### Optional

### Test, certificate, declaration

| KT | Approved for use with drinking water according to UA assessment basis, declaration |

### Accessory mounted

| NA | Process connection POM G1/4" DN 6/8 |

| CAV01- | Complete order code |

2  Intended use

The flow assembly is suitable for the installation of the CAS51D and CAS80E optical sensors with different path lengths. Thanks to its design, it can be operated in pressurized systems.

The assembly is designed exclusively for use in liquid media.

Use of the device for any purpose other than that described poses a threat to the safety of people and of the entire measuring system, and is therefore not permitted.
The manufacturer is not liable for damage caused by improper or non-intended use.

3  Authorized installation personnel

- Installation, commissioning, operation and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- The technical personnel must be authorized by the plant operator to perform the stated tasks.
- The electrical connection may only be established by an electrical technician.
- The technical personnel must have read and understood the Operating Instructions and must follow the instructions contained therein.
- Measuring point faults may be repaired only by authorized and specially trained personnel.

Repairs not described in the Operating Instructions provided must only be carried out directly at the manufacturer's site or by the service organization.

4  Safety instructions

- Pay attention to the following safety instructions.
- Pay attention to Operating Instructions BA00459C (CAS51D) and BA02005C (CAS80E) of the measuring devices.

4.1  Workplace safety

⚠️ CAUTION

Sensor UV light
The sensor's UV light can damage the eyes and skin!
- Never look into the measuring gap while the sensor is in operation.

As the user, you are responsible for complying with the following safety conditions:
- Installation guidelines
- Local standards and regulations

4.2  Operational safety

Before commissioning the entire measuring point:

1. Verify that all connections are correct.
2. Ensure that electrical cables and hose connections are undamaged.
3. Do not operate damaged products, and protect them against unintentional operation.
4. Label damaged products as defective.
During operation:

- If faults cannot be rectified:
  Take products out of service and protect them against unintentional operation.

### 4.3 Product safety

The product is designed to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. The relevant regulations and international standards have been observed.

1  **CAV01 flow assembly kit**
7 Tool list

8 Installation

8.1 Technical data

8.1.1 Environment

Ambient temperature range
0 to 60 °C (32 to 140 °F)

8.1.2 Process

Process temperature range
0 to 50 °C (32 to 122 °F)

Process pressure range
- Maximum 6 bar (87 psi) at 20 °C (68 °F)
- Maximum 4 bar (58 psi) at 50 °C (122 °F)

Pressure/temperature ratings

![Pressure/temperature ratings diagram]

2 Pressure/temperature ratings
Flow limit
The flow limit depends on the sensor used and its properties. The data are based on water.
- Minimum 100 ml/h (0.026 gal/h)
- Maximum 10 l/h (2.64 gal/h)

8.1.3 Mechanical construction

Dimensions
→ Section "Installation"

Materials

Wetted materials

Housing: POM-C
O-rings: EPDM
Other parts: Stainless steel 1.4404, PTFE

Process connections
G1/4" (for hoses with outer diameter 8 mm (0.31 in))

8.2 Installation conditions

8.2.1 Dimensions
4  Dimensions of wall holder. Dimensions: mm (in)

8.2.2  Orientation

The following diagrams show the orientation of the CAS51D sensor in the assembly.

- Install the CAS80E sensor in the assembly with the reverse orientation. (See Section 8.3.3 Installation with CAS80E sensor) → 16
Assembly in the bypass

To achieve flow through the assembly with a bypass, pressure p1 must be higher than pressure p2. No measures to increase pressure are required for branch pipes that branch off from the main pipe (no return medium).

1. Connect the medium inflow and outlet to the hose connections of the assembly. The assembly is filled from below and is therefore self-venting.
2. Install an orifice plate in the main pipe to ensure that pressure p1 is higher than pressure p2.
3. Make sure that the flow is at least 100 ml/h (0.026 gal/h).
4. Take the extended response times into consideration.
Assembly in open outlet

![Connection diagram with open outlet, arrow points in the flow direction](image)

- 1 Pump
- 2 Flow assembly
- 3 Open outlet
- 4 Filter unit

As an alternative to operation in the bypass, it is also possible to direct the sample flow from a filter unit with an open outlet through the assembly.

### 8.2.3 Environment

**Technical precautions to protect the measuring point from the influence of environmental factors**

The ambient conditions at the installation location must meet the technical specification of the assembly and sensor.

1. Protection against direct sunshine and UV radiation sources.
2. Protection against contamination.
3. At ambient temperatures below 0 °C (32 °F), the medium must not freeze. Supply and return lines must be insulated.
8.3 Installing the assembly

8.3.1 Mounting the wall holder with the flow vessel on the panel

**NOTICE**

Sharp threads and mounting plate.
- Wear gloves for the installation.

The wall holder and flow vessel are pre-assembled.

The mounting materials used to secure the wall holder are not included in the scope of delivery and must be supplied by the customer.

- Preferably align the assembly with the cleaning connection pointing upwards. This makes it easier for any air remaining in the pipe after cleaning or maintenance to escape.
8.3.2 Installation with CAS51D sensor

**CAUTION**

Residual medium and high temperatures
Risk of injury!
- When working with parts that are in contact with the medium, protect against residual medium and elevated temperatures.
- Wear protective goggles and safety gloves.

Preparatory steps:

1. Wet the O-rings with water or grease them before use.
   - The O-rings slide more easily over the sensor and do not twist.
2. Make sure that the optical windows do not come into contact with grease.

- Select the correct air distributor for the sensor gap width.
7 Air distributor for gaps up to 10 mm (0.39 in)
1 Double nipple
2 Air distributor
3 Mounting holes
4 Sensor

8 Air distributor for gaps as of 40 mm (1.57)
1 Double nipple
2 Air distributor
3 Mounting holes
4 Sensor

Check whether the O-ring is located between the air distributor and banjo bolt.
Pull the sensor into the mounted flow vessel until the air distributor engages in the flow vessel.

If the optional compressed air cleaning unit is ordered, the connection nozzle provided for this purpose is pre-installed and the check valve is enclosed.
- Fit the check valve on the connection nozzle according to the specified direction of the arrow.

Once attached, the check valve is difficult to remove from the screw-in nozzle.

8.3.3 Installation with CAS80E sensor

⚠️ CAUTION

**Residual medium and high temperatures**

Risk of injury!
- When working with parts that are in contact with the medium, protect against residual medium and elevated temperatures.
- Wear protective goggles and safety gloves.

Preparatory steps:

1. Wet the O-rings with water or grease them before use.
   - The O-rings slide more easily over the sensor and do not twist.
2. Make sure that the optical windows do not come into contact with grease.
Select the correct air distributor for the sensor gap width.

- **9** Air distributor for gaps up to 10 mm (0.39 in)
  1. Double nipple
  2. Air distributor
  3. Mounting holes
  4. Sensor

- **10** Air distributor for gaps as of 40 mm (1.57 in)
  1. Double nipple
  2. Air distributor
  3. Mounting holes
  4. Sensor

Check whether the O-ring is located between the air distributor and banjo bolt.
Push the sensor into the mounted flow vessel until the air distributor engages in the flow vessel.

If the optional compressed air cleaning unit is ordered, the connection nozzle provided for this purpose is pre-installed and the check valve is enclosed.
Fit the check valve on the screw-in nozzle according to the specified direction of the arrow.

Once attached, the check valve is difficult to remove from the screw-in nozzle.

8.4  Post-installation check

1. After mounting, check all the connections to ensure they are secure.
2. Check the tight sealing of all the seals on the assembly (no leaks).
3. Check whether the sensor is installed and connected correctly.

8.5  Commissioning

**WARNING**
Risk of injury if medium escapes!

- Before applying pressure to the assembly, ensure that the medium is correctly connected.
- If the medium connection is not correct, do not introduce the assembly into the process.

- Before commissioning, check the chemical compatibility of materials, the temperature range and the pressure range.

8.5.1  Preparations

The flow assembly is optionally fitted with a cleaning connection.

**NOTICE**
Process pressure too high for compressed air cleaning

- Maximum process pressure for compressed air cleaning 10 bar (145 psi)

Connect the compressed air hose:

- Connect a compressed air hose (outer diameter 6 mm (0.24 in)) to the cleaning connection with the enclosed adapter (G1/4", 6 mm (0.24 in)).
8.6 Maintenance

⚠️ WARNING
Risk of injury if medium or cleaner escapes!
- Before each maintenance task, ensure that the process pipe is unpressurized, empty and rinsed.
- Switch off the cleaning unit before removing the sensor from the medium.

8.6.1 Maintenance tasks

⚠️ CAUTION
Risk of injury due to residual medium and elevated temperatures!
- When handling parts that are in contact with the medium, protect against residual medium and elevated temperatures.
- Wear protective goggles and safety gloves.

8.6.2 Cleaning agent

⚠️ WARNING
Organic solvents containing halogens
Limited evidence of carcinogenicity! Dangerous for the environment with long-term effects!
- Do not use organic solvents that contain halogens.

⚠️ WARNING
Thiocarbamide
Harmful if swallowed! Limited evidence of carcinogenicity! Possible risk of harm to the unborn child! Dangerous for the environment with long-term effects!
- Wear protective goggles, protective gloves and appropriate protective clothing.
- Avoid all contact with the eyes, mouth and skin.
- Avoid discharge into the environment.

The most common types of soiling and the appropriate cleaning agents in each case are shown in the following table.

Pay attention to the material compatibility of the materials to be cleaned.

<table>
<thead>
<tr>
<th>Type of soiling</th>
<th>Cleaning agent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Greases and oils</td>
<td>Hot water or tempered, surfactant-containing (basic) agents or water-soluble organic solvents (e.g. ethanol)</td>
</tr>
<tr>
<td>Limescale deposits, metal hydroxide buildup, lyophobic biological buildup</td>
<td>approx. 3% hydrochloric acid</td>
</tr>
<tr>
<td>Sulfide deposits</td>
<td>Mixture of 3% hydrochloric acid and thiocarbamide (commercially available)</td>
</tr>
<tr>
<td>Protein buildup</td>
<td>Mixture of 3% hydrochloric acid and pepsin (commercially available)</td>
</tr>
<tr>
<td>Type of soiling</td>
<td>Cleaning agent</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>------------------------------------------------------</td>
</tr>
<tr>
<td>Fibers, suspended substances</td>
<td>Pressurized water, possibly surface-active agents</td>
</tr>
<tr>
<td>Light biological buildup</td>
<td>Pressurized water</td>
</tr>
</tbody>
</table>

- Choose a cleaning agent to suit the degree and type of soiling.

### 8.6.3 Cleaning the assembly

To ensure stable and reliable measurements, the assembly and the sensor must be cleaned regularly. The frequency and intensity of the cleaning process depend on the medium.

1. Remove the sensor.
2. Clean the assembly depending on the degree of fouling.
4. Remove heavy soiling using a soft brush and a suitable cleaning agent.
5. For very persistent dirt, soak the parts in a cleaning solution.
6. After soaking the parts, clean them with a brush.
7. Rinse the parts thoroughly with water.

A typical cleaning interval for drinking water, for example, is 6 months.

### 8.6.4 Replacing O-rings

11  Arrangement of the O-rings on the assembly with CAS51D

- 1  O-ring
- 2  O-ring on lock ring

12  Arrangement of the O-rings on the assembly with CAS80E

- 1  O-ring
- 2  O-ring on lock ring
The air distributor for the sensors with a gap width of 40 mm (1.57 in) or 50 mm (1.97 in) has 2 mounting holes, each with an O-ring. It is recommended to replace the O-rings annually.

Replacement of the O-rings on the assembly with CAS51D
1. Remove the O-rings as described in Section 9.1.1.→  23
2. Replace the used O-rings with new O-rings.
3. Wet the new O-rings with water or grease them before use.
   The O-rings slide more easily over the sensor and do not twist.
4. Make sure that the optical windows do not come into contact with grease.
5. Install the O-rings and mount the assembly as described in Section 8.3.2.→  13

Replacement of the O-rings on the assembly with CAS80E
1. Remove the O-rings as described in Section 9.1.2.→  25
2. Replace the used O-rings with new O-rings.
3. Wet the new O-rings with water or grease them before use.
   The O-rings slide more easily over the sensor and do not twist.
4. Make sure that the optical windows do not come into contact with grease.
5. Install the O-rings and mount the assembly as described in Section 8.3.3.→  16
9  Removal

9.1  Removing the assembly

9.1.1  Removal with CAS51D sensor

**WARNING**

Risk of injury if medium or cleaner escapes!

- Before each maintenance task, ensure that the process pipe is unpressurized, empty and rinsed.
- Switch off the cleaning unit before removing the sensor from the medium.

**CAUTION**

Residual medium and high temperatures

Risk of injury!

- When working with parts that are in contact with the medium, protect against residual medium and elevated temperatures.
- Wear protective goggles and safety gloves.

**NOTICE**

The sensor and assembly can be damaged if dropped.

- When performing the removal, secure the sensor and assembly in such a way that nothing can fall or drop.

![Diagram of sensor removal process]

1. 
2. 
3.
**NOTICE**

Do not turn the sensor in the flow cell.
The sensor tube is unscrewed and liquid enters the sensor.
► Only pull or push the sensor in the flow cell.

► Make sure that the optical windows do not come into contact with grease.
9.1.2 Removal with CAS80E sensor

**WARNING**
Risk of injury if medium or cleaner escapes!
- Before each maintenance task, ensure that the process pipe is unpressurized, empty and rinsed.
- Switch off the cleaning unit before removing the sensor from the medium.

**CAUTION**
Residual medium and high temperatures
Risk of injury!
- When working with parts that are in contact with the medium, protect against residual medium and elevated temperatures.
- Wear protective goggles and safety gloves.

**NOTICE**
Do not turn the sensor in the flow cell.
The sensor tube is unscrewed and liquid enters the sensor.
- Only pull or push the sensor in the flow cell.
Make sure that the optical windows do not come into contact with grease.

10 Disposal

- Observe the local regulations.

⚠️

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.
