1 About this document

1.1 Document function
The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the Expert operating menu.

It is used to perform tasks that require detailed knowledge of the function of the device:
- Commissioning measurements under difficult conditions
- Optimal adaptation of the measurement to difficult conditions
- Detailed configuration of the communication interface
- Error diagnostics in difficult cases

1.2 Target group
The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations.

1.3 Using this document

1.3.1 Information on the document structure
The document lists the submenus and their parameters according to the structure from the Expert menu (→ 8), which is displayed when the "Maintenance" user role is enabled.
Additional information regarding:

- The arrangement of the parameters according to the menu structure of the **Operation** menu, **Setup** menu, **Diagnostics** menu with a brief description:
  Operating Instructions
- Operating concept of the operating menus: Operating Instructions
1.3.2  Structure of a parameter description

The individual parts of a parameter description are described in the following section:

<table>
<thead>
<tr>
<th>Complete parameter name</th>
<th>Write-protected parameter = ☑</th>
</tr>
</thead>
</table>

| Navigation              | Navigation path to the parameter via the local display (direct access code) or web browser |
|                        | Navigation path to the parameter via the operating tool |
|                        | The names of the menus, submenus and parameters are abbreviated to the form in which they appear on the display and in the operating tool. |

| Prerequisite            | The parameter is only available under these specific conditions |

| Description             | Description of the parameter function |

| Selection               | List of the individual options for the parameter |
|                        | • Option 1 |
|                        | • Option 2 |

| User entry              | Input range for the parameter |

| User interface          | Display value/data for the parameter |

| Factory setting         | Default setting ex works |

| Additional information  | Additional explanations (e.g. in examples): |
|                        | • On individual options |
|                        | • On display values/data |
|                        | • On the input range |
|                        | • On the factory setting |
|                        | • On the parameter function |

## Direct access

<table>
<thead>
<tr>
<th>Navigation</th>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Expert → Direct access</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

## Prerequisite

There is a local display with operating elements.

## Description

Use this function to enter the access code to enable direct access to the desired parameter via the local display. A parameter number is assigned to each parameter for this purpose.

## User entry

0 to 65535

## Additional information

The direct access code consists of a 5-digit number (at maximum) and the channel number, which identifies the channel of a process variable: e.g. 00914-2. In the navigation view, this appears on the right-hand side in the header of the selected parameter.
1 Direct access code

Note the following when entering the direct access code:

- The leading zeros in the direct access code do not have to be entered.
  Example: Enter “914” instead of “00914”
- If no channel number is entered, channel 1 is accessed automatically.
  Example: Enter 00914 → Assign variable parameter
- If a different channel is accessed: Enter the direct access code with the corresponding channel number.
  Example: Enter 00914-2 → Assign variable parameter

---

Locking status

**Navigation**

Expert → Locking status

**Description**

Displays the active write protection.

**User interface**

- Hardware locked
- Temp. locked

**Additional information**

User interface

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device

**Selection**

<table>
<thead>
<tr>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hardware locked</td>
<td>The write protection switch (DIP switch) for hardware locking is activated on the I/O electronic module. This locks write access to the parameters.</td>
</tr>
<tr>
<td>Temp. locked</td>
<td>Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset etc.). Once the internal processing has been completed, the parameters can be changed once again.</td>
</tr>
</tbody>
</table>
Access stat.disp

Navigation

Expert → Access stat.disp

Prerequisite

A local display is provided.

Description

Displays the access authorization to the parameters via the local display.

User interface

- Operator
- Maintenance

Factory setting

Operator

Additional information

Description

If the ⚖-symbol appears in front of a parameter, it cannot be modified via the local display with the current access authorization.

Access authorization can be modified via the Ent. access code parameter (→ 13).

For information about the Ent. access code parameter: see the "Disabling write protection via the access code" section of the Operating Instructions for the device

If additional write protection is active, this restricts the current access authorization even further.

Display

Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device

Access stat.tool

Navigation

Expert → Access stat.tool

Description

Displays the access authorization to the parameters via the operating tool or Web browser.

User interface

- Operator
- Maintenance

Factory setting

Maintenance

Additional information

Description

Access authorization can be modified via the Ent. access code parameter (→ 13).

If additional write protection is active, this restricts the current access authorization even further.

Display

Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device
Ent. access code

Navigation

Expert → Ent. access code

Description
Use this function to enter the user-specific release code to remove parameter write protection.

Display language

Navigation

Expert → System → Display → Display language

Prerequisite

A local display is provided.

Description

Use this function to select the configured language on the local display.

Selection

- English
- Deutsch *
- Français *
- Español *
- Italiano *
- Nederlands *
- Portuguesa *
- Polski *
- русский язык (Ru) *
- Svenska *
- Türkçe *
- 中文 (Chinese) *
- 日本語 (Japanese) *

* Visibility depends on order options or device settings
Format display

**Navigation**

Expert → System → Display → Format display

**Prerequisite**

A local display is provided.

**Description**

Use this function to select how the measured value is shown on the local display.

**Selection**

- 1 value, max.
- Bargr. + 1 value
- 2 values
- Val. large + 2 val.
- 4 values

**Factory setting**

1 value, max.

**Additional information**

*Description*

The display format (size, bar graph etc.) and number of measured values displayed simultaneously (1 to 4) can be configured. This setting only applies to normal operation.

- The Value 1 display parameter (→ 17) to Value 4 display parameter (→ 22) are used to specify which measured values are shown on the local display and in what order.

- If more measured values are specified than the display mode selected permits, then the values alternate on the device display. The display time until the next change is configured via the Display interval parameter (→ 23).

* Visibility depends on order options or device settings
Possible measured values shown on the local display:

"1 value, max." option

```
| m[1] | 900.00 kg/h |
```

"Bargr. + 1 value" option

```
| m[1] | 900.00 kg/h |
| U[1] | 900.00 l/h  |
```

"2 values' option

```
| m[1] | 900.00 kg/h |
| U[1] | 900.00 l/h  |
```

"Val. large+2val." option

```
| m[1] | 900.00 kg/h |
| U[1] | 900.00 l/h  |
| ρ[1] | 1.00 kg/l   |
```

"4 values' option

```
| m[1] | 900.00 kg/h |
| U[1] | 900.00 l/h  |
| ρ[1] | 1.00 kg/l   |
| Σ[1] | 213.94 kg   |
```
Value 1 display

Navigation

Expert → System → Display → Value 1 display

Prerequisite

A local display is provided.

Description

Use this function to select one of the measured values to be shown on the local display.

Selection

- Mass flow
- Volume flow
- Correct. vol. flow
- Target mass flow *
- Carrier mass fl. *
- Density
- Ref. density
- Concentration *

- Totalizer 3

Factory setting

Mass flow

* Visibility depends on order options or device settings
Description of device parameters

Additional information

Description
If several measured values are displayed at once, the measured value selected here will be the first value to be displayed. The value is only displayed during normal operation.

The Format display parameter (→ 15) is used to specify how many measured values are displayed simultaneously and how.

Dependency
The unit of the displayed measured value is taken from the System units submenu (→ 49).

Selection
- Oscil. frequency option
  Displays the current oscillation frequency of the measuring tubes. This frequency depends on the density of the medium.
- Oscil. amplitude option
  Displays the relative oscillation amplitude of the measuring tubes in relation to the preset value. This value is 100 % under optimum conditions.
- Oscil. damping option
  Displays the current oscillation damping. Oscillation damping is an indicator of the sensor's current need for excitation power.
- Signal asymmetry option
  Displays the relative difference between the oscillation amplitude at the inlet and outlet of the sensor. The measured value is the result of production tolerances of the sensor coils and should remain constant over the life time of a sensor.

0% bargraph 1

Navigation
Expert → System → Display → 0% bargraph 1

Prerequisite
A local display is provided.

Description
Use this function to enter the 0% bar graph value to be shown on the display for the measured value 1.

User entry
Signed floating-point number

Factory setting
Country-specific:
- 0 kg/h
- 0 lb/min

Additional information

Description
The Format display parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

User entry
The unit of the displayed measured value is taken from the System units submenu (→ 49).
100% bargraph 1

**Navigation**

Expert → System → Display → 100% bargraph 1

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 1.

**User entry**

Signed floating-point number

**Factory setting**

Depends on country and nominal diameter → 137

**Additional information**

The **Format display** parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

Decimal places 1

**Navigation**

Expert → System → Display → Decimal places 1

**Prerequisite**

A measured value is specified in the **Value 1 display** parameter (→ 17).

**Description**

Use this function to select the number of decimal places for measured value 1.

**Selection**

- x
- x.x
- x.xx
- x.xxx
- x.xxxx

**Factory setting**

x.xx

**Additional information**

This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

Value 2 display

**Navigation**

Expert → System → Display → Value 2 display

**Prerequisite**

A local display is provided.
**Description**
Use this function to select one of the measured values to be shown on the local display.

**Selection**
For the picklist, see the **Value 1 display** parameter (→ 17)

**Factory setting**
None

**Additional information**
*Description*
If several measured values are displayed at once, the measured value selected here will be the second value to be displayed. The value is only displayed during normal operation.

*Dependency*
The **Format display** parameter (→ 15) is used to specify how many measured values are displayed simultaneously and how.

**Decimal places 2**

**Navigation**
Expert → System → Display → Decimal places 2

**Prerequisite**
A measured value is specified in the **Value 2 display** parameter (→ 19).

**Description**
Use this function to select the number of decimal places for measured value 2.

**Selection**
- x
- x.x
- x.xx
- x.xxx
- x.xxxx

**Factory setting**
x.xx

**Additional information**
*Description*
This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

**Value 3 display**

**Navigation**
Expert → System → Display → Value 3 display

**Prerequisite**
A local display is provided.

**Description**
Use this function to select one of the measured values to be shown on the local display.

**Selection**
For the picklist, see the **Value 1 display** parameter (→ 17)

**Factory setting**
None
### Additional information

**Description**

If several measured values are displayed at once, the measured value selected here will be the third value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ 15) is used to specify how many measured values are displayed simultaneously and how.

**Selection**

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

### 0% bargraph 3

**Navigation**

Expert → System → Display → 0% bargraph 3

**Prerequisite**

A selection was made in the **Value 3 display** parameter (→ 20).

**Description**

Use this function to enter the 0% bar graph value to be shown on the display for the measured value 3.

**User entry**

Signed floating-point number

**Factory setting**

Country-specific:

- 0 kg/h
- 0 lb/min

**Additional information**

The **Format display** parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

**User entry**

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

### 100% bargraph 3

**Navigation**

Expert → System → Display → 100% bargraph 3

**Prerequisite**

A selection was made in the **Value 3 display** parameter (→ 20).

**Description**

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 3.

**User entry**

Signed floating-point number

**Factory setting**

0
Description of device parameters

Additional information

Description

The **Format display** parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

User entry

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

Decimal places 3

Navigation

Expert → System → Display → Decimal places 3

Prerequisite

A measured value is specified in the **Value 3 display** parameter (→ 20).

Description

Use this function to select the number of decimal places for measured value 3.

Selection

- x
- x.x
- x.xx
- x.xxx
- x.xxxx

Factory setting

x.xx

Additional information

Description

This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

Value 4 display

Navigation

Expert → System → Display → Value 4 display

Prerequisite

A local display is provided.

Description

Use this function to select one of the measured values to be shown on the local display.

Selection

For the picklist, see the **Value 1 display** parameter (→ 17)

Factory setting

None
### Additional information

**Description**
If several measured values are displayed at once, the measured value selected here will be the fourth value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ 15) is used to specify how many measured values are displayed simultaneously and how.

**Selection**

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

### Decimal places 4

<table>
<thead>
<tr>
<th>Navigation</th>
<th>专家 → 系统 → 显示 → 位数4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prerequisite</td>
<td>A measured value is specified in the <strong>Value 4 display</strong> parameter (→ 22).</td>
</tr>
<tr>
<td>Description</td>
<td>Use this function to select the number of decimal places for measured value 4.</td>
</tr>
</tbody>
</table>
| Selection | • x  
• x.x  
• x.xx  
• x.xxx  
• x.xxxx |
| Factory setting | x.xx |

**Additional information**

This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

### Display interval

<table>
<thead>
<tr>
<th>Navigation</th>
<th>专家 → 系统 → 显示 → 显示间隔</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prerequisite</td>
<td>A local display is provided.</td>
</tr>
<tr>
<td>Description</td>
<td>Use this function to enter the length of time the measured values are displayed if the values alternate on the display.</td>
</tr>
<tr>
<td>User entry</td>
<td>1 to 10 s</td>
</tr>
<tr>
<td>Factory setting</td>
<td>5 s</td>
</tr>
</tbody>
</table>
Additional information

Description
This type of alternating display only occurs automatically if the number of measured values defined exceeds the number of values the selected display format can display simultaneously.

- The Value 1 display parameter (→ 17) to Value 4 display parameter (→ 22) are used to specify which measured values are shown on the local display.
- The display format of the displayed measured values is specified using the Format display parameter (→ 15).

Display damping

Navigation
Expert → System → Display → Display damping

Prerequisite
A local display is provided.

Description
Use this function to enter a time constant for the reaction time of the local display to fluctuations in the measured value caused by process conditions.

User entry
0.0 to 999.9 s

Factory setting
0.0 s

Additional information

User entry
Use this function to enter a time constant (PT1 element 1) for display damping:
- If a low time constant is entered, the display reacts particularly quickly to fluctuating measured variables.
- On the other hand, the display reacts more slowly if a high time constant is entered.

Damping is switched off if 0 is entered (factory setting).

Header

Navigation
Expert → System → Display → Header

Prerequisite
A local display is provided.

Description
Use this function to select the contents of the header of the local display.

Selection
- Device tag
- Free text

Factory setting
Device tag

Additional information

Description
The header text only appears during normal operation.

1) proportional transmission behavior with first order delay
Selection

- Device tag
  Is defined in the **Device tag** parameter (→ 121).
- Free text
  Is defined in the **Header text** parameter (→ 25).

Description

Use this function to enter a customer-specific text for the header of the local display.

User entry

Max. 12 characters such as letters, numbers or special characters (e.g. @, %, /)

Factory setting

-------------

Additional information

**Description**

The header text only appears during normal operation.

User entry

The number of characters displayed depends on the characters used.

Separator

**Navigation**

Expert → System → Display → Separator

**Prerequisite**

A local display is provided.
### Description of device parameters

**Proline Promass 100 EtherNet/IP**

| Description | Use this function to select the decimal separator. |
| Selection   | • . (point)  
|             | • , (comma) |
| Factory setting | . (point) |

### Contrast display

**Navigation**  
Expert → System → Display → Contrast display

**Prerequisite**  
A local display is provided.

**Description**  
Use this function to enter a value to adapt the display contrast to the ambient conditions (e.g. the lighting or viewing angle).

**User entry**  
20 to 80 %

**Factory setting**  
Depends on the display

### Backlight

**Navigation**  
Expert → System → Display → Backlight

**Description**  
Use this function to switch the backlight of the local display on and off.

**Selection**  
• Disable  
• Enable

**Factory setting**  
Enable

### Access stat.disp

**Navigation**  
Expert → System → Display → Access stat.disp

**Prerequisite**  
A local display is provided.

**Description**  
Displays the access authorization to the parameters via the local display.

**User interface**  
• Operator  
• Maintenance

**Factory setting**  
Operator
Additional information

*Description*

If the ☑-symbol appears in front of a parameter, it cannot be modified via the local display with the current access authorization.

- Access authorization can be modified via the **Ent. access code** parameter (→ 13).

- For information about the **Ent. access code** parameter: see the 'Disabling write protection via the access code' section of the Operating Instructions for the device.

- If additional write protection is active, this restricts the current access authorization even further.

*Display*

Detailed information on access authorization is provided in the 'User roles and associated access authorization' and 'Operating concept' sections of the Operations Instructions for the device.

---

### 3.1.2 "Diagn. handling" submenu

*Navigation*

[Expert → System → Diagn. handling](#)

- **Diagn. handling**
  - Alarm delay
  - **Diagn. behavior**

*Alarm delay*

*Description*

Use this function to enter the time interval until the device generates a diagnostic message.

- The diagnostic message is reset without a time delay.

*User entry*

0 to 60 s

*Factory setting*

0 s

*Additional information*

This setting affects the following diagnostic messages:

- 046 Sensor limit
- 140 Sensor sig.asym.
- 144 MeasErrorTooHigh
- 190 Special event 1
- 191 Special event 5
- 192 Special event 9
Description of device parameters

- 830 Sensor temp.
- 831 Sensor temp.
- 832 Electronic temp.
- 833 Electronic temp.
- 834 Process temp.
- 835 Process temp.
- 843 Process limit
- 862 Partly filled
- 910 Tube not oscil.
- 912 Medium inhomog.
- 913 Medium unsuitab.
- 944 MonitoringFailed
- 990 Special event 4
- 991 Special event 8
- 992 Special event 12

"Diagn. behavior" submenu

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the Diagn. behavior submenu (→  28).

The following options are available in the Assign behavior of diagnostic no. xxx parameters:

<table>
<thead>
<tr>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm</td>
<td>The device stops measurement. The totalizers assume the defined alarm condition. A diagnostic message is generated.</td>
</tr>
<tr>
<td>Warning</td>
<td>The device continues to measure. The totalizers are not affected. A diagnostic message is generated.</td>
</tr>
<tr>
<td>Logbook only</td>
<td>The device continues to measure. The diagnostic message is entered only in the Event logbook submenu (→  118) (Event list submenu (→  119)) and is not displayed in alternation with the measured value display.</td>
</tr>
<tr>
<td>Off</td>
<td>The diagnostic event is ignored, and no diagnostic message is generated or entered.</td>
</tr>
</tbody>
</table>

For a list of all the diagnostic events, see the Operating Instructions for the device

3.1.3 "Administration" submenu

Navigation

Expert → System → Administration

"Def. access code" wizard

The **Def. access code** wizard (→ 35) is only available when operating via the local display or Web browser.

If operating via the operating tool, the **Def. access code** parameter (→ 37) can be found directly in the **Administration** submenu. There is no **Confirm code** parameter if the device is operated via the operating tool.

Navigation

Expert → System → Administration → Def. access code

---

**Def. access code**

**Navigation**

Expert → System → Administration → Def. access code → Def. access code

**Description**

Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the configuration of the device against any inadvertent changes via the local display or Web browser.

**User entry**

0 to 9999

**Factory setting**

0
Additional information

Description
The write protection affects all parameters in the document marked with the symbol.
On the local display, the symbol in front of a parameter indicates that the parameter is write-protected.
The parameters that cannot be write-accessed are grayed out in the Web browser.

Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the Ent. access code parameter → 13.

If you lose the access code, please contact your Endress+Hauser sales organization.

User entry
A message is displayed if the access code is not in the input range.

Factory setting
If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the device configuration data can be modified. The user is logged on in the "Maintenance" role.

Confirm code

<table>
<thead>
<tr>
<th>Navigation</th>
<th>Expert → System → Administration → Def. access code → Confirm code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Description</td>
<td>Enter the defined release code a second time to confirm the release code.</td>
</tr>
<tr>
<td>User entry</td>
<td>0 to 9999</td>
</tr>
<tr>
<td>Factory setting</td>
<td>0</td>
</tr>
</tbody>
</table>

"Reset access code" submenu

<td>→ 37</td>
</tr>
</tbody>
</table>
### Operating time

**Navigation**  
Expert → Diagnostics → Operating time  
Expert → Diagnostics → Operating time

**Description**  
Use this function to display the length of time the device has been in operation.

**User interface**  
Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**  
*User interface*  
The maximum number of days is 9999, which is equivalent to 27 years.

### Reset acc. code

**Navigation**  
Expert → System → Administration → Reset acc. code → Reset acc. code

**Description**  
Use this function to enter a reset code to reset the user-specific release code to the factory setting.

**User entry**  
Character string comprising numbers, letters and special characters

**Factory setting**  
0x00

**Additional information**  
*Description*  
For a reset code, contact your Endress+Hauser service organization.

*User entry*  
The reset code can only be entered via:  
- Web browser  
- DeviceCare, FieldCare (via interface CDI RJ45)  
- Fieldbus

### Additional parameters in the "Administration" submenu

### Def. access code

**Navigation**  
Expert → System → Administration → Def. access code

**Description**  
Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the configuration of the device against any inadvertent changes via the operating tool.

**User entry**  
0 to 9999
**Device reset**

**Navigation**
Expert → System → Administration → Device reset

**Description**
Use this function to choose whether to reset the device configuration - either entirely or in part - to a defined state.

**Selection**
- Cancel
- To delivery set.
- Restart device

**Factory setting**
Cancel

**Additional information**

<table>
<thead>
<tr>
<th>Options</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cancel</td>
<td>No action is executed and the user exits the parameter.</td>
</tr>
<tr>
<td>To delivery set.</td>
<td>Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.</td>
</tr>
<tr>
<td></td>
<td>This option is not visible if no customer-specific settings have been ordered.</td>
</tr>
<tr>
<td>Restart device</td>
<td>The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.</td>
</tr>
</tbody>
</table>

**Activate SW opt.**

**Navigation**
Expert → System → Administration → Activate SW opt.

**Description**
Use this function to enter an activation code to enable an additional, ordered software option.
User entry: Max. 10-digit string consisting of numbers.

Factory setting: Depends on the software option ordered.

Additional information:

Description:
If a measuring device was ordered with an additional software option, the activation code is programmed in the device at the factory.

User entry:

To activate a software option subsequently, please contact your Endress+Hauser sales organization.

NOTE!
The activation code is linked to the serial number of the measuring device and varies according to the device and software option.

If an incorrect or invalid code is entered, this results in the loss of software options that have already been activated.

▸ Before you enter a new activation code, make a note of the current activation code.
▸ Enter the new activation code provided by Endress+Hauser when the new software option was ordered.
▸ Once the activation code has been entered, check if the new software option is displayed in the SW option overv. parameter (→ 39).
  ➔ The new software option is active if it is displayed.
  ➔ If the new software option is not displayed or all software options have been deleted, the code entered was either incorrect or invalid.
▸ If the code entered is incorrect or invalid, enter the old activation code.
▸ Have your Endress+Hauser sales organization check the new activation code remembering to specify the serial number or ask for the code again.

Example for a software option
Order code for "Application package", option EB 'Heartbeat Verification + Monitoring'

The software options currently enabled are displayed in the SW option overv. parameter (→ 39).

Web browser:

Once a software option has been activated, the page must be loaded again in the Web browser.

---

**SW option overv.**

**Navigation**: Expert → System → Administration → SW option overv.

**Description**: Displays all the software options that are enabled in the device.

**User interface**:
- HBT Verification
- HBT Monitoring
- Concentration
- Viscosity
Additional information

Description
Displays all the options that are available if ordered by the customer.

"HBT Verification" option and "HBT Monitoring" option
Order code for 'Application package', option EB 'Heartbeat Verification + Monitoring'

'Concentration' option
Order code for 'Application package', option ED 'Concentration' and option EE 'Special density'

"Viscosity" option
Only available for Promass I.
Order code for 'Application package', option EG 'Viscosity'

### Mass flow

**Navigation**

**Description**

Displays the mass flow that is currently measured.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Mass flow unit** parameter (→ 47)

### Volume flow

**Navigation**

**Description**

Displays the volume flow currently calculated.

**User interface**

Signed floating-point number

**Additional information**

*Description*

The volume flow is calculated from the mass flow currently measured and the density currently measured.

*Dependency*

The unit is taken from the **Volume flow unit** parameter (→ 51)

### Correct.vol.flow

**Navigation**

**Description**

Displays the corrected volume flow currently measured.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Cor.volflow unit** parameter (→ 53)
# Density

**Navigation**

**Description**

Displays the density currently measured.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Density unit** parameter (→ 55)

---

# Ref. density

**Navigation**

**Description**

Displays the reference density currently calculated.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Ref. dens. unit** parameter (→ 56)

---

# Temperature

**Navigation**

**Description**

Displays the medium temperature currently measured.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Temperature unit** parameter (→ 56)

---

# Pressure value

**Navigation**

**Description**

Displays the fixed or external pressure value.

**User interface**

Signed floating-point number
Additional information

**Dependency**

The unit is taken from the **Pressure unit** parameter (→ 57).

---

**Dynam. viscosity**

**Navigation**

**Prerequisite**

For the following order code:

*Application package*, option **EG** "Viscosity"

The software options currently enabled are displayed in the **SW option overv.** parameter (→ 39).

**Description**

Displays the dynamic viscosity currently calculated.

**User interface**

Signed floating-point number

**Additional information**

**Dependency**

The unit is taken from the **Dyn. visc. unit** parameter.

---

**Kinematic visc.**

**Navigation**

**Prerequisite**

For the following order code:

*Application package*, option **EG** "Viscosity"

The software options currently enabled are displayed in the **SW option overv.** parameter (→ 39).

**Description**

Displays the kinematic viscosity currently calculated.

**User interface**

Signed floating-point number

**Additional information**

**Dependency**

The unit is taken from the **Kin. visc. unit** parameter.
**TempCompDynVisc**

**Navigation**

**Prerequisite**

For the following order code:
"Application package", option EG "Viscosity"

The software options currently enabled are displayed in the SW option overv. parameter (→ 39).

**Description**

Displays the temperature compensation currently calculated for the viscosity.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the Dyn. visc. unit parameter.

**TempCompKinVisc**

**Navigation**

**Prerequisite**

For the following order code:
"Application package", option EG "Viscosity"

The software options currently enabled are displayed in the SW option overv. parameter (→ 39).

**Description**

Displays the temperature compensation currently calculated for the kinetic viscosity.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the Kin. visc. unit parameter.

**Concentration**

**Navigation**

**Prerequisite**

For the following order code:
"Application package", option ED "Concentration"

The software options currently enabled are displayed in the SW option overv. parameter (→ 39).

**Description**

Displays the concentration currently calculated.

**User interface**

Signed floating-point number
Additional information  

Dependency

The unit is taken from the Concentr. unit parameter.

Target mass flow

Navigation  

Prerequisite

With the following conditions:
- Order code for "Application package", option ED 'Concentration'
- The WT-% option or the User conc. option is selected in the Concentr. unit parameter.

Description

Displays the mass flow currently measured for the target medium.

User interface

Signed floating-point number

Additional information  

Dependency

The unit is taken from the Mass flow unit parameter (→ 39).

Carrier mass fl.

Navigation  

Prerequisite

With the following conditions:
- Order code for "Application package", option ED 'Concentration'
- The WT-% option or the User conc. option is selected in the Concentr. unit parameter.

Description

Displays the mass flow currently measured for the carrier medium.

User interface

Signed floating-point number

Additional information  

Dependency

The unit is taken from the Mass flow unit parameter (→ 39).

"Totalizer" submenu

**Navigation**

Expert → Sensor → Measured val. → Totalizer

<table>
<thead>
<tr>
<th>Totalizer val. 1 to n</th>
<th>→ 48</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tot. overflow 1 to n</td>
<td>→ 48</td>
</tr>
</tbody>
</table>
**Totalizer val. 1 to n**

**Navigation**

Expert → Sensor → Measured val. → Totalizer → Totalizer val. 1 to n

**Prerequisite**

One of the following options is selected in the **Assign variable** parameter (→ 107) of the **Totalizer 1 to n** submenu:

- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow *
- Carrier mass fl.*

**Description**

Displays the current totalizer reading.

**User interface**

Signed floating-point number

**Additional information**

*Description*

As it is only possible to display a maximum of 7 digits in the operating tool, the current counter value is the sum of the totalizer value and the overflow value from the **Tot. overflow 1 to n** parameter if the display range is exceeded.

In the event of an error, the totalizer adopts the mode defined in the **Failure mode** parameter (→ 111).

*User interface*

The value of the process variable totalized since measuring began can be positive or negative. This depends on the settings in the **Operation mode** parameter (→ 109).

The unit of the selected process variable is specified for the totalizer in the **Unit totalizer** parameter (→ 107).

*Example*

Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool:

- Value in the **Totalizer val. 1** parameter: 1968457 m³
- Value in the **Tot. overflow 1** parameter: 1 ⋅ 10⁷ (1 overflow) = 10000000 [m³]
- Current totalizer reading: 11968457 m³

---

**Tot. overflow 1 to n**

**Navigation**

Expert → Sensor → Measured val. → Totalizer → Tot. overflow 1 to n

**Prerequisite**

One of the following options is selected in the **Assign variable** parameter (→ 107) of the **Totalizer 1 to n** submenu:

- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow *
- Carrier mass fl.*

**Description**

Displays the current totalizer overflow.

*Visibility depends on order options or device settings*
User interface

Integer with sign

Additional information

Description

If the current totalizer reading exceeds 7 digits, which is the maximum value range that can be displayed by the operating tool, the value above this range is output as an overflow. The current totalizer value is therefore the sum of the overflow value and the totalizer value from the Totalizer val. 1 to n parameter.

User interface

The unit of the selected process variable is specified for the totalizer in the Unit totalizer parameter (→ 107).

Example

Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool:

- Value in the Totalizer val. 1 parameter: 1968457 m³
- Value in the Tot. overflow 1 parameter: $2 \cdot 10^7$ (2 overflows) = 20000000 [m³]
- Current totalizer reading: 21968457 m³

```
Mass text

**Navigation**
Expert → Sensor → System units → User-spec. units → Mass text

**Description**
Use this function to enter a text for the user-specific unit of mass and mass flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

**User entry**
Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**
User mass

**Additional information**

**Result**
The defined unit is shown as an option in the choose list of the following parameters:
- Mass flow unit parameter (→ 50)
- Mass unit parameter (→ 50)

**Example**
If the text CENT for "centner" is entered, the following options are displayed in the picklist for the Mass flow unit parameter (→ 50):
- CENT/s
- CENT/min
- CENT/h
- CENT/d

Mass offset

**Navigation**
Expert → Sensor → System units → User-spec. units → Mass offset

**Description**
Use this function to enter the zero point shift for the user-specific mass and mass flow unit.

**User entry**
Signed floating-point number

**Factory setting**
0

**Additional information**

**Description**
Value in user-specific unit = (factor × value in base unit) + offset

Mass factor

**Navigation**
Expert → Sensor → System units → User-spec. units → Mass factor

**Description**
Use this function to enter a quantity factor (without time) for the user-specific mass and mass flow unit.

**User entry**
Signed floating-point number
### Volume text

**Navigation**

Expert → Sensor → System units → User-spec. units → Volume text

**Description**

Use this function to enter a text for the user-specific unit of volume and volume flow. The corresponding time units (s, min, h, d) for volume flow are generated automatically.

**User entry**

Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**

User vol.

**Additional information**

*Example*

If the text GLAS is entered, the choose list of the Volume flow unit parameter (→ 51) shows the following options:

- GLAS/s
- GLAS/min
- GLAS/h
- GLAS/d

### Volume offset

**Navigation**

Expert → Sensor → System units → User-spec. units → Volume offset

**Description**

Use this function to enter the offset for adapting the user-specific volume unit and volume flow unit (without time).

**User entry**

Signed floating-point number

**Factory setting**

0

**Additional information**

*Description*

Value in user-specific unit = (factor × value in base unit) + offset
### Volume factor

**Navigation**

Expert → Sensor → System units → User-spec. units → Volume factor

**Description**

Use this function to enter a quantity factor (without time) for the user-specific volume and volume flow unit.

**User entry**

Signed floating-point number

**Factory setting**

1.0

---

### Corr. vol. text

**Navigation**

Expert → Sensor → System units → User-spec. units → Corr. vol. text

**Description**

Use this function to enter a text for the user-specific unit of the corrected volume and corrected volume flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

**User entry**

Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**

UserCrVol.

**Additional information**

**Result**

The defined unit is shown as an option in the choose list of the following parameters:

- Cor.volfloow unit parameter (→ 53)
- Corr. vol. unit parameter (→ 54)

**Example**

If the text GLAS is entered, the choose list of the Cor.volfloow unit parameter (→ 53) shows the following options:

- GLAS/s
- GLAS/min
- GLAS/h
- GLAS/d

---

### Corr vol. offset

**Navigation**

Expert → Sensor → System units → User-spec. units → Corr vol. offset

**Description**

Use this function to enter the offset for adapting the user-specific corrected volume unit and corrected volume flow unit (without time).

Value in user-specific unit = \((factor \times value\text{ in base unit}) + offset\)

**User entry**

Signed floating-point number

**Factory setting**

0
**Cor.vol. factor**

- **Navigation**: Expert → Sensor → System units → User-spec. units → Cor.vol. factor
- **Description**: Use this function to enter a quantity factor (without time) for the user-specific corrected volume unit and corrected volume flow unit.
- **User entry**: Signed floating-point number
- **Factory setting**: 1.0

**Density text**

- **Navigation**: Expert → Sensor → System units → User-spec. units → Density text
- **Description**: Use this function to enter a text or the user-specific unit of density.
- **User entry**: Max. 10 characters such as letters, numbers or special characters (@, %, /)
- **Factory setting**: User dens.
- **Additional information**: Result
  - The defined unit is shown as an option in the choose list of the Density unit parameter (→ 55).
  - Example
    - Enter text “CE_L” for centners per liter

**Density offset**

- **Navigation**: Expert → Sensor → System units → User-spec. units → Density offset
- **Description**: Use this function to enter the zero point shift for the user-specific density unit.
  - Value in user-specific unit = (factor × value in base unit) + offset
- **User entry**: Signed floating-point number
- **Factory setting**: 0

**Density factor**

- **Navigation**: Expert → Sensor → System units → User-spec. units → Density factor
- **Description**: Use this function to enter a quantity factor for the user-specific density unit.
### User entry
Signed floating-point number

### Factory setting
1.0

### Pressure text
**Navigation**
Expert → Sensor → System units → User-spec. units → Pressure text

**Description**
Use this function to enter a text for the user-specific pressure unit.

**User entry**
Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**
User pres.

**Additional information**
Result
The defined unit is shown as an option in the choose list of the Pressure unit parameter (→ 57).

### Pressure offset
**Navigation**
Expert → Sensor → System units → User-spec. units → Pressure offset

**Description**
Use this function to enter the offset for adapting the user-specific pressure unit.

**User entry**
Signed floating-point number

**Factory setting**
0

### Pressure factor
**Navigation**
Expert → Sensor → System units → User-spec. units → Pressure factor

**Description**
Use this function to enter a quantity factor for the user-specific pressure unit.

**User entry**
Signed floating-point number

**Factory setting**
1.0

**Additional information**
Example
1 Dyn/cm² = 0.1 Pa → 10 Dyn/cm² = 1 Pa → user entry: 10
### 3.2.3 "Process param." submenu

</tbody>
</table>

**Flow damping**

**Navigation**

Expert → Sensor → Process param. → Flow damping

**Description**

Use this function to enter a time constant for flow damping (PT1 element). Reduction of the variability of the flow measured value (in relation to interference). For this purpose, the depth of the flow filter is adjusted: when the filter setting increases, the reaction time of the device also increases.

**User entry**

0 to 100.0 s

**Factory setting**

0 s

**Additional information**

- The damping is performed by a PT1 element ²).

- **User entry**
  - Value = 0: no damping
  - Value > 0: damping is increased

- **Result**
  - Damping is switched off if 0 is entered (factory setting).

- The damping affects the following variables of the device:
  - Outputs
  - Low flow cut off → 66
  - Totalizers → 106

---

²) Proportional behavior with first-order lag
**Density damping**

**Navigation**
Expert → Sensor → Process param. → Density damping

**Description**
Use this function to enter a time constant for the damping (PT1 element) of the density measured value.

**User entry**
0 to 999.9 s

**Factory setting**
0 s

**Additional information**

*Description*
The damping is performed by a PT1 element.

*User entry*
- Value = 0: no damping
- Value > 0: damping is increased

Damping is switched off if 0 is entered (factory setting).

---

**Temp. damping**

**Navigation**
Expert → Sensor → Process param. → Temp. damping

**Description**
Use this function to enter a time constant for the damping (PT1 element) of the temperature measured value.

**User entry**
0 to 999.9 s

**Factory setting**
0 s

**Additional information**

*Description*
The damping is performed by a PT1 element.

*User entry*
- Value = 0: no damping
- Value > 0: damping is increased

Damping is switched off if 0 is entered (factory setting).

---

3) Proportional behavior with first-order lag
4) Proportional behavior with first-order lag
Flow override

**Description**
Use this function to select whether to interrupt the evaluation of measured values. This is useful for the cleaning processes of a pipeline, for example.

**Selection**
- Off
- On

**Factory setting**
Off

**Additional information**

*Result*
This setting affects all the functions and outputs of the measuring device.

*Description*

**Flow override is active**
- The diagnostic message diagnostic message \(C453\) Flow override is displayed.
- Output values
  - Output: Value at zero flow
  - Temperature: proceeding output
  - Totalizers 1-3: Stop being totalized

Positive zero return can also be enabled via the Status input: Assign stat.inp. parameter.

"Low flow cut off" submenu

**Navigation**

*Expert → Sensor → Process param. → Low flow cut off*

**Assign variable**

**Description**
Use this function to select the process variable for low flow cutoff detection.
Selection
- Off
- Mass flow
- Volume flow
- Correct.vol.flow

Factory setting
Mass flow

On value

Navigation
Expert → Sensor → Process param. → Low flow cut off → On value

Prerequisite
One of the following options is selected in the Assign variable parameter (→ 66):
- Mass flow
- Volume flow
- Correct.vol.flow

Description
Use this function to enter a switch-on value for low flow cut off. Low flow cut off is activated if the value entered is not equal to 0 → 67.

User entry
Positive floating-point number

Factory setting
Depends on country and nominal diameter → 138

Additional information
Dependency
The unit depends on the process variable selected in the Assign variable parameter (→ 66).

Off value

Navigation
Expert → Sensor → Process param. → Low flow cut off → Off value

Prerequisite
One of the following options is selected in the Assign variable parameter (→ 66):
- Mass flow
- Volume flow
- Correct.vol.flow

Description
Use this function to enter a switch-off value for low flow cut off. The off value is entered as a positive hysteresis from the on value → 67.

User entry
0 to 100.0 %

Factory setting
50 %
### Additional information

**Example**

![Diagram](https://example.com/diagram.png)

- **Q**: Flow
- **t**: Time
- **H**: Hysteresis
- **A**: Low flow cut off active
- **1**: Low flow cut off is activated
- **2**: Low flow cut off is deactivated
- **3**: On value entered
- **4**: Off value entered

#### Pres. shock sup.

- **Prerequisite**: One of the following options is selected in the **Assign variable** parameter (→ 66):
  - Mass flow
  - Volume flow
  - Correct.vol.flow
- **Description**: Use this function to enter the time interval for signal suppression (= active pressure shock suppression).
- **User entry**: 0 to 100 s
- **Factory setting**: 0 s
- **Additional information**

  **Pressure shock suppression is enabled**
  - **Prerequisite**:  
    - Flow rate < on-value of low flow cut off
    - Changing the flow direction
  - **Output values**:  
    - Flow displayed: 0
    - Totalizer: the totalizers are pegged at the last correct value

  **Pressure shock suppression is disabled**
  - **Prerequisite**: the time interval set in this function has elapsed.
  - If the flow also exceeds the switch-off value for low flow cut off, the device starts processing the current flow value again and displays it.

  **Example**
  
  When closing a valve, momentarily strong fluid movements may occur in the pipeline, which are registered by the measuring system. These totalized flow values lead to a false totalizer status, particularly during batching processes.
Q  Flow
 t  Time
 A  Drip
 B  Pressure shock
 C  Pressure shock suppression active as specified by the time entered
 D  Pressure shock suppression inactive
 1  Valve closes
 2  Flow falls below the on-value of the low flow cut off; pressure shock suppression is activated
 3  The time entered has elapsed; pressure shock suppression is deactivated
 4  The actual flow value is now displayed and output
 5  On value for low flow cut off
 6  Off value for low flow cut off

"Partial pipe det" submenu

Navigation  

Expert → Sensor → Process param. → Partial pipe det

<table>
<thead>
<tr>
<th>Partial pipe det</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assign variable</td>
</tr>
<tr>
<td>Low value</td>
</tr>
<tr>
<td>High value</td>
</tr>
<tr>
<td>Response time</td>
</tr>
<tr>
<td>Max. damping</td>
</tr>
</tbody>
</table>
Assign variable

Navigation
Expert → Sensor → Process param. → Partial pipe det → Assign variable

Description
Use this function to select a process variable to detect empty or partially filled measuring tubes.
For gas measurement: Deactivate monitoring due to low gas density.

Selection
- Off
- Density
- Ref.density

Factory setting
Off

Low value

Navigation
Expert → Sensor → Process param. → Partial pipe det → Low value

Prerequisite
One of the following options is selected in the Assign variable parameter (→ 70):
- Density
- Ref.density

Description
Use this function to enter a lower limit value to enable detection of empty or partially filled measuring tubes. If the measured density falls below this value, monitoring is enabled.

User entry
Signed floating-point number

Factory setting
200

Additional information
User entry
The lower limit value must be less than the upper limit value defined in the High value parameter (→ 70).

The unit depends on the process variable selected in the Assign variable parameter (→ 70).

Limit value
If the displayed value is outside the limit value, the measuring device displays the diagnostic message $S862$ Partly filled.

High value

Navigation
Expert → Sensor → Process param. → Partial pipe det → High value

Prerequisite
One of the following options is selected in the Assign variable parameter (→ 70):
- Density
- Ref.density
Description | Use this function to enter an upper limit value to enable detection of empty or partially filled measuring tubes. If the measured density exceeds this value, detection is enabled.

User entry | Signed floating-point number

Factory setting | 6000

Additional information | 

Limit value | The upper limit value must be greater than the lower limit value defined in the **Low value** parameter (→ 70).

The unit depends on the process variable selected in the **Assign variable** parameter (→ 70).

**Limit value** | If the displayed value is outside the limit value, the measuring device displays the diagnostic message **S862 Partly filled**.

---

**Response time**

**Prerequisite** | One of the following options is selected in the **Assign variable** parameter (→ 70):
- Density
- Ref.density

**Description** | Use this function to enter the minimum length of time (debouncing time) the signal must be present for the diagnostic message **S862 Partly filled** to be triggered if the measuring pipe is empty or partially full.

**User entry** | 0 to 100 s

**Factory setting** | 1 s

---

**Max. damping**

**Navigation** | Expert → Sensor → Process param. → Partial pipe det → Max. damping

**Prerequisite** | One of the following options is selected in the **Assign variable** parameter (→ 70):
- Density
- Ref.density

**Description** | Use this function to enter a damping value to enable detection of empty or partially filled measuring tubes.

**User entry** | Positive floating-point number

**Factory setting** | 0
Additional information

*Description*

If oscillation damping exceeds the specified value, the measuring device presumes that the pipe is partially filled and the flow signal is set to 0. The measuring device displays the diagnostic message **S862 Partly filled**. In the case of non-homogeneous media or air pockets, the damping of the measuring tubes increases.

*User entry*

- Damping is disabled if 0 is entered (factory setting).
- Damping is enabled if the value entered is greater than 0.
- The value entered depends on application-specific influence variables, such as the medium, nominal diameter, sensor etc.

*Example*

- If the pipe is filled normally the value of the oscillation damping is 500.
- If the pipe is partially filled the value of the oscillation damping is > 5000.
- A practical damping value would then be 2000: enter 2000 as the value.

---

### 3.2.4 "Measurement mode" submenu

*Navigation*

Expert → Sensor → Measurement mode

#### "Measurement mode" menu

- **Select medium** → 72
- **Select gas type** → 73
- **Sound velocity** → 73
- **Temp. coeff. SV** → 74

**Select medium**

*Navigation*

Expert → Sensor → Measurement mode → Select medium

*Description*

Use this function to select the type of medium.

*Selection*

Liquid

*Factory setting*

Liquid
Select gas type

**Navigation**
Expert → Sensor → Measurement mode → Select gas type

**Prerequisite**
The Gas option is selected in the Select medium parameter (→ 72).

**Description**
Use this function to select the type of gas for the measuring application.

**Selection**
- Air
- Ammonia NH3
- Argon Ar
- Sulf. hex.fl.SF6
- Oxygen O2
- Ozone O3
- Nitrog. ox. NOx
- Nitrogen N2
- Nitrous ox. N2O
- Methane CH4
- Hydrogen H2
- Helium He
- Hydrog.chlor.HCl
- Hydrog.sulf. H2S
- Ethylene C2H4
- Carbon diox. CO2
- Carbon monox. CO
- Chlorine Cl2
- Butane C4H10
- Propane C3H8
- Propylene C3H6
- Ethane C2H6
- Others

**Factory setting**
Methane CH4

**Additional information**
Description
The gas type needs to be selected so that it is possible to comply with accuracy specifications in gas applications.

Sound velocity

**Navigation**
Expert → Sensor → Measurement mode → Sound velocity

**Prerequisite**
In the Select gas type parameter (→ 73), the Others option is selected.

**Description**
Use this function to enter the sound velocity of the gas at 0 °C (+32 °F).

**User entry**
1 to 99999.9999 m/s

**Factory setting**
415.0 m/s
**Temp. coeff. SV**

**Navigation**

Expert → Sensor → Measurement mode → Temp. coeff. SV

**Prerequisite**

The Others option is selected in the Select gas type parameter (→ 73).

**Description**

Use this function to enter a temperature coefficient for the sound velocity of the gas.

**User entry**

Positive floating-point number

**Factory setting**

0 (m/s)/K

---

### 3.2.5 "External comp." submenu

**Navigation**

<table>
<thead>
<tr>
<th>External comp.</th>

</tbody>
</table>

---

**Pressure compen.**

**Navigation**

**Description**

Use this function to select the type of pressure compensation.

**Selection**

- Off
- Fixed value
- External value

**Factory setting**

Off
Additional information

**Selection**
- **Fixed value**
  A fixed pressure value is used for compensation: **Pressure value** parameter (→ 75)
- **External value**
  The pressure value read in via EtherNet/IP is used for compensation.
- **Current input 1**
  The pressure value read in via the current input is used for compensation.

For more information, see the "Cyclic data transmission" section of the Operating Instructions

---

### Pressure value

**Navigation**

Expert → Sensor → External comp. → Pressure value

**Prerequisite**

The **Fixed value** option is selected in the **Pressure compen.** parameter (→ 74).

**Description**

Use this function to enter a value for the process pressure that is used for pressure correction.

**User entry**

Positive floating-point number

**Factory setting**

0 bar

**Additional information**

*User entry*

The unit is taken from the **Pressure unit** parameter (→ 57)

---

### External press.

**Navigation**

**Prerequisite**

The **External value** option is selected in the **Pressure compen.** parameter (→ 74).

**Description**

Use this function to enter an external pressure value.

**User entry**

Positive floating-point number

**Factory setting**

0 bar

**Additional information**

*User entry*

The unit is taken from the **Pressure unit** parameter (→ 57)
### Temperature mode

**Navigation**

Expert → Sensor → External comp. → Temperature mode

**Description**

Use this function to select the temperature mode.

**Selection**

- Internal value
- External value

**Factory setting**

Internal value

**Additional information**

*Description*

Use this function to select the type of temperature compensation.

*Selection*

All the options available for selection are used for measured value compensation.

- Internal value
  
  The temperature value measured internally (temperature sensor of the measuring sensor) is used for compensation.

- External value
  
  The temperature value read in via EtherNet/IP is used for compensation.

- Current input 1
  
  The temperature value read in via the current input is used for compensation.

   ![tip]

   For more information, see the "Cyclic data transmission" section of the Operating Instructions

---

### External temp.

**Navigation**

**Prerequisite**

In the Temperature mode parameter (→ 76), the External value option is selected.

**Description**

Use this function to enter the external temperature.

**User entry**

-273.15 to 99999 °C

**Factory setting**

Country-specific:

- 0 °C
- +32 °F

**Additional information**

*Description*

The unit is taken from the Temperature unit parameter (→ 56)
3.2.6 "Calculated value" submenu

Description of device parameters

Navigation

Expert → Sensor → Calculated value

"Corr. vol.flow." submenu

Navigation

Description

Use this function to select the reference density for calculating the corrected volume flow.

Selection

- Fix ref. density
- Calc ref. density
- Ref. dens API 53
- Ext. ref. density

Factory setting

Calc ref density

Additional information

The Ref. dens API 53 option is suitable only for applications involving LPG⁵, where the flow rate is measured on the basis of the corrected volume flow.

Selecting this option means that the reference density is used, taking into account the values in table 53 E of API MPMS section 11.2. Temperature measurement (measured internally or read into the device from an external source) and density measurement take

---

Endress+Hauser
place during operation while the medium is flowing. The mass flow is divided by the reference density to give the corrected volume flow and is issued as an output signal.

---

**Ext. ref.density**

**Navigation**

**Prerequisite**
In the Corr. vol.flow. parameter (→ 77), the Ext. ref.density option is selected.

**Description**
Displays the reference density which is read in externally, e.g. via the current input.

**User interface**
Floating point number with sign

**Additional information**
Dependency

The unit is taken from the Ref. dens. unit parameter (→ 56)

---

**Fix ref.density**

**Navigation**

**Prerequisite**
The Fix ref.density option is selected in the Corr. vol.flow. parameter (→ 77) parameter.

**Description**
Use this function to enter a fixed value for the reference density.

**User entry**
Positive floating-point number

**Factory setting**
1 kg/Nl

**Additional information**
Dependency

The unit is taken from the Ref. dens. unit parameter (→ 56)

---

**Ref. temperature**

**Navigation**

**Prerequisite**
The Calc ref density option is selected in the Corr. vol.flow. parameter (→ 77).

**Description**
Use this function to enter a reference temperature for calculating the reference density.

**User entry**
-273.15 to 99999 °C
**Factory setting**  
Country-specific:
- +20 °C
- +68 °F

**Additional information**  
*Dependency*

The unit is taken from the **Temperature unit** parameter (→  56)

**Reference density calculation**

\[
\rho_n = \rho \cdot (1 + \alpha \cdot \Delta t + \beta \cdot \Delta t^2)
\]

- \(\rho_n\): reference density
- \(\rho\): fluid density currently measured
- \(t\): fluid temperature currently measured
- \(t_n\): reference temperature at which the reference density is calculated (e.g. 20 °C)
- \(\Delta t\): \(t - t_n\)
- \(\alpha\): linear expansion coefficient of the fluid, unit = [1/K]; K = Kelvin
- \(\beta\): square expansion coefficient of the fluid, unit = [1/K^2]

**Linear exp coeff**

**Navigation**

Expert → Sensor → Calculated value → Corr. vol.flow. → Linear exp coeff

**Prerequisite**
The **Calc ref density** option is selected in the **Corr. vol.flow.** parameter (→  77) parameter.

**Description**
Use this function to enter a linear, fluid-specific expansion coefficient for calculating the reference density.

**User entry**
Signed floating-point number

**Factory setting**
0.0

**Square exp coeff**

**Navigation**

**Prerequisite**
The **Calc ref density** option is selected in the **Corr. vol.flow.** parameter (→  77) parameter.

**Description**
For fluid with a non-linear expansion pattern: use this function to enter a quadratic, fluid-specific expansion coefficient for calculating the reference density.

**User entry**
Signed floating-point number

**Factory setting**
0.0
3.2.7 "Sensor adjustm." submenu

**Navigation**

**Install. direct.**

**Description**

Use this function to change the sign of the medium flow direction.

**Selection**

- In arrow direct.
- Against arrow

**Factory setting**

In arrow direct.

**Additional information**

Before changing the sign: ascertain the actual direction of fluid flow with reference to the direction indicated by the arrow on the sensor nameplate.

"Zero point adj." submenu

- It is generally not necessary to perform zero point adjustment.
- However, this function may be needed in some applications with low flow and strict accuracy requirements.
- A zero point adjustment cannot increase repeatability.
- The following conditions should be met to perform a zero point adjustment successfully without the adjustment finishing in an error:
  - The real flow must be 0.
  - The pressure must be at least 15 psi g.
- The adjustment takes a maximum of 60 s. The more stable the conditions, the faster the adjustment is completed.
- This function can also be used to check the health of the measuring device.
  A healthy measuring device has a maximum zero point deviation of ±100 compared to the factory setting of the measuring device (calibration report).
**Zero point adj.**

**Navigation**

**Description**

Use this function to select the start of the zero point adjustment.

Observe conditions → 80.

**Selection**

- Cancel
- Busy
- Zero adjust fail
- Start

**Factory setting**

Cancel

**Additional information**

**Description**

- Cancel
  
  If zero point adjustment has failed, select this option to cancel zero point adjustment.
- Busy
  
  Is displayed during zero point adjustment.
- Zero adjust fail
  
  Is displayed if zero point adjustment has failed.
- Start
  
  Select this option to start zero point adjustment.

**Progress**

**Navigation**

**Description**

The progress of the process is indicated.

**User interface**

0 to 100 %
"Variable adjust" submenu

**Navigation**

**Description**

Use this function to enter the zero point shift for the mass flow trim. The mass flow unit on which the shift is based is kg/s.

**User entry**

Signed floating-point number

**Factory setting**

0 kg/s

**Additional information**

Corrected value = (factor × value) + offset
### Mass flow factor

**Navigation**

Expert → Sensor → Sensor adjust. → Variable adjust → Mass flow factor

**Description**

Use this function to enter a quantity factor (without time) for the mass flow. This multiplication factor is applied over the mass flow range.

**User entry**

Positive floating-point number

**Factory setting**

1

**Additional information**

*Description*  
Corrected value = (factor × value) + offset

---

### Vol. flow offset

**Navigation**

**Description**

Use this function to enter the zero point shift for the volume flow trim. The volume flow unit on which the shift is based is m³/s.

**User entry**

Signed floating-point number

**Factory setting**

0 m³/s

**Additional information**

*Description*  
Corrected value = (factor × value) + offset

---

### Vol. flow factor

**Navigation**

**Description**

Use this function to enter a quantity factor (without time) for the volume flow. This multiplication factor is applied over the volume flow range.

**User entry**

Positive floating-point number

**Factory setting**

1

**Additional information**

*Description*  
Corrected value = (factor × value) + offset
**Density offset**

**Navigation**
- Expert → Sensor → Sensor adjustm. → Variable adjust → Density offset

**Description**
Use this function to enter the zero point shift for the density trim. The density unit on which the shift is based is kg/m³.

**User entry**
Signed floating-point number

**Factory setting**
0 kg/m³

**Additional information**
- Description
  
  Corrected value = (factor × value) + offset

---

**Density factor**

**Navigation**
- Expert → Sensor → Sensor adjustm. → Variable adjust → Density factor

**Description**
Use this function to enter a quantity factor for the density. This multiplication factor is applied over the density range.

**User entry**
Positive floating-point number

**Factory setting**
1

**Additional information**
- Description

  Corrected value = (factor × value) + offset

---

**Corr. vol offset**

**Navigation**

**Description**
Use this function to enter the zero point shift for the corrected volume flow trim. The corrected volume flow unit on which the shift is based is 1 Nm³/s.

**User entry**
Signed floating-point number

**Factory setting**
0 Nm³/s

**Additional information**
- Description

  Corrected value = (factor × value) + offset
### Corr. vol factor

**Navigation**  

**Description**  
Use this function to enter a quantity factor (without time) for the corrected volume flow. This multiplication factor is applied over the corrected volume flow range.

**User entry**  
Positive floating-point number

**Factory setting**  
1

**Additional information**  
*Description*

\[
\text{Corrected value} = (\text{factor} \times \text{value}) + \text{offset}
\]

### Ref.dens. offset

**Navigation**  
Expert → Sensor → Sensor adjustm. → Variable adjust → Ref.dens. offset

**Description**  
Use this parameter to enter the zero point shift for the reference density trim. The reference density unit on which the shift is based is 1 kg/Nm³.

**User entry**  
Signed floating-point number

**Factory setting**  
0 kg/Nm³

**Additional information**  
*Description*

\[
\text{Corrected value} = (\text{factor} \times \text{value}) + \text{offset}
\]

### Ref.dens. factor

**Navigation**  
Expert → Sensor → Sensor adjustm. → Variable adjust → Ref.dens. factor

**Description**  
Use this function to enter a quantity factor (without time) for the reference density. This multiplication factor is applied over the reference density range.

**User entry**  
Positive floating-point number

**Factory setting**  
1

**Additional information**  
*Description*

\[
\text{Corrected value} = (\text{factor} \times \text{value}) + \text{offset}
\]
**Temp. offset**

**Navigation**  
Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. offset

**Description**  
Use this function to enter the zero point shift for the temperature trim. The temperature unit on which the shift is based is K.

**User entry**  
Signed floating-point number

**Factory setting**  
0 K

**Additional information**  
*Description*
Corrected value = (factor × value) + offset

---

**Temp. factor**

**Navigation**  
Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. factor

**Description**  
Use this function to enter a quantity factor for the temperature. In each case, this factor refers to the temperature in K.

**User entry**  
Positive floating-point number

**Factory setting**  
1

**Additional information**  
*Description*
Corrected value = (factor × value) + offset

---

**3.2.8 "Calibration" submenu**

Cal. factor

Navigation

Expert → Sensor → Calibration → Cal. factor

Description
Displays the current calibration factor for the sensor.

User interface
Signed floating-point number

Factory setting
Depends on nominal diameter and calibration.

Zero point

Navigation

Expert → Sensor → Calibration → Zero point

Description
Use this function to enter the zero point correction value for the sensor.

User entry
Signed floating-point number

Factory setting
Depends on nominal diameter and calibration.

Nominal diameter

Navigation

Expert → Sensor → Calibration → Nominal diameter

Description
Displays the nominal diameter of the sensor.

User interface
DNxx / x'

Factory setting
Depends on the size of the sensor

Additional information

Description
The value is also specified on the sensor nameplate.

C0 to 5

Navigation

Expert → Sensor → Calibration → C0 to 5

Description
Displays the current density coefficients C0 to 5 of the sensor.

User interface
Signed floating-point number

Factory setting
0
3.2.9 "Supervision" submenu

**Navigation**

Expert → Sensor → Supervision

---

**Limit tube damp.**

**Navigation**

Expert → Sensor → Supervision → Limit tube damp.

**Description**

Use this function to enter a limit value for measuring tube damping.

**User entry**

Positive floating-point number

**Factory setting**

Positive floating-point number

**Additional information**

* If the displayed value is outside the limit value, the measuring device displays the diagnostic message **T5948 Tube damp. high**.
* For detecting inhomogeneous media, for example

* Visibility depends on order options or device settings
6) Media Access Control
Description of device parameters

**User interface**
Unique 12-digit character string comprising letters and numbers

**Factory setting**
Each measuring device is given an individual address.

**Additional information**
*Example*
For the display format
00:07:05:10:01:5F

---

**Default netw.set**

**Navigation**
Expert → Communication → Configuration → Default netw.set

**Description**
Displays the use of default network settings.

**User interface**
- Off
- On

**Factory setting**
Off

**Additional information**
*User interface*
The *On* option is displayed as soon as the last octet of the IP address is set via DIP switches.

---

**DHCP client**

**Navigation**
Expert → Communication → Configuration → DHCP client

**Description**
Use this function to activate and deactivate the DHCP client functionality.

**Selection**
- Off
- On

**Factory setting**
Off

**Additional information**
*Result*
If the DHCP client functionality of the Web server is activated, the IP address (→ 90), Subnet mask (→ 91) and Default gateway (→ 91) are set automatically.

Identification is via the MAC address of the measuring device.

---

**IP address**

**Navigation**
Expert → Communication → Configuration → IP address

**Description**
Use this function to enter the IP address of the device's web server.
### Subnet mask

**User entry**
4 octet: 0 to 255 (in the particular octet)

**Factory setting**
192.168.1.212

**Navigation**
Expert → Communication → Configuration → Subnet mask

**Description**
Use this function to enter the subnet mask.

**User entry**
4 octet: 0 to 255 (in the particular octet)

**Factory setting**
255.255.255.0

### Default gateway

**Navigation**
Expert → Communication → Configuration → Default gateway

**Description**
Use this function to enter the default gateway.

**User entry**
4 octet: 0 to 255 (in the particular octet)

**Factory setting**
0.0.0.0

### Webserver funct.

**Navigation**
Expert → Communication → Configuration → Webserver funct.

**Description**
Use this function to switch the Web server on and off.

**Selection**
- Off
- On

**Factory setting**
On
**Description of device parameters**

### Proline Promass 100 EtherNet/IP

#### Additional information

**Description**

Once disabled, the Webserver funct. can only be re-enabled via the local display or the operating tool FieldCare.

**Selection**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
</table>
| Off    | ● The web server is completely disabled.  
          ● Port 80 is locked. |
| On     | ● The complete functionality of the web server is available.  
          ● JavaScript is used.  
          ● The password is transferred in an encrypted state.  
          ● Any change to the password is also transferred in an encrypted state. |

#### Login page

**Navigation**

[Expert → Communication → Web server → Login page]

**Description**

Use this function to select the format of the login page.

**Selection**

- Without header
- With header

**Factory setting**

With header

#### Capability flags

**Navigation**

[Expert → Communication → Configuration → Capability flags]

**Description**

Displays the DLR (Device Level Ring) properties of the device.

**User interface**

- Announce-b. node
- Beacon-b. node
- Supervisor cap.
- Redund. gateway
- Flush tab. frame

**Factory setting**

Beacon-b. node

#### User description

**Navigation**

[Expert → Communication → Configuration → User description]

**Description**

Use this function to enter the user-defined device name and location (separated by a semicolon).
Factory setting: description; location

### WLAN

**Navigation**

[Expert ➔ Communication ➔ WLAN settings ➔ WLAN]

**Description**

Use this function to enable and disable the WLAN connection.

**Selection**

- Disable
- Enable

**Factory setting**

Enable
### WLAN mode

**Navigation**

Expert → Communication → WLAN settings → WLAN mode

**Description**

Use this function to select the WLAN mode.

**Selection**

- Access point
- WLAN Client

**Factory setting**

Access point

### SSID name

**Navigation**

Expert → Communication → WLAN settings → SSID name

**Prerequisite**

The client is activated.

**Description**

Use this function to enter the user-defined SSID name (max. 32 characters).

**User entry**

-

**Factory setting**

-

### Network security

**Navigation**

Expert → Communication → WLAN settings → Network security

**Description**

Use this function to select the type of security for the WLAN interface.

**Selection**

- Unsecured
- WPA2-PSK
- EAP-PEAP MSCHAP2
- EAP-PEAP NoAuth.
- EAP-TLS

**Factory setting**

WPA2-PSK

**Additional information**

Selection

- Unsecured
  - Access the WLAN connection without identification.
- WPA2-PSK
  - Access the WLAN connection with a network key.
Description of device parameters

**Sec. identific.**

**Navigation**

- Expert → Communication → WLAN settings → Sec. identific.

**Description**

Use this function to select the security settings (download via the menu: Data Management > Security > Download WLAN).

**User interface**

- Root certificate
- Device certific.
- Dev. private key

**User name**

**Navigation**

- Expert → Communication → WLAN settings → User name

**Description**

Use this function to enter the user name.

**User entry**

- 

**Factory setting**

- 

**WLAN password**

**Navigation**

- Expert → Communication → WLAN settings → WLAN password

**Description**

Use this function to enter the WLAN password.

**User entry**

- 

**Factory setting**

- 

**WLAN IP address**

**Navigation**

- Expert → Communication → WLAN settings → WLAN IP address

**Description**

Use this function to enter the IP address of the measuring device's WLAN connection.

**User entry**

- 4 octet: 0 to 255 (in the particular octet)

**Factory setting**

- 192.168.1.212
**WLAN MAC address**

**Navigation**

Expert → Communication → WLAN settings → WLAN MAC address

**Description**

Displays the MAC address of the measuring device.

**User interface**

Unique 12-digit character string comprising letters and numbers

**Factory setting**

Each measuring device is given an individual address.

**Additional information**

*Example*

For the display format

00:07:05:10:01:5F

---

**WLAN subnet mask**

**Navigation**

Expert → Communication → WLAN settings → WLAN subnet mask

**Description**

Use this function to enter the subnet mask.

**User entry**

4 octet: 0 to 255 (in the particular octet)

**Factory setting**

255.255.255.0

---

**WLAN passphrase**

**Navigation**

Expert → Communication → WLAN settings → WLAN passphrase

**Prerequisite**

The **WPA2-PSK** option is selected in the **Security type** parameter (→ 101).

**Description**

Use this function to enter the network key.

**User entry**

8 to 32-digit character string comprising numbers, letters and special characters

**Factory setting**

Serial number of the measuring device (e.g. L100A802000)

---

**Assign SSID name**

**Navigation**

Expert → Communication → WLAN settings → Assign SSID name

**Description**

Use this function to select which name is used for the SSID.

---

7) Media Access Control

8) Service Set Identifier
Description of device parameters

Proline Promass 100 EtherNet/IP

Selection
- Device tag
- User-defined

Factory setting
User-defined

Additional information
Selection
- Device tag
  The device tag name is used as the SSID.
- User-defined
  A user-defined name is used as the SSID.

SSID name

Navigation
Expert → Communication → WLAN settings → SSID name

Prerequisite
- The User-defined option is selected in the Assign SSID name parameter (→ 103).
- The Access point option is selected in the WLAN mode parameter (→ 101).

Description
Use this function to enter a user-defined SSID name.

User entry
Max. 32-digit character string comprising numbers, letters and special characters

Factory setting

WLAN channel

Navigation
Expert → Communication → WLAN settings → WLAN channel

Description
Use this function to enter the WLAN channel.

User entry
1 to 11

Factory setting
6

Additional information
Description
- It is only necessary to enter a WLAN channel if multiple WLAN devices are in use.
- If just one measuring device is in use, it is recommended to keep the factory setting.

Select antenna

Navigation
Expert → Communication → WLAN settings → Select antenna

Description
Use this function to select whether the external or internal antenna is used for reception.

Selection
- External antenna
- Internal antenna
### Factory setting
- **Internal antenna**

### Connection state

</table>

3.4.1 "Totalizer 1 to n" submenu

**Navigation**

Expert → Application → Totalizer 1 to n

**Totalizer 1 to n**

**Assign variable**

→ 107

**Unit totalizer**

→ 107

**Operation mode**

→ 109
Assign variable

**Navigation**

Expert → Application → Totalizer 1 to n → Assign variable

**Description**

Use this function to select a process variable for the Totalizer 1 to n.

**Selection**

- Off
- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow*
- Carrier mass fl.*

**Factory setting**

Mass flow

**Additional information**

* If the option selected is changed, the device resets the totalizer to 0.

**Selection**

If the Off option is selected, only Assign variable parameter (→ 107) is still displayed in the Totalizer 1 to n submenu. All other parameters in the submenu are hidden.

Unit totalizer

**Navigation**

Expert → Application → Totalizer 1 to n → Unit totalizer

**Prerequisite**

One of the following options is selected in the Assign variable parameter (→ 107) of the Totalizer 1 to n submenu:

- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow*
- Carrier mass fl.*

**Description**

Use this function to select the process variable unit for the Totalizer 1 to n (→ 106).
Selection

SI units
• g
• kg
• t

Custom-specific units
User mass

or

SI units
• cm³
• dm³
• m³
• ml
• l
• hl
• Ml Mega

Custom-specific units
User vol.

or

SI units
• Nl
• Nm³
• l
• Sm³

Custom-specific units
UserCrVol.

Factory setting
Country-specific:
• kg
• lb

Additional information
Description
The unit is selected separately for each totalizer. It is independent of the selection made in the **System units** submenu (→ 49).

Selection
The selection is dependent on the process variable selected in the **Assign variable** parameter (→ 107).
**Operation mode**

**Navigation**  
Expert → Application → Totalizer 1 to n → Operation mode

**Prerequisite**  
One of the following options is selected in the **Assign variable** parameter (→ 107) of the **Totalizer 1 to n** submenu:
- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow *
- Carrier mass fl. *

**Description**  
Use this function to select how the totalizer summates the flow.

**Selection**  
- Net flow total
- Forward total
- Reverse total

**Factory setting**  
Net flow total

**Additional information**  
**Selection**
- Net flow total  
  Flow values in the forward and reverse flow direction are totalized and balanced against one another. Net flow is registered in the flow direction.
- Forward total  
  Only the flow in the forward flow direction is totalized.
- Reverse total  
  Only the flow in the reverse flow direction is totalized (= reverse flow quantity).

---

**Control Tot. 1 to n**

**Navigation**  
Expert → Application → Totalizer 1 to n → Control Tot. 1 to n

**Prerequisite**  
One of the following options is selected in the **Assign variable** parameter (→ 107) of the **Totalizer 1 to n** submenu:
- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow *
- Carrier mass fl. *

**Description**  
Use this function to select the control of totalizer value 1-3.

**Selection**  
- Totalize
- Reset + hold
- Preset + hold
- Reset + totalize
- Preset+totalize

**Factory setting**  
Totalize

* Visibility depends on order options or device settings

<tr>
<td>Preset + totalize</td>
<td>The totalizer is set to the defined start value from the Preset value parameter and the totaling process is restarted.</td>
</tr>
</tbody>
</table>

Preset value 1 to n

Navigation

Expert → Application → Totalizer 1 to n → Preset value 1 to n

Prerequisite

One of the following options is selected in the Assign variable parameter (→ 107) of the Totalizer 1 to n submenu:
- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow *
- Carrier mass fl.

Description

Use this function to enter a start value for the Totalizer 1 to n.

User entry

Signed floating-point number

Factory setting

Country-specific:
- 0 kg
- 0 lb

Additional information

Entry

The unit of the selected process variable is specified for the totalizer in the Unit totalizer parameter (→ 107).

Example

This configuration is suitable for applications such as iterative filling processes with a fixed batch quantity.

* Visibility depends on order options or device settings
Failure mode

Navigation

Prerequisite
One of the following options is selected in the Assign variable parameter (→ 107) of the Totalizer 1 to n submenu:
- Volume flow
- Mass flow
- Correct.vol.flow
- Target mass flow
- Carrier mass fl.

Description
Use this function to select how a totalizer behaves in the event of a device alarm.

Selection
- Stop
- Actual value
- Last valid value

Factory setting
Stop

Additional information

Description

Selection
- Stop
  The totalizer is stopped in the event of a device alarm.
- Actual value
  The totalizer continues to count based on the actual measured value; the device alarm is ignored.
- Last valid value
  The totalizer continues to count based on the last valid measured value before the device alarm occurred.

3.4.2 "Viscosity" submenu

Only available for Promass I.

For detailed information on the parameter descriptions for the Viscosity application package, refer to the Special Documentation for the device.

Navigation

Viscosity

Viscos. damping

Temp. compensat.

* Visibility depends on order options or device settings
3.4.3 "Concentration" submenu

For detailed information on the parameter descriptions for the Concentration application package, refer to the Special Documentation for the device.

Navigation: ➔ Expert → Application → Concentration

3.5 "Diagnostics" submenu

Navigation: ➔ Expert → Diagnostics

Actual diagnos.

Prerequisite: A diagnostic event has occurred.
**Description**
Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.

**User interface**
Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**
*Display*
- Additional pending diagnostic messages can be viewed in the **Diagnostic list** submenu (→ 115).

*Example*
- For the display format:  
  *F271 Main electronic*

---

### Timestamp

**Navigation**
- Expert → Diagnostics → Timestamp

**Description**
Displays the operating time when the current diagnostic message occurred.

**User interface**
- Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**
*Display*
- The diagnostic message can be viewed via the **Actual diagnos**. parameter (→ 112).

*Example*
- For the display format:  
  24d12h13m00s

---

### Prev.diagnostics

**Navigation**
- Expert → Diagnostics → Prev.diagnostics

**Prerequisite**
Two diagnostic events have already occurred.

**Description**
Displays the diagnostic message that occurred before the current message.

**User interface**
Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**
*Example*
- For the display format:  
  *F271 Main electronic*

#### Diagnostics 1

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 1

**Description**

Displays the current diagnostics message with the highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**

*Examples*

For the display format:

- F271 Main electronic
- F276 I/O module

#### Timestamp

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**

*Display*

The diagnostic message can be viewed via the **Diagnostics 1** parameter (→ 115).

*Example*

For the display format:

24d12h13m00s
Diagnostics 2

Navigation  
Expert → Diagnostics → Diagnostic list → Diagnostics 2

Description  
Displays the current diagnostics message with the second-highest priority.

User interface  
Symbol for diagnostic behavior, diagnostic code and short message.

Additional information  
Examples

For the display format:
- F271 Main electronic
- F276 I/O module

Timestamp

Navigation  
Expert → Diagnostics → Diagnostic list → Timestamp

Description  
Displays the operating time when the diagnostic message with the second-highest priority occurred.

User interface  
Days (d), hours (h), minutes (m) and seconds (s)

Additional information  
Display

- The diagnostic message can be viewed via the Diagnostics 2 parameter (→ 116).

Example

For the display format:
24d12h13m00s

Diagnostics 3

Navigation  
Expert → Diagnostics → Diagnostic list → Diagnostics 3

Description  
Displays the current diagnostics message with the third-highest priority.

User interface  
Symbol for diagnostic behavior, diagnostic code and short message.

Additional information  
Examples

For the display format:
- F271 Main electronic
- F276 I/O module
**Timestamp**

**Navigation**  
Expert → Diagnostics → Diagnostic list → Timestamp

**Description**  
Displays the operating time when the diagnostic message with the third-highest priority occurred.

**User interface**  
Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**  
Display

- The diagnostic message can be viewed via the Diagnostics 3 parameter (→ 116).

**Example**
For the display format:  
24d12h13m00s

---

**Diagnostics 4**

**Navigation**  
Expert → Diagnostics → Diagnostic list → Diagnostics 4

**Description**  
Displays the current diagnostics message with the fourth-highest priority.

**User interface**  
Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**  
Examples

- For the display format:
  - F271 Main electronic
  - F276 I/O module

---

**Timestamp**

**Navigation**  
Expert → Diagnostics → Diagnostic list → Timestamp

**Description**  
Displays the operating time when the diagnostic message with the fourth-highest priority occurred.

**User interface**  
Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**  
Display

- The diagnostic message can be viewed via the Diagnostics 4 parameter (→ 117).

**Example**
For the display format:  
24d12h13m00s
Diagnostics 5

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 5

**Description**

Displays the current diagnostics message with the fifth-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**

*Examples*

For the display format:
- F271 Main electronic
- F276 I/O module

Timestamp

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the fifth-highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**

*Display*

The diagnostic message can be viewed via the **Diagnostics 5** parameter (→ 118).

*Example*

For the display format:
24d12h13m00s

3.5.2 "Event logbook" submenu

**Navigation**

Expert → Diagnostics → Event logbook

Filter options

Event list

→ 119
Filter options

Navigation

Expert → Diagnostics → Event logbook → Filter options

Description

Use this function to select the category whose event messages are displayed in the event list of the operating tool.

Selection

- All
- Failure (F)
- Funct. check (C)
- Out of spec. (S)
- Mainten. req. (M)
- Information (I)

Factory setting

All

Additional information

Description

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:

- F = Failure
- C = Function Check
- S = Out of Specification
- M = Maintenance Required

"Event list" submenu

The Event list submenu is only displayed if operating via the local display.

If operating via the FieldCare operating tool, the event list can be read out with a separate FieldCare module.

If operating via the Web browser, the event messages can be found directly in the Event logbook submenu.

Navigation

Expert → Diagnostics → Event logbook → Event list

Event list

Navigation

Expert → Diagnostics → Event logbook → Event list

Description

Displays the history of event messages of the category selected in the Filter options parameter.
User interface

- For a ‘Category I’ event message
  Information event, short message, symbol for event recording and operating time when error occurred
- For a ‘Category F, C, S, M’ event message (status signal)
  Diagnostics code, short message, symbol for event recording and operating time when error occurred

Additional information

Description

A maximum of 20 event messages are displayed in chronological order.
The following symbols indicate whether an event has occurred or has ended:
- Occurred: Occurrence of the event
- Ended: End of the event

Examples

For the display format:
- 1109: Configuration modified
  Occurred 24d12h13m00s
- ☑ F271 Main electronic
  Occurred 01d04h12min30s

HistoROM

A HistoROM is a ‘non-volatile’ device memory in the form of an EEPROM.

3.5.3 "Device info" submenu

Navigation  ☑ ☑  Expert → Diagnostics → Device info

<table>
<thead>
<tr>
<th>Device info</th>
<th></th>

<tr>
<td>Config. counter</td>
<td>→ ☑ 123</td>
</tr>
<tr>
<td>ENP version</td>
<td>→ ☑ 123</td>
</tr>
</tbody>
</table>
### Device tag

**Navigation**  
Expert → Diagnostics → Device info → Device tag

**Description**  
Displays a unique name for the measuring point so it can be identified quickly within the plant.

**User interface**  
Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).

**Factory setting**  
Promass 100

### Serial number

**Navigation**  
Expert → Diagnostics → Device info → Serial number

**Description**  
Displays the serial number of the measuring device.

**User interface**  
A maximum of 11-digit character string comprising letters and numbers.

**Additional information**  
**Description**

- **Uses of the serial number**
  - To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
  - To obtain specific information on the measuring device using the Device Viewer: [www.endress.com/deviceviewer](http://www.endress.com/deviceviewer)

### Firmware version

**Navigation**  
Expert → Diagnostics → Device info → Firmware version

**Description**  
Displays the device firmware version installed.

**User interface**  
Character string in the format xx.yy.zz

**Additional information**  
**Display**

- The Firmware version is also located:
  - On the title page of the Operating instructions
  - On the transmitter nameplate
### Device name

**Navigation**

Expert → Diagnostics → Device info → Device name

**Description**

Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.

**User interface**

Max. 32 characters such as letters or numbers.

**Factory setting**

Promass 100

---

### Order code

**Navigation**

Expert → Diagnostics → Device info → Order code

**Description**

Displays the device order code.

**User interface**

Character string composed of letters, numbers and certain punctuation marks (e.g. `/`).

**Additional information**

*Description*

The order code can be found on the nameplate of the sensor and transmitter in the "Order code" field.

The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.

*Uses of the order code*

- To order an identical spare device.
- To identify the device quickly and easily, e.g. when contacting Endress+Hauser.

---

### Ext. order cd. 1

**Navigation**

Expert → Diagnostics → Device info → Ext. order cd. 1

**Description**

Displays the first part of the extended order code.

On account of length restrictions, the extended order code is split into a maximum of 3 parameters.

**User interface**

Character string

**Additional information**

*Description*

The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.

The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.
### Ext. order cd. 2

**Navigation**  
Expert → Diagnostics → Device info → Ext. order cd. 2

**Description**  
Displays the second part of the extended order code.

**User interface**  
Character string

**Additional information**  
For additional information, see *Ext. order cd. 1* parameter (→ 122)

### Ext. order cd. 3

**Navigation**  
Expert → Diagnostics → Device info → Ext. order cd. 3

**Description**  
Displays the third part of the extended order code.

**User interface**  
Character string

**Additional information**  
For additional information, see *Ext. order cd. 1* parameter (→ 122)

### Config. counter

**Navigation**  
Expert → Diagnostics → Device info → Config. counter

**Description**  
Displays the number of parameter modifications for the device. When the user changes a parameter setting, this counter is incremented.

**User interface**  
0 to 65535

### ENP version

**Navigation**  
Expert → Diagnostics → Device info → ENP version

**Description**  
Displays the version of the electronic nameplate.

**User interface**  
Character string

**Factory setting**  
2.02.00

**Additional information**  
*Description*  
This electronic nameplate stores a data record for device identification that includes more data than the nameplates attached to the outside of the device.
3.5.4 "Min/max val." submenu

**Navigation**

Expert → Diagnostics → Min/max val.

### Description

Use this function to select measured variables whose minimum, maximum and average measured values are to be reset.

### Selection

- Cancel
- Oscil. amplitude
- Osc. ampl. 1 *
- Oscil. damping
- Tors.oscil.damp. *
- Oscil. frequency
- Tors.oscil.freq.
- Signal asymmetry

### Factory setting

Cancel

* Visibility depends on order options or device settings
Additional information

Selection

Detailed description of the options Oscil. frequency, Oscil. amplitude, Oscil. damping and Signal asymmetry: Value 1 display parameter (→ 17)

"Electronic temp." submenu

Navigation

Expert → Diagnostics → Min/max val. → Electronic temp.

Minimum value

Description
Displays the lowest previously measured temperature value of the main electronics module.

User interface
Signed floating-point number

Additional information
Dependency

The unit is taken from the Temperature unit parameter (→ 56)

Maximum value

Description
Displays the highest previously measured temperature value of the main electronics module.

User interface
Signed floating-point number

### Sim. diag. event

→ 135
Description of device parameters

Proline Promass 100 EtherNet/IP

Assign proc.var.

Navigation  
Expert → Diagnostics → Simulation → Assign proc.var.

Description  
Use this function to select a process variable for the simulation process that is activated. The display alternates between the measured value and a diagnostic message of the “Function check” category (C) while simulation is in progress.

Selection  
- Off
- Mass flow
- Volume flow
- Correct.vol.flow
- Density
- Ref.density
- Temperature
- Dynam. viscosity
- Kinematic visc.
- TempCompDynVisc
- TempCompKinVisc
- Concentration
- Target mass flow
- Carrier mass fl.

Factory setting  
Off

Additional information  
Description

The simulation value of the process variable selected is defined in the Value proc. var. parameter (→ 134).

Value proc. var.

Navigation  
Expert → Diagnostics → Simulation → Value proc. var.

Prerequisite  
One of the following options is selected in the Assign proc.var. parameter (→ 134):
- Mass flow
- Volume flow
- Correct.vol.flow
- Density
- Ref.density
- Temperature
- Dynam. viscosity
- Kinematic visc.
- TempCompDynVisc
- TempCompKinVisc
- Concentration
- Target mass flow
- Carrier mass fl.

* Visibility depends on order options or device settings
### Description
Use this function to enter a simulation value for the selected process variable. Subsequent measured value processing and the signal output use this simulation value. In this way, users can verify whether the measuring device has been configured correctly.

#### User entry
Depends on the process variable selected

#### Factory setting
0

#### Additional information
Entry

The unit of the displayed measured value is taken from the **System units** submenu (→ 49).

---

### Sim. alarm

#### Navigation
Expert → Diagnostics → Simulation → Sim. alarm

#### Description
Use this function to switch the device alarm on and off.

#### Selection
- Off
- On

#### Factory setting
Off

#### Additional information
Description

The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

---

### Event category

#### Navigation
Expert → Diagnostics → Simulation → Event category

#### Description
Use this function to select the category of the diagnostic events that are displayed for the simulation in the **Sim. diag. event** parameter (→ 135).

#### Selection
- Sensor
- Electronics
- Configuration
- Process

#### Factory setting
Process

---

### Sim. diag. event

#### Navigation
Expert → Diagnostics → Simulation → Sim. diag. event

#### Description
Use this function to select a diagnostic event for the simulation process that is activated.
Selection

- Off
- Diagnostic event picklist (depends on the category selected)

Factory setting

Off

Additional information

Description

For the simulation, you can choose from the diagnostic events of the category selected in the Event category parameter (→ 135).
