2	Installation instructions	5
3	Process connections	6

1 Introduction

Endress+Hauser thermometers for hygienic and aseptic applications are available with different process connection types. If a standard thermometer cannot be ordered with the required standard process connection via the product configurator, this special combination must be manufactured on customer's request.

For this reason, this document is available as a supplementary documentation so that the technical data for all available process connections can be called up via serial number:

- Internet: www.endress.com/deviceviewer
- Smartphone/tablet: Endress+Hauser Operations App

in addition to the associated Technical Information (TI), the Operating Instructions (BA) or the Brief Operating Instructions (KA).

Supplementary documentation for:

Thermometer	Documentation type
TM311	TI01439T BA01952T KA01437T
TM371	TI01292T BA01581T KA01272T
TM372	TI01612T BA02224T KA01563T
TMR35	TI00123R BA00215R
TTR35	TI00105R BA00229R
DTT35	TI00125R BA00235R
TM401	TI01058T BA02023T
TM411 (TE411, TK40)	TI01038T BA02023T
TT411	TI01099T BA02023T
TM402	TI01349T BA02023T
TM412	TI01348T BA02023T
TT412	TI01350T BA02023T

NOTICE

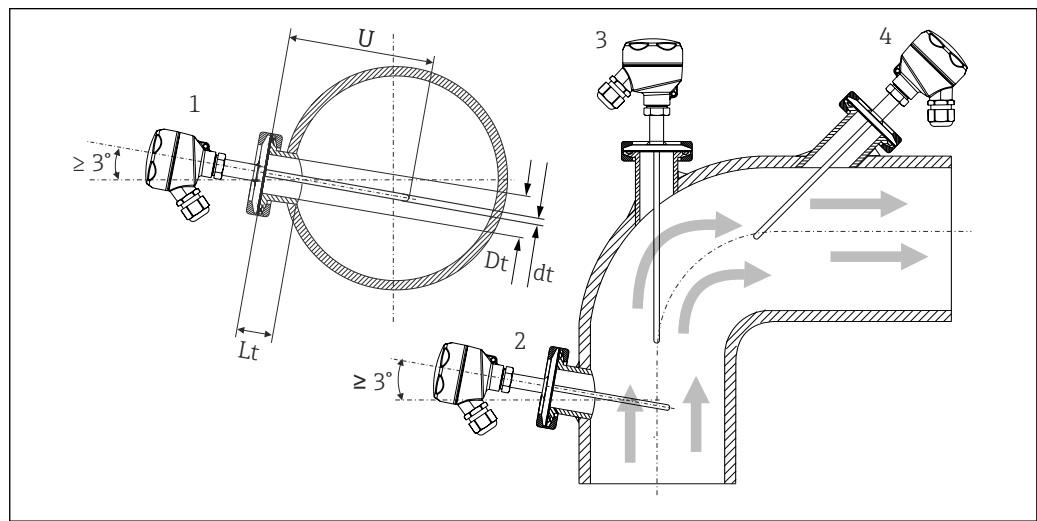

Maximum pressure and temperature may be limited by the thermometer or thermowell type. Maximum design pressure and temperature stated is for the process connection only and not for the thermometer type.

- Check the technical specifications in the related Technical Information and Operating Instructions (BA or KA) for thermometer pressure-temperature ratings.

2 Installation instructions

The immersion length of the thermometer can influence the accuracy. If the immersion length is too small then errors in the measurement are caused by heat conduction via the process connection and the container wall. If installing in a pipe, the immersion length should ideally correspond to half of the pipe diameter.

- Installation possibilities: pipes, tanks or other plant components
- To minimize the heat conduction error, a minimum immersion length is recommended depending on the type of sensor used and the design of the insert. This immersion length corresponds to the minimum insertion length for the calibration.

A000B946

■ 1 Installation examples

1, 2 Perpendicular to the flow direction, installed at a min. angle of 3° to ensure self-draining

3 On elbows

4 Inclined installation in pipes with a small nominal diameter

U Immersion length

i In the case of pipes with a small nominal diameter, it is advisable for the tip of the thermometer to project well into the process so that it extends past the pipe axis. Installation at an angle (4) could be another solution. When determining the immersion length or installation depth, all the parameters of the thermometer and of the medium to be measured must be taken into account (e.g. flow velocity, process pressure).

i The requirements of the EHEDG and the 3-A Sanitary Standard must be adhered to.

Installation instructions EHEDG/cleanability: $L_t \leq (D_t - dt)$

Installation instructions 3-A/cleanability: $L_t \leq 2(D_t - dt)$

1. As a general rule, the thermometers should be installed in such a way that does not impact their ability to be cleaned (the requirements of the 3-A Sanitary Standard must be observed).
2. The Varivent® and Liquiphant-M weld-in adapter and Ingold (+ weld-in adapter) connections enable flush-mounted installation.

3 Process connections

All dimensions in mm (in).
