

The Cerabar S / Deltabar S is suitable for the connection to a PA and FF system according to both the Entity-Concept or the FISCO-Concept (as described below).

Ex ia IIC T6

Class I, Division 1, Groups A, B, C, D
Class II, Division 1, Groups E, F, G
Class III, Division 1

The FISCO-Concept allows interconnection of intrinsically safe apparatus to associated apparatus not specifically examined in such combination.

The criteria for interconnection is that the voltage (U_i or V_{max}), the current (I_i or I_{max}) and the power (P_i or P_{max}) which intrinsically safe apparatus can receive and remain intrinsically safe, considering faults, must be equal or greater than the voltage (U_o or V_o or V_t), the current (I_o or I_{sc} or I_t) and the power (P_o or P_{max}) levels which can be delivered by the associated apparatus, considering faults and applicable factors. In addition, the maximum unprotected capacitance (C_i) and inductance (L_i) of each apparatus (other than the termination) connected to the fieldbus must be less than or equal to 5 nF and $10 \mu\text{H}$ respectively.

In each segment only one active device, normally the associated apparatus, is allowed to provide the necessary energy for the fieldbus system. The voltage U_o (or V_o or V_t) of the associated apparatus has to be limited to the range of 14 V to 24 VDC. All other equipment connected to the bus cable has to be passive, meaning that they are not allowed to provide energy to the system, except to a leakage current of 50 μA for each connected device. Separately powered equipment needs a galvanic isolation to assure that the intrinsically safe fieldbus circuit remains passive.

The cable used to interconnect the devices needs to have the parameters in the following range:

$$\begin{aligned} \text{loop resistance } R' : & 15...150 \Omega/\text{km} \\ \text{inductance per unit length } L' : & 0.4...1 \text{ mH/km} \\ \text{capacitance per unit length } C' : & 80...200 \text{ pF/km} \\ C = C' \text{ 'lineline' + } C' \text{ 'linescreen':} & \text{if both lines are floating or} \\ \text{length of spur cable:} & \leq 30 \text{ m} \\ \text{length of trunk cable:} & \leq 1 \text{ km} \\ \text{length of splice:} & \leq 1 \text{ m} \end{aligned}$$

At each end of the trunk cable an approved infallible line termination with the following parameters is suitable: $R = 90...100 \Omega$
 $C = 0...2.2 \mu\text{F}$.

One of the allowed terminations might already be integrated in the associated apparatus. The number of passive devices connected to the bus segment is not limited due to I.S. reasons. If the above rules are respected, up to a total length of 1000 m (sum of the length of trunk cable and all spur cables), the inductance and capacitance of the cable will not impair the intrinsic safety of the installation.

Notes:

INTRINSICALLY SAFE Class I, Div. 1, Groups A, B, C, D, Class II, Div. 1, Groups E, F, G.
Class III, Ex ia IIC T6

- CSA certified apparatus must be installed in accordance with manufacturer instructions.
- CSA certified associated apparatus must meet the following requirements:
 U_o or V_o or $V_t \leq U_i$ (V_{max}) **and** I_o or I_{sc} or $I_t \leq I_i$ (I_{max}) **and** P_o or $P_{max} \leq P_i$ (P_{max}).
- The maximum non-hazardous area voltage must not exceed 250 V.
- The installation must be in accordance with the Canadian Electrical Code or National Electrical Code (ANSI/NFPA70) and ISA RP 12.06.01.
- Be aware of multiple earthing of screen. The screen must be connected in accordance with Canadian Electrical Code or National Electrical Code (ANSI/NFPA70) and ISA RP 12.06.01.
- Caution: Use only supply wires suitable for 5 °C above surrounding temperature.
- Warning: Substitution of components may impair intrinsic safety.
- The polarity for connecting is of no importance due to an internal rectifier.
- Remark: Versions with optional terminal block with integrated overvoltage protection have an isolation voltage greater than 420 VDC between terminal connections and potentially grounded metal parts.
- Type of protection for Cerabar S PMC71 and Deltabar S FMD76.
- Intrinsically safe (Ex ia), Cl. I, Div. 1, Groups A, B, C, D, Cl. II, Div. 1, Group G + coal dust, Ex ia IIC T6.

HAZARDOUS LOCATION INSTALLATION (not for separated housing)

- Install per Canadian Electrical Code (CEC) or National Electrical Code (ANSI/NFPA70) and ISA RP 12.06.01. Intrinsically safe barrier not required. Max. supply voltage 32 V. For T-codes see table.
- WARNING: Explosion Hazard - do not disconnect equipment unless power has been switched off or the area is known to be non hazardous.

AVERTISSEMENT : Risque d'explosion - avant de déconnecter l'équipement, couper le courant ou assurer que l'emplacement test design non dangereux.

WARNING: Substitution of components may impair suitability for Class I, Div. 2.
AVERTISSEMENT : La substitution de composant peut rendre ce matériel inacceptable pour les emplacements de Class I, Div. 2.

HAZARDOUS (CLASSIFIED) LOCATION

NON HAZARDOUS LOCATION
