Technical Information
RN42
Active barrier, HART-transparent

1-channel active barrier with wide range power supply for the safe separation of 0/4 to 20 mA standard signal circuits, HART-transparent

Application
- 1-channel active barrier with wide range power supply
- Transmission and galvanic isolation of analog 0/4 to 20 mA signals, optionally intrinsically safe [Ex-ia] from the hazardous area
- Bidirectional transmission of digital HART communication signals
- Connection sockets integrated on front for HART communicators
- Power supply of loop-powered transmitters
  - Transmitter supply voltage >16.5 V
- For safety-oriented applications up to SIL 2 (SC 3) in accordance with IEC61508 (optional)
- For ambient temperatures –40 to +60 °C (–40 to 140 °F)

Your benefits
- Wide range power supply of 19.2 to 253 VAC/DC
- Input 0/4 to 20 mA, power-supplying or non power-supplying
- Output 0/4 to 20 mA, active or passive
- Optional installation in Ex zone 2, "en" explosion protection
- Quick and easy wiring thanks to plug-in terminals (with screw or push-in technology)
- Compact housing width: 17.5 mm (0.69 in); option for installation rotated by 180° (terminals for power supply at top or bottom)

Function and system design

Product description

Active barrier, 1-channel

- The active barrier is used for the transmission and galvanic isolation of 0/4 to 20 mA/HART signals. The device has an active/passive current input to which a 2- or 4-wire transmitter can be directly connected. The output of the device can be operated actively or passively. The current signal is then available to the PLC / controller or to other instrumentation at plug-in screw terminals or optional push-in terminals.
- HART communication signals are transmitted bidirectionally by the device. Connection sockets for connecting HART communicators are integrated into the front of the device.
- The device is optionally available as an "associated apparatus", which allows devices to be connected in Ex Zone 0/20 [ia] and operated in Ex Zone 2 [ec]. 2-wire transmitters are supplied with power, and transmit analog 0/4 to 20 mA/HART measured values from the hazardous area to the non-hazardous area. These devices are accompanied by separate Ex documentation, which is an integral part of this manual. Compliance with the installation instructions and connection data in this documentation is mandatory!

Dependability

We only provide a warranty if the device is installed and used as described in the Operating Instructions.

Input

Version

The following versions are available:
1-channel

Input data, measuring range

Power supply

Terminal assignment
Quick wiring guide

I Terminal assignment, left: power supply top; right: power supply bottom (option)

HART communicators can be connected to the HART connection sockets. Ensure an adequate external resistance (≥ 230 Ω) in the output circuit.

To use the HART terminals, the internal 250 Ω communication resistor can be added to the measuring loop via the alternative terminal assignment (terminal 3.3).

Connecting the supply voltage
The power is supplied via terminals 1.1 and 1.2.

Special connection instructions
- Disconnecting units and auxiliary circuit protective systems with suitable AC or DC values must be provided in the building installation.
- A switch/power circuit breaker must be provided close to the device and clearly marked as a disconnecting unit for this device.
- An overcurrent protection unit (I ≤ 10 A) must be provided in the installation.

Performance characteristics

<table>
<thead>
<tr>
<th>Power supply 1)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Supply voltage</td>
</tr>
<tr>
<td>Power consumption</td>
</tr>
<tr>
<td>Power loss</td>
</tr>
<tr>
<td>Current consumption at 24 V&lt;sub&gt;DC&lt;/sub&gt;</td>
</tr>
<tr>
<td>Current consumption at 230 V&lt;sub&gt;AC&lt;/sub&gt;</td>
</tr>
</tbody>
</table>

1) The data apply for the following operating scenario: input active / output active / output load 0 Ω. When external voltages are connected to the output, the power loss in the device may increase. The power loss in the device can be reduced by connecting an external output load.

</thead>
</table>

### Mounting

#### Mounting location
The device is designed for installation on 35 mm (1.38 in) DIN rails in accordance with IEC 60715 (TH35).

**NOTICE**
- When using in hazardous areas, the limit values of the certificates and approvals must be observed.

#### Installing a DIN rail device

The device can be installed in any position (horizontal or vertical) on the DIN rail without lateral clearance from neighboring devices. No tools are required for installation. The use of end brackets (type "WEW 35/1" or equivalent) on the DIN rail is recommended to fix the device.

**NOTICE**
- If several devices are installed side by side, it is important to ensure that the maximum side wall temperature of the individual devices of 80 °C (176 °F) is not exceeded. If this cannot be guaranteed, mount the devices at a distance from one another or ensure sufficient cooling.
Environment

Important ambient conditions

</tr>
</tbody>
</table>

Maximum temperature change rate

0.5 °C/min, no condensation permitted

Shock and vibration resistance

Sinusoidal vibrations, in accordance with IEC 60068-2-6
- 5 to 13.2 Hz: 1 mm peak
- 13.2 to 100 Hz: 0.7g peak

Electromagnetic compatibility (EMC)

CE compliance

Electromagnetic compatibility in accordance with all the relevant requirements of the IEC/EN 61326 series and NAMUR Recommendation EMC (NE21). For details, refer to the Declaration of Conformity.

- Maximum measured error < 1% of measuring range
- Strong, pulse-like EMC interference can result in transient (< 1) deviations in the output signal (≥ ±1 %).
- Interference immunity as per IEC/EN 61326 series, industrial requirements
- Interference emission as per IEC/EN 61326 series (CISPR 11) Group 1 Class A

This unit is not intended for use in residential environments and cannot guarantee adequate protection of the radio reception in such environments.

Mechanical construction

Design, dimensions

Dimensions in mm (in)

Terminal housing for mounting on DIN rail

Width (B) x length (L) x height (H) (with terminals): 17.5 mm (0.69 in) x 116 mm (4.57 in) x 107.5 mm (4.23 in)
Weight
Device with terminals (values rounded up):
Approx. 135 g (4.76 oz)

Color
Light gray

Materials
All the materials used are RoHS-compliant.
Housing: polycarbonate (PC); flammability rating according to UL94: V-0

Display and operating elements

![Display and operating elements, left: power supply top; right: power supply bottom (option)](image)

1. Plug-in screw or push-in terminal
2. Green LED “On”, power supply
3. Connection sockets for HART communication (channel 1)
4. DIN rail clip for DIN rail mounting

Local operation

Hardware settings / configuration
No manual hardware settings are required at the device for commissioning.
Attention must be paid to the different terminal assignment when connecting 2/4-wire transmitters. At the output side, the connected system is detected and automatic switching takes place between the active and passive mode.

Ordering information
Detailed ordering information is available from the nearest sales organization www.addresses.endress.com or in the Product Configurator under www.endress.com:

1. Select the product using the filters and search field.
2. Open the product page.
The Configuration button opens the Product Configurator.

Product Configurator - the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop
Accessories

Various accessories, which can be ordered with the device or subsequently from Endress+Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

| W@M | Life cycle management for your plant  
W@M offers assistance with a wide range of software applications over the entire process: from planning and procurement to the installation, commissioning and operation of the measuring devices. All the relevant information is available for every measuring device over the entire life cycle, such as the device status, device-specific documentation, spare parts etc.  
The application already contains the data of your Endress+Hauser device. Endress+Hauser also takes care of maintaining and updating the data records.  
W@M is available: 
Via the Internet: www.endress.com/lifecyclemanagement |

Certificates and approvals

For the approvals available, see the Configurator on the specific product page: www.endress.com → (search for device name)

CE mark

The product meets the requirements of the harmonized European standards. As such, it complies with the legal specifications of the EC directives. The manufacturer confirms successful testing of the product by affixing to it the CE-mark.

Functional safety

A SIL version of the device is optionally available. It can be used in safety equipment in accordance with IEC 61508 up to SIL 2 (SC 3).

Please refer to Safety Manual FY01034K for the use of the device in safety instrumented systems according to IEC 61508.

Documentation

The following document types are available in the Downloads section of the Endress+Hauser website (www.endress.com/downloads):

For an overview of the scope of the associated Technical Documentation, refer to the following:
- W@M Device Viewer (www.endress.com/deviceviewer): Enter the serial number from the nameplate  
- Endress+Hauser Operations App: Enter the serial number from the nameplate or scan the matrix code on the nameplate
