1.3 Documentation

Technical Information Memosens CLS15E, TI01526C

In addition to these Operating Instructions, an XA with "Safety instructions for electrical apparatus in the hazardous area" is also included with sensors for use in the hazardous area. Please follow instructions on use in the hazardous area carefully.
2 Basic safety instructions

2.1 Requirements for the personnel

- Installation, commissioning, operation and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- The technical personnel must be authorized by the plant operator to carry out the specified activities.
- The electrical connection may be performed only by an electrical technician.
- The technical personnel must have read and understood these Operating Instructions and must follow the instructions contained therein.
- Faults at the measuring point may only be rectified by authorized and specially trained personnel.

Repairs not described in the Operating Instructions provided must be carried out only directly at the manufacturer's site or by the service organization.

2.2 Intended use

The conductivity sensor is designed for the conductive measurement of the conductivity of liquids.

It is used in the following areas:
Measurements in pure and ultrapure water

Use of the device for any purpose other than that described, poses a threat to the safety of people and of the entire measuring system and is therefore not permitted.

The manufacturer is not liable for damage caused by improper or non-designated use.

2.3 Workplace safety

As the user, you are responsible for complying with the following safety conditions:
- Installation guidelines
- Local standards and regulations
- Regulations for explosion protection

Electromagnetic compatibility
- The product has been tested for electromagnetic compatibility in accordance with the applicable international standards for industrial applications.
- The electromagnetic compatibility indicated applies only to a product that has been connected in accordance with these Operating Instructions.

2.4 Operational safety

Before commissioning the entire measuring point:
1. Verify that all connections are correct.
2. Ensure that electrical cables and hose connections are undamaged.
3. Do not operate damaged products, and protect them against unintentional operation.
4. Label damaged products as defective.
During operation:

- If faults cannot be rectified:
  products must be taken out of service and protected against unintentional operation.

2.5  Product safety

The product is designed to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. The relevant regulations and international standards have been observed.

3  Incoming acceptance and product identification

3.1  Incoming acceptance

1. Verify that the packaging is undamaged.
   ➔ Notify the supplier of any damage to the packaging.
   Keep the damaged packaging until the issue has been resolved.

2. Verify that the contents are undamaged.
   ➔ Notify the supplier of any damage to the delivery contents.
   Keep the damaged goods until the issue has been resolved.

3. Check that the delivery is complete and nothing is missing.
   ➔ Compare the shipping documents with your order.

4. Pack the product for storage and transportation in such a way that it is protected against impact and moisture.
   ➔ The original packaging offers the best protection.
   Make sure to comply with the permitted ambient conditions.

If you have any questions, please contact your supplier or your local Sales Center.

3.2  Product identification

3.2.1  Nameplate

The nameplate provides you with the following information on your device:
- Manufacturer identification
- Extended order code
- Serial number
- Safety information and warnings

- Compare the information on the nameplate with the order.
3.2.2  Product identification

Product page
www.endress.com/cls15e

Interpreting the order code
The order code and serial number of your product can be found in the following locations:
- On the nameplate
- In the delivery papers

Obtaining information on the product
2. Page search (magnifying glass symbol): Enter valid serial number.
3. Search (magnifying glass).
   The product structure is displayed in a popup window.
4. Click the product overview.
   A new window opens. Here you fill information pertaining to your device, including the product documentation.

Manufacturer's address
Endress+Hauser Conducta GmbH+Co. KG
Dieselstraße 24
D-70839 Gerlingen

3.3  Scope of delivery
The scope of delivery includes:
- Sensor in the version ordered
- Operating Instructions

4  Mounting

4.1  Mounting requirements
The sensors are installed directly via the process connection, e.g. Clamp.
As an option, the sensor can also be installed using a commercially available T-piece or cross fitting or using a flow assembly.

- **1** With NPT $\frac{1}{2}''$ thread in T-piece or cross fitting
  1. T-piece or cross fitting (DN 32, 40 or 50)
  2. Glue-in VC threaded coupling (NPT $\frac{1}{2}''$ for DN 20)
  3. Glue-in adapter coupling (for DN 32, 40, 50)

- **2** With NPT $\frac{1}{2}''$ thread in flow assembly 71042405, dimensions in mm (inch)
  1. Sensor holder NPT $\frac{1}{2}''$
  2. Inlet
  3. Outlet

If using the sensor in the ultrapure water range, you must work under air-evacuated conditions.

- Otherwise, the CO$_2$ in the air can dissolve in the water and its (weak) dissociation can increase the conductivity by up to 3 µS/cm.
4.2 Mounting the sensor

1. **NOTICE**
   **Incorrect mounting or disassembly**
   The head could become loose and fall off, resulting in total sensor failure!
   - Only mount the sensor via the process connection.
   - To do so, use a suitable tool, such as an open-ended wrench.

   Install the sensor via the process connection or an assembly.

2. Ensure that the electrodes are fully immersed in the medium during measurement.
   Immersion depth: at least 35 mm (1.38").

4.3 Post-mounting check

1. Are the sensor and cable undamaged?
2. Is the sensor installed in the process connection and is not suspended from the cable?

5 Electrical connection

**WARNING**
Device is live!
Incorrect connection may result in injury or death!
- The electrical connection may be performed only by an electrical technician.
- The electrical technician must have read and understood these Operating Instructions and must follow the instructions contained therein.
- Prior to commencing connection work, ensure that no voltage is present on any cable.
5.1 Connecting the sensor

The electrical connection of the sensor to the transmitter is established using the measuring cable CYK10.

![Diagram of cable connections]

### NOTICE

#### Mechanical twist protection

If too much force is applied to the Memosens head, this can shear the connections and therefore destroy the sensor!

- There is no need to exert excessive force when connecting the sensor to the cable coupling. Proceed with care!
- If the Memosens coupling clearly will not close, check the coupling for dirt or mechanical damage, and make sure that you are turning it in the right direction. Pay attention to the lock symbol on the coupling!
- If necessary, use a different Memosens cable.

5.2 Ensuring the degree of protection

Only the mechanical and electrical connections which are described in these instructions and which are necessary for the required, designated use, may be carried out on the device delivered.

- Exercise care when carrying out the work.

Otherwise, the individual types of protection (Ingress Protection (IP), electrical safety, EMC interference immunity) agreed for this product can no longer be guaranteed due, for example to covers being left off or cable (ends) that are loose or insufficiently secured.

5.3 Post-connection check

### WARNING

#### Connection errors

The safety of people and of the measuring point is at risk! The manufacturer does not accept any responsibility for errors that result from failure to comply with the instructions in this manual.

- Put the measuring point into operation only if you can answer **yes** to all the following questions.

**Product status and specifications**

- Are the sensor and cable free from damage on the outside?
Electrical connection
- Is the installed cable strain-relieved and not twisted?
- Is a sufficient length of the cable cores stripped, and are the cores correctly positioned in the terminal on the transmitter?
- Are all plug-in terminals on the transmitter securely engaged?
- Are all cable entries mounted on the transmitter, tightened and leak-tight?

6 Commissioning

Prior to initial commissioning, ensure that:
- The sensor is correctly installed
- The electrical connection is correct

1. Check the temperature compensation and damping settings on the transmitter.

Operating Instructions of the transmitter being used, e.g. BA01245C if using Liquiline CM44x or CM44xR.

⚠️ WARNING
Escaping process medium
Risk of injury from high pressure, high temperatures or chemical hazards!
- Before applying pressure to an assembly with cleaning system, ensure that the system has been connected correctly.
- If you cannot reliably establish the correct connection, do not install the assembly in the process.

If using an assembly with automatic cleaning function:
2. Check that the cleaning medium (water or air, for example) is connected correctly.
3. Following commissioning:
   Maintain the sensor at regular intervals.
   This is the only way to ensure a reliable measurement.

As the sensor can be operated with a nominal pressure greater than 1 bar (15 psi), it has been registered according to CSA B51 (“Boiler, pressure vessel, and pressure piping code”; category F) with a CRN (Canadian Registration Number) in all Canadian provinces.
The CRN is located on the nameplate.
7 Maintenance

**WARNING**

**Thiocarbamide**
Harmful if swallowed! Limited evidence of carcinogenicity! Possible risk of harm to the unborn child! Dangerous for the environment with long-term effects!
- Wear protective goggles, protective gloves and appropriate protective clothing.
- Avoid all contact with the eyes, mouth and skin.
- Avoid discharge into the environment.

**CAUTION**

**Corrosive chemicals**
Risk of chemical burns to the eyes and skin and risk of damage to clothing and equipment!
- It is absolutely essential to protect the eyes and hands properly when working with acids, alkalis and organic solvents!
- Wear protective goggles and safety gloves.
- Clean away splashes on clothes and other objects to prevent any damage.
- Comply with instructions in the safety data sheets for the chemicals used.

Clean away fouling on the sensor as follows depending on the type of fouling:

1. **Oily and greasy films:**
   Clean with a grease remover, e.g. alcohol, or hot water and a surfactant-containing (basic) agent (e.g. washing-up liquid).

2. **Lime and metal hydroxide buildup and low solubility (lyophobic) organic buildup:**
   Dissolve buildup with diluted hydrochloric acid (3 %) and then rinse thoroughly with plenty of clear water.

3. **Sulfidic buildup (from flue gas desulfurization or wastewater treatment plants):**
   Use a mixture of hydrochloric acid (3 %) and thiocarbamide (commercially available) and then rinse thoroughly with plenty of clear water.

4. **Buildup containing protein (e.g. in the food industry):**
   Use a mixture of hydrochloric acid (0.5 %) and pepsin (commercially available) and then rinse thoroughly with plenty of clear water.

5. **Readily soluble biological buildup:**
   Rinse with pressurized water.

After cleaning, rinse the sensor thoroughly with plenty of water.
8 Repair

8.1 General information
The repair and conversion concept provides for the following:
- The product has a modular design
- Spare parts are grouped into kits which include the associated kit instructions
- Only use original spare parts from the manufacturer
- Repairs are carried out by the manufacturer's Service Department or by trained users
- Certified devices can only be converted to other certified device versions by the manufacturer's Service Department or at the factory
- Observe applicable standards, national regulations, Ex documentation (XA) and certificates

1. Carry out the repair according to the kit instructions.
2. Document the repair and conversion and enter, or have entered, in the Life Cycle Management tool (W@M).

8.2 Spare parts
Device spare parts that are currently available for delivery can be found on the website:
www.endress.com/device-viewer

- Quote the serial number of the device when ordering spare parts.

8.3 Return
The product must be returned if repairs or a factory calibration are required, or if the wrong product was ordered or delivered. As an ISO-certified company and also due to legal regulations, Endress+Hauser is obliged to follow certain procedures when handling any returned products that have been in contact with medium.

To ensure the swift, safe and professional return of the device:
- Refer to the website www.endress.com/support/return-material for information on the procedure and conditions for returning devices.

8.4 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.
9 Accessories

The following are the most important accessories available at the time this documentation was issued.

- For accessories not listed here, please contact your Service or Sales Center.

9.1 Threaded and adapter couplings

For sensors with NPT ½" process connection

**PVC threaded coupling**
- For gluing into commercially available PVC cross fittings or T-pieces with DN 20
- With G½ internal thread, self-sealing with NPT ½" sensor thread
- Order No. 50066536

**PVDF threaded coupling**
- With G½ internal thread and G1 external thread
- Explosion-proof up to 12 bar at 20 °C (174 psi at 68 °F), max. 120 °C at 1 bar (248 °F at 14.5 psi), including O-ring
- Self-sealing internal thread with NPT ½" sensor thread
- Order No. 50004381

**PVC adapter couplings AM**
- For adapting the PVC threaded coupling to larger nominal diameters
- Diameter, order numbers:
  - AM 32: for cross-fittings or T-pieces DN 32, Order No. 50004738
  - AM 40: for cross-fittings or T-pieces DN 40, Order No. 50004739
  - AM 50: for cross-fittings or T-pieces DN 50, Order No. 50004740

9.2 Flow assembly

**Flowfit CYA21**
- Universal assembly for analysis systems in industrial utilities
- Product Configurator on the product page: [www.endress.com/CYA21](http://www.endress.com/CYA21)

![Technical Information TI01441C](#)

9.3 Measuring cable

**Memosens data cable CYK10**
- For digital sensors with Memosens technology
- Product Configurator on the product page: [www.endress.com/cyk10](http://www.endress.com/cyk10)

![Technical Information TI00118C](#)

**Memosens data cable CYK11**
- Extension cable for digital sensors with Memosens protocol
- Product Configurator on the product page: [www.endress.com/cyk11](http://www.endress.com/cyk11)

![Technical Information TI00118C](#)
9.4  Calibration solutions

Conductivity calibration solutions CLY11

Precision solutions referenced to SRM (Standard Reference Material) by NIST for qualified calibration of conductivity measuring systems in accordance with ISO 9000

- CLY11-A, 74 μS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
  Order No. 50081902
- CLY11-B, 149.6 μS/cm (reference temperature 25 °C (77 °F)), 500 ml (16.9 fl.oz)
  Order No. 50081903

9.5  Calibration set

Conducal CLY421

- Conductivity calibration set (case) for ultrapure water applications
- Complete, factory-calibrated measuring system with certificate, traceable to SRM by NIST and PTB, for comparison measurement in ultrapure water up to max. 20 μS/cm
- Product Configurator on the product page: www.endress.com/cly421

10  Technical data

</table>
10.1.4 Temperature compensation
Pt1000 (Class A according to IEC 60751)

10.2 Performance characteristics

10.2.1 Measuring uncertainty
Each individual sensor is factory-measured in a solution with approx. 5 μS/cm for cell constant 0.01 cm\(^{-1}\) or approx. 50 μS/cm for cell constant 0.1 cm\(^{-1}\) using a reference measuring system traceable to NIST or PTB. The exact cell constant is entered into the manufacturer certificate supplied. The uncertainty of measurement in determining the cell constant is 1.0 %.

10.2.2 Response time

10.3 Environment

10.3.1 Ambient temperature
-20 to 60 °C (-4 to 140 °F)

10.3.2 Storage temperature
-25 to +80 °C (-10 to +180 °F)

10.3.3 Degree of protection
IP 68 / NEMA type 6P (1.9 m water column, 20 °C, 24 h)
10.4  Process

10.4.1  Process temperature

Normal operation  -20 to 120 °C (-4 to 248 °F)
Sterilization (max. 1 h)  1) Max. 140 °C (284 °F)

1) Threaded versions: max. 30 minutes

10.4.2  Process pressure

13 bar (188 psi) absolute, at 20 °C (68 °F)
2 bar (29 psi) absolute, at 120 °C (248 °F)

10.4.3  Temperature/pressure ratings

4  Mechanical pressure-temperature resistance

A  Can be sterilized for a short time (1 hour)

10.5  Mechanical construction

10.5.1  Weight

Approx. 0.3 kg (0.66 lbs) depending on version

10.5.2  Materials (in contact with medium)

Electrodes  Polished, stainless steel 1.4435 (AISI 316L)
Sensor shaft  Polyethersulfone (PES-GF20)
O-ring, in contact with medium (only Clamp version)  EPDM
10.5.3 Materials (not in contact with medium)

Information according to REACH Regulation (EC) 1907/2006 Art. 33/1)
An internal connector contains the SVHC substance lead (CAS number 7439-92-1) with over 0.1 % (w/w).
The product does not present a hazard if it is used as designated.

10.5.4 Process connection

Thread NPT ½" and ¾"
Clamp 1½" as per ISO 2852

10.5.5 Surface roughness

$R_a \leq 0.8 \mu m$
