

Operating Instructions

Proline Promass E 100

Coriolis flowmeter
HART

- Make sure the document is stored in a safe place such that it is always available when working on or with the device.
- To avoid danger to individuals or the facility, read the "Basic safety instructions" section carefully, as well as all other safety instructions in the document that are specific to working procedures.
- The manufacturer reserves the right to modify technical data without prior notice. Your Endress+Hauser Sales Center will supply you with current information and updates to these instructions.

1 About this document

1.1 Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2 Symbols

1.2.1 Safety symbols

DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Symbol	Meaning
	Direct current
	Alternating current
	Direct current and alternating current
	Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.
	Protective Earth (PE) A terminal which must be connected to ground prior to establishing any other connections. The ground terminals are situated inside and outside the device: <ul style="list-style-type: none"> ▪ Inner ground terminal: Connects the protective earth to the mains supply. ▪ Outer ground terminal: Connects the device to the plant grounding system.

1.2.3 Tool symbols

Symbol	Meaning
	Allen key
	Open-ended wrench

1.2.4 Symbols for certain types of information

Symbol	Meaning
	Permitted Procedures, processes or actions that are permitted.
	Preferred Procedures, processes or actions that are preferred.
	Forbidden Procedures, processes or actions that are forbidden.
	Tip Indicates additional information.
	Reference to documentation.
	Reference to page.
	Reference to graphic.
	Notice or individual step to be observed.
	Series of steps.
	Result of a step.
	Help in the event of a problem.
	Visual inspection.

1.2.5 Symbols in graphics

Symbol	Meaning
1, 2, 3, ...	Item numbers
	Series of steps
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections
	Hazardous area
	Safe area (non-hazardous area)
	Flow direction

1.3 Documentation

 For an overview of the scope of the associated Technical Documentation, refer to the following:

- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate

 Detailed list of the individual documents along with the documentation code
→  119

1.3.1 Standard documentation

Document type	Purpose and content of the document
Technical Information	Planning aid for your device The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.
Sensor Brief Operating Instructions	Guides you quickly to the 1st measured value - Part 1 The Sensor Brief Operating Instructions are aimed at specialists with responsibility for installing the measuring device. <ul style="list-style-type: none"> ■ Incoming acceptance and product identification ■ Storage and transport ■ Installation
Transmitter Brief Operating Instructions	Guides you quickly to the 1st measured value - Part 2 The Transmitter Brief Operating Instructions are aimed at specialists with responsibility for commissioning, configuring and parameterizing the measuring device (until the first measured value). <ul style="list-style-type: none"> ■ Product description ■ Installation ■ Electrical connection ■ Operation options ■ System integration ■ Commissioning ■ Diagnostic information
Description of Device Parameters	Reference for your parameters The document provides a detailed explanation of each individual parameter in the Expert operating menu. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.2 Supplementary device-dependent documentation

Additional documents are supplied depending on the device version ordered: Always comply strictly with the instructions in the supplementary documentation. The supplementary documentation is an integral part of the device documentation.

1.4 Registered trademarks

HART®

Registered trademark of the FieldComm Group, Austin, Texas, USA

TRI-CLAMP®

Registered trademark of Ladish & Co., Inc., Kenosha, USA

2 Safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

- ▶ Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ▶ Are authorized by the plant owner/operator.
- ▶ Are familiar with federal/national regulations.
- ▶ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▶ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:

- ▶ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- ▶ Follow the instructions in this manual.

2.2 Designated use

Application and media

The measuring device described in this manual is intended only for the flow measurement of liquids and gases.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:

- ▶ Keep within the specified pressure and temperature range.
- ▶ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- ▶ Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area (e.g. explosion protection, pressure vessel safety).
- ▶ Use the measuring device only for media to which the process-wetted materials are sufficiently resistant.
- ▶ If the ambient temperature of the measuring device is outside the atmospheric temperature, it is absolutely essential to comply with the relevant basic conditions as specified in the device documentation →  6.
- ▶ Protect the measuring device permanently against corrosion from environmental influences.

Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

WARNING

Danger of breakage due to corrosive or abrasive fluids and ambient conditions!

- ▶ Verify the compatibility of the process fluid with the sensor material.
- ▶ Ensure the resistance of all fluid-wetted materials in the process.
- ▶ Keep within the specified pressure and temperature range.

NOTICE**Verification for borderline cases:**

- ▶ For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

Residual risks**⚠ WARNING**

The electronics and the medium may cause the surfaces to heat up. This presents a burn hazard!

- ▶ For elevated fluid temperatures, ensure protection against contact to prevent burns.

⚠ WARNING**Danger of housing breaking due to measuring tube breakage!**

If a measuring tube ruptures, the pressure inside the sensor housing will rise according to the operating process pressure.

- ▶ Use a rupture disk.

⚠ WARNING**Danger from medium escaping!**

For device versions with a rupture disk: medium escaping under pressure can cause injury or material damage.

- ▶ Take precautions to prevent injury and material damage if the rupture disk is actuated.

2.3 Workplace safety

For work on and with the device:

- ▶ Wear the required personal protective equipment according to federal/national regulations.

For welding work on the piping:

- ▶ Do not ground the welding unit via the measuring device.

If working on and with the device with wet hands:

- ▶ Due to the increased risk of electric shock, gloves must be worn.

2.4 Operational safety

Risk of injury.

- ▶ Operate the device in proper technical condition and fail-safe condition only.
- ▶ The operator is responsible for interference-free operation of the device.

Conversions to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers.

- ▶ If, despite this, modifications are required, consult with Endress+Hauser.

Repair

To ensure continued operational safety and reliability,

- ▶ Carry out repairs on the device only if they are expressly permitted.
- ▶ Observe federal/national regulations pertaining to repair of an electrical device.
- ▶ Use original spare parts and accessories from Endress+Hauser only.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

2.6 IT security

Our warranty is valid only if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the device and associated data transfer, must be implemented by the operators themselves in line with their security standards.

3 Product description

The device consists of a transmitter and a sensor.

The device is available as a compact version:

The transmitter and sensor form a mechanical unit.

3.1 Product design

3.1.1 Device version with HART communication protocol

A0023153

1 Important components of a measuring device

- 1 Sensor
- 2 Transmitter housing
- 3 Main electronics module
- 4 Transmitter housing cover
- 5 Transmitter housing cover (version for optional local display)
- 6 Local display (optional)
- 7 Main electronics module (with bracket for optional local display)

4 Incoming acceptance and product identification

4.1 Incoming acceptance

Are the order codes on the delivery note (1) and the product sticker (2) identical?

Are the goods undamaged?

Do the nameplate data match the ordering information on the delivery note?

Is the envelope present with accompanying documents?

- i** ■ If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
- Depending on the device version, the CD-ROM might not be part of the delivery! The Technical Documentation is available via the Internet or via the *Endress+Hauser Operations App*, see the "Product identification" section → 13.

4.2 Product identification

The following options are available for identification of the device:

- Nameplate specifications
- Order code with breakdown of the device features on the delivery note
- Enter serial numbers from nameplates in the *W@M Device Viewer* (www.endress.com/deviceviewer): All information about the device is displayed.
- Enter the serial number from nameplates in the *Endress+Hauser Operations App* or scan the 2-D matrix code (QR code) on the nameplate using the *Endress+Hauser Operations App*: All information about the device is displayed.

For an overview of the scope of the associated Technical Documentation, refer to the following:

- The "Additional standard documentation on the device" →  7 and "Supplementary device-dependent documentation" →  7 sections
- The *W@M Device Viewer*: enter the serial number from the nameplate (www.endress.com/deviceviewer)
- The *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the 2-D matrix code (QR code) on the nameplate.

4.2.1 Transmitter nameplate

A0030222

 2 Example of a transmitter nameplate

- 1 Manufacturing location
- 2 Name of the transmitter
- 3 Order code
- 4 Serial number (Ser. no.)
- 5 Extended order code (Ext. ord. cd.)
- 6 Electrical connection data, e.g. available inputs and outputs, supply voltage
- 7 Permitted ambient temperature (T_a)
- 8 Degree of protection
- 9 2-D matrix code
- 10 Document number of safety-related supplementary documentation →  120
- 11 Manufacturing date: year-month
- 12 CE mark, C-Tick
- 13 Firmware version (FW)

4.2.2 Sensor nameplate

A0029206

 3 Example of a sensor nameplate, part 1

- 1 Name of the sensor
- 2 Manufacturing location
- 3 Nominal diameter of the sensor; flange nominal diameter/nominal pressure; sensor test pressure; medium temperature range; material of measuring tube and manifold
- 4 Sensor-specific information
- 5 CE mark, C-Tick
- 6 Order code
- 7 Serial number (ser. no.)
- 8 Extended order code (Ext. ord. cd.)

A0029207

4 Example of a sensor nameplate, part 2

- 1 Approval information for explosion protection, Pressure Equipment Directive and degree of protection
- 2 Permitted ambient temperature (T_a)
- 3 Document number of safety-related supplementary documentation
- 4 2-D matrix code
- 5 Flow direction
- 6 Manufacturing date: year-month

i **Order code**
The measuring device is reordered using the order code.

Extended order code

- The device type (product root) and basic specifications (mandatory features) are always listed.
- Of the optional specifications (optional features), only the safety and approval-related specifications are listed (e.g. LA). If other optional specifications are also ordered, these are indicated collectively using the # placeholder symbol (e.g. #LA#).
- If the ordered optional specifications do not include any safety and approval-related specifications, they are indicated by the + placeholder symbol (e.g. XXXXXX-ABCDE+).

4.2.3 Symbols on measuring device

Symbol	Meaning
	WARNING! This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.
	Reference to documentation Refers to the corresponding device documentation.
	Protective ground connection A terminal which must be connected to ground prior to establishing any other connections.

5 Storage and transport

5.1 Storage conditions

Observe the following notes for storage:

- ▶ Store in the original packaging to ensure protection from shock.
- ▶ Do not remove protective covers or protective caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.
- ▶ Protect from direct sunlight to avoid unacceptably high surface temperatures.
- ▶ Store in a dry and dust-free place.
- ▶ Do not store outdoors.

Storage temperature →  109

5.2 Transporting the product

Transport the measuring device to the measuring point in the original packaging.

A0029252

 Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

5.2.1 Measuring devices without lifting lugs

WARNING

Center of gravity of the measuring device is higher than the suspension points of the webbing slings.

Risk of injury if the measuring device slips.

- ▶ Secure the measuring device against slipping or turning.
- ▶ Observe the weight specified on the packaging (stick-on label).

A0029214

5.2.2 Measuring devices with lifting lugs

CAUTION

Special transportation instructions for devices with lifting lugs

- ▶ Only use the lifting lugs fitted on the device or flanges to transport the device.
- ▶ The device must always be secured at two lifting lugs at least.

5.2.3 Transporting with a fork lift

If transporting in wood crates, the floor structure enables the crates to be lifted lengthwise or at both sides using a forklift.

5.3 Packaging disposal

All packaging materials are environmentally friendly and 100 % recyclable:

- Outer packaging of device
 - Polymer stretch wrap that complies with EU Directive 2002/95/EC (RoHS)
- Packaging
 - Wooden crate treated in accordance with ISPM 15 standard, confirmed by IPPC logo
 - Cardboard box in accordance with European packaging guideline 94/62EC, recyclability confirmed by Resy symbol
- Carrying and securing materials
 - Disposable plastic pallet
 - Plastic straps
 - Plastic adhesive strips
- Filler material
 - Paper pads

6 Installation

6.1 Installation conditions

6.1.1 Mounting position

Mounting location

A0028772

To prevent measuring errors arising from accumulation of gas bubbles in the measuring tube, avoid the following mounting locations in the pipe:

- Highest point of a pipeline.
- Directly upstream of a free pipe outlet in a down pipe.

Installation in down pipes

However, the following installation suggestion allows for installation in an open vertical pipeline. Pipe restrictions or the use of an orifice with a smaller cross-section than the nominal diameter prevent the sensor running empty while measurement is in progress.

A0028773

5 Installation in a down pipe (e.g. for batching applications)

- 1 Supply tank
- 2 Sensor
- 3 Orifice plate, pipe restriction
- 4 Valve
- 5 Batching tank

DN		Ø orifice plate, pipe restriction	
[mm]	[in]	[mm]	[in]
8	$\frac{3}{8}$	6	0.24
15	$\frac{1}{2}$	10	0.40
25	1	14	0.55
40	$1\frac{1}{2}$	22	0.87
50	2	28	1.10
80	3	50	1.97

Orientation

The direction of the arrow on the sensor nameplate helps you to install the sensor according to the flow direction (direction of medium flow through the piping).

Orientation			Recommendation
A	Vertical orientation	 <small>A0015591</small>	✓✓ ¹⁾
B	Horizontal orientation, transmitter at top	 <small>A0015589</small>	✓✓ ²⁾ Exceptions: → ☒ 6, ☒ 18
C	Horizontal orientation, transmitter at bottom	 <small>A0015590</small>	✓✓ ³⁾ Exceptions: → ☒ 6, ☒ 18
D	Horizontal orientation, transmitter at side	 <small>A0015592</small>	✗

- 1) This orientation is recommended to ensure self-draining.
- 2) Applications with low process temperatures may decrease the ambient temperature. To maintain the minimum ambient temperature for the transmitter, this orientation is recommended.
- 3) Applications with high process temperatures may increase the ambient temperature. To maintain the maximum ambient temperature for the transmitter, this orientation is recommended.

If a sensor is installed horizontally with a curved measuring tube, match the position of the sensor to the fluid properties.

☒ 6 Orientation of sensor with curved measuring tube

- 1 Avoid this orientation for fluids with entrained solids: Risk of solids accumulating.
- 2 Avoid this orientation for outgassing fluids: Risk of gas accumulating.

Inlet and outlet runs

No special precautions need to be taken for fittings which create turbulence, such as valves, elbows or T-pieces, as long as no cavitation occurs → 19.

Installation dimensions

For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section.

6.1.2 Environmental and process requirements

Ambient temperature range

Measuring device	<ul style="list-style-type: none"> ■ -40 to $+60$ °C (-40 to $+140$ °F) ■ Order code for "Test, certificate", option JM: -50 to $+60$ °C (-58 to $+140$ °F)
------------------	---

- If operating outdoors:
Avoid direct sunlight, particularly in warm climatic regions.

System pressure

It is important that cavitation does not occur, or that gases entrained in the liquids do not outgas.

Cavitation is caused if the pressure drops below the vapor pressure:

- In liquids that have a low boiling point (e.g. hydrocarbons, solvents, liquefied gases)
- In suction lines
- Ensure the system pressure is sufficiently high to prevent cavitation and outgassing.

For this reason, the following mounting locations are recommended:

- At the lowest point in a vertical pipe
- Downstream from pumps (no danger of vacuum)

Thermal insulation

In the case of some fluids, it is important to keep the heat radiated from the sensor to the transmitter to a low level. A wide range of materials can be used for the required insulation.

NOTICE**Electronics overheating on account of thermal insulation!**

- ▶ Recommended orientation: horizontal orientation, transmitter housing pointing downwards.
- ▶ Do not insulate the transmitter housing .
- ▶ Maximum permissible temperature at the lower end of the transmitter housing: 80 °C (176 °F)
- ▶ Thermal insulation with extended neck free: We recommend that you do not insulate the extended neck in order to ensure optimum dissipation of heat.

A0034391

7 Thermal insulation with extended neck free

Heating**NOTICE****Electronics can overheat due to elevated ambient temperature!**

- ▶ Observe maximum permitted ambient temperature for the transmitter .
- ▶ Depending on the fluid temperature, take the device orientation requirements into account .

NOTICE**Danger of overheating when heating**

- ▶ Ensure that the temperature at the lower end of the transmitter housing does not exceed 80 °C (176 °F).
- ▶ Ensure that sufficient convection takes place at the transmitter neck.
- ▶ Ensure that a sufficiently large area of the transmitter neck remains exposed. The uncovered part serves as a radiator and protects the electronics from overheating and excessive cooling.
- ▶ When using in potentially explosive atmospheres, observe the information in the device-specific Ex documentation. For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

Heating options

If a fluid requires that no heat loss should occur at the sensor, users can avail of the following heating options:

- Electrical heating, e.g. with electric band heaters
- Via pipes carrying hot water or steam
- Via heating jackets

Vibrations

The high oscillation frequency of the measuring tubes ensures that the correct operation of the measuring system is not influenced by plant vibrations.

6.1.3 Special mounting instructions**Drainability**

The measuring tubes can be completely drained and protected against solids build-up in vertical orientation.

Sanitary compatibility

When installing in hygienic applications, please refer to the information in the "Certificates and approvals/hygienic compatibility" section → 117

Rupture disk

Information that is relevant to the process: → 111.

⚠ WARNING

Danger from medium escaping!

Medium escaping under pressure can cause injury or material damage.

- ▶ Take precautions to prevent danger to persons and damage if the rupture disk is actuated.
- ▶ Observe information on the rupture disk sticker.
- ▶ Make sure that the function and operation of the rupture disk is not impeded through the installation of the device.
- ▶ Do not use a heating jacket.
- ▶ Do not remove or damage the rupture disk.
- ▶ After the rupture disk is actuated, do not operate the measuring device any more.

The position of the rupture disk is indicated on a sticker applied over it. If the rupture disk is triggered, the sticker is destroyed. The disk can therefore be visually monitored.

1 Rupture disk label

Zero point adjustment

All measuring devices are calibrated in accordance with state-of-the-art technology. Calibration takes place under reference conditions → 104. Therefore, a zero point adjustment in the field is generally not required.

Experience shows that zero point adjustment is advisable only in special cases:

- To achieve maximum measuring accuracy even with low flow rates.
- Under extreme process or operating conditions (e.g. very high process temperatures or very high-viscosity fluids).

6.2 Mounting the measuring device

6.2.1 Required tools

For sensor

For flanges and other process connections: Corresponding mounting tools

6.2.2 Preparing the measuring device

1. Remove all remaining transport packaging.
2. Remove any protective covers or protective caps present from the sensor.
3. If present, remove transport protection of the rupture disk.
4. Remove stick-on label on the electronics compartment cover.

6.2.3 Mounting the measuring device

⚠ WARNING

Danger due to improper process sealing!

- ▶ Ensure that the inside diameters of the gaskets are greater than or equal to that of the process connections and piping.
 - ▶ Ensure that the seals are clean and undamaged.
 - ▶ Secure the seals correctly.
1. Ensure that the direction of the arrow on the nameplate of the sensor matches the flow direction of the fluid.
 2. Install the measuring device or turn the transmitter housing so that the cable entries do not point upwards.

A0029263

6.3 Post-installation check

Is the device undamaged (visual inspection)?	<input type="checkbox"/>
Does the measuring device conform to the measuring point specifications? For example: <ul style="list-style-type: none"> ■ Process temperature → 109 ■ Process pressure (refer to the section on "Pressure-temperature ratings" in the "Technical Information" document) ■ Ambient temperature ■ Measuring range 	<input type="checkbox"/>
Has the correct orientation for the sensor been selected ? <ul style="list-style-type: none"> ■ According to sensor type ■ According to medium temperature ■ According to medium properties (outgassing, with entrained solids) 	<input type="checkbox"/>
Does the arrow on the sensor nameplate match the direction of flow of the fluid through the piping → 18?	<input type="checkbox"/>
Are the measuring point identification and labeling correct (visual inspection)?	<input type="checkbox"/>
Is the device adequately protected from precipitation and direct sunlight?	<input type="checkbox"/>
Are the securing screw and securing clamp tightened securely?	<input type="checkbox"/>

7 Electrical connection

NOTICE

The measuring device does not have an internal circuit breaker.

- ▶ For this reason, assign the measuring device a switch or power-circuit breaker so that the power supply line can be easily disconnected from the mains.
- ▶ Although the measuring device is equipped with a fuse, additional overcurrent protection (maximum 16 A) should be integrated into the system installation.

7.1 Electrical safety

In accordance with applicable federal/national regulations.

7.2 Connection conditions

7.2.1 Required tools

- For cable entries: Use corresponding tools
- For securing clamp (on aluminum housing): Allen screw 3 mm
- For securing screw (for stainless steel housing): open-ended wrench 8 mm
- Wire stripper
- When using stranded cables: crimper for wire end ferrule

7.2.2 Requirements for connecting cable

The connecting cables provided by the customer must fulfill the following requirements.

Permitted temperature range

- The installation guidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

Power supply cable (incl. conductor for the inner ground terminal)

Standard installation cable is sufficient.

Signal cable

Current output 4 to 20 mA HART

A shielded cable is recommended. Observe grounding concept of the plant.

Pulse/frequency/switch output

Standard installation cable is sufficient.

Cable diameter

- Cable glands supplied:
M20 × 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
- Spring terminals:
Wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)

7.2.3 Terminal assignment

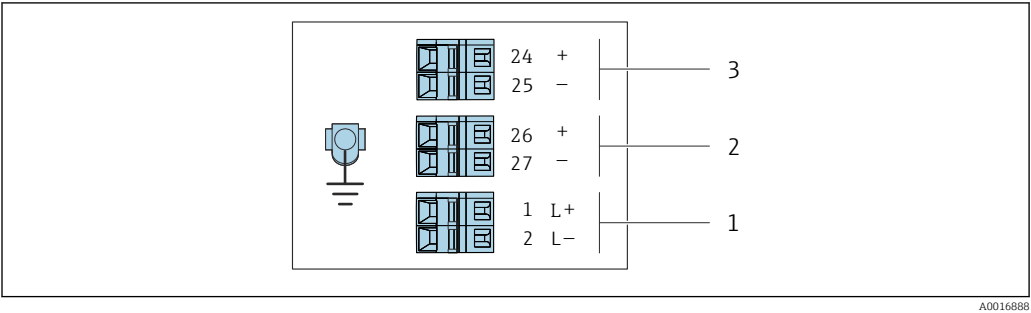

Transmitter

Connection version 4-20 mA HART with pulse/frequency/switch output

Order code for "Output", option B

Depending on the housing version, the transmitters can be ordered with terminals or device plugs.

Order code "Housing"	Connection methods available		Possible options for order code "Electrical connection"
	Outputs	Power supply	
Options A, B	Terminals	Terminals	<div><div>▪ Option A: coupling M20x1</div><div>▪ Option B: thread M20x1</div><div>▪ Option C: thread G ½"</div><div>▪ Option D: thread NPT ½"</div></div>
Options A, B	Device plugs →  25	Terminals	<div><div>▪ Option L: plug M12x1 + thread NPT ½"</div><div>▪ Option N: plug M12x1 + coupling M20</div><div>▪ Option P: plug M12x1 + thread G ½"</div><div>▪ Option U: plug M12x1 + thread M20</div></div>
Options A, B, C	Device plugs →  25	Device plugs →  25	Option Q: 2 x plug M12x1
Order code for "Housing": <div><div>▪ Option A: compact, coated aluminum</div><div>▪ Option B: compact, hygienic, stainless</div><div>▪ Option C ultra-compact, hygienic, stainless</div></div>			

 8 Terminal assignment 4-20 mA HART with pulse/frequency/switch output

- 1 Power supply: DC 24 V
- 2 Output 1: 4-20 mA HART (active)
- 3 Output 2: pulse/frequency/switch output (passive)

Order code "Output"	Terminal number					
	Power supply		Output 1		Output 2	
	2 (L-)	1 (L+)	27 (-)	26 (+)	25 (-)	24 (+)
Option B	DC 24 V		4-20 mA HART (active)		Pulse/frequency/switch output (passive)	
Order code for "Output": Option B: 4-20 mA HART with pulse/frequency/switch output						

7.2.4 Pin assignment, device plug

Supply voltage

	Pin	Assignment	
	1	L+	DC 24 V
	2		Not assigned
	3		Not assigned
	4	L-	DC 24 V
	5		Grounding/shielding
	Coding		Plug/socket
	A		Plug

Device plug for signal transmission (device side)

	Pin	Assignment	
	1	+	4-20 mA HART (active)
	2	-	4-20 mA HART (active)
	3	+	Pulse/frequency/switch output (passive)
	4	-	Pulse/frequency/switch output (passive)
	5		Grounding/shielding
	Coding		Plug/socket
	A		Socket

7.2.5 Preparing the measuring device

NOTICE

Insufficient sealing of the housing!

Operational reliability of the measuring device could be compromised.

- Use suitable cable glands corresponding to the degree of protection.

1. Remove dummy plug if present.
2. If the measuring device is supplied without cable glands:
Provide suitable cable gland for corresponding connecting cable.
3. If the measuring device is supplied with cable glands:
Observe requirements for connecting cables → 23.

7.3 Connecting the measuring device

NOTICE

Limitation of electrical safety due to incorrect connection!

- Have electrical connection work carried out by appropriately trained specialists only.
- Observe applicable federal/national installation codes and regulations.
- Comply with local workplace safety regulations.
- Always connect the protective ground cable ⊕ before connecting additional cables.
- For use in potentially explosive atmospheres, observe the information in the device-specific Ex documentation.
- The power unit must be tested to ensure it meets safety requirements (e.g. PELV, SELV).

7.3.1 Connecting the transmitter

The connection of the transmitter depends on the following order codes:

- Housing version: compact or ultra-compact
- Connection version: device plug or terminals

9 Housing versions and connection versions

- | | |
|---|---|
| A | Housing version: compact, coated, aluminum |
| B | Housing version: compact, hygienic, stainless |
| 1 | Cable entry or device plug for signal transmission |
| 2 | Cable entry or device plug for supply voltage |
| C | Housing version: ultra-compact, hygienic, stainless |
| 3 | Device plug for signal transmission |
| 4 | Device plug for supply voltage |

10 Device versions with connection examples

- 1 Cable
- 2 Device plug for signal transmission
- 3 Device plug for supply voltage

For device version with device plug: follow step 6 only.

1. Depending on the housing version, loosen the securing clamp or fixing screw of the housing cover.
2. Depending on the housing version, unscrew or open the housing cover and disconnect the local display from the main electronics module where necessary
→ 115.
3. Push the cable through the cable entry . To ensure tight sealing, do not remove the sealing ring from the cable entry.
4. Strip the cable and cable ends. In the case of stranded cables, also fit ferrules.
5. Connect the cable in accordance with the terminal assignment or the device plug pin assignment .
6. Depending on the device version, tighten the cable glands or plug in the device plug and tighten .
7. **⚠ WARNING**
Housing degree of protection may be voided due to insufficient sealing of the housing.
 - Screw in the screw without using any lubricant. The threads on the cover are coated with a dry lubricant.

Reverse the removal procedure to reassemble the transmitter.

7.3.2 Ensuring potential equalization

Requirements

No special measures for potential equalization are required.

 For devices intended for use in hazardous locations, please observe the guidelines in the Ex documentation (XA).

7.4 Special connection instructions

7.4.1 Connection examples

Current output 4 to 20 mA HART

 11 Connection example for 4 to 20 mA HART current output (active)

- 1 Automation system with current input (e.g. PLC)
- 2 Cable shield provided at one end. The cable shield must be grounded at both ends to comply with EMC requirements; observe cable specifications
- 3 Connection for HART operating devices → 41
- 4 Resistor for HART communication ($\geq 250 \Omega$); observe maximum load
- 5 Analog display unit; observe maximum load
- 6 Transmitter

A0028762

12 Connection example for 4 to 20 mA HART current output (passive)

- 1 Automation system with current input (e.g. PLC)
- 2 Power supply
- 3 Cable shield provided at one end. The cable shield must be grounded at both ends to comply with EMC requirements; observe cable specifications
- 4 Analog display unit: observe maximum load
- 5 Transmitter

Pulse/frequency output

A0028761

13 Connection example for pulse/frequency output (passive)

- 1 Automation system with pulse/frequency input (e.g. PLC)
- 2 Power supply
- 3 Transmitter: Observe input values

Switch output

A0028760

14 Connection example for switch output (passive)

- 1 Automation system with switch input (e.g. PLC)
- 2 Power supply
- 3 Transmitter: Observe input values

HART input

A0019828

15 Connection example for HART input (burst mode) via current output (active)

- 1 Cable shield provided at one end. Observe cable specifications
- 2 Resistor for HART communication ($\geq 250 \Omega$): observe maximum load
- 3 Connection for HART operating devices
- 4 Analog display unit
- 5 Transmitter
- 6 Sensor for external measured variable

A0019830

16 Connection example for HART input (master mode) via current output (active)

- 1 Automation system with current input (e.g. PLC).
Prerequisite: automation system with HART version 6, HART commands 113 and 114 can be processed.
- 2 Cable shield provided at one end. Observe cable specifications
- 3 Resistor for HART communication ($\geq 250 \Omega$): observe maximum load
- 4 Connection for HART operating devices
- 5 Analog display unit
- 6 Transmitter
- 7 Sensor for external measured variable

7.5 Ensuring the degree of protection

The measuring device fulfills all the requirements for degree of protection IP66/67, Type 4X enclosure.

To guarantee degree of protection IP66/67, Type 4X enclosure, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly.
2. Dry, clean or replace the seals if necessary.
3. Tighten all housing screws and screw covers.
4. Firmly tighten the cable glands.

- 5. To ensure that moisture does not enter the cable entry:
Route the cable so that it loops down before the cable entry ("water trap").

- 6. Insert dummy plugs into unused cable entries.

7.6 Post-connection check

Are cables or the device undamaged (visual inspection)?	<input type="checkbox"/>
Do the cables used meet the requirements → 23?	<input type="checkbox"/>
Do the cables have adequate strain relief?	<input type="checkbox"/>
Are all the cable glands installed, firmly tightened and leak-tight? Cable run with "water trap" → 29?	<input type="checkbox"/>
Depending on the device version: are all the device plugs firmly tightened → 26?	<input type="checkbox"/>
Does the supply voltage match the specifications on the transmitter nameplate → 103?	<input type="checkbox"/>
Is the terminal assignment → 24 or pin assignment of the connector → 25 correct?	<input type="checkbox"/>
If supply voltage is present, is the power LED on the electronics module of the transmitter lit green → 11?	<input type="checkbox"/>
Depending on the device version, is the securing clamp or fixing screw firmly tightened?	<input type="checkbox"/>

8 Operation options

8.1 Overview of operating options

- 1 Computer with Web browser (e.g. Internet Explorer) or with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 2 Field Xpert SFX350 or SFX370
- 3 Field Xpert SMT70
- 4 Control system (e.g. PLC)

8.2 Structure and function of the operating menu

8.2.1 Structure of the operating menu

 For an overview of the operating menu for experts: "Description of Device Parameters" document supplied with the device →  119

 17 Schematic structure of the operating menu

A0018237-EN

8.2.2 Operating philosophy

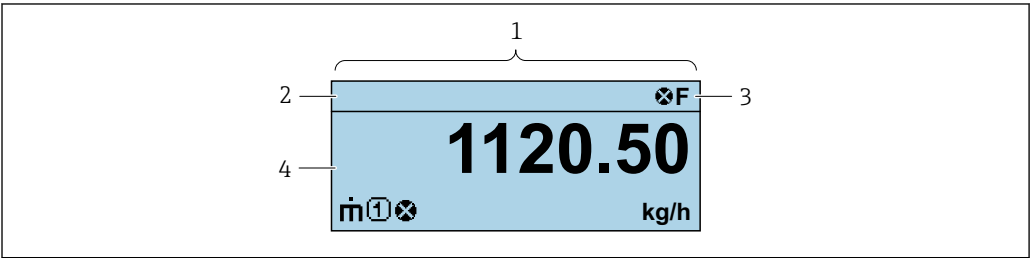

The individual parts of the operating menu are assigned to certain user roles (operator, maintenance etc.). Each user role contains typical tasks within the device lifecycle.

Menu/parameter		User role and tasks	Content/meaning
Language	task-oriented	Role "Operator", "Maintenance" Tasks during operation: <ul style="list-style-type: none"> Configuring the operational display Reading measured values 	<ul style="list-style-type: none"> Defining the operating language Defining the Web server operating language Resetting and controlling totalizers
Operation			<ul style="list-style-type: none"> Configuring the operational display (e.g. display format, display contrast) Resetting and controlling totalizers
Setup		"Maintenance" role Commissioning: <ul style="list-style-type: none"> Configuration of the measurement Configuration of the outputs 	Submenus for fast commissioning: <ul style="list-style-type: none"> Setting the system units Defining the medium Configuring the outputs Configuration of the operational display Defining the output conditioning Setting the low flow cut off Configuring partial and empty pipe detection Advanced setup <ul style="list-style-type: none"> For more customized configuration of the measurement (adaptation to special measuring conditions) Configuration of totalizers Administration (define access code, reset measuring device)
Diagnostics		"Maintenance" role Fault elimination: <ul style="list-style-type: none"> Diagnostics and elimination of process and device errors Measured value simulation 	Contains all parameters for error detection and analyzing process and device errors: <ul style="list-style-type: none"> Diagnostics list Contains up to 5 currently pending diagnostic messages. Event logbook Contains event messages that have occurred. Device information Contains information for identifying the device. Measured values Contains all current measured values. Heartbeat The functionality of the device is checked on demand and the verification results are documented. Simulation Is used to simulate measured values or output values.
Expert	function-oriented	Tasks that require detailed knowledge of the function of the device: <ul style="list-style-type: none"> Commissioning measurements under difficult conditions Optimal adaptation of the measurement to difficult conditions Detailed configuration of the communication interface Error diagnostics in difficult cases 	Contains all the parameters of the device and makes it possible to access these parameters directly using an access code. The structure of this menu is based on the function blocks of the device: <ul style="list-style-type: none"> System Contains all higher-order device parameters which do not concern the measurement or the communication interface. Sensor Configuration of the measurement. Output Configuring of the analog current outputs as well as the pulse/frequency and switch output. Communication Configuration of the digital communication interface and the Web server. Application Configuration of the functions that go beyond the actual measurement (e.g. totalizer). Diagnostics Error detection and analysis of process and device errors and for device simulation and Heartbeat Technology.

8.3 Displaying the measured values via the local display (optionally available)

8.3.1 Operational display

 The local display is optionally available:
Order code for "Display; operation", option B "4-line, illuminated; via communication".

A0037831

- 1 Operational display
- 2 Device tag →  50
- 3 Status area
- 4 Display area for measured values (4-line)

Status area

The following symbols appear in the status area of the operational display at the top right:

- Status signals
 - **F**: Failure
 - **C**: Function check
 - **S**: Out of specification
 - **M**: Maintenance required
- Diagnostic behavior
 - : Alarm
 - : Warning
 - : Locking (the device is locked via the hardware →  75)
 - : Communication (communication via remote operation is active)

Display area

In the display area, each measured value is prefaced by certain symbol types for further description:

Measured variables

Symbol	Meaning
	Mass flow
	<ul style="list-style-type: none">■ Volume flow■ Corrected volume flow

	<ul style="list-style-type: none"> ▪ Density ▪ Reference density
	Temperature
	Totalizer  The measurement channel number indicates which of the three totalizers is displayed.
	Output 

Measurement channel numbers

Symbol	Meaning
	Measurement channel 1 to 4
The measurement channel number is displayed only if more than one channel is present for the same measured variable type (e.g. Totalizer 1 to 3).	

Diagnostic behavior

The diagnostic behavior pertains to a diagnostic event that is relevant to the displayed measured variable.
For information on the symbols

 The number and display format of the measured values can only be configured via the control system or Web server.

8.3.2 User roles and related access authorization

The two user roles "Operator" and "Maintenance" have different write access to the parameters if the customer defines a user-specific access code. This protects the device configuration from unauthorized access →  74.

Defining access authorization for user roles

An access code is not yet defined when the device is delivered from the factory. Access authorization (read and write access) to the device is not restricted and corresponds to the "Maintenance" user role.

- Define the access code.
 - ↳ The "Operator" user role is redefined in addition to the "Maintenance" user role. Access authorization differs for the two user roles.

Access authorization to parameters: "Maintenance" user role

Access code status	Read access	Write access
An access code has not yet been defined (factory setting).	✓	✓
After an access code has been defined.	✓	✓ ¹⁾

1) The user only has write access after entering the access code.

Access authorization to parameters: "Operator" user role

Access code status	Read access	Write access
After an access code has been defined.	✓	-- 1)

- 1) Despite the defined access code, certain parameters can always be modified and thus are excepted from the write protection, as they do not affect the measurement. Refer to the "Write protection via access code" section

The user role with which the user is currently logged on is indicated by the .
Navigation path:

8.4 Access to the operating menu via the Web browser

8.4.1 Function range

Thanks to the integrated Web server, the device can be operated and configured via a Web browser and via a service interface (CDI-RJ45) . In addition to the measured values, status information on the device is also displayed and allows the user to monitor the status of the device. Furthermore the device data can be managed and the network parameters can be configured.

For additional information on the Web server, refer to the Special Documentation for the device

8.4.2 Prerequisites

Computer hardware

Interface	The computer must have an RJ45 interface.
Connection	Standard Ethernet cable with RJ45 connector.
Screen	Recommended size: ≥12" (depends on the screen resolution)

Computer software

Recommended operating systems	Microsoft Windows 7 or higher. Microsoft Windows XP is supported.
Web browsers supported	<ul style="list-style-type: none"> ▪ Microsoft Internet Explorer 8 or higher ▪ Microsoft Edge ▪ Mozilla Firefox ▪ Google Chrome ▪ Safari

Computer settings

User rights	Appropriate user rights (e.g. administrator rights) for TCP/IP and proxy server settings are necessary (for adjusting the IP address, subnet mask etc.).
Proxy server settings of the Web browser	The Web browser setting <i>Use a Proxy Server for Your LAN</i> must be deselected .
JavaScript	JavaScript must be enabled. If JavaScript cannot be enabled: enter <code>http://XXX.XXX.X.XXX/basic.html</code> in the address line of the Web browser, e.g. <code>http://192.168.1.212/basic.html</code> . A fully functional but simplified version of the operating menu structure starts in the Web browser.

Network connections	Only the active network connections to the measuring device should be used.
	Switch off all other network connections.

 In the event of connection problems:

Measuring device: Via CDI-RJ45 service interface

Device	CDI-RJ45 service interface
Measuring device	The measuring device has an RJ45 interface.
Web server	Web server must be enabled; factory setting: ON  For information on enabling the Web server →  40

8.4.3 Establishing a connection

Via service interface (CDI-RJ45)

Preparing the measuring device

Configuring the Internet protocol of the computer

The following information refers to the default Ethernet settings of the device.

IP address of the device: 192.168.1.212 (factory setting)

1. Switch on the measuring device.
2. Connect to the computer using a cable →  116.
3. If a 2nd network card is not used, close all the applications on the notebook.
 - ↳ Applications requiring Internet or a network, such as e-mail, SAP applications, Internet or Windows Explorer.
4. Close any open Internet browsers.
5. Configure the properties of the Internet protocol (TCP/IP) as defined in the table:

IP address	192.168.1.XXX; for XXX all numerical sequences except: 0, 212 and 255 → e.g. 192.168.1.213
Subnet mask	255.255.255.0
Default gateway	192.168.1.212 or leave cells empty

Starting the Web browser

1. Start the Web browser on the computer.

2.
- Enter the IP address of the Web server in the address line of the Web browser:
192.168.1.212
- The login page appears.

- 1
- Picture of device
- 2
- Device name
- 3
- Device tag (→ ⓘ 50)
- 4
- Status signal
- 5
- Current measured values
- 6
- Operating language
- 7
- User role
- 8
- Access code
- 9
- Login
- 10
- Reset access code

If a login page does not appear, or if the page is incomplete

8.4.4 **Logging on**

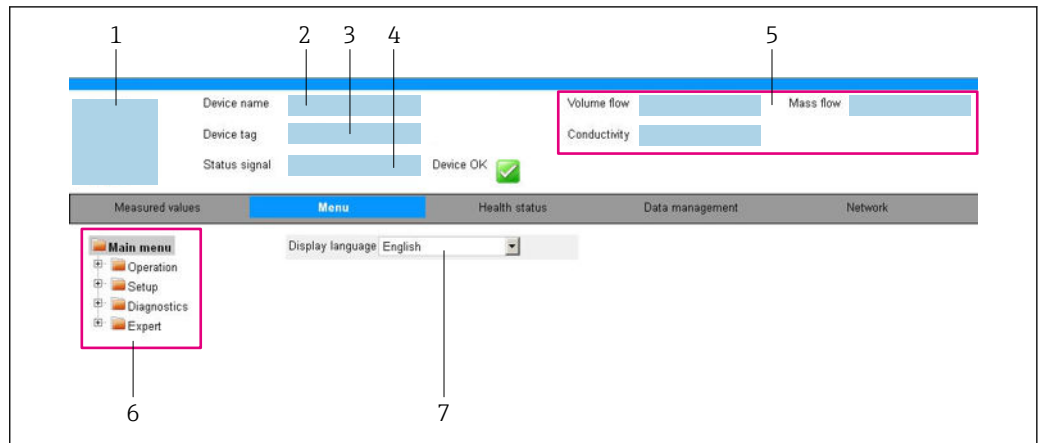

1.
- Select the preferred operating language for the Web browser.
2.
- Enter the user-specific access code.
3.
- Press **OK** to confirm your entry.

Access code	0000 (factory setting); can be changed by customer → ⓘ 74
-------------	---

If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

8.4.5 User interface

A0032879

- 1 Picture of device
- 2 Device name
- 3 Device tag
- 4 Status signal
- 5 Current measured values
- 6 Navigation area
- 7 Local display language

Header

The following information appears in the header:

- Device name
- Device tag → 50
- Device status with status signal → 81
- Current measured values

Function row

Functions	Meaning
Measured values	Displays the measured values of the measuring device
Menu	<ul style="list-style-type: none"> ■ Access to the operating menu from the measuring device ■ The structure of the operating menu is the same as for the operating tools <p> For detailed information on the structure of the operating menu, see the Operating Instructions for the measuring device</p>
Device status	Displays the diagnostic messages currently pending, listed in order of priority
Data management	<p>Data exchange between PC and measuring device:</p> <ul style="list-style-type: none"> ■ Device configuration: <ul style="list-style-type: none"> ■ Load settings from the device (XML format, save configuration) ■ Save settings to the device (XML format, restore configuration) ■ Logbook - Export Event logbook (.csv file) ■ Documents - Export documents: <ul style="list-style-type: none"> ■ Export backup data record (.csv file, create documentation of the measuring point configuration) ■ Verification report (PDF file, only available with the "Heartbeat Verification" application package)
Network configuration	<p>Configuration and checking of all the parameters required for establishing the connection to the measuring device:</p> <ul style="list-style-type: none"> ■ Network settings (e.g. IP address, MAC address) ■ Device information (e.g. serial number, firmware version)
Logout	End the operation and call up the login page

Navigation area

If a function is selected in the function bar, the submenus of the function open in the navigation area. The user can now navigate through the menu structure.

Working area

Depending on the selected function and the related submenus, various actions can be performed in this area:

- Configuring parameters
- Reading measured values
- Calling up help text
- Starting an upload/download

8.4.6 Disabling the Web server

The Web server of the measuring device can be switched on and off as required using the **Web server functionality** parameter.

Navigation

"Expert" menu → Communication → Web server

Parameter overview with brief description

Parameter	Description	Selection
Web server functionality	Switch the Web server on and off.	<ul style="list-style-type: none"> ■ Off ■ On

Function scope of the "Web server functionality" parameter

Option	Description
Off	<ul style="list-style-type: none"> ■ The web server is completely disabled. ■ Port 80 is locked.
On	<ul style="list-style-type: none"> ■ The complete functionality of the web server is available. ■ JavaScript is used. ■ The password is transferred in an encrypted state. ■ Any change to the password is also transferred in an encrypted state.

Enabling the Web server

If the Web server is disabled it can only be re-enabled with the **Web server functionality** parameter via the following operating options:

- Via Bedientool "FieldCare"
- Via "DeviceCare" operating tool

8.4.7 Logging out

 Before logging out, perform a data backup via the **Data management** function (upload configuration from device) if necessary.

1. Select the **Logout** entry in the function row.
↳ The home page with the Login box appears.
2. Close the Web browser.
3. If no longer needed:
Reset modified properties of the Internet protocol (TCP/IP) →  37.

8.5 Access to the operating menu via the operating tool

8.5.1 Connecting the operating tool

Via HART protocol

This communication interface is available in device versions with a HART output.

A0028747

18 Options for remote operation via HART protocol

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX350 or SFX370
- 6 Field Xpert SMT70
- 7 VIATOR Bluetooth modem with connecting cable
- 8 Transmitter

Via service interface (CDI)

A0014019

- 1 Service interface (CDI = Endress+Hauser Common Data Interface) of the measuring device
- 2 Commubox FXA291
- 3 Computer with FieldCare operating tool with COM DTM CDI Communication FXA291

Via service interface (CDI-RJ45)

HART

A0016926

19 Connection for the order code for "Output", option B: 4-20 mA HART, pulse/frequency/switch output

- 1 Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server
- 2 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
- 3 Standard Ethernet connecting cable with RJ45 plug

8.5.2 Field Xpert SFX350, SFX370

Function range

Field Xpert SFX350 and Field Xpert SFX370 are mobile computers for commissioning and maintenance. They enable efficient device configuration and diagnostics for HART and FOUNDATION Fieldbus devices in the **non-hazardous area** (SFX350, SFX370) and **hazardous area** (SFX370).

For details, see Operating Instructions BA01202S

Source for device description files

See information → 45

8.5.3 FieldCare

Function scope

FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field devices in a system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

Access is via:

- HART protocol
- CDI-RJ45 service interface

Typical functions:

- Configuring parameters of transmitters
- Loading and saving device data (upload/download)
- Documentation of the measuring point
- Visualization of the measured value memory (line recorder) and event logbook

For additional information about FieldCare, see Operating Instructions BA00027S and BA00059S

Source for device description files

See information → 45

Establishing a connection

1. Start FieldCare and launch the project.
2. In the network: Add a device.
 - ↳ The **Add device** window opens.
3. Select the **CDI Communication TCP/IP** option from the list and press **OK** to confirm.
4. Right-click **CDI Communication TCP/IP** and select the **Add device** option in the context menu that opens.
5. Select the desired device from the list and press **OK** to confirm.
 - ↳ The **CDI Communication TCP/IP (Configuration)** window opens.
6. Enter the device address in the **IP address** field and press **Enter** to confirm: 192.168.1.212 (factory setting); if the IP address is not known .
7. Establish the online connection to the device.

8.5.4 DeviceCare

Function scope

Tool to connect and configure Endress+Hauser field devices.

The fastest way to configure Endress+Hauser field devices is with the dedicated "DeviceCare" tool. Together with the device type managers (DTMs) it presents a convenient, comprehensive solution.

For details, see Innovation Brochure IN01047S

Source for device description files

See information →  45

8.5.5 AMS Device Manager

Function scope

Program from Emerson Process Management for operating and configuring measuring devices via HART protocol.

Source for device description files

See data →  45

8.5.6 SIMATIC PDM

Function scope

SIMATIC PDM is a standardized, manufacturer-independent program from Siemens for the operation, configuration, maintenance and diagnosis of intelligent field devices via HART protocol.

Source for device description files

See data →  45

8.5.7 Field Communicator 475

Function scope

Industrial handheld terminal from Emerson Process Management for remote configuration and measured value display via HART protocol.

Source for device description files

See data →  45

9 System integration

9.1 Overview of device description files

9.1.1 Current version data for the device

Firmware version	01.01.zz	<ul style="list-style-type: none"> On the title page of the Operating Instructions On the transmitter nameplate Firmware version Diagnostics → Device information → Firmware version
Release date of firmware version	10.2014	---
Manufacturer ID	0x11	Manufacturer ID Diagnostics → Device information → Manufacturer ID
Device type ID	0x4A	Device type Diagnostics → Device information → Device type
HART protocol revision	7	---
Device revision	2	<ul style="list-style-type: none"> On the transmitter nameplate Device revision Diagnostics → Device information → Device revision

For an overview of the different firmware versions for the device

9.1.2 Operating tools

The suitable device description file for the individual operating tools is listed in the table below, along with information on where the file can be acquired.

Operating tool via HART protocol	Sources for obtaining device descriptions
FieldCare	<ul style="list-style-type: none"> www.endress.com → Download Area CD-ROM (contact Endress+Hauser) DVD (contact Endress+Hauser)
DeviceCare	<ul style="list-style-type: none"> www.endress.com → Download Area CD-ROM (contact Endress+Hauser) DVD (contact Endress+Hauser)
<ul style="list-style-type: none"> Field Xpert SFX350 Field Xpert SFX370 	Use update function of handheld terminal
AMS Device Manager (Emerson Process Management)	www.endress.com → Download Area
SIMATIC PDM (Siemens)	www.endress.com → Download Area
Field Communicator 475 (Emerson Process Management)	Use update function of handheld terminal

9.2 Measured variables via HART protocol

The following measured variables (HART device variables) are assigned to the dynamic variables at the factory:

Dynamic variables	Measured variables (HART device variables)
Primary dynamic variable (PV)	Mass flow
Secondary dynamic variable (SV)	Totalizer 1

Dynamic variables	Measured variables (HART device variables)
Tertiary dynamic variable (TV)	Density
Quaternary dynamic variable (QV)	Temperature

The assignment of the measured variables to the dynamic variables can be modified and assigned as desired via the operating tool using the following parameters:

- Expert → Communication → HART output → Output → Assign PV
- Expert → Communication → HART output → Output → Assign SV
- Expert → Communication → HART output → Output → Assign TV
- Expert → Communication → HART output → Output → Assign QV

The following measured variables can be assigned to the dynamic variables:

Measured variables for PV (primary dynamic variable)

- Off
- Mass flow
- Volume flow
- Corrected volume flow
- Density
- Reference density
- Temperature
- Carrier pipe temperature
- Electronic temperature
- Oscillation frequency 0
- Frequency fluctuation 0
- Oscillation damping 0
- Oscillation damping fluctuation 0
- Signal asymmetry
- Exciter current 0

Measured variables for SV, TV, QV (secondary, tertiary and quaternary dynamic variable)

- Mass flow
- Volume flow
- Corrected volume flow
- Density
- Reference density
- Temperature
- Electronic temperature
- Oscillation frequency
- Oscillation amplitude
- Oscillation damping
- Signal asymmetry
- External pressure
- Totalizer 1...3

9.2.1 Device variables

Device variables are permanently assigned. A maximum of eight device variables can be transmitted.

Assignment	Device variables
0	Mass flow
1	Volume flow
2	Corrected volume flow
3	Density
4	Reference density

Assignment	Device variables
5	Temperature
6	Totalizer 1
7	Totalizer 2
8	Totalizer 3
13	Target mass flow ¹⁾
14	Carrier mass flow ¹⁾
15	Concentration ¹⁾

Parameter overview with brief description

Parameter	Description	Selection / User entry
Burst mode 1 to n	Activate the HART burst mode for burst message X.	<ul style="list-style-type: none"> Off On
Burst command 1 to n	Select the HART command that is sent to the HART master.	<ul style="list-style-type: none"> Command 1 Command 2 Command 3 Command 9 Command 33 Command 48
Burst variable 0	For HART command 9 and 33: select the HART device variable or the process variable.	<ul style="list-style-type: none"> Mass flow Volume flow Corrected volume flow Target mass flow * Carrier mass flow * Density Reference density Concentration * Temperature Totalizer 1 Totalizer 2 Totalizer 3 Sensor integrity Pressure HART input Percent of range Measured current Primary variable (PV) Secondary variable (SV) Tertiary variable (TV) Quaternary variable (QV) Not used
Burst variable 1	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 2	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 3	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 4	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 5	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 6	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst variable 7	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.
Burst trigger mode	Select the event that triggers burst message X.	<ul style="list-style-type: none"> Continuous Window Rising Falling On change

Parameter	Description	Selection / User entry
Burst trigger level	Enter the burst trigger value. Together with the option selected in the Burst trigger mode parameter the burst trigger value determines the time of burst message X.	Positive floating-point number
Min. update period	Enter the minimum time span between two burst commands of burst message X.	Positive integer
Max. update period	Enter the maximum time span between two burst commands of burst message X.	Positive integer

* Visibility depends on order options or device settings

10 Commissioning

10.1 Function check

Before commissioning the device, make sure that the post-installation and post-connection checks have been performed.

- "Post-installation check" checklist → 22
- "Post-connection check" checklist → 30

10.2 Configuring the measuring device

The **Setup** menu with its submenus contains all the parameters needed for standard operation.

Structure of the "Setup" menu

Setup	→	Select medium	→ 53
		Current output 1	→ 54
		Pulse/frequency/switch output	→ 56
		Output conditioning	→ 62
		Low flow cut off	→ 65
		Partially filled pipe detection	→ 66
		HART input	→ 61
		Advanced setup	→ 67

10.2.1 Defining the tag name

To enable fast identification of the measuring point within the system, you can enter a unique designation using the **Device tag** parameter and thus change the factory setting.

-  The number of characters displayed depends on the characters used.
-  For information on the tag name in the "FieldCare" operating tool → 43

Navigation

"Setup" menu → Device tag

Parameter overview with brief description

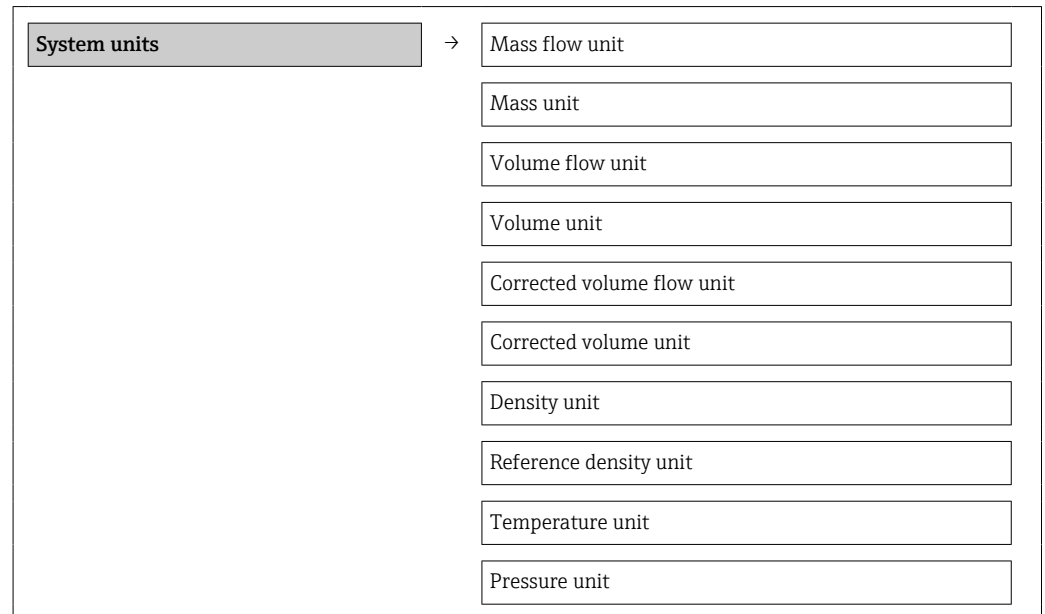

Parameter	Description	User entry	Factory setting
Device tag	Enter the name for the measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Promass

10.2.2 Setting the system units

In the **System units** submenu the units of all the measured values can be set.

Navigation

"Setup" menu → Advanced setup → System units

Structure of the submenu**Parameter overview with brief description**

Parameter	Description	Selection	Factory setting
Mass flow unit	Select mass flow unit. <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"> Output Low flow cut off Simulation process variable 	Unit choose list	Country-specific: <ul style="list-style-type: none"> kg/h lb/min
Mass unit	Select mass unit. <i>Result</i> The selected unit is taken from: Mass flow unit parameter	Unit choose list	Country-specific: <ul style="list-style-type: none"> kg lb
Volume flow unit	Select volume flow unit. <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"> Output Low flow cut off Simulation process variable 	Unit choose list	Country-specific: <ul style="list-style-type: none"> l/h gal/min (us)
Volume unit	Select volume unit. Result The selected unit is taken from: Volume flow unit parameter	Unit choose list	Country-specific: <ul style="list-style-type: none"> l gal (us)
Corrected volume flow unit	Select corrected volume flow unit. <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"> Output Low flow cut off Simulation process variable 	Unit choose list	Country-specific: <ul style="list-style-type: none"> NI/h Sft³/h

Parameter	Description	Selection	Factory setting
Corrected volume unit	Select corrected volume unit. Result The selected unit is taken from: Corrected volume flow unit parameter	Unit choose list	Country-specific: ■ NI ■ Sft ³
Density unit	Select density unit. <i>Result</i> The selected unit applies for: ■ Output ■ Simulation process variable ■ Density adjustment (in Expert menu)	Unit choose list	Country-specific: ■ kg/l ■ lb/ft ³
Reference density unit	Select reference density unit.	Unit choose list	–
Temperature unit	Select temperature unit. <i>Result</i> The selected unit applies for: ■ Output ■ Reference temperature ■ Simulation process variable	Unit choose list	Country-specific: ■ °C (Celsius) ■ °F (Fahrenheit)
Pressure unit	Select process pressure unit.	Unit choose list	Country-specific: ■ bar ■ psi

10.2.3 Selecting and setting the medium

The **Medium selection** submenu contains parameters that have to be configured for selecting and setting the medium.

Navigation

"Setup" menu → Select medium

► Medium selection		
Select medium	→	53
Select gas type	→	53
Reference sound velocity	→	53
Temperature coefficient sound velocity	→	53
Pressure compensation	→	53
Pressure value	→	53
External pressure	→	53

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Select medium	–	Select medium type.	Gas	–
Select gas type	The following option is selected in the Medium selection parameter: Gas	Select measured gas type.	Gas type choose list	–
Reference sound velocity	The following option is selected in the Select gas type parameter: Others	Enter sound velocity of gas at 0 °C (32 °F).	1 to 99 999.9999 m/s	0 m/s
Temperature coefficient sound velocity	The following option is selected in the Select gas type parameter: Others	Enter temperature coefficient for the gas sound velocity.	Positive floating-point number	0 (m/s)/K
Pressure compensation	The following option is selected in the Medium selection parameter: Gas	Select pressure compensation type.	<ul style="list-style-type: none"> ■ Off ■ Fixed value ■ External value 	–
Pressure value	The following option is selected in the Pressure compensation parameter: Fixed value	Enter process pressure to be used for pressure correction.	Positive floating-point number	–
External pressure	The following option is selected in the Pressure compensation parameter: External value		Positive floating-point number	–

10.2.4 **Configuring the current output**

The **"Current output 2" submenu** contains all the parameters that must be configured for the configuration of the current output.

Navigation

"Setup" menu → Current output 1 to n

Structure of the submenu

Current output 1 to n	→	Assign current output
		Current span
		4 mA value
		20 mA value
		Failure mode
		Failure current

Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Assign current output	Select process variable for current output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1 ■ Sensor integrity 	–
Mass flow unit	Select mass flow unit. <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"> ■ Output ■ Low flow cut off ■ Simulation process variable 	Unit choose list	Country-specific: <ul style="list-style-type: none"> ■ kg/h ■ lb/min
Volume flow unit	Select volume flow unit. <i>Result</i> The selected unit applies for: <ul style="list-style-type: none"> ■ Output ■ Low flow cut off ■ Simulation process variable 	Unit choose list	Country-specific: <ul style="list-style-type: none"> ■ l/h ■ gal/min (us)
Current span	Select current range for process value output and upper/lower level for alarm signal.	<ul style="list-style-type: none"> ■ 4...20 mA NAMUR ■ 4...20 mA US ■ 4...20 mA ■ 0...20 mA ■ Fixed current 	–
0/4 mA value	Enter 4 mA value.	Signed floating-point number	–
20 mA value	Enter 20 mA value.	Signed floating-point number	–
Failure mode	Define output behavior in alarm condition.	<ul style="list-style-type: none"> ■ Min. ■ Max. ■ Last valid value ■ Actual value ■ Defined value 	–
Failure current	Enter current output value in alarm condition.	$3.59 \cdot 10^{-3}$ to $22.5 \cdot 10^{-3}$ mA	–

10.2.5 Configuring the pulse/frequency/switch output

The **Pulse/frequency/switch output 1** submenu contains all the parameters that must be configured for the configuration of the selected output type.

Pulse output

Navigation

"Setup" menu → Pulse/frequency/switch output

Structure of the submenu for the pulse output

Pulse/frequency/switch output	→	Operating mode
		Assign pulse output
		Value per pulse
		Pulse width
		Failure mode
		Invert output signal

Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Operating mode	Define the output as a pulse, frequency or switch output.	<ul style="list-style-type: none"> ■ Pulse ■ Frequency ■ Switch 	–
Assign pulse output	Select process variable for pulse output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow 	–
Mass unit	Select mass unit. <i>Result</i> The selected unit is taken from: Mass flow unit parameter	Unit choose list	Country-specific: <ul style="list-style-type: none"> ■ kg ■ lb
Volume unit	Select volume unit. Result The selected unit is taken from: Volume flow unit parameter	Unit choose list	Country-specific: <ul style="list-style-type: none"> ■ l ■ gal (us)
Value per pulse	Enter measured value at which a pulse is output.	Signed floating-point number	–
Pulse width	Define time width of the output pulse.	0.05 to 2 000 ms	–
Failure mode	Define output behavior in alarm condition.	<ul style="list-style-type: none"> ■ Actual value ■ No pulses 	–
Invert output signal	Invert the output signal.	<ul style="list-style-type: none"> ■ No ■ Yes 	–

Frequency output

Navigation

"Setup" menu → Pulse/frequency/switch output

Structure of the submenu for the frequency output

Pulse/frequency/switch output	→	Operating mode
		Assign frequency output
		Minimum frequency value
		Maximum frequency value
		Measuring value at minimum frequency
		Measuring value at maximum frequency
		Failure mode
		Failure frequency
		Invert output signal

Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Operating mode	Define the output as a pulse, frequency or switch output.	<ul style="list-style-type: none"> ■ Pulse ■ Frequency ■ Switch 	–
Assign frequency output	Select process variable for frequency output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1 	–

Parameter	Description	Selection / User entry	Factory setting

Switch-on value	Enter measured value for the switch-on point.	Signed floating-point number	–
Switch-off value	Enter measured value for the switch-off point.	Signed floating-point number	–
Switch-on delay	Define delay for the switch-on of status output.	0.0 to 100.0 s	–

Parameter	Description	Selection / User entry	Factory setting
Switch-off delay	Define delay for the switch-off of status output.	0.0 to 100.0 s	–
Failure mode	Define output behavior in alarm condition.	<div>■ Actual status</div> <div>■ Open</div> <div>■ Closed</div>	–
Invert output signal	Invert the output signal.	<div>■ No</div> <div>■ Yes</div>	–

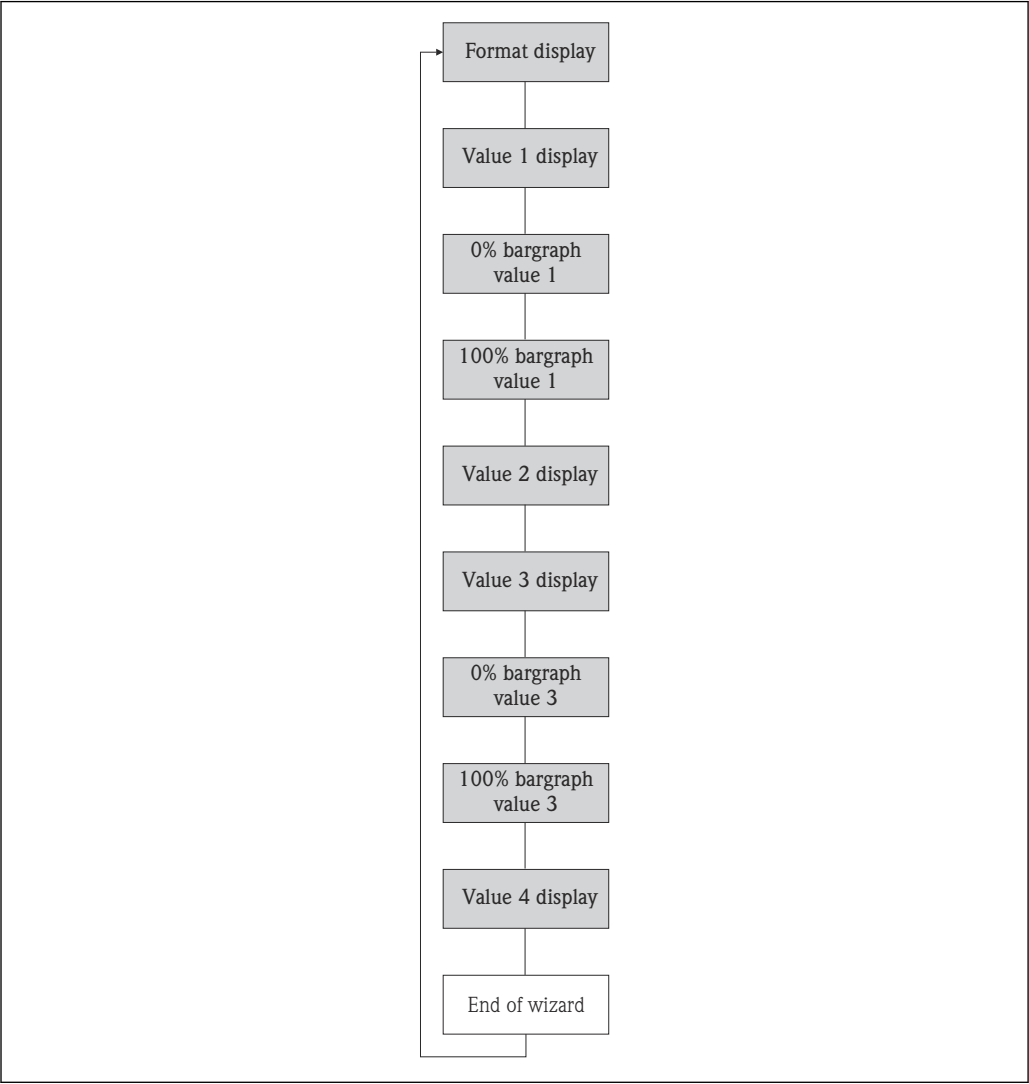

10.2.6 Configuring the local display

The **Display** wizard guides you systematically through all the parameters that can configured for configuring the local display.

Navigation

"Setup" menu → Display

Structure of the wizard

A0013797-EN

20 "Display" wizard in the "Setup" menu

Parameter overview with brief description

Parameter	Description	Selection / User entry
Format display	Select how measured values are shown on the display.	<ul style="list-style-type: none"> ■ 1 value, max. size ■ 1 bargraph + 1 value ■ 2 values ■ 1 value large + 2 values ■ 4 values
Value 1 display	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1 ■ Sensor integrity ■ None ■ Totalizer 1 ■ Totalizer 2 ■ Totalizer 3 ■ Current output 1
0% bargraph value 1	Enter 0% value for bar graph display.	Signed floating-point number
100% bargraph value 1	Enter 100% value for bar graph display.	Signed floating-point number
Value 2 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)
Value 3 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)
0% bargraph value 3	Enter 0% value for bar graph display.	Signed floating-point number
100% bargraph value 3	Enter 100% value for bar graph display.	Signed floating-point number
Value 4 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)

10.2.7 Configuring the HART input

The **HART input** submenu contains all the parameters that must be configured for the configuration of the HART input.

Navigation

"Expert" menu → Communication → HART input → Configuration

<div style="border: 1px solid black; background-color: #f0f0f0; padding: 2px; display: inline-block;">HART input</div>	→	<div style="border: 1px solid black; padding: 2px; display: inline-block;">Capture mode</div>
--	---	---

	Device ID
	Device type
	Manufacturer ID
	Burst command
	Slot number
	Timeout
	Failure mode
	Failure value

Parameter overview with brief description

Parameter	Description	Selection / User entry
Capture mode	Select capture mode via burst or master communication.	<div>■ Off</div> <div>■ Burst network</div> <div>■ Master network</div>
Manufacturer ID	Enter manufacture ID of external device.	0 to 255
Device ID	Enter device ID of external device.	Positive integer
Device type	Enter device type of external device.	0 to 255
Burst command	Select command to read in external process variable.	<div>■ Command 1</div> <div>■ Command 3</div> <div>■ Command 9</div> <div>■ Command 33</div>
Slot number	Define position of external process variable in burst command.	1 to 4
Timeout	Enter deadline for process variable of external device. <div> If the deadline is exceeded, diagnostic message F410 data transmission is output.</div>	1 to 120 s
Failure mode	Define behavior if external process variable is missed.	<div>■ Alarm</div> <div>■ Last valid value</div> <div>■ Defined value</div>
Failure value	Enter value to be used by the device if input value from external device is missing.	Signed floating-point number

10.2.8 Configuring the output conditioning

The **Output conditioning** wizard contains all the parameters that must be configured for the configuration of output conditioning.

Navigation

"Setup" menu → Output conditioning

Structure of the submenu for output conditioning

Output conditioning	→	Assign current output
		Damping output
		Measuring mode output

	Assign frequency output
	Damping output
	Measuring mode output
	Assign pulse output
	Measuring mode output
	Operating mode totalizer

Parameter overview with brief description

Parameter	Description	Selection / User entry
Assign current output	Select process variable for current output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1 ■ Sensor integrity
Damping output	Set reaction time for output signal to fluctuations in the measured value.	0 to 999.9 s
Measuring mode output	Select measuring mode for output.	<ul style="list-style-type: none"> ■ Forward flow ■ Forward/Reverse flow ■ Reverse flow compensation

Parameter	Description	Selection / User entry
Assign frequency output	Select process variable for frequency output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1
Damping output	Set reaction time for output signal to fluctuations in the measured value.	0 to 999.9 s
Measuring mode output	Select measuring mode for output.	<ul style="list-style-type: none"> ■ Forward flow ■ Forward/Reverse flow ■ Reverse flow ■ Reverse flow compensation
Assign pulse output	Select process variable for pulse output.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow
Measuring mode output	Select measuring mode for output.	<ul style="list-style-type: none"> ■ Forward flow ■ Forward/Reverse flow ■ Reverse flow ■ Reverse flow compensation
Operating mode totalizer	Select totalizer calculation mode.	<ul style="list-style-type: none"> ■ Net flow total ■ Forward flow total ■ Reverse flow total

10.2.9 Configuring the low flow cut off

The **Low flow cut off** submenu contains parameters that must be configured for the configuration of low flow cut off.

Navigation

"Setup" menu → Low flow cut off

<div>Low flow cut off</div>	→	Assign process variable
		On value low flow cutoff
		Off value low flow cutoff
		Pressure shock suppression

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	–	Select process variable for low flow cut off.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow 	–
On value low flow cutoff	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Mass flow ■ Volume flow ■ Corrected volume flow 	Enter on value for low flow cut off.	Positive floating-point number	For liquids: depends on country and nominal diameter
Off value low flow cutoff	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Mass flow ■ Volume flow ■ Corrected volume flow 	Enter off value for low flow cut off.	0 to 100.0 %	–
Pressure shock suppression	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Mass flow ■ Volume flow ■ Corrected volume flow 	Enter time frame for signal suppression (= active pressure shock suppression).	0 to 100 s	–

10.2.10 Configuring the partial filled pipe detection

The **Partially filled pipe detection** submenu contains parameters that have to be set for configuring empty pipe detection.

Navigation

"Setup" menu → Partially filled pipe detection

Partially filled pipe detection	→	Assign process variable
		Low value partial filled pipe detection
		High value partial filled pipe detection
		Response time part. filled pipe detect.

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign process variable	–	Select process variable for partially filled pipe detection.	<ul style="list-style-type: none"> ■ Off ■ Density ■ Reference density 	–
Low value partial filled pipe detection	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Density ■ Reference density 	Enter lower limit value for deactivating partially filled pipe detection.	Signed floating-point number	Country-dependent: <ul style="list-style-type: none"> ■ 0.2 kg/l ■ 12.5 lb/ft³
High value partial filled pipe detection	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Density ■ Reference density 	Enter upper limit value for deactivating partially filled pipe detection.	Signed floating-point number	Country-dependent: <ul style="list-style-type: none"> ■ 6 kg/l ■ 374.6 lb/ft³
Response time part. filled pipe detect.	One of the following options is selected in the Assign process variable parameter: <ul style="list-style-type: none"> ■ Density ■ Reference density 	Enter time before diagnostic message is displayed for partially filled pipe detection.	0 to 100 s	–

10.3 Advanced settings

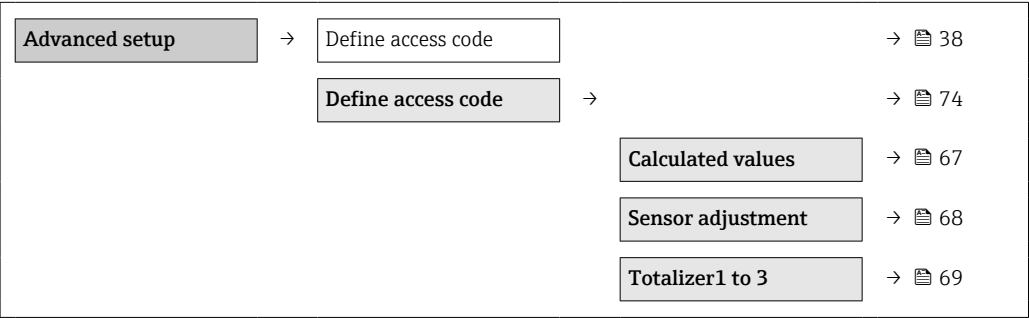

The **Advanced setup** submenu with its submenus contains parameters for specific settings.

Navigation

"Setup" menu → Advanced setup

Overview of the parameters and submenus in the "Advanced setup" submenu:

Taking the example of the Web browser

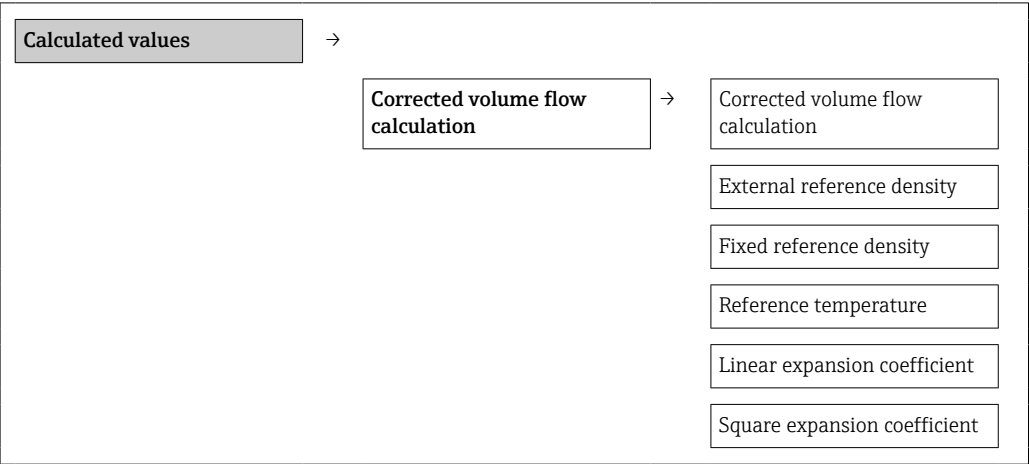

10.3.1 Calculated values

The **Calculated values** submenu contains parameters for calculating the corrected volume flow.

Navigation

"Setup" menu → Advanced setup → Calculated values

Structure of the submenu

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Corrected volume flow calculation	–	Select reference density for calculating the corrected volume flow.	<ul style="list-style-type: none"> Fixed reference density Calculated reference density Reference density by API table 53 	–
External reference density	–	Shows external reference density.	Floating point number with sign	0 kg/Nl
Fixed reference density	The following option is selected in the Corrected volume flow calculation parameter: Fixed reference density	Enter fixed value for reference density.	Positive floating-point number	–
Reference temperature	The following option is selected in the Corrected volume flow calculation parameter: Calculated reference density	Enter reference temperature for calculating the reference density.	–273.15 to 99 999 °C	–
Linear expansion coefficient	The following option is selected in the Corrected volume flow calculation parameter: Calculated reference density	Enter linear, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	–
Square expansion coefficient	–	For media with a non-linear expansion pattern: enter the quadratic, medium-specific expansion coefficient for calculating the reference density.	Signed floating-point number	–

10.3.2 Carrying out a sensor adjustment

The **Sensor adjustment** submenu contains parameters that pertain to the functionality of the sensor.

Navigation

"Setup" menu → Advanced setup → Sensor adjustment

Structure of the submenu

Parameter overview with brief description

Parameter	Description	Selection / User interface
Installation direction	Set sign of flow direction to match the direction of the arrow on the sensor.	<ul style="list-style-type: none"> ■ Flow in arrow direction ■ Flow against arrow direction
Zero point adjustment control	Start zero point adjustment.	<ul style="list-style-type: none"> ■ Cancel ■ Busy ■ Zero point adjust failure ■ Start
Progress	Shows the progress of the process.	0 to 100 %

10.3.3 Configuring the totalizer

In the "Totalizer 1 to n" submenu the individual totalizers can be configured.

Navigation

"Setup" menu → Advanced setup → Totalizer 1 to n

<div>Totalizer 1 to n</div>	→	Assign process variable
		Unit totalizer
		Failure mode

Parameter overview with brief description

Parameter	Description	Selection
Assign process variable	Select process variable for totalizer.	<ul style="list-style-type: none"> ■ Off ■ Volume flow ■ Mass flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow
Unit totalizer	Select process variable totalizer unit.	Unit choose list
Totalizer operation mode	Select totalizer calculation mode.	<ul style="list-style-type: none"> ■ Net flow total ■ Forward flow total ■ Reverse flow total
Failure mode	Define totalizer behavior in alarm condition.	<ul style="list-style-type: none"> ■ Stop ■ Actual value ■ Last valid value

10.3.4 Carrying out additional display configurations

In the **"Display"** submenu you can set all the parameters involved in the configuration of the local display.

Navigation

"Setup" menu → Advanced setup → Display

Structure of the submenu

Display	→	Format display
		Value 1 display
		0% bargraph value 1
		100% bargraph value 1
		Decimal places 1
		Value 2 display
		Decimal places 2
		Value 3 display
		0% bargraph value 3
		100% bargraph value 3
		Decimal places 3
		Value 4 display
		Decimal places 4
		Display language
		Display interval
		Display damping
		Header
		Header text
		Separator
		Backlight

Parameter overview with brief description

Parameter	Description	Selection / User entry	Factory setting
Format display	Select how measured values are shown on the display.	<ul style="list-style-type: none"> ■ 1 value, max. size ■ 1 bargraph + 1 value ■ 2 values ■ 1 value large + 2 values ■ 4 values 	–
Value 1 display	Select the measured value that is shown on the local display.	<ul style="list-style-type: none"> ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Target mass flow ■ Carrier mass flow ■ Density ■ Reference density ■ Concentration ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Temperature ■ Carrier pipe temperature ■ Electronic temperature ■ Oscillation frequency 0 ■ Oscillation frequency 1 ■ Oscillation amplitude 0 ■ Oscillation amplitude 1 ■ Frequency fluctuation 0 ■ Frequency fluctuation 1 ■ Oscillation damping 0 ■ Oscillation damping 1 ■ Tube damping fluctuation 0 ■ Tube damping fluctuation 1 ■ Signal asymmetry ■ Exciter current 0 ■ Exciter current 1 ■ Sensor integrity ■ None ■ Totalizer 1 ■ Totalizer 2 ■ Totalizer 3 ■ Current output 1 	–
0% bargraph value 1	Enter 0% value for bar graph display.	Signed floating-point number	–
100% bargraph value 1	Enter 100% value for bar graph display.	Signed floating-point number	–
Decimal places 1	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> ■ x ■ x.x ■ x.xx ■ x.xxx ■ x.xxxx 	–
Value 2 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)	–
Decimal places 2	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> ■ x ■ x.x ■ x.xx ■ x.xxx ■ x.xxxx 	–
Value 3 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)	–
0% bargraph value 3	Enter 0% value for bar graph display.	Signed floating-point number	–
100% bargraph value 3	Enter 100% value for bar graph display.	Signed floating-point number	–

Parameter	Description	Selection / User entry	Factory setting
Decimal places 3	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> ■ x ■ x.x ■ x.xx ■ x.xxx ■ x.xxxx 	–
Value 4 display	Select the measured value that is shown on the local display.	Picklist (see 1st display value)	–
Decimal places 4	Select the number of decimal places for the display value.	<ul style="list-style-type: none"> ■ x ■ x.x ■ x.xx ■ x.xxx ■ x.xxxx 	–
Display language	Set display language.	<ul style="list-style-type: none"> ■ English ■ Deutsch ■ Français ■ Español ■ Italiano ■ Nederlands ■ Portuguesa ■ Polski ■ русский язык (Russian) ■ Svenska ■ Türkçe ■ 中文 (Chinese) ■ 日本語 (Japanese) ■ 한국어 (Korean) ■ العربية (Arabic) ■ Bahasa Indonesia ■ ภาษาไทย (Thai) ■ tiếng Việt (Vietnamese) ■ čeština (Czech) 	English (alternatively, the ordered language is preset in the device)
Display interval	Set time measured values are shown on display if display alternates between values.	1 to 10 s	–
Display damping	Set display reaction time to fluctuations in the measured value.	0.0 to 999.9 s	–
Header	Select header contents on local display.	<ul style="list-style-type: none"> ■ Device tag ■ Free text 	–
Header text	Enter display header text.	Character string comprising numbers, letters and special characters (#12)	–
Separator	Select decimal separator for displaying numerical values.	<ul style="list-style-type: none"> ■ . ■ , 	–
Backlight	Switch the local display backlight on and off.	<ul style="list-style-type: none"> ■ Disable ■ Enable 	–

10.4 Simulation

The "**Simulation**" submenu enables you to simulate, without a real flow situation, various process variables in the process and the device alarm mode and to verify downstream signal chains (switching valves or closed-control loops).

Navigation

"Diagnostics" menu → Simulation

<div style="background-color: #cccccc; padding: 2px 5px; display: inline-block;">Simulation</div>	→	<div style="border: 1px solid black; padding: 2px; margin-bottom: 5px;">Assign simulation process variable</div> <div style="border: 1px solid black; padding: 2px;">Value process variable</div>
---	---	---

Simulation current output
Value current output
Frequency simulation
Frequency value
Pulse simulation
Pulse value
Switch output simulation
Switch status
Simulation device alarm
Simulation diagnostic event

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry
Assign simulation process variable	–	Select a process variable for the simulation process that is activated.	<ul style="list-style-type: none"> ■ Off ■ Mass flow ■ Volume flow ■ Corrected volume flow ■ Density ■ Reference density ■ Temperature ■ Dynamic viscosity ■ Kinematic viscosity ■ Temp. compensated dynamic viscosity ■ Temp. compensated kinematic viscosity ■ Concentration ■ Target mass flow ■ Carrier mass flow
Value process variable	A process variable is selected in the Assign simulation process variable parameter.	Enter the simulation value for the selected process variable.	Signed floating-point number
Simulation current output 1	–	Switch simulation of the current output on and off.	<ul style="list-style-type: none"> ■ Off ■ On
Value current output 1	The On option is selected in the Current output simulation parameter.	Enter the current value for simulation.	$3.59 \cdot 10^{-3}$ to $22.5 \cdot 10^{-3}$ mA
Frequency simulation 1	–	Switch simulation of the frequency output on and off.	<ul style="list-style-type: none"> ■ Off ■ On
Frequency value 1	The On option is selected in the Frequency output simulation parameter.	Enter the frequency value for simulation.	0.0 to 12 500.0 Hz
Pulse simulation 1	The Down-count. val. option is selected in the Simulation pulse output parameter.	Switch simulation of the pulse output on and off.  If the Fixed value option is selected, the Pulse width parameter defines the pulse width of the pulses output.	<ul style="list-style-type: none"> ■ Off ■ Fixed value ■ Down-counting value
Pulse value 1	The Down-count. val. option is selected in the Simulation pulse output parameter.	Enter the number of pulses for simulation.	0 to 65 535

Parameter	Prerequisite	Description	Selection / User entry
Switch output simulation 1	–	Switch simulation of switch output on and off.	<div>■ Off</div> <div>■ On</div>
Switch status 1	The On option is selected in the Switch output simulation parameter.	Select the status of the status output for the simulation.	<div>■ Open</div> <div>■ Closed</div>
Simulation device alarm	–	Switch the device alarm on and off.	<div>■ Off</div> <div>■ On</div>
Simulation diagnostic event	–	Switch simulation of the diagnostic event on and off. For the simulation, you can choose from the diagnostic events of the category selected in the Diagnostic event category parameter.	<div>■ Off</div> <div>■ Picklist</div> <div>Diagnostic events (depends on the selected category)</div>

10.5 Protecting settings from unauthorized access

The following options exist for protecting the configuration of the measuring device from unintentional modification after commissioning:

- Write protection via access code for Web browser → 74
- Write protection via write protection switch → 75

10.5.1 Write protection via access code

With the customer-specific access code, access to the measuring device via the Web browser is protected, as are the parameters for the measuring device configuration.

Navigation

"Setup" menu → Advanced setup → Administration → Define access code

Structure of the submenu

Define access code

 →

Define access code

Confirm access code

Defining the access code via the Web browser

1. Navigate to the **Enter access code** parameter.
2. Define a max. 4-digit numeric code as an access code.
3. Enter the access code again to confirm the code.
 - ↳ The Web browser switches to the login page.

-  If no action is performed for 10 minutes, the Web browser automatically returns to the login page.
-  The user role with which the user is currently logged on via the Web browser is indicated by the **Access status tooling** parameter. Navigation path: Operation → Access status tooling

10.5.2 Write protection via write protection switch

The write protection switch makes it possible to block write access to the entire operating menu with the exception of the following parameters:

- External pressure
- External temperature
- Reference density
- All parameters for configuring the totalizer

The parameter values are now read only and cannot be edited any more:

- Via service interface (CDI)
- Via HART protocol

1. Depending on the housing version, loosen the securing clamp or fixing screw of the housing cover.
2. Depending on the housing version, unscrew or open the housing cover and disconnect the local display from the main electronics module where necessary → 115.
3. Disconnect the T-DAT from the main electronics module.
4. Setting the write protection switch on the main electronics module to the ON position enables the hardware write protection. Setting the write protection switch on the main electronics module to the OFF position (factory setting) disables the hardware write protection.
 - ↳ If hardware write protection is enabled: the **Locking status** parameter displays the **Hardware locked** option → 76; if disabled, the **Locking status** parameter does not display any option → 76
5. Reverse the removal procedure to reassemble the transmitter.

11 Operation

11.1 Reading device locking status

The write protection types that are currently active can be determined using the **Locking status** parameter.

Navigation

"Operation" menu → Locking status

Function scope of "Locking status" parameter

Options	Description
Hardware locked	The locking switch (DIPswitch) for locking the hardware is activated on the main electronic module. This prevents write access to the parameters → 75.
Temporarily locked	Due to internal processing in the device (e.g. up-/downloading of data, reset), write access to the parameters is blocked for a short time. Once the internal processing has been completed, the parameters can be changed once again.

11.2 Reading measured values

Using the **Measured values** submenu , it is possible to read all the measured values.

Diagnostics → Measured values

11.2.1 Process variables

The **Process variables** submenu contains all the parameters needed to display the current measured values for every process variable.

Navigation

"Diagnostics" menu → Measured values → Process variables

Process variables

Mass flow

Volume flow

Corrected volume flow

Density

Reference density

Temperature

Pressure value

Parameter overview with brief description

Parameter	Description	User interface	Factory setting
Mass flow	Displays the mass flow currently measured.	Signed floating-point number	–
Volume flow	Displays the calculated volume flow.	Signed floating-point number	–
Corrected volume flow	Displays the corrected volume flow currently calculated.	Signed floating-point number	–

Parameter	Description	User interface	Factory setting
Density	Displays the density currently measured.	Signed floating-point number	–
Reference density	Displays the reference density currently calculated.	Signed floating-point number	–
Temperature	Displays the temperature currently measured.	Signed floating-point number	
Pressure value	Displays either a fixed or external pressure value.	Signed floating-point number	

11.2.2 Totalizer

The **"Totalizer"** submenu contains all the parameters needed to display the current measured values for every totalizer.

Navigation

"Diagnostics" menu → Measured values → Totalizer

Structure of the submenu

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Totalizer value 1 to n	In the Assign process variable parameter of Totalizer 1 to n submenu one of the following options is selected: <ul style="list-style-type: none"> ■ Volume flow ■ Mass flow ■ Corrected volume flow 	Displays the current totalizer counter value.	Signed floating-point number
Totalizer overflow 1 to n	In the Assign process variable parameter of Totalizer 1 to n submenu one of the following options is selected: <ul style="list-style-type: none"> ■ Volume flow ■ Mass flow ■ Corrected volume flow 	Displays the current totalizer overflow.	–32 000.0 to 32 000.0

11.2.3 Output values

The **"Output values"** submenu contains all the parameters needed to display the current measured values for every output.

Navigation

"Diagnostics" menu → Measured values → Output values

Structure of the submenu

	Output frequency 1
	Switch status 1

Parameter overview with brief description

Parameter	Description	User interface
Output current 1	Displays the current value currently calculated for the current output.	3.59 to 22.5 mA
Measured current 1	Displays the current value currently measured for the current output.	0 to 30 mA
Pulse output 1	Displays the value currently measured for the pulse output.	Positive floating-point number
Output frequency 1	Displays the value currently measured for the frequency output.	0.0 to 12 500.0 Hz
Switch status 1	Displays the current switch output status.	<ul style="list-style-type: none"> ■ Open ■ Closed

11.3 Adapting the measuring device to the process conditions

The following are available for this purpose:

- Basic settings using the **Setup** menu →  50
- Advanced settings using the **Advanced setup** submenu →  67

11.4 Performing a totalizer reset

In the **Operation** submenu the totalizers are reset:

- Control Totalizer
- Reset all totalizers

Function scope of "Control Totalizer" parameter

Options	Description
Totalize	The totalizer is started.
Stop	Totalizing is stopped.
Reset + hold	The totaling process is stopped and the totalizer is reset to 0.
Preset + hold	The totaling process is stopped and the totalizer is set to its defined start value from the Preset value parameter.
Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.
Preset + totalize	The totalizer is set to the defined start value in Preset value parameter and the totaling process is restarted.

Function scope of "Reset all totalizers" parameter

Options	Description
Reset + totalize	Resets all totalizers to 0 and restarts the totaling process. This deletes all the flow values previously totaled.

Navigation
"Operation" menu → Operation

Structure of the submenu

Parameter overview with brief description

Parameter	Description	Selection / User entry
Control Totalizer	Control totalizer value.	<ul style="list-style-type: none">■ Totalize■ Reset + hold■ Preset + hold■ Reset + totalize■ Preset + totalize
Preset value	Specify start value for totalizer.	Signed floating-point number
Reset all totalizers	Reset all totalizers to 0 and start.	<ul style="list-style-type: none">■ Cancel■ Reset + totalize

12 Diagnostics and troubleshooting

12.1 General troubleshooting

For output signals

Problem	Possible causes	Remedy
Green power LED on the main electronics module of the transmitter is dark	Supply voltage does not match that specified on the nameplate.	Apply the correct supply voltage →  26.
Device measures incorrectly.	Configuration error or device is operated outside the application.	1. Check and correct parameter configuration. 2. Observe limit values specified in the "Technical Data".

For access

Problem	Possible causes	Remedy
No write access to parameters	Hardware write protection enabled	Set the write protection switch on the main electronics module to the OFF position →  75.
No connection via HART protocol	Missing or incorrectly installed communication resistor.	Install the communication resistor (250 Ω) correctly. Observe the maximum load .
No connection via HART protocol	Commubox <ul style="list-style-type: none"> Connected incorrectly Configured incorrectly Drivers not installed correctly USB interface on computer configured incorrectly 	Observe the documentation for the Commubox.  FXA195 HART: Document "Technical Information" TI00404F
Not connecting to Web server	Incorrect setting for the Ethernet interface of the computer	1. Check the properties of the Internet protocol (TCP/IP) . 2. Check the network settings with the IT manager.
Not connecting to Web server	Web server disabled	Via the "FieldCare" operating tool check whether the Web server of the measuring device is enabled and enable it if necessary →  40.
No or incomplete display of contents in the Web browser	<ul style="list-style-type: none"> JavaScript not enabled JavaScript cannot be enabled 	1. Enable JavaScript. 2. Enter http://XXX.XXX.X.XXX/basic.html as the IP address.
Web browser frozen and operation no longer possible	Data transfer active	Wait until data transfer or current action is finished.
Web browser frozen and operation no longer possible	Connection lost	1. Check cable connection and power supply. 2. Refresh the Web browser and restart if necessary.
Content of Web browser incomplete or difficult to read	Not using optimum version of Web server.	1. Use the correct Web browser version . 2. Clear the Web browser cache and restart the Web browser.
Content of Web browser incomplete or difficult to read	Unsuitable view settings.	Change the font size/display ratio of the Web browser.

12.2 Diagnostic information via light emitting diodes

12.2.1 Transmitter

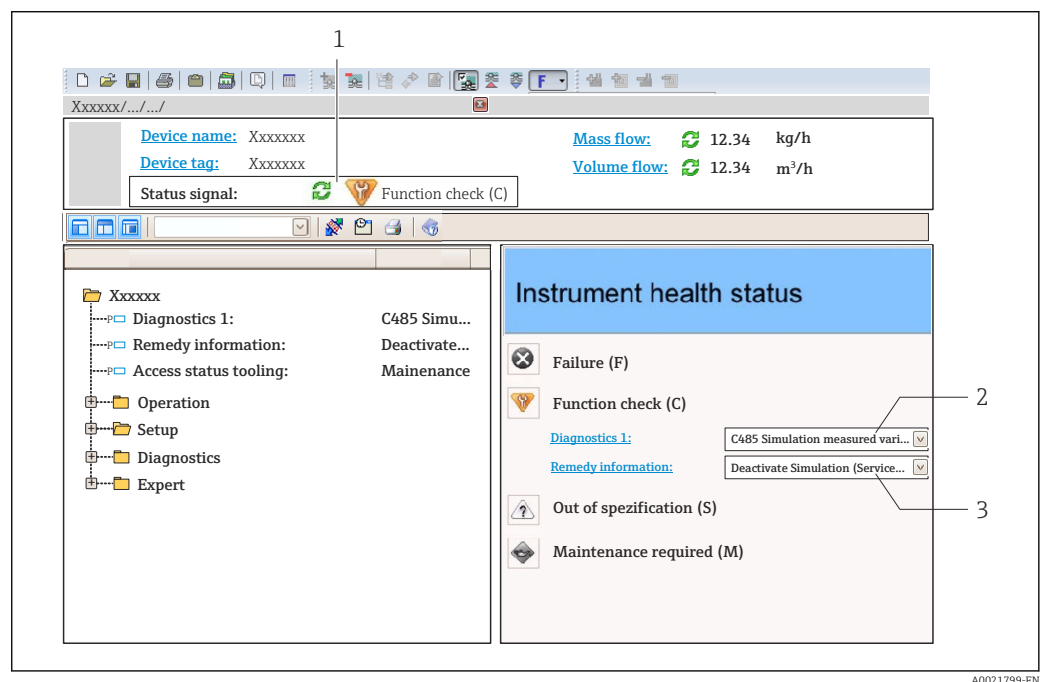

Various light emitting diodes (LEDs) on the main electronics module of the transmitter provide information on device status.

LED	Color	Meaning
Power	Off	Supply voltage is off or too low
	Green	Supply voltage is ok
Link/Activity	Orange	Link available but no activity
	Flashing orange	Activity present
Communication	Flashing white	HART communication is active.

12.3 Diagnostic information in FieldCare

12.3.1 Diagnostic options

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.

- 1 Status area with status signal
- 2 Diagnostic information → 82
- 3 Remedial measures with Service ID

i Furthermore, diagnostic events that have occurred can be viewed in the **Diagnostics** menu:

- Via parameters → 86
- Via submenu → 87

Status signals

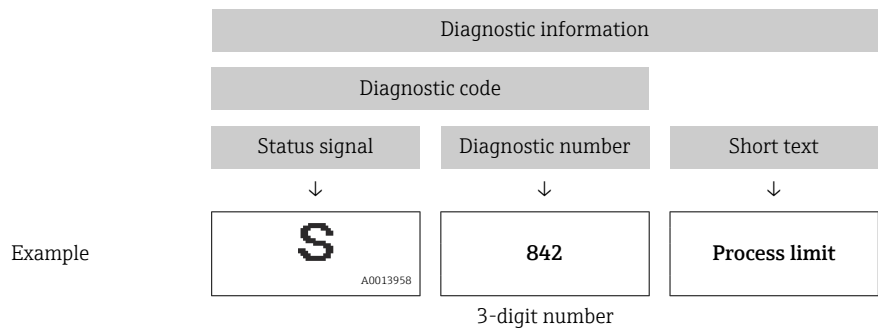

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
 <small>A0017271</small>	Failure A device error has occurred. The measured value is no longer valid.
 <small>A0017278</small>	Function check The device is in service mode (e.g. during a simulation).
 <small>A0017277</small>	Out of specification The device is operated: <ul style="list-style-type: none">■ Outside its technical specification limits (e.g. outside the process temperature range)■ Outside of the configuration carried out by the user (e.g. maximum flow in parameter 20 mA value)
 <small>A0017276</small>	Maintenance required Maintenance is required. The measured value is still valid.

 The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault.

12.3.2 Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:

- On the home page
Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu
Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

1. Call up the desired parameter.
2. On the right in the working area, mouse over the parameter.
↳ A tool tip with remedy information for the diagnostic event appears.

12.4 Adapting the diagnostic information

12.4.1 Adapting the diagnostic behavior

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for certain diagnostics information in the **Diagnostic behavior** submenu .

Expert → System → Diagnostic handling → Diagnostic behavior

You can assign the following options to the diagnostic number as the diagnostic behavior:

Options	Description
Alarm	Measurement is interrupted. Signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated.
Warning	Measurement is resumed. The signal outputs and totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is entered in the Event logbook (events list) submenu only and is not displayed in alternation with the measured value display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

12.4.2 Adapting the status signal

Each item of diagnostic information is assigned a specific status signal at the factory. The user can change this assignment for certain diagnostic information in the **Diagnostic event category** submenu.

Expert → Communication → Diagnostic event category

Available status signals

Configuration as per HART 7 Specification (Condensed Status), in accordance with NAMUR NE107.

Symbol	Meaning
F A0013956	Failure A device error has occurred. The measured value is no longer valid.
C A0013959	Function check The device is in service mode (e.g. during a simulation).
S A0013958	Out of specification The device is being operated: <ul style="list-style-type: none"> Outside its technical specification limits (e.g. outside the process temperature range) Outside of the configuration carried out by the user (e.g. maximum flow in parameter 20 mA value)
M A0013957	Maintenance required Maintenance is required. The measured value is still valid.
N A0023076	Has no effect on the condensed status.

12.5 Overview of diagnostic information

 The amount of diagnostic information and the number of measured variables affected increase if the measuring device has one or more application packages.

 In the case of some items of diagnostic information, the status signal and the diagnostic behavior can be changed. Adapt the diagnostic information →  82

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
Diagnostic of sensor				
022	Sensor temperature	1. Change main electronic module 2. Change sensor	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
046	Sensor limit exceeded	1. Inspect sensor 2. Check process condition	S	Alarm
062	Sensor connection	1. Change main electronic module 2. Change sensor	F	Alarm
082	Data storage	1. Check module connections 2. Contact service	F	Alarm
083	Memory content	1. Restart device 2. Contact service	F	Alarm
140	Sensor signal	1. Check or change main electronics 2. Change sensor	S	Alarm
144	Measuring error too high	1. Check or change sensor 2. Check process conditions	F	Alarm

1) Diagnostic behavior can be changed.

12.6 Pending diagnostic events

The **Diagnostics** menu allows the user to view the current diagnostic event and the previous diagnostic event separately.

 To call up the measures to rectify a diagnostic event:

- Via Web browser
- Via "FieldCare" operating tool →  82

 Other pending diagnostic events can be displayed in the **Diagnostic list** submenu
→  87

Navigation

"Diagnostics" menu

Structure of the submenu

	Previous diagnostics
--	----------------------

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface	Factory setting
Actual diagnostics	1 diagnostic event has occurred.	Displays the current diagnostic event along with the diagnostic information.  If two or more messages occur simultaneously, the message with the highest priority is shown on the display.	Symbol for diagnostic behavior, diagnostic code and short message.	–
Previous diagnostics	2 diagnostic events have already occurred.	Displays the diagnostic event that occurred prior to the current diagnostic event along with the diagnostic information.	Symbol for diagnostic behavior, diagnostic code and short message.	–

12.7 Diagnostic list

In the **Diagnostic list** submenu, up to 5 currently pending diagnostic events can be displayed along with the related diagnostic information. If more than 5 diagnostic events are pending, the events with the highest priority are shown on the display.

Navigation path

Diagnostics menu → **Diagnostic list** submenu

To call up the measures to rectify a diagnostic event:

- Via Web browser
- Via "FieldCare" operating tool →  82

12.8 Event logbook

12.8.1 Event history

A chronological overview of the event messages that have occurred is provided in the **Events list** submenu.

Navigation path

"Diagnostics" menu → Event logbook → Events list

The event history includes entries for:

- Diagnostic events →  83
- Information events →  88

In addition to the operation time of its occurrence, each event is also assigned a symbol that indicates whether the event has occurred or is ended:

- Diagnostic event
 - : Event has occurred
 - : Event has ended
- Information event
 - : Event has occurred

To call up the measures to rectify a diagnostic event:

- Via Web browser
- Via "FieldCare" operating tool →  82

For filtering the displayed event messages →  88

12.8.2 Filtering the event logbook

Using the **Filter options** parameter, you can define which category of event messages is displayed in the **Events list** submenu.

Navigation path

"Diagnostics" menu → Event logbook → Filter options

Filter categories

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

12.8.3 Overview of information events

Unlike a diagnostic event, an information event is displayed in the event logbook only and not in the diagnostic list.

Info number	Info name

12.9 Resetting the measuring device

Using the **Device reset** parameter it is possible to reset the entire device configuration or some of the configuration to a defined state.

Setup → Advanced setup → Administration

Function scope of "Device reset" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.  This option is not visible if no customer-specific settings have been ordered.
Restart device	The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
History reset	Every parameter is reset to its factory setting.

12.10 Device information

The **Device information** submenu contains all the parameters that display different information for identifying the device.

Navigation

"Diagnostics" menu → Device information

Device information	→	Device tag

Parameter overview with brief description

Parameter	Description	User interface	Factory setting
Device tag	Enter the name for the measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /)	–
Serial number	Displays the serial number of the measuring device.	Max. 11-digit character string comprising letters and numbers.	–
Firmware version	Displays the device firmware version installed.	Character string with the following format: xx.yy.zz	–
Device name	Displays the name of the transmitter.	Character string composed of letters, numbers and certain punctuation marks.	–
Order code	Displays the device order code.	Character string composed of letters, numbers and certain punctuation marks	–
Extended order code 1	Displays the 1st part of the extended order code.	Character string	–
Extended order code 2	Displays the 2nd part of the extended order code.	Character string	–
Extended order code 3	Displays the 3rd part of the extended order code.	Character string	–
ENP version	Displays the version of the electronic nameplate.	Character string in the format xx.yy.zz	–
Device revision	Displays the device revision with which the device is registered with the HART Communication Foundation.	0 to 255	–
Device ID	Displays the device ID for identifying the device in a HART network.	Positive integer	6-digit hexadecimal number
Device type	Displays the device type with which the measuring device is registered with the HART Communication Foundation.	0 to 255	–
Manufacturer ID	Displays the manufacturer ID with which the measuring device is registered with the HART Communication Foundation.	0 to 255	–

Parameter	Description	User interface	Factory setting
IP address	Displays the IP address of the Web server of the measuring device.	4 octet: 0 to 255 (in the particular octet)	–
Subnet mask	Displays the subnet mask.	4 octet: 0 to 255 (in the particular octet)	–
Default gateway	Displays the default gateway.	4 octet: 0 to 255 (in the particular octet)	–

12.11 Firmware history

Release date	Firmware version	Order code for "Firmware version"	Firmware changes	Documentation type	Documentation
04.2013	01.00.00	Option 76	Original firmware	Operating Instructions	
06.2014	01.01.zz	Option 70	<ul style="list-style-type: none"> ■ In accordance with HART 7 Specification ■ Integration of optional onsite display ■ New unit "Beer Barrel (BBL)" ■ Monitoring of measuring tube damping ■ Simulation of diagnostic events ■ External verification of the current and PFS output via the Heartbeat application package ■ Fixed value for simulation pulses 	Operating Instructions	

 Flashing the firmware to the current version or to the previous version is possible via the service interface (CDI) .

 For the compatibility of the firmware version with the previous version, the installed device description files and operating tools, observe the information about the device in the "Manufacturer's information" document.

 The manufacturer's information is available:

- In the Download Area of the Endress+Hauser Internet site: www.endress.com → Download
- Specify the following details:
 - Product root, e.g. 8E1B
 - Text search: Manufacturer's information
 - Search range: documentation

13 Maintenance

13.1 Maintenance tasks

No special maintenance work is required.

13.1.1 Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the seals.

13.1.2 Interior cleaning

Observe the following points for CIP and SIP cleaning:

- Use only cleaning agents to which the process-wetted materials are adequately resistant.
- Observe the maximum permitted medium temperature for the measuring device
→  109.

13.2 Measuring and test equipment

Endress+Hauser offers a wide variety of measuring and test equipment, such as W@M or device tests.

 Your Endress+Hauser Sales Center can provide detailed information on the services.

List of some of the measuring and testing equipment: →  95 →  96

13.3 Endress+Hauser services

Endress+Hauser offers a wide variety of services for maintenance such as recalibration, maintenance service or device tests.

 Your Endress+Hauser Sales Center can provide detailed information on the services.

14 Repair

14.1 General notes

14.1.1 Repair and conversion concept

The Endress+Hauser repair and conversion concept provides for the following:

- The measuring devices have a modular design.
- Spare parts are grouped into logical kits with the associated Installation Instructions.
- Repairs are carried out by Endress+Hauser Service or by appropriately trained customers.
- Certified devices can only be converted to other certified devices by Endress+Hauser Service or at the factory.

14.1.2 Notes for repair and conversion

For repair and modification of a measuring device, observe the following notes:

- ▶ Use only original Endress+Hauser spare parts.
- ▶ Carry out the repair according to the Installation Instructions.
- ▶ Observe the applicable standards, federal/national regulations, Ex documentation (XA) and certificates.
- ▶ Document every repair and each conversion and enter them into the *W@M* life cycle management database.

14.2 Spare parts

W@M Device Viewer (www.endress.com/deviceviewer):

All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

Measuring device serial number:

- Is located on the nameplate of the device.
- Can be read out via the **Serial number** parameter (→  90) in the **Device information** submenu.

14.3 Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

14.4 Return

The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the website for more information:
<http://www.endress.com/support/return-material>
2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

14.5 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.

14.5.1 Removing the measuring device

1. Switch off the device.

WARNING

Danger to persons from process conditions.

- ▶ Beware of hazardous process conditions such as pressure in the measuring device, high temperatures or aggressive fluids.
2. Carry out the mounting and connection steps from the "Mounting the measuring device" and "Connecting the measuring device" sections in reverse order. Observe the safety instructions.

14.5.2 Disposing of the measuring device

WARNING

Danger to personnel and environment from fluids that are hazardous to health.

- ▶ Ensure that the measuring device and all cavities are free of fluid residues that are hazardous to health or the environment, e.g. substances that have permeated into crevices or diffused through plastic.

Observe the following notes during disposal:

- ▶ Observe valid federal/national regulations.
- ▶ Ensure proper separation and reuse of the device components.

15 Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

15.1 Device-specific accessories

15.1.1 For the sensor

Accessories	Description
Heating jacket	<p>Is used to stabilize the temperature of the fluids in the sensor. Water, water vapor and other non-corrosive liquids are permitted for use as fluids.</p> <p> If using oil as a heating medium, please consult with Endress+Hauser.</p> <p>Heating jackets cannot be used with sensors fitted with a rupture disk.</p> <ul style="list-style-type: none"> ▪ If ordered together with the measuring device: order code for "Enclosed accessories" <ul style="list-style-type: none"> ▪ Option RB "heating jacket, G 1/2" internal thread" ▪ Option RC "heating jacket, G 3/4" internal thread" ▪ Option RD "Heating jacket, NPT 1/2" internal thread" ▪ Option RE "Heating jacket, NPT 3/4" internal thread" ▪ If ordered subsequently: Use the order code with the product root DK8003. <p> Special Documentation SD02151D</p>

15.2 Communication-specific accessories

Accessories	Description
Commubox FXA195 HART	<p>For intrinsically safe HART communication with FieldCare via the USB interface.</p> <p> Technical Information TI00404F</p>
Commubox FXA291	<p>Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop.</p> <p> Technical Information TI405C/07</p>
HART Loop Converter HMX50	<p>Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.</p> <p> <ul style="list-style-type: none"> ▪ Technical Information TI00429F ▪ Operating Instructions BA00371F </p>
Wireless HART adapter SWA70	<p>Is used for the wireless connection of field devices.</p> <p>The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks with minimum cabling complexity.</p> <p> Operating Instructions BA00061S</p>
Fieldgate FXA42	<p>Is used to transmit the measured values of connected 4 to 20 mA analog measuring devices, as well as digital measuring devices</p> <p> <ul style="list-style-type: none"> ▪ Technical Information TI01297S ▪ Operating Instructions BA01778S ▪ Product page: www.endress.com/fxa42 </p>

Field Xpert SMT70	<p>The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous and non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress.</p> <p>This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle.</p> <p> <ul style="list-style-type: none"> ■ Technical Information TI01342S ■ Operating Instructions BA01709S ■ Product page: www.endress.com/smt70 </p>
Field Xpert SMT77	<p>The Field Xpert SMT77 tablet PC for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1.</p> <p> <ul style="list-style-type: none"> ■ Technical Information TI01418S ■ Operating Instructions BA01923S ■ Product page: www.endress.com/smt77 </p>

15.3 Service-specific accessories

Accessories	Description
Applicator	<p>Software for selecting and sizing Endress+Hauser measuring devices:</p> <ul style="list-style-type: none"> ■ Choice of measuring devices for industrial requirements ■ Calculation of all the necessary data for identifying the optimum flowmeter: e.g. nominal diameter, pressure loss, flow velocity and accuracy. ■ Graphic illustration of the calculation results ■ Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. <p>Applicator is available:</p> <ul style="list-style-type: none"> ■ Via the Internet: https://portal.endress.com/webapp/applicator ■ As a downloadable DVD for local PC installation.
W@M	<p>W@M Life Cycle Management</p> <p>Improved productivity with information at your fingertips. Data relevant to a plant and its components is generated from the first stages of planning and during the asset's complete life cycle.</p> <p>W@M Life Cycle Management is an open and flexible information platform with online and on-site tools. Instant access for your staff to current, in-depth data shortens your plant's engineering time, speeds up procurement processes and increases plant uptime.</p> <p>Combined with the right services, W@M Life Cycle Management boosts productivity in every phase. For more information, visit www.endress.com/lifecyclemanagement</p>
FieldCare	<p>FDT-based plant asset management tool from Endress+Hauser.</p> <p>It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.</p> <p> Operating Instructions BA00027S and BA00059S</p>
DeviceCare	<p>Tool to connect and configure Endress+Hauser field devices.</p> <p> Innovation brochure IN01047S</p>

15.4 System components

Accessories	Description
Memograph M graphic data manager	<p>The Memograph M graphic data manager provides information on all the relevant measured variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on a SD card or USB stick.</p> <div><ul style="list-style-type: none">▪ Technical Information TI00133R▪ Operating Instructions BA00247R</div>
iTEMP	<p>The temperature transmitters can be used in all applications and are suitable for the measurement of gases, steam and liquids. They can be used to read in the medium temperature.</p> <div><p>"Fields of Activity" document FA00006T</p></div>

16 Technical data

16.1 Application

The measuring device is intended only for the flow measurement of liquids and gases.
Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.
To ensure that the device remains in proper operating condition for its service life, use the measuring device only for media against which the process-wetted materials are sufficiently resistant.

16.2 Function and system design

Measuring principle	Mass flow measurement based on the Coriolis measuring principle
Measuring system	<p>The device consists of a transmitter and a sensor.</p> <p>The device is available as a compact version: The transmitter and sensor form a mechanical unit.</p> <p>For information on the structure of the device →  11</p>

16.3 Input

Measured variable

Direct measured variables

- Mass flow
- Density
- Temperature

Calculated measured variables

- Volume flow
- Corrected volume flow
- Reference density

Measuring range

Measuring ranges for liquids

DN		Measuring range full scale values $\dot{m}_{\min(F)}$ to $\dot{m}_{\max(F)}$	
[mm]	[in]	[kg/h]	[lb/min]
8	$\frac{3}{8}$	0 to 2 000	0 to 73.50
15	$\frac{1}{2}$	0 to 6 500	0 to 238.9
25	1	0 to 18 000	0 to 661.5
40	$1\frac{1}{2}$	0 to 45 000	0 to 1 654
50	2	0 to 70 000	0 to 2 573
80	3	0 to 180 000	0 to 6 615

Measuring ranges for gases

The full scale values depend on the density of the gas and can be calculated with the formula below:

$$\dot{m}_{\max(G)} = \dot{m}_{\max(F)} \cdot \rho_G : x$$

$\dot{m}_{\max(G)}$	Maximum full scale value for gas [kg/h]
$\dot{m}_{\max(F)}$	Maximum full scale value for liquid [kg/h]
$\dot{m}_{\max(G)} < \dot{m}_{\max(F)}$	$\dot{m}_{\max(G)}$ can never be greater than $\dot{m}_{\max(F)}$
ρ_G	Gas density in [kg/m ³] at operating conditions
x	Constant dependent on nominal diameter

DN		x
[mm]	[in]	[kg/m ³]
8	$\frac{3}{8}$	85
15	$\frac{1}{2}$	110
25	1	125
40	$1\frac{1}{2}$	125
50	2	125
80	3	155

Calculation example for gas

- Sensor: Promass E, DN 50
- Gas: Air with a density of 60.3 kg/m³ (at 20 °C and 50 bar)
- Measuring range (liquid): 70 000 kg/h
- x = 125 kg/m³ (for Promass E, DN 50)

Maximum possible full scale value:
 $\dot{m}_{\max(G)} = \dot{m}_{\max(F)} \cdot \rho_G : x = 70\,000\text{ kg/h} \cdot 60.3\text{ kg/m}^3 : 125\text{ kg/m}^3 = 33\,800\text{ kg/h}$

Recommended measuring range

"Flow limit" section →  111

Operable flow range	Over 1000 : 1. Flow rates above the preset full scale value do not override the electronics unit, with the result that the totalizer values are registered correctly.
---------------------	--

Input signal	<p>External measured values</p> <p>To increase the accuracy of certain measured variables or to calculate the corrected volume flow for gases, the automation system can continuously write different measured values to the measuring device:</p> <ul style="list-style-type: none">■ Operating pressure to increase accuracy (Endress+Hauser recommends the use of a pressure measuring device for absolute pressure, e.g. Cerabar M or Cerabar S)■ Medium temperature to increase accuracy (e.g. iTEMP)■ Reference density for calculating the corrected volume flow for gases <p> Various pressure transmitters and temperature measuring devices can be ordered from Endress+Hauser: see "Accessories" section →  97</p> <p>It is recommended to read in external measured values to calculate the following measured variables:</p> <ul style="list-style-type: none">■ Mass flow■ Corrected volume flow <p><i>HART protocol</i></p> <p>The measured values are written from the automation system to the measuring device via the HART protocol. The pressure transmitter must support the following protocol-specific functions:</p> <ul style="list-style-type: none">■ HART protocol■ Burst mode

Accuracy of outputs

 The output accuracy must be factored into the measured error if analog outputs are used, but can be ignored for fieldbus outputs (e.g. Modbus RS485, EtherNet/IP).

The outputs have the following base accuracy specifications.

Current output

Accuracy	Max. $\pm 5 \mu\text{A}$
-----------------	--------------------------

Pulse/frequency output

o.r. = of reading

Accuracy	Max. $\pm 50 \text{ ppm o.r.}$ (over the entire ambient temperature range)
-----------------	--

Repeatability

o.r. = of reading; $1 \text{ g/cm}^3 = 1 \text{ kg/l}$; T = medium temperature

Base repeatability

 Design fundamentals →  108

Mass flow and volume flow (liquids)

$\pm 0.075 \% \text{ o.r.}$

$\pm 0.05 \% \text{ o.r.}$ (calibration option, for mass flow)

Mass flow (gases)

$\pm 0.35 \% \text{ o.r.}$

Density (liquids)

$\pm 0.00025 \text{ g/cm}^3$

Temperature

$\pm 0.25 ^\circ\text{C} \pm 0.0025 \cdot T ^\circ\text{C}$ ($\pm 0.45 ^\circ\text{F} \pm 0.0015 \cdot (T-32) ^\circ\text{F}$)

Response time

The response time depends on the configuration (damping).

Influence of ambient temperature

Current output

o.r. = of reading

Temperature coefficient	Max. $\pm 0.005\%$ o.r./°C
-------------------------	----------------------------

Pulse/frequency output

Temperature coefficient	No additional effect. Included in accuracy.
-------------------------	---

Influence of medium temperature

Mass flow and volume flow

o.f.s. = of full scale value

When there is a difference between the temperature for zero point adjustment and the process temperature, the additional measured error of the sensor is typically $\pm 0.0002\%$ o.f.s./°C ($\pm 0.0001\%$ o. f.s./°F).

The effect is reduced if zero point adjustment is performed at process temperature.

Density

When there is a difference between the density calibration temperature and the process temperature, the typical measured error of the sensor is $\pm 0.0001\text{ g/cm}^3\text{ /}^\circ\text{C}$ ($\pm 0.00005\text{ g/cm}^3\text{ /}^\circ\text{F}$). Field density calibration is possible.

21 Field density calibration, for example at +20 °C (+68 °F)

Temperature

$\pm 0.005 \cdot T\text{ }^\circ\text{C}$ ($\pm 0.005 \cdot (T - 32)\text{ }^\circ\text{F}$)

Influence of medium pressure

The table below shows the effect on accuracy of mass flow due to a difference between calibration pressure and process pressure.

o.r. = of reading

- It is possible to compensate for the effect by:
 - Reading in the current pressure measured value via the current input.
 - Specifying a fixed value for the pressure in the device parameters.

Operating Instructions .

DN		[% o.r./bar]	[% o.r./psi]

Calculation of the maximum repeatability as a function of the flow rate

Flow rate	Maximum repeatability in % o.r.
$\geq \frac{1}{2} \cdot \frac{\text{ZeroPoint}}{\text{BaseRepeat}} \cdot 100$ <small>A0021335</small>	$\pm \text{BaseRepeat}$ <small>A0021340</small>
$< \frac{1}{2} \cdot \frac{\text{ZeroPoint}}{\text{BaseRepeat}} \cdot 100$ <small>A0021336</small>	$\pm \frac{1}{2} \cdot \frac{\text{ZeroPoint}}{\text{MeasValue}} \cdot 100$ <small>A0021337</small>

Example for maximum measured error

E Maximum measured error in % o.r. (example)
Q Flow rate in % of maximum full scale value

16.7 Installation

16.8 Environment

Ambient temperature range

→  19 →  19

Temperature tables

Observe the interdependencies between the permitted ambient and fluid temperatures when operating the device in hazardous areas.

For detailed information on the temperature tables, see the separate document entitled "Safety Instructions" (XA) for the device.

Storage temperature

−40 to +80 °C (−40 to +176 °F), preferably at +20 °C (+68 °F)

Climate class

DIN EN 60068-2-38 (test Z/AD)

Degree of protection

Transmitter and sensor

- As standard: IP66/67, type 4X enclosure
- With the order code for "Sensor options", option CM: IP69 can also be ordered
- When housing is open: IP20, type 1 enclosure
- Display module: IP20, type 1 enclosure

Vibration resistance

- Oscillation, sinusoidal, following IEC 60068-2-6
 - 2 to 8.4 Hz, 3.5 mm peak
 - 8.4 to 2 000 Hz, 1 g peak
- Oscillation, broadband noise following IEC 60068-2-64
 - 10 to 200 Hz, 0.003 g²/Hz
 - 200 to 2 000 Hz, 0.001 g²/Hz
 - Total: 1.54 g rms

Shock resistance

Shock, half-sine according to IEC 60068-2-27
6 ms 30 g

Shock resistance

Shock due to rough handling following IEC 60068-2-31

Interior cleaning

- SIP cleaning
- CIP cleaning

Electromagnetic compatibility (EMC)

- As per IEC/EN 61326 and NAMUR Recommendation 21 (NE 21)
- Complies with emission limits for industry as per EN 55011 (Class A)

Details are provided in the Declaration of Conformity.

16.9 Process

Medium temperature range

−40 to +150 °C (−40 to +302 °F)

Dependency of ambient temperature on medium temperature

22 Exemplary representation, values in the table below.

T_a Ambient temperature range
 T_m Medium temperature
A Maximum permitted medium temperature T_m at $T_{a\max} = 60\text{ }^{\circ}\text{C}$ (140 °F); higher medium temperatures T_m require a reduced ambient temperature T_a
B Maximum permitted ambient temperature T_a for the maximum specified medium temperature T_m of the sensor

 Values for devices used in the hazardous area:
Separate Ex documentation (XA) for the device .

Density	0 to 5 000 kg/m ³ (0 to 312 lb/cf)
Pressure-temperature ratings	 An overview of the pressure-temperature ratings for the process connections is provided in the "Technical Information" document
Sensor housing	<p>The sensor housing is filled with dry nitrogen gas and protects the electronics and mechanics inside.</p> <p> If a measuring tube fails (e.g. due to process characteristics like corrosive or abrasive fluids), the fluid will initially be contained by the sensor housing.</p> <p>In the event of a tube failure, the pressure level inside the sensor housing will rise according to the operating process pressure. If the user judges that the sensor housing burst pressure does not provide an adequate safety margin, the device can be fitted with a rupture disk. This prevents excessively high pressure from forming inside the sensor housing. Therefore, the use of a rupture disk is strongly recommended in applications involving high gas pressures, and particularly in applications in which the process pressure is greater than 2/3 of the sensor housing burst pressure.</p> <p>Burst pressure of the sensor housing</p> <p>If the device is fitted with a rupture disk (order code for "Sensor option", option CA "Rupture disk"), the rupture disk trigger pressure is decisive .</p> <p>The sensor housing burst pressure refers to a typical internal pressure which is reached prior to mechanical failure of the sensor housing and which was determined during type</p>

testing. The corresponding type test declaration can be ordered with the device (order code for "Additional approval", option LN "Sensor housing burst pressure, type test").

DN		Sensor housing burst pressure	
[mm]	[in]	[bar]	[psi]
8	$\frac{3}{8}$	250	3 620
15	$\frac{1}{2}$	250	3 620
25	1	250	3 620
40	1½	200	2 900
50	2	180	2 610
80	3	120	1 740

For information on the dimensions: see the "Mechanical construction" section of the "Technical Information" document

Rupture disk

To increase the level of safety, a device version with a rupture disk with a trigger pressure of 10 to 15 bar (145 to 217.5 psi) can be used (order code for "Sensor option", option CA "rupture disk").

The use of rupture disks cannot be combined with the separately available heating jacket.

Flow limit

Select the nominal diameter by optimizing between the required flow range and permissible pressure loss.

For an overview of the full scale values for the measuring range, see the "Measuring range" section → 99

- The minimum recommended full scale value is approx. 1/20 of the maximum full scale value
- In most applications, 20 to 50 % of the maximum full scale value can be considered ideal
- A low full scale value must be selected for abrasive media (such as liquids with entrained solids): flow velocity < 1 m/s (< 3 ft/s).
- For gas measurement the following rules apply:
 - The flow velocity in the measuring tubes should not exceed half the sound velocity (0.5 Mach).
 - The maximum mass flow depends on the density of the gas: formula → 99

To calculate the flow limit, use the *Applicator* sizing tool → 96

Pressure loss

To calculate the pressure loss, use the *Applicator* sizing tool → 96

System pressure

→ 19

16.10 Mechanical construction

Design, dimensions

For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section.

Weight

All values (weight exclusive of packaging material) refer to devices with EN/DIN PN 40 flanges. Weight specifications including transmitter: order code for "Housing", option A "Compact, aluminum coated".

Weight in SI units

DN [mm]	Weight [kg]
8	4.5
15	4.8

Protective cover

Stainless steel, 1.4404 (316L)

Safety Barrier Promass 100

Housing: Polyamide

Process connections

- Fixed flange connections:
 - EN 1092-1 (DIN 2501) flange
 - EN 1092-1 (DIN 2512N) flange
 - Namur lengths in accordance with NE 132
 - ASME B16.5 flange
 - JIS B2220 flange
 - DIN 11864-2 Form A flange, DIN 11866 series A, flange with notch
- Clamp connections:
Tri-Clamp (OD tubes), DIN 11866 series C
- Thread:
 - DIN 11851 thread, DIN 11866 series A
 - SMS 1145 thread
 - ISO 2853 thread, ISO 2037
 - DIN 11864-1 Form A thread, DIN 11866 series A
- VCO connections:
 - 8-VCO-4
 - 12-VCO-4

 Process connection materials →  112

Surface roughness

All data relate to parts in contact with fluid. The following surface roughness quality can be ordered.

- Not polished
- $Ra_{max} = 0.76 \mu m$ (30 μin)
- $Ra_{max} = 0.38 \mu m$ (15 μin)

16.11 Human interface

Local display

The local display is only available with the following device order code:
Order code for "Display; operation", option **B**: 4-line; illuminated, via communication

Display element

- 4-line liquid crystal display with 16 characters per line.
- White background lighting; switches to red in event of device errors.
- Format for displaying measured variables and status variables can be individually configured.
- Permitted ambient temperature for the display: -20 to $+60$ °C (-4 to $+140$ °F). The readability of the display may be impaired at temperatures outside the temperature range.

Disconnecting the local display from the main electronics module

i In the case of the "Compact, aluminum coated" housing version, the local display must only be disconnected manually from the main electronics module. In the case of the "Compact, hygienic, stainless" and "Ultra-compact, hygienic, stainless" housing versions, the local display is integrated in the housing cover and is disconnected from the main electronics module when the housing cover is opened.

"Compact, aluminum coated" housing version

The local display is plugged onto the main electronics module. The electronic connection between the local display and main electronics module is established via a connecting cable.

For some work performed on the measuring device (e.g. electrical connection), it is advisable to disconnect the local display from the main electronics module:

1. Press in the side latches of the local display.
2. Remove the local display from the main electronics module. Pay attention to the length of the connecting cable when doing so.

Once the work is completed, plug the local display back on.

Remote operation**Via HART protocol**

This communication interface is available in device versions with a HART output.

A0028747

24 Options for remote operation via HART protocol

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with operating tool (e.g. FieldCare, AMS Device Manager, SIMATIC PDM)
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX350 or SFX370
- 6 Field Xpert SMT70
- 7 VIATOR Bluetooth modem with connecting cable
- 8 Transmitter

Service interface

Via service interface (CDI-RJ45)

HART

A0016926

25 Connection for the order code for "Output", option B: 4-20 mA HART, pulse/frequency/switch output

- 1 Service interface (CDI -RJ45) of the measuring device with access to the integrated Web server
- 2 Computer with Web browser (e.g. Internet Explorer) for accessing the integrated device Web server or with "FieldCare" operating tool with COM DTM "CDI Communication TCP/IP"
- 3 Standard Ethernet connecting cable with RJ45 plug

Languages

Can be operated in the following languages:

- Via "FieldCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese
- Via Web browser
English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Bahasa (Indonesian), Vietnamese, Czech, Swedish, Korean

16.12 Certificates and approvals

i Currently available certificates and approvals can be called up via the product configurator.

CE mark

The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.
Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

RCM-tick symbol

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex approval

The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

Sanitary compatibility	<ul style="list-style-type: none"> ■ 3-A approval <ul style="list-style-type: none"> ■ Only measuring devices with the order code for "Additional approval", option LP "3A" have 3-A approval. ■ The 3-A approval refers to the measuring device. ■ When installing the measuring device, ensure that no liquid can accumulate on the outside of the measuring device. Remote transmitters must be installed in accordance with the 3-A Standard. ■ Accessories (e.g. heating jacket, weather protection cover, wall holder unit) must be installed in accordance with the 3-A Standard. Each accessory can be cleaned. Disassembly may be necessary under certain circumstances. ■ EHEDG-tested Only devices with the order code for "Additional approval", option LT "EHEDG" have been tested and meet the requirements of the EHEDG. To meet the requirements for EHEDG certification, the device must be used with process connections in accordance with the EHEDG position paper entitled "Easy Cleanable Pipe Couplings and Process Connections" (www.ehedg.org).
Pharmaceutical compatibility	<ul style="list-style-type: none"> ■ FDA 21 CFR 177 ■ USP <87> ■ USP <88> Class VI 121 °C ■ TSE/BSE Certificate of Suitability ■ cGMP <p> Devices with order code for "Test, certificate", option JG "Compliance with requirements derived from cGMP, declaration" are in accordance with cGMP requirements relating to the surfaces of wetted parts, design, FDA 21 CFR material conformity, USP Class VI tests and TSE/BSE-compliance.</p> <p>A manufacturer's declaration specific to the serial number is supplied with the device.</p>
HART certification	<p>HART interface</p> <p>The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:</p> <ul style="list-style-type: none"> ■ Certified according to HART 7 ■ The device can also be operated with certified devices of other manufacturers (interoperability)
Pressure Equipment Directive	<ul style="list-style-type: none"> ■ With the identification PED/G1/x (x = category) on the sensor nameplate, Endress+Hauser confirms conformity with the "Essential Safety Requirements" specified in Appendix I of the Pressure Equipment Directive 2014/68/EU. ■ Devices not bearing this marking (PED) are designed and manufactured according to good engineering practice. They meet the requirements of Article 4 paragraph 3 of the Pressure Equipment Directive 2014/68/EU. The range of application is indicated in tables 6 to 9 in Annex II of the Pressure Equipment Directive 2014/68/EU.
Other standards and guidelines	<ul style="list-style-type: none"> ■ EN 60529 Degrees of protection provided by enclosures (IP code) ■ IEC/EN 60068-2-6 Environmental influences: Test procedure - Test Fc: vibrate (sinusoidal). ■ IEC/EN 60068-2-31 Environmental influences: Test procedure - Test Ec: shocks due to rough handling, primarily for devices. ■ EN 61010-1 Safety requirements for electrical equipment for measurement, control and laboratory use - general requirements

16.13 Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Detailed information on the application packages:
Special Documentation for the device → 120

Heartbeat Technology

Package	Description
Heartbeat Verification +Monitoring	<p>Heartbeat Verification Meets the requirement for traceable verification to DIN ISO 9001:2008 Chapter 7.6 a) "Control of monitoring and measuring equipment".</p> <ul style="list-style-type: none"> ■ Functional testing in the installed state without interrupting the process. ■ Traceable verification results on request, including a report. ■ Simple testing process via local operation or other operating interfaces. ■ Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications. ■ Extension of calibration intervals according to operator's risk assessment. <p>Heartbeat Monitoring Continuously supplies data, which are characteristic of the measuring principle, to an external condition monitoring system for the purpose of preventive maintenance or process analysis. These data enable the operator to:</p> <ul style="list-style-type: none"> ■ Draw conclusions - using these data and other information - about the impact process influences (such as corrosion, abrasion, buildup etc.) have on the measuring performance over time. ■ Schedule servicing in time. ■ Monitor the process or product quality, e.g. gas pockets.

Concentration	Package	Description
	Concentration	<p>Calculation and outputting of fluid concentrations</p> <p>The measured density is converted to the concentration of a substance of a binary mixture using the "Concentration" application package:</p> <ul style="list-style-type: none"> Choice of predefined fluids (e.g. various sugar solutions, acids, alkalis, salts, ethanol etc.) Common or user-defined units ("Brix", "Plato", % mass, % volume, mol/l etc.) for standard applications. Concentration calculation from user-defined tables. <p>The measured values are output via the digital and analog outputs of the device.</p>
