2. Special Conditions for Safe Use

The suffix "X" placed after the certificate number indicates that this product is subject to special conditions for safe use, that is:

2.1 Repairs of the flameproof joints may only be made by the manufacturer or on behalf of the manufacturer and on his own responsibility. Repair in compliance with the values in GB/T 3836.2-2021 is not accepted.

2.2 In the case of process connections made of polymeric material or with polymeric coatings, avoid electrostatic charging of the plastic surface.

2.3 For Group II C, if electrostatic charging of the probe can be avoided (e.g. through friction, cleaning, maintenance, strong medium flow), a probe coated with non-conductive material can be used.

2.4 For EPL Ga applications, at the metallic parts of the products made of light metal there is a danger of ignition by impact or friction.

3. Conditions for Safe Use

3.1 The external earth connection facility shall be connected reliably.

3.2 For cable entries, appropriate cable glands or blind plugs shall be used. Otherwise/alternatively Ex e cable glands specified/provided by the manufacturer which are rated at least IP67 can be used (terminal compartment in increased safety only).

3.3 The relationship between ambient temperature, process temperature and the temperature class is shown as following:

a(model)=0, 1; g(application)=A, B

3.4 Electrical data:

3.4.1 Products with type of protection Ex d or Ex d e

$U \leq 30\text{Vdc}$, $I = 4\sim 20\text{mA}$, $P \leq 0.6\text{W}$

3.4.2 Products with type of protection Ex ia

$U_i = 30\text{V}$ $I_i = 170\text{mA}$ $P_i = 1\text{W}$ $C_i = 16\text{nF}$ $L_i = 0$

3.5 When used as intrinsically safe product, it should be used in explosive gas atmospheres together with approved associated apparatus, follow the instruction manual of this product and associated apparatus when connecting the wiring. Connect the wiring terminals correctly.

3.6 Connecting cable between intrinsically safe product and associated apparatus should be insulated screen cable; connect the cable screen functionally to earth.

3.7 Obey the warning "Keep tight when the circuit is alive" when the area is known to be hazardous as the non Ex ia products.

3.8 The user shall not change the configuration in order to maintain/ensure the explosion protection performance of the equipment. Any change may impair safety.

3.9 For installation, use and maintenance of this product, the end user shall observe the instruction manual and the following standards:

GB 50257-2014 "Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering".

GB/T 3836.13-2021 "Explosive atmospheres- Part 13:Equipment repair, overhaul ,reclamation and modification".

GB/T 3836.15-2017 "Explosive atmospheres- Part 15:Electrical installations design, selection and erection".

GB/T 3836.16-2017 "Explosive atmospheres- Part 16:Electrical installations inspection and maintenance".
