1   About this document

1.1   Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2   Symbols

1.2.1   Safety symbols

⚠ DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

⚠ WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

⚠ CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2   Electrical symbols

∼

Alternating current

≂

Direct current and alternating current

⎓

Direct current

⏚

Ground connection

A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

⏚ **Protective earth (PE)**

Ground terminals that must be connected to ground prior to establishing any other connections.

The ground terminals are located on the interior and exterior of the device:
• Interior ground terminal: protective earth is connected to the mains supply.
• Exterior ground terminal: device is connected to the plant grounding system.

1.2.3   Tool symbols

⊕ ✎
Phillips head screwdriver

Flat blade screwdriver

Torx screwdriver

Allen key

Open-ended wrench

1.2.4   Symbols for certain types of information and graphics

☑ **Permitted**
Procedures, processes or actions that are permitted

☑☑ **Preferred**
Procedures, processes or actions that are preferred

☒ **Forbidden**
Procedures, processes or actions that are forbidden

⚠ → **Safety instructions**
Observe the safety instructions contained in the associated Operating Instructions

Temperature resistance of the connection cables
Specifies the minimum value of the temperature resistance of the connection cables

1.3   Documentation

The following documentation types are available in the Downloads area of the Endress
+Hauser website (www.endress.com/downloads):

For an overview of the scope of the associated Technical Documentation, refer to the
following:
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number
  from the nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or
  scan the matrix code on the nameplate

1.3.1   Technical Information (TI)

Planning aid
The document contains all the technical data on the device and provides an overview of
the accessories and other products that can be ordered for the device.

1.3.2   Brief Operating Instructions (KA)

Guide that takes you quickly to the 1st measured value
The Brief Operating Instructions contain all the essential information from incoming
acceptance to initial commissioning.

1.3.3   Operating Instructions (BA)

The Operating Instructions contain all the information that is required in various phases of
the life cycle of the device: from product identification, incoming acceptance and storage,
to mounting, connection, operation and commissioning through to troubleshooting,
maintenance and disposal.

It also contains a detailed explanation of each individual parameter in the operating menu
(except the **Expert** menu). The description is aimed at those who work with the device
over the entire life cycle and perform specific configurations.

1.3.4   Description of Device Parameters (GP)

The Description of Device Parameters provides a detailed explanation of each individual
parameter in the 2nd part of the operating menu: the **Expert** menu. It contains all the
device parameters and allows direct access to the parameters by entering a specific code.
The description is aimed at those who work with the device over the entire life cycle and
perform specific configurations.

1.3.5   Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the
device. They are an integral part of the Operating Instructions.

The nameplate indicates the Safety Instructions (XA) that are relevant to the device.

1.3.6   Installation instructions (EA)

Installation Instruction are used to replace a faulty unit with a functioning unit of the same
type.

1.4   Registered trademarks

Modbus®
Registered trademark of SCHNEIDER AUTOMATION, INC.

2 Basic safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:
- ▸ Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ▸ Are authorized by the plant owner/operator.
- ▸ Are familiar with federal/national regulations.
- ▸ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▸ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:
- ▸ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- ▸ Follow the instructions in this manual.

2.2 Intended use

Application and measured materials

The device described in these Operating Instructions is a monitoring unit for use with the Endress+Hauser Micropilot M and Micropilot S-series radars and other HART compatible devices. Mounted at the tank side, it provides indication of measured data, allows configuration and supplies intrinsically safe (i.s.) or explosion proof (XP) power to the connected sensors on the tank. Various industry standard digital gauging communication protocols support integration into open architecture tank gauging and inventory systems.

Measuring devices for use in hazardous areas, in hygienic applications or in applications where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:
- ▸ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- ▸ Check the nameplate to verify if the device ordered can be put to its intended use in the approval-related area (e.g. explosion protection, pressure vessel safety).
- ▸ If the measuring device is not operated at atmospheric temperature, compliance with the relevant basic conditions specified in the associated device documentation is absolutely essential.
- ▸ Protect the measuring device permanently against corrosion from environmental influences.
- ▸ Observe the limit values in the "Technical Information".

The manufacturer is not liable for damage caused by improper or non-designated use.

2.3 Workplace safety

For work on and with the device:
- ▸ Wear the required personal protective equipment according to federal/national regulations.

2.4   Operational safety

Risk of injury!
▶ Operate the device only if it is in proper technical condition, free from errors and faults.
▶ The operator is responsible for interference-free operation of the device.

Modifications to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers:
▶ If modifications are nevertheless required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability:
▶ Carry out repairs on the device only if they are expressly permitted.
▶ Observe federal/national regulations pertaining to the repair of an electrical device.
▶ Use only original spare parts and accessories from the manufacturer.

Hazardous area

To eliminate danger to persons or the facility when the device is used in the hazardous area (e.g. explosion protection):
▶ Check the nameplate to verify if the device ordered can be put to its intended use in the hazardous area.
▶ Observe the specifications in the separate supplementary documentation that is an integral part of these instructions.

2.5   Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. It meets general safety standards and legal requirements.

NOTICE

Loss of degree of protection by opening of the device in humid environments
▶ If the device is opened in a humid environment, the degree of protection indicated on the nameplate is no longer valid. This may also impair the safe operation of the device.

2.5.1   CE mark
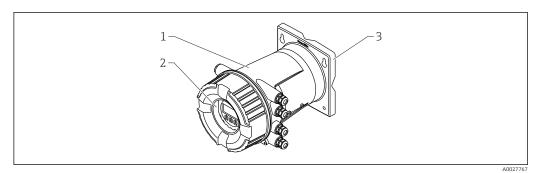

The measuring system meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

3 Product description

3.1 Product design

A0027767

⊡ *1   Design of Tankside Monitor NRF81*

1   Housing
2   Display and operating module (can be operated without opening the cover)
3   Mounting plate for wall or pipe mounting

4   Incoming acceptance and product identification

4.1   Incoming acceptance

Upon receipt of the goods check the following:
• Are the order codes on the delivery note and the product sticker identical?
• Are the goods undamaged?
• Do the nameplate data match the ordering information on the delivery note?
• If required (see nameplate): Are the Safety Instructions (XA) enclosed?
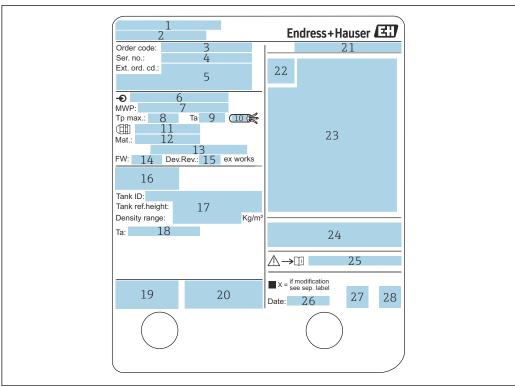

> If one of these conditions is not satisfied, contact your Endress+Hauser Sales Center.

4.2   Product identification

The following options are available for identification of the measuring device:
• Nameplate specifications
• Extended order code with breakdown of the device features on the delivery note
• *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
• *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

> For an overview of the scope of the associated Technical Documentation, refer to the following:
> • *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
> • *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

4.2.1   Nameplate

🖾 2   Nameplate

1   Manufacturer address
2   Device name
3   Order code
4   Serial number
5   Extended order code
6   Supply voltage
7   Maximum process pressure
8   Maximum process temperature
9   Permitted ambient temperature (T_a)
10   Temperature resistance of cable
11   Thread for cable entry
12   Material in contact with process
13   Not used
14   Firmware version
15   Device revision
16   Metrology certification numbers
17   Customized parametrization data
18   Ambient temperature range
19   CE mark / C-tick mark
20   Additional information on the device version
21   Ingress protection
22   Certificate symbol
23   Data concerning the Ex approval
24   General certificate of approval
25   Associated Safety Instructions (XA)
26   Manufacturing date
27   RoHS mark
28   QR code for the Endress+Hauser Operations App

4.2.2   Manufacturer address

Endress+Hauser SE+Co. KG
Hauptstraße 1
79689 Maulburg, Germany
Place of manufacture: See nameplate.

4.3 Storage and transport

4.3.1 Storage conditions

- Storage temperature: −50 to +80 °C (−58 to +176 °F)
- Store the device in its original packaging.

4.3.2 Transport

⚠ CAUTION

Risk of injury
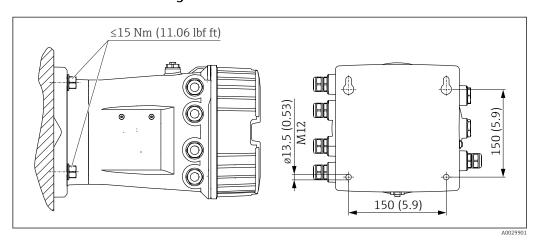

▶ Transport the measuring device to the measuring point in its original packaging.
▶ Take into account the mass center of the device in order to avoid unintended tilting.
▶ Comply with the safety instructions, transport conditions for devices over 18 kg (39.6 lb) (IEC 61010).

5   Installation

5.1   Installation conditions

5.1.1   Wall mounting
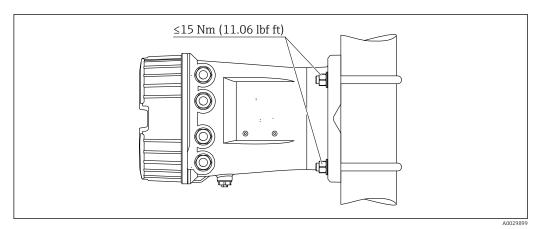

🖼 *3   Wall mounting of the Tankside Monitor*

5.1.2   Pipe mounting

Ordering feature 620 "Accessory enclosed"
- PV
  Mounting kit, pipe, DN32-50 (1-1/4" - 2")
- PW
  Mounting kit, pipe, DN80 (3")
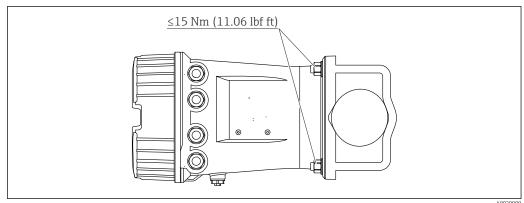

🖼 *4   Mounting of the Tankside Monitor at a vertical pipe*

≤15 Nm (11.06 lbf ft)

A0029900

🖾 *5   Mounting of the Tankside Monitor at a horizontal pipe*
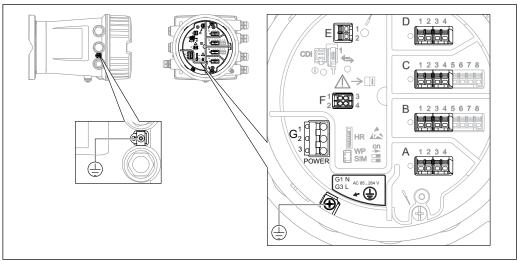

5.2   Post-installation check

○	Is the device undamaged (visual inspection)?
○	Does the device conform to the measuring point specifications? For example: • Process temperature • Process pressure (refer to the chapter on "Material load curves" of the "Technical Information" document) • Ambient temperature range • Measuring range
○	Are the measuring point identification and labeling correct (visual inspection)?
○	Is the device adequately protected from precipitation and direct sunlight?

6 Electrical connection

6.1 Terminal assignment

6 *Terminal compartment (typical example) and ground terminals*

A0027362

Terminal area A/B/C/D (slots for I/O modules)
Module: Up to four I/O modules, depending on the order code
- Modules with four terminals can be in any of these slots.
- Modules with eight terminals can be in slot B or C.

The exact assignment of the modules to the slots is dependent on the device version → 🖺 18.

Terminal area E
Module: HART Ex i/IS interface
- E1: H+
- E2: H-

Terminal area F
Remote display
- F1: V_{CC} (connect to terminal 81 of the remote display)
- F2: Signal B (connect to terminal 84 of the remote display)
- F3: Signal A (connec t to terminal 83 of the remote display)
- F4: Gnd (connect to terminal 82 of the remote display)

Terminal area G (for High voltage AC power supply and Low voltage AC power supply)
- G1: N
- G2: not connected
- G3: L

Terminal area G (for Low voltage DC power supply)
- G1: L-
- G2: not connected
- G3: L+
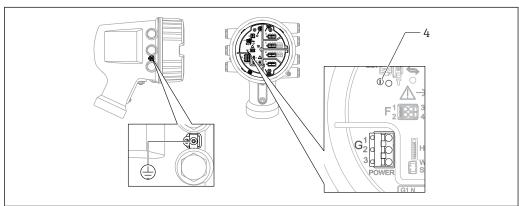

Terminal area: Protective ground
Module: Protective ground connection (M4 screw)

A0018339
⊠ 7   Terminal area: Protective ground

6.1.1   Power supply

A0033413

G1   N
G2   not connected
G3   L
4   Green LED: indicates power supply

The supply voltage is also indicated on the nameplate.

Supply voltage

High voltage AC power supply:
Operational value:
100 to 240 V_{AC} (- 15 % + 10 %) = 85 to 264 V_{AC} , 50/60 Hz

Low voltage AC power supply:
Operational value:
65 V_{AC} (- 20 % + 15 %) = 52 to 75 V_{AC} , 50/60 Hz

Low voltage DC power supply:
Operational value:
24 to 55 V_{DC} (- 20 % + 15 %) = 19 to 64 V_{DC}

Power consumption

Maximum power varies depending on the configuration of the modules. The value shows maximum apparent power, select the applicable cables accordingly. The actual consumed effective power is 12 W.

High voltage AC power supply:
28.8 VA
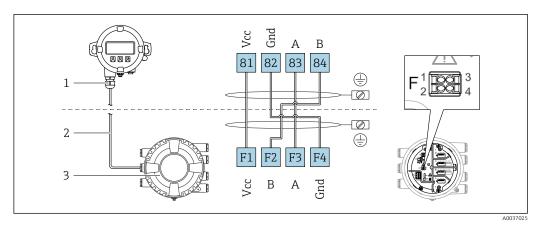

Low voltage AC power supply:
21.6 VA

Low voltage DC power supply:
13.4 W
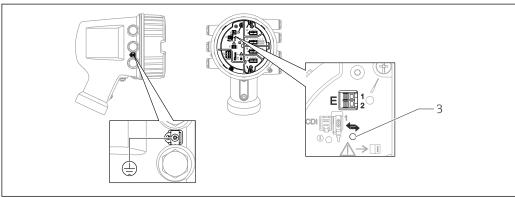

6.1.2   Remote display and operating module DKX001

A0037025

🖻 *8   Connection of the remote display and operating module DKX001 to the Tank Gauging device (NMR8x, NMS8x or NRF8x)*

1   Remote display and operating module
2   Connecting cable
3   Tank Gauging device (NMR8x, NMS8x or NRF8x)

ℹ️   The remote display and operating module DKX001 is available as an accessory. For details refer to SD01763D.

ℹ️   • The measured value is indicated on the DKX001 and on the local display and operating module simultaneously.
  • The operating menu cannot be accessed on both modules at the same time. If the operating menu is entered in one of these modules, the other module is automatically locked. This locking remains active until the menu is closed in the first module (back to measured value display).

6.1.3   HART Ex i/IS interface

A0033414

E1   H+
E2   H-
3   Orange LED: indicates data communication
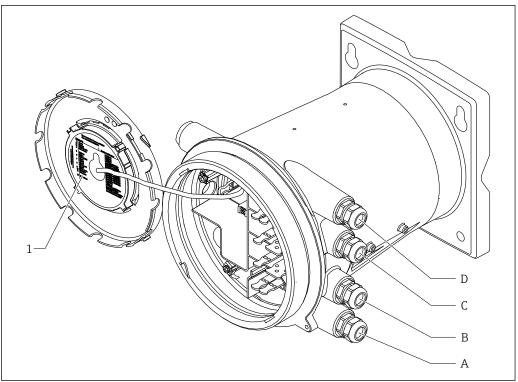

ℹ️   This interface always operates as the main HART master for connected HART slave transmitters. The Analog I/O modules, on the other hand, can be configured as a HART master or slave → 🖺 30 → 🖺 32.

6.1.4   Slots for I/O modules

The terminal compartment contains four slots (A, B, C and D) for I/O modules. Depending on the device version (ordering features 040, 050 and 060) these slots contain different I/O modules. The table below shows which module is located in which slot for a specific device version.

ℹ️ The slot assignment for the device is also indicated on a label attached to the back cover of the display module.
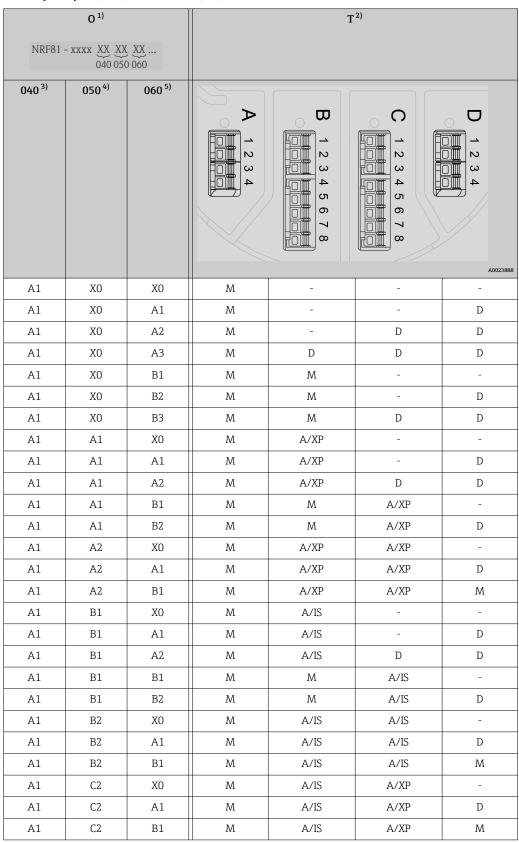

1   Label showing (among other things) the modules in the slots A to D.
A   Cable entry for slot A
B   Cable entry for slot B
C   Cable entry for slot C
D   Cable entry for slot D

6.1.5 Terminals of the "Modbus" module, "V1" module or "WM550" module

A0031200

⊕ *9   Designation of the "Modbus", "V1" or "WM550" modules (examples); depending on the device version these modules may also be in slot B or C.*

Depending on the device version, the "Modbus" and/or "V1" or "WM550" module may be in different slots of the terminal compartment. In the operating menu the "Modbus" and "V1" or "WM550" interfaces are designated by the respective slot and the terminals within this slot: **A1-4**, **B1-4**, **C1-4**, **D1-4**.

Terminals of the "Modbus" module
Designation of the module in the operating menu: **Modbus X1-4**; (X = A, B, C or D)
- X1 [1]
  - Terminal name: S
  - Description: Cable shielding connected via a capacitor to EARTH
- X2 [1]
  - Terminal name: 0V
  - Description: Common reference
- X3 [1]
  - Terminal name: B-
  - Description: Non-inverting signal line
- X4 [1]
  - Terminal name: A+
  - Description: Inverting signal line

---
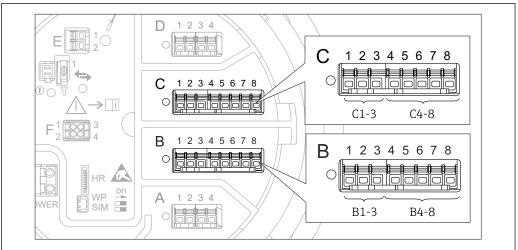

1)   Here, "X" stands for one of the slots "A", "B", "C", or "D".

Terminals of the "V1" and "WM550" module

Designation of the module in the operating menu: **V1 X1-4** or **WM550 X1-4**; (X = A, B, C or D)

- X1 [2]
  - Terminal name: S
  - Description: Cable shielding connected via a capacitor to EARTH
- X2 [1]
  - Terminal name: -
  - Description: not connected
- X3 [1]
  - Terminal name: B-
  - Description: Protocol loop signal -
- X4 [1]
  - Terminal name: A+
  - Description: Protocol loop signal +

6.1.6   Terminals of the "Analog I/O" module (Ex d /XP or Ex i/IS)

A0031168

Terminal: B1-3

Function: Analog input or output (configurable)
- Passive usage: → 🗎 30
- Active usage: → 🗎 32
- Designation in the operating menu:
  Analog I/O B1-3 (→ 🗎 136)

Terminal: C1-3

Function: Analog input or output (configurable)
- Passive usage: → 🗎 30
- Active usage: → 🗎 32
- Designation in the operating menu:
  Analog I/O C1-3 (→ 🗎 136)

Terminal: B4-8

Function: Analog input
- RTD: → 🗎 33
- FMR5xx: → 🗎 34
- Designation in the operating menu:
  Analog IP B4-8 (→ 🗎 130)

---

2)   Here, "X" stands for one of the slots "A", "B", "C", or "D".

Terminal: C4-8
Function: Analog input
- RTD: → 🖹 33
- FMR5xx: → 🖹 34
- Designation in the operating menu:
  Analog IP C4-8 (→ 🖹 130)
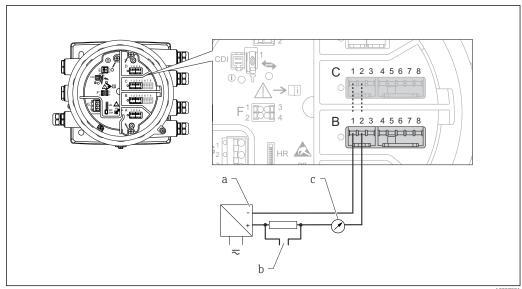

6.1.7 Connection of the "Analog I/O" module for passive usage

ℹ️ • In the passive usage the supply voltage for the communication line must be supplied by an external source.
• The wiring must be in accordance with the intended operating mode of the Analog I/O module; see the drawings below.
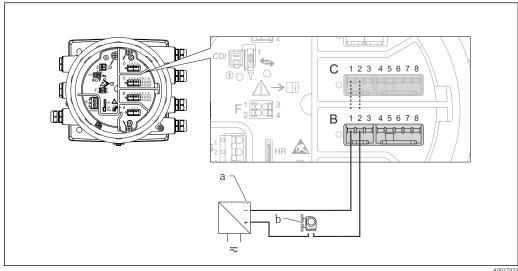

"Operating mode" = "4..20mA output" or "HART slave +4..20mA output"

🖼 *10   Passive usage of the Analog I/O module in the output mode*

a   Power supply
b   HART signal output
c   Analog signal evaluation

"Operating mode" = "4..20mA input" or "HART master+4..20mA input"

🖼 *11   Passive usage of the Analog I/O module in the input mode*

a   Power supply
b   External device with 4...20mA and/or HART signal output
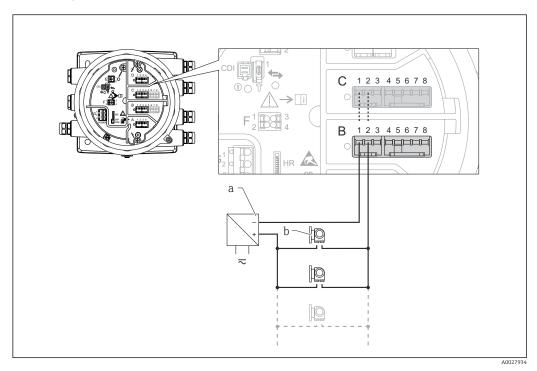

"Operating mode" = "HART master"

A0027934

⊞ *12   Passive usage of the Analog I/O module in the HART master mode*
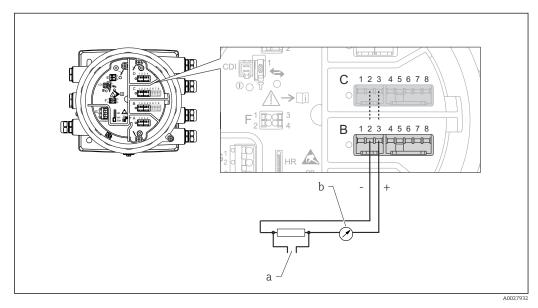

a   Power supply
b   Up to 6 external devices with HART signal output

### 6.1.8   Connection of the "Analog I/O" module for active usage

ℹ️ • In the active usage the supply voltage for the communication line is supplied by the device itself. There is no need of an external power supply.
• The wiring must be in accordance with the intended operating mode of the Analog I/O module; see the drawings below.

ℹ️ • Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
• Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
• Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

"Operating mode" = "4..20mA output" or "HART slave +4..20mA output"

A0027932

🔲 *13   Active usage of the Analog I/O module in the output mode*

a   HART signal output
*b   Analog signal evaluation*

"Operating mode" = "4..20mA input" or "HART master+4..20mA input"

A0027935

🔲 *14   Active usage of the Analog I/O module in the input mode*

a   External device with 4...20mA and/or HART signal output
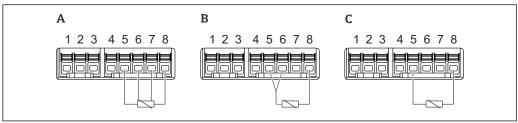

"Operating mode" = "HART master"

15   Active usage of the Analog I/O module in the HART master mode

a   Up to 6 external devices with HART signal output

ℹ️ The maximum current consumption for the connected HART devices is 24 mA (i.e. 4 mA per device if 6 devices are connected).
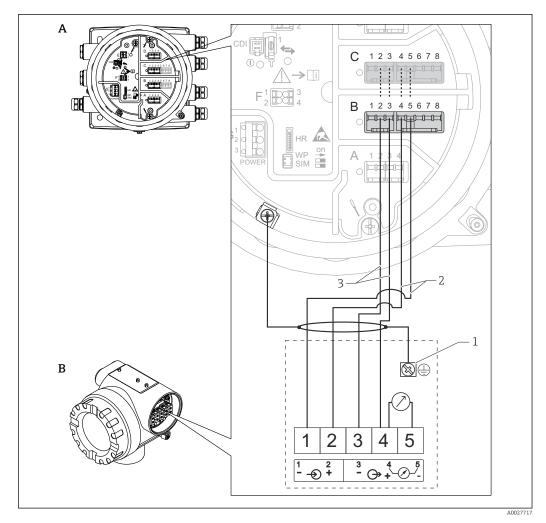

6.1.9   Connection of a RTD

A   4-wire RTD connection
B   3-wire RTD connection
C   2-wire RTD connection
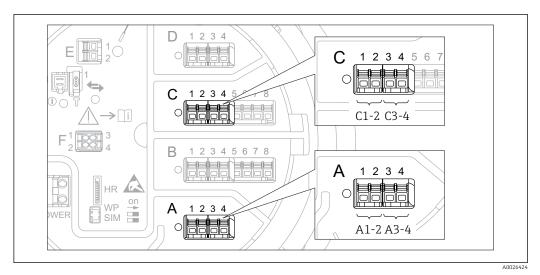

6.1.10   Connection of a Micropilot S FMR5xx

A0027717

⊡ 16   *Connection of a Micropilot S FMR5xx to the Analog input module of a Tankside Monitor NRF81*

A   Tankside Monitor NRF81
B   Micropilot S FMR5xx
1   Grounding
2   Power supply (from NRF81 to FMR5xx)
3   4-20mA/HART signal (from FMR5xx to NRF81)

If connected in this way, the Micropilot S FMR5xx gets its supply voltage from the Tankside Monitor NRF81.

6.1.11   Terminals of the "Digital I/O" module

☑ 17   Designation of the digital inputs or outputs (examples)

- Each Digital IO Module provides two digital inputs or outputs.
- In the operating menu each input or output is designated by the respective slot and two terminals within this slot. **A1-2**, for example, denotes terminals 1 and 2 of slot **A**. The same is valid for slots **B**, **C** and **D** if they contain a Digital IO module.
- For each of these pairs of terminals, one of the following operating modes can be selected in the operating menu:
  - Disable
  - Passive Output
  - Passive Input
  - Active Input

6.2   Connecting requirements

6.2.1   Cable specification

Terminals

Wire cross section 0.2 to 2.5 mm² (24 to 13 AWG)
Use for terminals with function: Signal and power supply
- Spring terminals (NRF81-xx1...)
- Screw terminals (NRF81-xx2...)

Wire cross section max. 2.5 mm² (13 AWG)
Use for terminals with function: Ground terminal in the terminal compartment

Wire cross section max. 4 mm² (11 AWG)
Use for terminals with function: Ground terminal at the housing

Power supply line

Standard device cable is sufficient for the power line.

HART communication line

- Standard device cable is sufficient if only the analog signal is used.
- Shielded cable is recommended if using the HART protocol. Observe the grounding concept of the plant.

Modbus communication line

- Observe the cable conditions from the TIA-485-A, Telecommunications Industry Association.
- Additional conditions: Use shielded cable.

V1 communication line

- 2-wire twisted pair, screened or unscreened cable
- Resistance in one cable: ≤ 120 Ω
- Capacitance between lines: ≤ 0.3 µF

WM550 communication line
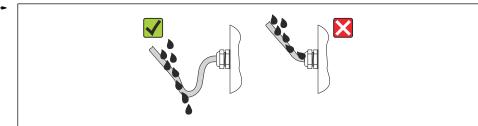

- 2-wire twisted pair, unscreened cable
- Cross section minimum 0.5 mm² (20 AWG)
- Maximum total cable resistance: ≤ 250 Ω
- Cable with low capacitance

6.3 Ensuring the degree of protection

To guarantee the specified degree of protection, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly. Dry, clean or replace the seals if necessary.

2. Tighten all housing screws and screw covers.

3. Firmly tighten the cable glands.

4. To ensure that moisture does not enter the cable entry, route the cable so that it loops down before the cable entry ("water trap").

A0013960

5. Insert blind plugs appropriate for the safety rating of the device (e.g. Ex d/XP).

6.4 Post-connection check

❍	Are cables or the device undamaged (visual inspection)?
❍	Do the cables comply with the requirements?
❍	Do the cables have adequate strain relief?
❍	Are all cable glands installed, firmly tightened and correctly sealed?
❍	Does the supply voltage match the specifications on the transmitter nameplate?
❍	Is the terminal assignment correct → 📖 15?
❍	If required: Is the protective earth connected correctly ?
❍	If supply voltage is present: Is the device ready for operation and do values appear on the display module?
❍	Are all housing covers installed and firmly tightened?
❍	Is the securing clamp tightened correctly?

7   Operability

7.1   Overview of the operation options

The device is operated via an operating menu → 🖺 39. This menu can be accessed by the following interfaces:

- The display and operating module at the device or the remote display and operating module DKX001 (→ 🖺 40).
- FieldCare connected through the service interface in the terminal compartment of the device (→ 🖺 51).
- FieldCare connected through Tankvision Tank Scanner NXA820 (remote operation; → 🖺 51).
- FieldCare connected through Commubox FXA195 (→ 🖺 100) to a HART interface of the device.

7.2   Structure and function of the operating menu

Menu	Submenu / parameter	Meaning
Operation	Level	Shows the measured and calculated level values.
	Temperature	Shows the measured and calculated temperature values.
	Density	Shows the measured and calculated density values.
	Pressure	Shows the measured and calculated pressure values.
	GP values	Shows the general purpose values.
Setup	Parameters 1 to N	Standard commissioning parameters
	Advanced setup	Contains further parameters and submenus: • to adapt the device to special measuring conditions. • to process the measured value. • to configure the signal output.
Diagnostics	Diagnostic parameters	Indicates: • The latest diagnostic messages and their timestamps. • The operating time (overall time and time since last restart). • The time according to the real-time clock.
	Diagnostic list	Contains up to 5 currently active error messages.
	Device information	Contains information needed to identify the device.
	Simulation	Used to simulate measured values or output values.
Expert [1] Contains all parameters of the device (including those which are already contained in one of the other menus). This menu is organized according to the function blocks of the device. The parameter of the **Expert** menu are described in: GP01083G (NRF81)	System	Contains all general device parameters which do not affect the measurement or the communication interface.
	Input/output	Contains submenus to configure the analog and discrete I/O modules and connected HART devices.
	Communication	Contains all parameters needed to configure the digital communication interface.
	Application	Contains submenus to configure • the tank gauging application • the tank calculations • the alarms.
	Tank values	Shows measured and calculated tank values
	Diagnostics	Contains all parameters needed to detect and analyze operational errors.

1) On entering the "Expert" menu, an access code is always requested. If a customer specific access code has not been defined, "0000" has to be entered.

7.3 Access to the operating menu via the local or remote display and operating module

ℹ️ • Operating via the remote display and operating module DKX001 (→ 🖺 17) or the local display and operating module at the device are equivalent.
- The measured value is indicated on the DKX001 and on the local display and operating module simultaneously.
- The operating menu cannot be accessed on both modules at the same time. If the operating menu is entered in one of these modules, the other module is automatically locked. This locking remains active until the menu is closed in the first module (back to measured value display).

7.3.1 Display and operating elements

The device has an illuminated **liquid crystal display (LCD)** that shows measured and calculated values as well as the device status in the standard view. Other views are used to navigate through the operating menu and to set parameter values.

The device is operated by **three optical keys**, namely "-", "+" and "E". They are actuated when the appropriate field on the protective glass of the front is **lightly** touched with the finger ("touch control").

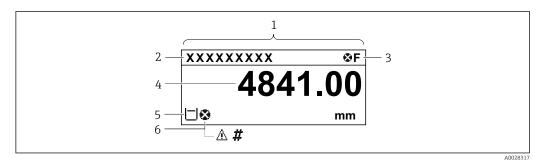

A0028345

🖺 *18   Display and operating elements*

1   Liquid crystal display (LCD)
2   Optical keys; can be operated through the cover glass. If used without the cover glass, lightly place your finger in front of the optical sensor for activation. Do not press hard.

7.3.2 Standard view (measured value display)

☒ 19   Typical appearance of the standard view (measured value display)

1   Display module
2   Device tag
3   Status area
4   Display area for measured values
5   Display area for measured value and status symbols
6   Measured value status symbol

Status symbols

Symbol	Meaning
F _{A0013956}	**"Failure"** A device error is present. The measured value is no longer valid.
C _{A0013959}	**"Function check"** The device is in service mode (e.g. during a simulation).
S _{A0013958}	**"Out of specification"** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)
M _{A0013957}	**"Maintenance required"** Maintenance is required. The measured value is still valid.

Measured value status symbols

| Symbol	Meaning
 _{A0012102}	**Status "Alarm"** The measurment is interrupted. The output assumes the defined alarm value. A diagnostic message is generated.
 _{A0012103}	**Status "Warning"** The device continues measuring. A diagnostic message is generated.
# _{A0031169}	**Calibration to regulatory standards disturbed** Is displayed in the following situations: • The write protection switch is OFF. → 🖹 49 • The write protection switch is ON but the level value can currently not be guaranteed.

Locking state symbols
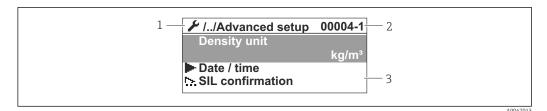

Symbol	Meaning
 _{A0011978}	**Display parameter** Marks display-only parameters which cannot be edited.
 _{A0011979}	**Device locked** • In front of a parameter name: The device is locked via software and/or hardware. • In the header of the measured value screen: The device is locked via hardware.

Meaning of the keys in the standard view

Key	Meaning

A0028326	**Enter key**
	
	• Pressing the key briefly opens the operating menu.
	• Pressing the key for 2 s opens the context menu:
	  ▪ **Level** (visible if the keylock is inactive):
	     Shows the measured levels.
	  ▪ **Keylock on** (visible if the keylock is inactive):
	     Activates the keylock.
	  ▪ **Keylock off** (visible if the keylock is active):
	     Deactivates the keylock.

7.3.3   Navigation view

■ 20   Navigation view

1   Current submenu or wizard
2   Quick access code
3   Display area for navigation

Navigation symbols

Symbol	Meaning
 A0011975	**Operation** Is displayed: • in the main menu next to the selection **Operation** • in the header, if you are in the **Operation** menu.
 A0011974	**Setup** Is displayed: • in the main menu next to the selection **Setup** • in the header, if you are in the **Setup** menu
 A0011976	**Expert** Is displayed: • in the main menu next to the selection **Expert** • in the header, if you are in the **Expert** menu
 A0011977	**Diagnostics** Is displayed: • in the main menu next to the selection **Diagnostics** • in the header, if you are in the **Diagnostics** menu
 A0013967	**Submenu**
 A0013968	**Wizard**
 A0013963	**Parameter locked** When displayed in front of a parameter name, indicates that the parameter is locked.

Meaning of the keys in the navigation view

Key	Meaning
A0028324	**Minus key** Moves the selection bar upwards in a picklist.
A0028325	**Plus key** Moves the selection bar downwards in a picklist.
A0028326	**Enter key** • Pressing the key briefly opens the selected menu, submenu or parameter. • For parameters: Pressing the key for 2 s opens the help text for the function of the parameter (if present).
A0028327	**Escape key combination (press keys simultaneously)** • Pressing the keys briefly • Exits the current menu level and takes you to the next higher level. • If help text is open, closes the help text of the parameter. • Pressing the keys for 2 s returns you to the measured value display ("standard view").

7.3.4   Wizard view

A0047014
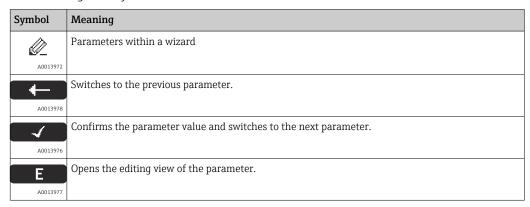

🖼 *21   Wizard view on the display module*
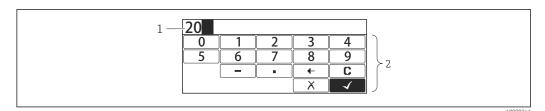

1   Current wizard
2   Display area for navigation

Wizard navigation symbols

Symbol	Meaning
A0013972	Parameters within a wizard
A0013978	Switches to the previous parameter.
A0013976	Confirms the parameter value and switches to the next parameter.
A0013977	Opens the editing view of the parameter.

🛈   In the wizard view the meaning of the keys is indicated by the navigation symbol directly above the respective key (softkey functionality).

7.3.5 Numeric editor

22   Numeric editor on the display module

1   Display area of the entered value
2   Input mask
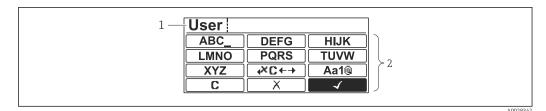

Symbol	Meaning
0 ... **9** A0013998	Selection of numbers from 0 to 9.
. A0016619	Inserts decimal separator at the input position.
− A0016620	Inserts minus sign at the input position.
✓ A0013985	Confirms selection.
← A0016621	Moves the input position one position to the left.
✗ A0013986	Exits the input without applying the changes.
C A0014040	Clears all entered characters.

Meaning of the keys in the numeric editor

Key	Meaning
A0028324	**Minus key** In the input mask, moves the selection bar to the left (backwards).
A0028325	**Plus key** In the input mask, moves the selection bar to the right (forwards).
A0028326	**Enter key** • Pressing the key briefly adds the selected number to the current decimal place or carries out the selected action. • Pressing the key for 2 s confirms the edited parameter value.
A0028327	**Escape key combination (press keys simultaneously)** Closes the text or numeric editor without applying changes.

7.3.6   Text editor

🖼 23   *Text editor on the display module*

1   Display area of the entered text
2   Input mask

Text editor symbols

Symbol	Meaning
ABC_ ··· **XYZ** A0013997	Selection of letters from A to Z
Aa1@ A0013981	Toggle • Between upper-case and lower-case letters • For entering numbers • For entering special characters
✓ A0013985	Confirms selection.
⎗C↔ A0013987	Switches to the selection of the correction tools.
✗ A0013986	Exits the input without applying the changes.
C A0014040	Clears all entered characters.

Correction symbols under ⎗C↔

C A0013989	Clears all entered characters.
⊟→ A0013991	Moves the input position one position to the right.
←⊟ A0013990	Moves the input position one position to the left.
⎗✗ A0013988	Deletes one character immediately to the left of the input position.

Meaning of the keys in the text editor

Key	Meaning
A0028324	**Minus key** In the input mask, moves the selection bar to the left (backwards).
A0028325	**Plus key** In the input mask, moves the selection bar to the right (forwards).

A0028326	**Enter key**
	• Pressing the key briefly
	  • Opens the selected group.
	  • Carries out the selected action.
	• Pressing the key for 2 s confirms the edited parameter value.

A0028327	**Escape key combination (press keys simultaneously)** Closes the text or numeric editor without applying changes.

7.3.7   Keypad lock

Automatic keypad lock

Operation via the local display is automatically locked:
• after a start-up or restart of the device.
• if the device has not been operated via the display for > 1 minute.

When attempting to access the operating menu while the keylock is enabled, the **Keylock on** message appears.

Disabling the keypad lock

1. The keylock is enabled.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. Select **Keylock off** from the context menu.
   ↳ The keylock is disabled.

Manual activation of the keypad lock

After commissioning of the device the keypad lock can be activated manually.

1. The device is in the measured value display.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. Select **Keylock on** from the context menu.
   ↳ The keylock is enabled.

7.3.8   Access code and user roles

Meaning of the access code

An access code can be defined in order to distinguish between the following user roles:

User role	Definition
Maintenance	• Knows the access code. • Has write access to all parameters (except service parameters).
Operator	• Doesn't know the access code. • Has write access to only a few parameters.

• The description of parameters states which role is needed at least for read and write access to each parameter.
• The current user role is indicated by the **Access status display** parameter.
• If the access code is **"0000"**, every user is in the **Maintenance** role. This is the default setting on delivery of the device.

Defining an access code

1. Navigate to: Setup → Advanced setup → Administration → Define access code → Define access code

2. Enter the intended access code (max. 4 digits).

3. Repeat the same code in the **Confirm access code** parameter.
   ↳ The user is in the **Operator** role. The 🔒-symbol appears in front of all write-protected parameters.

Switching to the "Maintenance" role

If the 🔒-symbol appears on the local display in front of a parameter, the parameter is write-protected because the user is in the **Operator** role. To switch to the **Maintenance** role, proceed as follows:

1. Press E.
   ↳ The input prompt for the access code appears.

2. Enter the access code.
   ↳ The user is in the **Maintenance** role. The 🔒-symbol in front of the parameters disappears; all previously write-protected parameters are now re-enabled.
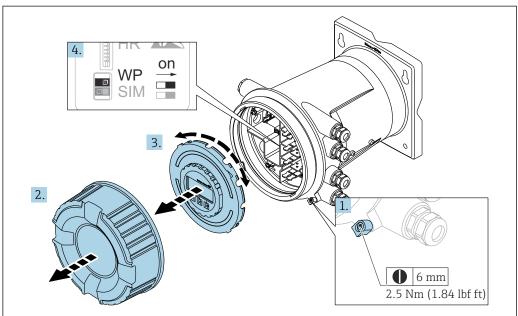

Switching back to the "Operator" role automatically

The user automatically switches back to the **Operator** role:
• if no key is pressed for 10 minutes in the navigation and editing mode.
• 60 s after going back from the navigation and editing mode to the standard view (measured value display).

7.3.9 Write protection switch

The operating menu can be locked by a hardware switch in the connection compartment. In this locking state W&M related parameters are read only.

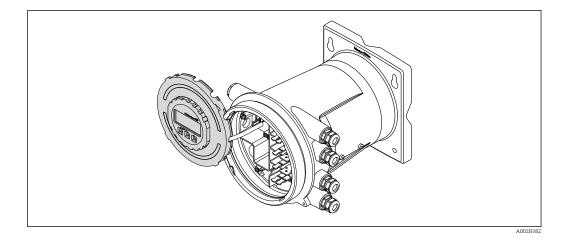

A0028364

The display module can be attached to the edge of the electronics compartment. This makes it easier to access the lock switch.

1. Loosen the securing clamp.

2. Unscrew the housing cover.

3. Pull out the display module with a gentle rotation movement.

4. Using a flat blade screwdriver or a similar tool, set the write protection switch **(WP)** into the desired position. **ON:** operating menu is locked; **OFF:** operating menu is unlocked.

5. Put the display module onto the connection compartment, screw the cover closed and tighten the securing clamp.

To avoid acces to the write protection switch, the cover of the connection compartment can be secured by a lead seal.
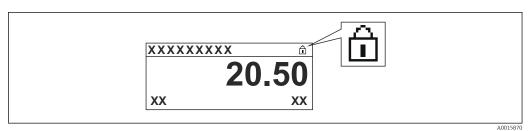

A0033364

For LNE approval, bolts at built in flange additionally must be secured by a lead seal.

A0028382
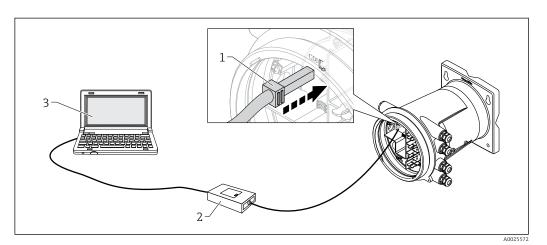

Indication of the locking state

A0015870

⊠ 24   Write protection symbol in the header of the display

Write protection via locking switch is indicated as follows:
• **Locking status (→ 🖺 122)** = **Hardware locked**
• 🔒 appears in the header of the display.

7.4 Access to the operating menu via the service interface and FieldCare

A0025572

🖾 *25   Operation via service interface*

1   Service interface (CDI = Endress+Hauser Common Data Interface)
2   Commubox FXA291
3   Computer with "FieldCare" operating tool and "CDI Communication FXA291" COM DTM
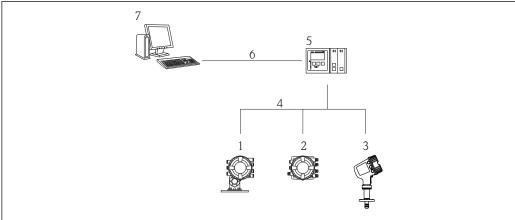

The "Save/Restore" function
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → **Advanced setup** → **Administration** → **Device reset** = **Restart device**.
This ensures correct operation of the device after the restore.

7.5 Access to the operating menu via Tankvision Tank Scanner NXA820 and FieldCare

7.5.1 Wiring scheme

A0025621

🖾 *26   Connection of Tank Gauging devices to FieldCare via the Tankvision Tank Scanner NXA820*

1   Proservo NMS8x
2   Tankside Monitor NRF81
3   Micropilot NMR8x
4   Field protocol (e.g. Modbus, V1)
5   Tankvision Tank Scanner NXA820
6   Ethernet
7   Computer with FieldCare installed

### 7.5.2 Establishing the connection between FieldCare and the device

1. Make sure the **HART CommDTM NXA** is installed and update the DTM catalogue if required.

2. Create a new project in FieldCare.

3.
   A0028515

   Add a new device: **NXA HART Communication**

4.

   A0028516

   Open the configuration of the DTM and enter the required data (IP address of the NXA820; "Password" = "hart"; "Tank identification" only with NXA V1.05 or higher)

5.

A0028517

Select **Create network** from the context menu.
↳   The device is detected and the DTM is assigned.

6.

A0032934

↳   The device can be configured.

The **"Save/Restore" function**
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → Advanced setup → Administration → Device reset = Restart device.
This ensures correct operation of the device after the restore.

8 System integration

8.1 Overview of the Device Description files (DTM)

To integrate the device via HART into FieldCare, a Device Description file (DTM) according to the following specification is required:

Manufacturer ID	0x11
Device type (NRF8x)	0x112F
HART specification	7.0
DD files	For information and files see: www.endress.com

9   Commissioning

9.1   Initial settings

9.1.1   Setting the display language

Setting the display language via the display module

1. While in the standard view (→ 🗏 41), press "E". If required, select **Keylock off** from the context menu and press "E" again.
    ↳ The **Language** parameter appears.
2. Open the **Language** parameter and select the display language.

Setting the display language via an operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Display → Language
2. Select the display language.

ℹ️ This setting only affects the language on the display module. To set the language in the operating tool use the language setting functionality of FieldCare or DeviceCare, respectively.
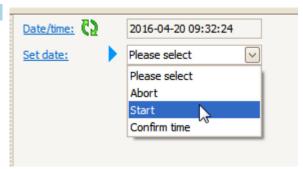

9.1.2   Setting the real-time clock

Setting the real-time clock via the display module

1. Navigate to: Setup → Advanced setup → Date / time → Set date
2. Use the following parameters to set the the real-time clock to the current date and time: **Year**, **Month**, **Day**, **Hour**, **Minutes**.
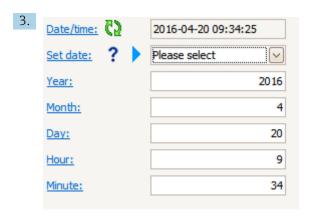

Setting the real-time clock via an operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Date / time
2.

Go to the **Set date** parameter and select the **Start** option.

3.

Use the following parameters to set the date and time: **Year**, **Month**, **Day**, **Hour**, **Minutes**.

4.

Go to the **Set date** parameter and select the **Confirm time** option.
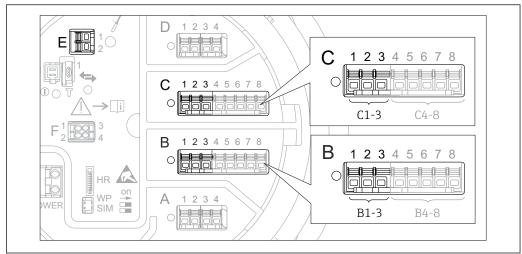

↳ The real-time clock is set to the current date and time.

9.2 Configuring the tank gauging application

Configuration of the inputs:	Description
HART inputs	→ 📄 58
NMT532/539/81 connected via HART	→ 📄 61
4-20mA inputs	→ 📄 63
RTD input	→ 📄 64
Digital inputs	→ 📄 66
Configuration of the data processing in the device:	**Description**

9.2.1   Configuration of the HART inputs

Connecting and addressing HART devices

A0032955

⊡ *27   Possible terminals for HART loops*

B   Analog I/O module in slot B (availability depending on device version → ⊜ 18)
C   Analog I/O module in slot C (availability depending on device version → ⊜ 18)
E   HART Ex is output (available in all device versions)

ⓘ HART devices must be configured and given a unique HART address in the range from 1 to 15 via their own user interface before they are connected to the Tankside Monitor NRF81 [3]. Make sure they are connected as defined by the terminal assignment → ⊜ 28. Devices with an address larger than 15 are not recognized by the Tankside Monitor.

Slot B or C: Setting the operating mode of the Analog I/O module

ⓘ This section is not relevant for the HART Ex is output (Slot E). This output always functions as a HART master for the connected HART slaves.

If HART devices are connected to an Analog I/O module (slot B or C in the terminal compartment), this module must be configured as follows:

1. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog I/O X1-3

2. Go to the **Operating mode** parameter (→ ⊜ 136).

3. If only one HART device is connected to this loop:
    Select the **HART master+4..20mA input** option. In this case the 4-20mA signal can be used in addition to the HART signal. For the configuration of the 4-20mA input: → ⊜ 63.

4. If up to 6 HART devices are connected to this loop:
    Select the **HART master** option.

Configuring the power supply for a connected Micropilot S FMR5xx

ⓘ This section is only relevant if a Micropilot S FMR5xx is connected to the Tankside Monitor.

---

3)   The current software does not support HART devices with adress 0 (zero).

The Tankside Monitor can provide the supply voltage for a connected Micropilot S FMR5xx. To configure this functionality, proceed as follows:

1. Make sure the FMR5xx is connected to the Analog I/O module as defined by the terminal assignment → 🗎 34.

2. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog IP X4-8

3. Go to the **Operating mode** parameter (→ 🗎 130) and select the **Gauge power supply** option.

.

Defining the type of measured value

ℹ️ This setting can be skipped for a connected Prothermo NMT5xx and NMT8x or Micropilot FMR5xx as for these devices the type of measured value is automatically recognized by the Tankside Monitor.

ℹ️ • The measured values can only be used in the system if the unit of the assigned HART variable fits the type of measured value. The HART variable assigned to **Output temperature**, for example, has to be in ℃ or ℉.
• A HART variable with unit "%" can not be used for **Output level**. Instead, the HART variable must be in mm, m, ft or in.

The type of measured value must be specified for each HART variable (PV, SV, TV and QV). To do so, proceed as follows:

1. Navigate to: Setup → Advanced setup → Input/output → HART devices
   ↳ There is a submenu for each connected HART device.

2. For each device go to the corresponding submenu.

3. If the device measures a pressure:
   Go to the **Output pressure** parameter (→ 🗎 126) and specify which of the four HART variables contains the measured pressure. Only a HART variable with a pressure unit may be selected.

4. If the device measures a density:
   Go to the **Output density** parameter (→ 🗎 127) and specify which of the four HART variables contains the measured density. Only a HART variable with a density unit may be selected.

5. If the device measures a temperature:
   Go to the **Output temperature** parameter (→ 🗎 127) and specify which of the four HART variables contains the measured temperature. Only a HART variable with a temperature unit may be selected.

6. If the device measures the vapor temperature:
   Go to the **Output vapor temperature** parameter (→ 🗎 128) and specify which of the four HART variables contains the measured vapor temperature. Only a HART variable with a temperature unit may be selected.

7. If the device measures a level:
   Go to the **Output level** parameter (→ 🗎 128) and specify which of the four HART variables contains the measured level. Only a HART variable with a level unit (not "%") may be selected.

Disconnecting HART devices

When a HART device is disconnected from the device, it must also be logically removed as follows:

1. Navigate to Setup → Advanced setup → Input/output → HART devices → Forget device → Forget device

2. Select the HART device to be removed.

This procedure is also necessary if a defective device is exchanged.

9.2.2 Configuration of a connected Prothermo temperature transmitter

If a Prothermo NMT532, NMT539 or NMT8x temperature transmitter is connected via HART, it can be configured as follows:

1. Navigate to: Expert → Input/output → HART devices → HART Device(s) → NMT device config; here, **HART Device(s)** is the name of the connected Prothermo.

2. Go to the **Configure device?** parameter and select **Yes**.

3.

A0030099

🖾 28   *Prothermo NMT53x: Position of the bottom temperature element*

a   *Distance from bottom temperature element to zero reference (tank bottom or datum plate).*

To configure a **Prothermo NMT53x**: Go to the **Bottom point** parameter and enter the position of the bottom temperature element (see picture above).

↳ The value entered into the **Bottom point** parameter in the Tank Gauging device is handed over to the **Bottom point** parameter in the connected Prothermo NMT53x.

4.

A0047111

⊠ *29   Prothermo NMT8x: Distance between the physical end of the probe and the zero level value*

a   *Distance between the physical end of the probe and the zero level value in the tank (tank bottom or datum plate).*
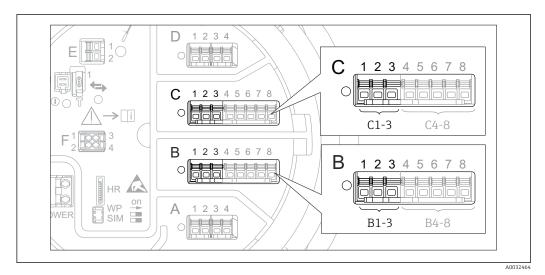

To configure a **Prothermo NMT8x**: Go to the **Bottom point** parameter and enter the distance between the physical end of the probe and the zero level value in the tank (tank bottom or datum plate).

↳ The value entered into the **Bottom point** parameter in the Tank Gauging device is handed over to the **End of probe to zero distance** parameter in the connected Prothermo NMT8x.

ℹ️ To check the temperatures measured by the individual elements, go to the following submenu: Operation → Temperature → NMT element values → Element temperature

There is a **Element temperature X** parameter for each element of the Prothermo.

### 9.2.3   Configuration of the 4-20mA inputs

⊡ *30   Possible locations of the Analog I/O modules, which can be used as a 4-20mA input. The order code of the device determines which of these modules is actually present → 🖹 18.*

For each Analog I/O module to which a 4-20mA device is connected, proceed as follows:

1. Make sure the 4-20mA devices are connected as defined by the terminal assignment → 🖹 28.

2. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog I/O X1-3

3. Go to the **Operating mode** parameter (→ 🖹 136) and select **4..20mA input** or **HART master+4..20mA input**.

4. Go to the **Process variable** parameter (→ 🖹 142) and specify which process variable is transmitted by the connected device.

5. Go to the **Analog input 0% value** parameter (→ 🖹 142) and define which value of the process variable corresponds to an input current of 4 mA (see diagram below).

6. Go to the **Analog input 100% value** parameter (→ 🖹 142) and define which value of the process variable corresponds to an input current of 20 mA (see diagram below).

7. Go to the **Process value** parameter (→ 🖹 143) and check whether the indicated value matches the actual value of the process variable.

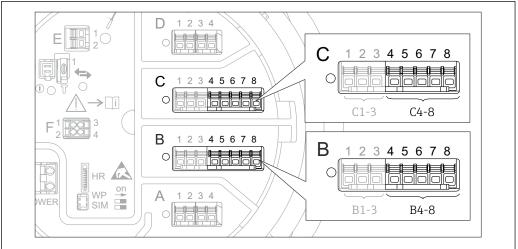

⊡ *31   Scaling of the 4-20mA input to the process variable*

1   Input value in mA
2   Process value

ℹ️ The **Analog I/O** submenu contains additional parameters for a more detailed configuration of the Analog Input. For a description refer to : → 🖹 136
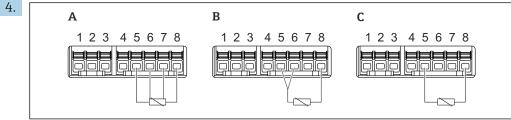

9.2.4 Configuration of a connected RTD

⊠ 32   Possible locations of the Analog I/O modules, to which an RTD can be connected. The order code of the device determines which of these modules is actually present → 🖺 18.

1. Make sure the RTD is connected as defined by the terminal assignment → 🖺 33.

2. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog IP X4-8.

3. Go to the **RTD type** parameter (→ 🖺 130) and specify the type of the connected RTD.

4.

*⊠ 33   RTD connection types*

A   4 wire RTD connection
B   3 wire RTD connection
C   2 wire RTD connection

   Go to the **RTD connection type** parameter (→ 🖺 131) and specify the type of connection of the RTD (2-, 3- or 4-wire).

5. Go to the **Input value** parameter (→ 🖺 133) and check whether the indicated temperature matches the actual temperature.

6. Go to the **Minimum probe temperature** parameter (→ 🖺 133) and specify the minimum approved temperature of the connected RTD.

7. Go to the **Maximum probe temperature** parameter (→ 🖺 134) and specify the maximum approved temperature of the connected RTD.

8.

A0042773

1   Datum plate
2   RTD
3   Probe position (→ 🗎 134)

Go to the **Probe position** parameter and enter the mounting position of the RTD (measured from the datum plate).
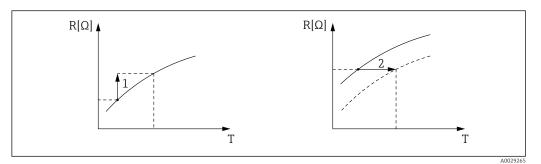

↳   This parameter, in conjunction with the measured level, determines whether the measured temperature refers to the product or to the gas phase.

Offset for resistance and/or temperature

An offset for the resistance or the temperature can be defined in the following submenu: Expert → Input/output → Analog IP X4-8.
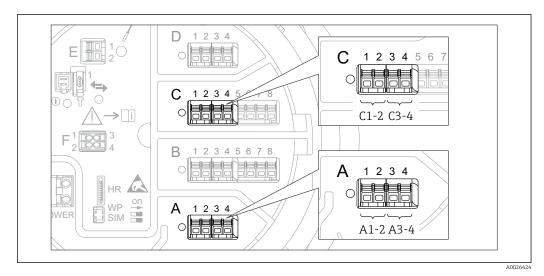

- **Ohms offset** is added to the measured resistance before the calculation of the temperature.
- **Temperature offset after conversion** is added to the measured temperature.

A0029265

1   Ohms offset
2   Temperature offset after conversion

9.2.5   Configuration of the digital inputs

*34   Possible locations of the Digital I/O modules (examples); the order code defines the number and location of digial input modules → 🖺 18.*

There is a **Digital Xx-x** submenu for each digital I/O module of the device. "X" designates the slot in the terminal compartment, "x-x" the terminals within this slot. The most important parameters of this submenu are **Operating mode** and **Contact type**.

The "Operating mode" parameter

Setup → Advanced setup → Input/output → Digital Xx-x → Operating mode

A   "Operating mode" = "Input passive"
B   "Operating mode" = "Input active"

Meaning of the options

- **Input passive**
  The DIO module measures the voltage provided by an external source. Depending on the status of the external switch, this voltage is 0 at the input (switch open) or exceeds a certain limit voltage (switch closed). These two states represent the digital signal.
- **Input active**
  The DIO module provides a voltage and uses it to detect whether the external switch is open or closed.

The "Contact type" parameter

Setup → Advanced setup → Input/output → Digital Xx-x → Contact type

This parameter determines how the state of the external switch is mapped to the internal states of the DIO module:

State of the external switch	Internal state of the DIO module	
	Contact type = Normally open	Contact type = Normally closed
Open	Inactive	Active
Closed	Active	Inactive
Behavior in special situaions:		
During start-up	Unknown	Unknown
Fault in measurement	Error	Error

- The internal state of the Digital Input can be transferred to a Digital Output or can be used to control the measurement.
- The **Digital Xx-x** submenu contains additional parameters for a more detailed configuration of the Digital Input. For a description refer to → 🕮 146.

### 9.2.6   Linking input values to tank variables

Measured values must be linked to tank variables before they can be used in the Tank Gauging application. This is done by defining the source of each tank variable in the following parameters:

Tank variable	Parameter defining the source of this variable
Product level	• Setup → Level source • Setup → Advanced setup → Application → Tank configuration → Level → Level source
Bottom water level	Setup → Advanced setup → Application → Tank configuration → Level → Water level source
Average or spot temperature of the product	• Setup → Liquid temp source • Setup → Advanced setup → Application → Tank configuration → Temperature → Liquid temp source
Temperature of the air surrounding the tank	Setup → Advanced setup → Application → Tank configuration → Temperature → Air temperature source
Temperature of the vapor above the product	Setup → Advanced setup → Tank configuration → Temperature → Vapor temp source
Density of the product	Setup → Advanced setup → Application → Tank configuration → Density → Observed density source
Bottom pressure (P1)	Setup → Advanced setup → Application → Tank configuration → Pressure → P1 (bottom) source
Middle pressure (P2)	Setup → Advanced setup → Application → Tank configuration → Pressure → P2 (middle) source
Top pressure (P3)	Setup → Advanced setup → Application → Tank configuration → Pressure → P3 (top) source

Depending on the application not all these parameters will be relevant in a given situation.

9.2.7   Tank calculation: Direct level measurement

If no tank calculation is configured, level and temperature are measured directly.

A0029273
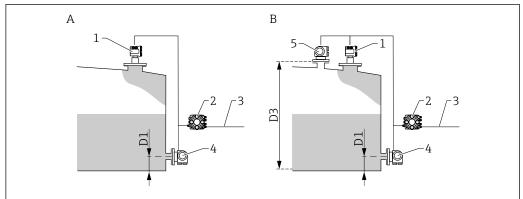

A   Direct level measurement (without temperature)
B   Direct level and temperature measurement
1   Level transmitter (typically FMR540 or FMR51)
2   Tankside Monitor
3   To inventory management system
4   Temperature transmitter

1. Navigate to: "Setup → Level source" and specify from which device the level is obtained.

2. If a temperature transmitter is connected:

    Navigate to: "Setup → Liquid temp source" and specify from which device the temperature is obtained.

9.2.8   Tank calculation: Hybrid tank measurement system (HTMS)

HTMS uses level and pressure measurements to calculate the density of the medium.

ℹ️ In non-atmospheric (i.e. pressurized) tanks it is recommended to use the **HTMS P1+P3** mode. Two pressure sensors are required in this case. In atmospheric (i.e. unpressurized) tanks the **HTMS P1** with only one pressure sensor is sufficient.

A0029275

A   *The "HTMS P1" measurement mode*
B   *The "HTMS P1+P3" measurement mode*
D1   *P1 position*
D3   *P3 position*
*1*   *Level transmitter (e.g. typically FMR540 or FMR51)*
2   *Tankside Monitor*
3   *To inventory management system*
4   *Pressure sensor (bottom)*
5   *Pressure sensor (top)*

1. Navigate to Setup → Advanced setup → Application → Tank configuration → Level

2. Go to **Level source (→ 🖺 120)** and specify from which device the level is obtained.

3. Navigate to Setup → Advanced setup → Application → Tank configuration → Pressure

4. Go to **P1 (bottom) source (→ 🖺 181)** and specify from which device the bottom pressure (P1) is obtained.

5. If a top pressure transmitter (P3) is connected:
   Go to **P3 (top) source (→ 🖺 185)** and specify from which device the top pressure (P3) is obtained.

6. Navigate to: Setup → Advanced setup → Application → Tank calculation → HTMS

7. Go to **HTMS mode (→ 🖺 210)** and specify the HTMS mode.

8. Navigate to Setup → Advanced setup → Application → Tank configuration → Density

9. Go to **Observed density source (→ 🖺 179)** and select **HTMS**.

10. Use the other parameters of the **HTMS** submenu to configure the calculation. For a detailed description: → 🖺 208

9.2.9   Tank calculation: Hydrostatic tank gauging (HTG)

Hydrostatic Tank Gauging (HTG) is a method to calculate the level and the density of the product inside a tank using pressure measurements only. The pressure is measured at different heights of the tank using one, two or three pressure sensors. With these data the density or the level of the product (or both) can be calculated.

Overview of the HTG parameters

🖻 *35   HTG parameters*

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Application → Tank configuration → Pressure → P1 (bottom)
H_{P1} (Position of P1 sensor)	Setup → Advanced setup → Application → Tank configuration → Pressure → P1 position
P2 (Middle pressure)	Setup → Advanced setup → Application → Tank configuration → Pressure → P2 (middle)
H_{P1-P2} (Distance between P1 and P2 sensors)	Setup → Advanced setup → Application → Tank configuration → Pressure → P1-2 distance
P3 (Top pressure)	Setup → Advanced setup → Application → Tank configuration → Pressure → P3 (top)
H_{P3} (Position of P3 sensor)	Setup → Advanced setup → Application → Tank configuration → Pressure → P3 position
ρ_P (Density of the product [1])	• Read-only: Setup → Advanced setup → Application → Tank calculation → HTG → Density value • Writable: Setup → Advanced setup → Application → Tank calculation → HTG → Manual density
ρ_V (Vapor density)	Setup → Advanced setup → Application → Tank configuration → Density → Vapor density
ρ_A (Ambient air temperature)	Setup → Advanced setup → Application → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L_{HTG} (Calculated level)	Setup → Advanced setup → Application → Tank calculation → HTG → Tank level

1)   Depending on the **HTG mode** parameter this is a writable or a read-only parameter.

Selecting the HTG mode

1. Navigate to Setup → Advanced setup → Application → Tank calculation → HTG

2. Go to the **HTG mode** parameter (→ 🖺 205) and select the mode according to the following table.

HTG mode	Measured variables	Required additional parameters	Calculated variables
P1 only	P1	• ρ_P • g • H_{P1}	L_{HTG}
P1 + P3	• P1 • P3	• ρ_P • ρ_V • ρ_A • g • H_{P1} • H_{P3}	L_{HTG} (more precise calculation for pressurized tanks)
P1 + P2	• P1 • P2	• ρ_A • g • H_{P1} • H_{P1-P2}	• ρ_P • L_{HTG}
P1 + P2 + P3	• P1 • P2 • P3	• ρ_V • ρ_A • g • H_{P1} • H_{P1-P2} • H_{P3}	• ρ_P • L_{HTG} (more precise calculation for pressurized tanks)

Assigning the P1 (bottom) pressure sensor

1. Navigate to : Setup → Advanced setup → Application → Tank configuration → Pressure

2. Go to the **P1 (bottom) source** parameter (→ 🖺 181) and select the device from which the bottom pressure is obtained.

3. Go to the **P1 (bottom)** parameter (→ 🖺 116) and check whether the indicated pressure matches the actual pressure at the P1 position. If necessary, the indicated pressure can be corrected by the **P1 offset** parameter.

4. Go to the **P1 position** parameter (→ 🖺 182) and enter the distance from the datum plate to the P1 sensor.

5. Go to the **P1 abs / rel** parameter (→ 🖺 182) and specify whether the P1 sensor measures an absolute or a relative pressure.

Assigning the P2 (middle) pressure sensor

ℹ️ This procedure is only required for the following HTG modes:
• P1 + P2
• P1 + P2 + P3

1. Navigate to Setup → Advanced setup → Application → Tank configuration → Pressure

2. Go to the **P2 (middle) source** parameter (→ 🖺 183) and select the device from which the middle pressure is obtained.

3. Go to the **P2 (middle)** parameter (→ 🖺 116) and check whether the indicated pressure matches the actual pressure at the P2 position. If necessary, the indicated pressure can be corrected by the **P2 offset** parameter (→ 🖺 184).

4. Go to the **P1-2 distance** parameter (→ 🖺 184) and enter the distance between the P1 and P2 sensors.

5. Go to the **P2 abs / rel** parameter (→ 🖺 184) and specify whether the P2 sensor measures an absolute or a relative pressure.

Assigning the P3 (top) sensor

ℹ️ This procedure is only required for the following HTG mode:
- P1 + P3
- P1 + P2 + P3

1. Navigate to Setup → Advanced setup → Application → Tank configuration → Pressure

2. Go to the **P3 (top) source** parameter (→ 📖 185) and select the device from which the top pressure is obtained.

3. Go to the **P3 (top)** parameter (→ 📖 116) and check whether the indicated pressure matches the actual pressure at the P3 position. If necessary, the indicated pressure can be corrected by the **P3 offset** parameter (→ 📖 186).

4. Go to the **P3 position** parameter (→ 📖 186) and enter the distance from the datum plate to the P3 sensor.

5. Go to the **P3 abs / rel** parameter (→ 📖 186) and specify whether the P3 sensor measures an absolute or a relative pressure.

Selecting HTG as the level source

1. Navigate to Setup → Advanced setup → Application → Tank configuration → Level

2. Go to the **Operation mode** parameter and select **HTG**.

Supplementary specifications
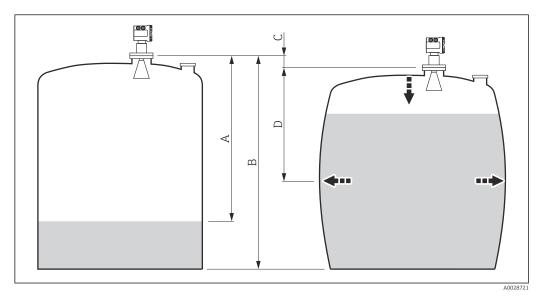

1. If the ambient pressure deviates considerably from 1 bar (14.5 psi):
   Navigate to Setup → Advanced setup → Application → Tank configuration → Pressure

2. Go to the **Ambient pressure** parameter (→ 📖 187) and specify the ambient pressure.

ℹ️ The **HTG** submenu contains additional parameters for a more detailed configuration of the HTG calculation. For details: → 📖 198

9.2.10 Tank calculation: Hydrostatic Tank Deformation (HyTD)

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels divided over the full range of the tank.

A0028721

🖾 *36   Correction of the hydrostatic tank deformation (HyTD)*

A   "Distance" (tank nearly empty)
B   Gauge Reference Height (GRH)
C   HyTD correction value
D   "Distance" (tank filled)

ℹ️ This mode should not be used in conjunction with HTG as with HTG the level is not measured relative to the gauge reference height.

ℹ️ The Correction of the Hydrostatic Tank Deformation is configured in the **HyTD** submenu (→ 🕮 190)

9.2.11   Tank calculation: Thermal tank shell correction (CTSh)

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

This correction is recommended for the following situations:
- if the operating temperature deviates considederably from the temperature during calibration ($\Delta T > 10$ ℃ (18 ℉))
- for extremely high tanks
- for refrigerated, cryogenic or heated applications

As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.

This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

9.2.12 Configuration of the alarms (limit evaluation)

A limit evaluation can be configured for up to 4 tank variables. The limit evaluation issues an alarm if the value exceeds an upper limit or falls below a lower limit, respectively. The limit values can be defined by the user.

🔟 37   Principle of the limit evaluation

A   Alarm mode = On
B   Alarm mode = Latching
1   HH alarm value
2   H alarm value
3   L alarm value
4   LL alarm value
5   HH alarm
6   H alarm
7   L alarm
8   LL alarm
9   "Clear alarm" = "Yes" or power off-on
10   Hysteresis
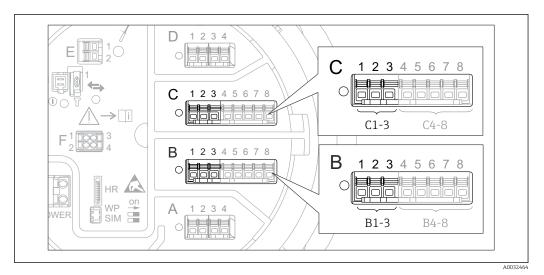

The limit evaluation is configured in the **Alarm 1 to 4** submenus.

Navigation path: Setup → Advanced setup → Alarm → Alarm 1 to 4

🛈 For **Alarm mode** = **Latching** all alarms remain active until the user selects **Clear alarm** = **Yes** or the power is switched off and on.

🛈 Make sure to also configure the parameter **"Hysteresis" parameter** accordingly, depending on tank variable and unit used.
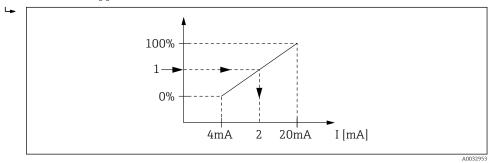

9.2.13 Configuration of the 4-20mA output

🖼 *38   Possible locations of the Analog I/O modules, which can be used as a 4-20mA output. The order code of the device determines which of these modules is actually present → 🖺 18.*

Each Analog I/O module of the device can be configured as a 4...20mA analog output. To do so, proceed as follows:

1. Navigate to: Setup → Advanced setup → Input/output → Analog I/O X1-3.

2. Go to the **Operating mode** parameter and select **4..20mA output** or **HART slave +4..20mA output** [4].

3. Go to the **Analog input source** parameter and select the tank variable which is to be transmitted via the 4...20mA output.

4. Go to the **0 % value** parameter and enter the value of the selected tank variable which will be mapped to 4 mA.

5. Go to the **100 % value** parameter and enter the value of the selected tank variable which will be mapped to 20 mA.

🖼 *39   Scaling of the tank variable to the output current*

1   Tank variable
2   Output current

ℹ️ After startup of the device, as long as the assigned tank variable is not yet available, the output current assumes the defined errror value.

ℹ️ The **Analog I/O** submenu contains more parameters which can be used for a more detailed configuration of the analog output. For a description see → 🖺 136

---

4)   "HART slave +4..20mA output " means that the Analog I/O module serves as a HART slave which cyclically sends up to four HART variables to a HART master. For the configuration of the HART output: → 🖺 77

9.2.14 Configuration of the HART slave + 4-20mA output

If **Operating mode** = **HART slave +4..20mA output** has been selected for an Analog I/O module, it serves as a HART slave which sends up to four HART variables to a HART master.

The 4-20 mA signal can be used in this case, too. For its configuration: → 🖹 76

Standard case: PV = 4-20mA signal
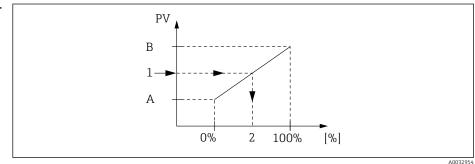

By default, the Primary Variable (PV) is identical to the tank variable transmitted by the 4-20mA output. To define the other HART variables and to configure the HART output in more detail, proceed as follows:

1. Navigate to: Setup → Advanced setup → Communication → HART output → Configuration

2. Go to the **System polling address** parameter and set the HART slave address of the device.

3. Use the following parameters to assign tank variables to the second to fourth HART variable: **Assign SV**, **Assign TV**, **Assign QV**.
   ↳ The four HART variables are transmitted to a connected HART Master.

Special case: PV ≠ 4-20mA signal

In exceptional cases it might be required that the Primary Variable (PV) transmits a different tank variable than the 4-20mA output. This is configured as follows.

1. Navigate to: Setup → Advanced setup → Communication → HART output → Configuration

2. Go to the **PV source** parameter and select **Custom**.
   ↳ The following additional parameters appear in the submenu: **Assign PV**, **0 % value**, **100 % value** and **PV mA selector**.

3. Go to the **Assign PV** parameter and select the tank variable to be transmitted as the Primary Variable (PV).

4. Use the **0 % value** and **100 % value** parameters to define a range for the PV. The **Percent of range** parameter indicates the percentage for the actual value of the PV. It is included in the cyclical output to the HART master.
   ↳

🖻 40   *Scaling of the tank variable to the percentage*
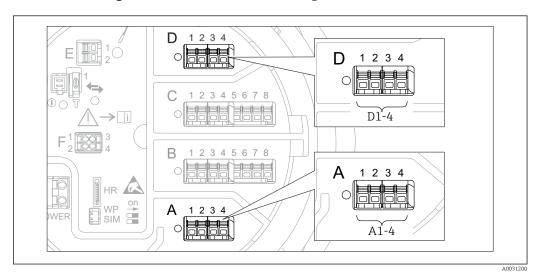

A   0 % value
B   100 % value
1   Primary variable (PV)
2   Percent of range

5. Use the **PV mA selector** parameter to define whether the output current of an Analog I/O module is to be included in the cyclical HART output.

ℹ After startup of the device, as long as the assigned tank variable is not yet available, the output current assumes the defined errror value.

ℹ The **PV mA selector** parameter does not influence the output current at the terminals of the Analog I/O module. It only defines whether the value of this current is part of the HART output or not.

9.2.15 Configuration of the Modbus output

⊞ *41   Possible locations of the Modbus modules (examples); depending on the device version these modules may also be in slot B or C → 🖻 18.*
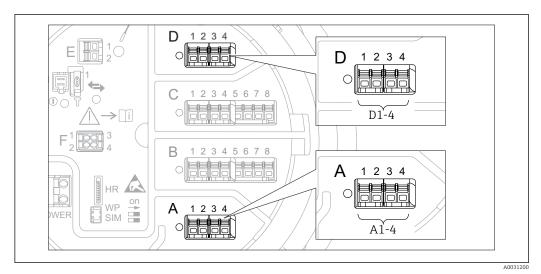

The Tankside Monitor NRF81 acts as a Modbus slave. Measured or calculated tank values are stored in registers which can be requested by a Modbus master.

The following submenu is used to configure the communication between the device and the Modbus master:
Setup → Advanced setup → Communication → Modbus X1-4 →Configuration (→ 🖻 152)

9.2.16   Configuration of the V1 output
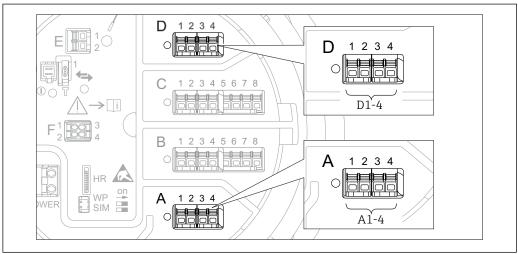

🖾 *42   Possible locations of the V1 modules (examples); depending on the device version these modules may also be in slot B or C → 🖺 18.*

The following submenus are used to configure the V1 communication between the device and the control system:
- Setup → Advanced setup → Communication → V1 X1-4 → Configuration→ 🖺 155
- Setup → Advanced setup → Communication → V1 X1-4 → V1 input selector→ 🖺 158

9.2.17   Configuration of the WM550 output
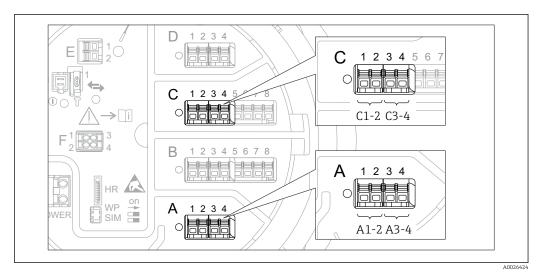

🖾 *43   Possible locations of the WM550 modules (examples); depending on the device version these modules may also be in slot B or C → 🖺 18.*

The following submenus are used to configure the WM550 communication between the device and the control system:
- **Setup** menu → **Advanced setup** submenu → **Communication** submenu → WM550 X1-4 → **Configuration** submenu → 🖺 151
- **Setup** menu → **Advanced setup** submenu → **Communication** submenu → WM550 X1-4 → **WM550 input selector** submenu → 🖺 160
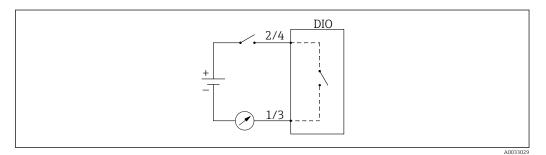

9.2.18   Configuration of the digital outputs

⊞ 44   *Possible locations of the Digital I/O modules (examples); the order code defines the number and location of Digital I/O modules → ▤ 18.*

⊞ 45   *Usage of the Digital I/O module as a digital output*

There is a **Digital Xx-x** submenu for each digital I/O module of the device. "X" designates the slot in the terminal compartment, "x-x" the terminals within this slot. The most important parameters of this submenu are **Operating mode, Digital input source** and **Contact type**.

A digital output can be used to
- output the state of an alarm (if an alarm has been configured → ▤ 75)
- transmit the status of a digital input (if a digital input has been configured → ▤ 66)

To configure a digital output, proceed as follows:

1. Navigate to Setup → Advanced setup → Input/output → Digital Xx-x, where Xx-x designates the digital I/O module to be configured.

2. Go to the **Operating mode** parameter and select the **Output passive** option.

3. Go to the **Digital input source** parameter and select the alarm or digital input to be transmitted.

4. Go to the **Contact type** parameter and select how the internal state of the alarm or digital input is to be mapped to the digital output (see table below).

• State of the alarm • Internal state of the digital input	Switching state of the digital output	
	Contact type = Normally open	Contact type = Normally closed
Inactive	Open	Closed
Active	Closed	Open

- For SIL applications, **Contact type** is automatically set to **Normally closed** by the device when starting the SIL confirmation procedure.
- In case of a power supply failure, the switching state is always "open", irrespectiv of the selected option.
- The **Digital Xx-x** submenu contains additional parameters for a more detailed configuration of the Digital Input. For a description refer to → 🕮 146.

9.3 Advanced settings

For a more detailed configuration of the signal inputs, the tank calculations and the signal outputs refer to the **Advanced setup** submenu (→ 🕮 122).

9.4 Simulation

To check the correct configuration of the device and of the control system, it is possible to simulate different situations (measured values, diagnostic messages etc.). See the **Simulation** submenu (→ 🕮 245) for details.

9.5 Protecting settings from unauthorized access

There are two possibilities to protect the settings from unauthorized access:
- By an access code (→ 🕮 48)
  This locks the access via the display and operating module.
- By the protection switch (→ 🕮 49)
  This locks the access to W&M-related parameters by any user interface (display and operating module, FieldCare, other configuration tools).
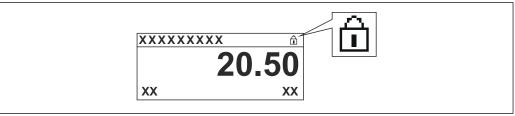

10   Operation

10.1   Reading off the device locking status

Depending on the locking state of the device some operations may be locked. The current locking status is indicated at: Setup → Advanced setup → Locking status. The following table summarizes the different locking statuses:

Locking status	Meaning	Unlocking procedure
Hardware locked	The device is locked by the write-protection switch in the terminal compartment.	→ 🖹 49
SIL locked	The device is in SIL-locked mode.	🖺 Detailed information on this topic see SIL Safety manual
CT active - all parameters	The custody transfer mode is active.	→ 🖹 49
WHG locked	The device is in WHG-locked mode.	🖺 Detailed information on this topic see SIL Safety manual
Temporarily locked	Write access to the parameters is temporarily lock due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed again.	Wait for completion of the device-internal processing.

A locking is indicated by the write protection symbol in the header of the display:

A0015870

10.2   Reading off measured values

Tank values can be read off in the following submenus:
- Operation → Level
- Operation → Temperature
- Operation → Density
- Operation → Pressure

11   Diagnostics and troubleshooting

11.1   General trouble shooting
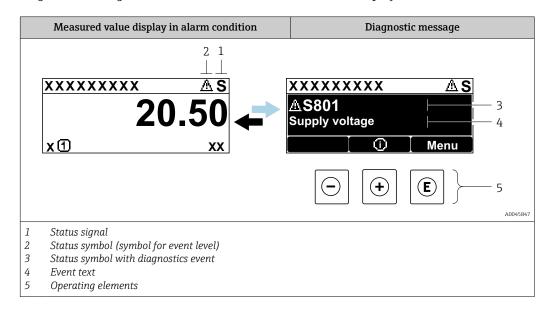

11.1.1   General errors

Error	Possible cause	Remedial action
Device does not respond.	Supply voltage not connected.	Connect the correct voltage.
	The cables do not contact the terminals properly.	Ensure electrical contact between the cable and the terminal.
Values on the display invisible	The plug of the display cable is not connected correctly.	Connect the plug correctly.
	Display is defective.	Replace display.
	Display contrast too low.	Set Setup → Advanced setup → Display → Contrast display to a value ≥ 60 %.
"Communication error" is indicated on the display when starting the device or connecting the display	Electromagnetic interference	Check grounding of the device.
	Broken display cable or display plug.	Exchange display.
CDI communication does not work.	Wrong setting of the COM port on the computer.	Check the setting of the COM port on the computer (e.g. FieldCare) and change it if necessary.
Device measures incorrectly.	Parametrization error	Check and adjust parameterization.

11.2   Diagnostic information on local display

11.2.1   Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the measured value display.
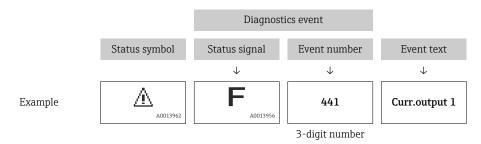

Measured value display in alarm condition	Diagnostic message

1   Status signal
2   Status symbol (symbol for event level)
3   Status symbol with diagnostics event
4   Event text
5   Operating elements

Status signals

F A0013956	**"Failure"** A device error is present. The measured value is no longer valid.
C A0013959	**"Function check"** The device is in service mode (e.g. during a simulation or a warning).
S A0013958	**"Out of specification"** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)
M A0013957	**"Maintenance required"** Maintenance is required. The measured value is still valid.

Status symbol (symbol for event level)

A0013961	**"Alarm" status** The measurement is interrupted. The signal outputs take on the defined alarm condition. A diagnostic message is generated.
A0013962	**"Warning" status** The device continues to measure. A diagnostic message is generated.

Diagnostics event and event text

The fault can be identified using the diagnostics event. The event text helps you by providing information about the fault. In addition, the corresponding symbol is displayed before the diagnostics event.

		Diagnostics event	
Status symbol	Status signal	Event number	Event text
	↓	↓	↓

Example	⚠ A0013962	F A0013956	441	Curr.output 1

3-digit number
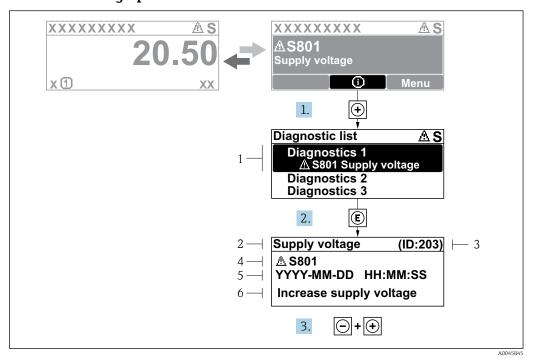

If two or more diagnostic messages are pending simultaneously, only the message with the highest priority is shown. Additional pending diagnostic messages can be shown in **Diagnostic list** submenu (→ 🕮 241).

Operating elements

Operating functions in menu, submenu	
⊕ A0013970	**Plus key** Opens the message about the remedial measures.
Ⓔ A0013952	**Enter key** Opens the operating menu.

11.2.2   Calling up remedial measures

⊠ 46   Message for remedial measures

1   Diagnostic information
2   Short text
3   Service ID
4   Diagnostic behavior with diagnostic code
5   Operation time of occurrence
6   Remedial measures

A diagnostic message appears in the standard view (measured value display).

1. Press ⊞ (ⓘ symbol).
    ↳ The **Diagnostic list** submenu opens.

2. Select the desired diagnostic event with ⊞ or ⊟ and press ⒠ .
    ↳ The message for the remedial measures for the selected diagnostic event opens.

3. Press ⊟ + ⊞ simultaneously.
    ↳ The message for the remedial measures closes.
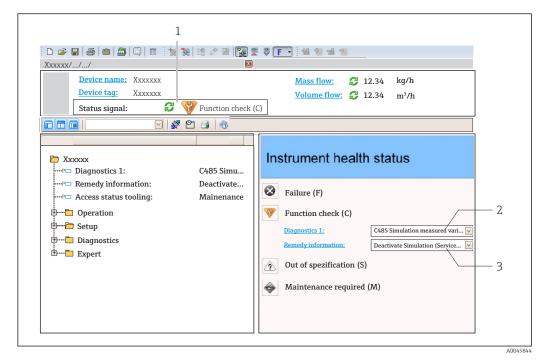

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in the **Diagnostic list** submenu or in the **Previous diagnostics**.

1. Press ⒠.
    ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
    ↳ The message for the remedial measures closes.

11.3   Diagnostic information in FieldCare

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.

A0045844

1   Status area with status signal
2   Diagnostic information
3   Remedial measures with Service ID

Furthermore, diagnostic events that have occurred can be viewed in the **Diagnostic list** submenu.

11.3.1   Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
A0017271	**Failure** A device error has occurred. The measured value is no longer valid.
A0017278	**Function check** The device is in service mode (e.g. during a simulation or a warning).
A0017277	**Out of specification** The device is operated outside its technical specification limits (e.g. outside the process temperature range)
A0017276	**Maintenance required** Maintenance is required. The measured value is still valid.

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

11.3.2   Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:
- On the home page
  Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu
  Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

1. Call up the desired parameter.

2. On the right in the working area, mouse over the parameter.
   ↳ A tool tip with remedy information for the diagnostic event appears.

11.4   Overview of the diagnostic messages

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
Diagnostic of sensor				
102	Sensor incompatible error	1. Restart device 2. Contact service	F	Alarm
150	Detector error	1. Restart device 2. Check electrical connections of detector 3. Replace detector unit	F	Alarm
151	Sensor electronic failure	Replace sensor electronic module	F	Alarm
Diagnostic of electronic				
242	Software incompatible	1. Check software 2. Flash or change main electronic module	F	Alarm
252	Modules incompatible	1. Check if correct electronic modul is plugged 2. Replace electronic module	F	Alarm
261	Electronic modules	1. Restart device 2. Check electronic modules 3. Change I/O module or main electronics	F	Alarm
262	Module connection	1. Check module connections 2. Change electronic modules	F	Alarm
270	Main electronics failure	Replace main electronics	F	Alarm
271	Main electronics failure	1. Restart device 2. Change main electronic module	F	Alarm
272	Main electronics failure	Restart device	F	Alarm
272	Main electronics failure	1. Restart device 2. Contact service	F	Alarm
273	Main electronics failure	1. Emergency operation via display 2. Change main electronics	F	Alarm
275	I/O module failure	1. Restart device 2. Change I/O module	F	Alarm
276	I/O module faulty	1. Restart device 2. Change I/O module	F	Alarm
282	Data storage	1. Restart device 2. Contact service	F	Alarm
283	Memory content	1. Transfer data or reset device 2. Contact service	F	Alarm
284	Detector SW update in progress	Firmware update active, please wait!	F	Alarm
311	Electronic failure	Maintenance required! 1. Do not perform reset 2. Contact service	M	Warning
333	System recovery required	HW change detected System configuration recovery required Go to menu on device and perform recovery	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
334	System recovery failure	HW changed, system recovery failure. Return to factory	F	Alarm
381	Displacer distance invalid	1. Calibrate sensor 2. Restart device 3. Replace sensor electronics	F	Alarm
382	Sensor communication	1. Check connection of sensor electronics 2. Restart device 3. Replace sensor electronics	F	Alarm
Diagnostic of configuration				
400	AIO simulation output	Deactivate simulation AIO output	C	Warning
401	DIO simulation output	Deactivate simulation DIO output	C	Warning
403	Calibration AIO	1. Restart device 2. Change I/O module	F	Alarm

1)   Diagnostic behavior can be changed.

The parameters No.941, 942, and 943 are only used for NMR8x and NRF81.

11.5   Diagnostic list

In the Diagnostic list submenu, up to 5 currently pending diagnostic messages can be displayed. If more than 5 messages are pending, the messages with the highest priority are shown on the display.

Navigation path
Diagnostics → Diagnostic list

Calling up and closing the remedial measures

1.   Press E.
     ↳ The message for the remedial measures for the selected diagnostic event opens.

2.   Press ⊟ + ⊞ simultaneously.
     ↳ The message about the remedial measures closes.

11.6   Reset measuring device

To reset the device to a defined state use the **Device reset** parameter (→ 🗎 236).

11.7   Device information

Information on the device (order code, hardware and software version of the individual modules etc.) can be found in the **Device information** submenu (→ 🗎 242).

11.8   Firmware history

Date	Software version	Modifications	Documentation (NRF81)		
			Operating Instructions	Description of Parameters	Technical Information
04.2016	01.00.zz	Original software	BA01465G/00/EN/01.16	GP01083G/00/EN/01.16	TI01251G/00/EN/01.16
12.2016	01.02.zz	Bugfixes and improvements	BA01465G/00/EN/02.17	GP01083G/00/EN/02.17	TI01251G/00/EN/02.17
07.2018	01.03.zz	Software update	BA01465G/00/EN/04.18		TI01251G/00/EN/03.18
05.2020	01.04.zz	Software update	BA01465G/00/EN/05.20		TI01251G/00/EN/04.20
08.2021	01.05.zz	Software update	BA01465G/00/EN/06.21		

12   Maintenance

12.1   Maintenance tasks
No special maintenance work is required.

12.1.1   Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the seals.

12.2   Endress+Hauser services

Endress+Hauser offers a wide variety of services for maintenance such as recalibration, maintenance service or device tests.

Your Endress+Hauser Sales Center can provide detailed information on the services.

13   Repair

13.1   General information on repairs

13.1.1   Repair concept

The Endress+Hauser repair concept assumes that the devices have a modular design and that repairs can be done by the Endress+Hauser service or specially trained customers.

Spare parts are contained in suitable kits. They contain the related replacement instructions.

For more information on service and spare parts, contact the Service Department at Endress+Hauser.

13.1.2   Repairs to Ex-approved devices

When carrying out repairs to Ex-approved devices, please note the following:

- Repairs to Ex-approved devices may only be carried out by trained personnel or by the Endress+Hauser Service.
- Comply with the prevailing standards, national Ex-area regulations, safety instructions (XA) and certificates.
- Only use original spare parts from Endress+Hauser.
- When ordering a spare part, please note the device designation on the nameplate. Only replace parts with identical parts.
- Carry out repairs according to the instructions. On completion of repairs, carry out the specified routine test on the device.
- Only Endress+Hauser Service may convert a certified device into a different certified variant.
- Document all repair work and conversions.

13.1.3   Replacement of a device or electronic module

After a complete device or the electronic mainboard has been replaced, the parameters can be downloaded into the instrument again via FieldCare.

Condition: The configuration of the old device has been saved to the computer via FieldCare.

The "Save/Restore" function
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → Advanced setup → Administration → Device reset = Restart device.
This ensures correct operation of the device after the restore.

13.2   Spare parts
Some interchangeable measuring device components are listed on an overview sign in the connection compartment cover.

The spare part overview sign contains the following information:
- A list of the most important spare parts for the measuring device, including their ordering information.
- The URL for the *W@M Device Viewer* (www.endress.com/deviceviewer):
  All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

13.3   Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

13.4   Return

The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the website for more information:
   http://www.endress.com/support/return-material

2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

13.5   Disposal
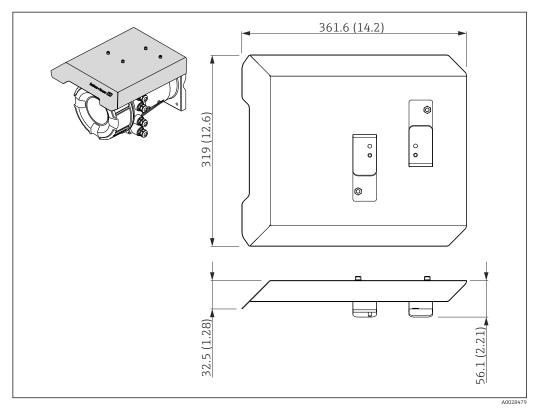

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.

14 Accessories

14.1 Device-specific accessories

14.1.1 Weather protection cover

⚄ 47 *Weather protection cover; dimensions: mm (in)*

Materials
- Protection cover and mounting brackets
  Material
  316L (1.4404)
- Screws and washers
  Material
  A4
- The weather protection cover can be ordered together with the device:
  Ordering feature 620 "Accessory Enclosed", option PA "Weather Protection Cover")
- It can also be ordered as an accessory:
  Order code: 71292751 (for NMR8x and NRF8x)

14.2   Communication-specific accessories

WirelessHART adapter SWA70
• Is used for the wireless connection of field devices
• The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks

📖 For details, see Operating Instructions BA00061S

Gauge Emulator, Modbus to BPM
• Using the protocol converter, it is possible to integrate a field device into a host system even if the field device does not know the communication protocol of the host system. Eliminates vendor lock-in for field devices.
• Field communication protocol (field device): Modbus RS485
• Host communication protocol (host system): Enraf BPM
• 1 measuring device per Gauge Emulator
• Separate power supply: 100 to 240 V_{AC}, 50 to 60 Hz, 0.375 A, 15 W
• Several approvals for the hazardous area

Gauge Emulator, Modbus to TRL/2
• Using the protocol converter, it is possible to integrate a field device into a host system even if the field device does not know the communication protocol of the host system. Eliminates vendor lock-in for field devices.
• Field communication protocol (field device): Modbus RS485
• Host communication protocol (host system): Saab TRL/2
• 1 measuring device per Gauge Emulator
• Separate power supply: 100 to 240 V_{AC}, 50 to 60 Hz, 0.375 A, 15 W
• Several approvals for the hazardous area

14.3   Service-specific accessories

Commubox FXA195 HART
For intrinsically safe HART communication with FieldCare via the USB interface

📖 For details, see "Technical Information" TI00404F

Commubox FXA291
Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop
Order number: 51516983

📖 For details, see "Technical Information" TI00405C

DeviceCare SFE100
Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus field devices
DeviceCare is available for download at www.software-products.endress.com. You need to register in the Endress+Hauser software portal to download the application.

📖 Technical Information TI01134S

FieldCare SFE500
FDT-based plant asset management tool
It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

📖 Technical Information TI00028S

14.4   System components

RIA15
Compact process display unit with very low voltage drop for universal use to display 4 to 20 mA/HART signals

📖 Technical Information TI01043K

Tankvision Tank Scanner NXA820 / Tankvision Data Concentrator NXA821 / Tankvision Host Link NXA822
Inventory Management System with completely integrated software for operation via standard web browser

📖 Technical Information TI00419G

15   Operating menu

ℹ️ • 🔲 : Navigation path for operating module at the device
    • 🖥️ : Navigation path for operating tool (e.g. FieldCare)
    • 🔒 : Parameter can be locked via software locking

15.1   Overview of the operating menu
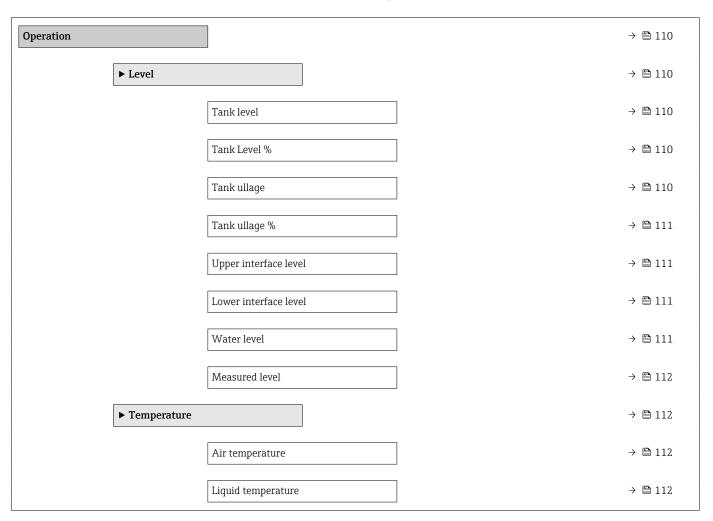

ℹ️ • This section lists the parameters of the following menus:
      • Operation (→ 🖹 110)
      • Setup (→ 🖹 119)
      • Diagnostics (→ 🖹 238)
    • For the **Expert** menu refer to the "Description of Device Parameters" (GP) of the respective device.
    • Depending on the device version and parametrization some parameters will not be available in a given situation. For details refer to the "Prerequisite" category in the description of the respective parameter.
    • The representation essentially corresponds to the menu in an operating tool (e.g. FieldCare). On the local display there may be minor differences in the menu structure. Details are mentioned in the description of the respective submenu.

15.2 "Operation" menu

The **Operation** menu (→ 🖹 110) shows the most important measured values.

Navigation   🖩🖵 Operation

15.2.1 "Level" submenu

Navigation   🖩🖵 Operation → Level

Tank level

Navigation	🖩🖵 Operation → Level → Tank level
Description	Shows the distance from the zero position (tank bottom or datum plate) to the product surface.

Additional information

Read access	Operator
Write access	–

Tank Level %

Navigation	🖩🖵 Operation → Level → Tank Level %
Description	Shows the level as a percentage of the full measuring range.

Additional information

Read access	Operator
Write access	–

Tank ullage

Navigation	🖩🖵 Operation → Level → Tank ullage
Description	Shows the remaining empty space in the tank.

Additional information

Read access	Operator
Write access	–

Tank ullage %

Navigation	⊶⊟ Operation → Level → Tank ullage %
Description	Shows the remaining empty space in percentage related to parameter tank reference height.

Additional information

Read access	Operator
Write access	-

Upper interface level

Navigation	⊶⊟ Operation → Level → Upper I/F level
Description	Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Maintenance
Write access	-

Lower interface level

Navigation	⊶⊟ Operation → Level → Lower I/F level
Description	Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Maintenance
Write access	-

Water level

Navigation	⊶⊟ Operation → Level → Water level
Description	Shows the bottom water level.

Additional information

Read access	Operator
Write access	-

Measured level

Navigation	⊞⊟ Operation → Level → Measured level
Description	Shows the measured level without any correction from the tank calculations.
Additional information	

Read access	Operator
Write access	-

15.2.2   "Temperature" submenu

Navigation   ⊞⊟ Operation → Temperature

Air temperature

Navigation	⊞⊟ Operation → Temperature → Air temp.
Description	Shows the air temperature.
Additional information	

Read access	Operator
Write access	-

Liquid temperature

Navigation	⊞⊟ Operation → Temperature → Liquid temp.
Description	Shows the average or spot temperature of the measured liquid.
Additional information	

Read access	Operator
Write access	-

Vapor temperature

Navigation	⊞⊟ Operation → Temperature → Vapor temp.
Description	Shows the measured vapor temperature.

Additional information

Read access	Operator
Write access	-

"NMT element values" submenu

ℹ This submenu is only visible if a Prothermo NMT is connected.

Navigation   ▣   Operation → Temperature → NMT elem. values

"Element temperature" submenu

Navigation   ▣   Operation → Temperature → NMT elem. values → Element temp.

Element temperature 1 to 24

Navigation   ▣   Operation → Temperature → NMT elem. values → Element temp. → Element temp 1 to 24

Description   Shows the temperature of an element in the NMT.

Additional information

Read access	Operator
Write access	-

"Element position" submenu

Navigation   ▣   Operation → Temperature → NMT elem. values → Element position

---

Element position 1 to 24

Navigation   ▣   Operation → Temperature → NMT elem. values → Element position → Element pos. 1 to 24

Description   Shows the position of the selected element in the NMT.

15.3.1 "Advanced setup" submenu

Navigation   ⌷⌷ Setup → Advanced setup

Locking status

Navigation	⌷⌷ Setup → Advanced setup → Locking status
Description	Indicates the type of locking.

'Hardware locked' (HW)
The device is locked by the 'WP' switch on the main electronics module. To unlock, set the switch into the OFF position.

'WHG locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'SIL locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'Temporarily locked' (SW)
The device is temporarily locked by processes in the device (e.g. data upload/download, reset). The device will automatically be unlocked after completion of these processes.

Additional information

Read access	Operator
Write access	-

User role

Navigation	⌷ Setup → Advanced setup → User role
Description	Shows the access authorization to the parameters via the operating tool.

Minimum probe temperature   🔒

| Navigation | ⚙️🖥️ Setup → Advanced setup → Input/output → Analog IP → Min. probe temp |

| Prerequisite | Operating mode (→ 🔖 130) = RTD temperature input |

| Description | Minimum approved temperature of the connected probe.
If the temperature falls below this value, the W&M status will be 'invalid'. |

User entry	−213 to 927 °C

Factory setting	−100 °C

Additional information	Read access	Operator
	Write access	Maintenance

Maximum probe temperature

Navigation	◰◳ Setup → Advanced setup → Input/output → Analog IP → Max. probe temp

Prerequisite	Operating mode (→ 🖺 130) = RTD temperature input

Description	Maximum approved temperature of the connected probe.
	If the temperature rises above this value, the W&M status will be 'invalid'.

User entry	−213 to 927 °C

Factory setting	250 °C

Additional information	Read access	Operator
	Write access	Maintenance

Probe position

Navigation	◰◳ Setup → Advanced setup → Input/output → Analog IP → Probe position

Prerequisite	Operating mode (→ 🖺 130) = RTD temperature input

Description	Position of the temperature probe, measured from zero position (tank bottom or datum plate). This parameter, in conjunction with the measured level, determines whether the temperature probe is still covered by the product. If this is no longer the case, the status of the temperature value will be 'invalid'.

User entry	−5 000 to 30 000 mm

Factory setting	5 000 mm

Additional information	Read access	Operator
	Write access	Maintenance

Damping factor	🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Analog IP → Damping factor
Prerequisite	Operating mode (→ 🔲 130) ≠ Disabled
Description	Defines the damping constant (in seconds).
User entry	0 to 999.9 s
Factory setting	0 s

Additional information	Read access	Operator
	Write access	Maintenance

Gauge current

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Analog IP → Gauge current
Prerequisite	Operating mode (→ 🔲 130) = Gauge power supply
Description	Shows the current on the power supply line for the connected device.
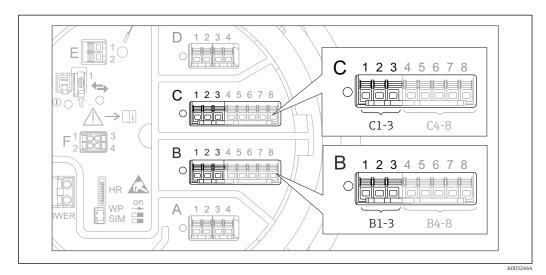

Additional information	Read access	Operator
	Write access	–

"Analog I/O" submenu

There is a **Analog I/O** submenu for each Analog I/O module of the device. This submenu refers to terminals 1 to 3 of this module (an analog input or output). For terminals 4 to 8 (always an analog input) refer to → 🗎 130.

A0032464

🖼 *49   Terminals for the "Analog I/O" submenu ("B1-3" or "C1-3", respectively)*

Navigation   🖾🔲   Setup → Advanced setup → Input/output → Analog I/O

Operating mode			⊡

Navigation	🖾🔲 Setup → Advanced setup → Input/output → Analog I/O → Operating mode

Description   Defines the operating mode of the analog I/O module.

Selection
- Disabled
- 4..20mA input
- HART master+4..20mA input
- HART master
- 4..20mA output
- HART slave +4..20mA output

Factory setting   Disabled

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options

Operating mode (→ 🗎 136)	Direction of signal	Type of signal
Disabled	-	-
4..20mA input	Input from 1 external device	Analog (4...20mA)
HART master+4..20mA input	Input from 1 external device	• Analog (4...20mA) • HART
HART master	Input from up to 6 external devices	HART

Operating mode (→ 🖺 136)	Direction of signal	Type of signal
4..20mA output	Output to higher-level unit	Analog (4...20mA)
HART slave +4..20mA output	Output to higher-level unit	• Analog (4...20mA) • HART

Depending on the terminals used, the Analog I/O module is used in the passive or active mode.

Mode	Terminals of the I/O module		
	1	2	3
Passive (power supply from external source)	-	+	not used
Active (power supplied by the device itself)	not used	-	+

In the active mode the following conditions must be met:
- Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
- Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
- Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

Current span

Navigation   🔲🔲   Setup → Advanced setup → Input/output → Analog I/O → Current span

Prerequisite   **Operating mode** parameter (→ 🖺 136) ≠ **Disabled** option or **HART master** option

Description   Defines the current range for the measured value transmission.

Selection
- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4... 20.5 mA)
- Fixed value *

Factory setting   4...20 mA NE (3.8...20.5 mA)

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA (4... 20.5 mA)	4 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA NE (3.8...20.5 mA)	3.8 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA

---

* Visibility depends on order options or device settings

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.0 mA
Fixed current	Constant current, defined in the **Fixed current** parameter (→ 🖺 138).				

In the case of an error, the output current assumes the value defined in the **Failure mode** parameter (→ 🖺 139).

Fixed current   🔒

Navigation   🔢🖳 Setup → Advanced setup → Input/output → Analog I/O → Fixed current

Prerequisite   Current span (→ 🖺 137) = Fixed current

Description   Defines the fixed output current.

User entry   4 to 22.5 mA

Factory setting   4 mA

Additional information

                          • Alarm x Low or LowLow
                          • Digital Xx-x
                          • Primary Modbus x
                          • Secondary Modbus x

Factory setting   None

Additional information   Meaning of the options
                          • **Alarm x any**, **Alarm x High**, **Alarm x HighHigh**, **Alarm x High or HighHigh**, **Alarm x
                            Low**, **Alarm x LowLow**, **Alarm x Low or LowLow**
                            The digital output indicates if the selected alarm is currently active. The alarms
                            themselves are defined in the **Alarm 1 to 4** submenus.
                          • **Digital Xx-x** [7]
                            The digital signal present at the digital input **Xx-x** is passed through to the digital
                            output.
                          • **Modbus A1-4 Discrete x**
                            Modbus B1-4 Discrete x
                            Modbus C1-4 Discrete x
                            Modbus D1-4 Discrete x
                            The digital value written by the Modbus Master device to the **Modbus discrete x**
                            parameter [8] is passed to the digital output. For details refer to Special Documentation
                            SD02066G.

---

7)   Only present if "Operating mode (→ 🗎 146)" = "Input passive" or "Input active" for the respective Digital I/O module.
8)   Expert → Communication → Modbus Xx-x → Modbus discrete x

Input value

Navigation	🅰🅱 Setup → Advanced setup → Input/output → Digital Xx-x → Input value
Prerequisite	Operating mode (→ 🗎 146) = **"Input passive" option** or **"Input active" option**
Description	Shows the digital input value.

Additional information

Read access	Operator
Write access	–

Contact type 🔒

Navigation	🅰🅱 Setup → Advanced setup → Input/output → Digital Xx-x → Contact type
Prerequisite	Operating mode (→ 🗎 146) ≠ **Disabled**
Description	Determines the switching behavior of the input or output.
Selection	• Normally open • Normally closed
Factory setting	Normally open

Output simulation 🔒

Navigation	🅰🅱 Setup → Advanced setup → Input/output → Digital Xx-x → Output sim
Prerequisite	Operating mode (→ 🗎 146) = **Output passive**
Description	Sets the output to a specific simulated value.
Selection	• Disable • Simulating active • Simulating inactive • Fault 1 • Fault 2
Factory setting	Disable
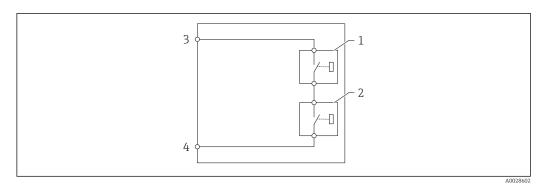

Additional information

Read access	Operator
Write access	Maintenance

The digital output consists of two relays connected in series:

52   The two relays of a digital output

1/2   The relays
3/4   The terminals of the digital output

The switching state of these relays is defined by the **Output simulation** parameter as follows:

Output simulation	State of relay 1	State of relay 2	Expected result on the terminals of the I/O module
Simulating active	Closed	Closed	Closed
Simulating inactive	Open	Open	Open
Fault 1	Closed	Open	Open
Fault 2	Open	Closed	Open

The **Fault 1** and **Fault 2** options can be used to check the correct switching behavior of the two relays.

Output value

Navigation   Setup → Advanced setup → Input/output → Digital Xx-x → Output values

Prerequisite   Operating mode (→ 🖺 146) = Output passive

Description   Shows the digital output value.

Modbus address   🔒

Navigation	🎛🖮 Setup → Advanced setup → Communication → Modbus X1-4 → Configuration → Device ID
Prerequisite	**Communication interface protocol (→ 🗎 151) = MODBUS**
Description	Defines the Modbus address of the device.
User entry	1 to 247
Factory setting	1

Additional information	Read access	Operator
	Write access	Maintenance

Float swap mode   🔒

Navigation	🎛🖮 Setup → Advanced setup → Communication → Modbus X1-4 → Configuration → Float swap mode
Prerequisite	**Communication interface protocol (→ 🗎 151) = MODBUS**
Description	Sets the format of how the floating point value is transferred on Modbus.
Selection	• Normal 3-2-1-0 • Swap 0-1-2-3 • WW Swap 1-0-3-2
Factory setting	Swap 0-1-2-3

Additional information	Read access	Operator
	Write access	Maintenance

Bus termination   🔒

Navigation	🎛🖮 Setup → Advanced setup → Communication → Modbus X1-4 → Configuration → Bus termination
Prerequisite	**Communication interface protocol (→ 🗎 151) = MODBUS**
Description	Activates or deactivates the bus termination at the device. Should only be activated on the last device in a loop.
Selection	• Off • On

Factory setting   Off

Additional information

Read access	Operator
Write access	Maintenance

"Configuration" submenu

This submenu is only present for devices with a **V1** communication interface.

Navigation   🔳🔲   Setup → Advanced setup → Communication → V1 X1-4
→ Configuration

Communication interface protocol variant	🔒

Navigation	🔳🔲 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → Protocol variant

Description   Determines which variant of the V1 protocol is used.

User interface   • None
• V1 *

Factory setting   None

Additional information

Read access	Operator
Write access	Maintenance

V1 address	🔒

Navigation	🔳🔲 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → V1 address

Prerequisite   **Communication interface protocol variant (→ 🕮 155) = V1**

Description   Identifier of the device for the V1 communication.

User entry   0 to 99

Factory setting   1

Additional information

Read access	Operator
Write access	Maintenance

---

*   Visibility depends on order options or device settings

V1 address	🔒

Navigation	🎛🖥 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → V1 address

Prerequisite	Communication interface protocol variant (→ 🗎 155)

Description	Identifier of the previous device for V1 communication.

User entry	0 to 255

Factory setting	1

Additional information	Read access	Operator
	Write access	Maintenance

Level mapping	🔒

Navigation	🎛🖥 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → Level mapping

Prerequisite	Communication interface protocol (→ 🗎 151) = V1

Description	Determines the transmittable range of levels.

Selection	• +ve • +ve & -ve

Factory setting	+ve

Additional information	Read access	Operator
	Write access	Maintenance

In V1, the level is always represented by a number in the range from 0 to 999 999. This number corresponds to a level as follows:

"Level mapping" = "+ve"

Number	Corresponding level
0	0.0 mm
999 999	99 999.9 mm

"Level mapping" = "+ve & -ve"

Number	Corresponding level
0	0.0 mm
500 000	50 000.0 mm

Number	Corresponding level
500 001	−0.1 mm
999 999	−49 999.9 mm

Line impedance   🔒

Navigation   ⓘ🖳 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → Line
                        impedance

Prerequisite   Communication interface protocol (→ 🖺 151) = V1

Description   Adjusts the impedance of the communication line.

User entry   0 to 15

Factory setting   15

Additional information

Read access	Operator
Write access	Maintenance

ℹ The line impedance affects the voltage difference between a logical 0 and a logical 1
on the message of the device to the bus. The default setting is suitable for most
applications.

"V1 input selector" submenu

This submenu is only present for devices with a **V1** communication interface.

Navigation   🖳🖳 Setup → Advanced setup → Communication → V1 X1-4 → V1
                        input select.

Alarm 1 input source   🔒

Navigation	🖳🖳 Setup → Advanced setup → Communication → V1 X1-4 → V1 input select. → Alarm1 input src
Description	Determines which discrete value will be transmitted as V1 alarm 1 status.
Selection	• None • Alarm 1-4 any • Alarm 1-4 HighHigh • Alarm 1-4 High or HighHigh • Alarm 1-4 High • Alarm 1-4 Low • Alarm 1-4 Low or LowLow • Alarm 1-4 LowLow
Factory setting	None

Additional information

Read access	Operator
Write access	Maintenance

Alarm 2 input source   🔒

Navigation	🖳🖳 Setup → Advanced setup → Communication → V1 X1-4 → V1 input select. → Alarm2 input src
Description	Determines which discrete value will be transmitted as V1 alarm 2 status.
Selection	• None • Alarm 1-4 any • Alarm 1-4 HighHigh • Alarm 1-4 High or HighHigh • Alarm 1-4 High • Alarm 1-4 Low • Alarm 1-4 Low or LowLow • Alarm 1-4 LowLow
Factory setting	None

Additional information

"Tank calculation" submenu

Navigation   ⊞⊟   Setup → Advanced setup → Application → Tank calculation

"HyTD" submenu

Overview

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the
Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic
pressure exerted by the liquid stored in the tank. The compensation is based on a linear
approximation obtained from manual hand dips at several levels distributed over the full
range of the tank.

A0028721

⊡ *54   Correction of the hydrostatic tank deformation (HyTD)*

A   "Distance" (level below L_0 → "HyTD correction value" = 0)
B   Gauge Reference Height (GRH)
C   HyTD correction value
D   "Distance" (level above L_0 → "HyTD correction value" > 0)

This mode should not be used in conjunction with HTG as with HTG the level is not
measured relative to the gauge reference height.

Linear approximation of the HyTD correction

The real amount of deformation varies non-linearly with the level due to the construction of the tank. However, as the correction values are typically small compared to the measured level, a simple straight line method can be used with good results.

A0028724

🖾 *55   Calculation of the HyTD correction*

1   Linear correction according to "Deformation factor (→ 🕮 191)"
2   Real correction
3   Starting level (→ 🕮 190)
L   Measured level (→ 🕮 112)
H   HyTD correction value (→ 🕮 190)

Calculation of the HyTD correction

$$L \leqslant L_0 \quad \Rightarrow \quad C_{HyTD} = 0$$
$$L > L_0 \quad \Rightarrow \quad C_{HyTD} = - (L - L_0) \times D$$

A0028715

L	Measured level
L_0	Starting level
c_{HyTD}	HyTD correction value
D	Deformation factor

"CTSh" submenu

Overview

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

This correction is recommended for the following situations:
- if the operating temperature deviates considederably from the temperature during calibration ($\Delta T > 10$ ℃ (18 ℉))
- for extremely high tanks
- for refrigerated, cryogenic or heated applications

As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.

This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

CTSh: Calculation of the wall temperature

A0028714

🖻 *56   Parameters for the CTSh calculation*

A   Gauge Reference Height (GRH)
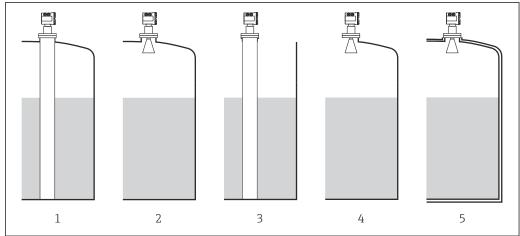

T_W	Temperature of the wetted part of the tank shell
T_D	Temperature of the dry part of the tank shell
T_P	Product temperature
T_V	Vapor temperature (in the tank)
T_A	Ambient temperature (atmosphere surrounding the tank)

CTSh: Calculation of the wall temperature

Depending on the parameters **Covered tank (→ 🖺 195)** and **Stilling well (→ 🖺 196)**, the temperatures T_W of the wetted and T_D of the dry part of the tank wall are calculated as follows:

Covered tank (→ 🖺 195)	Stilling well (→ 🖺 196)	T_W	T_D
Covered	Yes [1]	T_P	T_V
	No	$(7/8) T_P + (1/8) T_A$	$(1/2) T_V + (1/2) T_A$
Open top	Yes	T_P	T_A
	No	$(7/8) T_P + (1/8) T_A$	T_A

1)   This option is also valid for insulated tanks without a stilling welll. This is due to the temperature inside and outside of the tank shell being the same due to the insulation of the tank.

A0030381

1   Covered tank (→ 🕮 195) = Covered; Stilling well (→ 🕮 196) = Yes
2   Covered tank (→ 🕮 195) = Covered; Stilling well (→ 🕮 196) = No
3   Covered tank (→ 🕮 195) = Open top; Stilling well (→ 🕮 196) = Yes
4   Covered tank (→ 🕮 195) = Open top; Stilling well (→ 🕮 196) = No
5   Insulated tank: Covered tank (→ 🕮 195) = Open top; Stilling well (→ 🕮 196) = Yes

CTSh: Calculation of the correction

$$C_{CTSh} = \alpha (H - L)(T_D - T_{cal}) + \alpha L (T_W - T_{cal})$$

A0028716

H	Gauge Reference Height
L	Measured level
T_D	Temperature of the dry part of the tank shell (calculated from T_P, T_V and T_A)
T_W	Temperature of the wetted part of the tank shell (calculated from T_P, T_V and T_A)
T_{cal}	Temperature at which the measurement has been calibrated
α	Linear expansion coefficient
c_{CTSh}	CTSh correction value

Description	Defines the expansion coefficient of the wire material of the drum. Value is programmed in factory.
User entry	0 to 100 ppm
Factory setting	15 ppm

"HTG" submenu

Overview

Hydrostatic Tank Gauging (HTG) is a method to calculate the level and the density of the product inside a tank using pressure measurements only. The pressure is measured at different heights of the tank using one, two or three pressure sensors. With these data either the density or the level of the product (or both) can be calculated.

HTG modes

Four HTG modes can be selected in the **HTG mode** parameter ($\rightarrow$ 🗎 205). They determine which variables are measured and which are calculated. Depending on the selected mode a number of additional parameters are required for the calculation.

HTG mode ($\rightarrow$ 🗎 205)	Measured variables	Required additional parameters	Calculated variables
P1 only	P1	• ρ_P • g • H_{P1}	L_{HTG}
P1 + P3	• P1 • P3	• ρ_P • ρ_V • ρ_A • g • H_{P1} • H_{P3}	L_{HTG} (more precise calculation for pressurized tanks)

HTG parameters

⊡ *57   HTG parameters*

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Tank configuration → Pressure → P1 (bottom)
H_{P1} (Position of P1 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P1 position
P2 (Middle pressure)	Setup → Advanced setup → Tank configuration → Pressure → P2 (middle)
H_{P1-P2} (Distance between P1 and P2 transmitters)	Setup → Advanced setup → Tank configuration → Pressure → P1-2 distance
P3 (Top pressure)	Setup → Advanced setup → Tank configuration → Pressure → P3 (top)
H_{P3} (Position of P3 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P3 position
ρ_P (Density of the product [1])	• Read-only: Setup → Advanced setup → Calculation → HTG → Density value • Writable: Setup → Advanced setup → Calculation → HTG → Manual upper density
ρ_V (Vapor density)	Expert → Application → Tank configuration → Density → Vapor density
ρ_A (Ambient air temperature)	Setup → Advanced setup → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L_{HTG} (Calculated level)	Setup → Advanced setup → Calculation → HTG → Tank level

1)   Depending on the **HTG mode** parameter (→ 🖺 205) this is a writable or a read-only parameter.

HTG evaluation: dependence on measured level

To calculate the level or density by HTG with the required accuracy, P1 and P2 have to be covered by a certain product level. To avoid a measurement with an insufficient accuracy, the calculation will stop before the level reaches the position of the pressure sensor.

Two parameters are defined for this purpose:
- **Minimum level**
  This parameter defines the position below which no level is accepted. If the calculation leads to **Tank level** < **Minimum level**, the value of **Minimum level** will be displayed instead of the calculated value.
- **Safety distance**
  This parameter defines the minimum amount of product which must be present above the pressure sensor P1 or P2 for the level or density calculation to take place.

- The device always uses the bigger of these two values as the switch-over point for the level calculation.
- If **HTG mode** (→ 🖺 205) is set to **P1 only** or **P1 + P3**, the density is not calculated and the **Manual upper density** parameter is used instead.
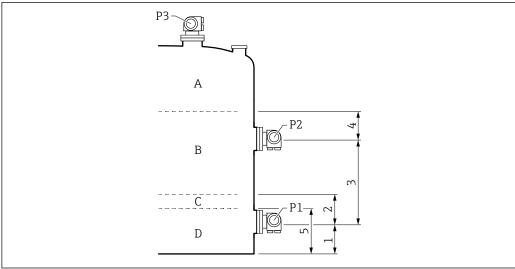

Case 1: H_{P1} < Minimum level < H_{P2}

| Level L is in area	Calculation method for ρ_P	Calculation method for L
A	calculated from pressure	calculated from pressure
B	ρ_P held	L = **Minimum level**

HTG evaluation: dependence on measured pressure

If the level of the product approaches the the P1 or P2 pressure sensor, the measured pressure becomes very small and the measurement might be too inaccurate for the Tank Gauging application. To solve this problem, a minimum pressure P_{min} is defined in the **Minimum pressure** parameter ($\rightarrow$ 🖺 206). If the pressure measured by the sensor P1 or P2, respectively, the software stops calculating the density and either holds the last calculated value (for the density) or returns the HTMinLevel (for HTGLevel).

- If P2 is smaller than P_{min}, the software stops calculating the density and uses the last density value.
- If P1 is smaller than P_{min}, the software stops calculating the level and uses the value of **Minimum level ($\rightarrow$ 🖺 206)**, instead.

Hysteresis

The level of the product in a tank is not constant but slightly varies, due for example to filling disturbances. If the level oscillates around the changeover level (**Minimum level**), the algorithm will constantly switch between calculating the value and holding the previous result. To avoid this effect a positional hysteresis is defined around the changeover point.

"HTMS" submenu

Overview

The Hybrid Tank Measurement System (HTMS) is a method to calculate the density of a product in a tank based on both a (top mounted) level and at least one (bottom mounted) pressure measurement. An additional pressure sensor can be installed at the top of the tank to provide information about the vapor pressure and to make the density calculation more accurate. The calculation method also takes into account a possible level of water at the bottom of the tank to make density calculations as accurate as possible.

HTMS parameters

59 HTMS parameters

A   Product
B   Water

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Tank configuration → Pressure → P1 (bottom)
H_{P1} (Position of P1 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P1 position
P3 (Top pressure)	Setup → Advanced setup → Tank configuration → Pressure → P3 (top)
H_{P3} (Position of P3 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P3 position
ρ_P (Density of the product [1])	• Measured value: Setup → Advanced setup → Calculation → HTMS → Density value • User-defined value: Setup → Advanced setup → Calculation → HTMS → Manual upper density
ρ_V (Vapor density)	Expert → Application → Tank configuration → Density → Vapor density
ρ_A (Ambient air temperature)	Setup → Advanced setup → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L_P (Level of the product)	Operation → Tank level
L_W (Bottom water level)	Operation → Water level
$V = L_W - H_{P1}$	
$\Delta_P = L_P - L_W = L_P - V - H_{P1}$	

1)   Depending on the situation this parameter is measured or a user-defined value is used.

HTMS modes

Two HTMS modes can be selected in the **HTMS mode** parameter (→ 🖺 210). The mode determines whether one or two pressure values are used. Depending on the selected mode a number of additional parameters are required for the calculation of the product density.

ℹ️ The **HTMS P1+P3** option must be used in pressurized tanks in order to compensate for the pressure of the vapor phase.

HTMS mode (→ 🖺 210)	Measured variables	Required additional parameters	Calculated variables
HTMS P1	• P_1 • L_P	• g • H_{P1} • L_W (optional)	ρ_P
HTMS P1+P3	• P_1 • P_3 • L_P	• ρ_V • ρ_A • g • H_{P1} • H_{P3} • L_W (optional)	ρ_P (more precise calculation for pressurized tanks)

Minimum level

The density of the product can only be calculated if the product has a minimum thickness :

$$\Delta_P \geq \Delta_{P,\,min}$$

A0028864

This is equivalent to the following condition for the product level:

$$L_P - V \geq \Delta_{P,min} + H_{P1} = L_{min}$$

A0028863

L_{min} is defined in the **Minimum level** parameter (→ 🖺 211). As can be seen from the formula it always must be bigger than H_{P1}.

If L_P - V falls below this limit, the density is calculated as follows:
• If a previous calculated value is available, this value will be kept as long as no new calculation is possible.
• If no value was previously calculated, the manual value (defined in the **Manual upper density** parameter) will be used.

Hysteresis

The level of the product in a tank is not constant but slightly varies, due for example to filling disturbances. If the level oscillates around the changeover level (**Minimum level** (→ 🖺 211)), the algorithm will constantly switch between calculating the value and holding the previous result. To avoid this effect a positional hysteresis is defined around the changeover point.

Decimal places 1 to 4   🔒

Navigation   🔲🔲 Setup → Advanced setup → Display → Decimal places 1

Prerequisite   The device has a local display.

Description   This selection does not affect the measurement and calculation accuracy of the device.

---

9)   not available for the **Value 1 display** parameter

Selection	• x
	• x.x
	• x.xx
	• x.xxx
	• x.xxxx

Factory setting   x.x

Additional information   The setting does not affect the measuring or computational accuracy of the device.

Read access	Operator
Write access	Maintenance

Separator   🔒

Navigation   Setup → Advanced setup → Display → Separator

Prerequisite   The device has a local display.

Description   Select decimal separator for displaying numerical values.

Selection   • .
           • ,

Factory setting   .

Additional information

Read access	Operator
Write access	Maintenance

Number format   🔒

Navigation   Setup → Advanced setup → Display → Number format

Prerequisite   The device has a local display.

Description   Choose number format for the display.

Selection   • Decimal
           • ft-in-1/16"

Factory setting   Decimal

Additional information

Read access	Operator
Write access	Maintenance

The **ft-in-1/16"** option is only valid for distance values.

Header	🔒

Navigation	🖩🖳 Setup → Advanced setup → Display → Header
Prerequisite	The device has a local display.
Description	Select header contents on local display.
Selection	• Device tag • Free text
Factory setting	Device tag

Additional information	Read access	Operator
	Write access	Maintenance

Meaning of the options
• **Device tag**
  The header contents is defined in the **Device tag** parameter (→ 🖺 119).
• **Free text**
  The header contents is defined in the **Header text** parameter (→ 🖺 226).

Header text	🔒

Navigation	🖩🖳 Setup → Advanced setup → Display → Header text
Prerequisite	Header (→ 🖺 226) = Free text
Description	Enter display header text.
User entry	Character string comprising numbers, letters and special characters (#11)
Factory setting	TG-Platform

Additional information	Read access	Operator
	Write access	Maintenance

Display interval	

Navigation	🖩🖳 Setup → Advanced setup → Display → Display interval
Description	Set time measured values are shown on display if display alternates between values.
User entry	1 to 10 s
Factory setting	5 s

Additional information   ℹ️ This parameter is only relevant if the number of selected measuring values exceeds the number of values the selected display format can display simultaneously.

Read access	Operator
Write access	Operator

Display damping   🔒

Navigation	◙◨ Setup → Advanced setup → Display → Display damping
Prerequisite	The device has a local display.
Description	Set display reaction time to fluctuations in the measured value.
User entry	0.0 to 999.9 s
Factory setting	0.0 s

Additional information

Read access	Operator
Write access	Maintenance

Backlight

Navigation	◙◨ Setup → Advanced setup → Display → Backlight
Prerequisite	The device has a local display.
Description	Switch the local display backlight on and off.
Selection	• Disable • Enable
Factory setting	Enable

"SIL confirmation" wizard

<table>
<tr><td>ℹ️</td><td>

- The **SIL confirmation** wizard is only available for devices with SIL or WHG approval (Feature 590: "Additional Approval", option LA: "SIL" or LC: "WHG overfill prevention") which are currently **not** in the SIL- or WHG-locked state.
- The **SIL confirmation** wizard is required to lock the device according to SIL or WHG. For details refer to the "Functional Safety Manual" of the respective device, which describes the locking procedure and the parameters of this wizard.

</td></tr>
</table>

Navigation   ▣▣   Setup → Advanced setup → SIL confirmation

"Deactivate SIL/WHG" wizard

<table>
<tr><td>ℹ️</td><td>

- The **Deactivate SIL/WHG** wizard is only available for devices with SIL or WHG approval (Feature 590: "Additional Approval", option LA: "SIL" or LC: "WHG overfill prevention") which are currently in the SIL- or WHG-locked state.
- The **Deactivate SIL/WHG** wizard is required to undo the locking of the device according to SIL or WHG. For details refer to the "Functional Safety Manual" of the respective device, which describes the locking procedure and the parameters of this wizard.

</td></tr>
</table>

Navigation   ▣▣   Setup → Advanced setup → Deactiv. SIL/WHG

"Administration" submenu

Navigation   ⊟   Setup → Advanced setup → Administration

Define access code   🔒

Navigation	⊟	Setup → Advanced setup → Administration → Def. access code

Description   Define release code for write access to parameters.

User entry   0 to 9 999

Factory setting   0

Additional information

Read access	Operator
Write access	Maintenance

> ℹ️ If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.

> ℹ️ The write protection affects all parameters marked with the 🔒 symbol in this document.

> ℹ️ Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 🗎 122).

Device reset   🔒

Navigation	▣⊟	Setup → Advanced setup → Administration → Device reset

Description   Reset the device configuration - either entirely or in part - to a defined state.

Selection   • Cancel
                             • To factory defaults
                             • Restart device

Factory setting   Cancel

Additional information   Meaning of the options
                             • **Cancel**
                               No action
                             • **To factory defaults**
                               All parameters are reset to the order-code specific factory setting.
                             • **Restart device**
                               The restart resets every parameter which is stored in the volatile memory (RAM) to the
                               factory setting (e.g. measured value data). The device configuration remains unchanged.

Write access	Maintenance

15.4   "Diagnostics" menu

Navigation   ▣▣ Diagnostics

Actual diagnostics

Navigation	▣▣ Diagnostics → Actual diagnos.
Description	Shows the current occured diagnostic event along with its diagnostic information.

Additional information

Read access	Operator
Write access	-

The display consists of:
• Symbol for event behavior
• Code for diagnostic behavior
• Operating time of occurrence
• Event text

ℹ️ If several messages are active at the same time, the messages with the highest priority is displayed.

ℹ️ Information on what is causing the message, and remedy measures, can be viewed via the ⓘ symbol on the display.

Timestamp

Navigation	▣▣ Diagnostics → Timestamp
Description	Displays the timestamp for the currently active diagnostic message.

Additional information

Read access	Operator
Write access	-

Previous diagnostics

Navigation	▣▣ Diagnostics → Prev.diagnostics
Description	Shows the diagnostic event that occurred prior to the current diagnostic event along with its diagnostic information.

Additional information

Read access	Operator
Write access	-

The display consists of:
• Symbol for event behavior
• Code for diagnostic behavior
• Operating time of occurrence
• Event text

If several messages are active at the same time, the messages with the highest priority is displayed.

Information on what is causing the message, and remedy measures, can be viewed via the ⓘ symbol on the display.

Timestamp

| Navigation | 🔲🔲 | Diagnostics → Timestamp |

Description   Shows the timestamp of the previous diagnostic message.

Additional information

Read access	Operator
Write access	-

Operating time from restart

| Navigation | 🔲🔲 | Diagnostics → Time fr. restart |

Description   Shows the time the device has been in operation since the last device restart.

Additional information

Read access	Operator
Write access	-

Operating time

| Navigation | 🔲🔲 | Diagnostics → Operating time |

Description   Indicates how long the device has been in operation.

Additional information

Read access	Operator
Write access	-

Date/time		
Navigation	◎▣ Diagnostics → Date/time	
Description	Displays the device internal real time clock.	
Additional information	Read access	Operator
	Write access	-

15.4.1   "Diagnostic list" submenu

Navigation   ⧠⧉   Diagnostics → Diagnostic list

Diagnostics 1 to 5

Navigation   ⧠⧉   Diagnostics → Diagnostic list → Diagnostics 1 to 5

Description   Display the current diagnostics messages with the highest to fifth-highest priority.

Additional information The display consists of:
• Symbol for event behavior
• Code for diagnostic behavior
• Operating time of occurrence
• Event text

Timestamp 1 to 5

Navigation   ⧠⧉   Diagnostics → Diagnostic list → Timestamp 1 to 5

Description   Timestamp of the diagnostic message.

15.4.2   "Device information" submenu

Navigation   ⧉▣   Diagnostics → Device info

Device tag

Navigation	⧉▣ Diagnostics → Device info → Device tag
Description	Shows the device tag.
User interface	Character string comprising numbers, letters and special characters (#32)
Factory setting	- none -

Additional information	Read access	Operator
	Write access	-

Serial number

Navigation	⧉▣ Diagnostics → Device info → Serial number
Description	The serial number is a unique alphanumerical code identifying the device. It is printed on the nameplate. In combination with the Operations app it allows to access all device related documentation.

Additional information	Read access	Operator
	Write access	-

Firmware version

Navigation	⧉▣ Diagnostics → Device info → Firmware version
Description	Displays the device firmware version installed.

Additional information	Read access	Operator
	Write access	-

Firmware CRC

Navigation	◙ ▣ Diagnostics → Device info → Firmware CRC

Description	Result of the cyclic redundancy check of the firmware.

Additional information	Read access	Operator
	Write access	-

Weight and measures configuration CRC

Navigation	◙ ▣ Diagnostics → Device info → W&M config CRC

Description	Result of the cyclic redundancy check of the weights and measure relevant parameters.

Additional information	Read access	Operator
	Write access	-

Device name

Navigation	◙ ▣ Diagnostics → Device info → Device name

Description	Use this function to display the device name. It can also be found on the nameplate.

Additional information	Read access	Operator
	Write access	-

Order code   🔒

Navigation	◙ ▣ Diagnostics → Device info → Order code

Description	Shows the device order code.

Additional information	Read access	Operator
	Write access	Service

Extended order code 1 to 3	🔒

Navigation	🔘🔲 Diagnostics → Device info → Ext. order cd. 1
Description	Display the three parts of the extended order code.
User interface	Character string comprising numbers, letters and special characters (#20)

Additional information

Read access	Operator
Write access	Service

The extended order code indicates the selected option of all ordering features and thus uniquely identifies the device.

15.4.3 "Simulation" submenu

Read access	Maintenance

Navigation   🎛🔲 Diagnostics → Simulation

Device alarm simulation   🔒

Navigation   🎛🔲 Diagnostics → Simulation → Dev. alarm sim.

Description   Switch the device alarm on and off.

Selection   • Off
               • On

Factory setting   Off

Additional information

Read access	Operator
Write access	Maintenance

Diagnostic event simulation   🔒

Navigation   🎛🔲 Diagnostics → Simulation → Diag. event sim.

Description   Select a diagnostic event to simulate this event.

Selection   The diagnostic events of the device

Factory setting   Off

Additional information

Read access	Operator
Write access	Maintenance

ℹ️ To terminate the simulation, select **Off**.

Current output N simulation   🔒

Navigation   🎛🔲 Diagnostics → Simulation → Curr.outp N sim.

Prerequisite   • The device has an Anlog I/O module.
               • **Operating mode (→ 🖺 136) = 4..20mA output** or **HART slave +4..20mA output**

Description   Switches the simulation of the current on or off.

Selection	• Off
	• On

Factory setting	Off

Additional information	Read access	Operator
	Write access	Maintenance

Simulation value

Navigation	⊞⊟ Diagnostics → Simulation → Simulation value

Prerequisite	Current output simulation (→ 🖹 245) = On

Description	Defines the current to be simulated.

User entry	3.4 to 23 mA

Factory setting	The current at the time the simulation was started.

Additional information	Read access	Operator
	Write access	Maintenance
