Safety instructions

- Install the device according to the National Electrical Code (NFPA70) or the Canadian Electrical Code, Part 1 (C22.1), where applicable.
- The sensor must be connected and operated in accordance with the Operating Instructions of the sensor and of the transmitter to be connected. All sensor operating data must be observed.
- Metallic process connection parts have to be mounted electrostatically conductive at the mounting location (< 1 MΩ).
- The sensor may only be used in liquid media with a conductivity of a least 10 nS/cm.
- Non-metal process connections must be protected against electrostatic charge.
- In order to avoid electrostatic charge clean the sensor with a damp cloth only.
- Full compliance with regulations for electrical systems in hazardous locations (EN/IEC 60079-14) is mandatory when using the devices and sensors.
- Ensure correct installation to maintain the housing protection type. (Use original seal. Fit cable entry properly. Tighten nut).
- The degree of protection only applies when the flange is mounted.
- The maximum ambient and process temperatures for temperature classes T3, T4 or T6 are limited as specified in the tables of this certificate.
- Observe the documentation and the control drawings of the transmitter.

Temperature tables

	Temperature class	
Typ	**T4**	**T6**
CLS50D-C2*B** CLS50D-C2*C**	-20 °C ≤ T_a ≤ 120 °C	-20 °C ≤ T_a ≤ 70 °C
CLS50D-C2*D**	-20 °C ≤ T_a ≤ 110 °C	-20 °C ≤ T_a ≤ 70 °C
CLS50-S***	-20 °C ≤ T_a ≤ 125 °C	-20 °C ≤ T_a ≤ 75 °C
CLS54-O****	-10 °C ≤ T_a ≤ + 105 °C	-10 °C ≤ T_a ≤ + 55 °C

The above temperature table applies only under the installation conditions, which are described in the Operating Instructions. If the installation conditions cannot be met, the maximum process temperature T_p must not exceed the maximum ambient temperature T_a.

Connection

Ex specification

- The sensor may only be connected to the following transmitter: Liquiline type CM42-LR/S (CLS50D) or CM42-IR/S (CLS50)
- CLS50 only
  The maximum permissible length of the measuring cable is as follows: 55 m (180 ft).
- Install per control drawing:

Safety Instructions Liquiline CM42, XA01687C

The sensors can be connected both Class I Division 1 and Class I Division 2: Division 1 equipment can be used in Division 2 as long as they are installed in the same manner as they were intended for Division 1 (NEC 500.8 (B)(2)). This is the case for Memosens sensor with inductive coupling between sensor and cable. There are no different installation methods between sensor and cable. For the cable-transmitter connection the XA of the transmitter must be considered.
