

FLOWSIC500 RECALIBRATION SERVICE

Spare parts, refurbishment
and recalibration as a
one-stop-shop

Accuracy and reliability

Endress+Hauser is a reliable manufacturer of ultrasonic gas flow meters with many years of experience in this product segment. In addition, Endress+Hauser sets high standards with the durability, accuracy, and long-term stability of its products. To ensure the measurement accuracy of its devices, Endress+Hauser also offers a general overhaul to manufacturer standards and recalibration for the FLOWSIC500 gas flow meter. This service guarantees ultimate precision in the long run and is also the basis for maximum device service life.

- Refurbishment to factory standards
- Proof of device performance
- Compliance for the next recalibration interval

At a glance

- Visual inspection by trained personnel
- General overhaul of the measuring device
- Leakage and function test
- Flow test under laboratory conditions
- Organization of the recalibration process
- Creation of service documentation
- Refurbishment of flow conditioning

Your benefits

- General overhaul of the measuring device and recalibration all from a single source
- Highest accuracy and traceability of the measurement result
- Safety for your company and customers
- Compliant with recalibration regulations
- Calibration validity for the next recalibration interval
- Proof of fulfillment of the assured properties over the life cycle

Workflow example

Please contact your local Endress+Hauser office for further information on additional services related to your calibration project, e.g. decommissioning, recommissioning, pre-inspection on site or provision of loan devices.
