1 About this document

1.1 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the operating menu.

1.2 Symbols

1.2.1 Safety symbols

DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Alternating current

Direct current and alternating current

Direct current

Ground connection

A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

Protective earth (PE)

Ground terminals that must be connected to ground prior to establishing any other connections.

The ground terminals are located on the interior and exterior of the device:

- Interior ground terminal: protective earth is connected to the mains supply.
- Exterior ground terminal: device is connected to the plant grounding system.

1.2.3 Tool symbols

Phillips head screwdriver

Flat blade screwdriver

Torx screwdriver

Allen key

Open-ended wrench

1.2.4 Symbols for certain types of information and graphics

Permitted

Procedures, processes or actions that are permitted

Preferred

Procedures, processes or actions that are preferred

Forbidden

Procedures, processes or actions that are forbidden

Tip

Indicates additional information

Reference to documentation

Reference to graphic

Notice or individual step to be observed

1, 2, 3.

Series of steps

Result of a step

Visual inspection

Operation via operating tool

Write-protected parameter

1, 2, 3, ...

Item numbers

A, B, C, ...

Views

→ **Safety instructions**

Observe the safety instructions contained in the associated Operating Instructions

Temperature resistance of the connection cables

Specifies the minimum value of the temperature resistance of the connection cables

1.3 Documentation

The following documentation types are available in the Downloads area of the Endress +Hauser website (www.endress.com/downloads):

- For an overview of the scope of the associated Technical Documentation, refer to the following:
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
 - *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

1.3.1 Technical Information (TI)

Planning aid

The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.

1.3.2 Brief Operating Instructions (KA)

Guide that takes you quickly to the 1st measured value

The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

1.3.3 Operating Instructions (BA)

The Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

It also contains a detailed explanation of each individual parameter in the operating menu (except the **Expert** menu). The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.4 Description of Device Parameters (GP)

The Description of Device Parameters provides a detailed explanation of each individual parameter in the 2nd part of the operating menu: the **Expert** menu. It contains all the device parameters and allows direct access to the parameters by entering a specific code. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.5 Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

- The nameplate indicates the Safety Instructions (XA) that are relevant to the device.

1.3.6 Installation instructions (EA)

Installation Instruction are used to replace a faulty unit with a functioning unit of the same type.

2 Overview of the operating menu

- The following table lists all parameters the "Expert" menu may contain. The page number refers to where a description of the parameter can be found.
- Depending on the device version and parametrization some parameters will not be available in a given situation. For details on the conditions refer to the "Prerequisite" category in the description of the respective parameter.
- The representation essentially corresponds to the menu seen when using an operating tool (e.g. FieldCare). On the local display there may be minor differences in the menu structure. Details are mentioned in the description of the respective submenu.

Direct access

Navigation

Expert → Direct access (0106)

User entry

0 to 65 535

Factory setting

0

Additional information

Enter the access code of a parameter in order to access this parameter directly (i.e. without navigation).

The direct access code consists of a five digit number and an optional channel code, which specifies an input or output channel, e.g. 00353-2

- Leading zeros need not to be entered.
- If the channel code is not entered, channel 1 is automatically selected.
- In order to access a different channel: Enter the direct access code with the channel code.

 In this document, the direct access code is added in brackets after the parameter name in the *Navigation* category.

Locking status

Navigation

  Expert → Locking status (0004)

Description

Indicates the type of locking.

'Hardware locked' (HW)

The device is locked by the 'WP' switch on the main electronics module. To unlock, set the switch into the OFF position.

'WHG locked' (SW)

Unlock the device by entering the appropriate access code in 'Enter access code'.

'SIL locked' (SW)

Unlock the device by entering the appropriate access code in 'Enter access code'.

'Temporarily locked' (SW)

The device is temporarily locked by processes in the device (e.g. data upload/download, reset). The device will automatically be unlocked after completion of these processes.

Additional information

3.1.3 "Date / time" submenu

The Date / time submenu is used to set the real-time clock of the device.

Setting the real-time clock via the display and operating module

1. Navigate to Expert → System → Date / time → Set date.
↳ The current value of the real-time clock is displayed.
2. If the displayed value is correct: Press to terminate the wizard.
3. If the displayed value is not correct: Press to edit it.
↳ The current value of the **Year** parameter is displayed.
4. If the displayed value is correct: Press to go to the next value.
5. If the displayed value is incorrect: Press and enter the correct value. Confirm the new value by pressing .
6. Repeat the last two steps for the following parameters: **Month, Day, Hour, Minute**.
↳ The new value of the real-time clock is displayed.
7. Confirm the new value of the real-time clock by pressing .
8. Quit the wizard by pressing again.

Setting the real-time clock via an operating tool (e.g. FieldCare)

1. Navigate to: Expert → System → Date / time

2.

Go to the **Set date** parameter (→ 50) and select the **Start** option.

3.

- i** If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.
- i** The write protection affects all parameters marked with the symbol in this document.
- i** Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 33).

Activate SW option

Navigation

Expert → System → Administration → Activate SW opt. (0029)

Description

Enter the application package code or code of another re-ordered functionality to enable it

User entry

Positive integer

Factory setting

0

3.2.1 "Information" submenu

The **Information** submenu (→ 60) comprises all display parameters which give information about the current state of the measurement.

Description of parameters

Navigation

Expert → Sensor → Information

▶ Information	
Gross weight	→ 60
Net weight	→ 60
Gauge status	→ 61
Active gauge command	→ 61
Balance flag	→ 61
Displacer status	→ 61
Motor status	→ 62
One-time command status	→ 62
Sensor temperature	→ 62
Detector temperature	→ 62

Gross weight

Navigation

Expert → Sensor → Information → Gross weight (8080)

Description

Shows non-compensated measured weight from detector.

Additional information

Read access	Operator
Write access	-

Net weight

Navigation

Expert → Sensor → Information → Net weight (8007)

Description

Shows the corrected weight data from the detector, as compensated by the drum table. This weight is used for measurement.

Additional information

Read access	Operator
Write access	-

Gauge status**Navigation**
 Expert → Sensor → Information → Gauge status (8081)
Description

Indicates the current status of the device gauge command.

Additional information

Read access	Operator
Write access	-

Active gauge command**Navigation**
 Expert → Sensor → Information → Active gauge cmd (8073)
Description

Indicates the currently executed Gauge Command.

Additional information

Read access	Operator
Write access	-

Balance flag**Navigation**
 Expert → Sensor → Information → Balance flag (8006)
Description

Indicates the validity of the Measurement. If balanced, corresponding Value (Liquid Level, Upper Interface, Lower Interface, Tank Bottom) is updated.

Additional information

Read access	Operator
Write access	-

Displacer status**Navigation**
 Expert → Sensor → Information → Displacer status (8160)
Description

Shows the current moving and balancing status of the displacer.

Additional information

Read access	Operator
Write access	-

Motor status**Navigation** Expert → Sensor → Information → Motor status (8118)**Description**

Shows the current moving Direction of the Motor.

Additional information

Read access	Operator
Write access	-

One-time command status**Navigation** Expert → Sensor → Information → One-time Cmd (8201)**Description**

Indicates the status of the last executed one-time gauge command.

Additional information

Read access	Operator
Write access	-

Additional information One-time command is available for all gauge commands, excepting Level, Stop, Up, and Interface.

Sensor temperature**Navigation** Expert → Sensor → Information → Sensor temp. (8066)**Description**

Shows the temperature of sensor module electronics.

Additional information

Read access	Operator
Write access	-

Detector temperature**Navigation** Expert → Sensor → Information → Detector temp. (8090)**Description**

Shows the temperature of the detector unit.

- C Lower interface
- 1 Displacer pos
- 2 Upper I/F level
- 3 Lower I/F level
- 4 Datum plate
- 5 Distance

Distance

Navigation

Expert → Sensor → Measured values → Distance (8103)

Description

Shows measured distance from reference position.

Additional information

Read access	Operator
Write access	-

Displacer position

Navigation

Expert → Sensor → Measured values → Displacer pos (8130)

Description

Shows measured displacer position from zero position (tank bottom or datum plate). Value is always updated when displacer moves.

Additional information

Read access	Operator
Write access	-

Liquid level

Navigation
 Expert → Sensor → Measured values → Liquid level (8072)
Description

Shows measured level from zero position (tank bottom or datum plate). Value is updated when device generates a valid level measurement.

Additional information

Read access	Operator
Write access	-

Upper interface level

Navigation
 Expert → Sensor → Measured values → Upper I/F level (8127)
Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Operator
Write access	-

Upper interface level timestamp

Navigation
 Expert → Sensor → Measured values → Up I/F timestamp (8055)
Description

Shows timestamp for the last measured upper interface level.

Additional information

Read access	Operator
Write access	-

Lower interface level

Navigation
 Expert → Sensor → Measured values → Lower I/F level (8128)
Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Operator
Write access	-

Lower interface level timestamp

Navigation Expert → Sensor → Measured values → LowI/F timestamp (8061)**Description**

Shows timestamp of the last measured lower interface level.

Additional information

Read access	Operator
Write access	-

Bottom level

Navigation Expert → Sensor → Measured values → Bottom level (8129)**Description**

Shows measured bottom level. Value is updated after a successfull tank bottom gauge command.

Additional information

Read access	Operator
Write access	-

Bottom level timestamp

Navigation Expert → Sensor → Measured values → BotLev timestamp (8048)**Description**

Shows the timestamp for measured bottom level.

"Spot density" submenu**Navigation**
  Expert → Sensor → Measured values → Spot density

► Spot density	
Measured upper density	→  67
Upper density timestamp	→  67
Measured middle density	→  67
Middle Density Timestamp	→  68
Measured lower density	→  68
Lower density timestamp	→  68

Measured upper density**Navigation**
  Expert → Sensor → Measured values → Spot density → Meas upper dens. (8164)
Description

Shows the Measured Upper Density Value.

Additional information

Read access	Operator
Write access	-

Upper density timestamp**Navigation**
  Expert → Sensor → Measured values → Spot density → UpDens timestamp (8067)
Description

Shows timestamp of the last measured upper density.

Additional information

Read access	Operator
Write access	-

Measured middle density**Navigation**
  Expert → Sensor → Measured values → Spot density → Meas middle dens (8165)
Description

Shows the Measured Middle Density Value.

Additional information

Read access	Operator
Write access	-

Middle Density Timestamp**Navigation**
 Expert → Sensor → Measured values → Spot density → MidDensTimestamp (8011)
Description

Shows the timestamp of the last measured middle density.

Additional information

Read access	Operator
Write access	-

Measured lower density**Navigation**
 Expert → Sensor → Measured values → Spot density → Meas lower dens. (8166)
Description

Shows the Measured Lower Density Value.

Additional information

Read access	Operator
Write access	-

Lower density timestamp**Navigation**
 Expert → Sensor → Measured values → Spot density → LowerDensTimestp (8122)
Description

Shows timestamp of last measured lower density.

"Profile density" submenu**Navigation**
  Expert → Sensor → Measured values → Profile density

► Profile density	
Profile point	→  69
Profile average density	→  69
Profile density timestamp	→  69
► Density table	→  70

Profile point**Navigation**
  Expert → Sensor → Measured values → Profile density → Profile point (8170)
Description

Shows actual number of Density Points measured so far in current operation, and the total Number of Points after Density Profile Operation is complete.

Additional information

Read access	Operator
Write access	-

Profile average density**Navigation**
  Expert → Sensor → Measured values → Profile density → Profile avg dens (8175)
Description

Shows the average density calculated after a profile density measurement is complete.

Additional information

Read access	Operator
Write access	-

Profile density timestamp**Navigation**
  Expert → Sensor → Measured values → Profile density → Profil dens time (8114)
Description

Shows the timestamp when the last average density profile was finished.

Additional information

Read access	Operator
Write access	-

*"Density table" submenu**Navigation*

Expert → Sensor → Measured values → Profile density → Density table

Density table

Navigation

Expert → Sensor → Measured values → Profile density → Density table

Description

Shows measured density table of profile density.

"Displacer" submenu**Navigation**

Expert → Sensor → Sensor config → Displacer → Displacer type (8071)

► Displacer	
Displacer type	→ 74
Displacer diameter	→ 74
Displacer weight	→ 75
Displacer volume	→ 75
Displacer balance volume	→ 75
Displacer height	→ 76
Immersion depth	→ 76

Displacer type**Navigation**

Expert → Sensor → Sensor config → Displacer → Displacer type (8071)

Description

Chooses the type of displacer used.

Selection

- Custom diameter
- Diameter 30 mm
- Diameter 50 mm
- Diameter 70 mm
- Diameter 110 mm

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Displacer diameter**Navigation**

Expert → Sensor → Sensor config → Displacer → Displacer diamet (8014)

Prerequisite

Displacer type (→ 74) = Custom diameter

Description

Sets the diameter of the cylindrical part of displacer.

User entry 0 to 999.9 mm

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer weight

Navigation Expert → Sensor → Sensor config → Displacer → Displacer weight (8010)

Description Set the weight of the displacer in air. Indicated on the displacer in grams.

User entry 10 to 999.9 g

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer volume

Navigation Expert → Sensor → Sensor config → Displacer → Displacer volume (8008)

Description Displacer volume indicated on displacer in mililiter.

User entry 10 to 999.9 ml

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer balance volume

Navigation Expert → Sensor → Sensor config → Displacer → Balance volume (8009)

Description Defines the balance volume of the displacer as the lower part of displacer immersed in liquid. Units in milliliters. Indicated on displacer.

User entry 10 to 999.9 ml

Factory setting See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Displacer height**Navigation**

Expert → Sensor → Sensor config → Displacer → Displacer height (8195)

Description

Sets the displacer height in mm. Used for density measurement as minimum distance between last profile point and liquid level.

User entry

10 to 300 mm

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Immersion depth**Navigation**

Expert → Sensor → Sensor config → Displacer → Immersion depth (8070)

Description

Defines distance (mm) from displacer bottom to balancing line defined by balanced volume. Value is needed for correct bottom level measurement.

User entry

0 to 99.9 mm

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

"Wiredrum" submenu*Navigation*

[Diagram] Expert → Sensor → Sensor config → Wiredrum

► Wiredrum	
Drum circumference	→ [Diagram] 77
Wire weight	→ [Diagram] 77

Drum circumference**Navigation**

[Diagram] Expert → Sensor → Sensor config → Wiredrum → Drum circumfer (8082)

Description

Sets the circumference of the wire drum. Indicated in Label.

User entry

100 to 999.9 mm

Factory setting

See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

Wire weight**Navigation**

[Diagram] Expert → Sensor → Sensor config → Wiredrum → Wire weight (8040)

Description

Defines the weight of the measuring wire in g/10m. Indicated on Label.

User entry

0 to 999.9 g

Factory setting

See label on the device.

Additional information

Read access	Operator
Write access	Maintenance

"Safety settings" submenu*Navigation*
  Expert → Sensor → Sensor config → Safety settings

 Safety settings	
High stop level	→  78
Low stop level	→  78
Slow hoist zone	→  79
Overtension weight	→  79
Undertension weight	→  79
Output out of range	→  80

High stop level**Navigation**
  Expert → Sensor → Sensor config → Safety settings → High stop level (8135)
Description

Position of the displacer high stop as measured from defined zero position (tank bottom or datum plate).

User entry

-999 999.9 to 999 999.9 mm

Factory setting

20 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Low stop level**Navigation**
  Expert → Sensor → Sensor config → Safety settings → Low stop level (8069)
Description

Position of the displacer low stop as measured from defined zero position (tank bottom or datum plate).

User entry

-999 999.9 to 999 999.9 mm

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Slow hoist zone

Navigation	Expert → Sensor → Sensor config → Safety settings → Slow hoist zone (8084)				
Description	Defines the interval in millimeters, measured down from the Reference Position, in which the Displacer reduces moving speed.				
User entry	10 to 999 999.9 mm				
Factory setting	70 mm				
Additional information	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Read access</td> <td style="padding: 2px;">Operator</td> </tr> <tr> <td style="padding: 2px;">Write access</td> <td style="padding: 2px;">Maintenance</td> </tr> </table>	Read access	Operator	Write access	Maintenance
Read access	Operator				
Write access	Maintenance				

Overtension weight

Navigation	Expert → Sensor → Sensor config → Safety settings → Overtension wgt (8097)				
Description	Sets the minimum Weight in grams when Overtension Alarm will be set.				
User entry	100 to 999.9 g				
Factory setting	350 g				
Additional information	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Read access</td> <td style="padding: 2px;">Operator</td> </tr> <tr> <td style="padding: 2px;">Write access</td> <td style="padding: 2px;">Maintenance</td> </tr> </table>	Read access	Operator	Write access	Maintenance
Read access	Operator				
Write access	Maintenance				

Undertension weight

Navigation	Expert → Sensor → Sensor config → Safety settings → Undertension wgt (8098)				
Description	Defines the undertension error weight. Undertension error will be issued if displacer weight is below this value longer than 7 seconds.				
User entry	0 to 300 g				
Factory setting	10 g				
Additional information	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Read access</td> <td style="padding: 2px;">Operator</td> </tr> <tr> <td style="padding: 2px;">Write access</td> <td style="padding: 2px;">Maintenance</td> </tr> </table>	Read access	Operator	Write access	Maintenance
Read access	Operator				
Write access	Maintenance				

Output out of range

Navigation Expert → Sensor → Sensor config → Safety settings → Output out range (8218)

Description Selection of behavior between Alarm or Last valid value when displacer reached HighStopLevel, LowStopLevel or ReferencePosition.

Selection

- Last valid value
- Alarm
- None

Factory setting Last valid value

Additional information

Read access	Operator
Write access	Maintenance

"Level settings" submenu*Navigation*

Diagram: Expert → Sensor → Sensor config → Level settings → Upper density (8113)

► Level settings	
Upper density	→ 81
Middle density	→ 81
Lower density	→ 82
Process condition	→ 82
Standby level	→ 82
Offset standby distance	→ 83

Upper density**Navigation**

Diagram: Expert → Sensor → Sensor config → Level settings → Upper density (8113)

Description

Sets the density of the upper phase of the liquid.

User entry

50 to 2 000 kg/m³

Factory setting

800 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Middle density**Navigation**

Diagram: Expert → Sensor → Sensor config → Level settings → Middle density (8041)

Description

Sets Density of Middle Phase in the Tank if three Phases are available. Otherwise used for the Lower Phase in the Tank if two Phases are available.

User entry

50 to 2 000 kg/m³

Factory setting

1 000 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Lower density

Navigation Expert → Sensor → Sensor config → Level settings → Lower density (8042)

Description Sets the density of the lower Phase in the tank if three phases are available.

User entry 50 to 2 000 kg/m³

Factory setting 1 200 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Process condition

Navigation Expert → Sensor → Sensor config → Level settings → Process cond. (8001)

Description Select the liquid condition of the tank.

Selection

- Universal
- Calm surface
- Turbulent surface

Factory setting Universal

Additional information For W&M, setting to option **Calm surface** is recommended.

Read access	Operator
Write access	Maintenance

Standby level

Navigation Expert → Sensor → Sensor config → Level settings → Standby level (8194)

Description Defines the position in the tank where the displacer waits for the liquid level to rise during standby level gauge command.

User entry -999 999.9 to 999 999.9 mm

Factory setting 0 mm

Additional information

Read access	Operator
Write access	Maintenance

 7 Displacer waiting for the liquid level to rise during standby level gauge command

- 1 Gauge reference height
- 2 Empty
- 3 Datum plate
- 4 Standby level
- 5 Standby distance
- 6 Reference position

Offset standby distance

Navigation

 Expert → Sensor → Sensor config → Level settings → Offset distance (8107)

Description

Defines the distance from the current position where the displacer waits for the liquid level to rise during offset standby gauge command.

User entry

0 to 999 999.9 mm

Factory setting

500 mm

Additional information

A0051273

■ 8 *a: Offset standby distance*

"Balance settings" submenu*Navigation*
  Expert → Sensor → Sensor config → Balance settings

► Balance settings	
Level measurement mode	→  85
Interface measurement mode	→  86
Balancing waiting time	→  86
Seek delay	→  87
Weight tolerance	→  87

The parameter "Process condition" does a pre-set of the major balancing parameters. For the most applications its enough to set the correct "Process condition" parameter which affects the balancing parameter settings automatically.

Level measurement mode**Navigation**
  Expert → Sensor → Sensor config → Balance settings → Level meas mode (8056)
Description

Chooses the measurement mode used for level measurement.

Selection

- Normal measure mode
- Compensation mode
- Non hysteresis mode

Factory setting

Non hysteresis mode

Additional information

Read access	Operator
Write access	Maintenance

A0038582

Fig. 9 NMS8x level mode

- a1 Displacer is in liquid or air unbalanced*
- a2 Displacer on liquid balanced*
- b1 Displacer is in liquid or air unbalanced*
- b2 Displacer on liquid balanced*
- b3 Displacer is moved out of the liquid, the weight in vapour is measured and used for the new weight calculation*
- b4 Displacer on liquid balanced*
- c1 Displacer is in liquid or air unbalanced*
- c2 Displacer on liquid balanced*
- c3 Displacer is lifted up*
- c4 Displacer on liquid balanced*

Interface measurement mode

Navigation

Expert → Sensor → Sensor config → Balance settings → Interface mode (8064)

Description

Chooses the measurement mode used for interface level measurements.

Selection

- Non hysteresis mode
- Normal measure mode

Factory setting

Non hysteresis mode

Additional information

Read access	Operator
Write access	Maintenance

Balancing waiting time

Navigation

Expert → Sensor → Sensor config → Balance settings → Bal waiting time (8205)

Description

Set the waiting time in seconds, after which the balance flag is turned on if level measurement is balanced (motor has stopped).

User entry

0 to 255 s

Factory setting

4 s

Additional information

Read access	Operator
Write access	Maintenance

Seek delay**Navigation**

Diagram: Expert → Sensor → Sensor config → Balance settings → Seek delay (8162)

Description

When displacer is balanced, this parameter sets the Delay Time (seconds) before displacer starts to track Level again.

User entry

1 to 255 s

Factory setting

2 s

Additional information

Read access	Operator
Write access	Maintenance

Weight tolerance**Navigation**

Diagram: Expert → Sensor → Sensor config → Balance settings → Weight tolerance (8213)

Description

Defines balance weight tolerance in grams, in which the displacer is in balance status.

User entry

0.1 to 100 g

Factory setting

1.6 g

Additional information

Read access	Operator
Write access	Maintenance

"Spot density" submenu*Navigation* Expert → Sensor → Sensor config → Spot density

▶ Spot density	
Upper density offset	→  88
Middle density offset	→  88
Lower density offset	→  89
Submersion depth	→  89

Upper density offset**Navigation** Expert → Sensor → Sensor config → Spot density → Up dens. offset (8176)**Description**

Defines an offset value which is added to the measured upper density value.

User entry-999.99 to 999.99 kg/m³**Factory setting**0 kg/m³**Additional information**

Read access	Operator
Write access	Maintenance

Middle density offset**Navigation** Expert → Sensor → Sensor config → Spot density → Mid dens. offset (8177)**Description**

Defines an Offset Value which is added to the measured Middle Density Value.

User entry-999.99 to 999.99 kg/m³**Factory setting**0 kg/m³**Additional information**

Read access	Operator
Write access	Maintenance

Lower density offset

Navigation Expert → Sensor → Sensor config → Spot density → Low dens. offset (8178)

Description Defines an offset value which is added to the measured lower density value.

User entry -999.99 to 999.99 kg/m³

Factory setting 0 kg/m³

Additional information

Read access	Operator
Write access	Maintenance

Submersion depth

Navigation Expert → Sensor → Sensor config → Spot density → Submersion depth (8169)

Description Sets the displacer submersion depth (mm) for spot density operations.

User entry 50 to 99 999.9 mm

Factory setting 150 mm

Additional information

Read access	Operator
Write access	Maintenance

"Profile density" submenu**Navigation**
 Expert → Sensor → Sensor config → Profile density

► Profile density	
Density measurement mode	→  90
Manual profile level	→  90
Profile density offset distance	→  91
Profile density interval	→  91
Profile density offset	→  91

Density measurement mode**Navigation**
 Expert → Sensor → Sensor config → Profile density → Density mode (8186)
Description

In normal measure mode, measures at specified positions. In compensation mode measures using next integer value of drum turns to improve accuracy.

Selection

- Normal measure mode
- Compensation mode

Factory setting

Normal measure mode

Additional information

Read access	Operator
Write access	Maintenance

 In normal mode, measures spot densities at requested positions. In compensation mode the Proservo measures the spot densities at multiples of the wiredrum circumference (e.g. every ~ 150 mm (5.91 in))

Manual profile level**Navigation**
 Expert → Sensor → Sensor config → Profile density → Man profile lvl (8182)
Description

Sets the level position in the tank where the manual profile density operation starts.

User entry

-999 999.9 to 999 999.9 mm

Factory setting

1 000 mm

Read access	Operator
Write access	Maintenance

Profile density offset distance**Navigation**

Expert → Sensor → Sensor config → Profile density → Dens offset dist (8185)

Description

Profile density offset distance [mm] is the distance between start point and first measurement point.

User entry

0 to 999 999.9 mm

Factory setting

500 mm

Additional information

Read access	Operator
Write access	Maintenance

Profile density interval**Navigation**

Expert → Sensor → Sensor config → Profile density → Density interval (8174)

Description

Sets the interval between two measurement points in profile density operation.

User entry

1 to 100 000 mm

Factory setting

1 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Profile density offset**Navigation**

Expert → Sensor → Sensor config → Profile density → Prof dens offset (8173)

Description

Defines an offset value which is added to the measured profile density value.

User entry

-999.99 to 999.99 kg/m³

Factory setting

0 kg/m³

"Sensor calibration" wizard**Navigation**
 Expert → Sensor → Calibration → Sensor cal.

► Sensor calibration	
Sensor calibration	→  95
Offset weight	→  95
Span weight	→  96
Zero calibration	→  96
Calibration status	→  96
Offset calibration	→  96
Span calibration	→  97

Sensor calibration**Navigation**
 Expert → Sensor → Calibration → Sensor cal. → Sensor cal.
Description

This sequence calibrates the sensor of the servo.

Additional information

Read access	Operator
Write access	Maintenance

Offset weight**Navigation**
 Expert → Sensor → Calibration → Sensor cal. → Offset wgt. (8095)
Description

Sets the weight that is used for the lower point sensor calibration. Changing the value will delete the calibration data.

User entry

0 to 150 g

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

For density measurement application, it is recommended to apply 50 g.

Span weight**Navigation**

Expert → Sensor → Calibration → Sensor cal. → Span wgt. (8096)

Description

Sets the weight that is used for the middle point sensor calibration. Changing the value will delete the calibration data.

User entry

10 to 999.9 g

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Zero calibration**Navigation**

Expert → Sensor → Calibration → Sensor cal. → Zero calibration

Description

In this step the sensor calibration zero weight will be done.

Additional information

Read access	Operator
Write access	Maintenance

Calibration status**Navigation**

Expert → Sensor → Calibration → Sensor cal. → Status (8031)

Description

Gives feedback on the latest status of the calibration process.

Additional information

#blank# (HART PV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14716)

Description Shows the first HART variable (PV).

Additional information

Read access	Operator
Write access	-

#blank# (HART SV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14705)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the second HART variable (SV).

Additional information

Read access	Operator
Write access	-

#blank# (HART TV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14706)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the third HART variable (TV).

Additional information

Read access	Operator
Write access	-

#blank# (HART QV - designation dependent on device)

Navigation  Expert → Input/output → HART devices → HART Device(s) → #blank# (14716)

Prerequisite For HART devices other than NMT: **Operating mode** (→  109) = PV,SV,TV & QV

Description Shows the fourth HART variable (QV).

Additional information

Read access	Operator
Write access	-

HART device PV mA**Navigation**

  Expert → Input/output → HART devices → HART Device(s) → HARTDEV PV mA (14708)

Prerequisite

Not available for Micropilot S FMR5xx and Prothermo 53x.

Description

Shows the first HART variable (PV) in mA.

Additional information

Read access	Operator
Write access	-

HART device PV %**Navigation**

  Expert → Input/output → HART devices → HART Device(s) → HARTDEV PV % (14709)

Prerequisite

Not available for Micropilot S FMR5xx and Prothermo 53x.

Description

Shows the first HART variable (PV) in percentage.

Additional information

Read access	Operator
Write access	-

Output pressure**Navigation**

  Expert → Input/output → HART devices → HART Device(s) → Output pressure (14719)

Prerequisite

Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description

Defines which HART variable is the pressure.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting

No value

Additional information

Read access	Operator
Write access	Maintenance

Output density

**Navigation**

Diagram: Expert → Input/output → HART devices → HART Device(s) → Output density (14720)

Prerequisite

Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description

Defines which HART variable is the density.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting

No value

Additional information

Read access	Operator
Write access	Maintenance

Output temperature

**Navigation**

Diagram: Expert → Input/output → HART devices → HART Device(s) → Output temp. (14721)

Prerequisite

Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description

Defines which HART variable is the temperature.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting

No value

Additional information

Read access	Operator
Write access	Maintenance

Output vapor temperature

**Navigation**

Diagram: Expert → Input/output → HART devices → HART Device(s) → Output vapor tmp (14726)

Prerequisite

Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description Defines which HART variable is the vapor temperature.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting No value

Additional information

Read access	Operator
Write access	Maintenance

Output level

Navigation Expert → Input/output → HART devices → HART Device(s) → Output level (14718)

Prerequisite

Not available for Micropilot S FMR5xx, Prothermo NMT53x and Prothermo NMT8x. In these cases the measured variables are allocated automatically.

Description Defines which HART variable is the level.

Selection

- No value
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)

Factory setting No value

Ohms offset

Navigation Expert → Input/output → Analog IP → Ohms offset (14026)

Prerequisite

Operating mode (→ 139) = RTD temperature input

Description

Defines a offset for the resistance.

This value is added to the measured resistance before the calculation of the temperature.

User entry

-10.0 to 10.0 Ohm

Factory setting

0 Ohm

Additional information

The value entered in this parameter is added to the measured resistance before the calculation of the temperature.

Read access	Operator
Write access	Maintenance

Thermocouple type

Navigation Expert → Input/output → Analog IP → Thermocouple typ (14008)

Description

Defines the type of the connected thermocouple.

Selection

- N type
- B type
- C type
- D type
- J type
- K type
- L type
- L GOST type
- R type
- S type
- T type
- U type

Factory setting N type

RTD connection type

Navigation Expert → Input/output → Analog IP → RTD connect type (14022)

Prerequisite **Operating mode (→ 139) ≠ RTD temperature input**

Description Defines the connection type of the RTD.

Selection

- 4 wire RTD connection
- 2 wire RTD connection
- 3 wire RTD connection

Factory setting 4 wire RTD connection

Additional information

Read access	Operator
Write access	Maintenance

Process value

Navigation Expert → Input/output → Analog IP → Process value (14003)

Prerequisite **Operating mode (→ 139) ≠ Disabled**

Description Shows the measured value received via the analog input.

Additional information

Read access	Operator
Write access	-

Process variable

Navigation Expert → Input/output → Analog IP → Process variable (14016)

Prerequisite **Operating mode (→ 139) ≠ RTD temperature input**

Description Determines type of measured value.

Selection

- Level linearized
- Temperature
- Pressure
- Density

Factory setting Level linearized

Additional information

Read access	Operator
Write access	Maintenance

0 % value**Navigation**

Expert → Input/output → Analog IP → 0 % value (14001)

Prerequisite

Operating mode (→ 139) = 4..20mA input

Description

Defines the value represented by a current of 4mA.

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

100 % value**Navigation**

Expert → Input/output → Analog IP → 100 % value (14013)

Prerequisite

Operating mode (→ 139) = 4..20mA input

Description

Defines the value represented by a current of 20mA.

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Input value percent**Navigation**

Expert → Input/output → Analog IP → Input value [%] (14002)

Prerequisite

Operating mode (→ 139) = 4..20mA input

Description

Shows the input value in percent.

0% corresponds to 4 mA.

100% corresponds to 20 mA.

Additional information

- 0% corresponds to 4 mA
- 100% corresponds to 20 mA

Read access	Operator
Write access	-

Input value**Navigation**

Expert → Input/output → Analog IP → Input value (14015)

Prerequisite

Operating mode (→ 139) ≠ Disabled

Description

Shows the value received via the analog input.

Additional information

Read access	Operator
Write access	-

Temperature offset after conversion**Navigation**

Expert → Input/output → Analog IP → Temp. offset (14025)

Prerequisite

Operating mode (→ 139) = RTD temperature input

Description

Defines an offset for the measured temperature.
The offset is applied after the resistance of the RTD has been converted to a temperature.

User entry

-20 to 20 °C

Factory setting

0 °C

Additional information

The offset defined in this parameter is applied after the resistance of the RTD has been converted to a temperature.

Read access	Operator
Write access	Maintenance

Minimum probe temperature**Navigation**

Expert → Input/output → Analog IP → Min. probe temp (14010)

Prerequisite

Operating mode (→ 139) = RTD temperature input

Description

Minimum approved temperature of the connected probe.
If the temperature falls below this value, the W&M status will be 'invalid'.

User entry -213 to 927 °C

Factory setting -100 °C

Additional information

Read access	Operator
Write access	Maintenance

Maximum probe temperature

Navigation Expert → Input/output → Analog IP → Max. probe temp (14011)

Prerequisite **Operating mode (→ 139) = RTD temperature input**

Description Maximum approved temperature of the connected probe.
If the temperature rises above this value, the W&M status will be 'invalid'.

User entry -213 to 927 °C

Factory setting 250 °C

Additional information

Read access	Operator
Write access	Maintenance

Probe position

Navigation Expert → Input/output → Analog IP → Probe position (14009)

Prerequisite **Operating mode (→ 139) = RTD temperature input**

Description Position of the temperature probe, measured from zero position (tank bottom or datum plate). This parameter, in conjunction with the measured level, determines whether the temperature probe is still covered by the product. If this is no longer the case, the status of the temperature value will be 'invalid'.

User entry -5 000 to 30 000 mm

Factory setting 5 000 mm

Additional information

Read access	Operator
Write access	Maintenance

Calibration type AIP

**Navigation** Expert → Input/output → Analog IP → Cal type AIP (14018)**Prerequisite** Operating mode (→ [139](#)) ≠ Disabled**Description** Select calibration state of the analog input or output.**Selection**

- User calibration
- Factory calibration

Factory setting Factory calibration**Additional information** **Meaning of the options**

- Not calibrated
This is a display option only. It can not be selected. It is shown if the analog input is not in a calibrated state.
- User calibration
Activates a user calibration. The user calibration itself is defined in the **User calibration wizard**.
- Factory calibration
Activates the factory calibration which is permanently stored in the device.

Read access	Operator
Write access	Maintenance

Active calibration

Navigation Expert → Input/output → Analog IP → Act. calibration (14012)**Prerequisite** Operating mode (→ [139](#)) ≠ Disabled**Description** Shows calibration state of the analog input.**Additional information**

Read access	Operator
Write access	-

Damping factor

**Navigation** Expert → Input/output → Analog IP → Damping factor (14004)**Prerequisite** Operating mode (→ [139](#)) ≠ Disabled**Description** Defines the damping constant (in seconds).**User entry** 0 to 999.9 s

Factory setting 0 s

Additional information

Read access	Operator
Write access	Maintenance

Gauge current

Navigation   Expert → Input/output → Analog IP → Gauge current (14027)

Prerequisite **Operating mode (→  139) = Gauge power supply**

Description Shows the current on the power supply line for the connected device.

Additional information

Read access	Operator
Write access	-

3.3.3 "Analog I/O" submenu

i There is a **Analog I/O** submenu (→ [147](#)) for each Analog I/O module of the device.
This submenu refers to terminals 1 to 3 of this module (an analog input or output).
For terminals 4 to 8 (always an analog input) refer to → [138](#).

A0032464

[12](#) Terminals for the "Analog I/O" submenu (→ [147](#)) ("B1-3" or "C1-3", respectively)

Navigation

Expert → Input/output → Analog I/O

► Analog I/O	
Operating mode	→ 148
Current span	→ 149
Fixed current	→ 150
Analog input source	→ 150
Failure mode	→ 151

Input value in mA	→ 157
Input value percent	→ 157
Damping factor	→ 157
Calibration	→ 158
Active calibration	→ 158
Used for SIL/WHG	→ 158

Operating mode**Navigation**

Expert → Input/output → Analog I/O → Operating mode (13958)

Description

Defines the operating mode of the analog I/O module.

Selection

- Disabled
- 4..20mA input
- HART master+4..20mA input
- HART master
- 4..20mA output
- HART slave +4..20mA output

Factory setting

Disabled

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options

Operating mode (→ 148)	Direction of signal	Type of signal
Disabled	-	-
4..20mA input	Input from 1 external device	Analog (4...20mA)
HART master+4..20mA input	Input from 1 external device	■ Analog (4...20mA) ■ HART
HART master	Input from up to 6 external devices	HART
4..20mA output	Output to higher-level unit	Analog (4...20mA)
HART slave +4..20mA output	Output to higher-level unit	■ Analog (4...20mA) ■ HART

Depending on the terminals used, the Analog I/O module is used in the passive or active mode.

Mode	Terminals of the I/O module		
	1	2	3
Passive (power supply from external source)	-	+	not used
Active (power supplied by the device itself)	not used	-	+

In the active mode the following conditions must be met:

- Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
- Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
- Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

Current span**Navigation**

Expert → Input/output → Analog I/O → Current span (13987)

Prerequisite

Operating mode parameter (→ 148) ≠ **Disabled** option or **HART master** option

Description

Defines the current range for the measured value transmission.

Selection

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4... 20.5 mA)
- Fixed value *

Factory setting

4...20 mA NE (3.8...20.5 mA)

Additional information

Read access	Operator
Write access	Maintenance

* Visibility depends on order options or device settings

Meaning of the options

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA (4... 20.5 mA)	4 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA NE (3.8...20.5 mA)	3.8 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.0 mA
Fixed current	Constant current, defined in the Fixed current parameter (→ 150).				

 In the case of an error, the output current assumes the value defined in the **Failure mode** parameter (→ 151).

Fixed current**Navigation**

 Expert → Input/output → Analog I/O → Fixed current (13989)

Prerequisite

Current span (→ 149) = **Fixed current**

Description

Defines the fixed output current.

User entry

4 to 22.5 mA

Factory setting

4 mA

Additional information

Read access	Operator
Write access	Maintenance

Analog input source**Navigation**

 Expert → Input/output → Analog I/O → Analog source (13974)

Prerequisite

- **Operating mode** (→ 148) = 4..20mA output or HART slave +4..20mA output
- **Current span** (→ 149) ≠ **Fixed current**

Description

Defines the process variable transmitted via the AIO.

Selection

- None
- Tank level
- Tank level %
- Tank ullage
- Tank ullage %
- Measured level
- Distance
- Displacer position
- Water level

- Upper interface level
- Lower interface level
- Bottom level
- Tank reference height
- Liquid temperature
- Vapor temperature
- Air temperature
- Observed density value
- Average profile density ³⁾
- Upper density
- Middle density

- P3 (top)
- GP 1 ... 4 value
- AIO B1-3 value ³⁾
- AIO B1-3 value mA ³⁾
- AIO C1-3 value ³⁾
- AIO C1-3 value mA ³⁾
- AIP B4-8 value ³⁾
- AIP C4-8 value ³⁾
- Element temperature 1 ... 24 ³⁾
- HART device 1...15 PV ³⁾
- HART device 1 ... 15 PV mA ³⁾
- HART device 1 ... 15 PV % ³⁾
- HART device 1 ... 15 SV ³⁾
- HART device 1 ... 15 TV ³⁾
- HART device 1 ... 15 QV ³⁾

Factory setting Tank level

Additional information

Read access	Operator
Write access	Maintenance

Failure mode

Navigation

Diagram: Expert → Input/output → Analog I/O → Failure mode (13988)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA output or HART slave +4..20mA output

Description

Defines the output behavior in case of an error.

Selection

- Min.
- Max.
- Last valid value
- Actual value
- Defined value

Factory setting

Max.

3) Visibility depends on order options or device settings

Additional information

Read access	Operator
Write access	Maintenance

Error value**Navigation**

Expert → Input/output → Analog I/O → Error value (13972)

Prerequisite

Failure mode (→ [151](#)) = Defined value

Description

Defines the output value in case of an error.

User entry

3.4 to 22.6 mA

Factory setting

22 mA

Additional information

Read access	Operator
Write access	Maintenance

Output out of range**Navigation**

Expert → Input/output → Analog I/O → Output out range (13971)

Prerequisite

Operating mode (→ [148](#)) = 4..20mA output or HART slave +4..20mA output

Description

Behavior of current output if the value is out of allowed range.

Selection

- Last valid value
- Alarm
- None

Factory setting

Alarm

Additional information

Read access	Operator
Write access	Maintenance

Error on event**Navigation**

Expert → Input/output → Analog I/O → Error on event (13967)

Prerequisite

Operating mode (→ [148](#)) = 4..20mA output or HART slave +4..20mA output

Description

Defines to which type of event (alarm or warning) the output responds.

Selection	<ul style="list-style-type: none"> ■ Output related error ■ Any error ■ Any error or warning 				
Factory setting	Output related error				
Additional information	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Read access</td> <td style="padding: 2px;">Operator</td> </tr> <tr> <td style="padding: 2px;">Write access</td> <td style="padding: 2px;">Maintenance</td> </tr> </table>	Read access	Operator	Write access	Maintenance

Write access	Maintenance				

100 % value

Navigation	Expert → Input/output → Analog I/O → 100 % value (13968)
Prerequisite	<ul style="list-style-type: none"> ■ Operating mode (→ 148) = 4..20mA output or HART slave +4..20mA output ■ Current span (→ 149) ≠ Fixed current

Description Value corresponding to an output current of 100% (20mA).

User entry Signed floating-point number

Factory setting 0 Unitless

Additional information

Read access	Operator
Write access	Maintenance

Input value %

Navigation Expert → Input/output → Analog I/O → Input value % (13955)

Prerequisite

- **Operating mode** (→ 148) = 4..20mA output or HART slave +4..20mA output
- **Current span** (→ 149) ≠ Fixed current

Description Shows the output value as a percentage of the complete 4...20mA range.

Additional information

Read access	Operator
Write access	-

Output value

Navigation Expert → Input/output → Analog I/O → Output value (13969)

Prerequisite **Operating mode** (→ 148) = 4..20mA output or HART slave +4..20mA output

Description Shows the output value in mA.

Additional information

Read access	Operator
Write access	-

Readback value

Navigation Expert → Input/output → Analog I/O → Readback value (13957)

Prerequisite **Operating mode** (→ 148) = 4..20mA output or HART slave +4..20mA output

Description Shows the measured (feedback) current at the output.

User interface 0 to 65 535 µA

Factory setting 0 µA

Additional information

Read access	Operator
Write access	-

Feedback threshold**Navigation**

Diagram: Expert → Input/output → Analog I/O → Feedback thresh. (13956)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA output or HART slave +4..20mA output

Description

Shows the feedback threshold.

Additional information

Read access	Operator
Write access	-

Process variable**Navigation**

Diagram: Expert → Input/output → Analog I/O → Process variable (13964)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA input or HART master+4..20mA input

Description

Defines the type of measuring variable.

Selection

- Level linearized
- Temperature
- Pressure
- Density

Factory setting

Level linearized

Additional information

Read access	Operator
Write access	Maintenance

Analog input 0% value**Navigation**

Diagram: Expert → Input/output → Analog I/O → AI 0% value (13977)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA input or HART master+4..20mA input

Description

Value corresponding to an input current of 0% (4mA).

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Analog input 100% value**Navigation**

Diagram: Expert → Input/output → Analog I/O → AI 100% value (13965)

Prerequisite

Operating mode (→ [148](#)) = 4..20mA input or HART master+4..20mA input

Description

Value corresponding to an input current of 100% (20mA).

User entry

Signed floating-point number

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

Error event type**Navigation**

Diagram: Expert → Input/output → Analog I/O → Error event type (13953)

Prerequisite

Operating mode (→ [148](#)) ≠ Disabled or HART master

Description

Defines the type of event message (alarm/warning) in case of an error or output out of range in the analog I/O module.

Selection

- None
- Warning
- Alarm

Factory setting

Warning

Additional information

Read access	Operator
Write access	Maintenance

Process value**Navigation**

Diagram: Expert → Input/output → Analog I/O → Process value (13963)

Prerequisite

Operating mode (→ [148](#)) = 4..20mA input or HART master+4..20mA input

Description

Shows the input value scaled to customer units.

Additional information

Read access	Operator
Write access	-

Input value in mA**Navigation**

Diagram: Expert → Input/output → Analog I/O → Input val. in mA (13970)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA input or HART master+4..20mA input

Description

Shows the input value in mA.

Additional information

Read access	Operator
Write access	-

Input value percent**Navigation**

Diagram: Expert → Input/output → Analog I/O → Input value [%] (13978)

Prerequisite

Operating mode (→ [Diagram 148](#)) = 4..20mA input or HART master+4..20mA input

Description

Shows the input value as a percentage of the complete 4...20mA current range.

Additional information

Read access	Operator
Write access	-

Damping factor**Navigation**

Diagram: Expert → Input/output → Analog I/O → Damping factor (13951)

Prerequisite

Operating mode (→ [Diagram 148](#)) ≠ Disabled or HART master

Description

Defines the damping constant (in seconds).

User entry

0 to 999.9 s

Factory setting

0 s

Additional information

Read access	Operator
Write access	Maintenance

Calibration**Navigation**

Expert → Input/output → Analog I/O → Calibration (13966)

Prerequisite

Operating mode (→ [148](#)) ≠ Disabled or HART master

Description

Select calibration state of the analog input or output.

Selection

- User calibration
- Factory calibration

Factory setting

Factory calibration

Additional information

Read access	Operator
Write access	Maintenance

Active calibration**Navigation**

Expert → Input/output → Analog I/O → Act. calibration (13981)

Prerequisite

Operating mode (→ [148](#)) ≠ Disabled or HART master

Description

Indicates the calibration status of the Analog I/O module.

Additional information**Meaning of the options**

- **User calibration**
The calibration entered by the user is active.
- **Factory calibration**
The calibration stored permanently in the device is active.

Read access	Operator
Write access	-

Used for SIL/WHG**Navigation**

Expert → Input/output → Analog I/O → Used for SIL/WHG (13980)

Prerequisite

- **Operating mode (→ [148](#)) = 4..20mA output or HART slave +4..20mA output**
- The device has a SIL approval.

Description

Determines whether the discrete I/O module is in SIL/WHG mode.

Selection

- Enabled
- Disabled

Factory setting

Disabled

Additional information

Read access	Operator
Write access	Maintenance

Expected SIL/WHG chain

Navigation Expert → Input/output → Analog I/O → SIL/WHG chain (13952)**Prerequisite**

- **Operating mode (→  148) = 4..20mA output or HART slave +4..20mA output**
- The device has a SIL approval.

Additional information

Read access	Operator
Write access	-

3.3.4 "Digital Xx-x" submenu

- i** In the operating menu, each digital input or output is designated by the respective slot of the terminal compartment and two terminals within this slot. **A1-2**, for example, denotes terminals 1 and 2 of slot **A**. The same is valid for slots **B**, **C** and **D** if they contain a Digital IO module.
- In this document, **Xx-x** designates any of these submenus. The structure of all these submenus is the same.

■ 13 Designation of the digital inputs or outputs (examples)

Navigation

■ ■ ■ Expert → Input/output → Digital Xx-x → Operating mode (13911)

► Digital Xx-x	
Operating mode	→ ■ 161
Digital input source	→ ■ 161
Input value	→ ■ 162
Contact type	→ ■ 162
Output simulation	→ ■ 163
Output value	→ ■ 164
Readback value	→ ■ 164
Error on event	→ ■ 164
Damping factor	→ ■ 165
Used for SIL/WHG	→ ■ 165

Operating mode**Navigation**

Expert → Input/output → Digital Xx-x → Operating mode (13911)

Description

Defines the operating mode of the discrete I/O module.

Selection

- Disabled
- Output passive
- Input passive
- Input active

Factory setting

Disabled

Additional information

14 Operating modes of the Digital I/O module

- A Input passive
B Input active
C Output passive

Read access	Operator
Write access	Maintenance

Digital input source**Navigation**

Expert → Input/output → Digital Xx-x → Digital source (13907)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Defines which device state is indicated by the digital output.

Selection

- None
- Alarm x any
- Alarm x High
- Alarm x HighHigh
- Alarm x High or HighHigh
- Alarm x Low
- Alarm x LowLow
- Alarm x Low or LowLow
- Digital Xx-x
- Primary Modbus x
- Secondary Modbus x

Factory setting

None

Additional information**Meaning of the options**

- **Alarm x any, Alarm x High, Alarm x HighHigh, Alarm x High or HighHigh, Alarm x Low, Alarm x LowLow, Alarm x Low or LowLow**

The digital output indicates if the selected alarm is currently active. The alarms themselves are defined in the **Alarm 1 to 4** submenus.

- **Digital Xx-x⁴⁾**

The digital signal present at the digital input **Xx-x** is passed through to the digital output.

- **Modbus A1-4 Discrete x**

Modbus B1-4 Discrete x

Modbus C1-4 Discrete x

Modbus D1-4 Discrete x

The digital value written by the Modbus Master device to the **Modbus discrete x** parameter⁵⁾ is passed to the digital output. For details refer to Special Documentation SD02066G.

Read access	Operator
Write access	Maintenance

Input value**Navigation**

④ ⑤ Expert → Input/output → Digital Xx-x → Input value (13901)

Prerequisite

Operating mode (→ ⑥ 161) = "Input passive" option or "Input active" option

Description

Shows the digital input value.

Additional information

Read access	Operator
Write access	-

Contact type**Navigation**

④ ⑤ Expert → Input/output → Digital Xx-x → Contact type (13912)

Prerequisite

Operating mode (→ ⑥ 161) ≠ Disabled

Description

Determines the switching behavior of the input or output.

Selection

- Normally open
- Normally closed

Factory setting

Normally open

Additional information

Read access	Operator
Write access	Maintenance

4) Only present if "Operating mode (→ ⑥ 161)" = "Input passive" or "Input active" for the respective Digital I/O module.

5) Expert → Communication → Modbus Xx-x → Modbus discrete x

Output simulation**Navigation**

Expert → Input/output → Digital Xx-x → Output sim (13909)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Sets the output to a specific simulated value.

Selection

- Disable
- Simulating active
- Simulating inactive
- Fault 1
- Fault 2

Factory setting

Disable

Additional information

Read access	Operator
Write access	Maintenance

The digital output consists of two relays connected in series:

A0028602

15 The two relays of a digital output

1/2 The relays

3/4 The terminals of the digital output

The switching state of these relays is defined by the **Output simulation** parameter as follows:

Output simulation	State of relay 1	State of relay 2	Expected result on the terminals of the I/O module
Simulating active	Closed	Closed	Closed
Simulating inactive	Open	Open	Open
Fault 1	Closed	Open	Open
Fault 2	Open	Closed	Open

The **Fault 1** and **Fault 2** options can be used to check the correct switching behavior of the two relays.

Output value

Navigation

Expert → Input/output → Digital Xx-x → Output value (13902)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Shows the digital output value.

Additional information

Read access	Operator
Write access	-

Readback value

Navigation

Expert → Input/output → Digital Xx-x → Readback value (13903)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Shows the value read back from the output.

Additional information

Read access	Operator
Write access	-

Error on event

**Navigation**

Expert → Input/output → Digital Xx-x → Error on event (13916)

Prerequisite

Operating mode (→ 161) = Output passive

Description

Defines to which type of events (error or warning) the output responds. Choice: only output related or all.

Selection

- Output related error
- Any error
- Any error or warning

Factory setting

Output related error

Additional information

Read access	Operator
Write access	Maintenance

Damping factor

Navigation Expert → Input/output → Digital Xx-x → Damping factor (13904)

Prerequisite Operating mode (→ 161) ≠ Disabled

Description Defines the damping constant.

User entry 1 to 10 s

Factory setting 5 s

Additional information

Read access	Operator
Write access	Maintenance

Used for SIL/WHG

Navigation Expert → Input/output → Digital Xx-x → Used for SIL/WHG (13910)

Prerequisite
■ Operating mode (→ 161) = Output passive
■ The device has a SIL certificate.

Description Determines whether the discrete I/O module is in SIL/WHG mode.

Selection
■ Enabled
■ Disabled

Factory setting Disabled

3.4 "Communication" submenu

This menu contains a submenu for each digital communication interface of the device. The communication interfaces are designated by "X1-4" where "X" specifies the slot in the terminal compartment and "1-4" the terminals within this slot.

■ 16 Designation of the "Modbus" or "V1" modules (examples); depending on the device version these modules may also be in slot B or C.

Navigation

■ ■ Expert → Communication

3.4.1 "Modbus Xx-x" or "V1 Xx-x" submenu

This submenu is only present for devices with **MODBUS** and/or **V1** communication interface. There is one submenu of this type for each communication interface.

Navigation

Expert → Communication → Modbus Xx-x / V1 Xx-x

▶ Modbus Xx-x	
Communication interface protocol	→ 171
Modbus value 1 to 4	→ 172
Modbus discrete 1 to 4	→ 172
▶ Configuration	→ 173
▶ Integer conversion	→ 178
▶ User value source	→ 183
▶ GP values	→ 184
▶ Discrete selector	→ 187

▶ V1 Xx-x	
Communication interface protocol	→ 171
▶ Configuration	→ 188
▶ V1 input selector	→ 191

Communication interface protocol

Navigation

Expert → Communication → Modbus X1-4 / V1 X1-4 / WM550 X1-4 → Commu I/F protoc (13201)

Description

Shows the type of communication protocol.

Additional information

Read access	Operator
Write access	-

Modbus value 1 to 4

Navigation

 Expert → Communication → Modbus Xx-x → Modbus value 1 to 4 (13206-1 to 4)

Prerequisite

Communication interface protocol (→  171) = MODBUS

Description

Shows the respective floating point value written by the host system.

Additional information

Read access	Operator
Write access	-

 The Modbus interface provides four floating point values which can be written to by the Host system. These values can be linked to specific functions (e.g. providing the air temperature value).

Modbus discrete 1 to 4

Navigation

 Expert → Communication → Modbus Xx-x → Modbus discr. 1 to 4 (13240-1 to 4)

Prerequisite

Communication interface protocol (→  171) = MODBUS

Description

Shows the integer value written by the host-system.

Additional information

Read access	Operator
Write access	-

 The Modbus interface provides four discrete (integer) registers which can be written to by the Host system. These values can be linked to specific functions (e.g. controlling a discrete output).

In the device these values are converted into the following discrete state values:

- Unknown (integer value 0)
- Inactive (integer value 1)
- Active (integer value 2)
- Invalid (integer value >= 3)

"Configuration" submenu (Modbus)

 Only visible for devices with a Modbus I/O module.

Navigation

◀ ▶ Expert → Communication → Modbus Xx-x → Configuration

▶ Configuration	
Baudrate	→ 173
Parity	→ 174
Modbus address	→ 174
Float swap mode	→ 174
Invalid data	→ 175

Read access	Operator
Write access	Maintenance

Modbus address**Navigation**

Diagram: Expert → Communication → Modbus X1-4 → Configuration → Modbus address (13205)

Prerequisite

Communication interface protocol (→ [171](#)) = MODBUS

Description

Defines the Modbus address of the device.

User entry

1 to 247

Factory setting

1

Additional information

Read access	Operator
Write access	Maintenance

Float swap mode**Navigation**

Diagram: Expert → Communication → Modbus X1-4 → Configuration → Float swap mode (13232)

Prerequisite

Communication interface protocol (→ [171](#)) = MODBUS

Description Sets the format of how the floating point value is transferred on Modbus.

Selection

- Normal 3-2-1-0
- Swap 0-1-2-3
- WW Swap 1-0-3-2

Factory setting Swap 0-1-2-3

Additional information

Read access	Operator
Write access	Maintenance

Invalid data

Navigation Expert → Communication → Modbus Xx-x → Configuration → Invalid data (13243)

Prerequisite **Communication interface protocol (→ 171) = MODBUS**

Description Sets what byte is sent in a message that contains invalid data.

Selection

- 0x00
- 0xFF

Factory setting 0x00

Additional information

Read access	Operator
Write access	Maintenance

Word type

Navigation Expert → Communication → Modbus Xx-x → Configuration → Word type (13208)

Prerequisite **Communication interface protocol (→ 171) = MODBUS**

Description Selects if the integer value has the range 0 to +65535 or -32768 to +32767.

Selection

- Unsigned
- Signed

Factory setting Unsigned

Additional information

Read access	Operator
Write access	Maintenance

CRC seed**Navigation**

Expert → Communication → Modbus Xx-x → Configuration → CRC seed (13248)

Prerequisite

Communication interface protocol (→ [171](#)) = MODBUS

Description

CRC seed value selection used for all communication CRC calculations.

Selection

- 0x0000
- 0xFFFF

Factory setting

0xFFFF

Additional information

Read access	Operator
Write access	Maintenance

Old TSM mode**Navigation**

Expert → Communication → Modbus Xx-x → Configuration → Old TSM mode (13213)

Prerequisite

Communication interface protocol (→ [171](#)) = MODBUS

Description

Selects the type of value available at the NRF590 SW vers.1 compatible modbus map (Address 3000-3195) addresses.

Selection

- Float values
- Integer values

Factory setting

Float values

Additional information

Read access	Operator
Write access	Maintenance

Bus termination**Navigation**

Expert → Communication → Modbus X1-4 → Configuration → Bus termination (13249)

Prerequisite

Communication interface protocol (→ [171](#)) = MODBUS

Description

Activates or deactivates the bus termination at the device. Should only be activated on the last device in a loop.

Selection

- Off
- On

Factory setting Off

Additional information

Read access	Operator
Write access	Maintenance

Compatibility mode

Navigation Expert → Communication → Modbus Xx-x / V1 Xx-x → Configuration → Comp. mode (13281)

Description Defines the compatibility mode.

Selection

- Nxx5xx
- Nxx8x

Factory setting Nxx8x

Additional information In **NMS5x** mode: Only values which have also existed on NMS5x Gauge status are output on the bus.

In **NMS8x** mode: All Gauge status are available at this parameter.

Write access	Maintenance

Level mapping

Navigation Expert → Communication → V1 Xx-x → Configuration → Level mapping (13268)

Prerequisite **Communication interface protocol** (→ 171) = V1

Description Determines the transmittable range of levels.

Selection

- +ve
- +ve & -ve

Factory setting +ve

Additional information

Read access	Operator
Write access	Maintenance

In V1, the level is always represented by a number in the range from 0 to 999 999. This number corresponds to a level as follows:

"Level mapping" = "+ve"

Number	Corresponding level
0	0.0 mm
999 999	99 999.9 mm

"Level mapping" = "+ve & -ve"

Number	Corresponding level
0	0.0 mm
500 000	50 000.0 mm
500 001	-0.1 mm
999 999	-49 999.9 mm

Line impedance

Navigation

Diagram: Expert → Communication → V1 Xx-x → Configuration → Line impedance (13266)

Prerequisite

Communication interface protocol (→ [171](#)) = V1

Description

Adjusts the impedance of the communication line.

User entry

0 to 15

Factory setting

15

Additional information

Read access	Operator
Write access	Maintenance

i The line impedance affects the voltage difference between a logical 0 and a logical 1 on the message of the device to the bus. The default setting is suitable for most applications.

Compatibility mode

Navigation

Diagram: Expert → Communication → Modbus Xx-x / V1 Xx-x → Configuration → Comp. mode (13281)

Description

Defines the compatibility mode.

Selection

  Expert → Communication → HART output → HART config. → Assign SV (0235)

Description

Assign a measured variable to the second dynamic variable (SV).

Selection

- None
- Tank level
- Tank ullage
- Measured level
- Distance
- Displacer position
- Water level
- Upper interface level
- Lower interface level
- Bottom level
- Tank reference height
- Liquid temperature
- Vapor temperature
- Air temperature
- Observed density value
- Average profile density
- Upper density
- Middle density
- Lower density
- P1 (bottom)
- P2 (middle)
- P3 (top)
- GP 1 value
- GP 2 value
- GP 3 value
- GP 4 value

Factory setting

Liquid temperature

Additional information

Read access	Operator
Write access	Maintenance

 The **Measured level** option doesn't contain a unit. If a unit is needed, select the **Tank level** option.

Secondary variable (SV)

Navigation Expert → Communication → HART output → HART config. → Second.var(SV) (0226)

Prerequisite **Assign SV** (→ 202) ≠ None

Description Shows the current measured value of the secondary dynamic variable (SV)

Additional information

Read access	Operator
Write access	-

Assign TV

Navigation Expert → Communication → HART output → HART config. → Assign TV (0236)

Description Assign a measured variable to the tertiary dynamic variable (TV).

Selection

- None
- Tank level
- Tank ullage
- Measured level
- Distance
- Displacer position
- Water level
- Upper interface level
- Lower interface level
- Bottom level
- Tank reference height
- Liquid temperature
- Vapor temperature
- Air temperature
- Observed density value
- Average profile density
- Upper density
- Middle density
- Lower density
- P1 (bottom)
- P2 (middle)
- P3 (top)
- GP 1 value
- GP 2 value
- GP 3 value
- GP 4 value

Factory setting Water level

Additional information

Read access	Operator
Write access	Maintenance

The **Measured level** option doesn't contain a unit. If a unit is needed, select the **Tank level** option.

Tertiary variable (TV)

Navigation

Expert → Communication → HART output → HART config. → Tertiary var(TV) (0228)

Prerequisite

Assign TV (→ 203) ≠ None

Description

Shows the current measured value of the tertiary (third) dynamic variable (TV)

Additional information

Read access	Operator
Write access	-

Assign QV**Navigation**

Expert → Communication → HART output → HART config. → Assign QV (0237)

Description

Assign a measured variable to the quaternary dynamic variable (QV).

Selection

- None
- Tank level
- Tank ullage
- Measured level
- Distance
- Displacer position
- Water level
- Upper interface level
- Lower interface level
- Bottom level
- Tank reference height
- Liquid temperature
- Vapor temperature
- Air temperature
- Observed density value
- Average profile density
- Upper density
- Middle density
- Lower density
- P1 (bottom)
- P2 (middle)
- P3 (top)
- GP 1 value
- GP 2 value
- GP 3 value
- GP 4 value

Factory setting

Observed density value

Additional information

Read access	Operator
Write access	Maintenance

 The **Measured level** option doesn't contain a unit. If a unit is needed, select the **Tank level** option.

Quaternary variable (QV)

Navigation

  Expert → Communication → HART output → HART config. → Quaterna.var(QV) (0203)

Prerequisite

Assign QV (→ [204](#)) ≠ None

Description

Shows the current measured value of the quaternary (fourth) dynamic variable (QV)

Additional information

Read access	Operator
Write access	-

"Information" submenu**Navigation**

HART short tag**Navigation**
 Expert → Communication → HART output → Information → HART short tag (0220)
Description

Defines the short tag for the measuring point.

Maximum length: 8 characters

Allowed characters: A-Z, 0-9, certain special characters

User entry

Character string comprising numbers, letters and special characters (8)

Factory setting

NMS8x

Additional information

Read access	Operator
Write access	Maintenance

Device tag

Navigation Expert → Communication → HART output → Information → Device tag (0215)

Description Enter a unique name for the measuring point to identify the device quickly within the plant.

User entry Character string comprising numbers, letters and special characters (32)

Factory setting NMS8x

Additional information

Read access	Operator
Write access	Maintenance

Device revision

Navigation Expert → Communication → HART output → Information → Device revision (0204)

Description Shows the device revision with which the device is registered with the HART Communication Foundation

User interface 0 to 255

Factory setting 6

Additional information

Read access	Operator
Write access	-

Device ID

Navigation Expert → Communication → HART output → Information → Device ID (0221)

Description Shows the device ID for identifying the device in a HART network

User interface Positive integer

Factory setting 123 456

Additional information

Read access	Operator
Write access	-

Device type

Navigation   Expert → Communication → HART output → Information → Device type (0209)

Description Shows the device type with which the measuring device is registered with the HART Communication Foundation

User interface 0 to 65 535

Factory setting 4 397

Additional information

Read access	Operator
Write access	-

Manufacturer ID

Navigation   Expert → Communication → HART output → Information → Manufacturer ID (0259)

Description Shows the device's manufacturer ID registered with the HART Communication Foundation.

User interface 0 to 65 535

Factory setting 17

Additional information

Read access	Operator
Write access	-

HART revision

Navigation   Expert → Communication → HART output → Information → HART revision (0205)

Description HART revision used by the device.

User interface 5 to 7

Factory setting 7

Additional information

Read access	Operator
Write access	-

HART descriptor

Navigation Expert → Communication → HART output → Information → HART descriptor (0212)

Description Enter description for the measuring point

User entry Character string comprising numbers, letters and special characters (16)

Factory setting NMS8x

Additional information

Read access	Operator
Write access	Maintenance

HART message

Navigation Expert → Communication → HART output → Information → HART message (0216)

Description Use this function to define a HART message which is sent via the HART protocol when requested by the master.

Maximum length: 32 characters

Allowed characters: A-Z, 0-9, certain special characters

User entry Character string comprising numbers, letters and special characters (32)

Factory setting NMS8x

Additional information

Read access	Operator
Write access	Maintenance

Hardware revision

Navigation Expert → Communication → HART output → Information → Hardware rev. (0206)

Description Hardware revision of the device.

User interface 0 to 30

Factory setting 1

Additional information

Read access	Operator
Write access	-

Software revision

Navigation  Expert → Communication → HART output → Information → Software rev. (0224)

Description Software revision of the device.

User interface 0 to 255

Factory setting 6

Additional information

Read access	Operator
Write access	-

HART date code

Navigation  Expert → Communication → HART output → Information → HART date code (0202)

Description Enter date of the last configuration change. Use this format yyyy-mm-dd

User entry Character string comprising numbers, letters and special characters (10)

Factory setting 2009-07-20

Additional information

Read access	Operator
Write access	Maintenance

"Level" submenu*Navigation*
  Expert → Application → Tank config → Level

► Level	
Level source	→  213
Empty	→  214
Tank reference height	→  214
Tank level	→  214
Set level	→  215
Upper interface level	→  215
Lower interface level	→  215
Water level source	→  215
Water level	→  216
Manual water level	→  216

Level source**Navigation**
  Expert → Application → Tank config → Level → Level source (14601)
Description

Defines the source of the level value.

Selection

- No input value
- HART device 1 ... 15 level
- Level SR *
- Level *
- Displacer position *
- AIO B1-3 value *
- AIO C1-3 value *
- AIP B4-8 value *
- AIP C4-8 value *

Factory setting

Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

* Visibility depends on order options or device settings

Empty 

Navigation  Expert → Application → Tank config → Level → Empty (14602)

Description Distance from reference point to zero position (tank bottom or datum plate).

User entry 0 to 10 000.00 mm

Factory setting Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

 The reference point is the reference line of the calibration window.

Tank reference height 

Navigation  Expert → Application → Tank config → Level → Tank ref height (14603)

Description Defines the distance from the dipping reference point to the zero position (tank bottom or datum plate).

User entry 0 to 10 000.00 mm

Factory setting Dependent on the device version

Additional information

Read access	Operator
Write access	Maintenance

Tank level

Navigation  Expert → Application → Tank config → Level → Tank level (14655)

Description Shows the distance from the zero position (tank bottom or datum plate) to the product surface.

Additional information

Read access	Operator
Write access	-

Set level**Navigation**

Expert → Application → Tank config → Level → Set level (14604)

Description

If the level measured by the device does not match the actual level obtained by a manual dip, enter the correct level into this parameter.

User entry

0 to 10 000.00 mm

Factory setting

0 mm

Additional information

Read access	Operator
Write access	Maintenance

The device adjusts the **Empty** parameter (→ 214) according to the entered value, such that the measured level will match the actual level.

Upper interface level**Navigation**

Expert → Application → Tank config → Level → Upper I/F level (15003)

Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Maintenance
Write access	-

Lower interface level**Navigation**

Expert → Application → Tank config → Level → Lower I/F level (15004)

Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Maintenance
Write access	-

Water level source**Navigation**

Expert → Application → Tank config → Level → Water level src (14971)

Description

Defines the source of the bottom water level.

Selection

- Manual value
- Bottom level
- HART device 1 ... 15 level
- AIO B1-3 value
- AIO C1-3 value
- AIP B4-8 value
- AIP C4-8 value

Factory setting

Manual value

Additional information

Read access	Operator
Write access	Maintenance

Water level**Navigation**
  Expert → Application → Tank config → Level → Water level (14970)
Description

Shows the bottom water level.

Additional information

Read access	Operator
Write access	-

Manual water level**Navigation**
  Expert → Application → Tank config → Level → Man. water level (14959)
Prerequisite**Water level source (→  215) = Manual value****Description**

Defines the manual value of the bottom water level.

User entry

-2 000 to 5 000 mm

Factory setting

0 mm

Additional information

Read access	Operator

Read access	Operator
Write access	Maintenance

Vapor density

**Navigation**

Expert → Application → Tank config → Density → Vapor density (14981)

Description

Defines the density of the gas phase in the tank.

User entry0.0 to 500.0 kg/m³**Factory setting**1.2 kg/m³**Additional information**

Read access	Operator
Write access	Maintenance

Measured upper density

Navigation

Expert → Application → Tank config → Density → Meas upper dens. (15001)

Description

Shows the density of the upper phase.

Additional information

Read access	Operator
Write access	-

Measured middle density**Navigation**
 Expert → Application → Tank config → Density → Meas middle dens (14997)
Description

Density of the middle phase.

Additional information

Read access	Operator
Write access	-

Measured lower density**Navigation**
 Expert → Application → Tank config → Density → Meas lower dens. (15002)
Description

Density of the lower phase.

Additional information

Read access	Maintenance
Write access	-

Water density**Navigation**
 Expert → Application → Tank config → Density → Water density (13757)
Description

Density of the water in the tank.

User entry

Signed floating-point number

Factory setting1 000 kg/m³**Additional information**

Read access	Operator
Write access	Maintenance

Profile point**Navigation**
 Expert → Application → Tank config → Density → Profile point (8170)
Description

Shows actual number of Density Points measured so far in current operation, and the total Number of Points after Density Profile Operation is complete.

Additional information

Read access	Operator
Write access	-

Profile average density

Navigation Expert → Application → Tank config → Density → Profile avg dens (8175)**Description**

Shows the average density calculated after a profile density measurement is complete.

Additional information

Read access	Operator
Write access	-

Profile density timestamp

Navigation Expert → Application → Tank config → Density → Profil dens time (8114)**Description**

Shows the timestamp when the last average density profile was finished.

Read access	Operator
Write access	-

P1 (bottom) manual pressure**Navigation**

Expert → Application → Tank config → Pressure → P1 (bot) manual (14951)

Prerequisite**P1 (bottom) source (→ 226) = Manual value****Description**

Defines the manual value of the bottom pressure (P1).

User entry

-25 to 25 bar

Factory setting

0 bar

Additional information

Read access	Operator
Write access	Maintenance

P1 position**Navigation**

Expert → Application → Tank config → Pressure → P1 position (14952)

Description

Defines the position of the bottom pressure transmitter (P1), measured from zero position (tank bottom or datum plate).

User entry

-10 000 to 100 000 mm

Factory setting

5 000 mm

Additional information

Read access	Operator
Write access	Maintenance

P1 offset**Navigation**

Expert → Application → Tank config → Pressure → P1 offset (14953)

Description

Offset for the bottom pressure (P1).

The offset is added to the measured pressure prior to any tank calculation.

User entry

-25 to 25 bar

Factory setting

0 bar

Additional information

Read access	Operator
Write access	Maintenance

P1 absolute / gauge**Navigation**

Expert → Application → Tank config → Pressure → P1 absolut/gauge (14954)

Description

Defines whether the connected pressure transmitter measures an absolute or a gauge pressure.

Selection

- Absolute
- Gauge

Factory setting

Gauge

Additional information

Read access	Operator
Write access	Maintenance

P2 (middle) source**Navigation**

Expert → Application → Tank config → Pressure → P2 (mid) source (14995)

Description

Defines the source of the middle pressure (P2).

Selection

- Manual value
- HART device 1 ... 15 pressure
- AIO B1-3 value
- AIO C1-3 value
- AIP B4-8 value
- AIP C4-8 value

Factory setting

Manual value

Additional information

Read access	Operator
Write access	Maintenance

P2 (middle)**Navigation**

Expert → Application → Tank config → Pressure → P2 (middle) (14987)

Description

Shows the pressure (P2) at the middle transmitter.

Additional information

Read access	Operator
Write access	-

P2 (middle) manual pressure**Navigation**

Expert → Application → Tank config → Pressure → P2 (mid) manual (14955)

Prerequisite**P2 (middle) source (→ 228) = Manual value****Description**

Defines the manual value of the middle pressure (P2).

User entry

-25 to 25 bar

Factory setting

0 bar

Additional information

Read access	Operator
Write access	Maintenance

P2 offset**Navigation**

Expert → Application → Tank config → Pressure → P2 offset (14975)

Description

Defines the offset for the middle pressure (P2).

The offset is added to the measured pressure prior to any tank calculation.

User entry

-25 to 2.5 bar

Factory setting

0 bar

Additional information

Read access	Operator
Write access	Maintenance

P1-2 distance**Navigation**

Expert → Application → Tank config → Pressure → P1-2 distance (14974)

Description

Defines the distance between the bottom and the middle pressure transmitter.

User entry

0 to 100 000 mm

Factory setting

2 000 mm

Additional information

Read access	Operator
Write access	Maintenance

P2 absolute / gauge**Navigation**

Expert → Application → Tank config → Pressure → P2 absolut/gauge (14976)

Description

Defines whether the connected pressure transmitter measures an absolute or a gauge pressure.

Selection

- Absolute
- Gauge

Factory setting

Gauge

Additional information

Read access	Operator
Write access	Maintenance

P3 (top) source

Navigation

Expert → Application → Tank config → Pressure → P3 (top) source (14996)

Description

Defines the source of the top pressure (P3).

Selection

- Manual value
- HART device 1 ... 15 pressure
- AIO B1-3 value
- AIO C1-3 value
- AIP B4-8 value
- AIP C4-8 value

Factory setting

Manual value

Additional information

Read access	Operator
Write access	Maintenance

P3 (top)

Navigation

"HyTD" submenu

Overview

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels distributed over the full range of the tank.

■ 17 Correction of the hydrostatic tank deformation (HyTD)

- A "Distance" (level below L_0 → "HyTD correction value" = 0)
- B Gauge Reference Height (GRH)
- C HyTD correction value
- D "Distance" (level above L_0 → "HyTD correction value" > 0)

Linear approximation of the HyTD correction

The real amount of deformation varies non-linearly with the level due to the construction of the tank. However, as the correction values are typically small compared to the measured level, a simple straight line method can be used with good results.

图 18 Calculation of the HyTD correction

- 1 Linear correction according to "Deformation factor (→ 239)"
- 2 Real correction
- 3 Starting level (→ 238)
- L Measured level
- H HyTD correction value (→ 238)

Calculation of the HyTD correction

$L \leq L_0$	$\Rightarrow C_{\text{HyTD}} = 0$
$L > L_0$	$\Rightarrow C_{\text{HyTD}} = - (L - L_0) \times D$

A0028715

L	Measured level
L₀	Starting level
C_{HyTD}	HyTD correction value

"CTSh" submenu

Overview

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

- i** This correction is recommended for the following situations:
 - if the operating temperature deviates considerably from the temperature during calibration ($\Delta T > 10 \text{ }^{\circ}\text{C}$ (18 $^{\circ}\text{F}$))
 - for extremely high tanks
 - for refrigerated, cryogenic or heated applications
- i** As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.
- i** This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

CTSh: Calculation of the wall temperature**Fig. 19** Parameters for the CTSh calculation

T_w	Temperature of the wetted part of the tank shell
T_d	Temperature of the dry part of the tank shell
T_p	Product temperature
T_v	Vapor temperature (in the tank)
T_a	Ambient temperature (atmosphere surrounding the tank)
S_d	Measured distance (Empty to Level)
TRH	Tank reference height
E	Empty
L	Level

CTSh: Calculation of the wall temperature

Depending on the parameters **Covered tank** (→ [Fig. 244](#)) and **Stilling well** (→ [Fig. 244](#)), the temperatures T_w of the wetted and T_d of the dry part of the tank wall are calculated as follows:

Covered tank (→ Fig. 244)	Stilling well (→ Fig. 244)	T_w	T_d
Covered	Yes ¹⁾	T_p	T_v
	No	$(7/8) T_p + (1/8) T_a$	$(1/2) T_v + (1/2) T_a$
Open top	Yes	T_p	T_a
	No	$(7/8) T_p + (1/8) T_a$	T_a

1) This option is also valid for insulated tanks without a stilling well. This is due to the temperature inside and outside of the tank shell being the same due to the insulation of the tank.

A0030509

- 1 *Covered tank (\rightarrow 244) = Covered; Stilling well (\rightarrow 244) = Yes*
- 2 *Covered tank (\rightarrow 244) = Covered; Stilling well (\rightarrow 244) = No*

"HTMS" submenu

Overview

The Hybrid Tank Measurement System (HTMS) is a method to calculate the density of a product in a tank based on both a (top mounted) level and at least one (bottom mounted) pressure measurement. An additional pressure sensor can be installed at the top of the tank to provide information about the vapor pressure and to make the density calculation more accurate. The calculation method also takes into account a possible level of water at the bottom of the tank to make density calculations as accurate as possible.

HTMS parameters

20 HTMS parameters

A Product
B Water

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Tank configuration → Pressure → P1 (bottom)
H _{P1} (Position of P1 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P1 position
P3 (Top pressure)	Setup → Advanced setup → Tank configuration → Pressure → P3 (top)
H _{P3} (Position of P3 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P3 position
ρ _P (Density of the product ¹⁾)	<ul style="list-style-type: none"> ▪ Measured value: Setup → Advanced setup → Calculation → HTMS → Density value (13753) ▪ User-defined value: Setup → Advanced setup → Calculation → HTMS → Manual upper density (14998)
ρ _v (Vapor density)	Expert → Application → Tank configuration → Density → Vapor density
ρ _A (Ambient air temperature)	Setup → Advanced setup → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L _p (Level of the product)	Operation → Tank level (14655)
L _w (Bottom water level)	Operation → Water level (14970)
V = L _w - H _{P1}	
Δ _p = L _p - L _w = L _p - V - H _{P1}	

1) Depending on the situation this parameter is measured or a user-defined value is used.

HTMS modes

Two HTMS modes can be selected in the **HTMS mode** parameter (→ 248). The mode determines whether one or two pressure values are used. Depending on the selected mode a number of additional parameters are required for the calculation of the product density.

 The **HTMS P1+P3** option must be used in pressurized tanks in order to compensate for the pressure of the vapor phase.

HTMS mode (→ 248)	Measured variables	Required additional parameters	Calculated variables
HTMS P1	■ P_1 ■ L_p	■ g ■ H_{P1} ■ L_w (optional)	ρ_p
HTMS P1+P3	■ P_1 ■ P_3 ■ L_p	■ ρ_v ■ ρ_A ■ g ■ H_{P1} ■ H_{P3} ■ L_w (optional)	ρ_p (more precise calculation for pressurized tanks)

Minimum level

The density of the product can only be calculated if the product has a minimum thickness :

$$\Delta_p \geq \Delta_{p,\min}$$

A0028864

This is equivalent to the following condition for the product level:

$$L_p - V \geq \Delta_{p,\min} + H_{P1} = L_{\min}$$

A0028863

L_{\min} is defined in the **Minimum level** parameter (→ 249). As can be seen from the formula it always must be bigger than H_{P1} .

If $L_p - V$ falls below this limit, the density is calculated as follows:

- If a previous calculated value is available, this value will be kept as long as no new calculation is possible.
- If no value was previously calculated, the manual value (defined in the **Manual upper density** parameter) will be used.

Hysteresis

The level of the product in a tank is not constant but slightly varies, due for example to filling disturbances. If the level oscillates around the changeover level (**Minimum level** (→ 249)), the algorithm will constantly switch between calculating the value and holding the previous result. To avoid this effect a positional hysteresis is defined around the changeover point.

**2.1 HTMS hysteresis**

Tank Level %

Navigation

Expert → Tank values → Level → Tank Level % (14654)

Description

Shows the level as a percentage of the full measuring range.

Additional information

Read access	Operator
Write access	-

Tank ullage

Navigation

Expert → Tank values → Level → Tank ullage (14657)

Description

Shows the remaining empty space in the tank.

Additional information

Read access	Operator
Write access	-

Tank ullage %

Navigation

Expert → Tank values → Level → Tank ullage % (14658)

Description

Shows the remaining empty space in percentage related to parameter tank reference height.

Additional information

Read access	Operator
Write access	-

Upper interface level

Navigation

Expert → Tank values → Level → Upper I/F level (15003)

Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Maintenance
Write access	-

Upper interface level timestamp

Navigation

Expert → Tank values → Level → Up I/F timestamp (8055)

Description

Shows timestamp for the last measured upper interface level.

Additional information

Read access	Operator
Write access	-

Lower interface level

Navigation
 Expert → Tank values → Level → Lower I/F level (15004)
Description

Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Maintenance
Write access	-

Lower interface level timestamp

Navigation
 Expert → Tank values → Level → LowI/F timestamp (8061)
Description

Shows timestamp of the last measured lower interface level.

Additional information

Read access	Operator
Write access	-

Bottom level

Navigation
 Expert → Tank values → Level → Bottom level (15018)
Description

Shows the bottom level.

Additional information

Read access	Operator
Write access	-

Bottom level timestamp

Navigation
 Expert → Tank values → Level → BotLev timestamp (8048)
Description

Shows the timestamp for measured bottom level.

Additional information

Read access	Operator
Write access	-

Water level

Navigation Expert → Tank values → Level → Water level (14970)**Description**

Shows the bottom water level.

Additional information

Read access	Operator
Write access	-

Measured level

Navigation Expert → Tank values → Level → Measured level (14653)**Description**

Shows the measured level without any correction from the tank calculations.

Additional information

Read access	Operator
Write access	-

Distance

Navigation Expert → Tank values → Level → Distance (8103)**Description**

Shows measured distance from reference position.

Additional information

Read access	Operator
Write access	-

Displacer position

Navigation Expert → Tank values → Level → Displacer pos (15019)**Description**

Shows the displacer position.

Additional information

Read access	Operator

Measured upper density

Navigation	Expert → Tank values → Density → Meas upper dens. (15001)
Description	Shows the density of the upper phase.

Additional information

Read access	Operator
Write access	-

Upper density timestamp**Navigation**
 Expert → Tank values → Density → UpDens timestamp (8067)
Description

Shows timestamp of the last measured upper density.

Additional information

Read access	Operator
Write access	-

Measured middle density**Navigation**
 Expert → Tank values → Density → Meas middle dens (14997)
Description

Density of the middle phase.

Additional information

Read access	Operator
Write access	-

Middle Density Timestamp**Navigation**
 Expert → Tank values → Density → MidDensTimestamp (8011)
Description

Shows the timestamp of the last measured middle density.

Additional information

Read access	Operator
Write access	-

Measured lower density**Navigation**
 Expert → Tank values → Density → Meas lower dens. (15002)
Description

Density of the lower phase.

Additional information

Read access	Maintenance
Write access	-

Lower density timestamp

Navigation  Expert → Tank values → Density → LowerDensTimestp (8122)

Description Shows timestamp of last measured lower density.

Additional information

Read access	Operator
Write access	-

"Profile density" submenu

Navigation  Expert → Tank values → Density → Profile density

Profile density 0 to 49

Navigation  Expert → Tank values → Density → Profile density → Profile dens 0 to 49 (8068)

Description Shows the density measurement at the corresponding profile density position.

Additional information

Read access	Operator
Write access	-

Profile density position 0 to 49

Navigation  Expert → Tank values → Density → Profile density → Profile pos 0 to 49 (8077)

Description Shows the position where the corresponding density was measured.

Additional information

- Amplitude eval distance *
- DiffPhase *

Factory setting

Off

* Visibility depends on order options or device settings

Additional information

A total of 1000 measured values can be logged. This means:

- 1000 data points if 1 logging channel is used
- 500 data points if 2 logging channels are used
- 333 data points if 3 logging channels are used
- 250 data points if 4 logging channels are used

If the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 1000, 500, 333 or 250 measured values are always in the log (ring memory principle).

 The logged data are deleted if a new option is selected in this parameter.

Read access	Operator
Write access	Maintenance

Logging interval**Navigation**

 Expert → Diagnostics → Data logging → Logging interval (0856)

 Expert → Diagnostics → Data logging → Logging interval (0856)

Description

Define the logging interval t_{log} for data logging. This value defines the time interval between the individual data points in the memory.

User entry

1.0 to 3 600.0 s

Factory setting

10.0 s

Additional information

This parameter defines the interval between the individual data points in the data log, and thus the maximum loggable process time T_{log} :

- If 1 logging channel is used: $T_{log} = 1000 \cdot t_{log}$
- If 2 logging channels are used: $T_{log} = 500 \cdot t_{log}$
- If 3 logging channels are used: $T_{log} = 333 \cdot t_{log}$
- If 4 logging channels are used: $T_{log} = 250 \cdot t_{log}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of T_{log} always remains in the memory (ring memory principle).

 The logged data are deleted if this parameter is changed.

*Example***When using 1 logging channel**

- $T_{log} = 1000 \cdot 1 \text{ s} = 1000 \text{ s} \approx 16.5 \text{ min}$
- $T_{log} = 1000 \cdot 10 \text{ s} = 1000 \text{ s} \approx 2.75 \text{ h}$
- $T_{log} = 1000 \cdot 80 \text{ s} = 80000 \text{ s} \approx 22 \text{ h}$
- $T_{log} = 1000 \cdot 3600 \text{ s} = 3600000 \text{ s} \approx 41 \text{ d}$

Read access	Operator
Write access	Maintenance

Clear logging data

0 % value (Parameter)	142, 153, 200
100 % value (Parameter)	142, 153, 201

A

Access code (Parameter)	126
Access status display (Parameter)	32
Activate SW option (Parameter)	56
Active calibration (Parameter)	145, 158
Active diagnostics (Parameter)	123
Active gauge command (Parameter)	61
Actual diagnostics (Parameter)	281
Administration (Submenu)	55, 56
Air density (Parameter)	222, 273
Air temperature (Parameter)	219, 270
Air temperature source (Parameter)	218
Alarm (Submenu)	252
Alarm 1 input source (Parameter)	192
Alarm 2 input source (Parameter)	192
Alarm 3 input source (Parameter)	193
Alarm 4 input source (Parameter)	193
Alarm hysteresis (Parameter)	260
Alarm mode (Parameter)	253
Alarm value (Parameter)	256
Alarm value source (Parameter)	255
Ambient pressure (Parameter)	232
Analog I/O (Submenu)	147
Analog input 0% value (Parameter)	155
Analog input 100% value (Parameter)	156
Analog input source (Parameter)	150
Analog IP (Submenu)	138
Any error (Parameter)	259
Application (Submenu)	211
Assign channel 1 (Parameter)	297
Assign PV (Parameter)	199
Assign QV (Parameter)	204
Assign SV (Parameter)	202
Assign TV (Parameter)	203

B

Backlight (Parameter)	41
Balance flag (Parameter)	61, 262
Balance settings (Submenu)	85
Balancing waiting time (Parameter)	86
Baudrate (Parameter)	173
Board info (Submenu)	294
Bottom level (Parameter)	66, 267
Bottom level timestamp (Parameter)	66, 267
Bottom point (Parameter)	127, 133
Bus termination (Parameter)	176

C

Calibration (Parameter)	158
