# 1 About this document

## 1.1 Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

## 1.2 Symbols

### 1.2.1 Safety symbols

<table>

HART®
Registered trademark of the FieldComm Group, Austin, Texas, USA
2 Basic safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

‣ Trained, qualified specialists must have a relevant qualification for this specific function and task.
‣ Are authorized by the plant owner/operator.
‣ Are familiar with federal/national regulations.
‣ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
‣ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:

‣ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
‣ Follow the instructions in this manual.

2.2 Intended use

2.2.1 Active barrier

The active barrier is used for the safe isolation of 0/4 to 20 mA standard signal circuits. An intrinsically safe version is optionally available for operation in Zone 2. The device is designed for installation on DIN rails in accordance with IEC 60715.

A use in a manner not specified by the manufacturer's manual may impair the safety.

2.2.2 Product liability

The manufacturer does not accept any responsibility for damage that results from non-designated use and from failure to comply with the instructions in this manual.

2.3 Workplace safety

For work on and with the device:

‣ Wear the required personal protective equipment according to federal/national regulations.

2.4 Operational safety

Risk of injury!

‣ Operate the device only if it is in proper technical condition, free from errors and faults.
‣ The operator is responsible for interference-free operation of the device.

Modifications to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers:

‣ If modifications are nevertheless required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability:

‣ Carry out repairs on the device only if they are expressly permitted.
Basic safety instructions

- Observe federal/national regulations pertaining to the repair of an electrical device.
- Use only original spare parts and accessories from the manufacturer.

Hazardous area
To eliminate danger to persons or the facility when the device is used in the hazardous area (e.g. explosion protection):
- Check the nameplate to verify if the device ordered can be put to its intended use in the hazardous area.
- Observe the specifications in the separate supplementary documentation that is an integral part of these instructions.

2.5 Product safety
This device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

2.6 Installation instructions
- The device's IP20 degree of protection is intended for a clean and dry environment.
- Do not expose the device to mechanical and/or thermal stress that exceeds the specified limits.
- The device is intended for installation in a cabinet or similar housing. The device may only be operated as an installed device.
- To protect against mechanical or electrical damage, the device must be installed in an appropriate housing with a suitable degree of protection according to IEC/EN 60529.
- The device fulfills the EMC regulations for the industrial sector.
3  Product descriptions

3.1  Product description RN42

3.1.1  Product design

Active barrier, 1-channel

- The active barrier is used for the transmission and galvanic isolation of 0/4 to 20 mA/HART signals. The device has an active/passive current input to which a 2- or 4-wire transmitter can be directly connected. The output of the device can be operated actively or passively. The current signal is then available to the PLC / controller or to other instrumentation at plug-in screw terminals or optional push-in terminals.
- HART communication signals are transmitted bidirectionally by the device. Connection sockets for connecting HART communicators are integrated into the front of the device.
- The device is optionally available as an "associated apparatus", which allows devices to be connected in Ex Zone 0/20 [ia] and operated in Ex Zone 2 [ec]. 2-wire transmitters are supplied with power, and transmit analog 0/4 to 20 mA/HART measured values from the hazardous area to the non-hazardous area. These devices are accompanied by separate Ex documentation, which is an integral part of this manual. Compliance with the installation instructions and connection data in this documentation is mandatory!

4  Incoming acceptance and product identification

4.1  Incoming acceptance

Check the following during incoming acceptance:

- Are the order codes on the delivery note and the product sticker identical?
- Are the goods undamaged?
- Do the data on the nameplate match the ordering information on the delivery note?

If one of these conditions is not met, please contact the manufacturer's sales office.

4.2  Product identification

The following options are available for identification of the device:

- Nameplate specifications
- Extended order code with breakdown of the device features on the delivery note
- Enter the serial number from the nameplate in the W@M Device Viewer (www.endress.com/deviceviewer): all data relating to the device and an overview of the Technical Documentation supplied with the device are displayed.
- Enter the serial number on the nameplate into the Endress+Hauser Operations App or scan the 2-D matrix code (QR code) on the nameplate with the Endress+Hauser Operations App: all the information about the device and the technical documentation pertaining to the device is displayed.

4.2.1  Nameplate

The right device?

Compare and check the data on the nameplate of the device against the requirements of the measuring point:
1 Nameplate (example of Ex version)

1 Product name and manufacturer ID
2 Order code, extended order code and serial number, DataMatrix 2D code, FCC-ID (if applicable)
3 Power supply and current consumption, output
4 Approval in hazardous area with number of the relevant Ex documentation (XA...)
5 Fieldbus communication logo
6 Firmware version and device revision
7 Approval logos
8 2 lines for the TAG name

4.2.2 Name and address of manufacturer

Name of manufacturer: Endress+Hauser Wetzer GmbH + Co. KG
Address of manufacturer: Obere Wank 1, D-87484 Nesselwang
Model/type reference: RN42

4.3 Scope of delivery

The scope of delivery comprises:
- Device as per order
- Printed copy of the Brief Operating Instructions
- Optional: Functional safety manual (SIL mode)
- Additional documentation for devices which are suitable for use in the hazardous area (\(\odot\ \odot\ \odot\ )) , such as Safety Instructions (XA...), Control or Installation Drawings (ZD...)

4.4 Certificates and approvals

For certificates and approvals valid for the device: see the data on the nameplate

Approval-related data and documents: www.endress.com/deviceviewer → (enter the serial number)

4.4.1 Functional safety

A SIL version of the device is optionally available. It can be used in safety equipment in accordance with IEC 61508 up to SIL 2 (SC 3) .

Please refer to Safety Manual FY01034K for the use of the device in safety instrumented systems according to IEC 61508.
4.5 Storage and transport

When storing and transporting the device, pack it so that it is reliably protected against impact. The original packaging provides optimum protection.

5 Mounting

5.1 Mounting requirements

5.1.1 Dimensions

The dimensions of the device are provided in the 'Technical data' section of the Operating Instructions.

5.1.2 Mounting location

The device is designed for installation on 35 mm (1.38 in) DIN rails in accordance with IEC 60715 (TH35).

NOTICE

‣ When using in hazardous areas, the limit values of the certificates and approvals must be observed.

For information on ambient conditions, see the 'Technical data' section.

5.2 Installing a DIN rail device

The device can be installed in any position (horizontal or vertical) on the DIN rail without lateral clearance from neighboring devices. No tools are required for installation. The use of end brackets (type "WEW 35/1" or equivalent) on the DIN rail is recommended to fix the device.

If several devices are installed side by side, it is important to ensure that the maximum side wall temperature of the individual devices of 80 °C (176 °F) is not exceeded. If this cannot be guaranteed, mount the devices at a distance from one another or ensure sufficient cooling.

1. Position the top DIN rail groove at the top end of the DIN rail.
2. While holding the front of the device horizontally, lower it until you hear the locking clip of the device click into place on the DIN rail.
3. Pull gently on the device to check if it is correctly mounted on the DIN rail.

5.3 Disassembling the DIN rail device

1. Insert a screwdriver into the tab of the DIN rail clip.
2. Use the screwdriver to pull down on the DIN rail clip as shown in the diagram.
3. Hold down the screwdriver to remove the device from the DIN rail.
6 Electrical connection

6.1 Connecting requirements

A flat-blade screwdriver is required to establish an electrical connection to screw or push-in terminals.

![Diagram of electrical connection using screw terminals (left) and push-in terminals (right)]

**CAUTION**

Destruction of parts of the electronics

- Switch off the power supply before installing and connecting the device.

**NOTICE**

Destruction or malfunction of parts of the electronics

- **ESD** - Electrostatic discharge. Protect the terminals and HART sockets on the front from electrostatic discharge.
- A shielded cable is recommended for HART communication. Observe grounding concept of the plant.

For information on the connection data, see the "Technical data" section.

6.2 Special connection instructions

- Disconnecting units and auxiliary circuit protective systems with suitable AC or DC values must be provided within reach in the building installation.
- A switch/power circuit breaker must be provided close to the device and clearly marked as a disconnecting unit for this device.
- A circuit breaker (nominal current ≤ 10 A; breaking capacity 6 kA; e.g. type B) must be provided within reach for the supply line.

For information on the connection data, see the "Technical data" section.
6.3 Quick wiring guide

HART communicators can be connected to the HART connection sockets. Ensure an adequate external resistance (≥ 230 Ω) in the output circuit.

To use the HART terminals, the internal 250 Ω communication resistor can be added to the measuring loop via the alternative terminal assignment (terminal 3.3).

6.4 Connecting the supply voltage

The power is supplied via terminals 1.1 and 1.2.

6.5 Post-connection check

<table>
<thead>

7 Operation options

7.1 Display and operating elements RN42

![Display and operating elements, left: power supply top; right: power supply bottom (option)](image)

1 Plug-in screw or push-in terminal
2 Green LED "On", power supply
3 Connection sockets for HART communication (channel 1)
4 DIN rail clip for DIN rail mounting

7.1.1 Local operation

Hardware settings / configuration

No manual hardware settings are required at the device for commissioning.

Attention must be paid to the different terminal assignment when connecting 2/4-wire transmitters. At the output side, the connected system is detected and automatic switching takes place between the active and passive mode.

8 Commissioning

8.1 Post-installation check

Before commissioning the device, ensure that all post-mounting and post-connection checks have been carried out.

**NOTICE**

- Before commissioning the device, make sure that the supply voltage matches the voltage specifications on the nameplate. Failure to perform these checks may result in damage to the device caused by the incorrect supply voltage.

8.2 Switching on the device

Switch on the supply voltage. The green LED display on the front of the device indicates that the device is operational.

**To prevent incorrect wiring, the output current should be verified when simulating a high alarm at the input.**
9  Diagnostics and troubleshooting

9.1  General troubleshooting

Always start troubleshooting with the checklists below if faults occur after startup or during operation. The checklists take you directly (via various queries) to the cause of the problem and the appropriate remedial measures.

Due to its design, the device cannot be repaired. However, it is possible to send the device in for examination. See the "Return" section.

**General faults**

<table>
<thead>

<td>Connect external voltage correctly to output.</td>
</tr>
</tbody>
</table>

10  Maintenance

No special maintenance work is required for the device.

Cleaning
A clean, dry cloth can be used to clean the device.

11  Repair

11.1  General information

Due to its design, the device cannot be repaired.
11.2  Spare parts

Spare parts currently available for the device can be found online at:
http://www.products.endress.com/spareparts_consumables. Always quote the serial number of the device when ordering spare parts!

<table>
<thead>

11.3  Return

The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the website for more information:
http://www.endress.com/support/return-material

2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

11.4  Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.
12 Technical data

12.1 Function and system design

Product description RN42

Product design

Active barrier, 1-channel

- The active barrier is used for the transmission and galvanic isolation of 0/4 to 20 mA/HART signals. The device has an active/passive current input to which a 2- or 4-wire transmitter can be directly connected. The output of the device can be operated actively or passively. The current signal is then available to the PLC/controller or to other instrumentation at plug-in screw terminals or optional push-in terminals.
- HART communication signals are transmitted bidirectionally by the device. Connection sockets for connecting HART communicators are integrated into the front of the device.
- The device is optionally available as an "associated apparatus", which allows devices to be connected in Ex Zone 0/20 [ia] and operated in Ex Zone 2 [ec]. 2-wire transmitters are supplied with power, and transmit analog 0/4 to 20 mA/HART measured values from the hazardous area to the non-hazardous area. These devices are accompanied by separate Ex documentation, which is an integral part of this manual. Compliance with the installation instructions and connection data in this documentation is mandatory!

Dependability

We only provide a warranty if the device is installed and used as described in the Operating Instructions.

12.2 Input

Version

The following versions are available:
1-channel

Input data, measuring range

| Input signal range (underrange / overrange) | 0 to 22 mA |
| Function range, input signal | 0/4 to 20 mA |
| Input voltage drop signal for 4-wire connection | < 7 V at 20 mA |
| Transmitter supply voltage | 17.5 V ±1 V at 20 mA |
| Open-circuit voltage: 24.5 V ±5 % |

12.3 Output

Output data

| Output signal range (underrange / overrange) | 0 to 22 mA |
| Function range, output signal | 0/4 to 20 mA |
| Transmission behavior | 1:1 to input signal |
| NAMUR NE 43 | A current at the input that is valid according to NAMUR NE 43 is transmitted to the output (within the specified measuring uncertainty range) |
| Maximum load, active mode | ≤ 500 Ω |
| Open-circuit voltage, active mode | 17.5 V (± 5%) |
| Maximum load, passive mode | Rmax = (Uext - 4 V) / 0.022 A |
External voltage, passive mode  \( U_{\text{ext}} = 12 \text{ to } 30 \text{ V} \)

Transmissible communication protocols  HART

### 12.4 Power supply

#### Terminal assignment  Quick wiring guide

![Quick wiring guide diagram](image)

7  **Terminal assignment, left: power supply top; right: power supply bottom (option)**

| ![Terminal assignment diagram](diagram) | ![Terminal assignment diagram](diagram) |

1  **HART communicators can be connected to the HART connection sockets. Ensure an adequate external resistance (≥ 230 Ω) in the output circuit.**

To use the HART terminals, the internal 250 Ω communication resistor can be added to the measuring loop via the alternative terminal assignment (terminal 3.3).

Connecting the supply voltage  The power is supplied via terminals 1.1 and 1.2.

Special connection instructions

- Disconnecting units and auxiliary circuit protective systems with suitable AC or DC values must be provided in the building installation.
- A switch/power circuit breaker must be provided close to the device and clearly marked as a disconnecting unit for this device.
- An overcurrent protection unit (\( I \leq 10 \text{ A} \)) must be provided in the installation.

For information on the connection data, see the "Technical data" section.
Performance characteristics  

**Power supply**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supply voltage</td>
<td>24 to 230 V&lt;sub&gt;AC/DC&lt;/sub&gt; (-20% / +10%, 0/50/60 Hz)</td>
</tr>
<tr>
<td>Power consumption</td>
<td>≤ 4.9 VA / 2.4 W (20 mA); ≤ 5 VA / 2.5 W (22 mA)</td>
</tr>
<tr>
<td>Power loss</td>
<td>≤ 2 W (20 mA); ≤ 2.1 W (22 mA)</td>
</tr>
<tr>
<td>Current consumption at 24 V&lt;sub&gt;DC&lt;/sub&gt;</td>
<td>≤ 0.1 A (20 mA); ≤ 0.1 A (22 mA)</td>
</tr>
<tr>
<td>Current consumption at 230 V&lt;sub&gt;AC&lt;/sub&gt;</td>
<td>≤ 0.02 A (20 mA); ≤ 0.02 A (22 mA)</td>
</tr>
</tbody>
</table>

1) The data apply for the following operating scenario: input active / output active / output load 0 Ω. When external voltages are connected to the output, the power loss in the device may increase. The power loss in the device can be reduced by connecting an external output load.

**Terminals**

A flat-blade screwdriver is required to establish an electrical connection to screw or push-in terminals.

![Electrical connection using screw terminals (left) and push-in terminals (right)](image)

<table>
<thead>
<tr>
<th>Terminal design</th>

</tbody>
</table>

**Long-term drift**

Max. ±0.1% / year (of full scale value)

### 12.6 Mounting

**Mounting location**

The device is designed for installation on 35 mm (1.38 in) DIN rails in accordance with IEC 60715 (TH35).

**NOTICE**

- When using in hazardous areas, the limit values of the certificates and approvals must be observed.

For information on ambient conditions, see the “Technical data” section.

**Installing a DIN rail device**

The device can be installed in any position (horizontal or vertical) on the DIN rail without lateral clearance from neighboring devices. No tools are required for installation. The use of end brackets (type "WEW 35/1" or equivalent) on the DIN rail is recommended to fix the device.

**NOTICE**

- If several devices are installed side by side, it is important to ensure that the maximum side wall temperature of the individual devices of 80 °C (176 °F) is not exceeded. If this cannot be guaranteed, mount the devices at a distance from one another or ensure sufficient cooling.

![1. Position the top DIN rail groove at the top end of the DIN rail.](image)

![2. While holding the front of the device horizontally, lower it until you hear the locking clip of the device click into place on the DIN rail.](image)

![3. Pull gently on the device to check if it is correctly mounted on the DIN rail.](image)

Maximum temperature change rate
0.5 °C/min, no condensation permitted

Shock and vibration resistance
Sinusoidal vibrations, in accordance with IEC 60068-2-6
- 5 to 13.2 Hz: 1 mm peak
- 13.2 to 100 Hz: 0.7g peak

Electromagnetic compatibility (EMC)

CE compliance
Electromagnetic compatibility in accordance with all the relevant requirements of the IEC/EN 61326 series and NAMUR Recommendation EMC (NE21). For details, refer to the Declaration of Conformity.
- Maximum measured error < 1% of measuring range
- Strong, pulse-like EMC interference can result in transient (< 1) deviations in the output signal (≥ ±1 %).
- Interference immunity as per IEC/EN 61326 series, industrial requirements
- Interference emission as per IEC/EN 61326 series (CISPR 11) Group 1 Class A

This unit is not intended for use in residential environments and cannot guarantee adequate protection of the radio reception in such environments.

12.9  Display and operating elements RN42

![Diagram of display and operating elements RN42]

10  Display and operating elements, left: power supply top; right: power supply bottom (option)

1  Plug-in screw or push-in terminal
2  Green LED 'On', power supply
3  Connection sockets for HART communication (channel 1)
4  DIN rail clip for DIN rail mounting

Local operation

Hardware settings / configuration

No manual hardware settings are required at the device for commissioning. Attention must be paid to the different terminal assignment when connecting 2/4-wire transmitters. At the output side, the connected system is detected and automatic switching takes place between the active and passive mode.

12.10  Ordering information

Detailed ordering information is available from the nearest sales organization www.addresses.endress.com or in the Product Configurator under www.endress.com:

1. Select the product using the filters and search field.
2. Open the product page.

The Configuration button opens the Product Configurator.

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

12.11  Accessories

Various accessories, which can be ordered with the device or subsequently from Endress +Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.
## Service-specific accessories

| W@M | Life cycle management for your plant  
  W@M offers assistance with a wide range of software applications over the entire process: from planning and procurement to the installation, commissioning and operation of the measuring devices. All the relevant information is available for every measuring device over the entire life cycle, such as the device status, device-specific documentation, spare parts etc.  
  The application already contains the data of your Endress+Hauser device. Endress+Hauser also takes care of maintaining and updating the data records.  
  W@M is available:  
  Via the Internet: www.endress.com/lifecyclemanagement |

## 12.12 Certificates and approvals

For certificates and approvals valid for the device: see the data on the nameplate.

Approval-related data and documents: www.endress.com/deviceviewer → (enter the serial number)

## Functional safety

A SIL version of the device is optionally available. It can be used in safety equipment in accordance with IEC 61508 up to SIL 2 (SC 3).

Please refer to Safety Manual FY01034K for the use of the device in safety instrumented systems according to IEC 61508.

## 12.13 Documentation

The following document types are available in the Downloads section of the Endress+Hauser website (www.endress.com/downloads):

For an overview of the scope of the associated Technical Documentation, refer to the following:

- **W@M Device Viewer** (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- **Endress+Hauser Operations App**: Enter the serial number from the nameplate or scan the matrix code on the nameplate

**Brief Operating Instructions (KA)**  
Guide that takes you quickly to the 1st measured value  
The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

**Operating Instructions (BA)**  
Your reference guide  
These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and
storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

<table>

| Supplementary device-dependent documentation | Additional documents are supplied depending on the device version ordered: Always comply strictly with the instructions in the supplementary documentation. The supplementary documentation is an integral part of the device documentation. |
13 Appendix: system overview of RN Series

13.1 Power supply of RN Series

13.1.1 General information on the power supply of Endress+Hauser isolating amplifiers
Read the information leaflet enclosed in the package of the individual products.

13.1.2 Power supply options of RN4x Series (24 to 230 V)
The RN42 active barrier and RLN42 NAMUR isolating amplifier are available with an extended supply voltage range of 24 to 230 V\textsubscript{AC/DC}. These modules are powered individually and exclusively via the terminals on the device and are not suitable for power supply via the DIN rail bus connector.

13.2 Applications of the isolating amplifiers
This section describes the typical applications of the devices.

These devices perform various functions during signal conditioning:
- Amplification
- Normalization
- Filtering
- Galvanic isolation
- Supply of electrical power to connected sensors
- Line monitoring

The devices for these tasks are collectively known as isolating amplifiers or signal isolators and are available with different functions in the Endress+Hauser RN Series. Different types of signals are conditioned in this context.

13.2.1 Types of signals
Signals are referred to as analog signals if they can continuously assume every value between a minimum and maximum value \( (\text{e.g. } 0/4-20 \text{ mA}) \) and are therefore also known as 'value-continuous' signals. The value range in this interval is huge and is practically infinite in terms of measuring accuracy.

Electrical analog signals are generated with the help of a sensor, for example, which records the states, or changes of state, of physical variables and converts them to an electrical signal.

The following variables are typically measured in system and process engineering using Endress+Hauser measuring devices:
- Temperature
- Pressure
- Level
- Total flow
- Analysis values (e.g. turbidity, conductivity, pH etc.)

These analog signals are evaluated in the controller (PLC) and the signals can be used in a "target device": e.g. for
- Display devices, e.g. level indication via RIA15
- Control unit, e.g. level control
- Actuators, e.g. to fill a tank
A transmitter can also be connected downstream of the sensor. This transmitter converts the analog measured value signal to a standard signal and thereby enables the further processing of the signal with additional standardized, electrical modules. The transmitter can also be integrated in the sensor housing.

**Binary signals** only assume two values and signal the states 'on' or 'off' / "1" or "0" with these values. Binary signals are often equated with "digital" signals because digital signals are generally binary encoded.

**HART** (Highway Addressable Remote Transducer) signals are essentially characterized by the fact that they are operated and used as a complement to classic analog standard signals, in contrast to other digital fieldbus systems. HART therefore does not replace point-to-point wiring but rather enables the integration of smart field devices. The digital signals are modulated onto an analog 4 to 20 mA standard current signal by means of HART modulation in order to transmit digital information in addition to the analog information of the process value.

![Modulated HART signal](image)

**NAMUR** sensors are operated with a transmitted current and have four states so that sensor errors can also be detected by an analog evaluation unit. This is sometimes referred to as the "closed circuit current principle".

NAMUR sensors can adopt four states at the output:
- Current 0 mA: wire break; circuit open
- Current <1.2 mA: sensor ready, undamped
- Current >2.1 mA: sensor ready, dampened
- Current maximum value >6 mA: short-circuit, maximum current

The portfolio of the RN Series offers the following function modules:
- RN22, RN42 active barrier
- RN22 signal doubler
- RLN22, RLN42 NAMUR isolating amplifier
- RNO22 output isolating amplifier

**13.2.2 RN42 active barrier**

The active barriers perform several functions. In addition to galvanic signal isolation and the proportional transmission of analog 0/4-20 mA signals, they also provide power to connected sensors. The RN42 devices are HART-transparent, i.e. they also transmit the HART information supplied by the PMP71B. Via the HART connections on the front, HART signals can be measured or connected 'SMART' sensors can be easily configured.

The following are examples of typical applications of the RN42 active barrier. Each application is explained briefly and described in a schematic diagram.
Example: pressure measurement in a hazardous area
- The PMP71B passive 2-wire sensor supplies a current signal proportional to the pressure to the active input of the RN42 active barrier
- The RN42 active barrier supplies an active current output signal proportional to the input signal to a passive input of the evaluation unit

Please note: the devices have an active and passive current input to which a 2-wire or 4-wire transmitter can be directly connected. The output of the device can be operated actively or passively. The current signal is then available to the PLC / controller or to other instrumentation.

Flow measurement in a hazardous area
- The Promag P300 active 4-wire sensor supplies a current signal proportional to the flow to the passive input of the RN42 active barrier
- The RN42 active barrier supplies a passive current output signal proportional to the input signal to an active input of the evaluation unit
Flow measurement in the hazardous area with an RN42 active barrier
