Brief Operating Instructions
Liquiline Control CDC90

Automated cleaning and calibration of Memosens sensors

These instructions are Brief Operating Instructions; they are not a substitute for the Operating Instructions pertaining to the device.

Detailed information on the device can be found in the Operating Instructions and in the other documentation available at:
- www.endress.com/device-viewer
- Smart phone/tablet: Endress+Hauser Operations App

### 1.1 Symbols

- Additional information, tips
- Permitted or recommended
- Not permitted or not recommended
- Reference to device documentation
- Reference to page
- Reference to graphic
- Result of a step

#### 1.1.1 Symbols on the device

- Reference to device documentation

Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.
1.2 Documentation

The following manuals which are available on the product pages on the internet complement these Operating Instructions:

- Operating Instructions for Liquiline Control CDC90
  - Device description
  - Commissioning
  - Operation
  - Software description (excluding sensor menus; these are described in a separate manual - see below)
  - Device-specific diagnostics and troubleshooting
  - Maintenance
  - Repair and spare parts
  - Accessories
  - Technical data
- Operating Instructions for Memosens, BA01245C
  - Software description for Memosens inputs
  - Calibration of Memosens sensors
  - Sensor-specific diagnostics and troubleshooting
2 Basic safety instructions

2.1 Requirements for the personnel

- Installation, commissioning, operation and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- The technical personnel must be authorized by the plant operator to carry out the specified activities.
- The electrical connection may be performed only by an electrical technician.
- The technical personnel must have read and understood these Operating Instructions and must follow the instructions contained therein.
- Faults at the measuring point may only be rectified by authorized and specially trained personnel.

Repairs not described in the Operating Instructions provided must be carried out only directly at the manufacturer's site or by the service organization.

2.2 Intended use

Liquiline Control CDC90 is a fully automatic measuring, cleaning and calibration system for Memosens sensors. The system is fully equipped with power supply cables and a hose system.

2.2.1 Non-intended use

Use of the device for any purpose other than that described, poses a threat to the safety of people and of the entire measuring system and is therefore not permitted.

The manufacturer is not liable for damage caused by improper or non-designated use.

2.3 Workplace safety

As the user, you are responsible for complying with the following safety conditions:

- Installation guidelines
- Local standards and regulations
- Regulations for explosion protection

Electromagnetic compatibility

- The product has been tested for electromagnetic compatibility in accordance with the applicable international standards for industrial applications.
- The electromagnetic compatibility indicated applies only to a product that has been connected in accordance with these Operating Instructions.

2.4 Operational safety

Before commissioning the entire measuring point:

1. Verify that all connections are correct.
2. Ensure that electrical cables and hose connections are undamaged.
3. Do not operate damaged products, and protect them against unintentional operation.
4. Label damaged products as defective.
During operation:

- If faults cannot be rectified:
  products must be taken out of service and protected against unintentional operation.

⚠️ **CAUTION**

**Programs not switched off during maintenance activities.**
Risk of injury due to medium or cleaning agent!
- Quit any programs that are active.
- Switch to the Service Mode before you remove sensors from the assembly.
- If you need to test the cleaning function while cleaning is in progress, wear protective clothing, goggles and gloves or take other suitable measures to protect yourself.

2.5 **Product safety**

2.5.1 **State-of-the-art technology**
The product is designed to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. The relevant regulations and international standards have been observed.

2.6 **IT security**

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.

3 **Product description**

3.1 **Product design**
The complete Liquiline Control CDC90 consists of the following components:
- CDC90 control unit
- Pneumatic control unit
- Canister pump unit
- Ethernet switch

The system is available in different versions. Here is a complete overview comprising all of the system's modules.
1  Total view of CDC90

1  CDC90 control unit
2  Mounting plate
3  Ethernet switch
4  Pneumatic control unit
5  Canister for buffer solutions and cleaner
6  Canister holder

1 Extension of the output interface terminals for a 2nd measuring point
2 Extension of the pilot valves for a 2nd measuring point
4    Incoming acceptance and product identification

4.1    Incoming acceptance

1. Verify that the packaging is undamaged.
   Notify the supplier of any damage to the packaging.
   Keep the damaged packaging until the issue has been resolved.

2. Verify that the contents are undamaged.
   Notify the supplier of any damage to the delivery contents.
   Keep the damaged goods until the issue has been resolved.

3. Check that the delivery is complete and nothing is missing.
   Compare the shipping documents with your order.

4. Pack the product for storage and transportation in such a way that it is protected
   against impact and moisture.
   The original packaging offers the best protection.
   Make sure to comply with the permitted ambient conditions.

If you have any questions, please contact your supplier or your local Sales Center.

4.2    Product identification

4.2.1    Nameplate
The nameplate provides you with the following information on your device:
- Manufacturer identification
- Order code
- Serial number
- Ambient and process conditions
- Input and output values
- Safety information and warnings

Compare the information on the nameplate with the order.

4.2.2    Product identification

Product page
www.endress.com/cdc90

Interpreting the order code
The order code and serial number of your product can be found in the following locations:
- On the nameplate
- In the delivery papers

Obtaining information on the product

2. Page search (magnifying glass symbol): Enter valid serial number.
3. Search (magnifying glass).
   ➔ The product structure is displayed in a popup window.

4. Click the product overview.
   ➔ A new window opens. Here you fill information pertaining to your device, including the product documentation.

### 4.3 Scope of delivery

The scope of delivery comprises:
- 1 CDC90 control unit in the version ordered
- 1 pneumatic control unit
- Up to 3 pumps for supplying cleaner and buffer with canisters
- Up to 3 float switches, complete with cable to canisters
- 1 rinsing block with bracket for mounting on the process assembly
- 2 hose packages for compressed air and liquid; 3 hose packages if there is more than one measuring point
- 1 x Brief Operating Instructions (hard copy)
- Conduit adapter G 1/4" for hose 6/8 mm (ID/OD) for the assembly rinse connections: x 2 for 1 measuring point / x 4 for 2 measuring points
- USB stick
- In the case of 2 measuring points: 1 changeover valve to control the supply of medium to the two assemblies

The assemblies are pre-assembled on a mounting plate and pre-wired.

If you have any queries:
Please contact your supplier or local sales center.
5 Mounting

5.1 Mounting requirements
The device is intended for wall mounting.

Wall mounting as:
Panel

5.1.1 Installation site
Note the following when erecting the device:

1. Make sure that the wall has sufficient load-bearing capacity and is fully perpendicular.
2. Protect the device against additional heating (e.g. from heaters).
3. Protect the device against mechanical vibrations.
5.1.2 Dimensions

Dimensions of CDC90 control unit

Dimensions of field housing in mm (in)
Dimensions of pneumatic control unit

Dimensions of pneumatic control unit in mm (in)
Dimensions of canister holder

6 Dimensions of canister holder in mm (in)
7 Dimensions of canister with pump in mm (in)

Dimensions of rinsing block and changeover valve

8 Dimensions of rinsing block PVDF, in mm (in)
9  Dimensions of changeover valve, 2nd measuring point in mm (in)

Dimensions of mounting plate

10  Dimensions of mounting plate in mm (in)
5.2 Mounting the system

5.2.1 Wall mounting

⚠️ CAUTION

Risk of injury
The weight of the unit may result in crush injuries or other injuries.
- Mount the device in pairs.
- Use a suitable mounting tool.

The assemblies are pre-assembled on a mounting plate and pre-wired.

Distance sleeves (30 mm (1.2 in) distance) are included in the scope of delivery to secure the mounting plate on the wall.

11 Wall mounting

The mounting plate features drill holes for the bracket on the wall. The wall plugs and screws must be provided by the customer.

- Mount the mounting plate at the securing holes provided for this purpose and using the enclosed distance sleeves.

5.2.2 Maximum hose and cable length for one measuring point

The maximum length of the multihose is 10 m (32.8 ft) → 35.

- Shorten the hoses if necessary.

NOTICE
The rinsing block runs dry.
If the rinsing block is mounted below the canisters, the valves of the rinsing block open due to the pressure of the liquid and the canisters empty.
- Always mount the rinsing block and the assembly above the canisters.

5.2.3 Multihose bracket

Brackets for the multihoses are included in the scope of delivery. The wall plugs, screws and washers must be provided by the customer.
### 12 Multihose bracket

- Screw the bracket of the multihose onto the wall with washers.

### 5.2.4 Fix the rinsing block on the assembly

**CAUTION**

**Risk of injury**
Crush injuries or other injuries may occur.
- Use a suitable mounting tool, e.g. an Allen key.

**Rinsing block bracket on assembly**

### 13 Mounting the rinsing block bracket

1. Fit one half of the rinsing block bracket (1) on the assembly cylinder.
2. Fit the counterpart (3) on the assembly cylinder from the other side.
3. Connect the rinsing block bracket using the screws (2) provided.
Rinsing block on rinsing block bracket

- Secure the rinsing block panel (1) to the rinsing block bracket (2) using the screws (3) and washers (4) provided.

Fixing multihose on rinsing block

1. Guide the hoses through the opening on the rinsing block plate.
2. Use the counterpart to secure the cable gland.
Connecting the individual hoses in the multihose to the rinsing block valve

1. Unscrew the union nut of the valve.
2. Remove the union nut and the clamping ring located underneath it.
3. Guide the hose through the union nut and the clamping ring into the valve.
4. Using the clamping ring, secure the hose to the valve by pressing lightly on it.
5. Screw the union nut back onto the valve.

The hose is now firmly positioned in the valve.

5.2.5 Mounting the changeover valve for the 2nd measuring point

1. Guide the mounting plate with the changeover valve along the holder of the rinsing block.
Connect the two parts using the screws provided.

5.2.6 Mechanical connection

⚠️ CAUTION

Very loud pumps
The noise from the pumps can hurt the ears.
➤ Wear ear protectors in the vicinity of the pumps.

Connecting the medium and compressed air

Hose connection diagram
The system contains a hose package comprising:
Compressed air and rinsing hoses

⚠️ CAUTION

Excessive water temperatures will damage the rinsing hoses.
Risk of injury due to water vapor discharge.
➤ Ensure that the water temperature does not exceed 60 °C (140 °F).
14  Hose connection diagram for medium and compressed air for one measuring point

</tbody>
</table>

**Connecting compressed air supply**

**Compressed air supply**

When connecting, pay attention to the following:
- The compressed air line is to be provided by the customer.
- The compressed air is 4 to 6 bar (58 to 87 psi).
- The optimum operating air pressure is 6 bar (87 psi)
- The air must be filtered (50 μm) and free from oil and condensate.
- The internal diameter must be at least 6 mm (0.24 in).
- The outer diameter must be at least 8 mm (0.31 in).

**Hose specification**

<table>
<thead>
<tr>
<th>Hose</th>

<td>D 6/8 mm (0.24/0.31 in)</td>
</tr>
</tbody>
</table>
Connection in the pneumatic control unit

The hose system for the internal compressed air supply in the pneumatic control unit is already connected at the factory.

1. Guide the hose for the external compressed air supply into the cable gland provided on the pneumatic control unit.

2. Connect the hose for the compressed air supply to the supply for the pilot valve manifold.

Connecting multihoses

* M1 - air hoses from the pneumatic control unit to the rinsing block and assembly

M1 connection in the pneumatic control unit

The air hoses for the pilot valves in the pneumatic control unit are already connected at the factory.
The air hoses for the pilot valves are located in the hose package of the M1 multihose.

1. Guide hoses 1, 2, 3 and 4 of the M1 multihose into the cable gland provided on the pneumatic control unit.

2. Connect the hoses to the pilot valve manifold as follows:

<table>
<thead>
<tr>
<th>Pilot valve</th>
<th>Function</th>
<th>Hose number</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Compressed air control for assembly, measuring position</td>

<td>3</td>
</tr>
<tr>
<td>4</td>
<td>Compressed air control for process valve, purge air</td>
<td>4</td>
</tr>
</tbody>
</table>

M1 connection on rinsing block and assembly

3. Connect hose 1 to the connection for moving the assembly in the measuring position.
4. Connect hose 2 to the connection for moving the assembly in the service position.
5. Connect hose 3 to the compressed air control unit for the process valve for water on the rinsing block.

6. Connect hose 4 (compressed air control unit for the process valve for purge air) to the valve for purge air on the rinsing block.

### Connection on assemblies CPA87x and CPA471/472/472D/475

<table>
<thead>

</tbody>
</table>

### M2 - liquid hoses from pumps to rinsing block

#### M2 connection to pumps

The hoses for supplying liquid to the rinsing block are located in the hose package of the M2 multihose.

1. Connect the hoses to the pumps from left to right as follows:
## Hose number

<table>
<thead>
<tr>
<th>Hose number</th>
<th>Pump</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Pump 1 (left)</td>
<td>Liquid, canister 1</td>
</tr>

</tr>
<tr>
<td>C</td>
<td>Pump 3 (right)</td>
<td>Liquid, canister 3</td>
</tr>
</tbody>
</table>

2. Connect the hoses as follows for the transportation of cleaner and buffer at the pump:

![Connection of media](image1)

16. **Connection of media**

![Connection of float switch](image2)

17. **Connection of float switch**

### M2 connection to rinsing block

- Connect the hoses from the pumps to the valves of the rinsing block as follows:
<table>
<thead>
<tr>
<th>Hose number</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Liquid, canister 1</td>
</tr>
<tr>
<td>B</td>
<td>Liquid, canister 2</td>
</tr>
<tr>
<td>C</td>
<td>Liquid, canister 3</td>
</tr>
</tbody>
</table>

*M3 (2nd measuring point) - air hoses from the pneumatic control unit to the changeover valve and assembly of the 2nd measuring point*

**M3 connection in the pneumatic control unit**

The hoses on the pilot valves in the pneumatic control unit are already connected at the factory.
The hose package of the M3 multihose contains the following hoses:
- Changeover valve activation
- Assembly retraction

1. Guide the hoses of the M3 multihose into the cable gland provided on the pneumatic control unit.

2. Connect the hoses on the pilot valves in the pneumatic control unit as follows:

<table>
<thead>
<tr>
<th>Pilot valve</th>
<th>Function</th>
<th>Hose number</th>
</tr>
</thead>
<tbody>
<tr>
<td>9, 10</td>

</tr>
<tr>
<td></td>
<td>Compressed air control for changeover valve, bottom, 2nd measuring point</td>
<td>11</td>
</tr>
<tr>
<td>11</td>
<td>Compressed air control for assembly, measuring position, 2nd measuring point</td>
<td>9</td>
</tr>
<tr>
<td>12</td>
<td>Compressed air control for assembly, service position, 2nd measuring point</td>
<td>10</td>
</tr>
</tbody>
</table>
M3 connection to changeover valve and assembly of 2nd measuring point

1. Connect hose 8 to the upper connection of the changeover valve (to control the supply of medium to the first measuring point).
2. Connect hose 11 to the lower connection of the changeover valve (to control the supply of medium to the second measuring point).
3. Connect hose 9 to the connection for moving the assembly to the measuring position.
4. Connect hose 10 to the connection for moving the assembly to the service position.

Connection to assemblies CPA87x and CPA47x

</tbody>
</table>

Rinse pipe on rinsing block

- **Rinsing block**

1. Liquid, pump/ canister 1  
2. Liquid, pump/ canister 3  
3. Outlet rinse connection to assembly  
4. Liquid, pump/ canister 2  
5. Air rinsing block (pilot valve 4)  
6. Water connection  
7. Air process valve (pilot valve 3)
Connecting the rinse water

When connecting the water, pay attention to the following:
- The rinse water pipe is to be provided by the customer.
- The water pressure must be 3 to 6 bar (44 to 87 psi).

Pay attention to the quality of the rinse water. Particles larger than 100 μm should be filtered using a water filter.

1st measuring point

Two G1/4" adapters to a 6/8 mm hose are enclosed to adapt the rinse connections of the assembly. The assembly must have G 1/4" rinse connections.

20 Rinsing block with one assembly

1. Rinse the pipe thoroughly.
2. Connect the rinse water (6) to the water connection (5) of the rinsing block (4).
3. Connect the rinse chamber connection (3) on the rinsing block to the rinse connection (2) of the assembly (1).

2nd measuring point

Four G1/4" adapters to a 6/8 mm hose are enclosed to adapt the rinse connections of the assemblies. The assemblies must have G 1/4" rinse connections.

The supply of medium for both assemblies is regulated by the changeover valve.
Rinsing block with 2 assemblies (1st and 2nd measuring point)

1. Rinse the pipe thoroughly.
2. Connect the rinse water (7) to the water connection (6) of the rinsing block.
3. Connect the rinse chamber connection (4) on the rinsing block (5) to the rinse connection (3) of the changeover valve (2).
4. Connect the rinse connections of the assemblies (1) to the rinse connections of the changeover valve, 1st measuring point on right, 2nd measuring point on left.

Shortening the multihoses

The hoses in the multihose must be altered depending on the distance.

1. Unscrew the M3 multihose from the rinsing block.
2. Remove the corrugated hose (outer sheathing of the multihose) from the fastener and the plug.
3. Guide the hoses and cables further inside the corrugated hose so that they can be pulled out at the other end.
4. Pull out the hoses and cables to the point where the corrugated hose should be shortened.
5. Carefully cut into the corrugated hose. Take care not to damage the inner hoses or cables.
6. Shorten the corrugated hose to the desired length.
7. Pull the hoses through the fastener and the plug.
8. Secure the corrugated hose to the bracket.

The total length of the hoses to measuring points 1 and 2 may not exceed 10 m (32.8 ft).
**Connecting the pump**

**Compressed air control**

The compressed air control of the pumps is already connected ex works.

- For the compressed air control of the pumps, connect the 4 mm (0.16 in) tube piece provided and the 4 to 6 mm (0.16 to 0.24 in) conduit adapter as follows:
Connecting the compressed air control

<table>
<thead>
<tr>
<th>Pilot valve</th>
<th>Function</th>
<th>Hose number</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Pump 1, liquid canister 1 (left)</td>
<td>5</td>
</tr>
<tr>
<td>6</td>
<td>Pump 2, liquid canister 2 (center)</td>
<td>6</td>
</tr>
<tr>
<td>7</td>
<td>Pump 3, liquid canister 3 (right)</td>
<td>7</td>
</tr>
</tbody>
</table>

5.3 Post-mounting check

1. Following the installation, check all devices for damage.
2. Verify that the specified installation clearances have been observed.
3. Ensure that the temperature limits are observed at the mounting location.
4. Verify that all hoses are securely mounted and leak-tight.
5. Verify that all multihoses are positioned in such a way that they are protected.
6 Electrical connection

6.1 Connecting requirements

**NOTICE**

The device does not have a power switch

- A fuse with a maximum rating of 16 A must be provided by the customer. Observe the local regulations for installation.
- The circuit breaker must be a switch or power switch, and must be labeled as the circuit breaker for the device.
- The protective ground connection must be made before all other connections. If the protective ground is disconnected, this can be a source of danger.
- The circuit breaker must be located near the device.

1. Make sure to establish a sufficient connection of at least 0.75 mm² (0.029 in²) to the housing protective ground system.
2. Ensure the mechanical loading capacity of the feed cables complies with the conditions at the place of installation.

Only the mechanical and electrical connections which are described in these instructions, and which are necessary for the required, designated use, may be established on the device delivered.

- Exercise care when carrying out the work.

Supply voltage:

100 to 230 V AC

Fluctuations in the line voltage may not exceed ± 10 %.

6.2 Connecting the CDC90 control unit

**WARNING**

Device is live!
Incorrect connection may result in injury or death!

- The electrical connection may be performed only by an electrical technician.
- The electrical technician must have read and understood these Operating Instructions and must follow the instructions contained therein.
- Prior to commencing connection work, ensure that no voltage is present on any cable.

6.2.1 Cable gland assignment

The CDC90 control unit is already wired at the factory.
### 23 CDC90 control unit cable gland

<table>
<thead>
<tr>
<th>Wiring</th>
<th>Designation</th>

</tbody>
</table>

#### 6.2.2 Modules of the CDC90 control unit

**Modules:**
- Slot 1: base module BASE2-E (contains 2 sensor inputs, 2 current outputs)
- Slot 2-3: empty
- Slot 4: module 2AI (2 current inputs)
- Slot 5-6: 2x module DIO
- Slot 7: retrofittable: module 4AO (4 current outputs)

**Example of terminal name:**
6.2.3 Opening the CDC90 control unit

**NOTICE**

Pointed or sharp tools

The use of unsuitable tools can cause scratches on the housing or damage to the seal, and therefore negatively affect the leak-tightness of the housing!

- Do not use any sharp or pointed objects, e.g. a knife, to open the housing.
- Only use a suitable Phillips screwdriver.

1. Slacken the housing screws crosswise.
2. To close the housing: tighten the screws in a similar step-by-step, crosswise sequence.
6.2.4 Connecting the cable shield

Only use terminated original cables where possible. The sensor cable, fieldbus cable and Ethernet cable must be shielded cables.

Clamping range of cable clamps: 4 to 11 mm (0.16 to 0.43 in)

Sample cable (does not necessarily correspond to the original cable supplied)

1. Outer shield (exposed)
2. Cable cores with ferrules
3. Cable sheath (insulation)

1) Please pay attention to the instructions in the "Ensuring the degree of protection" section

1. Loosen a suitable cable gland on the bottom of the housing.
2. Remove the dummy plug.
3. Attach the gland to the cable end, making sure the gland is facing the right direction.
4. Pull the cable through the gland and into the housing.
5. Route the cable in the housing in such a way that the exposed cable shield fits into one of the cable clamps and the cable cores can be easily routed as far as the connection plug on the electronics module.
6. Connect the cable to the cable clamp.
7. Clamp the cable.
8. Connect cable cores as per the wiring diagram.
9. Tighten the cable gland from outside.
6.2.5  Cable terminals

Plug-in terminals for Memosens connections

- Press the screwdriver against the clip (opens the terminal).
- Insert the cable until the limit stop.
- Remove the screwdriver (closes the terminal).

- After connection, make sure that every cable end is securely in place. Terminated cable ends, in particular, tend to come loose easily if they have not been correctly inserted as far as the limit stop.

All other plug-in terminals

- Press the screwdriver against the clip (opens the terminal).
- Insert the cable until the limit stop.
- Remove the screwdriver (closes the terminal).

6.2.6  Connecting the supply voltage for the CDC90 control unit

"H" cable gland

The supply voltage for the CDC90 control unit is already wired at the factory.
Guide the cable of the supply voltage through the cable gland "H" provided.

6.3 Connecting the sensors

6.3.1 Sensor types

Sensors with Memosens protocol

<table>
<thead>
<tr>
<th>Sensor types</th>
<th>Sensor cable</th>
<th>Sensors</th>
</tr>
</thead>
</table>
| Digital sensors without additional internal power supply | With plug-in connection and inductive signal transmission  | • pH sensors  
|                                                  |                                                           | • ORP sensors  
|                                                  |                                                           | • Combined pH/ORP sensors       |
> Guide the sensor cable of the 1st measuring point through cable gland "6" provided.

Cable gland "7" is provided for the sensor of the 2nd measuring point.

**Connecting the sensor cable**

1. **Sensor cable connected directly**
   Connect the sensor cable to the terminal connector of the BASE2-E module.

2. **When connecting via M12 connector:**
   Connect the sensor connector to an M12 sensor socket which has been previously installed or is supplied on delivery.
30 Direct connection of sensors without additional supply voltage

6.4 Connecting additional inputs and outputs

WARNING
Module not covered
No shock protection. Danger of electric shock!
- Only the 4AO module can be retrofitted at slot 7. Other hardware must not be modified.
- If additional shields are required, connect them with PE centrally in the control cabinet via terminal blocks supplied by the customer.
6.4.1  Digital inputs and outputs

For monitoring the compressed air and the float switches.

Connecting the DIO

**Digital I/O connection to the actuator terminal in the pneumatic control unit**

<table>

**Input for control signal from soft keys.**

1. Input for control signal from soft keys.
2. Input for control signal from control station to control the implementation of the program remotely.
6.4.3 Current outputs

Transmission of the status signals from the measuring point to the control system.

1. Output to control the status LED on the CDC90 control unit
2. Output to transmit the status signals from the measuring point to the control system

Optional: additional 4AO module for measured values.
Transmission of the measured values (user-definable) from the measuring point to the control system.

6.5 Connecting digital communication

6.5.1 Connecting the Ethernet

**CAUTION**

Electric shock!
- The connected external devices must be insulated against dangerous voltages that may occur.
Connecting the Ethernet switch communication cable to the CDC90 control unit

The communication between the CDC90 control unit and the Ethernet switch is already wired at the factory.

1. Connect the Ethernet adapter cable W19 to the Ethernet connection of the BASE2-E module (3).

2. Connect the Ethernet adapter cable W24 to cable gland "8" provided.

3. Connect the EtherNet adapter cable at the EtherNet switch (1) to the connection (2) provided for this purpose.
Connecting the Ethernet switch communication cable to the pneumatic control unit

The Ethernet cable for internal communication between the Ethernet switch and the pneumatic control unit is already wired at the factory.

![Diagram of Ethernet switch connection](image)

37 Wiring of the Ethernet switch at the fieldbus interface
1. Connection on Ethernet switch
2. Ethernet switch
3. Pneumatic control unit
4. Fieldbus interface IN1 of the bus node

1. Connect the communication cable (W22) at the Ethernet switch (2) to the connection (1).
2. Connect the W22 cable to cable gland "4" of the pneumatic control unit (3) from below.
3. Connect the W20 cable in the pneumatic control unit (3) to cable gland "4" from the inside.
   - The W22 and W20 cables form a bridge.
4. Connect the W20 cable in the pneumatic control unit (3) to the fieldbus interface IN1 of the bus node (4).

Connecting the supply voltage of the Ethernet switch

The supply voltage of the Ethernet switch is already wired in the pneumatic control unit at the factory.
Wiring of the Ethernet switch at terminals XL

1. Connect the supply voltage (W9) at the Ethernet switch (1) to the connection (2).
2. Guide the W9 cable into the cable gland "9" of the pneumatic control unit.
3. Connect the wires as follows (3):

<table>
<thead>
<tr>
<th>Terminal -XL+</th>
<th>Cable wire</th>
</tr>

</tr>
</tbody>
</table>

6.5.2 Connecting the IPC

The IPC is already connected to the Ethernet switch at the factory.
Open the CDC90 control unit.
2. Connect the W18 adapter cable in the CDC90 control unit to cable gland "8" from the inside.
3. In the CDC90 control unit, connect the W18 adapter cable to IPC (1).
4. Connect the W23 cable on the outside of the CDC90 control unit to cable gland "8". The W18 and W23 cables form a bridge.
5. Connect cable W23 at the Ethernet switch to the connection (2) provided.

6.6 Connecting the pneumatic control unit

6.6.1 Cable gland assignment

The hoses in the pneumatic control unit are already connected at the factory.
The multi-core signal cable between the CDC90 control unit and the pneumatic control unit is routed into the pneumatic control unit via the actuator terminals and is prewired. See.

6.6.2 Connecting float switches and compressed air switches

1. Guide the wires of cables W4, W5 and W6 through cable gland “8” provided.
2. Connect the cable wires to the actuator terminal in the pneumatic control unit as follows:

<table>
<thead>
<tr>
<th>Terminal X2, top</th>
<th>Cable wire</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>W4, BK</td>
<td>Float switch, cleaner</td>

</tbody>
</table>
6.6.3 **Assemblies**

CDC90 is designed for the following assemblies:
- Cleanfit CPA47x
- Cleanfit CPA871/CPA875

**Limit position switches**

*Cleanfit CPA471/472/472D/475*

Assemblies with pneumatic limit position switches must be converted to electrical limit position switches.

**Monitoring of assembly position**

![Diagram](image)

### 40 Compressed air control CPA471/472/472D/475

Connect the connections for the position feedback signal in the pneumatic control unit as follows:

**Connection at output interface terminal in the pneumatic control unit**

<table>

</tbody>
</table>

### 6.8 Connecting the main supply voltage

- The cable for the supply voltage must be provided by the customer onsite and is not included in the scope of delivery.

**NOTICE**

The device does not have a power switch
- A fuse with a maximum rating of 16 A must be provided by the customer. Observe the local regulations for installation.
- The circuit breaker must be a switch or power switch, and must be labeled as the circuit breaker for the device.
- The protective ground connection must be made before all other connections. If the protective ground is disconnected, this can be a source of danger.
- A circuit breaker must be located near the device.
Preparing the main supply voltage

1. Ensure an adequate connection to the protective grounding system of the building.
2. Use a ground cable with min. 0.75 mm² (corresponding to 18 AWG), not included in the scope of delivery.

Connecting the main supply voltage

1. Guide the cable of the main supply voltage through cable gland "3" of the pneumatic control unit.
2. Connect the wires to the actuator terminal as follows:

<table>
<thead>
<tr>
<th>Terminal X1, bottom</th>
<th>Cable wire</th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>
<td>L1, BN</td>
</tr>
<tr>
<td>PE</td>
<td>PE, GN-YE</td>
</tr>
<tr>
<td>N</td>
<td>N, BU</td>
</tr>
</tbody>
</table>
6.9 Ensuring the degree of protection

Only the mechanical and electrical connections which are described in these instructions and which are necessary for the required, designated use, may be carried out on the device delivered.

- Exercise care when carrying out the work.

Individual types of protection permitted for this product (impermeability (IP), electrical safety, EMC interference immunity, Ex protection) can no longer be guaranteed if, for example:
  - Covers are left off
  - Different power units to the ones supplied are used
  - Cable glands are not sufficiently tightened (must be tightened with 2 Nm (1.5 lbf ft) for the permitted level of IP protection)
  - Unsuitable cable diameters are used for the cable glands
  - Modules are not fully secured
  - The display is not fully secured (risk of moisture entering due to inadequate sealing)
  - Loose or insufficiently tightened cables/cable ends
  - Conductive cable strands are left in the device
6.10 Post-connection check

WARNING

Connection errors
The safety of people and of the measuring point is at risk! The manufacturer does not accept any responsibility for errors that result from failure to comply with the instructions in this manual.

- Put the device into operation only if you can answer yes to all the following questions.

Device condition and specifications
- Are the device and all the cables free from damage on the outside?

Electrical connection
- Are the mounted cables strain relieved?
- Are the cables routed without loops and cross-overs?
- Are the signal cables correctly connected as per the wiring diagram?
- Have all the other connections been established correctly?
- Are unused connection wires connected to the protective ground connection?
- Are all plug-in terminals securely engaged?
- Are all the connection wires securely positioned in the cable terminals?
- Are all cable entries mounted, tightened and leak-tight?
- Does the supply voltage match the voltage indicated on the nameplate?
7  Operation options

7.1  Overview of operation options

7.1.1  Display and operating elements

<p>| | |</p>
<table>
<thead>
<tr>

For two measuring points: display and navigation to measuring point 2 and display of pH value or ORP value in mV |
| 5    | User profile display and log-in |
| 6    | Operating mode |
| 7    | Overview of main menu |
| 8    | Navigation |

Operation is via four main menus:

<table>
<thead>
<tr>
<th>Menu</th>
<th>Function</th>
</tr>
</thead>
</table>
| Guidance   | • Guided operation to schedule and execute programs.  
• Import and export files and settings. |
| Diagnostics| Contains information about device operation, diagnostics, troubleshooting and simulation. |
7.3 **Access to the operating menu via the Web browser**

The same menu options are available via the Web server as for the onsite display.

- Enter the following path: **192.168.0.1:8080/cdc90.htm**

If the IP address of the IPC has changed:

The correct IP address of the IPC followed by `.8080/cdc90.htm`

8 **System integration**

8.1 **Integrating the measuring device in the system**

8.1.1 **Web server**

**Establishing the data connection**

**NOTICE**

Depending on the load on the network, EtherCat can cause failures in the CDC90 IPCs if several CDC 90 devices are integrated.

- In the case of Modbus without a gateway, a physical separation must be established at the installation location with a VLAN-capable switch, e.g. Layer 2 Managed Switch (VLAN Capable).

The Ethernet settings of the **DHCP** parameter must be switched off for the device to have a valid IP address. *(Menu/Setup/General settings/Extended setup/Ethernet/Settings)*

The IP address can be assigned manually in the same menu (for point-to-point connections).

1. Start the PC.
2. First, configure a manual IP address in the network connection settings of the operating system.
3. Start the browser.
4. If you use a proxy server to connect to the Internet:
   Disable the proxy (browser settings under "Connections/LAN settings").
5. Enter the IP address of the device (192.168.0.1:8080/cdc90.htm) in the address line.
   The system takes a few moments to establish the connection and then the Web server starts.
Example: Microsoft Windows 10

6. Open Network and Sharing Center.
   - Apart from your standard network, it should also be possible to see an additional Ethernet connection (e.g. as "Unidentified network").

7. Select the link to this Ethernet connection.

8. In the pop-up window select the "Properties" button.

10. Select "Use the following IP Address".

11. Enter the desired IP address. This address must be in the same subnet as the IP address of the device, e.g.:
   - IP address CDC90: 192.168.0.1
   - IP address for the PC: 192.168.0.99.

12. Start the Internet browser.

13. If you use a proxy server to connect to the Internet:
   Disable the proxy (browser settings under "Connections/LAN settings").

14. Enter the IP address of your device in the address line.
   - The system takes a few moments to establish the connection and then the Web server starts.

Operation

The menu structure of the web server corresponds to the onsite operation.

8.1.2 Fieldbus systems

NOTICE

The device uses an EtherCat connection for internal communication. Depending on the load on the network, EtherCat can cause failures in the CDC90 IPCs if several CDC90 devices are integrated in the same network.

- To reduce the network load in the event of a Modbus TCP connection, the networks must be separated. A physical separation with a VLAN-capable switch, e.g. Layer 2 Managed Switch (VLAN Capable), or a software-based separation are possible.

Connection

The following communication options are available in the CDC90 control unit:
- Analog current inputs and outputs
  - Activation is via the analog current input (AI).
  - Feedback is via the analog current output (AO).
  - The settings must be implemented via the Web server or the local display.
- EtherNet/IP (adapter)
- PROFIBUS DP (slave)
- Modbus TCP (server)
- PROFINET (device)
Connection of PROFINET and PROFIBUS DP via gateway

The gateway must be installed externally. A 3 m (3.28 ft) Ethernet cable is provided. The cable to the distributed control system must be provided by the customer.

1. For connection to the CDC90, connect the Ethernet cable (4) at the top of the gateway.
2. Connect the end piece to the Ethernet switch (1).
3. For connection to the DCS, connect the cable for communication (5) at the bottom of the gateway.
4. Connect the end piece to the DCS (3).

Connection of EtherNet/IP via gateway

The gateway must be installed externally. A 3 m (3.28 ft) Ethernet cable is provided. The cable to the distributed control system must be provided by the customer.
**48 EtherNet/IP communication connection**

1. *Ethernet switch on CDC90*
2. *Gateway*
3. *Distributed control system DCS*
4. *Ethernet cable, CDC90/gateway communication*
5. *Communication connection, gateway/distributed control system DCS*

1. For connection to the CDC90, connect the Ethernet cable (4) at the bottom of the gateway.
2. Connect the end piece to the Ethernet switch (1).
3. For connection to the DCS, connect the cable for communication (5) at the top of the gateway.
4. Connect the end piece to the DCS (3).

**Modbus TCP connection to Ethernet switch**

1. For connection to the CDC90, connect the Ethernet cable to the Ethernet switch.
2. Connect the end piece to the DCS.

**Ethernet cable assignment**

More detailed information on fieldbus communication is provided on the product pages on the Internet:

- EtherNet/IP (adapter) via gateway Modbus TCP - EtherNet/IP: BA02241C
- Modbus TCP (server): BA02238C
- PROFIBUS DP (slave) via gateway Modbus TCP - PROFIBUS DP: BA02239C
- PROFINET (device) via gateway Modbus TCP - PROFINET: BA02240C

9 Commissioning

9.1 Starting commissioning

Initial commissioning is performed by Endress+Hauser specialists.
