2  Intended use
The O-rings are used to seal the CAV01 flow assembly.
Only replace a defective O-ring with a new O-ring of the same type.
Use of the device for any purpose other than that described poses a threat to the safety of people and of the entire measuring system, and is therefore not permitted.
The manufacturer is not liable for damage caused by improper or unintended use.

3  Authorized installation personnel
- Installation, commissioning, operation and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- The technical personnel must be authorized by the plant operator to perform the stated tasks.
- The electrical connection may only be established by an electrical technician.
- The technical personnel must have read and understood the Operating Instructions and must follow the instructions contained therein.
- Measuring point faults may be repaired only by authorized and specially trained personnel.

Information: Repairs not described in the Operating Instructions provided must only be carried out directly at the manufacturer's site or by the service organization.

4  Safety instructions

4.1  Workplace safety

![CAUTION]

Sensor UV light
The sensor's UV light can damage the eyes and skin!
- Never look into the measuring gap while the sensor is in operation.
As the user, you are responsible for complying with the following safety conditions:
- Installation specifications
- Local standards and regulations

4.2  Operational safety

Before commissioning the entire measuring point:

1. Verify that all connections are correct.
2. Ensure that electrical cables and hose connections are undamaged.
3. Do not operate damaged products, and protect them against unintentional operation.
4. Label damaged products as defective.

During operation:

- If faults cannot be rectified:
  - Take products out of service and protect them against unintentional operation.

4.3  Product safety

The product is designed to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. The relevant regulations and international standards have been observed.

Information on the components:
- **c**: Only used in the CAV01-AA**1** variant (no cleaning)
- **d**: Depending on variant, 1 or 2 pieces required (1 piece for CAV01-AA*A/B/C*, 2 pieces for CAV01-AA*D/E*)
- **e**: Depending on variant, 3 or 4 pieces required (3 pieces for CAV01-AA*A/B/C*, 4 pieces for CAV01-AA*D/E*)

### 7 Tool list

- 17mm
8  Replacing the O-rings

8.1  Preparation

⚠️ WARNING
Risk of injury if medium or cleaner escapes!
▸ Before each maintenance task, ensure that the process pipe is unpressurized, empty and rinsed.
▸ Switch off the cleaning unit before removing the sensor from the medium.

⚠️ CAUTION
Residual medium and high temperatures
Risk of injury!
▸ When working with parts that are in contact with the medium, protect against residual medium and elevated temperatures.
▸ Wear protective goggles and safety gloves.

8.2  Replacing the O-ring on the drain plug

1 → 2

A0053225  A0053226
Replace the used O-ring with the new O-ring.

8.3 Replacing the O-rings on the flow assembly with CAS51D sensor
NOTICE

Do not turn the sensor in the flow cell.
The sensor tube is unscrewed and liquid enters the sensor.
► Only pull or push the sensor in the flow cell.

1. Replace the used O-rings with new O-rings.
2. Wet the O-rings with water or grease them before use.
   ➔ The O-rings slide more easily over the sensor and do not twist.
3. Make sure that optical windows do not come into contact with grease.
2 Arrangement of the O-rings on the assembly with CAS51D

1 O-ring
2 O-ring on lock ring
The air distributor for the sensors with a gap width of 40 mm (1.57 in) or 50 mm (1.97 in) has 2 mounting holes, each with an O-ring. It is recommended to replace the O-rings annually.
Check whether the O-ring is located between the air distributor and banjo bolt.

Pull the sensor into the mounted flow vessel until the air distributor engages in the flow vessel.

**WARNING**
Risk of injury if medium escapes!

- Before applying pressure to the assembly, ensure that the medium is correctly connected.
- If the medium connection is not correct, do not introduce the assembly into the process.
- Before commissioning, check the chemical compatibility of materials, the temperature range and the pressure range.

The flow assembly is optionally fitted with a cleaning connection.

**NOTICE**
Process pressure too high for compressed air cleaning

- Maximum process pressure for compressed air cleaning 10 bar (145 psi)
Connect the compressed air hose:
- Connect a compressed air hose (outer diameter 6 mm (0.24 in)) to the cleaning connection with the enclosed adapter (G1/4", 6 mm (0.24 in)).

8.4 Replacing the O-rings on the flow assembly with CAS80E sensor

NOTICE
Do not turn the sensor in the flow cell.
The sensor tube is unscrewed and liquid enters the sensor.
- Only pull or push the sensor in the flow cell.
1. Replace the used O-rings with new O-rings.
2. Wet the O-rings with water or grease them before use.
   ✣ The O-rings slide more easily over the sensor and do not twist.
3. Make sure that optical windows do not come into contact with grease.
5  Arrangement of the O-rings on the assembly with CAS80E

1  O-ring
2  O-ring on lock ring
The air distributor for the sensors with a gap width of 40 mm (1.57 in) or 50 mm (1.97 in) has 2 mounting holes, each with an O-ring. It is recommended to replace the O-rings annually.

Check whether the O-ring is located between the air distributor and banjo bolt.
Push the sensor into the mounted flow vessel until the air distributor engages in the flow vessel.

**WARNING**

Risk of injury if medium escapes!

- Before applying pressure to the assembly, ensure that the medium is correctly connected.
- If the medium connection is not correct, do not introduce the assembly into the process.

- Before commissioning, check the chemical compatibility of materials, the temperature range and the pressure range.

The flow assembly is optionally fitted with a cleaning connection.

**NOTICE**

Process pressure too high for compressed air cleaning

- Maximum process pressure for compressed air cleaning 10 bar (145 psi)

Connect the compressed air hose:

- Connect a compressed air hose (outer diameter 6 mm (0.24 in)) to the cleaning connection with the enclosed adapter (G1/4", 6 mm (0.24 in)).
9 Disposal

- Observe the local regulations.

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.
