4  Safety instructions

⚠️ WARNING
Risk of injury from high pressure, high temperature or chemical hazards if process medium escapes!
- Before installing or removing an assembly, depressurize the system, drain the system and clean it.

⚠️ WARNING
Danger due to compressed air in the case of pneumatically operated assemblies!
- Before starting work on the assembly, switch off the compressed air supply and vent the compressed air lines.

⚠️ CAUTION
Contact with the medium poses a health hazard!
- Wear protective gloves, protective goggles and protective clothing, particularly when working with reagents, chemicals or process solutions.
- In case of contact with eyes or skin, rinse the affected area with plenty of water and then seek medical advice. Show the relevant safety data sheet to the physician.
NOTICE

Material damage due to solvents!
- Do not use any halogen-containing organic solvents or acetone. These solvents could destroy plastic components of the assembly.

Impact on the process
Before decommissioning an active device, the potential impact on the overall process must be taken into account! This applies in particular to the use of the switching contacts, analog signal outputs or the communication interface of the associated measuring device to control process variables. Coordinate service tasks with the operator!

  - as a transport lock,
  - for temporary operation without rinsing.
- Regular cleaning of the assembly must be guaranteed. It is not permitted to permanently close the rinse chamber during operation, as this may cause medium residue to settle. The rinse chamber must be rinsed regularly.
- Use Teflon sealing tape to seal the lock screws.
- The following keys are needed for installation:
  - Stainless steel lock screw (+RO) = AF 13 mm,
  - PVDF lock screw (+RP) = AF 17 mm.
- The nominal pressure for the lock screws is limited to PN10 (145 psi).
- When used in areas where gas explosions may occur, the lock screws may only be used in Zone 1 or Zone 2.
