1 About this document

1.1 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the operating menu.

1.2 Symbols

1.2.1 Safety symbols

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Alternating current

Direct current and alternating current

Direct current

Ground connection

A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

Ground terminals that must be connected to ground prior to establishing any other connections.

The ground terminals are located on the interior and exterior of the device:

- Interior ground terminal: protective earth is connected to the mains supply.
- Exterior ground terminal: device is connected to the plant grounding system.

1.2.3 Tool symbols

Phillips head screwdriver

Flat blade screwdriver

Torx screwdriver

Allen key

Open-ended wrench

1.2.4 Symbols for certain types of information and graphics

Permitted

Procedures, processes or actions that are permitted

Preferred

Procedures, processes or actions that are preferred

Forbidden

Procedures, processes or actions that are forbidden

Tip

Indicates additional information

Reference to documentation

Reference to graphic

Notice or individual step to be observed

Series of steps

Result of a step

Visual inspection

Operation via operating tool

Write-protected parameter

1, 2, 3, ...

Item numbers

A, B, C, ...

Views

Safety instructions

Observe the safety instructions contained in the associated Operating Instructions

Temperature resistance of the connection cables

Specifies the minimum value of the temperature resistance of the connection cables

1.3 Documentation

The following documentation types are available in the Downloads area of the Endress+Hauser website (www.endress.com/downloads):

 For an overview of the scope of the associated Technical Documentation, refer to the following:

- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

1.3.1 Technical Information (TI)

Planning aid

The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.

1.3.2 Brief Operating Instructions (KA)

Guide that takes you quickly to the 1st measured value

The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

1.3.3 Operating Instructions (BA)

The Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

It also contains a detailed explanation of each individual parameter in the operating menu (except the **Expert** menu). The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.4 Description of Device Parameters (GP)

The Description of Device Parameters provides a detailed explanation of each individual parameter in the 2nd part of the operating menu: the **Expert** menu. It contains all the device parameters and allows direct access to the parameters by entering a specific code. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.5 Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

 The nameplate indicates the Safety Instructions (XA) that are relevant to the device.

1.3.6 Installation instructions (EA)

Installation Instruction are used to replace a faulty unit with a functioning unit of the same type.

2 Overview of the operating menu

- 
- The following table lists all parameters the "Expert" menu may contain. The page number refers to where a description of the parameter can be found.
 - Depending on the device version and parametrization some parameters will not be available in a given situation. For details on the conditions refer to the "Prerequisite" category in the description of the respective parameter.
 - The representation essentially corresponds to the menu seen when using an operating tool (e.g. FieldCare). On the local display there may be minor differences in the menu structure. Details are mentioned in the description of the respective submenu.

Direct access

Navigation	 Expert → Direct access (0106)
User entry	0 to 65 535
Factory setting	0
Additional information	Enter the access code of a parameter in order to access this parameter directly (i.e. without navigation). The direct access code consists of a five digit number and an optional channel code, e.g. 00353-2 ■ Leading zeros need not to be entered. ■ If the channel code is not entered, channel 1 is automatically selected. ■ In order to access a different channel: Enter the direct access code with the channel code.  In this document, the direct access code is added in brackets after the parameter name in the <i>Navigation</i> category.

Locking status

Navigation

 Expert → Locking status (0004)

Description

Indicates the type of locking.

'Hardware locked' (HW)
The device is locked by the 'WP' switch on the main electronics module. To unlock, set the switch into the OFF position.

'WHG locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'SIL locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'Temporarily locked' (SW)
The device is temporarily locked by processes in the device (e.g. data upload/download, reset). The device will automatically be unlocked after completion of these processes.

Additional information

Read access	Operator
Write access	-

Access status display

Navigation

 Expert → Access stat.disp (0091)

Prerequisite

The device has a local display.

Description

Indicates access authorization to parameters via local display.

Additional information

Read access	Operator
Write access	-

 The access authorization can be changed via the **Enter access code** parameter (→  33).

 If an additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→  32).

User role

Navigation

 Expert → User role (0005)

Description

Shows the access authorization to the parameters via the operating tool

Additional information

Read access	Operator
Write access	-

Enter access code

Navigation	 Expert → Ent. access code (0003)	
Description	Enter access code to disable write protection of parameters.	
Additional information	Read access	Operator
	Write access	Operator

■ bar	psi	■ inH2O
■ Pa		■ inH2O (68°F)
■ kPa		■ ftH2O (68°F)
■ MPa		■ mmH2O
■ mbar a		■ mmHg

Factory setting bar

Additional information	Read access	Operator
	Write access	Maintenance (if Units preset (→  42) = Customer value)

Temperature unit

Navigation  Expert → System → System units → Temperature unit (0557)

Description Select temperature unit.

Selection

<i>SI units</i>	<i>US units</i>
■ °C	■ °F
■ K	■ °R

Factory setting °C

Additional information	Read access	Operator
	Write access	Maintenance (if Units preset (→  42) = Customer value)

Density unit

Navigation

Expert → System → System units → Density unit (0555)

Description

Select density unit.

Selection

SI units

■ g/cm³

■ g/ml

■ g/l

■ kg/l

■ kg/dm³

■ kg/m³

US units

■ lb/ft³

■ lb/gal (us)

■ lb/in³

■ STon/yd³

Other units

■ °API

■ SGU

Factory setting

kg/m³

Additional information

Read access	Operator
Write access	Maintenance (if Units preset (→ 42) = Customer value)

Decimal places length

Navigation

Expert → System → System units → Decimal length (0573)

Description

Number of decimal places for length values.

Selection

■ X

■ X.X

■ X.XX

■ X.XXX

■ X.XXXX

Factory setting

X.X

Additional information

Read access	Operator
Write access	Maintenance

 The setting does not affect the accuracy of the measurement or the calculations.

Decimal places pressure

Navigation

Expert → System → System units → Decimal pressure (0608)

Description

Number of decimal places for pressure values.

- Selection**
- X
 - X.X
 - X.XX
 - X.XXX
 - X.XXXX

Factory setting X.XXX

Additional information

Read access	Operator
Write access	Maintenance

 The setting does not affect the accuracy of the measurement or the calculations.

Decimal places temperature

Navigation   Expert → System → System units → Decimal temp. (0614)

Description Number of decimal places for temperature values.

- Selection**
- X
 - X.X
 - X.XX
 - X.XXX
 - X.XXXX

Factory setting X.X

Additional information

Read access	Operator
Write access	Maintenance

 The setting does not affect the accuracy of the measurement or the calculations.

Decimal places density

Navigation   Expert → System → System units → Decimal density (0609)

Description Number of decimal places for density values.

- Selection**
- X
 - X.X
 - X.XX
 - X.XXX
 - X.XXXX

Factory setting X.X

Additional information

Read access	Operator
Write access	Maintenance

 The setting does not affect the accuracy of the measurement or the calculations.

3.1.3 "Date / time" submenu

The **Date / time** submenu is used to set the real-time clock of the device.

Setting the real-time clock via the display and operating module

1. Navigate to Expert → System → Date / time → Set date.
 - ↳ The current value of the real-time clock is displayed.
2. If the displayed value is correct: Press  to terminate the wizard.
3. If the displayed value is not correct: Press  to edit it.
 - ↳ The current value of the **Year** parameter is displayed.
4. If the displayed value is correct: Press  to go to the next value.
5. If the displayed value is incorrect: Press  and enter the correct value. Confirm the new value by pressing .
6. Repeat the last two steps for the following parameters: **Month, Day, Hour, Minute**.
 - ↳ The new value of the real-time clock is displayed.
7. Confirm the new value of the real-time clock by pressing .
8. Quit the wizard by pressing  again.

Setting the real-time clock via an operating tool (e.g. FieldCare)

1. Navigate to: Expert → System → Date / time
- 2.

Go to the **Set date** parameter (→ 50) and select the **Start** option.

Use the following parameters to set the date and time: **Year, Month, Day, Hour, Minutes.**

Go to the **Set date** parameter (→ 50) and select the **Confirm time** option.

↳ The real-time clock is set to the current date and time.

Structure of the submenu on the display and operating module

Navigation  Expert → System → Date / time

3.1.4 "Administration" submenu

Structure of the submenu on the display and operating module

Navigation  Expert → System → Administration

Structure of the submenu in an operating tool (e.g. FieldCare)

Navigation  Expert → System → Administration

Description of parameters

Navigation  Expert → System → Administration

Define access code

Navigation  Expert → System → Administration → Def. access code (0093)

Description Define release code for write access to parameters.

User entry 0 to 9 999

Factory setting 0

Additional information	Read access	Operator
	Write access	Maintenance

-  If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.
-  The write protection affects all parameters marked with the  symbol in this document.
-  Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→  33).

Activate SW option

Navigation  Expert → System → Administration → Activate SW opt. (0029)

Description Enter the application package code or code of another re-ordered functionality to enable it

User entry Positive integer

Factory setting 0

Additional information	Read access	Operator
	Write access	Maintenance

Device reset

Navigation  Expert → System → Administration → Device reset (0000)

Description Reset the device configuration - either entirely or in part - to a defined state

Selection	■ Cancel ■ To factory defaults ■ Restart device				
Factory setting	Cancel				
Additional information	Meaning of the options ■ Cancel No action ■ To factory defaults All parameters are reset to the order-code specific factory setting. ■ Restart device The restart resets every parameter which is stored in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.

3.2.1 "Information" submenu

The **Information** submenu (→  60) comprises all display parameters which give information about the current state of the measurement.

Description of parameters

Navigation   Expert → Sensor → Information

► Information

Gross weight	→  60
Net weight	→  60
Gauge status	→  61
Active gauge command	→  61
Balance flag	→  61
Displacer status	→  61
Motor status	→  62
One-time command status	→  62
Sensor temperature	→  62
Detector temperature	→  62

Gross weight

Navigation   Expert → Sensor → Information → Gross weight (8080)

Description Shows non-compensated measured weight from detector.

Additional information	Read access	Operator
	Write access	-

Net weight

Navigation   Expert → Sensor → Information → Net weight (8007)

Description Shows the corrected weight data from the detector, as compensated by the drum table, This weight is used for measurement.

Additional information

Read access	Operator
Write access	-

Gauge status

Navigation Expert → Sensor → Information → Gauge status (8081)**Description**

Indicates the current status of the device gauge command.

Additional information

Read access	Operator
Write access	-

Active gauge command

Navigation Expert → Sensor → Information → Active gauge cmd (8073)**Description**

Indicates the currently executed Gauge Command.

Additional information

Read access	Operator
Write access	-

Balance flag

Navigation Expert → Sensor → Information → Balance flag (8006)**Description**

Indicates the validity of the Measurement. If balanced, corresponding Value (Liquid Level, Upper Interface, Lower Interface, Tank Bottom) is updated.

Additional information

Read access	Operator
Write access	-

Displacer status

Navigation Expert → Sensor → Information → Displacer status (8160)**Description**

Shows the current moving and balancing status of the displacer.

Additional information

Read access	Operator
Write access	-

Motor status

Navigation  Expert → Sensor → Information → Motor status (8118)

Description Shows the current moving Direction of the Motor.

Additional information

Read access	Operator
Write access	-

One-time command status

Navigation  Expert → Sensor → Information → One-time Cmd (8201)

Description Indicates the status of the last executed one-time gauge command.

Additional information

Read access	Operator
Write access	-

Additional information  One-time command is available for all gauge commands, excepting Level, Stop, Up, and Interface.

Sensor temperature

Navigation  Expert → Sensor → Information → Sensor temp. (8066)

Description Shows the temperature of sensor module electronics.

Additional information

Read access	Operator
Write access	-

Detector temperature

Navigation  Expert → Sensor → Information → Detector temp. (8090)

Description Shows the temperature of the detector unit.

Additional information

3.2.2 "Measured values" submenu

Navigation  Expert → Sensor → Measured values

► Measured values		
Distance	→ 	64
Displacer position	→ 	64
Liquid level	→ 	65
Upper interface level	→ 	65
Upper interface level timestamp	→ 	65
Lower interface level	→ 	65
Lower interface level timestamp	→ 	66
Bottom level	→ 	66
Bottom level timestamp	→ 	66
► Spot density	→ 	67
► Profile density	→ 	69

6 Terms concerning NMS8x installation

- A Liquid level
- B Upper interface
- C Lower interface
- 1 Displacer pos
- 2 Upper I/F level
- 3 Lower I/F level
- 4 Datum plate
- 5 Distance

Distance

Navigation Expert → Sensor → Measured values → Distance (8103)

Description Shows measured distance from reference position.

Read access	Operator
Write access	-

Displacer position

Navigation Expert → Sensor → Measured values → Displacer pos (8130)

Description Shows measured displacer position from zero position (tank bottom or datum plate). Value is always updated when displacer moves.

Read access	Operator
Write access	-

Liquid level

Navigation
 Expert → Sensor → Measured values → Liquid level (8072)
Description

Shows measured level from zero position (tank bottom or datum plate). Value is updated when device generates a valid level measurement.

Additional information

Read access	Operator
Write access	-

Upper interface level

Navigation
 Expert → Sensor → Measured values → Upper I/F level (8127)
Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Operator
Write access	-

Upper interface level timestamp

Navigation
 Expert → Sensor → Measured values → Up I/F timestamp (8055)
Description

Shows timestamp for the last measured upper interface level.

Additional information

Read access	Operator
Write access	-

Lower interface level

Navigation
 Expert → Sensor → Measured values → Lower I/F level (8128)
Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Operator
Write access	-

Lower interface level timestamp

Navigation

 Expert → Sensor → Measured values → LowI/F timestamp (8061)

Description

Shows timestamp of the last measured lower interface level.

Additional information

Read access	Operator
Write access	-

Bottom level

Navigation

 Expert → Sensor → Measured values → Bottom level (8129)

Description

Shows measured bottom level. Value is updated after a successfull tank bottom gauge command.

Additional information

Read access	Operator
Write access	-

Bottom level timestamp

Navigation

 Expert → Sensor → Measured values → BotLev timestamp (8048)

Description

Shows the timestamp for measured bottom level.

Additional information

Read access	Operator
Write access	-

"Spot density" submenu

Navigation   Expert → Sensor → Measured values → Spot density

► Spot density

Measured upper density

→  67

Upper density timestamp

→  67

Measured middle density

→  67

Middle Density Timestamp

→  68

Measured lower density

→  68

Lower density timestamp

→  68

Measured upper density

Navigation

  Expert → Sensor → Measured values → Spot density → Meas upper dens. (8164)

Description

Shows the Measured Upper Density Value.

Additional information

Read access	Operator
Write access	-

Upper density timestamp

Navigation

  Expert → Sensor → Measured values → Spot density → UpDens timestamp (8067)

Description

Shows timestamp of the last measured upper density.

Additional information

Read access	Operator
Write access	-

Measured middle density

Navigation

  Expert → Sensor → Measured values → Spot density → Meas middle dens (8165)

Description

Shows the Measured Middle Density Value.

Additional information	Read access	Operator
	Write access	-

Middle Density Timestamp

Navigation  Expert → Sensor → Measured values → Spot density → MidDensTimestamp (8011)

Description Shows the timestamp of the last measured middle density.

Additional information	Read access	Operator
	Write access	-

Measured lower density

Navigation  Expert → Sensor → Measured values → Spot density → Meas lower dens. (8166)

Description Shows the Measured Lower Density Value.

Additional information	Read access	Operator
	Write access	-

Lower density timestamp

Navigation  Expert → Sensor → Measured values → Spot density → LowerDensTimestp (8122)

Description Shows timestamp of last measured lower density.

Additional information	Read access	Operator
	Write access	-

"Profile density" submenu

Navigation   Expert → Sensor → Measured values → Profile density

► Profile density		
Profile point	→ 	69
Profile average density	→ 	69
Profile density timestamp	→ 	69
► Density table	→ 	70

Profile point

Navigation	  Expert → Sensor → Measured values → Profile density → Profile point (8170)	
Description	Shows actual number of Density Points measured so far in current operation, and the total Number of Points after Density Profile Operation is complete.	
Additional information	Read access	Operator
	Write access	-

Profile average density

Navigation	  Expert → Sensor → Measured values → Profile density → Profile avg dens (8175)	
Description	Shows the average density calculated after a profile density measurement is complete.	
Additional information	Read access	Operator
	Write access	-

Profile density timestamp

Navigation	  Expert → Sensor → Measured values → Profile density → Profil dens time (8114)	
Description	Shows the timestamp when the last average density profile was finished.	
Additional information	Read access	Operator
	Write access	-

"Density table" submenu

Navigation  Expert → Sensor → Measured values → Profile density → Density table

Density table

Navigation  Expert → Sensor → Measured values → Profile density → Density table

Description Shows measured density table of profile density.

3.2.3 "Sensor diag" submenu

Navigation  Expert → Sensor → Sensor diag

► Sensor diag	
► Start self check	→  71
Status self check	→  71
► Self check	→  71
Self check	→  71
Gauge status	→  72
Status self check	→  72

"Start self check" submenu

Navigation  Expert → Sensor → Sensor diag → Start self check

Status self check

Navigation  Expert → Sensor → Sensor diag → Start self check → Status (8192)

Description Shows the status of the self check of the sensor module.

Additional information

Read access	Operator
Write access	-

"Self check" wizard

Navigation  Expert → Sensor → Sensor diag → Start self check → Self check

Self check

Navigation  Expert → Sensor → Sensor diag → Start self check → Self check → Self check

Additional information

Read access	Operator
Write access	-

Gauge status

Navigation  Expert → Sensor → Sensor diag → Start self check → Self check → Gauge status (8081)

Description Indicates the current status of the device gauge command.

Additional information	Read access	Operator
	Write access	-

Status self check

Navigation  Expert → Sensor → Sensor diag → Start self check → Self check → Status (8192)

Description Shows the status of the self check of the sensor module.

Additional information	Read access	Operator
	Write access	-

3.2.4 "Sensor config" submenu

Navigation   Expert → Sensor → Sensor config → Post gauge cmd (8163)

► Sensor config

Post gauge command

► Displacer

► Wiredrum

► Safety settings

► Level settings

► Balance settings

► Spot density

► Profile density

→  73

→  74

→  77

→  78

→  81

→  85

→  88

→  90

Post gauge command

Navigation	  Expert → Sensor → Sensor config → Post gauge cmd (8163)	
Description	Defines the gauge command that will be executed after a one-time gauge command has finished.	
Selection	■ Stop ■ Level ■ Up ■ Upper I/F level ■ Lower I/F level ■ None	
Factory setting	Level	
Additional information	Read access	Operator
	Write access	Maintenance

"Displacer" submenu

Navigation  Expert → Sensor → Sensor config → Displacer → Displacer type (8071)

► Displacer

Displacer type

→  74

Displacer diameter

→  74

Displacer weight

→  75

Displacer volume

→  75

Displacer balance volume

→  75

Displacer height

→  76

Immersion depth

→  76

Displacer type

Navigation  Expert → Sensor → Sensor config → Displacer → Displacer type (8071)

Description Chooses the type of displacer used.

- Selection
- Custom diameter
 - Diameter 30 mm
 - Diameter 50 mm
 - Diameter 70 mm
 - Diameter 110 mm

Factory setting Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Displacer diameter

Navigation  Expert → Sensor → Sensor config → Displacer → Displacer diamet (8014)

Prerequisite **Displacer type (→  74) = Custom diameter**

Description Sets the diameter of the cylindrical part of displacer.

User entry 0 to 999.9 mm

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer weight

Navigation Expert → Sensor → Sensor config → Displacer → Displacer weight (8010)

Description Set the weight of the displacer in air. Indicated on the displacer in grams.

User entry 10 to 999.9 g

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer volume

Navigation Expert → Sensor → Sensor config → Displacer → Displacer volume (8008)

Description Displacer volume indicated on displacer in milliliter.

User entry 10 to 999.9 ml

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer balance volume

Navigation Expert → Sensor → Sensor config → Displacer → Balance volume (8009)

Description Defines the balance volume of the displacer as the lower part of displacer immersed in liquid. Units in milliliters. Indicated on displacer.

User entry 10 to 999.9 ml

Factory setting See label on the device.

Additional information	Read access	Operator
	Write access	Maintenance

Displacer height

Navigation  Expert → Sensor → Sensor config → Displacer → Displacer height (8195)

Description Sets the displacer height in mm. Used for density measurement as minimum distance between last profile point and liquid level.

User entry 10 to 300 mm

Factory setting Dependent on the device version

Additional information	Read access	Operator
	Write access	Maintenance

Immersion depth

Navigation  Expert → Sensor → Sensor config → Displacer → Immersion depth (8070)

Description Defines distance (mm) from displacer bottom to balancing line defined by balanced volume. Value is needed for correct bottom level measurement.

User entry 0 to 99.9 mm

Factory setting Dependent on the device version

Additional information	Read access	Operator
	Write access	Maintenance

"Wiredrum" submenu

Navigation   Expert → Sensor → Sensor config → Wiredrum

► Wiredrum

Drum circumference

→  77

Wire weight

→  77

Drum circumference

Navigation   Expert → Sensor → Sensor config → Wiredrum → Drum circumfer (8082)

Description Sets the circumference of the wire drum. Indicated in Label.

User entry 100 to 999.9 mm

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Wire weight

Navigation   Expert → Sensor → Sensor config → Wiredrum → Wire weight (8040)

Description Defines the weight of the measuring wire in g/10m. Indicated on Label.

User entry 0 to 999.9 g

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

"Safety settings" submenu

Navigation  Expert → Sensor → Sensor config → Safety settings

► Safety settings

High stop level

→  78

Low stop level

→  78

Slow hoist zone

→  79

Overtension weight

→  79

Undertension weight

→  79

Output out of range

→  80

High stop level

Navigation

 Expert → Sensor → Sensor config → Safety settings → High stop level (8135)

Description

Position of the displacer high stop as measured from defined zero position (tank bottom or datum plate).

User entry

–999 999.9 to 999 999.9 mm

Factory setting

20 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Low stop level

Navigation

 Expert → Sensor → Sensor config → Safety settings → Low stop level (8069)

Description

Position of the displacer low stop as measured from defined zero position (tank bottom or datum plate).

User entry

–999 999.9 to 999 999.9 mm

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Slow hoist zone

Navigation  Expert → Sensor → Sensor config → Safety settings → Slow hoist zone (8084)

Description Defines the interval in millimeters, measured down from the Reference Position, in which the Displacer reduces moving speed.

User entry 10 to 999 999.9 mm

Factory setting 70 mm

Additional information

Read access	Operator
Write access	Maintenance

Overtension weight

Navigation  Expert → Sensor → Sensor config → Safety settings → Overtension wgt (8097)

Description Sets the minimum Weight in grams when Overtension Alarm will be set.

User entry 100 to 999.9 g

Factory setting 350 g

Additional information

Read access	Operator
Write access	Maintenance

Undertension weight

Navigation  Expert → Sensor → Sensor config → Safety settings → Undertension wgt (8098)

Description Defines the undertension error weight. Undertension error will be issued if displacer weight is below this value longer than 7 seconds.

User entry 0 to 300 g

Factory setting 10 g

Additional information

Read access	Operator
Write access	Maintenance

Output out of range

Navigation Expert → Sensor → Sensor config → Safety settings → Output out range (8218)

Description Selection of behavior between Alarm or Last valid value when displacer reached HighStoplevel, LowStopLevel or ReferencePosition.

- Selection**
- Last valid value
 - Alarm
 - None

Factory setting Last valid value

Additional information

Read access	Operator
Write access	Maintenance

"Level settings" submenu

Navigation

 Expert → Sensor → Sensor config → Level settings → Upper density (8113)

► Level settings

Upper density

→  81

Middle density

→  81

Lower density

→  82

Process condition

→  82

Standby level

→  82

Offset standby distance

→  83

Upper density

Navigation

 Expert → Sensor → Sensor config → Level settings → Upper density (8113)

Description

Sets the density of the upper phase of the liquid.

User entry

50 to 2 000 kg/m³

Factory setting

800 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Middle density

Navigation

 Expert → Sensor → Sensor config → Level settings → Middle density (8041)

Description

Sets Density of Middle Phase in the Tank if three Phases are available. Otherwise used for the Lower Phase in the Tank if two Phases are available.

User entry

50 to 2 000 kg/m³

Factory setting

1 000 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Lower density

Navigation

Expert → Sensor → Sensor config → Level settings → Lower density (8042)

Description

Sets the density of the lower Phase in the tank if three phases are available.

User entry

50 to 2 000 kg/m³

Factory setting

1 200 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Process condition

Navigation

Expert → Sensor → Sensor config → Level settings → Process cond. (8001)

Description

Select the liquid condition of the tank.

Selection

- Universal
- Calm surface
- Turbulent surface

Factory setting

Universal

Additional information

 For W&M, setting to option **Calm surface** is recommended.

Read access	Operator
Write access	Maintenance

Standby level

Navigation

Expert → Sensor → Sensor config → Level settings → Standby level (8194)

Description

Defines the position in the tank where the displacer waits for the liquid level to rise during standby level gauge command.

User entry

–999 999.9 to 999 999.9 mm

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

A0040297

- 7 Displacer waiting for the liquid level to rise during standby level gauge command
- 1 Gauge reference height
 - 2 Empty
 - 3 Datum plate
 - 4 Standby level
 - 5 Standby distance
 - 6 Reference position

Offset standby distance

Navigation	  Expert → Sensor → Sensor config → Level settings → Offset distance (8107)
Description	Defines the distance from the current position where the displacer waits for the liquid level to rise during offset standby gauge command.
User entry	0 to 999 999.9 mm
Factory setting	500 mm

Additional information

A0051202

8 a: Offset standby distance

"Balance settings" submenu

Navigation   Expert → Sensor → Sensor config → Balance settings

► Balance settings

Level measurement mode

→  85

Interface measurement mode

→  86

Balancing waiting time

→  86

Seek delay

→  87

Weight tolerance

→  87

 The parameter "Process condition" does a pre-set of the major balancing parameters. For the most applications its enough to set the correct "Process condition" parameter which affects the balancing parameter settings automatically.

Level measurement mode

Navigation

  Expert → Sensor → Sensor config → Balance settings → Level meas mode (8056)

Description

Chooses the measurement mode used for level measurement.

Selection

- Normal measure mode
- Compensation mode
- Non hysteresis mode

Factory setting

Non hysteresis mode

Additional information

Read access	Operator
Write access	Maintenance

A0038582

9 NMS8x level mode

- a1 Displacer is in liquid or air unbalanced
- a2 Displacer on liquid balanced
- b1 Displacer is in liquid or air unbalanced
- b2 Displacer on liquid balanced
- b3 Displacer is moved out of the liquid, the weight in vapour is measured and used for the new weight calculation
- b4 Displacer on liquid balanced
- c1 Displacer is in liquid or air unbalanced
- c2 Displacer on liquid balanced
- c3 Displacer is lifted up
- c4 Displacer on liquid balanced

Interface measurement mode

Navigation Expert → Sensor → Sensor config → Balance settings → Interface mode (8064)

Description Chooses the measurement mode used for interface level measurements.

- Selection
- Non hysteresis mode
 - Normal measure mode

Factory setting Non hysteresis mode

Additional information

Read access	Operator
Write access	Maintenance

Balancing waiting time

Navigation Expert → Sensor → Sensor config → Balance settings → Bal waiting time (8205)

Description Set the waiting time in seconds, after which the balance flag is turned on if level measurement is balanced (motor has stopped).

User entry 0 to 255 s

Factory setting 4 s

Additional information

Read access	Operator
Write access	Maintenance

Seek delay

Navigation

 Expert → Sensor → Sensor config → Balance settings → Seek delay (8162)

Description

When displacer is balanced, this parameter sets the Delay Time (seconds) before displacer starts to track Level again.

User entry

1 to 255 s

Factory setting

2 s

Additional information

Read access	Operator
Write access	Maintenance

Weight tolerance

Navigation

 Expert → Sensor → Sensor config → Balance settings → Weight tolerance (8213)

Description

Defines balance weight tolerance in grams, in which the displacer is in balance status.

User entry

0.1 to 100 g

Factory setting

1.6 g

Additional information

Read access	Operator
Write access	Maintenance

A0038583

 10 Balancing parameter

"Spot density" submenu

Navigation  Expert → Sensor → Sensor config → Spot density

► Spot density

Upper density offset

→  88

Middle density offset

→  88

Lower density offset

→  89

Submersion depth

→  89

Upper density offset

Navigation	 Expert → Sensor → Sensor config → Spot density → Up dens. offset (8176)	
Description	Defines an offset value which is added to the measured upper density value.	
User entry	−999.99 to 999.99 kg/m³	
Factory setting	0 kg/m³	
Additional information	Read access	Operator
	Write access	Maintenance

Middle density offset

Navigation	 Expert → Sensor → Sensor config → Spot density → Mid dens. offset (8177)	
Description	Defines an Offset Value which is added to the measured Middle Density Value.	
User entry	−999.99 to 999.99 kg/m³	
Factory setting	0 kg/m³	
Additional information	Read access	Operator
	Write access	Maintenance

Lower density offset

Navigation Expert → Sensor → Sensor config → Spot density → Low dens. offset (8178)

Description Defines an offset value which is added to the measured lower density value.

User entry -999.99 to 999.99 kg/m³

Factory setting 0 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Submersion depth

Navigation Expert → Sensor → Sensor config → Spot density → Submersion depth (8169)

Description Sets the displacer submersion depth (mm) for spot density operations.

User entry 50 to 99 999.9 mm

Factory setting 150 mm

Additional information

Read access	Operator
Write access	Maintenance

"Profile density" submenu

Navigation  Expert → Sensor → Sensor config → Profile density

► Profile density		
Density measurement mode	→ 	90
Manual profile level	→ 	90
Profile density offset distance	→ 	91
Profile density interval	→ 	91
Profile density offset	→ 	91

Density measurement mode

Navigation  Expert → Sensor → Sensor config → Profile density → Density mode (8186)

Description In normal measure mode, measures at specified positions. In compensation mode measures using next integer value of drum turns to improve accuracy.

- Selection
- Normal measure mode
 - Compensation mode

Factory setting Normal measure mode

Read access	Operator
Write access	Maintenance

 In normal mode, measures spot densities at requested positions. In compensations mode the Proservo measures the spot densities at multiples of the wiredrum circumference (e.g. every ~ 150 mm (5.91 in))

Manual profile level

Navigation  Expert → Sensor → Sensor config → Profile density → Man profile lvl (8182)

Description Sets the level position in the tank where the manual profile density operation starts.

User entry -999 999.9 to 999 999.9 mm

Factory setting 1 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Profile density offset distance**Navigation**

Expert → Sensor → Sensor config → Profile density → Dens offset dist (8185)

Description

Profile density offset distance [mm] is the distance between start point and first measurement point.

User entry

0 to 999 999.9 mm

Factory setting

500 mm

Additional information

Read access	Operator
Write access	Maintenance

Profile density interval**Navigation**

Expert → Sensor → Sensor config → Profile density → Density interval (8174)

Description

Sets the interval between two measurement points in profile density operation.

User entry

1 to 100 000 mm

Factory setting

1 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Profile density offset**Navigation**

Expert → Sensor → Sensor config → Profile density → Prof dens offset (8173)

Description

Defines an offset value which is added to the measured profile density value.

User entry

-999.99 to 999.99 kg/m³

Factory setting

0 kg/m³

Additional information

Read access	Operator

Sensor calibration

Navigation  Expert → Sensor → Calibration → Sensor cal. → Sensor cal.

Description This sequence calibrates the sensor of the servo.

Additional information

Read access	Operator
Write access	Maintenance

Offset weight

Navigation  Expert → Sensor → Calibration → Sensor cal. → Offset wgt. (8095)

Description Sets the weight that is used for the lower point sensor calibration. Changing the value will delete the calibration data.

User entry 0 to 150 g

Factory setting Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

 For density measurement application, it is recommended to apply 50 g.

Span weight

Navigation

  Expert → Sensor → Calibration → Sensor cal. → Span wgt. (8096)

Description

Sets the weight that is used for the middle point sensor calibration. Changing the value will delete the calibration data.

User entry

10 to 999.9 g

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Zero calibration

Navigation

  Expert → Sensor → Calibration → Sensor cal. → Zero calibration

Description

In this step the sensor calibration zero weight will be done.

Additional information

Read access	Operator
Write access	Maintenance

Calibration status

Navigation

  Expert → Sensor → Calibration → Sensor cal. → Status (8031)

Description

Gives feedback on the latest status of the calibration process.

#blank# (HART PV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14716)

Description Shows the first HART variable (PV).

Additional information

Read access	Operator
Write access	-

#blank# (HART SV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14705)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the second HART variable (SV).

Additional information

Read access	Operator
Write access	-

#blank# (HART TV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14706)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the third HART variable (TV).

Additional information

Read access	Operator
Write access	-

#blank# (HART QV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14716)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the fourth HART variable (QV).

Additional information

Read access	Operator
Write access	-

HART device PV mA

Navigation  Expert → Input/output → HART devices → HART Device(s) → HARTDEV PV mA (14708)

Prerequisite Not available for Micropilot S FMR5xx and Prothermo 53x.

Description Shows the first HART variable (PV) in mA.

Additional information

Read access	Operator
Write access	-

HART device PV %

Navigation  Expert → Input/output → HART devices → HART Device(s) → HARTDEV PV % (14709)

Prerequisite Not available for Micropilot S FMR5xx and Prothermo 53x.

Description Shows the first HART variable (PV) in percentage.

Additional information

Read access	Operator
Write access	-

Output pressure

Navigation  Expert → Input/output → HART devices → HART Device(s) → Output pressure (14719)

Prerequisite Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description Defines which HART variable is the pressure.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting No value

Pressure

Navigation

 Expert → Input/output → HART devices → HART Device(s) → HART device info → Pressure (14723)

Prerequisite

Output pressure (→  112) ≠ No value

Description Shows the pressure value measured by the connected HART device.

Additional information	Read access	Operator
	Write access	-

Density

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Density (14724)

Prerequisite **Output density (→  113) ≠ No value**

Description Shows the density value measured by the connected HART device.

Additional information	Read access	Operator
	Write access	-

Temperature

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Temperature (14725)

Prerequisite **Output temperature (→  113) ≠ No value**

Description Shows the temperature measured by the connected HART device.

Additional information	Read access	Operator
	Write access	-

Vapor temperature

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Vapor temp. (14727)

Prerequisite **Output vapor temperature (→  113) ≠ No value**

Description Shows the temperature vaule of the vapor phase measured by the connected HART device.

Additional information	Read access	Operator
	Write access	-

Water level

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Water level (14717)

Prerequisite **Output level (→  114) ≠ No value**

Description Shows the water level value measured by the connected HART device.

Additional information

Read access	Operator
Write access	-

Level source

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Level source (14749)

Prerequisite Prothermo NMT53x

Description Shows which source should be used for level reference sent to NMT to determine liquid/vapour temperature. Tank level or manual level.

Selection

- Manual value
- Tank level

Factory setting Tank level

Additional information

Read access	Maintenance
Write access	Maintenance

Tank level to NMT

Navigation   Expert → Input/output → HART devices → HART Device(s) → HART device info → Tank lvl to NMT (14750)

Prerequisite Prothermo NMT53x with level measurement

Description Shows the level transferred to NMT.

Additional information

Read access	Maintenance
Write access	-

Manual value

Navigation

 Expert → Input/output → HART devices → HART Device(s) → HART device info → Manual value (14746)

Prerequisite

Prothermo NMT53x with level measurement

Description

Shows the manual set level.

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Maintenance
Write access	Maintenance

HART bus

Navigation

 Expert → Input/output → HART devices → HART Device(s) → HART device info → HART bus (14711)

Description

Information about the used IO-Slot.

Additional information

Read access	Operator
Write access	-

Device type

Navigation

 Expert → Input/output → HART devices → HART Device(s) → HART device info → Device type (14701)

Description

Shows the device type with which the measuring device is registered with the HART Communication Foundation.

Additional information

Read access	Operator
Write access	-

Device ID

Navigation

 Expert → Input/output → HART devices → HART Device(s) → HART device info → Device ID (14702)

Description

Shows the device ID of the connected HART device.

Additional information

Read access	Operator
Write access	-

Device date

Navigation

  Expert → Input/output → HART devices → HART Device(s) → HART device info → Device date (14707)

Description

Shows the date of the connected HART device. (e.g.: the last configuration change).

Additional information

Read access	Operator
Write access	-

Device description

Navigation

  Expert → Input/output → HART devices → HART Device(s) → HART device info → Device descrip. (14704)

Description

Shows a user defined HART descriptor of the connected device.

Factory setting

Disabled

Additional information

- Enabled: Water level value is transferred
- Disabled: Water level value is **not** transferred

The NMT delivers the average liquid temperature value in a tank by picking up the value of all temperature elements which are covered by liquid and calculating the average value. To select the submerged temperature elements, the NMT receives level information from a tank gauging device. If the water bottom temperature shall be excluded from the measurement, the water level value is used to exclude the temperature elements which are submerged in water.

Write access	Maintenance

Ohms offset**Navigation**

Expert → Input/output → Analog IP → Ohms offset (14026)

Prerequisite**Operating mode (→ 139) = RTD temperature input****Description**

Defines a offset for the resistance.
This value is added to the measured resistance before the calculation of the temperature.

User entry

-10.0 to 10.0 Ohm

Factory setting

0 Ohm

Additional information

The value entered in this parameter is added to the measured resistance before the calculation of the temperature.

Read access	Operator
Write access	Maintenance

Thermocouple type**Navigation**

Expert → Input/output → Analog IP → Thermocouple typ (14008)

Description

Defines the type of the connected thermocouple.

Selection

- N type
- B type
- C type
- D type
- J type
- K type
- L type
- L GOST type
- R type
- S type
- T type
- U type

Factory setting N type

RTD connection type

Navigation   Expert → Input/output → Analog IP → RTD connect type (14022)

Prerequisite **Operating mode (→  139) = RTD temperature input**

Description Defines the connection type of the RTD.

Selection

- 4 wire RTD connection
- 2 wire RTD connection
- 3 wire RTD connection

Factory setting 4 wire RTD connection

Additional information

Read access	Operator
Write access	Maintenance

Process value

Navigation   Expert → Input/output → Analog IP → Process value (14003)

Prerequisite **Operating mode (→  139) ≠ Disabled**

Description Shows the measured value received via the analog input.

Additional information

Read access	Operator
Write access	-

Process variable

Navigation   Expert → Input/output → Analog IP → Process variable (14016)

Prerequisite **Operating mode (→  139) ≠ RTD temperature input**

Description Determines type of measured value.

Selection

- Level linearized
- Temperature
- Pressure
- Density

Factory setting Level linearized

Additional information	Read access	Operator
	Write access	Maintenance

0 % value

Navigation  Expert → Input/output → Analog IP → 0 % value (14001)

Prerequisite **Operating mode (→  139) = 4..20mA input**

Description Defines the value represented by a current of 4mA.

User entry Signed floating-point number

Factory setting 0 mm

Additional information	Read access	Operator
	Write access	Maintenance

100 % value

Navigation  Expert → Input/output → Analog IP → 100 % value (14013)

Prerequisite **Operating mode (→  139) = 4..20mA input**

Description Defines the value represented by a current of 20mA.

User entry Signed floating-point number

Factory setting 0 mm

Additional information	Read access	Operator
	Write access	Maintenance

Input value percent

Navigation  Expert → Input/output → Analog IP → Input value [%] (14002)

Prerequisite **Operating mode (→  139) = 4..20mA input**

Description Shows the input value in percent.
0% corresponds to 4 mA.
100% corresponds to 20 mA.

Additional information

- 0% corresponds to 4 mA
- 100% corresponds to 20 mA

Read access	Operator
Write access	-

Input value**Navigation**
 Expert → Input/output → Analog IP → Input value (14015)
Prerequisite**Operating mode (→  139) ≠ Disabled****Description**

Shows the value received via the analog input.

Read access	Operator
Write access	-

Temperature offset after conversion**Navigation**
 Expert → Input/output → Analog IP → Temp. offset (14025)
Prerequisite**Operating mode (→  139) = RTD temperature input****Description**

Defines an offset for the measured temperature.
 The offset is applied after the resistance of the RTD has been converted to a temperature.

User entry

-20 to 20 °C

Factory setting

0 °C

Additional information

The offset defined in this parameter is applied after the resistance of the RTD has been converted to a temperature.

Read access	Operator
Write access	Maintenance

Minimum probe temperature**Navigation**
 Expert → Input/output → Analog IP → Min. probe temp (14010)
Prerequisite**Operating mode (→  139) = RTD temperature input****Description**

Minimum approved temperature of the connected probe.
 If the temperature falls below this value, the W&M status will be 'invalid'.

User entry	-213 to 927 °C	
Factory setting	-100 °C	
Additional information	Read access	Operator
	Write access	Maintenance

Maximum probe temperature

Navigation	 Expert → Input/output → Analog IP → Max. probe temp (14011)	
Prerequisite	Operating mode (→  139) = RTD temperature input	
Description	Maximum approved temperature of the connected probe. If the temperature rises above this value, the W&M status will be 'invalid'.	
User entry	-213 to 927 °C	
Factory setting	250 °C	
Additional information	Read access	Operator
	Write access	Maintenance

Probe position

Navigation	 Expert → Input/output → Analog IP → Probe position (14009)	
Prerequisite	Operating mode (→  139) = RTD temperature input	
Description	Position of the temperature probe, measured from zero position (tank bottom or datum plate). This parameter, in conjunction with the measured level, determines whether the temperature probe is still covered by the product. If this is no longer the case, the status of the temperature value will be 'invalid'.	
User entry	-5 000 to 30 000 mm	
Factory setting	5 000 mm	
Additional information	Read access	Operator
	Write access	Maintenance

Calibration type AIP

Navigation Expert → Input/output → Analog IP → Cal type AIP (14018)

Prerequisite **Operating mode (→ 139) ≠ Disabled**

Description Select calibration state of the analog input or output.

Selection

- User calibration
- Factory calibration

Factory setting Factory calibration

Additional information **Meaning of the options**

- Not calibrated
This is a display option only. It can not be selected. It is shown if the analog input is not in a calibrated state.
- User calibration
Activates a user calibration. The user calibration itself is defined in the **User calibration** wizard.
- Factory calibration
Activates the factory calibration which is permanently stored in the device.

Read access	Operator
Write access	Maintenance

Active calibration

Navigation Expert → Input/output → Analog IP → Act. calibration (14012)

Prerequisite **Operating mode (→ 139) ≠ Disabled**

Description Shows calibration state of the analog input.

Additional information

Read access	Operator
Write access	-

Damping factor

Navigation Expert → Input/output → Analog IP → Damping factor (14004)

Prerequisite **Operating mode (→ 139) ≠ Disabled**

Description Defines the damping constant (in seconds).

User entry 0 to 999.9 s

Factory setting 0 s

Additional information	Read access	Operator
	Write access	Maintenance

Gauge current

Navigation  Expert → Input/output → Analog IP → Gauge current (14027)

Prerequisite **Operating mode (→  139) = Gauge power supply**

Description Shows the current on the power supply line for the connected device.

Additional information	Read access	Operator
	Write access	-

3.3.3 "Analog I/O" submenu

i There is a **Analog I/O** submenu (→ 147) for each Analog I/O module of the device. This submenu refers to terminals 1 to 3 of this module (an analog input or output). For terminals 4 to 8 (always an analog input) refer to → 138.

A0032464

12 Terminals for the "Analog I/O" submenu (→ 147) ("B1-3" or "C1-3", respectively)

Navigation Expert → Input/output → Analog I/O

► Analog I/O

Operating mode	→ 148
Current span	→ 149
Fixed current	→ 150
Analog input source	→ 150
Failure mode	→ 151
Error value	→ 152
Output out of range	→ 152
Error on event	→ 152
Input value	→ 153
0 % value	→ 153
100 % value	→ 153
Input value %	→ 154

Output value	→  154

Process variable	→  155
Analog input 0% value	→  155
Analog input 100% value	→  156
Error event type	→  156
Process value	→  156
Input value in mA	→  157
Input value percent	→  157
Damping factor	→  157
Calibration	→  158
Active calibration	→  158
Used for SIL/WHG	→  158

Operating mode

Navigation   Expert → Input/output → Analog I/O → Operating mode (13958)

Description Defines the operating mode of the analog I/O module.

- Selection**
- Disabled
 - 4..20mA input
 - HART master+4..20mA input
 - HART master
 - 4..20mA output
 - HART slave +4..20mA output

Factory setting Disabled

Read access	Operator
Write access	Maintenance

Meaning of the options

Operating mode (→  148)	Direction of signal	Type of signal
Disabled	-	-
4...20mA input	Input from 1 external device	Analog (4...20mA)
HART master+4...20mA input	Input from 1 external device	■ Analog (4...20mA) ■ HART
HART master	Input from up to 6 external devices	HART
4...20mA output	Output to higher-level unit	Analog (4...20mA)
HART slave +4...20mA output	Output to higher-level unit	■ Analog (4...20mA) ■ HART

Depending on the terminals used, the Analog I/O module is used in the passive or active mode.

Mode	Terminals of the I/O module		
	1	2	3
Passive (power supply from external source)	-	+	not used
Active (power supplied by the device itself)	not used	-	+

In the active mode the following conditions must be met:

- Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
- Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
- Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

Current span**Navigation**

  Expert → Input/output → Analog I/O → Current span (13987)

Prerequisite

Operating mode parameter (→  148) ≠ **Disabled** option or **HART master** option

Description

Defines the current range for the measured value transmission.

Selection

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4... 20.5 mA)
- Fixed value *

Factory setting

4...20 mA NE (3.8...20.5 mA)

Additional information

Read access	Operator
Write access	Maintenance

* Visibility depends on order options or device settings

Meaning of the options

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA (4... 20.5 mA)	4 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA NE (3.8...20.5 mA)	3.8 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.0 mA
Fixed current	Constant current, defined in the Fixed current parameter (→ ⓘ 150).				

 In the case of an error, the output current assumes the value defined in the **Failure mode** parameter (→ ⓘ 151).

Fixed current

Navigation	 Expert → Input/output → Analog I/O → Fixed current (13989)				
Prerequisite	Current span (→ ⓘ 149) = Fixed current				
Description	Defines the fixed output current.				
User entry	4 to 22.5 mA				
Factory setting	4 mA

Analog input source

Navigation	 Expert → Input/output → Analog I/O → Analog source (13974)
Prerequisite	■ Operating mode (→ ⓘ 148) = 4..20mA output or HART slave +4..20mA output ■ Current span (→ ⓘ 149) ≠ Fixed current
Description	Defines the process variable transmitted via the AIO.
Selection	■ None ■ Tank level ■ Tank level % ■ Tank ullage ■ Tank ullage % ■ Measured level ■ Distance ■ Displacer position ■ Water level

- Upper interface level
- Lower interface level
- Bottom level
- Tank reference height
- Liquid temperature
- Vapor temperature
- Air temperature
- Observed density value
- Average profile density ³⁾
- Upper density
- Middle density
- Lower density
- P1 (bottom)
- P2 (middle)
- P3 (top)
- GP 1 ... 4 value
- AIO B1-3 value ³⁾
- AIO B1-3 value mA ³⁾
- AIO C1-3 value ³⁾
- AIO C1-3 value mA ³⁾
- AIP B4-8 value ³⁾
- AIP C4-8 value ³⁾

Failure mode

Navigation

 Expert → Input/output → Analog I/O → Failure mode (13988)

Prerequisite

Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output

Description

Defines the output behavior in case of an error.

Selection

- Min.
- Max.
- Last valid value
- Actual value
- Defined value

Factory setting

Max.

3) Visibility depends on order options or device settings

Additional information

Read access	Operator
Write access	Maintenance

Error value**Navigation**

  Expert → Input/output → Analog I/O → Error value (13972)

Prerequisite

Failure mode (→  151) = Defined value

Description

Defines the output value in case of an error.

User entry

3.4 to 22.6 mA

Factory setting

22 mA

Additional information

Read access	Operator
Write access	Maintenance

Output out of range**Navigation**

  Expert → Input/output → Analog I/O → Output out range (13971)

Prerequisite

Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output

Description

Behavior of current output if the value is out of allowed range.

Selection

- Last valid value
- Alarm
- None

Factory setting

Alarm

Additional information

Read access	Operator
Write access	Maintenance

Error on event**Navigation**

  Expert → Input/output → Analog I/O → Error on event (13967)

Prerequisite

Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output

Description

Defines to which type of event (alarm or warning) the output responds.

- Selection**
- Output related error
 - Any error
 - Any error or warning

Factory setting Output related error

Additional information

Read access	Operator
Write access	Maintenance

Input value

Navigation   Expert → Input/output → Analog I/O → Input value (13979)

- Prerequisite**
- Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output
 - Current span (→  149) ≠ Fixed current

Description Shows the input value of the analog I/O module.

Additional information

Read access	Operator
Write access	-

0 % value

Navigation   Expert → Input/output → Analog I/O → 0 % value (13954)

- Prerequisite**
- Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output
 - Current span (→  149) ≠ Fixed current

Description Value corresponding to an output current of 0% (4mA).

User entry Signed floating-point number

Factory setting 0 Unitless

Additional information

Read access	Operator
Write access	Maintenance

100 % value

Navigation   Expert → Input/output → Analog I/O → 100 % value (13968)

- Prerequisite**
- Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output
 - Current span (→  149) ≠ Fixed current

Description Value corresponding to an output current of 100% (20mA).

User entry Signed floating-point number

Factory setting 0 Unitless

Additional information

Read access	Operator
Write access	Maintenance

Input value %

Navigation  Expert → Input/output → Analog I/O → Input value % (13955)

Prerequisite

- **Operating mode** (→  148) = **4..20mA output** or **HART slave +4..20mA output**
- **Current span** (→  149) ≠ **Fixed current**

Description Shows the output value as a percentage of the complete 4...20mA range.

Additional information

Read access	Operator
Write access	-

Output value

Navigation  Expert → Input/output → Analog I/O → Output value (13969)

Prerequisite **Operating mode** (→  148) = **4..20mA output** or **HART slave +4..20mA output**

Description Shows the output value in mA.

Additional information

Read access	Operator
Write access	-

Readback value

Navigation  Expert → Input/output → Analog I/O → Readback value (13957)

Prerequisite **Operating mode** (→  148) = **4..20mA output** or **HART slave +4..20mA output**

Description Shows the measured (feedback) current at the output.

User interface 0 to 65 535 µA

Factory setting 0 µA

Additional information

Read access	Operator
Write access	-

Feedback threshold**Navigation**
 Expert → Input/output → Analog I/O → Feedback thresh. (13956)
Prerequisite**Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output****Description**

Shows the feedback threshold.

Additional information

Read access	Operator
Write access	-

Process variable**Navigation**
 Expert → Input/output → Analog I/O → Process variable (13964)
Prerequisite**Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Defines the type of measuring variable.

Selection

- Level linearized
- Temperature
- Pressure
- Density

Factory setting

Level linearized

Additional information

Read access	Operator
Write access	Maintenance

Analog input 0% value**Navigation**
 Expert → Input/output → Analog I/O → AI 0% value (13977)
Prerequisite**Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Value corresponding to an input current of 0% (4mA).

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Analog input 100% value**Navigation** Expert → Input/output → Analog I/O → AI 100% value (13965)**Prerequisite****Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Value corresponding to an input current of 100% (20mA).

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Error event type**Navigation** Expert → Input/output → Analog I/O → Error event type (13953)**Prerequisite****Operating mode (→  148) ≠ Disabled or HART master****Description**

Defines the type of event message (alarm/warning) in case of an error or output out of range in the analog I/O module.

Selection

- None
- Warning
- Alarm

Factory setting

Warning

Additional information

Read access	Operator
Write access	Maintenance

Process value**Navigation** Expert → Input/output → Analog I/O → Process value (13963)**Prerequisite****Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Shows the input value scaled to customer units.

Additional information

Read access	Operator
Write access	-

Input value in mA**Navigation**
 Expert → Input/output → Analog I/O → Input val. in mA (13970)
Prerequisite**Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Shows the input value in mA.

Additional information

Read access	Operator
Write access	-

Input value percent**Navigation**
 Expert → Input/output → Analog I/O → Input value [%] (13978)
Prerequisite**Operating mode (→  148) = 4..20mA input or HART master+4..20mA input****Description**

Shows the input value as a percentage of the complete 4...20mA current range.

Additional information

Read access	Operator
Write access	-

Damping factor**Navigation**
 Expert → Input/output → Analog I/O → Damping factor (13951)
Prerequisite**Operating mode (→  148) ≠ Disabled or HART master****Description**

Defines the damping constant (in seconds).

User entry

0 to 999.9 s

Factory setting

0 s

Additional information

Read access	Operator
Write access	Maintenance

Calibration

Navigation	Expert → Input/output → Analog I/O → Calibration (13966)	
Prerequisite	Operating mode (→ 148) ≠ Disabled or HART master	
Description	Select calibration state of the analog input or output.	
Selection	■ User calibration ■ Factory calibration	
Factory setting	Factory calibration	
Additional information	Read access	Operator
	Write access	Maintenance

Active calibration

Navigation	Expert → Input/output → Analog I/O → Act. calibration (13981)	
Prerequisite	Operating mode (→ 148) ≠ Disabled or HART master	
Description	Indicates the calibration status of the Analog I/O module.	
Additional information	Meaning of the options ■ User calibration The calibration entered by the user is active. ■ Factory calibration The calibration stored permanently in the device is active.	
	Read access	Operator
	Write access	-

Used for SIL/WHG

Navigation	Expert → Input/output → Analog I/O → Used for SIL/WHG (13980)	
Prerequisite	■ Operating mode (→ 148) = 4..20mA output or HART slave +4..20mA output ■ The device has a SIL approval.	
Description	Determines whether the discrete I/O module is in SIL/WHG mode.	
Selection	■ Enabled ■ Disabled	
Factory setting	Disabled	

Additional information

Read access	Operator
Write access	Maintenance

Expected SIL/WHG chain

Navigation

 Expert → Input/output → Analog I/O → SIL/WHG chain (13952)

Prerequisite

- Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output
- The device has a SIL approval.

Additional information

Read access	Operator
Write access	-

3.3.4 "Digital Xx-x" submenu

-  In the operating menu, each digital input or output is designated by the respective slot of the terminal compartment and two terminals within this slot. **A1-2**, for example, denotes terminals 1 and 2 of slot **A**. The same is valid for slots **B**, **C** and **D** if they contain a Digital IO module.
- In this document, **Xx-x** designates any of these submenus. The structure of all these submenus is the same.

13 Designation of the digital inputs or outputs (examples)

Digital input source

Navigation

Expert → Input/output → Digital Xx-x → Digital source (13907)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Defines which device state is indicated by the digital output.

Selection

■ None

■ Alarm x any

■ Alarm x High

■ Alarm x HighHigh

■ Alarm x High or HighHigh

■ Alarm x Low

■ Alarm x LowLow

■ Alarm x Low or LowLow

■ Digital Xx-x

■ Primary Modbus x

■ Secondary Modbus x

Factory setting

None

Endress+Hauser

161

Additional information**Meaning of the options**

- **Alarm x any, Alarm x High, Alarm x HighHigh, Alarm x High or HighHigh, Alarm x Low, Alarm x LowLow, Alarm x Low or LowLow**

The digital output indicates if the selected alarm is currently active. The alarms themselves are defined in the **Alarm 1 to 4** submenus.

- **Digital Xx-x**⁴⁾

The digital signal present at the digital input **Xx-x** is passed through to the digital output.

- **Modbus A1-4 Discrete x**
Modbus B1-4 Discrete x
Modbus C1-4 Discrete x
Modbus D1-4 Discrete x

The digital value written by the Modbus Master device to the **Modbus discrete x** parameter⁵⁾ is passed to the digital output. For details refer to Special Documentation SD02066G.

Read access	Operator
Write access	Maintenance

Input value**Navigation**

 Expert → Input/output → Digital Xx-x → Input value (13901)

Prerequisite

Operating mode (→  161) = "Input passive" option or "Input active" option

Description

Shows the digital input value.

Additional information

Read access	Operator
Write access	-

Contact type**Navigation**

 Expert → Input/output → Digital Xx-x → Contact type (13912)

Prerequisite

Operating mode (→  161) ≠ Disabled

Description

Determines the switching behavior of the input or output.

Selection

- Normally open
- Normally closed

Factory setting

Normally open

Additional information

Read access	Operator
Write access	Maintenance

4) Only present if "Operating mode (→  161)" = "Input passive" or "Input active" for the respective Digital I/O module.

5) Expert → Communication → Modbus Xx-x → Modbus discrete x

Output simulation

Navigation  Expert → Input/output → Digital Xx-x → Output sim (13909)

Prerequisite **Operating mode (→  161) = Output passive**

Description Sets the output to a specific simulated value.

- Selection**
- Disable
 - Simulating active
 - Simulating inactive
 - Fault 1
 - Fault 2

Factory setting Disable

Additional information

Read access	Operator
Write access	Maintenance

The digital output consists of two relays connected in series:

A0028602

 15 The two relays of a digital output

1/2 The relays

3/4 The terminals of the digital output

The switching state of these relays is defined by the **Output simulation** parameter as follows:

Output simulation	State of relay 1	State of relay 2	Expected result on the terminals of the I/O module
Simulating active	Closed	Closed	Closed
Simulating inactive	Open	Open	Open
Fault 1	Closed	Open	Open
Fault 2	Open	Closed	Open

 The **Fault 1** and **Fault 2** options can be used to check the correct switching behavior of the two relays.

Output value

Navigation

 Expert → Input/output → Digital Xx-x → Output value (13902)

Prerequisite

Operating mode (→  161) = Output passive

Description

Shows the digital output value.

Additional information

Read access	Operator
Write access	-

Readback value

Navigation

 Expert → Input/output → Digital Xx-x → Readback value (13903)

Prerequisite

Operating mode (→  161) = Output passive

Description

Shows the value read back from the output.

Additional information

Read access	Operator
Write access	-

Error on event

Navigation

 Expert → Input/output → Digital Xx-x → Error on event (13916)

Prerequisite

Operating mode (→  161) = Output passive

Description

Defines to which type of events (error or warning) the output responds. Choice: only output related or all.

Selection

- Output related error
- Any error
- Any error or warning

Factory setting

Output related error

Additional information

Read access	Operator
Write access	Maintenance

Damping factor

Navigation Expert → Input/output → Digital Xx-x → Damping factor (13904)

Prerequisite **Operating mode (→ 161) ≠ Disabled**

Description Defines the damping constant.

User entry 1 to 10 s

Factory setting 5 s

Additional information

Read access	Operator
Write access	Maintenance

Used for SIL/WHG

Navigation Expert → Input/output → Digital Xx-x → Used for SIL/WHG (13910)

Prerequisite

- **Operating mode (→ 161) = Output passive**
- The device has a SIL certificate.

Description Determines whether the discrete I/O module is in SIL/WHG mode.

Selection

- Enabled
- Disabled

Factory setting Disabled

Additional information

Read access	Operator

3.4 "Communication" submenu

This menu contains a submenu for each digital communication interface of the device. The communication interfaces are designated by "X1-4" where "X" specifies the slot in the terminal compartment and "1-4" the terminals within this slot.

16 Designation of the "Modbus" or "V1" modules (examples); depending on the device version these modules may also be in slot B or C.

Navigation  Expert → Communication

3.4.1 "Modbus Xx-x" or "V1 Xx-x" submenu

This submenu is only present for devices with **MODBUS** and/or **V1** communication interface. There is one submenu of this type for each communication interface.

Navigation  Expert → Communication → Modbus Xx-x / V1 Xx-x

► Modbus Xx-x		
Communication interface protocol	→ 	171
Modbus value 1 to 4	→ 	172
Modbus discrete 1 to 4	→ 	172
► Configuration	→ 	173
► Integer conversion	→ 	178
► User value source	→ 	183
► GP values	→ 	184
► Discrete selector	→ 	187

► V1 Xx-x		
Communication interface protocol	→ 	171
► Configuration	→ 	188
► V1 input selector	→ 	191

Communication interface protocol

Navigation	 Expert → Communication → Modbus X1-4 / V1 X1-4 / WM550 X1-4 → Commu I/F protoc (13201)	
Description	Shows the type of communication protocol.	
Additional information	Read access	Operator
	Write access	-

Modbus value 1 to 4

Navigation  Expert → Communication → Modbus Xx-x → Modbus value 1 to 4 (13206-1 to 4)

Prerequisite **Communication interface protocol (→  171) = MODBUS**

Description Shows the respective floating point value written by the host system.

Additional information

Read access	Operator
Write access	-

 The Modbus interface provides four floating point values which can be written to by the Host system. These values can be linked to specific functions (e.g. providing the air temperature value).

Modbus discrete 1 to 4

Navigation  Expert → Communication → Modbus Xx-x → Modbus discr. 1 to 4 (13240-1 to 4)

Prerequisite **Communication interface protocol (→  171) = MODBUS**

Description Shows the integer value written by the host-system.

Additional information

Read access	Operator
Write access	-

 The Modbus interface provides four discrete (integer) registers which can be written to by the Host system. These values can be linked to specific functions (e.g. controlling a discrete output).

In the device these values are converted into the following discrete state values:

- Unknown (integer value 0)
- Inactive (integer value 1)
- Active (integer value 2)
- Invalid (integer value ≥ 3)

"Configuration" submenu (Modbus)

 Only visible for devices with a Modbus I/O module.

Baudrate

Navigation	  Expert → Communication → Modbus X1-4 → Configuration → Baudrate (13203)
Prerequisite	Communication interface protocol (→  171) = MODBUS
Description	Defines the baud rate of the communication.
Selection	■ 600 BAUD ■ 1200 BAUD ■ 2400 BAUD ■ 4800 BAUD ■ 9600 BAUD * ■ 19200 BAUD *
Factory setting	9600 BAUD

* Visibility depends on order options or device settings

Additional information	Read access	Operator
	Write access	Maintenance

Parity

Navigation  Expert → Communication → Modbus X1-4 → Configuration → Parity (13204)

Prerequisite **Communication interface protocol (→  171) = MODBUS**

Description Defines the parity of the Modbus communication.

- Selection
- Odd
 - Even
 - None / 1 stop bit
 - None / 2 stop bits

Factory setting None / 1 stop bit

Additional information	Read access	Operator
	Write access	Maintenance

Modbus address

Navigation  Expert → Communication → Modbus X1-4 → Configuration → Modbus address (13205)

Prerequisite **Communication interface protocol (→  171) = MODBUS**

Description Defines the Modbus address of the device.

User entry 1 to 247

Factory setting 1

Additional information	Read access	Operator
	Write access	Maintenance

Float swap mode

Navigation  Expert → Communication → Modbus X1-4 → Configuration → Float swap mode (13232)

Prerequisite **Communication interface protocol (→  171) = MODBUS**

Description Sets the format of how the floating point value is transferred on Modbus.

Selection

- Normal 3-2-1-0
- Swap 0-1-2-3
- WW Swap 1-0-3-2

Factory setting Swap 0-1-2-3

Additional information

Read access	Operator
Write access	Maintenance

Invalid data

Navigation   Expert → Communication → Modbus Xx-x → Configuration → Invalid data (13243)

Prerequisite Communication interface protocol (→  171) = MODBUS

Description Sets what byte is sent in a message that contains invalid data.

Selection

- 0x00
- 0xFF

Factory setting 0x00

Additional information

Read access	Operator
Write access	Maintenance

Word type

Navigation   Expert → Communication → Modbus Xx-x → Configuration → Word type (13208)

Prerequisite Communication interface protocol (→  171) = MODBUS

Description Selects if the integer value has the range 0 to +65535 or -32768 to +32767.

Selection

- Unsigned
- Signed

Factory setting Unsigned

Additional information

Read access	Operator
Write access	Maintenance

CRC seed

Navigation	 Expert → Communication → Modbus Xx-x → Configuration → CRC seed (13248)	
Prerequisite	Communication interface protocol (→  171) = MODBUS	
Description	CRC seed value selection used for all communication CRC calculations.	
Selection	■ 0x0000 ■ 0xFFFF	
Factory setting	0xFFFF	
Additional information	Read access	Operator
	Write access	Maintenance

Old TSM mode

Navigation	 Expert → Communication → Modbus Xx-x → Configuration → Old TSM mode (13213)	
Prerequisite	Communication interface protocol (→  171) = MODBUS	
Description	Selects the type of value available at the NRF590 SW vers.1 compatible modbus map (Address 3000-3195) addresses.	
Selection	■ Float values ■ Integer values	
Factory setting	Float values	
Additional information	Read access	Operator
	Write access	Maintenance

Bus termination

Navigation	 Expert → Communication → Modbus X1-4 → Configuration → Bus termination (13249)	
Prerequisite	Communication interface protocol (→  171) = MODBUS	
Description	Activates or deactivates the bus termination at the device. Should only be activated on the last device in a loop.	
Selection	■ Off ■ On

Factory setting 1

Additional information

Read access	Operator
Write access	Maintenance

Level mapping

Navigation Expert → Communication → V1 Xx-x → Configuration → Level mapping (13268)

Prerequisite **Communication interface protocol (→ 171) = V1**

Description Determines the transmittable range of levels.

Selection

- +ve
- +ve & -ve

Factory setting +ve

Additional information

Read access	Operator
Write access	Maintenance

In V1, the level is always represented by a number in the range from 0 to 999 999. This number corresponds to a level as follows:

"Level mapping" = "+ve"

Number	Corresponding level
0	0.0 mm
999 999	99 999.9 mm

"Level mapping" = "+ve & -ve"

Number	Corresponding level
0	0.0 mm
500 000	50 000.0 mm
500 001	-0.1 mm
999 999	-49 999.9 mm

Line impedance

Navigation

Expert → Communication → V1 Xx-x → Configuration → Line impedance (13266)

Prerequisite

Communication interface protocol (→ 171) = V1

Description

Adjusts the impedance of the communication line.

User entry

0 to 15

Factory setting

15

Additional information

Read access	Operator
Write access	Maintenance

The line impedance affects the voltage difference between a logical 0 and a logical 1 on the message of the device to the bus. The default setting is suitable for most applications.

Compatibility mode

Navigation

Expert → Communication → Modbus Xx-x / V1 Xx-x → Configuration → Comp. mode (13281)

Description

Defines the compatibility mode.

Selection

- Nxx5xx
- Nxx8x

Factory setting

Nxx8x

Additional information

In **NMS5x** mode: Only values which have also existed on NMS5x Gauge status are output on the bus.

In **NMS8x** mode: All Gauge status are available at this parameter.

Factory setting	9.807 m/s ²

"HyTD" submenu*Overview*

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels distributed over the full range of the tank.

A0030164

17 Correction of the hydrostatic tank deformation (HyTD)

- A "Distance" (level below $L_0 \rightarrow$ "HyTD correction value" = 0)
- B Gauge Reference Height (GRH)
- C HyTD correction value
- D "Distance" (level above $L_0 \rightarrow$ "HyTD correction value" > 0)

Linear approximation of the HyTD correction

The real amount of deformation varies non-linearly with the level due to the construction of the tank. However, as the correction values are typically small compared to the measured level, a simple straight line method can be used with good results.

A0028724

18 Calculation of the HyTD correction

- 1 Linear correction according to "Deformation factor (→ 239)"
- 2 Real correction
- 3 Starting level (→ 238)
- L Measured level
- H HyTD correction value (→ 238)

Calculation of the HyTD correction

$$L \leq L_0 \Rightarrow C_{HyTD} = 0$$
$$L > L_0 \Rightarrow C_{HyTD} = - (L - L_0) \times D$$

A0028715

L	Measured level

"CTSh" submenu

Overview

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

-  This correction is recommended for the following situations:
 - if the operating temperature deviates considerably from the temperature during calibration ($\Delta T > 10\text{ °C}$ (18 °F))
 - for extremely high tanks
 - for refrigerated, cryogenic or heated applications
-  As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.
-  This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

CTSh: Calculation of the wall temperature

A0028713

19 Parameters for the CTSh calculation

T _W	Temperature of the wetted part of the tank shell
T _D	Temperature of the dry part of the tank shell
T _P	Product temperature
T _V	Vapor temperature (in the tank)
T _A	Ambient temperature (atmosphere surrounding the tank)
S _d	Measured distance (Empty to Level)
TRH	Tank reference height
E	Empty
L	Level

CTSh: Calculation of the wall temperature

Depending on the parameters **Covered tank** (→ 244) and **Stilling well** (→ 244), the temperatures T_W of the wetted and T_D of the dry part of the tank wall are calculated as follows:

Covered tank (→ 244)	Stilling well (→ 244)	T _W	T _D
Covered	Yes ¹⁾	T _P	T _V
	No	(7/8) T _P + (1/8) T _A	(1/2) T _V + (1/2) T _A
Open top	Yes	T _P	T _A
	No	(7/8) T _P + (1/8) T _A	T _A

1) This option is also valid for insulated tanks without a stilling well. This is due to the temperature inside and outside of the tank shell being the same due to the insulation of the tank.

A0030509

- 1 Covered tank (→ 244) = Covered; Stilling well (→ 244) = Yes
- 2 Covered tank (→ 244) = Covered; Stilling well (→ 244) = No
- 3 Covered tank (→ 244) = Open top; Stilling well (→ 244) = Yes
- 4 Covered tank (→ 244) = Open top; Stilling well (→ 244) = No
- 5 Insulated tank: Covered tank (→ 244) = Open top; Stilling well (→ 244) = Yes

CTSh: Calculation of the correction

$$C_{CTSh} = \alpha_{\text{tank}} (TRH - L) (T_D - T_{cal}) + \alpha_{\text{tank}} L (T_W - T_{cal}) - \alpha_{\text{wire}} S_D (T_v - T_{cal})$$

A0030497

TRH	Tank reference height
L	Level
T _D	Temperature of the dry part of the tank shell (calculated from T _p , T _V and T _A)
T _W	Temperature of the wetted part of the tank shell (calculated from T _p , T _V and T _A)
T _{cal}	Temperature at which the measurement has been calibrated
α _{tank}	Linear expansion coefficient of tank
α _{wire}	Linear expansion coefficient of wire
C _{CTSh}	CTSh correction value

Factory setting

15 ppm

"HTMS" submenu

Overview

The Hybrid Tank Measurement System (HTMS) is a method to calculate the density of a product in a tank based on both a (top mounted) level and at least one (bottom mounted) pressure measurement. An additional pressure sensor can be installed at the top of the tank to provide information about the vapor pressure and to make the density calculation more accurate. The calculation method also takes into account a possible level of water at the bottom of the tank to make density calculations as accurate as possible.

HTMS parameters

20 HTMS parameters

- A Product
- B Water

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Tank configuration → Pressure → P1 (bottom)
H _{p1} (Position of P1 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P1 position
P3 (Top pressure)	Setup → Advanced setup → Tank configuration → Pressure → P3 (top)
H _{p3} (Position of P3 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P3 position
ρ _p (Density of the product ¹⁾)	- Measured value: Setup → Advanced setup → Calculation → HTMS → Density value (13753) - User-defined value: Setup → Advanced setup → Calculation → HTMS → Manual upper density (14998)
ρ _v (Vapor density)	Expert → Application → Tank configuration → Density → Vapor density
ρ _A (Ambient air temperature)	Setup → Advanced setup → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L _p (Level of the product)	Operation → Tank level (14655)
L _w (Bottom water level)	Operation → Water level (14970)
V = L _w - H _{p1}	
Δ _p = L _p - L _w = L _p - V - H _{p1}	

1) Depending on the situation this parameter is measured or a user-defined value is used.

HTMS modes

Two HTMS modes can be selected in the **HTMS mode** parameter (→  248). The mode determines whether one or two pressure values are used. Depending on the selected mode a number of additional parameters are required for the calculation of the product density.

 The **HTMS P1+P3** option must be used in pressurized tanks in order to compensate for the pressure of the vapor phase.

HTMS mode (→  248)	Measured variables	Required additional parameters	Calculated variables
HTMS P1	■ P_1 ■ L_p	■ g ■ H_{p1} ■ L_w (optional)	ρ_p
HTMS P1+P3	■ P_1 ■ P_3 ■ L_p	■ ρ_v ■ ρ_A ■ g ■ H_{p1} ■ H_{p3} ■ L_w (optional)	ρ_p (more precise calculation for pressurized tanks)

Minimum level

The density of the product can only be calculated if the product has a minimum thickness :

$$\Delta_p \geq \Delta_{p, \min}$$

A0028864

This is equivalent to the following condition for the product level:

$$L_p - V \geq \Delta_{p, \min} + H_{p1} = L_{\min}$$

A0028863

$L_{\min}$ is defined in the **Minimum level** parameter (→  249). As can be seen from the formula it always must be bigger than H_{p1} .

If $L_p - V$ falls below this limit, the density is calculated as follows:

- If a previous calculated value is available, this value will be kept as long as no new calculation is possible.
- If no value was previously calculated, the manual value (defined in the **Manual upper density** parameter) will be used.

Hysteresis

The level of the product in a tank is not constant but slightly varies, due for example to filling disturbances. If the level oscillates around the changeover level (**Minimum level** (→  249)), the algorithm will constantly switch between calculating the value and holding the previous result. To avoid this effect a positional hysteresis is defined around the changeover point.

A0029148

21 HTMS hysteresis

- 1 Value calculated
- 2 Value held/manual
- L_{min} Minimum level (→ 249)
- H_r Hysteresis (→ 250)

Bottom level timestamp

Navigation Expert → Tank values → Level → BotLev timestamp (8048)**Description**

Shows the timestamp for measured bottom level.

Additional information

Read access	Operator
Write access	-

Water level

Navigation

 Expert → Tank values → Level → Water level (14970)

Description

Shows the bottom water level.

Additional information

Read access	Operator
Write access	-

Measured level

Navigation

 Expert → Tank values → Level → Measured level (14653)

Description

Shows the measured level without any correction from the tank calculations.

Additional information

Read access	Operator
Write access	-

Distance

Navigation

 Expert → Tank values → Level → Distance (8103)

Description

Shows measured distance from reference position.

Additional information

Read access	Operator
Write access	-

Displacer position

Navigation

 Expert → Tank values → Level → Displacer pos (15019)

Description

Shows the displacer position.

Write access	-

3.6.2 "Temperature" submenu

Navigation  Expert → Tank values → Temperature

► Temperature	
Liquid temperature	→  269
Vapor temperature	→  269
Air temperature	→  270
► NMT element values	→  270
► Element temperature	→  270
Element temperature 0 to 23	→  270
► Element position	→  270
Element position 0 to 23	→  270

Liquid temperature

Navigation  Expert → Tank values → Temperature → Liquid temp. (14978)

Description Shows the average or spot temperature of the measured liquid.

Additional information	Read access	Operator
	Write access	-

Vapor temperature

Navigation  Expert → Tank values → Temperature → Vapor temp. (14985)

Description Shows the measured vapor temperature.

Additional information	Read access	Operator
	Write access	-

Air temperature

Navigation	 Expert → Tank values → Temperature → Air temp. (14986)	
Description	Shows the air temperature.	
Additional information	Read access	Operator
	Write access	-

"NMT element values" submenu

Navigation  Expert → Tank values → Temperature → NMT elem. values

"Element temperature" submenu

Navigation  Expert → Tank values → Temperature → NMT elem. values
→ Element temp. → Element temp 0 to 23 (14984)

Element temperature 1 to 24

Navigation	 Expert → Tank values → Temperature → NMT elem. values → Element temp. → Element temp 1 to 24 (14984-1 to 24)	
Description	Shows the temperature of an element in the NMT.	
Additional information	Read access	Operator
	Write access	-

"Element position" submenu

Navigation  Expert → Tank values → Temperature → NMT elem. values
→ Element position

Element position 1 to 24

Navigation	 Expert → Tank values → Temperature → NMT elem. values → Element position → Element pos. 1 to 24 (15014-1 to 24)	
Description	Shows the position of the selected element in the NMT.	

Additional information

Read access	Operator
Write access	-

3.6.3 "Density" submenu

Navigation  Expert → Tank values → Density

► Density		
Observed density	→ 	272
Observed density temperature	→ 	273
Vapor density	→ 	273
Air density	→ 	273
Measured upper density	→ 	273
Upper density timestamp	→ 	274
Measured middle density	→ 	274
Middle Density Timestamp	→ 	274
Measured lower density	→ 	274
Lower density timestamp	→ 	275
► Profile density	→ 	275
Profile density 0 to 49	→ 	275
Profile density position 0 to 49	→ 	275

Observed density

Navigation  Expert → Tank values → Density → Observed density (13451)

Description Calculated density of the product.

Read access	Operator
Write access	-

 This value is calculated from different measured variables depending on the selected calculation method.

Observed density temperature

Navigation	 Expert → Tank values → Density → Obs. dens. temp. (13453)
Description	Corresponding temperature of measured density. Can be used for reference density calculation.
User interface	Signed floating-point number
Factory setting	0 °C

Vapor density

Navigation	 Expert → Tank values → Density → Vapor density (14981)
Description	Defines the density of the gas phase in the tank.
User entry	0.0 to 500.0 kg/m ³
Factory setting	1.2 kg/m ³

Additional information

Read access	Operator
Write access	Maintenance

Air density

Navigation	 Expert → Tank values → Density → Air density (14980)
Description	Defines the density of the air surrounding the tank.
User entry	0.0 to 500.0 kg/m ³
Factory setting	1.2 kg/m ³

Additional information

Read access	Operator
Write access	Maintenance

Measured upper density

Navigation	 Expert → Tank values → Density → Meas upper dens. (15001)
Description	Shows the density of the upper phase.

Additional information	Read access	Operator
	Write access	-

Upper density timestamp

Navigation  Expert → Tank values → Density → UpDens timestamp (8067)

Description Shows timestamp of the last measured upper density.

Additional information	Read access	Operator
	Write access	-

Measured middle density

Navigation  Expert → Tank values → Density → Meas middle dens (14997)

Description Density of the middle phase.

Additional information	Read access	Operator
	Write access	-

Middle Density Timestamp

Navigation  Expert → Tank values → Density → MidDensTimestamp (8011)

Description Shows the timestamp of the last measured middle density.

Additional information	Read access	Operator
	Write access	-

Measured lower density

Navigation  Expert → Tank values → Density → Meas lower dens. (15002)

Description Density of the lower phase.

Additional information	Read access	Maintenance
	Write access	-

Lower density timestamp

Navigation Expert → Tank values → Density → LowerDensTimestp (8122)**Description**

Shows timestamp of last measured lower density.

Additional information

Read access	Operator
Write access	-

"Profile density" submenu*Navigation*  Expert → Tank values → Density → Profile density

Profile density 0 to 49

Navigation Expert → Tank values → Density → Profile density → Profile dens 0 to 49 (8068)**Description**

Shows the density measurement at the corresponding profile density position.

Additional information

Read access	Operator
Write access	-

Profile density position 0 to 49

Navigation Expert → Tank values → Density → Profile density → Profile pos 0 to 49 (8077)**Description**

Shows the position where the corresponding density was measured.

Additional information

Read access	Operator
Write access	-

3.6.4 "Pressure" submenu

Navigation  Expert → Tank values → Pressure

► Pressure

P1 (bottom)

→  276

P3 (top)

→  276

P1 (bottom)

Navigation  Expert → Tank values → Pressure → P1 (bottom) (14983)

Description Shows the pressure at the tank bottom.

Read access	Operator
Write access	-

P3 (top)

Navigation  Expert → Tank values → Pressure → P3 (top) (14988)

Description Shows the pressure (P3) at the top transmitter.

Read access	Operator
Write access	-

3.6.5 "GP values" submenu

Navigation  Expert → Tank values → GP values

▶ GP values

GP 1 to 4 name

Factory setting Off

* Visibility depends on order options or device settings

Additional information

A total of 1000 measured values can be logged. This means:

- 1000 data points if 1 logging channel is used
- 500 data points if 2 logging channels are used
- 333 data points if 3 logging channels are used
- 250 data points if 4 logging channels are used

If the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 1000, 500, 333 or 250 measured values are always in the log (ring memory principle).

 The logged data are deleted if a new option is selected in this parameter.

Read access	Operator
Write access	Maintenance

Logging interval

Navigation

Expert → Diagnostics → Data logging → Logging interval (0856)

Expert → Diagnostics → Data logging → Logging interval (0856)

Description

Define the logging interval t_{log} for data logging. This value defines the time interval between the individual data points in the memory.

User entry

1.0 to 3 600.0 s

Factory setting

10.0 s

Additional information

This parameter defines the interval between the individual data points in the data log, and thus the maximum loggable process time T_{log} :

- If 1 logging channel is used: $T_{log} = 1000 \cdot t_{log}$
- If 2 logging channels are used: $T_{log} = 500 \cdot t_{log}$
- If 3 logging channels are used: $T_{log} = 333 \cdot t_{log}$
- If 4 logging channels are used: $T_{log} = 250 \cdot t_{log}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of T_{log} always remains in the memory (ring memory principle).

 The logged data are deleted if this parameter is changed.

Example

When using 1 logging channel

- $T_{log} = 1000 \cdot 1 \text{ s} = 1000 \text{ s} \approx 16.5 \text{ min}$
- $T_{log} = 1000 \cdot 10 \text{ s} = 1000 \text{ s} \approx 2.75 \text{ h}$
- $T_{log} = 1000 \cdot 80 \text{ s} = 80\,000 \text{ s} \approx 22 \text{ h}$
- $T_{log} = 1000 \cdot 3\,600 \text{ s} = 3\,600\,000 \text{ s} \approx 41 \text{ d}$

"Display channel 1 to 4" submenu

i The **Display channel 1 to 4** submenu is only available when operating via the local display. When operating via FieldCare, the diagram can be displayed in the "Event List / HistoROM" function.

The **Display channel 1 to 4** submenu displays the measured value trend of the respective logging channel.

- x-axis: displays 125 to 500 measured values of a process variable (the number of values depending on the number of selected channels).
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.

i To quit the diagram and to return to the operating menu, press $\oplus$ and $\ominus$ simultaneously.
