# Brief Operating Instructions <br> Liquiphant FTL31 

Point level switch for liquids

These Brief Operating Instructions are not a substitute for the Operating Instructions pertaining to the device.
Detailed information is provided in the Operating Instructions and other documentation.
Available for all device versions via:

- Internet: www.endress.com/deviceviewer
- Smartphone/tablet: Endress+Hauser Operations app

## Basic safety instructions

## Requirements for the personnel

The personnel performing installation, commissioning, diagnostics and maintenance must satisfy the following requirements:

- Trained, qualified specialists: must have a relevant qualification for this specific function and task
- Are authorized by the plant owner/operator
- Are familiar with federal/national regulations
- Before starting work: read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application)
- Follow instructions and comply with basic conditions

## Intended use

The device described in this manual may be used only as a point level switch for liquids. Incorrect use of the device may pose a hazard.
To ensure that the device remains in proper condition for the operation time:

- Use the device only for media to which the wetted materials have an adequate level of resistance
- Comply with the limit values, see the "Technical data" section of the Operating Instructions

## Operational safety

Danger of injury!

- Operate the device only if it is in proper technical condition, free from errors and faults.
- The operator is responsible for the interference-free operation of the device.

## Mounting

The mounting process is illustrated in the following section on the basis of sample configurations. For detailed information, see the Operating Instructions.

## Mounting requirements

[^0]Installation is possible in any position in a vessel, pipe or tank under the
following conditions:

- When installed horizontally in a vessel, the tuning fork may be located in an installation socket only if liquids with low viscosity (<2000 mPa•s) are used.
- Minimum diameter of installation socket: 50 mm (2.0 in)
- Select a maximum length for the installation socket that enables the tuning fork to project freely into the vessel.
- Ensure that there is sufficient distance between the expected buildup on the tank wall and the fork. Recommended distance from wall $\geq 10 \mathrm{~mm}$ ( 0.39 in ).

## Important process conditions

Pressure and temperature (maximum):

- With weld-in adapter
- +25 bar (+362 psi) at $+150^{\circ} \mathrm{C}\left(+302^{\circ} \mathrm{F}\right)$
- +40 bar ( +580 psi ) at $+100^{\circ} \mathrm{C}\left(+212^{\circ} \mathrm{F}\right)$
- In customer socket
+40 bar (+580 psi) at $+150{ }^{\circ} \mathrm{C}\left(+302{ }^{\circ} \mathrm{F}\right)$
Operating altitude:
Up to 2000 m ( 6600 ft ) above sea level
i
In the case of seals used at the customer site, pay attention to the temperature and pressure specifications.

## Mounting the device

An open-ended wrench ( 32 mm ) is required for mounting
1.

For the NTP thread (ANSI B 1.20.1): use sealing material (PTFE) if necessary.

1. For the weld-in adapter with a flush-mount seal: remove the supplied flat seal (1) from the thread.

1
For the weld-in adapter with leakage hole: make sure the leakage hole points downwards.

## Aligning the tuning fork

9 The markings for the material specification (e.g. 316L) or the thread designation (e.g. G 3/4") on the device are aligned with the opening of the tuning fork and therefore aid orientation.

- 1 In the pipe: align the opening of the tuning fork parallel to the flow direction in such a way that the liquid can flow unhindered between the two tuning fork elements.

## Electrical connection

The connection with the M12 plug is presented in the following section. For other connection options, see the Operating Instructions

1
In accordance with IEC/EN61010 a suitable circuit breaker must be provided for the device.

## Power supply

| Electronic version | Supply voltage | Power consumption | Current consumption |
| :--- | :--- | :--- | :--- |
| 3-wire DC-PNP | 10 to 30 V DC | $<975 \mathrm{~mW}$ | $<15 \mathrm{~mA}$ |
| 2-wire AC/DC | 20 to 253 V | $<850 \mathrm{~mW}$ | $<3.8 \mathrm{~mA}$ |

| Reverse polarity | 2-wire AC/DC <br> protection |
| :--- | :--- |
|  | - AC mode: the device has reverse polarity protection. <br> DC mode: in the event of reverse polarity the maximum <br> safety mode is always detected. Check the wiring and <br> perform a function check before commissioning. The device <br> is not damaged in the event of reverse polarity. <br> 3-wire DC-PNP |
|  | Integrated. In the event of reverse polarity, the device is <br> deactivated automatically. |

## Connection with M12 plug

- 2 For horizontal installation in a vessel: align the tuning fork in such a way that both tuning fork elements are simultaneously covered with liquid.
- Fix the device with a maximum torque of $30 \mathrm{Nm}(22 \mathrm{lbf} \mathrm{ft})$. Also pay attention to the alignment of the tuning fork when doing so

LED indicator

LED is green: the device is operational
2 LED is yellow: tuning fork is covered by liquid
3 LED is red: warning/maintenance required (LED flashing) or fault/device failure (LED is lit)

[^0]:    A Device with weld-in adapter
    B Device in customer socket
    1 Flat seal
    Weld-in adapter
    Tuning fork
    With G 1" thread: $66,4 \mathrm{~mm}(2,61 \mathrm{in}) /$ With $G 3 / 4$ " thread: $63,9 \mathrm{~mm}(2,52 \mathrm{in})$
    2 With G $1^{\prime \prime}$ thread: $48,0 \mathrm{~mm}(1,89 \mathrm{in}) /$ With $G 3 / 4^{\prime \prime}$ thread: $38,0 \mathrm{~mm}(1,5 \mathrm{in})$
    L3 With G 1"thread: $66,4 \mathrm{~mm}(2,61 \mathrm{in})$
    L4 With G 1" thread: $47,9 \mathrm{~mm}(1,8 \mathrm{in})$
