Table of contents

1 Document information

1.1 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the Expert operating menu.

It is used to perform tasks that require detailed knowledge of the function of the device:
• Commissioning measurements under difficult conditions
• Optimal adaptation of the measurement to difficult conditions
• Detailed configuration of the communication interface
• Error diagnostics in difficult cases

1.2 Target group

The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations.

1.3 Using this document

1.3.1 Information on the document structure

The document lists the submenus and their parameters according to the structure from the **Expert** menu (→ 🕮 8), which is displayed when the **"Maintenance" user role** is enabled.

Operating menu for operators and maintenances

Operating menu for experts

A0029160-EN
☒ *1   Sample graphic for the schematic layout of the operating menu*

Detailed information concerning:
- Arrangement of the parameters according to the menu structure of the **Operation** menu, **Setup** menu, **Diagnostics** menu along with a brief description, see the Operating Instructions for the device
- Operating philosophy of the operating menu: "Operating philosophy" chapter of the Operating Instructions for the device

1.3.2   Structure of a parameter description

The individual parts of a parameter description are described in the following section:

Complete parameter name	Write-protected parameter = 🔒

Navigation	💻	Navigation path to the parameter via the operating tool The names of the menus, submenus and parameters are displayed in abbreviated format.
Prerequisite		The parameter is only available under these specific conditions
Description		Description of the parameter function
Selection		List of the individual options for the parameter • Option 1 • Option 2
User entry		Input range for the parameter
User interface		Display value/data for the parameter
Factory setting		Default setting ex works
Additional information		Additional explanations (e.g. in examples): • On individual options • On display values/data • On the input range • On the factory setting • On the parameter function

2 Overview of the Expert operating menu

The following table provides an overview of the menu structure of the expert operating menu and its parameters. The page reference indicates where the associated description of the submenu or parameter can be found.

3 Description of device parameters

In the following section, the parameters are listed according to the menu structure of the local display. Specific parameters for the operating tools are included at the appropriate points in the menu structure.

⇶ Expert

Locking status

Navigation   ▣   Expert → Locking status

Description   Displays the active write protection.

User interface
- Hardware locked
- Temporarily locked

Additional information   *User interface*

If two or more types of write protection are active, all the active types of write protection are displayed in the operating tool.

📖 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device → 🗎 7

Selection

Options	Description
Hardware locked (priority 1)	The locking switch (DIP switch) for locking the hardware is activated on the main electronic module. This prevents write access to the parameters .
Temporarily locked (priority 2)	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset etc.). Once the internal processing has been completed, the parameters can be changed once again.

Access status tooling

Navigation	Expert → Access stat.tool
Description	Displays the access authorization to the parameters via the operating tool.
User interface	• Operator • Maintenance
Factory setting	Maintenance

Additional information   *Description*

Access authorization can be modified via the **Enter access code** parameter (→ 🖺 11).

If additional write protection is active, this restricts the current access authorization even further.

User interface

Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device → 🖺 7

Enter access code

Navigation	Expert → Ent. access code
Description	Use this function to enter the user-specific release code to remove parameter write protection.
User entry	0 to 9 999

3.1   "System" submenu

Navigation   Expert → System

▶ System	
▶ Diagnostic handling	→ 🖺 12
▶ Administration	→ 🖺 19

3.1.1 "Diagnostic handling" submenu

Navigation   ⍾   Expert → System → Diagn. handling

▸ Diagnostic handling	
Alarm delay	→ 🖺 12
▸ Diagnostic behavior	→ 🖺 13
Alarm delay   🔒

Navigation   ⍾   Expert → System → Diagn. handling → Alarm delay

Description   Use this function to enter the time interval until the device generates a diagnostic message.

     🛈   The diagnostic message is reset without a time delay.

User entry   0 to 60 s

Factory setting   0 s

Additional information   *Effect*
This setting affects the following diagnostic messages:
- 046 Sensor limit exceeded
- 140 Sensor signal
- 144 Measuring error too high
- 190 Special event 1
- 191 Special event 5
- 192 Special event 9
- 830 Sensor temperature too high
- 831 Sensor temperature too low
- 832 Electronic temperature too high
- 833 Electronic temperature too low
- 834 Process temperature too high
- 835 Process temperature too low
- 843 Process limit
- 910 Tubes not oscillating
- 912 Medium inhomogeneous
- 913 Medium unsuitable
- 944 Monitoring failed
- 990 Special event 4
- 991 Special event 8
- 992 Special event 12

"Diagnostic behavior" submenu

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu (→ 🖺 13).
The following options are available in the **Assign behavior of diagnostic no. xxx** parameters:

Options	Description
Alarm	The device stops measurement. The measured value output via Modbus RS485 and the totalizers assume the defined alarm condition. A diagnostic message is generated.
Warning	The device continues to measure. The measured value output via Modbus RS485 and the totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is entered only in the **Event logbook** submenu (→ 🖺 87).
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

For a list of all the diagnostic events, see the Operating Instructions for the device → 🖺 7

- Alarm
- Warning
- Logbook entry only

Factory setting   Warning

Additional information   ℹ️ For a detailed description of the options available, see → 🗐 13

Assign behavior of diagnostic no. 144 (Measuring error too high)   🔒

| **Navigation** | 🖳 Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 144 |

Description   Option for changing the diagnostic behavior of the diagnostic message **144 Measuring error too high**.

Selection	• Off
	• Alarm
	• Warning
	• Logbook entry only

Factory setting	Alarm

Additional information	ℹ For a detailed description of the options available, see → 🗏 13

Assign behavior of diagnostic no. 832 (Electronic temperature too high)   🔒

Navigation	▯ Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 832

Description	Use this function to change the diagnostic behavior of the diagnostic message **832 Electronic temperature too high**.

Selection	• Off
	• Alarm
	• Warning
	• Logbook entry only

Factory setting	Warning

Additional information	ℹ For a detailed description of the options available, see → 🗏 13

Assign behavior of diagnostic no. 833 (Electronic temperature too low)   🔒

Navigation	▯ Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 833

Description	Use this function to change the diagnostic behavior of the diagnostic message **833 Electronic temperature too low**.

Selection	• Off
	• Alarm
	• Warning
	• Logbook entry only

Factory setting	Warning

Additional information	ℹ For a detailed description of the options available, see → 🗏 13

Assign behavior of diagnostic no. 834 (Process temperature too high)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 834
Description	Use this function to change the diagnostic behavior of the diagnostic message **834 Process temperature too high**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 🗎 13

Assign behavior of diagnostic no. 835 (Process temperature too low)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 835
Description	Use this function to change the diagnostic behavior of the diagnostic message **835 Process temperature too low**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 🗎 13

Assign behavior of diagnostic no. 912 (Medium inhomogeneous)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 912
Description	Option for changing the diagnostic behavior of the diagnostic message **912 Medium inhomogeneous**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 🗎 13

Assign behavior of diagnostic no. 913 (Medium unsuitable)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 913
Description	Option for changing the diagnostic behavior of the diagnostic message **913 Medium unsuitable**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 13

Assign behavior of diagnostic no. 944 (Monitoring failed)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 944
Description	Option for changing the diagnostic behavior of the diagnostic message **944 Monitoring failed**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 13

Assign behavior of diagnostic no. 948 (Tube damping too high)

Navigation	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 948
Description	Option for changing the diagnostic behavior of the diagnostic message **948 Tube damping too high**.
Selection	• Off • Alarm • Warning • Logbook entry only
Factory setting	Warning
Additional information	For a detailed description of the options available, see → 13

Assign behavior of diagnostic no. 192 (Special event 9)

Navigation		Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 192
Description		Option for changing the diagnostic behavior of the diagnostic message **192 Special event 9**.
Selection		• Off • Alarm • Warning • Logbook entry only
Factory setting		Warning
Additional information		For a detailed description of the options available, see → 🖺 13

Assign behavior of diagnostic no. 274 (Main electronic failure)

Navigation		Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 274
Description		Option for changing the diagnostic behavior of the diagnostic message **274 Main electronic failure**.
Selection		• Off • Alarm • Warning • Logbook entry only
Factory setting		Warning
Additional information		For a detailed description of the options available, see → 🖺 13

Assign behavior of diagnostic no. 392 (Special event 10)

Navigation		Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 392
Description		Option for changing the diagnostic behavior of the diagnostic message **392 Special event 10**.
Selection		• Off • Alarm • Warning • Logbook entry only
Factory setting		Warning
Additional information		For a detailed description of the options available, see → 🖺 13

Assign behavior of diagnostic no. 592 (Special event 11)

Navigation		Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 592

Description	Option for changing the diagnostic behavior of the diagnostic message **592 Special event 11**.

Selection	• Off
	• Alarm
	• Warning
	• Logbook entry only

Factory setting	Warning

Additional information	For a detailed description of the options available, see → 🖹 13

Assign behavior of diagnostic no. 992 (Special event 12)

Navigation		Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 992

Description	Option for changing the diagnostic behavior of the diagnostic message **992 Special event 12**.

Selection	• Off
	• Alarm
	• Warning
	• Logbook entry only

Factory setting	Warning

Additional information	For a detailed description of the options available, see → 🖹 13

3.1.2   "Administration" submenu

Navigation   Expert → System → Administration

► Administration	
Device reset	→ 🖹 20
Activate SW option	→ 🖹 20
Software option overview	→ 🖹 21

| Permanent storage | → 🕮 21 |
| Device tag | → 🕮 22 |

Device reset 🔒

| Navigation | ⊟ | Expert → System → Administration → Device reset |

Description Use this function to choose whether to reset the device configuration - either entirely or in part - to a defined state.

Selection
- Cancel
- To fieldbus defaults *
- To delivery settings
- Restart device

Factory setting Cancel

Additional information *"Cancel" option*

No action is executed and the user exits the parameter.

"To fieldbus defaults" option

Every parameter is reset to fieldbus default values.

"To delivery settings" option

Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.

ℹ This option is not visible if no customer-specific settings have been ordered.

"Restart device" option

The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.

Activate SW option 🔒

| Navigation | ⊟ | Expert → System → Administration → Activate SW opt. |

Description Use this function to enter an activation code to enable an additional, ordered software option.

User entry Max. 10-digit string consisting of numbers.

Factory setting 0

---

* Visibility depends on communication

Additional information   *User entry*

     Endress+Hauser provides the corresponding activation code for the software option with the order.

NOTICE! This activation code varies depending on the measuring device and the software option. If an incorrect or invalid code is entered, this can result in the loss of software options that are already been activated. After commissioning the measuring device: in this parameter only enter activation codes which Endress+Hauser has provided (e.g. when a new software option was ordered). If an incorrect or invalid activation code is entered, enter the activation code from the parameter protocol again and contact your Endress+Hauser sales organization, quoting the serial number of your device.

Example for a software option

Order code for "Application package", option EB "Heartbeat Verification + Monitoring"

Software option overview

Navigation   ▣   Expert → System → Administration → SW option overv.

Description   Displays all the software options that are enabled in the device.

User interface   Character string comprising letters

Additional information *Description*

Displays all the options that are available if ordered by the customer.

Permanent storage   🔒

Navigation   ▣   Expert → System → Administration → Perm. storage

Description   Use this function to switch permanent storage on and off.

Selection   • Off
                            • On

Factory setting   On

Additional information *Description*

NOTE!

If non-volatile device parameters are modified via the MODBUS RS485 function codes 06, 16 or 23, the change is saved in the EEPROM of the measuring device.

The number of writes to the EEPROM is technically restricted to a maximum of 1 million.

▸ Make sure to comply with this limit since, if it is exceeded, data loss and measuring device failure will result.

▸ Avoid constantly writing non-volatile device parameters via the MODBUS RS485.

Device tag	🔒

Navigation	▣ Expert → System → Administration → Device tag
Description	Use this function to enter the name for the measuring point.
User entry	Max. 32 characters such as letters, numbers or special characters (e.g. @, %, /).
Factory setting	LPGmass

3.2   "Sensor" submenu

Navigation   ▣   Expert → Sensor

▸ Sensor	
▸ Measured values	→ 🖺 22

Mass flow

Navigation   ▤   Expert → Sensor → Measured val. → Process variab. → Mass flow

Description   Displays the mass flow that is currently measured.

User interface   Signed floating-point number

Additional information   *Dependency*

🛈   The unit is taken from the **Mass flow unit** parameter (→ 🖹 28)

Volume flow

Navigation   ▤   Expert → Sensor → Measured val. → Process variab. → Volume flow

Description   Displays the volume flow currently calculated.

User interface   Signed floating-point number

Additional information   *Dependency*

🛈   The unit is taken from the **Volume flow unit** parameter (→ 🖹 29)

Density

Navigation		Expert → Sensor → Measured val. → Process variab. → Density
Description		Displays the density currently measured.
User interface		Signed floating-point number
Additional information		*Dependency*
		The unit is taken from the **Density unit** parameter (→ 🖺 33)

Corrected volume flow

Navigation		Expert → Sensor → Measured val. → Process variab. → Correct.vol.flow
Description		Displays the corrected volume flow currently measured.
User interface		Signed floating-point number
Additional information		*Dependency*
		The unit is taken from the **Corrected volume flow unit** parameter (→ 🖺 31)

Reference density

Navigation		Expert → Sensor → Measured val. → Process variab. → Ref.density
Description		Displays the reference density currently calculated.
User interface		Signed floating-point number
Additional information		*Dependency*
		The unit is taken from the **Reference density unit** parameter (→ 🖺 34)

Temperature

Navigation		Expert → Sensor → Measured val. → Process variab. → Temperature
Description		Displays the medium temperature currently measured.
User interface		Signed floating-point number

Additional information   *Dependency*

     The unit is taken from the **Temperature unit** parameter (→ 🖺 34)

Pressure value

Navigation   🖳   Expert → Sensor → Measured val. → Process variab. → Pressure value

Description   Displays the fixed or external pressure value.

User interface   Signed floating-point number

Additional information   *Dependency*

   The unit is taken from the **Pressure unit** parameter (→ 🖺 35)

"Totalizer" submenu

Navigation   🖳   Expert → Sensor → Measured val. → Totalizer

▸ Totalizer	
Totalizer value 1 to n	→ 🖺 25
Totalizer overflow 1 to n	→ 🖺 26

Totalizer value 1 to n   🔒

Navigation   🖳   Expert → Sensor → Measured val. → Totalizer → Totalizer val. 1 to n

Prerequisite   One of the following options is selected in the **Assign process variable** parameter
                        (→ 🖺 75) of the **Totalizer 1 to n** submenu:
                        • Volume flow
                        • Mass flow
                        • Corrected volume flow

Description   Displays the current totalizer reading.

User interface   Signed floating-point number

Additional information	*Description*

As it is only possible to display a maximum of 7 digits in the operating tool, the current counter value is the sum of the totalizer value and the overflow value from the **Totalizer overflow 1 to n** parameter if the display range is exceeded.

In the event of an error, the totalizer adopts the mode defined in the **Failure mode** parameter (→ 🖺 79).

User interface

The value of the process variable totalized since measuring began can be positive or negative. This depends on the settings in the **Totalizer operation mode** parameter (→ 🖺 78).

The unit of the selected process variable is specified for the totalizer depending on the selection made in the **Assign process variable** parameter (→ 🖺 75):
- **Volume flow** option: **Volume flow unit** parameter (→ 🖺 29)
- **Mass flow** option: **Mass flow unit** parameter (→ 🖺 28)
- **Corrected volume flow** option: **Corrected volume unit** parameter (→ 🖺 77)

Example

Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool:
- Value in the **Totalizer value 1** parameter: $1\,968\,457$ m^3
- Value in the **Totalizer overflow 1** parameter: $1 \cdot 10^7$ (1 overflow) = $10\,000\,000$ [m^3]
- Current totalizer reading: $11\,968\,457$ m^3

Totalizer overflow 1 to n   🔒

Navigation   🖳   Expert → Sensor → Measured val. → Totalizer → Tot. overflow 1 to n

Prerequisite   One of the following options is selected in the **Assign process variable** parameter (→ 🖺 75) of the **Totalizer 1 to n** submenu:
- Volume flow
- Mass flow
- Corrected volume flow

Description   Displays the current totalizer overflow.

User interface   Integer with sign

Additional information   *Description*

If the current totalizer reading has more than 7 digits, which is the maximum value range of the operating tool that can be displayed, the value above this range is output as an

overflow. The current totalizer value is therefore the sum of the overflow value and the totalizer value from the **Totalizer value 1 to n** parameter

Display

The unit of the selected process variable is specified for the totalizer depending on the selection made in the **Assign process variable** parameter (→ 🗎 75):
- **Volume flow** option: **Volume flow unit** parameter (→ 🗎 29)
- **Mass flow** option: **Mass flow unit** parameter (→ 🗎 28)
- **Corrected volume flow** option: **Corrected volume unit** parameter (→ 🗎 77)
Example

Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool:
- Value in the **Totalizer value 1** parameter: $1\,968\,457 \text{ m}^3$
- Value in the **Totalizer overflow 1** parameter: $2 \cdot 10^7$ (2 overflows) $= 20\,000\,000 \text{ [m}^3]$
- Current totalizer reading: $21\,968\,457 \text{ m}^3$

                    • **Maximum value** parameter (→ 🕮 94)
                    • **Minimum value** parameter (→ 🕮 94)

- **External temperature** parameter (→ 🖺 53)
- **Temperature** parameter (→ 🖺 24)
- **Reference temperature** parameter (→ 🖺 55)

Selection

🛈 For an explanation of the abbreviated units: → 🖺 101

Pressure unit 🔒

Navigation		Expert → Sensor → System units → Pressure unit

Description   Use this function to select the unit for the pipe pressure.

Selection

SI units
- Pa a
- kPa a
- MPa a
- bar
- Pa g
- kPa g
- MPa g
- bar g

US units
- psi a
- psi g

Custom-specific units
User pres.

Factory setting   Country-specific:
- bar g
- psi g

Additional information   *Result*

The unit is taken from:
- **Pressure value** parameter (→ 🖺 52)
- **External pressure** parameter (→ 🖺 52)
- **Pressure value** parameter (→ 🖺 25)

Selection

🛈 For an explanation of the abbreviated units: → 🖺 101

Date/time format 🔒

Navigation		Expert → Sensor → System units → Date/time format

Description   Use this function to select the desired time format for calibration history.

Selection
- dd.mm.yy hh:mm
- dd.mm.yy hh:mm am/pm
- mm/dd/yy hh:mm
- mm/dd/yy hh:mm am/pm

Factory setting	dd.mm.yy hh:mm

Additional information	*Selection*
	For an explanation of the abbreviated units: → 🖹 101

"User-specific units" submenu

Navigation   🖳   Expert → Sensor → System units → User-spec. units

▸ User-specific units		
	User mass text	→ 🖹 36
	User mass factor	→ 🖹 37
	User volume text	→ 🖹 37
	User volume factor	→ 🖹 38
	User corrected volume text	→ 🖹 38
	User corrected volume factor	→ 🖹 39
	User density text	→ 🖹 39
	User density offset	→ 🖹 39
	User density factor	→ 🖹 39
	User pressure text	→ 🖹 40
	User pressure offset	→ 🖹 40

User mass text   🔒

Navigation	🖳	Expert → Sensor → System units → User-spec. units → Mass text

Description	Use this function to enter a text for the user-specific unit of mass and mass flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

User entry	Max. 10 characters such as letters, numbers or special characters (@, %, /)

Factory setting	User mass

Additional information	*Result*

The defined unit is shown as an option in the choose list of the following parameters:
- **Mass flow unit** parameter (→ 🖺 28)
- **Mass unit** parameter (→ 🖺 28)

Example

If the text CENT for "centner" is entered, the following options are displayed in the picklist for the **Mass flow unit** parameter (→ 🖺 28):
- CENT/s
- CENT/min
- CENT/h
- CENT/d

User mass factor   🔒

Navigation	🖳	Expert → Sensor → System units → User-spec. units → Mass factor

Description	Use this function to enter a quantity factor (without time) for the user-specific mass and mass flow unit.

User entry	Signed floating-point number

Factory setting	1.0

Additional information	*Example*

Mass of 1 Zentner = 50 kg → 0.02 Zentner = 1 kg → entry: 0.02

User volume text   🔒
Navigation	🖳	Expert → Sensor → System units → User-spec. units → Volume text

Description	Use this function to enter a text for the user-specific unit of volume and volume flow. The corresponding time units (s, min, h, d) for volume flow are generated automatically.

User entry	Max. 10 characters such as letters, numbers or special characters (@, %, /)

Factory setting	User vol.

Additional information	*Result*

The defined unit is shown as an option in the choose list of the following parameters:
• **Volume flow unit** parameter (→ 🖺 29)
• **Volume unit** parameter (→ 🖺 31)

Example

If the text GLAS is entered, the choose list of the **Volume flow unit** parameter (→ 🖺 29) shows the following options:
• GLAS/s
• GLAS/min
• GLAS/h
• GLAS/d

User volume factor   🔒

Navigation	🖿	Expert → Sensor → System units → User-spec. units → Volume factor

Description	Use this function to enter a quantity factor (without time) for the user-specific volume and volume flow unit.

User entry	Signed floating-point number

Factory setting	1.0

User corrected volume text   🔒

Navigation	🖿	Expert → Sensor → System units → User-spec. units → Corr. vol. text

Description	Use this function to enter a text for the user-specific unit of the corrected volume and corrected volume flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

User entry	Max. 10 characters such as letters, numbers or special characters (@, %, /)

Factory setting	UserCrVol.

Additional information	*Result*

The defined unit is shown as an option in the choose list of the following parameters:
• **Corrected volume flow unit** parameter (→ 🖺 31)
• **Corrected volume unit** parameter (→ 🖺 32)

Example

If the text GLAS is entered, the choose list of the **Corrected volume flow unit** parameter (→ 🖺 31) shows the following options:
• GLAS/s
• GLAS/min
• GLAS/h
• GLAS/d

User corrected volume factor 🔒

Navigation	🖳 Expert → Sensor → System units → User-spec. units → Cor.vol. factor
Description	Use this function to enter a quantity factor (without time) for the user-specific corrected volume unit and corrected volume flow unit.
User entry	Signed floating-point number
Factory setting	1.0

User density text 🔒

Navigation	🖳 Expert → Sensor → System units → User-spec. units → Density text
Description	Use this function to enter a text or the user-specific unit of density.
User entry	Max. 10 characters such as letters, numbers or special characters (@, %, /)
Factory setting	User dens.
Additional information	*Result*

         ℹ️ The defined unit is shown as an option in the choose list of the **Density unit** parameter (→ 🖺 33).

         Example

         Enter text "CE_L" for centners per liter

User density offset 🔒

Navigation	🖳 Expert → Sensor → System units → User-spec. units → Density offset
Description	Use this function to enter the zero point shift for the user-specific density unit.

         ℹ️ Value in user-specific unit = (factor × value in base unit) + offset

User entry	Signed floating-point number
Factory setting	0

User density factor 🔒

Navigation	🖳 Expert → Sensor → System units → User-spec. units → Density factor
Description	Use this function to enter a quantity factor for the user-specific density unit.

User entry	Signed floating-point number

Factory setting	1.0

User pressure text	🔒

Navigation	🔲 Expert → Sensor → System units → User-spec. units → Pressure text

Description	Use this function to enter a text for the user-specific pressure unit.

User entry	Max. 10 characters such as letters, numbers or special characters (@, %, /)

Factory setting	User pres.

Additional information   *Result*

ℹ️ The defined unit is shown as an option in the choose list of the **Pressure unit** parameter (→ 🖹 35).

User pressure offset	🔒

Navigation	🔲 Expert → Sensor → System units → User-spec. units → Pressure offset

Description	Use this function to enter the offset for adapting the user-specific pressure unit.

User entry	Signed floating-point number

Factory setting	0

User pressure factor	🔒

Navigation	🔲 Expert → Sensor → System units → User-spec. units → Pressure factor

Description	Use this function to enter a quantity factor for the user-specific pressure unit.

User entry	Signed floating-point number

Factory setting	1.0

Additional information   *Example*

1 Dyn/cm² = 0.1 Pa → 10 Dyn/cm² = 1 Pa → user entry: 10

3.2.3 "Process parameters" submenu

Navigation   ▤   Expert → Sensor → Process param.

▶ Process parameters	
Flow damping	→ 🖺 41
Density damping	→ 🖺 42
Temperature damping	→ 🖺 42
Flow override	→ 🖺 43
▶ Low flow cut off	→ 🖺 43
▶ Partially filled pipe detection	→ 🖺 46

Flow damping   🔒

Navigation   ▤   Expert → Sensor → Process param. → Flow damping

Description   Use this function to enter the time constant for the damping (PT1 element) of the mass flow value. Reduction of the variability of the flow measured value (in relation to interference). For this purpose, the depth of the flow filter is adjusted: when the filter setting increases, the reaction time of the device also increases.

User entry   0 to 100

Factory setting   0 s

Additional information   *Description*

     ℹ   The damping is performed by a PT1 element [1].

     User entry

- Value = 0: no damping
- Value > 0: damping is increased

     ℹ   Damping is switched off if **0** is entered (factory setting).

     Result

     ℹ   The damping affects the following variables of the device:
- Outputs
  - Low flow cut off → 🖺 43
- Totalizers

---

1)   Proportional behavior with first-order lag

Density damping	🔒

Navigation		Expert → Sensor → Process param. → Density damping

Description	Use this function to enter a time constant for the damping (PT1 element) of the density measured value.

User entry	0 to 999.9 s

Factory setting	0 s

Additional information	*Description*

The damping is performed by a PT1 element [2].

User entry

- Value = 0: no damping
- Value > 0: damping is increased

Damping is switched off if **0** is entered (factory setting).

Temperature damping	🔒

Navigation		Expert → Sensor → Process param. → Temp. damping

Description	Use this function to enter a time constant for the damping (PT1 element) of the temperature measured value.

User entry	0 to 999.9 s

Factory setting	0 s

Additional information	*Description*

The damping is performed by a PT1 element [3].

User entry

- Value = 0: no damping
- Value > 0: damping is increased

Damping is switched off if **0** is entered (factory setting).

---

2)   Proportional behavior with first-order lag
3)   Proportional behavior with first-order lag

Flow override	🔒

Navigation	🖥 Expert → Sensor → Process param. → Flow override
Description	Use this function to select whether to interrupt the evaluation of measured values. This is useful for the cleaning processes of a pipeline, for example.
Selection	• Off • On
Factory setting	Off
Additional information	*Result*

Result

ℹ This setting affects all the functions and outputs of the measuring device.

Description

Flow override is active
- The diagnostic message diagnostic message △**C453 Flow override** is displayed.
- Output values
  - Output: Value at zero flow
  - Temperature: proceeding output
  - Totalizers 1-3: Stop being totalized

ℹ Positive zero return can also be enabled via the Status input: **Assign status input** parameter.

"Low flow cut off" submenu

Navigation   🖥   Expert → Sensor → Process param. → Low flow cut off

▶ Low flow cut off	
Assign process variable	→ 🖹 43
On value low flow cutoff	→ 🖹 44
Off value low flow cutoff	→ 🖹 44
Pressure shock suppression	→ 🖹 45

Assign process variable	🔒

Navigation	🖥 Expert → Sensor → Process param. → Low flow cut off → Assign variable
Description	Use this function to select the process variable for low flow cutoff detection.

Selection	• Off
	• Mass flow
	• Volume flow
	• Corrected volume flow

Factory setting	Mass flow

On value low flow cutoff   🔒

Navigation	🖥 Expert → Sensor → Process param. → Low flow cut off → On value
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 🖪 43):
	• Mass flow
	• Volume flow
	• Corrected volume flow
Description	Use this function to enter a switch-on value for low flow cut off. Low flow cut off is activated if the value entered is not equal to 0 → 🖪 44.
User entry	Positive floating-point number
Factory setting	Depends on country and nominal diameter
Additional information	*Dependency*

> ℹ The unit depends on the process variable selected in the **Assign process variable** parameter (→ 🖪 43).

Off value low flow cutoff   🔒

Navigation	🖥 Expert → Sensor → Process param. → Low flow cut off → Off value
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 🖪 43):
	• Mass flow
	• Volume flow
	• Corrected volume flow
Description	Use this function to enter a switch-off value for low flow cut off. The off value is entered as a positive hysteresis from the on value→ 🖪 44.
User entry	0 to 100.0 %
Factory setting	50 %

Additional information   *Example*
A0012887

Q   *Flow*
t   *Time*
H   *Hysteresis*
A   *Low flow cut off active*
1   *Low flow cut off is activated*
2   *Low flow cut off is deactivated*
3   *On value entered*
4   *Off value entered*

Pressure shock suppression   🔒

Navigation   ▣   Expert → Sensor → Process param. → Low flow cut off → Pres. shock sup.

Prerequisite   One of the following options is selected in the **Assign process variable** parameter
                            (→ 🕮 43):
                            • Mass flow
                            • Volume flow
                            • Corrected volume flow

Description   Use this function to enter the time interval for signal suppression (= active pressure shock
                            suppression).

User entry   0 to 100 s

Factory setting   0 s

Additional information   *Description*

                            Pressure shock suppression is enabled
                            • Prerequisite:
                              – Flow rate < on-value of low flow cut off
                                or
                              – Changing the flow direction
                            • Output values
                              – Flow displayed: 0
                              – Totalizer: the totalizers are pegged at the last correct value

                            Pressure shock suppression is disabled
                            • Prerequisite: the time interval set in this function has elapsed.
                            • If the flow also exceeds the switch-off value for low flow cut off, the device starts
                              processing the current flow value again and displays it.

                            Example

                            When closing a valve, momentarily strong fluid movements may occur in the pipeline,
                            which are registered by the measuring system. These totalized flow values lead to a false
                            totalizer status, particularly during batching processes.
A0012888

Q   Flow
t   Time
A   Drip
B   Pressure shock
C   Pressure shock suppression active as specified by the time entered
D   Pressure shock suppression inactive
1   Valve closes
2   Flow falls below the on-value of the low flow cut off: pressure shock suppression is activated
3   The time entered has elapsed: pressure shock suppression is deactivated
4   The actual flow value is now displayed and output
5   On value for low flow cut off
6   Off value for low flow cut off

"Partially filled pipe detection" submenu

Navigation   Expert → Sensor → Process param. → Partial pipe det

► Partially filled pipe detection	
Assign process variable	→ 🗎 47
Low value partial filled pipe detection	→ 🗎 47
High value partial filled pipe detection	→ 🗎 48
Response time part. filled pipe detect.	→ 🗎 48
Maximum damping partial filled pipe det.	→ 🗎 49

Assign process variable	🔒

Navigation	🖳 Expert → Sensor → Process param. → Partial pipe det → Assign variable
Description	Use this function to select a process variable to detect empty or partially filled measuring tubes. For gas measurement: Deactivate monitoring due to low gas density.
Selection	• Off • Density • Reference density
Factory setting	Off

Low value partial filled pipe detection	🔒

Navigation	🖳 Expert → Sensor → Process param. → Partial pipe det → Low value
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 🕮 47): • Density • Reference density
Description	Use this function to enter a lower limit value to enable detection of empty or partially filled measuring tubes. If the measured density falls below this value, monitoring is enabled.
User entry	Signed floating-point number
Factory setting	Country-specific: • 200 kg/m³ • 12.5 lb/ft³
Additional information	*User entry* The lower limit value must be less than the upper limit value defined in the **High value partial filled pipe detection** parameter (→ 🕮 48). ℹ️ The unit depends on the process variable selected in the **Assign process variable** parameter (→ 🕮 47). *Limit value* ℹ️ If the displayed value is outside the limit value, the measuring device displays the diagnostic message ⚠️**S862 Partly filled pipe**.

High value partial filled pipe detection	🔒

Navigation	☐ Expert → Sensor → Process param. → Partial pipe det → High value

Prerequisite

One of the following options is selected in the **Assign process variable** parameter (→ 🖺 47):
• Density
• Reference density

Description

Use this function to enter an upper limit value to enable detection of empty or partially filled measuring tubes. If the measured density exceeds this value, detection is enabled.

User entry

Signed floating-point number

Factory setting

Country-specific:
• 6 000 kg/m³
• 374.6 lb/ft³

Additional information

User entry

The upper limit value must be greater than the lower limit value defined in the **Low value partial filled pipe detection** parameter (→ 🖺 47).

ℹ The unit depends on the process variable selected in the **Assign process variable** parameter (→ 🖺 47).

Limit value

ℹ If the displayed value is outside the limit value, the measuring device displays the diagnostic message ⚠**S862 Partly filled pipe**.

Response time part. filled pipe detect.	🔒

Navigation	☐ Expert → Sensor → Process param. → Partial pipe det → Response time

Prerequisite

One of the following options is selected in the **Assign process variable** parameter (→ 🖺 47):
• Density
• Reference density

Description

Use this function to enter the minimum length of time (debouncing time) the signal must be present for the diagnostic message ⚠**S862 Partly filled pipe** to be triggered if the measuring pipe is empty or partially full.

User entry

0 to 100 s

Factory setting

1 s

Maximum damping partial filled pipe det.	🔒

Navigation	🖥 Expert → Sensor → Process param. → Partial pipe det → Max. damping
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 📄 47): • Density • Reference density
Description	Use this function to enter a damping value to enable detection of empty or partially filled measuring tubes.
User entry	Positive floating-point number
Factory setting	0

Additional information   *Description*

If pipe damping (**Testpoints** submenu (→ 📄 64)) exceeds the specified value, the measuring device presumes that the pipe is partially filled and the flow signal is set to **0**. The measuring device displays the diagnostic message △**S862 Partly filled pipe**. In the case of non-homogeneous media or air pockets, the damping of the measuring tubes increases.

User entry

• Damping is disabled if **0** is entered (factory setting).
• Damping is enabled if the value entered is greater than **0**.
• The value entered depends on application-specific influence variables, such as the medium, nominal diameter, sensor etc.

Example

• If the pipe is filled normally the value of the oscillation damping is 500.
• If the pipe is partially filled the value of the oscillation damping is > 5000.
• A practical damping value would then be 2000: enter 2000 as the value.

3.2.4   "Measurement mode" submenu

Navigation   🖥   Expert → Sensor → Measurement mode

▶ Measurement mode	
Select medium	→ 📄 50
Select gas type	→ 📄 50
Reference sound velocity	→ 📄 51
Temperature coefficient sound velocity	→ 📄 51

Select medium   ⌂

| Navigation | ▤   Expert → Sensor → Measurement mode → Select medium |

Description   Use this function to select the type of medium.

Selection   • Liquid
                     • Gas

Factory setting   Liquid

Select gas type   ⌂

| Navigation | ▤   Expert → Sensor → Measurement mode → Select gas type |

Prerequisite   The **Gas** option is selected in the **Select medium** parameter (→ 🗎 50).

Description   Use this function to select the type of gas for the measuring application.

Selection   • Air
                     • Ammonia NH3
                     • Argon Ar
                     • Sulfur hexafluoride SF6
                     • Oxygen O2
                     • Ozone O3
                     • Nitrogen oxide NOx
                     • Nitrogen N2
                     • Nitrous oxide N2O
                     • Methane CH4
                     • Hydrogen H2
                     • Helium He
                     • Hydrogen chloride HCl
                     • Hydrogen sulfide H2S
                     • Ethylene C2H4
                     • Carbon dioxide CO2
                     • Carbon monoxide CO
                     • Chlorine Cl2
                     • Butane C4H10
                     • Propane C3H8
                     • Propylene C3H6
                     • Ethane C2H6
                     • Others

Factory setting   Methane CH4

Reference sound velocity   🔒

Navigation   ⌨ Expert → Sensor → Measurement mode → Sound velocity

Prerequisite   The **Others** option is selected in the **Select gas type** parameter (→ 🖹 50).

Description   Use this function to enter the sound velocity of the gas at 0 ℃ (+32 ℉).

User entry   1 to 99 999.9999 m/s

Factory setting   0 m/s

Temperature coefficient sound velocity   🔒

Navigation   ⌨ Expert → Sensor → Measurement mode → Temp. coeff. SV

Prerequisite   The **Others** option is selected in the **Select gas type** parameter (→ 🖹 50).

Description   Use this function to enter a temperature coefficient for the sound velocity of the gas.

User entry   Positive floating-point number

Factory setting   0 (m/s)/K

3.2.5   "External compensation" submenu

Navigation   ⌨   Expert → Sensor → External comp.

▸ External compensation	
Pressure compensation	→ 🖹 52
Pressure value	→ 🖹 52
External pressure	→ 🖹 52
Temperature mode	→ 🖹 53
External temperature	→ 🖹 53

Pressure compensation	🔒

Navigation	🔲 Expert → Sensor → External comp. → Pressure compen.

Prerequisite	The **Gas** option is selected in the **Select medium** parameter (→ 🖺 50).

Description	Use this function select the type of pressure compensation.

Selection	• Off • Fixed value • External value

Factory setting	Off

Pressure value	🔒

Navigation	🔲 Expert → Sensor → External comp. → Pressure value

Prerequisite	The **Fixed value** option is selected in the **Pressure compensation** parameter (→ 🖺 52).

Description	Use this function to enter a value for the process pressure that is used for pressure correction.

User entry	Positive floating-point number

Factory setting	0 bar

Additional information	*User entry*

ℹ️ The unit is taken from the **Pressure unit** parameter (→ 🖺 35)

External pressure	

Navigation	🔲 Expert → Sensor → External comp. → External press.

Prerequisite	The **External value** option is selected in the **Pressure compensation** parameter (→ 🖺 52).

Description	Use this function to enter an external pressure value.

User entry	Positive floating-point number

Factory setting	0 bar

Additional information	*User entry*

ℹ️ The unit is taken from the **Pressure unit** parameter (→ 🖺 35)

Temperature mode	🔒

Navigation	🖳 Expert → Sensor → External comp. → Temperature mode
Description	Use this function to select the temperature mode.
Selection	• Internal measured value • External value
Factory setting	Internal measured value

External temperature	

Navigation	🖳 Expert → Sensor → External comp. → External temp.
Prerequisite	The **External value** option is selected in the **Temperature mode** parameter (→ 🖹 53) parameter.
Description	Use this function to enter the external temperature.
User entry	–273.15 to 99 999 ℃
Factory setting	• 0 ℃ • +32 ℉
Additional information	*Description* ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖹 34)

3.2.6   "Calculated values" submenu

Navigation   🖳   Expert → Sensor → Calculated value

▶ Calculated values

     ▶ Corrected volume flow calculation   → 🖹 53

"Corrected volume flow calculation" submenu

Navigation   🖳   Expert → Sensor → Calculated value → Corr. vol.flow.

▶ Corrected volume flow calculation

     Corrected volume flow calculation   → 🖹 54

External reference density	→ 🗎 54
Fixed reference density	→ 🗎 54

Corrected volume flow calculation   🔒

| Navigation | ☒ | Expert → Sensor → Calculated value → Corr. vol.flow. → Corr. vol.flow. |

Description   Use this function to select the reference density for calculating the corrected volume flow.

Selection
- Fixed reference density
- Calculated reference density
- Reference density by API table 53
- External reference density

Factory setting   Calculated reference density

External reference density

| Navigation | ☒ | Expert → Sensor → Calculated value → Corr. vol.flow. → Ext. ref.density |

Prerequisite   In the **Corrected volume flow calculation** parameter (→ 🗎 54), the **External reference density** option is selected.

Description   Displays the reference density which is read in externally, e.g. via the current input.

User interface   Floating point number with sign

Additional information   *Dependency*

🛈 The unit is taken from the **Reference density unit** parameter (→ 🗎 34)

Fixed reference density   🔒

| Navigation | ☒ | Expert → Sensor → Calculated value → Corr. vol.flow. → Fix ref.density |

Prerequisite   The **Fixed reference density** option is selected in the **Corrected volume flow calculation** parameter (→ 🗎 54) parameter.

Description	Use this function to enter a fixed value for the reference density.
User entry	Positive floating-point number
Additional information	*Dependency*

ℹ️ The unit is taken from the **Reference density unit** parameter (→ 🖹 34)

Reference temperature   🔒

Navigation	🖳	Expert → Sensor → Calculated value → Corr. vol.flow. → Ref. temperature
Prerequisite		In the **Corrected volume flow calculation** parameter (→ 🖹 54), the **Calculated reference density** option is selected.
Description		Use this function to enter a reference temperature for calculating the reference density.
User entry		−273.15 to 99 999 ℃
Factory setting		Country-specific: • +20 ℃ • +68 ℉
Additional information		*Dependency*

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖹 34)

Reference density calculation

$$\rho_n = \rho \cdot (1 + \alpha \cdot \Delta t + \beta \cdot \Delta t^2)$$

A0023403

- ρ_N: reference density
- ρ: fluid density currently measured
- t: fluid temperature currently measured
- t_N: reference temperature at which the reference density is calculated (e.g. 20 ℃)
- Δt: $t - t_N$
- α: linear expansion coefficient of the fluid, unit = $[1/K]$; K = Kelvin
- β: square expansion coefficient of the fluid, unit = $[1/K^2]$

Linear expansion coefficient   🔒

Navigation	🖳	Expert → Sensor → Calculated value → Corr. vol.flow. → Linear exp coeff
Prerequisite		In the **Corrected volume flow calculation** parameter (→ 🖹 54), the **Calculated reference density** option is selected.
Description		Use this function to enter a linear, fluid-specific expansion coefficient for calculating the reference density.

User entry	Signed floating-point number

Factory setting	0.0

Square expansion coefficient   🔒

Navigation	🔲	Expert → Sensor → Calculated value → Corr. vol.flow. → Square exp coeff

Prerequisite	In the **Corrected volume flow calculation** parameter (→ 🖺 54), the **Calculated reference density** option is selected.

Description	For fluid with a non-linear expansion pattern: use this function to enter a quadratic, fluid-specific expansion coefficient for calculating the reference density.

User entry	Signed floating-point number

Factory setting	0.0

3.2.7 "Sensor adjustment" submenu

Navigation   🔲   Expert → Sensor → Sensor adjustm.

▸ Sensor adjustment	
Installation direction	→ 🖺 56
▸ Zero point adjustment	→ 🖺 57
▸ Process variable adjustment	→ 🖺 58

Installation direction   🔒

Navigation	🔲	Expert → Sensor → Sensor adjustm. → Install. direct.

Description	Use this function to change the sign of the medium flow direction.

Selection	• Flow in arrow direction • Flow against arrow direction

Factory setting	Flow in arrow direction

Additional information   *Description*

ℹ️ Before changing the sign: ascertain the actual direction of fluid flow with reference to the direction indicated by the arrow on the sensor nameplate.
"Zero point adjustment" submenu

ℹ️ • It is generally not necessary to perform zero point adjustment.
• However, this function may be needed in some applications with low flow and strict accuracy requirements.
• A zero point adjustment cannot increase repeatability.
• The following conditions should be met to perform a zero point adjustment successfully without the adjustment finishing in an error:
  – The real flow must be **0**.
  – The pressure must be at least 15 psi g.
• The adjustment takes a maximum of 60 s. The more stable the conditions, the faster the adjustment is completed.
• This function can also be used to check the health of the measuring device.
  A healthy measuring device has a maximum zero point deviation of ±100 compared to the factory setting of the measuring device (calibration report).
Navigation   ▤   Expert → Sensor → Sensor adjustm. → Zero point adj.

```
▶ Zero point adjustment

            Zero point adjustment control

            Adjustment in progress
```

Zero point adjustment control   🔒

Navigation   ▤   Expert → Sensor → Sensor adjustm. → Zero point adj. → Zero point adj.

Description   Use this function to select the start of the zero point adjustment.

ℹ️ Observe conditions → 🖺 57.

Selection   • Cancel
                        • Busy
                        • Zero point adjust failure
                        • Start

Factory setting   Cancel
Additional information   *Description*

- Cancel
  If zero point adjustment has failed, select this option to cancel zero point adjustment.
- Busy
  Is displayed during zero point adjustment.
- Zero point adjust failure
  Is displayed if zero point adjustment has failed.
- Start
  Select this option to start zero point adjustment.

Progress

Navigation   🖳   Expert → Sensor → Sensor adjustm. → Zero point adj. → Progress

Description   The progress of the process is indicated.

User interface   0 to 100 %

"Process variable adjustment" submenu

Temperature offset	→ 🕮 62
Temperature factor	→ 🕮 62

Mass flow offset 🔒

Navigation	🖳 Expert → Sensor → Sensor adjustm. → Variable adjust → Mass flow offset
Description	Use this function to enter the zero point shift for the mass flow trim. The mass flow unit on which the shift is based is kg/s.
User entry	Signed floating-point number
Factory setting	0 kg/s
Additional information	*Description* ℹ️ Corrected value = (factor × value) + offset

Mass flow factor 🔒

Navigation	🖳 Expert → Sensor → Sensor adjustm. → Variable adjust → Mass flow factor
Description	Use this function to enter a quantity factor (without time) for the mass flow. This multiplication factor is applied over the mass flow range.
User entry	Positive floating-point number
Factory setting	1
Additional information	*Description* ℹ️ Corrected value = (factor × value) + offset

Volume flow offset 🔒

Navigation	🖳 Expert → Sensor → Sensor adjustm. → Variable adjust → Vol. flow offset
Description	Use this function to enter the zero point shift for the volume flow trim. The volume flow unit on which the shift is based is m³/s.
User entry	Signed floating-point number
Factory setting	0 m³/s

Additional information *Description*

     ℹ Corrected value = (factor × value) + offset

Volume flow factor 🔒

Navigation   ⊟ Expert → Sensor → Sensor adjustm. → Variable adjust → Vol. flow factor

Description   Use this function to enter a quantity factor (without time) for the volume flow. This multiplication factor is applied over the volume flow range.

User entry   Positive floating-point number

Factory setting   1

Additional information *Description*

     ℹ Corrected value = (factor × value) + offset

Density offset 🔒

Navigation   ⊟ Expert → Sensor → Sensor adjustm. → Variable adjust → Density offset

Description   Use this function to enter the zero point shift for the density trim. The density unit on which the shift is based is kg/m^3.

User entry   Signed floating-point number

Factory setting $0\ kg/m^3$

Additional information *Description*

     ℹ Corrected value = (factor × value) + offset

Density factor 🔒

Navigation   ⊟ Expert → Sensor → Sensor adjustm. → Variable adjust → Density factor

Description   Use this function to enter a quantity factor for the density. This multiplication factor is applied over the density range.

User entry   Positive floating-point number

Factory setting   1

Additional information   *Description*

                                ℹ️ Corrected value = (factor × value) + offset

---

Corrected volume flow offset   🔒

Navigation   ▣   Expert → Sensor → Sensor adjustm. → Variable adjust → Corr. vol offset

Description   Use this function to enter the zero point shift for the corrected volume flow trim. The
                                corrected volume flow unit on which the shift is based is 1 Nm³/s.

User entry   Signed floating-point number

Factory setting   0 Nm³/s

Additional information   *Description*

                                ℹ️ Corrected value = (factor × value) + offset

---

Corrected volume flow factor   🔒

Navigation   ▣   Expert → Sensor → Sensor adjustm. → Variable adjust → Corr. vol factor

Description   Use this function to enter a quantity factor (without time) for the corrected volume flow.
                                This multiplication factor is applied over the corrected volume flow range.

User entry   Positive floating-point number

Factory setting   1

Additional information   *Description*

                                ℹ️ Corrected value = (factor × value) + offset

---

Reference density offset   🔒

Navigation   ▣   Expert → Sensor → Sensor adjustm. → Variable adjust → Ref.dens. offset

Description   Use this parameter to enter the zero point shift for the reference density trim. The
                                reference density unit on which the shift is based is 1 kg/Nm³.

User entry   Signed floating-point number

Factory setting   0 kg/Nm³

Additional information	*Description*
	ℹ️ Corrected value = (factor × value) + offset

Reference density factor   🔒

Navigation	▣	Expert → Sensor → Sensor adjustm. → Variable adjust → Ref.dens. factor
Description		Use this function to enter a quantity factor (without time) for the reference density. This multiplication factor is applied over the reference density range.
User entry		Positive floating-point number
Factory setting		1
Additional information		*Description*
		ℹ️ Corrected value = (factor × value) + offset

Temperature offset   🔒

Navigation	▣	Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. offset
Description		Use this function to enter the zero point shift for the temperature trim. The temperature unit on which the shift is based is K.
User entry		Signed floating-point number
Factory setting		0 K
Additional information		*Description*
		ℹ️ Corrected value = (factor × value) + offset

Temperature factor   🔒

Navigation	▣	Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. factor
Description		Use this function to enter a quantity factor for the temperature. In each case, this factor refers to the temperature in K.
User entry		Positive floating-point number
Factory setting		1

Additional information   *Description*

 Corrected value = (factor × value) + offset

3.2.8   "Calibration" submenu

Navigation   ▣   Expert → Sensor → Calibration

▸ **Calibration**	
Calibration factor	→ 🖺 63

Exciter current 0	→ 🖹 68
RawMassFlow	→ 🖹 68

Oscillation frequency 0

Navigation   ☒   Expert → Sensor → Testpoints → Osc. freq. 0

Description   Displays the current oscillation frequency.

User interface   Positive floating point number

Additional information   *Typical values*

Sensor	DN		f_{Air}		f_{Water}	
	[mm]	[in]	Min. nom. [Hz]	max. nom. [Hz]	Min. nom. [Hz]	max. nom. [Hz]
LPGmass	8	$^3/_8$	531	611	479	551
	15	½	654	752	564	648
	25	1	770	886	649	747
	40	1½	706	812	597	687
	50	2	495	569	408	470

Frequency fluctuation 0

Navigation   ☒   Expert → Sensor → Testpoints → Freq. fluct. 0

Description   Displays the current frequency fluctuation.

User interface   Signed floating-point number

Oscillation amplitude 0

Navigation   ☒   Expert → Sensor → Testpoints → Osc. ampl. 0

Description   Displays the relative oscillation amplitude of the sensor in relation to the set point.

User interface   Signed floating-point number

| **Additional information** | *Description* |

This value is 100 % under normal conditions. The value can fall in the case of complex media (two-phase, high viscosity or high gas velocity).

Limit values

5 %

ℹ️ If the displayed value is outside the limit value, the measuring device displays the following diagnostic messages:
- Diagnostic message ⚠️**S913 Medium unsuitable**, associated service ID **205 Osc Amp Limit**
  Explanation: The measured oscillation amplitude has dropped below the xMin limit value.
- Diagnostic message ⚠️**S912 Medium inhomogeneous**, associated service ID **196 Fluid Inhomogeneous Amp**
  – Explanation: The fluctuation (standard deviation) of the amplitude is too high.
  – Possible cause: Air or suspended solids in the medium (multiphase)

For detailed information about troubleshooting, refer to the section entitled "Overview of the service-specific diagnostics information"

Oscillation damping 0

| **Navigation** | 🔳 | Expert → Sensor → Testpoints → Osc. damping 0 |

| **Description** | Displays the current oscillation damping. |

| **User interface** | Positive floating-point number |

| **Additional information** | *Description* |

Oscillation damping is an indicator of the sensor's current need for excitation power.

Typical values

Sensor	DN		Nominal value, air	Nominal value, water
	[mm]	[in]	[A/m]	[A/m]
LPGmass	8	³/₈	230	270
	15	½	600	750
	25	1	320	380
	40	1½	500	650
	50	2	270	310

Limit values

Damping depends on the viscosity and homogeneity of the medium. A high level of viscosity or an inhomogeneous medium (gas/liquid/solids mixture) can sometimes result in considerably higher damping (up to several tens of thousands).

Tube damping fluctuation 0

Navigation	▣ Expert → Sensor → Testpoints → Damping fluct 0
Description	Displays the current fluctuation of tube damping.
User interface	Signed floating-point number

Signal asymmetry

Navigation	▣ Expert → Sensor → Testpoints → Signal asymmetry
Description	Displays the relative difference between the oscillation amplitude measured at the inlet and outlet of the sensor.
User interface	Signed floating-point number

Additional information

Description

The measured value is the result of production tolerances of the sensor coils and should remain constant over the life time of a sensor.

Limit values

If the value is > 25 %, this is an indicator of a damaged sensor or sensor cable.

ℹ️ If the displayed value is outside the limit value, the measuring device displays the following diagnostic message:
Diagnostic message △**S140 Sensor signal**, associated service ID **204 El Dyn Sensor**
– Explanation: The amplitude asymmetry between the inlet and outlet sensor has exceeded the limit value.
– Possible cause: Virtually only occurs if one of the two signal sensors is defective.

For detailed information about troubleshooting, refer to the section entitled "Overview of the service-specific diagnostics information"

Electronic temperature

Navigation	▣ Expert → Sensor → Testpoints → Electronic temp.
Description	Displays the current temperature inside the main electronics.
User interface	Signed floating-point number

Additional information

NOTE!

Stay within the specified ambient temperature range.

Dependency

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🕮 34)

Exciter current 0	
Navigation	⊟ Expert → Sensor → Testpoints → Exc. current 0
Description	Displays the current excitation current.
User interface	Signed floating-point number

RawMassFlow	
Navigation	⊟ Expert → Sensor → Testpoints → RawMassFlow
Description	Displays the unprocessed mass flow (contains all sensor corrections etc.).
User interface	Signed floating-point number
Additional information	*Description*
	Displays the mass flow value before offset and factor correction, damping, low flow cut off and monitoring of a partially filled pipe. This value can be used to check the current zero point, similar to the zero point adjustment function.
	Dependency
	🛈 The unit is taken from the **Mass flow unit** parameter (→ 🕮 28)

3.2.10   "Supervision" submenu

Navigation   ⊟   Expert → Sensor → Supervision

```
▶ Supervision

            Limit value measuring tube damping                    → 🕮 68
```

Limit value measuring tube damping	🔒
Navigation	⊟ Expert → Sensor → Supervision → Limit tube damp.
Description	Use this function to enter a limit value for measuring tube damping.
User entry	Positive floating-point number
Factory setting	Positive floating-point number

Additional information   *Limit value*

- If the displayed value is outside the limit value, the measuring device displays the diagnostic message ⚠S948 **Tube damping too high**.
- For detecting inhomogeneous media, for example

3.3   "Communication" submenu

Navigation   ▣   Expert → Communication

```
▸ Communication

          ▸ Modbus configuration                          → 🗎 69

          ▸ Modbus information                            → 🗎 73

```

3.3.1   "Modbus configuration" submenu

Navigation   ▣   Expert → Communication → Modbus config.

```
▸ Modbus configuration

          Bus address                                    → 🗎 70

          Baudrate                                       → 🗎 70

          Data transfer mode                             → 🗎 70

          Parity                                         → 🗎 71

          Byte order                                     → 🗎 71

          Telegram delay                                 → 🗎 71

          Assign diagnostic behavior                     → 🗎 72

          Failure mode                                   → 🗎 72

          Interpreter mode                               → 🗎 73
```

Bus address	🔒

Navigation	🔲 Expert → Communication → Modbus config. → Bus address
Description	For entering the device address.
User entry	1 to 247
Factory setting	247

Baudrate	🔒

Navigation	🔲 Expert → Communication → Modbus config. → Baudrate
Description	Use this function to select a transmission rate.
Selection	• 1200 BAUD • 2400 BAUD • 4800 BAUD • 9600 BAUD • 19200 BAUD • 38400 BAUD • 57600 BAUD • 115200 BAUD
Factory setting	19200 BAUD

Data transfer mode	🔒

Navigation	🔲 Expert → Communication → Modbus config. → Data trans. mode
Description	Use this function to select the data transmission mode.
Selection	• ASCII • RTU
Factory setting	RTU

Additional information	*Options*
	• ASCII
	  Transmission of data in the form of readable ASCII characters. Error protection via LRC.
	• RTU
	  Transmission of data in binary form. Error protection via CRC16.

Parity	🔒

Navigation	🖳0 Expert → Communication → Modbus config. → Parity

Description	Use this function to select the parity bit.

Selection	• Odd • Even • None / 1 stop bit • None / 2 stop bits

Factory setting	Even

Additional information   *Options*

Picklist **ASCII** option:
• 0 = **Even** option
• 1 = **Odd** option

Picklist **RTU** option:
• 0 = **Even** option
• 1 = **Odd** option
• 2 = **None / 1 stop bit** option
• 3 = **None / 2 stop bits** option

Byte order	🔒

Navigation	🖳0 Expert → Communication → Modbus config. → Byte order

Description	Use this function to select the sequence in which the bytes are transmitted. The transmission sequence must be coordinated with the Modbus master.

Selection	• 0-1-2-3 • 3-2-1-0 • 1-0-3-2 • 2-3-0-1

Factory setting	1-0-3-2

Telegram delay	🔒

Navigation	🖳0 Expert → Communication → Modbus config. → Telegram delay

Description	Use this function to enter a delay time after which the measuring device replies to the request telegram of the Modbus master. This allows communication to be adapted to slow Modbus RS485 masters.

User entry	0 to 100 ms

Factory setting	6 ms

Assign diagnostic behavior	🔒

Navigation	▣ Expert → Communication → Modbus config. → Assign diag. beh
Description	Use this function to select the diagnostic behavior for Modbus communication.
Selection	• Off • Alarm or warning • Warning • Alarm
Factory setting	Alarm
Additional information	*Description*

Defines the category of messages to which data transmission responds:
• Off
The device continues to measure. The diagnostic event is ignored, and no diagnostic message is generated.
• Alarm or warning
The device continues to measure. A diagnostic message is generated. The signal outputs assume the alarm condition specified in **Failure mode** parameter (→ 🖺 72).
• Warning
The device continues to measure. A diagnostic message is generated. The signal outputs assume the alarm condition specified in **Failure mode** parameter (→ 🖺 72).
• Alarm
The device continues to measure. A diagnostic message is generated. The signal outputs assume the alarm condition specified in **Failure mode** parameter (→ 🖺 72).

Failure mode	🔒

Navigation	▣ Expert → Communication → Modbus config. → Failure mode
Description	Use this function to select the measured value output in the event of a diagnostic message via Modbus communication.
Selection	• NaN value • Last valid value
Factory setting	NaN value
Additional information	*Options*

• NaN value
The device outputs the NaN value [4].
• Last valid value
The device outputs the last valid measured value before the fault occurred.

ℹ This effect of this parameter depends on the option selected in the **Assign diagnostic behavior** parameter (→ 🖺 72).

---

4) Not a Number

Interpreter mode	🔒

Navigation	🖳	Expert → Communication → Modbus config. → Interpreter mode

Description   Use this function to select the interpreter mode. This mode defines the behavior of the telegram reception interpreter.

Selection   • Standard
                         • Ignore surplus bytes

Factory setting   Standard

Additional information   *"Standard" option*

Behaves according to the Modbus standard, i.e. the last two bytes received are the checksum CRC16.

NOTE!

The selection is only relevant in the RTU mode. In the ASCII mode, the device always behaves according to the Modbus standard.

"Ignore surplus bytes" option

If supported by the function code, the two bytes for the checksum CRC16 are determined from the anticipated telegram length. Surplus bytes at the end of the actual telegram are ignored. This is not the standard Modbus behavior.

3.3.2   "Modbus information" submenu

Navigation   🖳   Expert → Communication → Modbus info

▶ Modbus information	
Device ID	→ 🖺 73
Device revision	→ 🖺 74

Device ID	

Navigation	🖳	Expert → Communication → Modbus info → Device ID

Description   Displays the device ID for identifying the measuring device.

User interface   4-digit hexadecimal number

Device revision	

Navigation   ⊟   Expert → Communication → Modbus info → Device revision

Description   Displays the device revision.

User interface   4-digit hexadecimal number

3.3.3   "Modbus data map" submenu

*Navigation*   ⊟   Expert → Communication → Modbus data map

▸ Modbus data map	
Scan list register 0 to 15	→ 🖺 74

Scan list register 0 to 15	🔒

Navigation   ⊟   Expert → Communication → Modbus data map → Scan list reg.0 to 15

Description   Use this function to enter the scan list register. By entering the register address (1-based), up to 16 device parameters can be grouped by assigning them to the scan list registers 0 to 15. The data of the device parameters assigned here are read out via the register addresses 5051 to 5081.

User entry   1 to 65 535

Factory setting   1

3.4   "Application" submenu

Navigation   ⊟   Expert → Application

▸ Application	
Reset all totalizers	→ 🖺 75
▸ Totalizer 1 to n	→ 🖺 75

Reset all totalizers

Navigation   ▨   Expert → Application → Reset all tot.

Description   Use this function to reset all totalizers to the value **0** and restart the totaling process. This
                        deletes all the flow values previously totalized.

Selection   • Cancel
                        • Reset + totalize

Factory setting   Cancel

Additional information *Selection*

                        • Cancel
                          No action is executed and the user exits the parameter.
                        • Reset + totalize
                          All totalizers are reset to 0 and the totaling process is restarted.

3.4.1   "Totalizer 1 to n" submenu

Navigation   ▨   Expert → Application → Totalizer 1 to n

```
► Totalizer 1 to n

                    Assign process variable                      → 🖺 75

                    Mass unit                                    → 🖺 76

                    Volume unit                                  → 🖺 76

                    Corrected volume unit                        → 🖺 77

                    Totalizer operation mode                     → 🖺 78

                    Control Totalizer 1 to n                     → 🖺 78

                    Preset value 1 to n                          → 🖺 79

                    Failure mode                                 → 🖺 79
```

Assign process variable   🔓

Navigation   ▨   Expert → Application → Totalizer 1 to n → Assign variable

Description   Use this function to select a process variable for the Totalizer 1 to n.
Selection	• Off • Mass flow • Volume flow • Corrected volume flow

Factory setting	Mass flow

Additional information	*Description*
	ℹ️ If the option selected is changed, the device resets the totalizer to 0.
	Selection
	If the **Off** option is selected, only **Assign process variable** parameter (→ 📄 75) is still displayed in the **Totalizer 1 to n** submenu. All other parameters in the submenu are hidden.

Mass unit   🔒

Navigation	🔲 Expert → Application → Totalizer 1 to n → Mass unit

Prerequisite	The **Mass flow** option is selected in the **Assign process variable** parameter (→ 📄 75) of the **Totalizer 1 to n** submenu.

Description	Use this function to select the unit for the mass.

Selection	*SI units* • g • kg • t	*US units* • oz • lb • STon
	Custom-specific units User mass	

Factory setting	Country-specific: • kg • lb

Additional information	*Selection*
	ℹ️ For an explanation of the abbreviated units: → 📄 101

Volume unit   🔒

Navigation	🔲 Expert → Application → Totalizer 1 to n → Volume unit

Prerequisite	The **Volume flow** option is selected in the **Assign process variable** parameter (→ 📄 75) of the **Totalizer 1 to n** submenu.

Description	Use this function to select the unit for the volume.

Selection	*SI units*	*US units*	*Imperial units*
	• cm³	• af	• gal (imp)
	• dm³	• ft³	• Mgal (imp)
	• m³	• fl oz (us)	• bbl (imp;beer)
	• ml	• gal (us)	• bbl (imp;oil)
	• l	• kgal (us)	
	• hl	• Mgal (us)	
	• Ml Mega	• bbl (us;oil)	
		• bbl (us;liq.)	
		• bbl (us;beer)	
		• bbl (us;tank)	

Custom-specific units
User vol.

Factory setting	Country-specific:
	• l
	• gal (us)

Additional information   *Selection*

ℹ️ For an explanation of the abbreviated units: → 🗎 101

Corrected volume unit   🔒

Navigation	🖳 Expert → Application → Totalizer 1 to n → Corr. vol. unit

Prerequisite   The **Corrected volume flow** option is selected in the **Assign process variable** parameter (→ 🗎 75) of the **Totalizer 1 to n** submenu.

Description   Use this function to select the unit for the corrected volume.
Selection	*SI units*	*US units*	*Imperial units*
	• Nl	• Sft³	Sgal (imp)
	• Nm³	• Sgal (us)	
	• Sl	• Sbbl (us;liq.)	
	• Sm³		

Custom-specific units
UserCrVol.

Factory setting	Country-specific:
	• Nl
	• Sft³

Additional information   *Selection*

ℹ️ For an explanation of the abbreviated units: → 🗎 101
Totalizer operation mode	

Navigation	☐ Expert → Application → Totalizer 1 to n → Operation mode
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 🖺 75)**Totalizer 1 to n** submenu: • Volume flow • Mass flow • Corrected volume flow
Description	Use this function to select how the totalizer summates the flow.
Selection	• Net flow total • Forward flow total • Reverse flow total
Factory setting	Net flow total
Additional information	*Selection* • Net flow total Positive and negative flow values are totalized and balanced against one another. Net flow is registered in the flow direction. • Forward flow total Only the flow in the forward flow direction is totalized. • Reverse flow total Only the flow against the forward flow direction is totalized (= reverse flow total).

Control Totalizer 1 to n	

Navigation	☐ Expert → Application → Totalizer 1 to n → Control Tot. 1 to n
Prerequisite	One of the following options is selected in the **Assign process variable** parameter (→ 🖺 75) of the **Totalizer 1 to n** submenu: • Volume flow • Mass flow • Corrected volume flow
Description	Use this function to select the control of totalizer value 1-3.
Selection	• Totalize • Reset + hold • Preset + hold • Reset + totalize • Preset + totalize
Factory setting	Totalize

Additional information   *Selection*

- Totalize
  The totalizer is started or continues totalizing with the current counter reading.
- Reset + hold
  The totaling process is stopped and the totalizer is reset to 0.
- Preset + hold
  The totaling process is stopped and the totalizer is set to its defined start value from the
  Preset value parameter (→ 🖹 79).
- Reset + totalize
  The totalizer is reset to 0 and the totaling process is restarted.
- Preset + totalize
  The totalizer is set to the defined start value from the **Preset value** parameter
  (→ 🖹 79) and the totaling process is restarted.

Preset value 1 to n

Navigation   🖿   Expert → Application → Totalizer 1 to n → Preset value 1 to n

Prerequisite   One of the following options is selected in the **Assign process variable** parameter
(→ 🖹 75) of the **Totalizer 1 to n** submenu:
- Volume flow
- Mass flow
- Corrected volume flow

Description   Use this function to enter a start value for the Totalizer 1 to n.

User entry   Signed floating-point number

Factory setting   Country-specific:
- 0 kg
- 0 lb

Additional information   *User entry*

ℹ️ The unit of the selected process variable is specified for the totalizer depending on the
selection made in the **Assign process variable** parameter (→ 🖹 75):
- **Volume flow** option: **Volume flow unit** parameter (→ 🖹 29)
- **Mass flow** option: **Mass flow unit** parameter (→ 🖹 28)
- **Corrected volume flow** option: **Corrected volume unit** parameter (→ 🖹 77)

Failure mode   🔒

Navigation   🖿   Expert → Application → Totalizer 1 to n → Failure mode

Prerequisite   One of the following options is selected in the **Assign process variable** parameter
(→ 🖹 75) of the **Totalizer 1 to n** submenu:
- Volume flow
- Mass flow
- Corrected volume flow

Description   Use this function to select how a totalizer behaves in the event of a device alarm.

Selection	• Stop • Actual value • Last valid value

Factory setting	Stop

Additional information   *Description*

ℹ️ This setting does not affect the failsafe mode of other totalizers and the outputs. This is specified in separate parameters.

Selection

- Stop
  Totalizing is stopped when a device alarm occurs.
- Actual value
  The totalizer continues to count based on the actual measured value; the device alarm is ignored.
- Last valid value
  The totalizer continues to count based on the last valid measured value before the device alarm occurred.

3.5   "Diagnostics" submenu

Navigation   🖥️   Expert → Diagnostics

‣ Diagnostics		
	Actual diagnostics	→ 🔖 81
	Timestamp	→ 🔖 81
	Previous diagnostics	→ 🔖 81
	Timestamp	→ 🔖 82
	Operating time from restart	→ 🔖 82
	Operating time	→ 🔖 82

	‣ Event logbook	→ 🔖 87
	‣ Device information	→ 🔖 87
	‣ Min/max values	→ 🔖 91
	‣ Simulation	→ 🔖 97

Actual diagnostics

Navigation	▣ Expert → Diagnostics → Actual diagnos.
Prerequisite	A diagnostic event has occurred.
Description	Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.
Additional information	*Display*

🛈 Additional pending diagnostic messages can be viewed in the **Diagnostic list** submenu (→ 🕮 83).

Example

For the display format:
⊗F271 Main electronic failure

Timestamp

Navigation	▣ Expert → Diagnostics → Timestamp
Description	Displays the operating time when the current diagnostic message occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*Display*

🛈 The diagnostic message can be viewed via the **Actual diagnostics** parameter (→ 🕮 81).

Example

For the display format:
24d12h13m00s

Previous diagnostics

Navigation	▣ Expert → Diagnostics → Prev.diagnostics
Prerequisite	Two diagnostic events have already occurred.
Description	Displays the diagnostic message that occurred before the current message.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.

Additional information	*Example*
	For the display format:
	✪F271 Main electronic failure

Timestamp

Navigation	⊟ Expert → Diagnostics → Timestamp
Description	Displays the operating time when the last diagnostic message before the current message occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*Display*

The diagnostic message can be viewed via the **Previous diagnostics** parameter (→ 🖻 81).

Example

For the display format:
24d12h13m00s

Operating time from restart

Navigation	⊟ Expert → Diagnostics → Time fr. restart
Description	Use this function to display the time the device has been in operation since the last device restart.
User interface	Days (d), hours (h), minutes (m) and seconds (s)

Operating time

Navigation	⊟ Expert → Diagnostics → Operating time
Description	Use this function to display the length of time the device has been in operation.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*User interface*

The maximum number of days is 9999, which is equivalent to 27 years.

3.5.1 "Diagnostic list" submenu

Navigation ⊟ Expert → Diagnostics → Diagnostic list

Diagnostics 5	→ 🗎 86
Timestamp	→ 🗎 86

Diagnostics 1

Navigation ⊟ Expert → Diagnostics → Diagnostic list → Diagnostics 1

Description Displays the current diagnostics message with the highest priority.

User interface Symbol for diagnostic behavior, diagnostic code and short message.

Additional information *Examples*

For the display format:
- ⊗F271 Main electronic failure
- ⊗F276 I/O module failure

Timestamp

Navigation ⊟ Expert → Diagnostics → Diagnostic list → Timestamp

Description Displays the operating time when the diagnostic message with the highest priority occurred.

User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*Display*

The diagnostic message can be viewed via the **Diagnostics 1** parameter (→ 🖺 83).

Example

For the display format:
24d12h13m00s

Diagnostics 2

Navigation	🖳	Expert → Diagnostics → Diagnostic list → Diagnostics 2
Description		Displays the current diagnostics message with the second-highest priority.
User interface		Symbol for diagnostic behavior, diagnostic code and short message.
Additional information		*Examples*

For the display format:
- ⊗F271 Main electronic failure
- ⊗F276 I/O module failure

Timestamp

Navigation	🖳	Expert → Diagnostics → Diagnostic list → Timestamp
Description		Displays the operating time when the diagnostic message with the second-highest priority occurred.
User interface		Days (d), hours (h), minutes (m) and seconds (s)
Additional information		*Display*

The diagnostic message can be viewed via the **Diagnostics 2** parameter (→ 🖺 84).

Example

For the display format:
24d12h13m00s

Diagnostics 3

Navigation	🖳	Expert → Diagnostics → Diagnostic list → Diagnostics 3
Description		Displays the current diagnostics message with the third-highest priority.

User interface	Symbol for diagnostic behavior, diagnostic code and short message.

Additional information	*Examples*
	For the display format:

- ⊗F271 Main electronic failure
- ⊗F276 I/O module failure

Timestamp

Navigation	⊟ Expert → Diagnostics → Diagnostic list → Timestamp

Description	Displays the operating time when the diagnostic message with the third-highest priority occurred.

User interface	Days (d), hours (h), minutes (m) and seconds (s)

Additional information	*Display*

ℹ The diagnostic message can be viewed via the **Diagnostics 3** parameter (→ 🖹 84).

Example

For the display format:
24d12h13m00s

Diagnostics 4

Navigation	⊟ Expert → Diagnostics → Diagnostic list → Diagnostics 4

Description	Displays the current diagnostics message with the fourth-highest priority.

User interface	Symbol for diagnostic behavior, diagnostic code and short message.

Additional information	*Examples*
	For the display format:

- ⊗F271 Main electronic failure
- ⊗F276 I/O module failure

Timestamp

Navigation	⊟ Expert → Diagnostics → Diagnostic list → Timestamp

Description	Displays the operating time when the diagnostic message with the fourth-highest priority occurred.

User interface	Days (d), hours (h), minutes (m) and seconds (s)

Additional information	*Display*

ℹ️ The diagnostic message can be viewed via the **Diagnostics 4** parameter (→ 📄 85).

Example

For the display format:
24d12h13m00s

Diagnostics 5

Navigation	🔲	Expert → Diagnostics → Diagnostic list → Diagnostics 5

Description	Displays the current diagnostics message with the fifth-highest priority.

User interface	Symbol for diagnostic behavior, diagnostic code and short message.

Additional information	*Examples*

For the display format:
- ⊗F271 Main electronic failure
- ⊗F276 I/O module failure

Timestamp

Navigation	🔲	Expert → Diagnostics → Diagnostic list → Timestamp

| Description	Displays the operating time when the diagnostic message with the fifth-highest priority occurred.

User interface	Days (d), hours (h), minutes (m) and seconds (s)

Additional information	*Display*

ℹ️ The diagnostic message can be viewed via the **Diagnostics 5** parameter (→ 📄 86).

Example

For the display format:
24d12h13m00s

3.5.2   "Event logbook" submenu

Navigation   ⊟   Expert → Diagnostics → Event logbook

▶ Event logbook	
Filter options	→ 🗎 87
Filter options   🔒

Navigation	⊟	Expert → Diagnostics → Event logbook → Filter options

Description   Use this function to select the category whose event messages are displayed in the event list of the operating tool.

Selection   • All
                         • Failure (F)
                         • Function check (C)
                         • Out of specification (S)
                         • Maintenance required (M)
                         • Information (I)

**Factory setting**   All

Additional information   *Description*

ℹ️   The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:
      • F = Failure
      • C = Function Check
      • S = Out of Specification
      • M = Maintenance Required

3.5.3   "Device information" submenu

Navigation   ⊟   Expert → Diagnostics → Device info

▶ Device information	
Device tag	→ 🗎 88
Serial number	→ 🗎 88
Firmware version	→ 🗎 88
Device name	→ 🗎 89
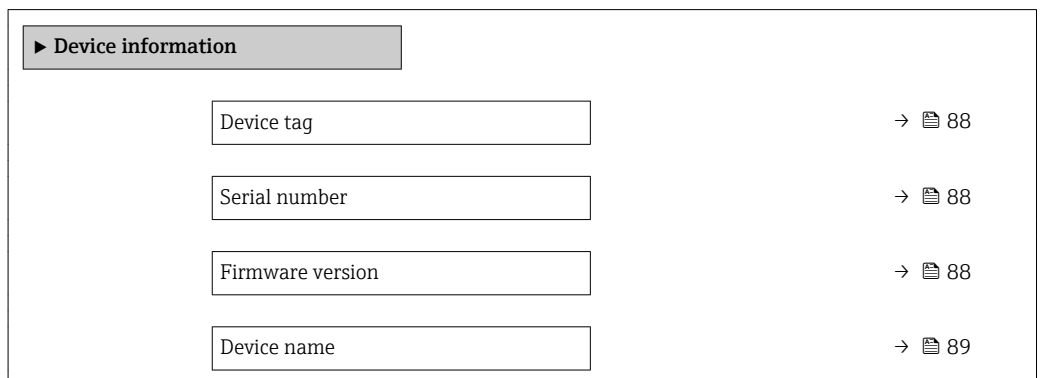

Order code	→ 🗐 89
Extended order code 1	→ 🗐 89
Extended order code 2	→ 🗐 90
Extended order code 3	→ 🗐 90
ENP version	→ 🗐 90
Configuration counter	→ 🗐 91

Device tag

Navigation	🖳	Expert → Diagnostics → Device info → Device tag
Description		Displays a unique name for the measuring point so it can be identified quickly within the plant.
User interface		Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).
Factory setting		LPGmass

Serial number

Navigation	🖳	Expert → Diagnostics → Device info → Serial number
Description		Displays the serial number of the measuring device.
	ℹ	The number can be found on the nameplate of the sensor and transmitter.
User interface		A maximum of 11-digit character string comprising letters and numbers.
Additional information		*Description*
	ℹ	Uses of the serial number • To identify the measuring device quickly, e.g. when contacting Endress+Hauser. • To obtain specific information on the measuring device using the Device Viewer: www.endress.com/deviceviewer

Firmware version

Navigation	🖳	Expert → Diagnostics → Device info → Firmware version
Description		Displays the device firmware version installed.

User interface	Character string in the format xx.yy.zz

Additional information   *Display*

The Firmware version is also located:
- On the title page of the Operating instructions
- On the transmitter nameplate

Device name

Navigation	▣	Expert → Diagnostics → Device info → Device name

Description   Displays the name of the measuring device. It can also be found on the nameplate.

User interface   Max. 32 characters such as letters or numbers.

Factory setting   LPGmass

Order code

Navigation	▣	Expert → Diagnostics → Device info → Order code

Description   Displays the device order code.

User interface   Character string composed of letters, numbers and certain punctuation marks (e.g. /).

Additional information   *Description*

It can be found in the "Order code" field on the nameplate.

The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.

Uses of the order code
- To order an identical spare device.
- To identify the device quickly and easily, e.g. when contacting Endress+Hauser.

Extended order code 1

Navigation	▣	Expert → Diagnostics → Device info → Ext. order cd. 1

Description   Displays the first part of the extended order code.

On account of length restrictions, the extended order code is split into a maximum of 3 parameters.

User interface   Character string

Additional information   *Description*

The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.

It can be found in the "Ext. ord. cd." field on the nameplate.

Extended order code 2	🔒

Navigation   Expert → Diagnostics → Device info → Ext. order cd. 2

Description   Displays the second part of the extended order code.

User interface   Character string

Additional information   For additional information, see **Extended order code 1** parameter (→ 🖺 89)

Extended order code 3	🔒

Navigation   Expert → Diagnostics → Device info → Ext. order cd. 3

Description   Displays the third part of the extended order code.

User interface   Character string

Additional information   For additional information, see **Extended order code 1** parameter (→ 🖺 89)

ENP version

Navigation   Expert → Diagnostics → Device info → ENP version

Description   Displays the version of the electronic nameplate.

User interface   Character string

Factory setting   2.02.00

Additional information   *Description*

This electronic nameplate stores a data record for device identification that includes more data than the nameplates attached to the outside of the device.

Configuration counter

Navigation   ▣   Expert → Diagnostics → Device info → Config. counter

Description   Displays the number of parameter modifications for the device. When the user changes a
                        parameter setting, this counter is incremented.

User interface   0 to 65 535

3.5.4   "Min/max values" submenu

Navigation   ▣   Expert → Diagnostics → Min/max val.

```
‣ Min/max values

              Reset min/max values                          → 🖹 91

              ‣ Electronic temperature                      → 🖹 92

              ‣ Medium temperature                          → 🖹 93

              ‣ Carrier pipe temperature                    → 🖹 93

              ‣ Oscillation frequency                       → 🖹 94

              ‣ Oscillation damping                         → 🖹 96

              ‣ Signal asymmetry                            → 🖹 96
```

Reset min/max values   🔒

Navigation   ▣   Expert → Diagnostics → Min/max val. → Reset min/max

Description   Use this function to select measured variables whose minimum, maximum and average
                        measured values are to be reset.

Selection   • Cancel
                        • Oscillation amplitude
                        • Oscillation damping
                        • Oscillation frequency
                        • Signal asymmetry

Factory setting   Cancel

"Electronic temperature" submenu

Navigation   ⌨   Expert → Diagnostics → Min/max val. → Electronic temp.

► Electronic temperature	
Minimum value	→ 🖺 92
Maximum value	→ 🖺 92

Minimum value

Navigation   ⌨   Expert → Diagnostics → Min/max val. → Electronic temp. → Minimum value

Description   Displays the lowest previously measured temperature value of the main electronics module.

User interface   Signed floating-point number

Additional information *Dependency*

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖺 34)

Maximum value

Navigation   ⌨   Expert → Diagnostics → Min/max val. → Electronic temp. → Maximum value

Description   Displays the highest previously measured temperature value of the main electronics module.

User interface   Signed floating-point number

Additional information *Dependency*

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖺 34)

"Medium temperature" submenu

Navigation   ▣   Expert → Diagnostics → Min/max val. → Medium temp.

> ▶ **Medium temperature**
>
> | Minimum value | → 🖹 93 |
> |---|---|
> | Maximum value | → 🖹 93 |

Minimum value

Navigation   ▣   Expert → Diagnostics → Min/max val. → Medium temp. → Minimum value

Description   Displays the lowest previously measured medium temperature value.

User interface   Signed floating-point number

Additional information   *Dependency*

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖹 34)

Maximum value

Navigation   ▣   Expert → Diagnostics → Min/max val. → Medium temp. → Maximum value

Description   Displays the highest previously measured medium temperature value.

User interface   Signed floating-point number

Additional information   *Dependency*

ℹ️ The unit is taken from the **Temperature unit** parameter (→ 🖹 34)

"Carrier pipe temperature" submenu

Navigation   ▣   Expert → Diagnostics → Min/max val. → Carr. pipe temp.

> ▶ **Carrier pipe temperature**
>
> | Minimum value | → 🖹 94 |
> |---|---|
> | Maximum value | → 🖹 94 |

Minimum value

Navigation	⊟ Expert → Diagnostics → Min/max val. → Carr. pipe temp. → Minimum value
Prerequisite	Order code for "Application package", option EB "Heartbeat Verification + Monitoring"
Description	Displays the lowest previously measured temperature value of the carrier pipe.
User interface	Signed floating-point number
Additional information	*Dependency*

The unit is taken from the **Temperature unit** parameter (→ 🖺 34)

Maximum value

Navigation	⊟ Expert → Diagnostics → Min/max val. → Carr. pipe temp. → Maximum value
Prerequisite	Order code for "Application package", option EB "Heartbeat Verification + Monitoring"
Description	Displays the highest previously measured temperature value of the carrier pipe.
User interface	Signed floating-point number
Additional information	*Dependency*

The unit is taken from the **Temperature unit** parameter (→ 🖺 34)

"Oscillation frequency" submenu

Navigation   ⊟   Expert → Diagnostics → Min/max val. → Oscil. frequency

▶ Oscillation frequency	
Minimum value	→ 🖺 94
Maximum value	→ 🖺 95

Minimum value

Navigation	⊟ Expert → Diagnostics → Min/max val. → Oscil. frequency → Minimum value
Description	Displays the lowest previously measured oscillation frequency.

User interface   Signed floating-point number

Maximum value

Navigation   ⊟   Expert → Diagnostics → Min/max val. → Oscil. frequency → Maximum value

Description   Displays the highest previously measured oscillation frequency.

User interface   Signed floating-point number

"Oscillation amplitude" submenu

Navigation   ⊟   Expert → Diagnostics → Min/max val. → Oscil. amplitude
▸ Oscillation amplitude	
Minimum value	→ 🖳 95
Maximum value	→ 🖳 95

Minimum value

Navigation   ⊟   Expert → Diagnostics → Min/max val. → Oscil. amplitude → Minimum value

Description   Displays the lowest previously measured oscillation amplitude.

User interface   Signed floating-point number

Maximum value

Navigation   ⊟   Expert → Diagnostics → Min/max val. → Oscil. amplitude → Maximum value

Description   Displays the highest previously measured oscillation amplitude.

User interface   Signed floating-point number

"Oscillation damping" submenu

Navigation   ▣   Expert → Diagnostics → Min/max val. → Oscil. damping

▸ Oscillation damping	
Minimum value	→ 🕮 96
Maximum value	→ 🕮 96

Minimum value

Navigation   ▣   Expert → Diagnostics → Min/max val. → Oscil. damping → Minimum value

Description   Displays the lowest previously measured oscillation damping.

User interface   Signed floating-point number

Maximum value

Navigation   ▣   Expert → Diagnostics → Min/max val. → Oscil. damping → Maximum value

Description   Displays the highest previously measured oscillation damping.

User interface   Signed floating-point number

"Signal asymmetry" submenu

Navigation   ▣   Expert → Diagnostics → Min/max val. → Signal asymmetry

▸ Signal asymmetry	
Minimum value	→ 🕮 97
Maximum value	→ 🕮 97

Minimum value

Navigation	Expert → Diagnostics → Min/max val. → Signal asymmetry → Minimum value
Description	Displays the lowest previously measured signal asymmetry.
User interface	Signed floating-point number

Maximum value

Navigation	Expert → Diagnostics → Min/max val. → Signal asymmetry → Maximum value
Description	Displays the highest previously measured signal asymmetry.
User interface	Signed floating-point number

3.5.5 "Simulation" submenu

Navigation Expert → Diagnostics → Simulation

▸ Simulation	
Assign simulation process variable	→ 🖺 97
Value process variable	→ 🖺 98
Simulation device alarm	→ 🖺 98
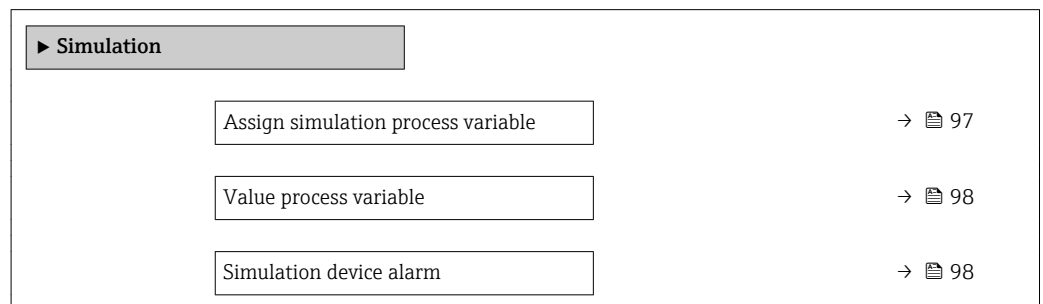

Assign simulation process variable

Navigation	Expert → Diagnostics → Simulation → Assign proc.var.
Description	Use this function to select a process variable for the simulation process that is activated.
Selection	▪ Off ▪ Mass flow ▪ Volume flow ▪ Corrected volume flow ▪ Density ▪ Reference density ▪ Temperature
Factory setting	Off

Additional information   *Description*

ⓘ   The simulation value of the process variable selected is defined in the **Value process variable** parameter (→ 🔲 98).

Value process variable	🔒

Navigation   ☒   Expert → Diagnostics → Simulation → Value proc. var.

Prerequisite   One of the following options is selected in the **Assign simulation process variable** parameter (→ 🔲 97):
• Mass flow
• Volume flow
• Corrected volume flow
• Density
• Reference density
• Temperature

Description   Use this function to enter a simulation value for the selected process variable. Subsequent measured value processing and the signal output use this simulation value. In this way, users can verify whether the measuring device has been configured correctly.

User entry   Depends on the process variable selected

Factory setting   0

Additional information   *User entry*

ⓘ   The unit of the displayed measured value is taken from the **System units** submenu (→ 🔲 27).

Simulation device alarm	🔒

Navigation   ☒   Expert → Diagnostics → Simulation → Sim. alarm

Description   Use this function to switch the device alarm on and off.

Selection   • Off
• On

Factory setting   Off

4   Country-specific factory settings

4.1   SI units

Not valid for USA and Canada.

4.1.1   System units

Mass	kg
Mass flow	kg/min
Volume	l
Volume flow	l/min
Corrected volume	Nl
Corrected volume flow	Nl/min
Density	kg/l
Reference density	kg/Nl
Temperature	°C
Pressure	bar g

4.1.2   On value low flow cut off

The switch-on point depends on the type of medium and the nominal diameter.

Nominal diameter [mm]	[l/min]
8	0.25
15	1
25	2.5
40	6
50	10

4.2   US units

Only valid for USA and Canada.

4.2.1   System units

Mass	lb
Mass flow	lb/min
Volume	gal (us)
Volume flow	gal/min (us)
Corrected volume	Sft³
Corrected volume flow	Sft³/min
Density	g/cm³
Reference density	g/Scm³

Temperature	lb/ft³
Pressure	psi g

4.2.2 On value low flow cut off

The switch-on point depends on the type of medium and the nominal diameter.

Nominal diameter [in]	[gal/min (us)]
³/₈	0.06
½	0.25
1	0.6
1½	1.5
2	2.5

5   Explanation of abbreviated units

5.1   SI units

Process variable	Units	Explanation
Density	g/cm³, g/m³	Gram/volume unit
	kg/dm³, kg/l, kg/m³	Kilogram/volume unit
	SD4℃, SD15℃, SD20℃	Specific density: The specific density is the ratio of the density of the fluid to the density of water at a water temperature of 4 ℃ (39 ℉), 15 ℃ (59 ℉), 20 ℃ (68 ℉).
	SG4℃, SG15℃, SG20℃	Specific gravity: The specific gravity is the ratio of the density of the fluid to the density of water at a water temperature of 4 ℃ (39 ℉), 15 ℃ (59 ℉), 20 ℃ (68 ℉).
Pressure	Pa a, kPa a, MPa a	Pascal, kilopascal, megapascal (absolute)
	bar	Bar
	Pa g, kPa g, MPa g	Pascal, kilopascal, megapascal (relative/gauge)
	bar g	Bar (relative/gauge)
Mass	g, kg, t	Gram, kilogram, metric ton
Mass flow	g/s, g/min, g/h, g/d	Gram/time unit
	kg/s, kg/min, kg/h, kg/d	Kilogram/time unit
	t/s, t/min, t/h, t/d	Metric ton/time unit
Reference density	kg/Nm³, kg/Nl, g/Scm³, kg/Sm³	Kilogram, gram/standard volume unit
Corrected volume	Nl, Nm³, Sm³	Normal liter, normal cubic meter, standard cubic meter
Corrected volume flow	Nl/s, Nl/min, Nl/h, Nl/d	Normal liter/time unit
	Nm³/s, Nm³/min, Nm³/h, Nm³/d	Normal cubic meter/time unit
	Sm³/s, Sm³/min, Sm³/h, Sm³/d	Standard cubic meter/time unit
Temperature	℃ , K	Celsius, Kelvin
Volume	cm³, dm³, m³	Cubic centimeter, cubic decimeter, cubic meter
	ml, l, hl, Ml Mega	Milliliter, liter, hectoliter, megaliter
Volume flow	cm³/s, cm³/min, cm³/h, cm³/d	Cubic centimeter/time unit
	dm³/s, dm³/min, dm³/h, dm³/d	Cubic decimeter/time unit
	m³/s, m³/min, m³/h, m³/d	Cubic meter/time unit
	ml/s, ml/min, ml/h, ml/d	Milliliter/time unit
	l/s, l/min, l/h, l/d	Liter/time unit
	hl/s, hl/min, hl/h, hl/d	Hectoliter/time unit
	Ml/s, Ml/min, Ml/h, Ml/d	Megaliter/time unit
Time	s, m, h, d, y	Second, minute, hour, day, year

5.2   US units

Process variable	Units	Explanation
Density	lb/ft³, lb/gal (us)	Pound/cubic foot, pound/gallon
	lb/bbl (us;liq.), lb/bbl (us;beer), lb/bbl (us;oil), lb/bbl (us;tank)	Pound/volume unit

| Process variable	Units	Explanation
Pressure	psi a	Pounds per square inch (absolute)
	psi g	Pounds per square inch (gauge)
Mass	oz, lb, STon	Ounce, pound, standard ton
Mass flow	oz/s, oz/min, oz/h, oz/d	Ounce/time unit
	lb/s, lb/min, lb/h, lb/d	Pound/time unit
	STon/s, STon/min, STon/h, STon/d	Standard ton/time unit
Reference density	lb/Sft³	Weight unit/standard volume unit
Corrected volume	Sft³, Sgal (us), Sbbl (us;liq.)	Standard cubic foot, standard gallon, standard barrel
Corrected volume flow	Sft³/s, Sft³/min, Sft³/h, Sft³/d	Standard cubic foot/time unit
	Sgal/s (us), Sgal/min (us), Sgal/h (us), Sgal/d (us)	Standard gallon/time unit
	Sbbl/s (us;liq.), Sbbl/min (us;liq.), Sbbl/h (us;liq.), Sbbl/d (us;liq.)	Barrel/time unit (normal liquids)
Temperature	°F, °R	Fahrenheit, Rankine
Volume	af	Acre foot
	ft³	Cubic foot
	fl oz (us), gal (us), kgal (us), Mgal (us)	Fluid ounce, gallon, kilogallon, million gallon
	bbl (us;liq.), bbl (us;beer), bbl (us;oil), bbl (us;tank)	Barrel (normal liquids), barrel (beer), barrel (petrochemicals), barrel (filling tanks)
Volume flow	af/s, af/min, af/h, af/d	Acre foot/time unit
	ft³/s, ft³/min, ft³/h, ft³/d	Cubic foot/time unit
	fl oz/s (us), fl oz/min (us), fl oz/h (us), fl oz/d (us)	Fluid ounce/time unit
	gal/s (us), gal/min (us), gal/h (us), gal/d (us)	Gallon/time unit
	kgal/s (us), kgal/min (us), kgal/h (us), kgal/d (us)	Kilogallon/time unit
	Mgal/s (us), Mgal/min (us), Mgal/h (us), Mgal/d (us)	Million gallon/time unit
	bbl/s (us;liq.), bbl/min (us;liq.), bbl/h (us;liq.), bbl/d (us;liq.)	Barrel/time unit (normal liquids) Normal liquids: 31.5 gal/bbl
	bbl/s (us;beer), bbl/min (us;beer), bbl/h (us;beer), bbl/d (us;beer)	Barrel /time unit (beer) Beer: 31.0 gal/bbl
	bbl/s (us;oil), bbl/min (us;oil), bbl/h (us;oil), bbl/d (us;oil)	Barrel/time unit (petrochemicals) Petrochemicals: 42.0 gal/bbl
	bbl/s (us;tank), bbl/min (us;tank), bbl/h (us;tank), bbl/d (us;tank)	Barrel/time unit (filling tank) Filling tanks: 55.0 gal/bbl
Time	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem (before midday), post meridiem (after midday)

5.3   Imperial units

Process variable	Units	Explanation
Density	lb/gal (imp), lb/bbl (imp;beer), lb/bbl (imp;oil)	Pound/volume unit
Corrected volume	Sgal (imp)	Standard gallon
Corrected volume flow	Sgal/s (imp), Sgal/min (imp), Sgal/h (imp), Sgal/d (imp)	Standard gallon/time unit
Volume	gal (imp), Mgal (imp)	Gallon, mega gallon
	bbl (imp;beer), bbl (imp;oil)	Barrel (beer), barrel (petrochemicals)
Volume flow	gal/s (imp), gal/min (imp), gal/h (imp), gal/d (imp)	Gallon/time unit
	Mgal/s (imp), Mgal/min (imp), Mgal/h (imp), Mgal/d (imp)	Mega gallon/time unit
	bbl/s (imp;beer), bbl/min (imp;beer), bbl/h (imp;beer), bbl/d (imp;beer)	Barrel /time unit (beer) Beer: 36.0 gal/bbl
	bbl/s (imp;oil), bbl/min (imp;oil), bbl/h (imp;oil), bbl/d (imp;oil)	Barrel/time unit (petrochemicals) Petrochemicals: 34.97 gal/bbl
Time	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem (before midday), post meridiem (after midday)

6 Modbus RS485 Register Information

6.1 Notes

6.1.1 Structure of the register information

The individual parts of a parameter description are described in the following section:

Navigation: navigation path to the parameter					
Parameter	Register	Data type	Access type	Selection/input	→ 🖹
Name of parameter	Indicated in decimal numerical format	• Float length = 4 byte • Integer length = 2 byte • String length, depending on parameter	Possible type of access to parameter: • Read access via function codes 03, 04 or 23 • Write access via function codes 06, 16 or 23	**Selection** List of the individual options for the parameter • Option 1 • **Option 2** • **Option 3** (+) ℹ️ • Factory setting highlighted in bold • (+) = Factory setting depends on country, order options or device settings **User entry** Input range for the parameter	Specified number of pages and cross-reference to standard parameter description

> **NOTICE**
>
> **If non-volatile device parameters are modified via the MODBUS RS485 function codes 06, 16 or 23, the change is saved in the EEPROM of the measuring device.**
> The number of writes to the EEPROM is technically restricted to a maximum of 1 million.
> ▶ Make sure to comply with this limit since, if it is exceeded, data loss and measuring device failure will result.
> ▶ Avoid constantly writing non-volatile device parameters via the MODBUS RS485.

6.1.2 Address model

The Modbus RS485 register addresses of the measuring device are implemented in accordance with the "Modbus Applications Protocol Specification V1.1".

In addition, systems are used that work with the register address model "Modicon Modbus Protocol Reference Guide (PI-MBUS-300 Rev. J)".

Depending on the function code used, a number is added at the start of the register address with this specification:
• "3" → "Read" access
• "4" → "Write" access

| Function code	Access type	Register in accordance with "Modbus Applications Protocol Specification"	Register in accordance with "Modicon Modbus Protocol Reference Guide"
03 04 23	Read	XXXX Example: mass flow = 2007	3XXXX Example: mass flow = 32007
06 16 23	Write	XXXX Example: reset totalizer = 6401	4XXXX Example: reset totalizer = 46401
6.2 Overview of the Expert operating menu

Navigation: Expert → Diagnostics					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🗐
Actual diagnostics	2732	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	81
Timestamp	2719	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	81
Previous diagnostics	2734	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	81
Timestamp	2068	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	82
Operating time from restart	2624	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	82
Operating time	2631	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	82

"Diagnostic list" submenu

Navigation: Expert → Diagnostics → Diagnostic list					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🗐
Diagnostics 1	2736	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	83
Timestamp	2710	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	83
Diagnostics 2	2738	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	84
Timestamp	2701	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	84
Diagnostics 3	2740	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	84
Timestamp	2692	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	85
Diagnostics 4	2742	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	85
Timestamp	2683	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	85
Diagnostics 5	2744	Integer	Read	Symbol for diagnostic behavior, diagnostic code and short message.	86
Timestamp	2675	Integer	Read	Days (d), hours (h), minutes (m) and seconds (s)	86

"Event logbook" submenu

Navigation: Expert → Diagnostics → Event logbook					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🗐
Filter options	2639	Integer	Read / Write	0 = Failure (F) 4 = Maintenance required (M) 8 = Function check (C) 12 = Out of specification (S) 16 = Information (I) **255 = All**	87

"Device information" submenu

Navigation: Expert → Diagnostics → Device information					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖹
Device tag	2026	String	Read	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	88
Serial number	7003	String	Read	A maximum of 11-digit character string comprising letters and numbers.	88
Firmware version	7277	String	Read	Character string in the format xx.yy.zz	88
Device name	7263	String	Read	Max. 32 characters such as letters or numbers.	89
Order code	2058	String	Read	Character string composed of letters, numbers and certain punctuation marks (e.g. /).	89
Extended order code 1	2212	String	Read	Character string	89
Extended order code 2	2222	String	Read	Character string	90
Extended order code 3	2232	String	Read	Character string	90
ENP version	4003	String	Read	Character string	90
Configuration counter	3100	Integer	Read	0 to 65 535	91

"Min/max values" submenu

Navigation: Expert → Diagnostics → Min/max values					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖹
Reset min/max values	2525	Integer	Read / Write	**0 = Cancel** 8 = Oscillation amplitude 10 = Oscillation damping 12 = Oscillation frequency 13 = Signal asymmetry	91

"Electronic temperature" submenu

Navigation: Expert → Diagnostics → Min/max values → Electronic temperature					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖹
Minimum value	2421	Float	Read	Signed floating-point number	92
Maximum value	2419	Float	Read	Signed floating-point number	92

"Medium temperature" submenu

Navigation: Expert → Diagnostics → Min/max values → Medium temperature					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖹
Minimum value	7529	Float	Read	Signed floating-point number	93
Maximum value	7531	Float	Read	Signed floating-point number	93

"Carrier pipe temperature" submenu

Navigation: Expert → Diagnostics → Min/max values → Carrier pipe temperature					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Minimum value	7533	Float	Read	Signed floating-point number	94
Maximum value	7535	Float	Read	Signed floating-point number	94

"Oscillation frequency" submenu

Navigation: Expert → Diagnostics → Min/max values → Oscillation frequency					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Minimum value	2459	Float	Read	Signed floating-point number	94
Maximum value	2468	Float	Read	Signed floating-point number	95

"Oscillation amplitude" submenu

Navigation: Expert → Diagnostics → Min/max values → Oscillation amplitude					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Minimum value	2472	Float	Read	Signed floating-point number	95
Maximum value	2470	Float	Read	Signed floating-point number	95

"Oscillation damping" submenu

Navigation: Expert → Diagnostics → Min/max values → Oscillation damping					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Minimum value	2478	Float	Read	Signed floating-point number	96
Maximum value	2423	Float	Read	Signed floating-point number	96

"Signal asymmetry" submenu

Navigation: Expert → Diagnostics → Min/max values → Signal asymmetry					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Minimum value	2474	Float	Read	Signed floating-point number	97
Maximum value	2476	Float	Read	Signed floating-point number	97

"Simulation" submenu

Navigation: Expert → Diagnostics → Simulation					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 🖺
Assign simulation process variable	6813	Integer	Read / Write	**0 = Off** 1 = Mass flow 2 = Volume flow 3 = Corrected volume flow 4 = Density 5 = Reference density 7 = Temperature	97
Value process variable	6814	Float	Read / Write	Depends on the process variable selected	98
Simulation device alarm	6812	Integer	Read / Write	**0 = Off** 1 = On	98
