## Certificates and declarations

### Declaration of conformity

INMETRO CERTIFICADO DE CONFORMIDADE

### Certificate of Conformity

Certificate number:

- TÜV 18.0687
- TÜV 23.0020
- TÜV 23.0021
- TÜV 23.0022

Affixing the certificate number certifies conformity with the standards under [www.abnt.org.br](http://www.abnt.org.br) (depending on the device version).

- ABNT NBR IEC 60079-0: 2020
- ABNT NBR IEC 60079-7: 2018
- ABNT NBR IEC 60079-11: 2013

**Extended order code**

The extended order code is indicated on the nameplate, which is affixed to the device in such a way that it is clearly visible. Additional information about the nameplate is provided in the associated Operating Instructions.

**Structure of the extended order code**

*Device type*

The device and the device design is defined in the "Device type" section (Product root).

*Basic specifications*

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available. The selected option of a feature can consist of several positions.

*Optional specifications*

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available. The features have a 2-digit structure to aid identification (e.g. JA). The first digit (ID) stands for the feature group and consists of a number or a letter (e.g. J = Test, Certificate). The second digit constitutes the value that stands for the feature within the group (e.g. A = 3.1 material (wetted parts), inspection certificate).

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

## Optional specifications

ID	Order code for	Option selected	Description
Jx	Test, certificate	JN	Ambient temperature transmitter -50 °C
Nx	Accessory mounted	NA	Overvoltage Protection (OVP)

### Safety instructions: General

- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
  - Be suitably qualified for their role and the tasks they perform
  - Be trained in explosion protection
  - Be familiar with national regulations or guidelines (e.g. ABNT NBR IEC 60079-14)
- Install the device according to the manufacturer's instructions and national regulations.
- Do not operate the device outside the specified electrical, thermal and mechanical parameters.
- Only use the device in media to which the wetted materials have sufficient durability.
- Refer to the temperature tables for the relationship between the permitted ambient temperature for the sensor and/or transmitter, depending on the range of application, and the temperature classes.
- Alterations to the device can affect the explosion protection and must be carried out by staff authorized to perform such work by Endress+Hauser.
- Observe all the technical data of the device (see nameplate).

### Safety instructions: Installation

- Continuous service temperature of the connecting cable: -40 to +80 °C (-50 to +80 °C for optional specifications, ID Jx (Test, Certificate) = JN); in accordance with the range of service temperature taking into account additional influences of the process conditions ( $T_{a,min}$  and  $T_{a,max} + 20$  K).
- Only use certified cable entries suitable for the application. Observe selection criteria as per ABNT NBR IEC 60079-14.
- When the measuring device is connected, attention must be paid to explosion protection at the transmitter.
- In potentially explosive atmospheres:
  - Do not disconnect the electrical connection of the power supply circuit when energized.
  - Do not open the connection compartment cover when energized.

*Type of protection Ex ec*

- In potentially explosive atmospheres: Do not disconnect the electrical connection of the power supply circuit when energized.
- Seal unused entry glands with approved sealing plugs that correspond to the type of protection. The plastic transport sealing plug does not meet this requirement and must therefore be replaced during installation.
- Only use certified cable entries and sealing plugs. The metal cable entries, extensions and sealing plugs supplied meet this requirement.

*Basic specification, position 8, 9 (sensor version; DSC sensor; measuring tube) = DA, DB, DC, DD and position 11 (pressure component) = B, C, D, E, F, G*

- The maximum medium temperature is limited for device versions with a pressure component that is installed directly on the sensor F, O, R:
  - To 40 °C for T6 and T5
  - To 90 °C for T4 and T1
- In the case of T4 ... T1 and medium temperatures > 90 °C the pressure component DPC21 must be installed using a spacer tube between the pressure component and the sensor F, O, R.
  - The spacer tube must have a minimum length of 50 cm (1.97 in).
  - The spacer tube supplied meets this requirement.

**Intrinsic safety**

- Observe the guidelines for interconnecting intrinsically safe circuits (e.g. ABNT NBR IEC 60079-14 , Proof of Intrinsic Safety).
- The intrinsically safe input power circuit of the device is isolated from ground. If the device is only equipped with one input, the dielectric strength of the input is at least 500 V<sub>rms</sub>. If the device is equipped with more than one input, the dielectric strength of each individual input to ground is at least 500 V<sub>rms</sub>, and the dielectric strength of the inputs vis-à-vis one another is also at least 500 V<sub>rms</sub>.
- The device can be connected to the Endress+Hauser FXA291 service tool: refer to the Operating Instructions.
- The device can be connected to the remote display FHX50 with Ex ia explosion protection; refer to the Special Documentation and Ex documentation.

*Basic specification, position 3 (Output; input) = A, B, C, D, E, G:*

When the intrinsically safe Ex ic circuits of the device are connected to certified intrinsically safe circuits of Category Ex ic for Equipment Groups IIB, the type of protection changes from Ex ic IIC to Ex ic IIB.

### Potential equalization

- Integrate the device into the potential equalization .
- If the ground connection has been established via the pipe as specified, it is also possible to integrate the sensor into the potential equalization system via the pipe.

### Overvoltage protection

Optional specification, ID Nx (Accessory Mounted) = NA

- Minimum ambient temperature when using Overvoltage Protection (OVP):  $-40\text{ }^{\circ}\text{C}$
- When using the internal overvoltage protection: Reduce the admissible ambient temperature at the housing by 2 K.
- For installations which require overvoltage protection to comply with national regulations or standards, install the device using overvoltage protection (e.g. HAW56x from Endress+Hauser).
- Observe the safety instructions of the overvoltage protection.
- If an overvoltage protection against atmospheric over voltages is required: no other circuits may leave the enclosure during normal operation without additional measures.
- The intrinsically safe input power circuit of the device is isolated from ground. If the device is only equipped with one input, the dielectric strength of the input is at least  $290\text{ }V_{\text{rms}}$ . If the device is equipped with more than one input, the dielectric strength of each individual input to ground is at least  $290\text{ }V_{\text{rms}}$ , and the dielectric strength of the inputs vis-à-vis one another is also at least  $290\text{ }V_{\text{rms}}$ .

### Temperature tables

#### Ambient temperature

*Minimum ambient temperature*

*Basic specification, position 3 (Output; Input) = A, B, D in conjunction with optional specification, ID Jx (Test, Certificate) = JN*

$T_a = -50\text{ }^{\circ}\text{C}$

(Not permitted in conjunction with *optional specification, ID Nx (Accessory Mounted) = NA* → 11)

*Basic specification, position 3 (Output; input) = A, B, C, D, E, G:*

$T_a = -40\text{ }^{\circ}\text{C}$

Maximum ambient temperature:

- Compact version  
 $T_a = +70\text{ °C}$  depending on the medium temperature and temperature class
- Transmitter remote version  
 $T_a = +75\text{ °C}$  depending on the medium temperature and temperature class
- Sensor remote version  
 $T_a = +85\text{ °C}$  depending on the medium temperature and temperature class

### Medium temperature

The following relationship of ambient temperature to medium temperature applies when  $T_m < -50\text{ °C}$ :

$T_m\text{ [°C]}$	-50	-100	-150	-200
$T_a\text{ [°C]}$	-50	-47	-44	-39

**Explosion hazards arising from gas and dust**

**Determining the temperature class and surface temperature with the temperature table**

- In the case of gas: Determine the temperature class as a function of the maximum ambient temperature  $T_a$  and the maximum medium temperature  $T_m$ .
- In the case of dust: Determine the maximum surface temperature as a function of the maximum ambient temperature  $T_a$  and the maximum medium temperature  $T_m$ .

**Example**

- Measured maximum ambient temperature:  $T_{ma} = 63\text{ }^\circ\text{C}$
- Measured maximum medium temperature:  $T_{mm} = 108\text{ }^\circ\text{C}$

$T_a$ [°C]	T6 [85 °C]	T5 [100 °C]	T4 [135 °C]	T3 [200 °C]	T2 [300 °C]	T1 [450 °C]
40	80	95	130	195	280	-
60	-	95	130	195	280	-
65	-	-	130	195	280	-

**1 Procedure for determining the temperature class and surface temperature**

1. In the column for the maximum ambient temperature  $T_a$  select the temperature that is immediately greater than or equal to the maximum ambient temperature  $T_{ma}$  that is present.

↳  $T_a = 65\text{ }^\circ\text{C}$ .  
The row showing the maximum medium temperature is determined.

2. Select the maximum medium temperature  $T_m$  of this row, which is immediately greater than or equal to the maximum medium temperature  $T_{mm}$  that is present.

↳ The column with the temperature class for gas is determined:  
 $108\text{ }^\circ\text{C} \leq 130\text{ }^\circ\text{C} \rightarrow T_4$ .

3. The maximum temperature of the temperature class determined corresponds to the maximum surface temperature for dust:  $T_4 = 135\text{ }^\circ\text{C}$ .
