IECEx Certificate of Conformity

EQUIPMENT:
Equipment and systems covered by this Certificate are as follows:

The NAMUR Switch Isolating Amplifiers Type RLN22-xx** are used for the intrinsically safe and galvanically isolated operation of proximity switches with NAMUR behaviour or potential-free switches and resistance-connected switches. They are equipped with a 24 V voltage supply. The equipment is provided for installation in zone 2 or in the safe area as associated apparatus. The intrinsically safe signal circuits may be routed into areas that require EPL Ga (Zone 0) or Da (Zone 20).

The voltage difference between input and output circuit or supply can be up to 375 V peak. The modules are equipped with a circuit for the detection of line faults.

The technical data are mentioned in the Annex.

SPECIFIC CONDITIONS OF USE: YES as shown below:

- The NAMUR Switch Isolating Amplifiers have to be installed in a suitable housing fulfilling the requirements of IEC 60079-7 or another recognized type of protection. The housing has to maintain a degree of protection of at least IP54 according to IEC 60529 for operation in zone 2.
- Connecting and disconnecting of non-intrinsically safe circuits are not allowed in energized state of the NAMUR Switch Isolating Amplifier.
- The DIP switches may only be operated when no explosive atmosphere is present.
