Technical Information

LiquiphantM  
FTL51C  
Vibronic

Point level switch for all kinds of liquids with high corrosion-resistant coating

Application
The Liquiphant M is a point level switch for use in all liquids
- for temperatures of −50 °C to 150 °C (-58 to 302 °F)
- for pressure up to 40 bar (580 psi)
- for viscosities up to 10000 mm²/s (cSt)
- for densities of ≥ 0.5 g/cm³ (SGU) or ≥ 0.7 g/cm³ (SGU)

The device functions reliably regardless of flow, turbulence, bubbles, foam, vibration, solids content or buildup, making the Liquiphant an ideal substitute for float switches.

All the wetted parts of the sensor (process connection, extension pipe and tuning fork) are coated in enamel or various synthetic materials, making the point level switch suitable for applications in very aggressive liquids.

International approvals certify use in hazardous areas.

Your benefits

- Use in safety systems requiring functional safety to SIL2/SIL3 in accordance with IEC 61508/IEC 61511-1
- Optimally adapted to the process with a wide range of materials for corrosion-resistant coating
- Large number of process connections to choose from
  - Flanges for various standards
  - Universal usage
- No adjustment: quick, low-cost startup
- No mechanically moving parts: no maintenance, no wear, long operating life
- FDA-approved material (PFA Edlon)

Application

Point level detection

Maximum or minimum detection in tanks or pipes containing all kinds of liquids, including use in hazardous areas. Particularly suitable for very aggressive liquids thanks to high level of corrosion protection.

Function and system design

Measuring principle

The sensor's fork vibrates at its intrinsic frequency. This frequency is reduced when covered with liquid. This change in frequency causes the point level switch to switch.

Modularity

Point level switch
Liquiphant M. FTL with electronic versions

Electronic insert FEL51 (AC 2-wire)

**Power supply**
- Supply voltage: AC 19 to 253 V
- Power consumption: < 0.83 W
- Residual current consumption: < 3.8 mA
- Short-circuit protection
- Overvoltage protection FEL51: overvoltage category III

**Electrical connection**
- Two-wire AC connection

Switches the load directly into the power supply circuit via an electronic switch.

Always connect in series with a load!

Check the following:
- The residual current in blocked state (up to 3.8 mA)
- That for low voltage
  - the voltage drop across the load is such that the minimum terminal voltage at the electronic insert (19 V) when blocked is not undershot.
  - the voltage drop across the electronics when switched through is observed (up to 12 V)
- That a relay cannot de-energize with holding power below 3.8 mA.

If this is the case, a resistor should be connected parallel to the relay. An RC module is available under the part number: 71107226.

- When selecting the relay, pay attention to the holding power / rated power (see "Connectable load")

**Output signal**

<table>

</tbody>
</table>

- Load current (switched through): $I_L$
- Residual current (blocked): < 3.8 mA
- Lit: ![Symbol]
- Unlit: ![Symbol]

**Signal on alarm**
- Output signal on power failure or in the event of damaged sensor: < 3.8 mA

**Connectable load**
- Voltage drop via FEL51 ≤ 12 V
- Residual current if electrical switch is blocked: ≤ 3.8 mA
- Load switched directly into the power supply circuit via the thyristor.
  - Transient (40 ms) ≤ 1.5 A, ≤ 375 VA at 253 V or ≤ 36 VA at 24 V (not short-circuit-proof)

The load is switched via an electronic switch directly in the power circuit.

Always connect in series with a load!

Not suitable for connection to low-voltage PLC inputs!
Selection guide for relays

Minimum nominal power of load
P/S  nominal power in [W] / [VA]
U  operating voltage in [V]

<table>

<td></td>
<td>&lt; 80.5 VA</td>
</tr>
</tbody>
</table>

Relays with less nominal power can be operated via an RC module connected in parallel (optional).
Electronic insert FEL52 (DC PNP)

Power supply
Supply voltage: DC 10 to 55 V
Ripple: ≤ 1.7 V, 0 to 400 Hz
Current consumption: ≤ 15 mA
Power consumption: ≤ 0.83 W
Reverse polarity protection
Overvoltage protection FEL52: overvoltage category III

Electrical connection
Three-wire DC connection
Switches the load via the transistor (PNP) and separate connection.
Preferably used with programmable logic controllers (PLC), DI modules as per EN 61131-2.
Positive signal at the switch output of the electronics (PNP); output blocked when point level is reached.

Signal on alarm
Output signal on power failure or in the event of damaged sensor: < 100 μA

Connectable load
- Load switched via the transistor and separate PNP connection, ≤ DC 55 V
- Load current ≤ 350 mA (pulsed overload and short-circuit protection)
- Residual current < 100 μA (with transistor blocked)
- Capacitance load ≤ 0.5 μF at 55 V, ≤ 1.0 μF at 24 V
- Residual voltage < 3 V (with transistor switched through)
**Electronic insert FEL54 (AC/DC with relay output)**

### Power supply
- **Supply voltage:** AC 19 to 253 V, 50/60 Hz or DC 19 to 55 V
- **Power consumption:** ≤ 1.3 W
- **Reverse polarity protection**
- **Overvoltage protection FEL54:** overvoltage category III

### Electrical connection
- **Universal current connection with relay output**
- **Power supply:** Please note the different voltage ranges for AC and DC.

#### Output:
- When connecting an instrument with high inductance, provide a spark arrester to protect the relay contact.
- A fine-wire fuse (depending on the load connected) protects the relay on short-circuiting.
- Both relay contacts switch simultaneously.

#### Output signal

<table>
<thead>
<tr>
<th>Safety mode</th>

<tr>
<td>MIN</td>
<td><img src="image" alt="MIN" /></td>
<td>3 4 5 6 7 8</td>
<td><img src="image" alt="sun" /></td>
<td><img src="image" alt="circle" /></td>
</tr>
</tbody>
</table>

- **MAX**
  - = relay energized
  - ![sun](image) = lit
  - ![circle](image) = unlit

- **MIN**
  - = relay de-energized
  - ![sun](image) = lit
  - ![circle](image) = unlit

### Connectable load
- Loads switched via 2 floating change-over contacts (DPDT)
- ![sun](image) ≤ 6 A (Ex de 4 A), ![sun](image) ≤ AC 253 V; ![sun](image) ≤ 1500 VA, cos φ = 1, ![sun](image) ≤ DC 750 VA, cos φ > 0.7
- ![sun](image) ≤ 6 A (Ex de 4 A) to DC 30 V, ![sun](image) ≤ 0.2 A to 125 V
- When connecting a low-voltage circuit with double insulation according to IEC 1010, the following applies: the sum of the voltages of the relay output and power supply is ≤ 300 V
- The electronic insert FEL52 DC-PNP is preferred for low DC load currents (e.g. when connecting to a PLC)
- Relay contact material: silver/nickel AgNi 90/10
Electronic insert FEL55 (8/16 mA)

**Power supply**
- Supply voltage: DC 11 to 36 V
- Power consumption: < 600 mW
- Reverse polarity protection
- Overvoltage protection FEL55: overvoltage category III

**Electrical connection**
- Two-wire connection for separate switching unit
  - For separate switching unit.
  - Signal transmission 16/8 mA on two-wire cabling.
  - For connection to programmable logic controllers (PLC) for example, AI modules 4 to 20 mA to EN 61131-2.
  - Output signal jump from high to low current on point level.
  - Fuse required for non-Ex applications!
  - Only use power units with safe galvanic isolation (e.g. SELV).

Output signal

<table>

Output signal jump from high to low current on point level.

Connectable load
- \( R = (U - 11 \, V) / 16.8 \, mA \)
- \( U = \) connection voltage: DC 11 to 36 V (in wet environments DC 11 to 35 V)

Example: PLC with 250 \( \Omega \) with 2-wire version

\[
250 \, \Omega = (U - 11 \, V) / 16.8 \, mA \\
4.2 \, [\Omega/\text{A}] = U - 11 \, V \\
U = 15.2 \, V
\]
Electronic insert FEL56 (NAMUR L-H edge)

Power supply
Supply voltage: DC 8.2 V ±20%
Power consumption: < 6 mW at I < 1 mA; < 38 mW at I = 2.8 mA
Connection data interface: IEC 60947-5-6

Electrical connection
Two-wire connection for separate switching unit
For connection to isolating amplifiers according to NAMUR (IEC 60947-5-6), e.g. FTL325N from Endress+Hauser.
Output signal jump from low to high current on point level. (L–H edge)
Connecting to multiplexer: Set clock time to min. 2 s.

</tbody>
</table>

Signal on alarm
Output signal in the event of damaged sensor: > 2.2 mA

Connectable load
See Technical Data of the isolating amplifier connected according to IEC 60947–5–6 (NAMUR)
Electronic insert FEL58 (NAMUR H-L edge)

Power supply
Supply voltage: DC 8.2 V ±20 %
Power consumption: < 6 mW at I < 1 mA; < 38 mW at I = 3.5 mA
Connection data interface: IEC 60947-5-6

Electrical connection
Two-wire connection for separate switching unit
For connection to isolating amplifiers according to NAMUR (IEC 60947-5-6), e.g. FTL325N, FTL375N from Endress+Hauser.
Output signal jump from high to low current on point level.
(H–L edge)

Additional function:
Test key on the electronic insert.
Pressing the key breaks the connection to the isolating amplifier.

Note!
In Ex-d applications, the additional function can only be used if the housing is not exposed to an explosive atmosphere.

Connecting to multiplexer: Set clock time to min. 2 s.

Output signal

Signal on alarm
Output signal in the event of damaged sensor: < 1.0 mA

Connectable load
- See Technical Data of the isolating amplifier connected according to IEC 60947–5–6 (NAMUR)
- Connection also to isolating amplifiers which have special safety circuits (I > 3.0 mA)
Electronic insert FEL57 (PFM)

**Power supply**
Supply voltage: DC 9.5 to 12.5 V  
Current consumption: 10 to 13 mA  
Power consumption: < 150 mW  
Reverse polarity protection

**Electrical connection**
Two-wire connection for separate switching unit
For connecting to Endress+Hauser switching units Nivotester FTL320, FTL325P, FTL370, FTL372, FTL375P (also with proof test).

Output signal jump of the PFM signal from high to low frequency when sensor is covered. Switching between minimum/maximum safety in the Nivotester.

Additional function “Proof testing”:  
Following an interruption in the power supply, a test cycle is activated, which tests the sensor and electronics without any change in level.

Approved for overfill prevention acc. to WHG (German Water Resources Act).

The check is activated and monitored at the switching unit.

The twin-core connecting cable (instrument cable) with a cable resistance of \( \leq 25 \, \Omega \) per core is connected to the screw terminals (conductor cross-sections 0.5 to 2.5 mm / 0.02 to 0.1 in) in the connection compartment. Protective circuits against reverse polarity, HF influences and overvoltage peaks are installed.

A shielded connecting cable is recommended in the event of strong electromagnetic interference. Here the shielding must be connected to the sensor and the power supply. Maximum cable length up to 1000 m (3281 ft).

**Signal on alarm**
Output signal on power failure or in the event of damaged sensor: 0 Hz

**Connectable load**
- Floating relay contacts in the connected switching unit Nivotester FTL325P, FTL375P
- For contact load, see the Technical Data of the switching unit.
**Electronic insert FEL50A (PROFIBUS PA)**

**Power supply**
- Bus voltage: DC 9 to 32 V
- Bus current:
  - 12.5 mA ± 1.0 mA (software version: 01.03.00, hardware version: 02.00)
  - 10.5 mA ± 1.0 mA (software version: 01.03.00, hardware version: 01.00)

**Electrical connection**
- Two-wire connection for power supply and data transfer

For connecting to PROFIBUS PA

Additional functions:
- Digital communication enables the representation, reading and editing of the following parameters:
  - Fork frequency, switch-on frequency, switch-off frequency, switch-on time and switch-off time, status, measured value, density change
- Matrix locking possible
- Switch to WHG mode possible (WHG approval)
- For a detailed description, see BA00198F

Signal on alarm

Failure information can be accessed using the following interfaces:

- Yellow LED flashing,
- Status code
- Diagnostic code
# Electronic insert FEL50D (density)

## Power supply
- Frequency range: 300 to 1500 Hz
- Signal level: 4 mA
- Pulse height: 16 mA
- Pulse width: 20 μS

## Electrical connection
- **Two-wire connection at Density Computer FML621**
  - For connecting to the Density and Concentration Computer FML621.
  - The output signal is based on pulse technology. With the aid of this signal, the fork frequency is constantly forwarded to the switching unit.
  - **Caution!** Operation with other switching units, such as FTL325P, is not permitted.
  - This electronic insert cannot be installed in devices that were originally used as a point level switch.

## Signal on alarm
- Output signal on power failure or in the event of damaged sensor: 0 Hz

## Adjustment
- In the Liquiphant M modular system, the option of an adjustment is also provided in addition to the electronics (see feature 60: "Accessories").
- There are three types of adjustment:
  - **Standard adjustment** (see ordering information for additional options, basic version A)
    - Here, two fork parameters are determined to describe the sensor characteristics, indicated in the adjustment report and provided with the product.
    - These parameters must be transferred to the Density Computer FML621.
  - **Special adjustment** (see ordering information for additional options, special adjustment, density H₂O (K) or special adjustment, density H₂O with 3.1 certificate (L))
    - Here, three fork parameters are determined to describe the sensor characteristics, indicated in the adjustment report and provided with the product.
    - These parameters must be transferred to the Density Computer FML621.
    - Greater accuracy is achieved with this type of adjustment (see also "Performance characteristics").
  - **Field adjustment**
    - During field adjustment, a density value actually determined by the customer is entered and the system is automatically adjusted to this value (wet adjustment).

### Note!
More information on Liquiphant M Density is available in Technical Information TI00420F. This document is available for download at www.endress.com => Download.
Operating principle

Measuring the density of a liquid medium in pipes and tanks. Also suitable for use in hazardous areas, and preferably for applications in the chemical and food industry.

* Pressure and temperature information required depending on the application.
1. Liquiphant M sensor with electronic insert FELS0D (pulse output);
2. Temperature sensor (e.g. 4 to 20 mA output);
3. Pressure transmitter (4 to 20 mA output);
4. Liquiphant Density and Concentration Computer FML621 with display and operating unit

Connection and function

Connecting cables
- Electronic inserts: cross-section ≤ 2.5 mm² (14 AWG); strand in ferrule as per DIN 46228
- Protective ground in housing: cross-section ≤ 2.5 mm² (14 AWG)
- External equipotential bonding connection on housing: cross-section ≤ 4 mm² (12 AWG)

Safety mode
- Minimum/maximum residual current safety selectable on electronic insert (with FEL57 on Nivotester only)
  - MAX = maximum safety:
The output switches to the power fail response when the fork is covered
  For use with overfill prevention for example
  - MIN = minimum safety:
The output switches to the power fail response when the fork is exposed
  For use with dry running protection for example

Switching time
- When fork is covered: approx. 0.5 s
- When fork is exposed: approx. 1.0 s
- Additionally configurable for PROFIBUS PA: 0.5 to 60 s
- Other switching times available on request.

Switch-on behavior
- When switching on the power supply, the output assumes the alarm signal.
- After ≤ 3 s it assumes the correct switching mode (exception: FEL57)

Performance characteristics

Reference operating conditions
- Ambient temperature: 23 °C (73 °F)
- Medium temperature: 23 °C (73 °F)
- Medium density (water): 1 g/cm³ (SGU)
- Medium viscosity: 1 mm²/s (cSt)
- Medium pressure, p: 0 bar (0 psi)
- Sensor mounting: vertical from above
- Density switch: to > 0.7 g/cm³ (SGU)

Maximum measured error
- Under reference operating conditions: max. +/- 1 mm (0.04 in)

Repeatability
- 0.1 mm (0.004 in)

Hysteresis
- ECTFE and PFA: approx. 2 mm (0.08 in)
- Enamel: approx. 2.5 mm (0.1 in)

Influence of medium temperature
- ECTFE and PFA: max. +1.4 mm to –2.8 mm (–50 to +120 °C / -58 to 248 °F)
- Enamel: max. +0.6 mm to –1.5 mm (–50 to +150 °C / -58 to 302 °F)

Influence of medium density
- max. +4.8 mm to –3.5 mm (0.5 to 1.5 g/cm³ (SGU))
- max. +0.19 in to -0.14 in

Influence of medium pressure
- ECTFE and PFA:
  - max. 0 mm to –2.0 mm (0 bar to 40 bar)
  - max. 0 in to -0.08 in (0 psi to 580 psi)
- Enamel:
  - max. 0 mm to –1.0 mm (0 bar to 25 bar)
  - max. 0 in to -0.04 in (0 psi to 363 psi)

Switching delay
- When fork is covered: 0.5 s
- When fork is exposed: 1.0 s
- Available on request: 0.2 s, 1.5 s or 5 s (when the tuning fork is covered or exposed)

## Operating conditions

### Installation instructions

Switch points on the sensor depend on the mounting position, with reference to water, density 1 g/cm³ (SGU), 23 °C (73 °F), pₚ 0 bar (0 psi).

**Note!**
- The switch points of the Liquiphant M are at other positions to those of the previous version Liquiphant II.
- Minimum distance between the tip of the fork and the tank wall or pipe wall: 10 mm

### Synthetic coating:

- Mounting from above
- Mounting from below
- Mounting from the side

### Enamel coating:

- Mounting from above
- Mounting from below
- Mounting from the side

### Examples of mounting

Examples of mounting depending on the viscosity ν of the liquid and the tendency to form buildup

Optimum mounting, problem-free even with high viscosity:
Position the fork so that the narrow edge of the tines is vertical to ensure that the liquid can run off easily.

**With buildup on the tank walls:**
* Ensure that there is sufficient distance between the buildup expected on the tank wall and the fork.

**Mounting positions with low viscosity (up to 2000 mm²/s):**

* Deburr the nozzle surfaces

**Mounting in piping from 2”**
Flow velocities up to 5 m/s (16.4 ft/s) with a viscosity of 1 mm²/s and density of 1 g/cm³. (Check the function in the case of other medium conditions.)
Support the device in the event of a severe dynamic load.
Support is possible only in conjunction with ECTFE or PFA synthetic coating.

Installation location
Ensure that there is adequate space outside the tank for mounting, connection and configuration.

Orientation
FTL51C with short pipe up to approx. 500 (19.7 mm): any position
FTL51C with long pipe: vertical
Environment

Ambient temperature range
Permitted ambient temperature $T_a$ at the housing depending on the medium temperature $T_p$ in the tank:

- Storage temperature:
  - -50 to +80 °C (-58 to 176 °F)

- Operating altitude:
  - Up to 2000 m (6600 ft) above sea level
  - Can be extended up to 3000 m (9800 ft) above sea level if overvoltage protection is used, for example HAW562 or HAW569

Storage temperature
-50 to +80 °C (-58 to 176 °F)

Operating altitude as per IEC61010-1 Ed.3
- Up to 2000 m (6600 ft) above sea level

- Can be extended up to 3000 m (9800 ft) above sea level if overvoltage protection is used, for example HAW562 or HAW569

Climate class
- Climate protection to IEC 68, Part 2-38, Fig. 2a

Degree of protection

* As per EN60529
** As per NEMA 250
*** Only with M20 cable entry or G1/2 thread
**** F13 housing only in conjunction with XP or Ex d approval

Vibration resistance
- As per IEC 68, parts 2-6 (10 to 55 Hz, 0.15 mm (0.01 in), 100 cycles)

Electromagnetic compatibility
- Interference emission to EN 61326, Electrical Equipment Class B
- Interference immunity to EN 61326; Annex A (Industrial) and NAMUR Recommendation NE 21 (EMC)
# Medium conditions

| Medium temperature | ECTFE: −50 °C to +120 °C (−58 °F to +248 °F)  
|                     | PFA: −50 °C to +150 °C (−58 °F to +302 °F)  
|                     | Enamel: max. −50 °C to +150 °C (−58 °F to +302 °F) |
| Thermal shock       | ≤ 120 °C/s (248 °F/s) |

| Medium pressure $p_e$ | The following values apply over the entire temperature range. Pay attention to exceptions for flange process connections!  
|                       | • ECTFE and PFA: −1 to +40 bar (−14.5 to 580 psi)  
|                       | • Enamel: max. −1 to +25 bar (−14.5 to 363 psi)  

Please refer to the standards listed for the permitted pressure values of the flanges at higher temperatures:  
• pR EN 1092-1: 2005  
  With regard to its stability-temperature property, the material 1.4435 is identical to 1.4404, which is classed under 13E0 in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.  
• ASME B 16.5a - 1998 Tab. 2-2.2 F316  
• ASME B 16.5a - 1998 Tab. 2.3.8 N10276  
• JIS B 2220  

The lowest value from the derating curves of the device and selected flange applies in each case.  
Canadian CRN approval: Additional details on maximum pressure values are available in the download area of the product page at ‘www.endress.com’.  

| Test pressure $p_e = 100$ bar (1450 psi): | ≤ 150 bar (2175 psi) or 1.5 times the medium pressure $p_e$  
|                                           | Membrane burst pressure at 200 bar (2900 psi)  

Note!  
Device function is not available during pressure testing.  

| Pressure shock | ≤ 20 bar/s (≤ 290 psi) |
| State of aggregation | Liquid |
| Density | 0.7 g/cm³ (SGU) = delivery status  
|         | 0.5 g/cm³ (SGU) can be adjusted via switch |
| Viscosity | ≤ 10,000 mm²/s (cSt) |
| Solids content | ≤ ø5 mm (0.2 in) |
| Lateral loading capacity | ≤ 75 Nm |
**Mechanical construction**

**Note!**
2D and 3D drawings containing individual dimensions can be generated and downloaded in the Configurator on the product pages of the Liquiphant FTL5x at www.endress.com.

### Design

Summary of all electrical and mechanical versions

#### Housing

</tbody>
</table>

#### Plug-in electronic inserts to mount in the housing

- FEL51: Two-wire AC connection
- FEL52: Three-wire DC connection PNP
- FEL54: Universal current connection, 2 relay outputs
- FEL55: Output 16/8 mA for separate switching unit
- FEL56: Output 0.6 to 1.0 / 2.2 to 2.8 mA for separate switching unit (NAMUR)
- FEL58: Output 2.2 to 3.5 / 0.6 to 1.0 mA for separate switching unit (NAMUR)
- FEL57: Output 150/50 Hz, PFM, for separate switching unit (Nivotester)
- FEL50A: Digital communication PROFIBUS PA
- FEL50D: Pulse output for Density Computer FML621

#### Bushings

Temperature spacer and pressure-tight feedthrough: enables closed tank insulation and normal ambient temperature for the housing.

#### Process connections

Flanges* according to DIN/EN, ASME, JIS from DN 40 / 1½"

* The following applies for DN 25/ASME 1½:

  - Radius (R) ≤ 4 mm.
  - Take into account for counterflange!

#### Sensors

With extension pipe up to 3 m

or special "length L II" (see also Page 24)
## Dimensions

Dimensions in mm (in)

* This length is customer-specific.

**Note!**
The switch points of the Liquiphant M are at other positions to those of the previous version Liquiphant II.
**Bushing**: temperature spacer, pressure tight feed-through

**Temperature spacer**
Provides sealed insulation for the vessel and normal ambient temperatures for the housing.

**Pressure tight feed-through**
Protects the housing from vessel pressures up to 40 bar (580 psi) if the sensor is damaged.
Provides sealed insulation for the vessel and normal ambient temperatures for the housing.

* FDA-compliant in accordance with 21 CFR Part 177.1550

**Parts with no process contact**

- Tuning fork/housing seal: EPDM
- Temperature spacer: 316L (1.4435)
- Pressure-tight feedthrough: 316L (1.4435)
- Ground terminal on housing (external): 316L (1.4404)
- Cable glands
  - Housing F13, F15, F16, F17: polyamide (PA)
    - In the case of approval B or C (→ 31 Ordering information): nickel-plated brass
  - Housing F27: polyamide PA, with approval "B" or "C" 316L (1.4435)
  - Housing T13: nickel-plated brass
- Polyester housing F16: PBT-FR with PBT-FR cover or with PA12 transparent cover
  - Cover seal: EPDM
  - Nameplate glued: polyester film (PET)
  - Pressure compensation filter: PBT-GF20
- Stainless steel housing F15: 316L (1.4404)
  - Cover seal: silicone
  - Safety claw: 304 (1.4301)
  - Pressure compensation filter: PBT-GF20, PA
- Aluminum housing F17/F13: EN-AC-AlSi10Mg, plastic-coated
  - Nameplate: aluminum, anodized
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass
  - Pressure compensation filter: silicone (F17 housing only)
- Stainless steel housing F27: 316L
  - Nameplate: 316L (1.4404)
  - Cover seal: FVMQ (optional: EPDM seal available as spare part)
  - Safety claw: 316L (1.4435)
- Aluminum housing T13: EN-AC-AlSi10Mg, plastic-coated,
  - Nameplate: aluminum, anodized
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass

**Process connections**

- Flanges made of 316L (1.4404) - synthetic coating; flanges made of 1.0487 (ASTMA 529) - enamel coating
- Flanges as per EN/DIN 1092-1 from DN 25, as per ASME B16.5 from 1", as per JIS B 2220 (RF) from 10K50
Human interface

**Electronic inserts**

**With FEL51, FEL52, FEL54, FEL55:**
- 2 switches for safety mode and density change
- green LED to indicate operational status
- red LED to indicate the switching status,
  flashes in the event of corrosion damage on sensor
  or if the electronics are defective

**With FEL56:**
- 2 switches for safety mode and density change
- green LED flashes to indicate operational status
- red LED to indicate the switching status,
  flashes in the event of corrosion damage on sensor
  or if the electronics are defective

**With FEL57:**
- 2 switches for density change and proof testing
- green LED to indicate operational status
- yellow LED to indicate the covered status,
  flashes in the event of corrosion damage on sensor
  or if the electronics are defective

**With FEL58:**
- 2 switches for safety mode and density change
- green LED
  - flashes quickly to indicate operational status,
  - flashes slowly in the event of corrosion damage to the
    sensor of if the electronics are defective
- yellow LED to indicate the switching status,
  Test key – breaks the cable connection

**With FEL50A:**
- 8 switches for configuring the device address
- green LED to indicate operational status,
  pulsing to indicate communication;
- yellow LED to indicate the switching status,
  flashes in the event of corrosion damage on sensor
  or if the electronics are defective

**With FEL50D:**
- yellow LED: to indicate the validation of the measurement
- green LED: to indicate the operational status
- red LED: to indicate faults
Certificates and approvals

Certificates

See Ordering information → 31.

CE mark

The measuring system meets the legal requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

RoHS

The measuring system complies with the substance restrictions of the EU Directive on the restriction of the use of certain hazardous substances 2011/65/EU (RoHS 2).

RCM-tick mark

The product or measuring system supplied complies with the regulations of the Australian Communications and Media Authority (ACMA) for network integrity, performance characteristics and health and safety requirements. The specifications for electromagnetic compatibility, in particular, are observed. The products bear the RCM-tick mark on their nameplate.

EAC conformity

The measuring system meets the legal requirements of the applicable EAC Directives. These are listed in the corresponding EAC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the EAC mark.

CRN approval

Device versions with a CRN approval (Canadian Registration Number) are listed in the following table.

The registration number CRN: 0F10904.5CADD1 is stamped on the nameplate of CRN-approved devices.
Pressure Equipment Directive 2014/68/EU (PED)

Pressure instruments with permitted pressure ≤ 200 bar (2 900 psi)

Pressure instruments with a flange and threaded boss that do not have a pressure-bearing housing do not fall within the scope of the Pressure Equipment Directive, irrespective of the maximum permitted pressure.

Reason:

According to Article 2, point 5 of EU Directive 2014/68/EU, pressure accessories are defined as "devices with an operational function and having pressure-bearing housings". If a pressure instrument does not have a pressure-bearing housing (no identifiable pressure chamber of its own), there is no pressure accessory present within the meaning of the Directive.

Process seal according to ANSI/ISA 12.27.01

Practice in North America for the installation of process seals. Endress+Hauser devices are designed as either single seal or dual seal devices with an alarm in accordance with ANSI/ISA 12.27.01. This means that the user does not need to install, or bear the costs of, an external secondary process seal in the thermowell which is required in ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These devices comply with installation practice in North America and enable very safe, low-cost installation in pressurized applications with hazardous media. Further information on the specific device can be found in the following section: Safety Instructions (ATEX) → § 34 ff.

Other certificates

- Material certificate as per EN 10204/3.1 for all pressure bearing parts
- Leak detection system in conjunction with WHG approval
  - Approval number: 2–65.40–446 (see also "Ordering information")

Note!

Device components in contact with the process are listed in the sections 'Mechanical construction' (→ § 24 ff.) and "Ordering information" (→ § 31).

Manufacturer declarations

The following documents can be ordered together with the document, depending on the desired device configuration:

- FDA conformity

The applicable European guidelines and standards can be found in the relevant EU Declarations of Conformity.

Use in hazardous zones

Pay particular attention to the information provided in the documentation: Safety Instructions, Control Drawings etc. → § 34

Note!

The use of the selected coating material affects the approved gas groups IIB/IIC. Please refer to the information in the safety documentation XA → § 34 ff.

Ordering information

Detailed ordering information is available:

- In the Product Configurator on the Endress+Hauser website: www.endress.com → Click "Corporate" → Select your country → Click "Products" → Select the product using the filter and search field → Open the product page → The 'Configuration' button on the right of the product picture opens the Product Configurator.
- From your Endress+Hauser Sales Center: www.addresses.endress.com

Note!

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: direct input of information specific to the measuring point, such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

**Accessories**

**Transparent cover**
For polyester housing F16  
Material: PA 12  
Weight: 0.04 kg  
Order number: 943461-0001

**Cover with sight glass**
For stainless steel housing F15  
Material: AISI 316L  
Weight: 0.16 kg  
- With glass sight glass  
  Order number: 943301-1000  
- With PC sight glass  
  Order number: 52001403  
  (Not for CSA, General Purpose)
