Technical Information
Proservo NMS80
Tank Gauging

Application
Proservo NMS8x Series intelligent tank gauges are designed for high accuracy liquid level measurement in storage and process applications. They fulfill the exacting demands of tank inventory management, inventory control, custody transfer, loss control, total cost saving, and safe operation.

Typical areas of application
- Precise level, interface, and density measurement of oil (fuels), petrochemical, chemical, and alcohol
- Tank mounted intelligence makes NMS8x ideal for single or multi-task installation, covering a wide range of measurement functions including Liquid level, Interface level, Spot density, Density profile, Tank bottom, and Water dip and integrating a wide range of tank sensor measurement functions including Water level, Temperature, and Pressure.

Your benefits
- SIL2/3 certified as per IEC 61508 (Min, Max, Continuous level)
- SIL2 by single channel, SIL3 by dual channel (homogeneous or diverse redundancy)
- Measures liquid level to an accuracy of +/- 0.4 mm (0.016 in)
- Measurement of up to 2 interface levels and density of up to 3 liquid phases
- Liquid density profiling of up to 50 points throughout the tank or upper layer, configurable
- Wetted parts are completely separated from the electronic circuit
- Tank top mounting with 3” flange
- Wide range of output signals including V1, Modbus RS 485, and HART protocol
- Material and pressure rating of the wetted parts can be selected
- Suitable for atmospheric and high pressure applications up to 6 bar/600 kPa/87 psi
- Integration of e.g. temperature, water level, pressure, overfill prevention sensor
- Direct connection of spot or average temperature sensor
- Robust IP66/68, NEMA Type 4X/6P enclosure, stainless steel or aluminum
- Operation and display in a wide variety of local languages
- Easy commissioning, maintenance, and diagnostics via FieldCare

Function and system design

Measuring principle

NMS8x is an intelligent tank gauge for measuring liquid levels with high precision. The system is based on the principle of gauging displacement.

A small displacer is accurately positioned in a liquid medium using a stepping motor. The displacer is then suspended on a measuring wire which is wound onto a finely grooved wire drum. NMS8x counts the rotations of the wire drum and to calculate the traveling distance of the wire and obtain the liquid level change.

The drum is driven via coupling magnets that are completely separated by the drum housing. Outer magnets are connected to the wire drum, with inner magnets connected to the drive motor. As the inner magnets turn, their magnetic attraction causes the outer magnets to turn, as well, causing the entire drum assembly to turn. The change of the apparent weight of the displacer on the wire creates torque on the outer magnets generating change of magnetic flux. These changes generated in the drum assembly are detected by a unique electromagnetic transducer on the inner magnets. The transducer transmits the weigh signal to a CPU using a non contact principle (patented). The drive motor is actuated to keep the weigh signal constant at set value defined by the operating command.

When the displacer is lowered and touches a liquid, the apparent weight of the displacer is reduced by liquid buoyancy force, which is measured by a temperature-compensated magnetic transducer. As a result, the torque in the magnetic coupling changes, and this is measured by six hall sensors. A signal indicating the weight of the displacer is sent to the motor control circuit. As the liquid levels rise and fall, the displacer position is adjusted by the drive motor. The rotation of the wire drum is continuously evaluated to determine the level value using a magnetic rotary encoder. In addition to gauging the level, NMS8x can measure the interfaces between up to three liquid phases, and the tank bottom, as well as spot and profile densities.
Integration of tank sensors

In addition to measuring the level, interfaces, tank bottom, and density, the device can also be used to integrate of tank sensors into tank inventory systems. All measured and calculated values can be displayed on the built-in display. They can be transferred to an inventory control system via a field communication protocol.

Typical values measured by the sensors are:
- Level
- Spot temperature
- Average temperature
- Water level
- Pressure
- Secondary level value (for critical applications)

Major applications

The number of measuring functions and output options, as well as the compact design, enables NMS8x to be installed in a wide range of applications at minimal cost.

Petroleum industry

From oil production to storage at an oil depot, there exists an extensive need to measure and manage a wide variety of products. Remote tank gauging by NMS8x combined with an inventory management system is an ideal way to measure and manage tank contents.

Chemical industry

A wide choice of options for the wetted parts ensures chemical compatibility and long product life.

Power plant

Fuel oil levels are major applications where precise measurement is required to ensure safe operation.
Typical tank installation

A  Fixed roof tank
B  High pressure tank
C  Floating roof tank with stilling well
   1  NMS8x
   2  Ball valve
   3  Measuring wire
   4  Displacer
   5  Stilling well
   6  Prothermo NMT81

When installing NMS8x to a floating roof tank, be sure to use a stilling well to protect the measuring wire. Otherwise the wire may break due to an external shock.
Application

NMS8x is primarily a highly accurate level measurement gauging instrument with the added ability to measure density. The following level measurements are supported: liquid surface level and interface level(s) between different liquids, as well as finding tank floor or datum plate. The following density measurements are supported: single-point (spot measurements), as well as profile measurements of all liquid(s) in a tank.

The choice of the most suitable displacer depends on the liquid conditions and measurement functions. These can be classified as follows:

- Continuous measurement value, e.g. level, interface
- One-time measurement value, e.g. spot density, tank profile, interface profile, manual profile

Measurement terminology

| 1  | Upper density |
| 2  | Middle density |
| 3  | Lower density |
| 4  | Tank bottom |
| 5  | Lower I/F |
| 6  | Upper I/F |
| 7  | Level |

NMS8x with standard level, I/F x 2, Tank bottom and spot density x 3 measurement
Density Profile measurement

A Tank profile: density profiling throughout tank
B Interface profile: density profiling within upper phase
C Manual profile: density profiling from a specific position to level
1 Level
2 Manual profile level
3 Upper phase (oil)
4 Middle phase (emulsion)
5 Lower phase (water)
6 Tank bottom
Displacer selection guide

A wide variety of displacers are available to suit different application. Proper displacer selection ensures optimal performance and longevity. The following guidelines will assist you in selecting the most suitable displacer for your application.

Displacer types

The following NMS8x displacers are available.

<table>

Product level
In general, larger diameter displacers have better accuracy under similar conditions.

Interface level(s)
Cylindrical-shaped displacers, with rounded top and bottom, reduce resistance while moving through liquid(s). This provides smoother movement and faster interface measurements compared to flat-faced displacers, particularly in density profile measurements that span the full tank height.

In order to move a displacer down through liquids, the displacer density (weight divided by volume) must be higher than the liquid density.
Tank bottom and datum plate level
70 mm (2.76 in) and 50 mm (1.97 in) displacers reduce resistance while moving through liquids. This provides smoother movement and faster interface measurements.

Density
Since the density is the calculated result of two measurements, a displacer with higher volume will usually yield the most accurate density measurement. In most cases we recommend our 50 mm (1.97 in) diameter displacer for density measurement.

For non-viscous applications (e.g. white oil, LPG/LNG), the 70 mm (2.76 in) displacer also works very well.

Level and density
When an application calls for equal emphasis on measuring both level and density, the 50 mm (1.97 in) and the 70 mm (2.76 in) diameter displacers will give the best all-around performance.

Custody transfer
The 50 mm (1.97 in) displacer or larger is the choice for requirements per NMi.

The 110 mm (4.33 in), conical 316L displacer is the choice for requirements per PTB.

Material compatibility
Displacers are available in three different standard materials. Material compatibility should be confirmed to ensure safe operation and optimal NMS8x performance.

316L
For NMS80 and NMS81, stainless steel is a highly versatile industrial material that provides good compatibility with a wide range of chemicals, including most white and black oils.

AlloyC276
This high-performance material is harder than 316L, and provides excellent resistance to many of the harshest corrosive chemical applications.

PTFE
One of the most well-known and versatile polymer materials, this high-performance material has one of the lowest friction coefficients. It provides excellent performance in viscous/sticky liquids, and also has excellent chemical resistance to a wide range of corrosives.

Process connection size
The process connection defines the tank process entry, and may affect the displacer size. The standard NMS8x process connections start at 3”/DN80 and fit most tank gauging applications. Accordingly, most applications can be covered with one of the 50mm or 70mm displacer options.

Smaller diameter displacers are available when the process connection is smaller.

When the 110 mm (4.33 in) diameter custody transfer approval (PTB) displacer is selected, a separate calibration and maintenance chamber is recommended between the NMS8x and tank process connection.

Measuring system
- From single tank level measurement to the largest oil refinery applications, Endress+Hauser tank gauging devices are an integral part of tank farm management solutions. A wide variety of data output protocols are available for seamless integration into many commonly used systems.
- A primary example is Tankvision from Endress+Hauser. Tankvision is a scalable system offering local tank management for multiple loops via Modbus or V1 protocols. Accumulated data is available to DCS and other plant management systems via a Host Link.
Integration of tank gauging devices into an inventory management system (typical example)

1. Proservo NMS8x
2. Pressure transmitter (e.g. Cerabar)
3. Temperature transmitter (e.g. Prothermo)
4. Tankside Monitor NRF81
5. Micropilot S FMR5xx
6. Micropilot NMR8xx
7. Field protocol (e.g. Modbus, V1)
8. Tankvision Tank Scanner NXA820
9. Ethernet
10. Ethernet switch
11. Internet Browser
12. Tankvision Data Concentrator NXA821
13. Tankvision Host Link NXA822
14. Modbus
15. DCS or PLC
### Input/output

**Level measurement**

Proservo is primarily a highly accurate level measurement gauging instrument, with the added ability to measure interfaces and densities. The following level measurements are supported: liquid surface level and interface level(s) between different liquids, as well as finding tank bottom or datum plate. The following density measurements are supported: single-point (called “spot” measurements), as well as profile measurements of all liquid(s) in a tank.

#### Measuring range

- Level and interface: Max. 36 m (118 ft) (longer range is possible as special product)
- Density: 0.430 to 2.000 g/cm³

The level and interface measuring range depend on the measuring wire and material compatibility to measured medium. Measuring wires are available in three different standard materials. Material compatibility should be confirmed to ensure safe operation and optimal measuring performance.

<table>
<thead>
<tr>
<th>Measuring range</th>

</tbody>
</table>

For devices with custody calibration (10 points) with option ITA or ITC of ordering feature 150 "Accuracy, Weight + Measure Approval": Maximum measuring range: 40 m (131 ft)

If the application exceeds the range listed above, contact Endress+Hauser for technically special products / solutions.
The device has a HART Ex ia/IS active input. Additional features are provided if the following Endress+Hauser devices are connected:

**Prothermo NMT**

The measured level is transmitted to the Prothermo. Prothermo uses this level to calculate the average temperature of the product.

**Technical data**

- Transmitter power supply voltage
  
  23.0 V - 380 \( \Omega \cdot I_{\text{load}} \)

- Maximum load
  
  500 \( \Omega \) including signal line

- Maximum current of all connected devices
  
  24 mA

The HART Ex ia/IS active input is available by default. It needs not to be chosen explicitly when ordering a device.
The terminal compartment contains up to four I/O modules, depending on the order code.

- Modules with four terminals can be in any of these slots.
- Modules with eight terminals can be in slot B or C.

The exact assignment of the modules to the slots is dependent on the device version. For a detailed description refer to the Operating Instructions of the device in question.

The following restrictions apply when selecting the modules:
- The device may contain a maximum of four I/O modules.
- A maximum of two I/O modules with 8 terminals is possible.

"Modbus RS485": Technical data

Number of units
Maximum 15 instruments per loop

Baud rate: Selectable
- 600 bit/s
- 1200 bit/s
- 2400 bit/s
- 4800 bit/s
- 9600 bit/s
- 19200 bit/s

Parity: Selectable
- Odd
- Even
- None

Cable
- 3-wire, with screening
The screening must be connected inside the housing
Termination resistors
To be set as required in specific environments
Topology
Serial bus
Transmission distance
Maximum 1200 m (3900 ft)
Instrument address
Each transmitter has an individual bus address configured in the software of the transmitter
Isolation
Bus inputs are electrically isolated from the other electronics
Error on alarm
Error message classified according to NAMUR NE 107

"V1": Technical data
Number of units
Maximum 10 instruments per loop
Baud rate: Selectable
3 300 bit/s
Cable
■ 2-wire twisted pair, screening recommended
■ 2-wire, unscreened
Termination resistors
Not required
Topology
■ Serial bus
■ Tree structure
Transmission distance
Maximum 6000 m (19 700 ft)
Instrument address
Each transmitter has an individual bus address configured in the software of the transmitter
Isolation
Serial communication circuit isolated from other circuits
Error on alarm
Error message classified according to NAMUR NE 107
WM550: Technical data

Number of units
Maximum 15\(^1\) instruments per loop

Baud rate: Selectable
- 600 bit/s
- 1200 bit/s
- 2400 bit/s
- 4800 bit/s

Cable
- 2-wire twisted pair, unscreened (recommended)
- 2-wire, screened or unscreened

Topology
Current loop or 2 redundant current loops (requires 2 I/O modules WM550)

Transmission distance
Maximum 7000 m (22,967 ft)

Instrument address
Each transmitter has an individual bus address configured in the software of the transmitter

Isolation
Serial communication circuit isolated from other circuits

Error on alarm
Error message classified according to NAMUR NE 107

---

1) The maximum number of devices depends on the maximum output voltage of the master and the voltage drop of slaves. For NXA820 with Nxx8x devices, a maximum number of 12 devices is guaranteed.
"4–20mA HART" I/O module (Ex d/XP or Ex i/IS): Technical data

**General data**
- Number of units
  - Maximum 6 instruments per loop
- Baud rate: Selectable
  - 1 200 bit/s
- Cable
  - 2-wire twisted pair, screened
  - Core cross section: 0.2 to 2.5 mm² (24 to 13 AWG)
- Topology
  - Serial bus
  - Tree structure
- Transmission distance
  - Maximum 1 200 m (3 900 ft)
- Instrument address
  - Each transmitter on a signal loop has an individual bus address. This is defined within the transmitter software and / or auxiliary configuration environment such as host system or Field Communicator 475.
- Isolation
  - Bus inputs are electrically isolated from the other electronics

**Input data**
- Input operating modes
  - 4..20mA input (1 external device)
  - HART master+4..20mA input (1 external device)
  - HART master (up to 6 external devices)
- Internal load (to ground)
  - 400 Ω
- Measuring range
  - 0 to 26 mA
- Accuracy
  - ±15 µA (after linearization and calibration)

**Connection of a Prothermo NMT**
- The measured level is transmitted to the Prothermo. Prothermo uses this level to calculate the average temperature of the product.

**Connection of a RTD temperature probe**
- 2-, 3- or 4-wire connection

**Output data**
- Output operating modes
  - 4..20mA output
  - HART slave +4..20mA output
- Output current
  - 3 to 24 mA
- Accuracy
  - ±15 µA (after linearization and calibration)

**Error on alarm**
- HART error message classified according to NAMUR NE 107

**Data for passive usage (input or output)**
- Minimum terminal voltage
  - 10.4 V ²)
- Maximum terminal voltage
  - 29 V ²)

²) Observing these values is mandatory in order to ensure correct measured value information.
9 Passive input or output: Use terminals 1 and 2

Data for active usage (input or output)
- Transmitter power supply voltage (Ex d/XP)
  18.5 V - 360 Ω · I_{load}
- Transmitter power supply voltage (Ex i/IS)
  20.0 V - 360 Ω · I_{load}
- Output load
  max. 500 Ω including signal line 3)

10 Active input or output: Use terminals 2 and 3

3) Observing this value is mandatory in order to ensure correct measured value information.
"Digital I/O module": Technical data

Output

- Relay switching power for resistive load
  - $30 \, V_{DC} @ 2 \, A$
  - $250 \, V_{DC} @ 0.1 \, A$
  - $250 \, V_{AC} @ 2 \, A$
- Relay type
  - normally open;
  - can be set to "normally closed" by a software option

Input

- Maximum pick-up voltage
  - $250 \, V_{AC}$
  - $250 \, V_{DC}$
- Minimum pick-up voltage
  - $25 \, V_{AC}$
  - $5 \, V_{DC}$
- Current consumption at maximum voltage
  - $\leq 1 \, mA \, (DC)$
  - $\leq 2 \, mA \, (AC)$

4) In case of a power supply failure, the switching state is always "open", irrespective of the selected software option.
Power supply

Terminal assignment

11  Terminal compartment (typical example) and ground terminals

1 Housing thread
   The threads of the electronics and connection compartment can be coated with an anti-friction coating.
   The following applies for all housing materials:
   ☑️ Do not lubricate the housing threads.

Terminal area A/B/C/D (slots for I/O modules)
   Module: Up to four I/O modules, depending on the order code
   - Modules with four terminals can be in any of these slots.
   - Modules with eight terminals can be in slot B or C.
   The exact assignment of the modules to the slots is dependent on the device version. For a detailed description refer to the Operating Instructions of the device in question.

Terminal area E
   Module: HART Ex i/IS interface
   - E1: H+
   - E2: H-

Terminal area F
   Remote display
   - F1: VCC (connect to terminal 81 of the remote display)
   - F2: Signal B (connect to terminal 84 of the remote display)
   - F3: Signal A (connect to terminal 83 of the remote display)
   - F4: Gnd (connect to terminal 82 of the remote display)

Terminal area G (for High voltage AC power supply and Low voltage AC power supply)
   - G1: N
   - G2: not connected
   - G3: L

Terminal area G (for Low voltage DC power supply)
   - G1: L-
   - G2: not connected
   - G3: L+

Terminal area: Protective ground
   Module: Protective ground connection (M4 screw)

12  Terminal area: Protective ground
Remote display and operating module DKX001

The remote display and operating module DKX001 is available as an accessory. For details refer to SD01763D.

- The measured value is indicated on the DKX001 and on the local display and operating module simultaneously.
- The operating menu cannot be accessed on both modules at the same time. If the operating menu is entered in one of these modules, the other module is automatically locked. This locking remains active until the menu is closed in the first module (back to measured value display).

**Supply voltage**

<table>
<thead>
<tr>
<th>Power supply type</th>
<th>Operational value</th>
<th>Voltage range</th>
</tr>
</thead>
<tbody>
<tr>
<td>High voltage AC power supply</td>
<td>100 to 240 V&lt;sub&gt;AC&lt;/sub&gt; (-15% + 10%) = 85 to 264 V&lt;sub&gt;AC&lt;/sub&gt;, 50/60 Hz</td>
<td>85 to 264 V&lt;sub&gt;AC&lt;/sub&gt;, 50/60 Hz</td>
</tr>
<tr>
<td>Low voltage AC power supply</td>
<td>65 V&lt;sub&gt;AC&lt;/sub&gt; (-20% + 15%) = 52 to 75 V&lt;sub&gt;AC&lt;/sub&gt;, 50/60 Hz</td>
<td>52 to 75 V&lt;sub&gt;AC&lt;/sub&gt;, 50/60 Hz</td>
</tr>
<tr>
<td>Low voltage DC power supply</td>
<td>24 to 55 V&lt;sub&gt;DC&lt;/sub&gt; (-20% + 15%) = 19 to 64 V&lt;sub&gt;DC&lt;/sub&gt;</td>
<td>19 to 64 V&lt;sub&gt;DC&lt;/sub&gt;</td>
</tr>
</tbody>
</table>

**Power consumption**

Maximum power varies depending on the configuration of the modules. The value shows maximum apparent power, select the applicable cables accordingly. The actual consumed effective power is 12 W.

- High voltage AC power supply: 28.8 VA
- Low voltage AC power supply: 21.6 VA
- Low voltage DC power supply: 13.4 W

**Sources for gauge commands**

Gauge commands can be sent via various sources.

- Displays or CDI (e.g. FieldCare)
- Digital input (e.g. switch)
- Fieldbus (Modbus, V1, HART)

The last received gauge command via any sources will be executed as usual.

During calibration, gauge commands are not accepted from any sources.
Display operation
Digital input (e.g. switch)
Tankvision

Gauge command priorities

The priority of the gauge command for NMS8x is very simple. The last received gauge command via any sources will be executed to take of the former gauge command. However the priority varies depending on the devices. When replacing the device with the NMS8x, check the priorities shown below.

NOTICE
Undesired gauge command will be executed.
If the setting is not changed, an undesired gauge command will be executed (e.g. Level command via Fieldbus would overwrite Stop command for maintenance.).
▶ If the system has been automatically or semi-automatically programmed for operation, maintenance or other purposes, the setting should be changed corresponding to use.

1) Position 090 of the order code, e.g. NMx8x-xxxxxxxxxxxxxA...

2) The entries NOT having I/O modules inside will be directly assembled with 316L blind plugs without adapters. For details of module positions, refer to the chapter for "Slots for I/O modules" in Operating Instructions.

For the following devices with JPN Ex approval, cable glands are attached to the device (see position 010 of the order code). These cable glands must be used. Proservo NMS80-JC...

### Cable specification

**Terminals**

**Wire cross section 0.2 to 2.5 mm² (24 to 13 AWG)**

Use for terminals with function: Signal and power supply

- Spring terminals (NMx8x-xx1...)
- Screw terminals (NMx8x-xx2...)

**Wire cross section max. 2.5 mm² (13 AWG)**

Use for terminals with function: Ground terminal in the terminal compartment

**Wire cross section max. 4 mm² (11 AWG)**

Use for terminals with function: Ground terminal at the housing

**Power supply line**

Standard device cable is sufficient for the power line.

**HART communication line**

- Standard device cable is sufficient if only the analog signal is used.
- Shielded cable is recommended if using the HART protocol. Observe the grounding concept of the plant.

**Modbus communication line**

- Observe the cable conditions from the TIA-485-A, Telecommunications Industry Association.
- Additional conditions: Use shielded cable.

**V1 communication line**

- 2-wire twisted pair, screened or unscreened cable
- Resistance in one cable: ≤ 120 Ω
- Capacitance between lines: ≤ 0.3 µF

**WM550 communication line**

- 2-wire twisted pair, unscreened cable
- Cross section minimum 0.5 mm² (20 AWG)
- Maximum total cable resistance: ≤ 250 Ω
- Cable with low capacitance

**Overvoltage protection**

On the communication and power lines; according to IEC 60060-1 / DIN 60079-14:

10 kA, 8/20 μs, 10 pulses according to IEC 60060-1 / DIN 60079-14

**Overvoltage category**

Overvoltage category II

**Pollution degree**

Pollution degree 2

**Hysteresis**

Within the specified accuracy (+/- 1 mm (0.039 in)) according to OIML R85 (2008)

It can be reduced by non hysteresis measurement mode.

**Repeatability**

0.1 mm (0.004 in)

**Linearity**

Within maximum measured error

**Long-term drift**

Within the specified error of measurement

**Influence of ambient temperature**

Within the specified accuracy according to OIML R85 (2008)

**Influence of medium temperature**

None (Displacer principle is not influenced by medium temperature.)

**Influence of medium pressure**

No influence of medium pressure to the measuring principle.

**Effect of gas phase**

No effect of gas phase to the measuring principle.
### Installation

#### Requirements

Depending on the type of tank and application, different installation procedures are recommended for NMS8x.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

- A stilling well is required in a floating roof tank and a covered floating roof tank.
- Guide wires cannot be installed in a floating roof tank. When the measuring wire is exposed to free space, it may break due to an external shock.
- Installing guide wires is not allowed in pressurized tanks because the wires would prevent closing the valve for replacing the wire, wire drum, or displacer. NMS8x installation position is important for applications without the guide wire system in order to prevent the measuring wire from being broken (refer to Operating Instructions for details).
Mounting with a stilling well

The stilling well diameter that is required to protect the measuring wire without disturbing its operation varies depending on the tank height. The stilling well could either be of constant diameter, or narrower at its upper part and wider at its lower part. The following figure shows two examples of the latter case, namely a concentric stilling well and an asymmetric stilling well.

![Mounting with concentric stilling well](image)

14 Mounting with concentric stilling well

- **A** Front view
- **B** Side view

p  Longitudinal wire position from the center of the flange
(Lx)  
r  Radial direction offset

- L₃: length from center of the calibration window to the bottom of the flange built-in NMS8x (77 mm (3.03 in) + flange thickness). For JIS 10K 150A RF, the flange thickness is 22 mm (0.87 in).
- When using an asymmetric stilling well, take into account the lateral shift of the displacer and follow the NMS8x mounting direction as shown in the figure.
- To calculate the required stilling well diameters, the formula below should be used. The following tables contain the necessary parameters in order to calculate the dimensions of the stilling well. Be sure to have appropriate dimensions of the stilling well according to each dimension in the table.
- The radial direction offset (r) is required for only the 47 m (154.20 ft) and 55 m (180.45 ft) wire drum. For all other drums, the offset is 0 mm/in.
## Feature: 110

### Parameter Description

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>d</td>
<td>Diameter of displacer</td>
</tr>
<tr>
<td>p(Lx)</td>
<td>Longitudinal wire position from the center of the flange. The value can be determined by using following graph.</td>
</tr>
<tr>
<td>r</td>
<td>Radial direction offset</td>
</tr>
<tr>
<td>s</td>
<td>Safety factor recommended: 5 mm (0.197 in)</td>
</tr>
</tbody>
</table>

The following graph shows the lateral shift of the displacer depending on the measured distance for the different wire drums.
Lateral shift of displacer according to measurement range

- a 16 m (A3) (NMS80/NMS81/NMS83)
- b 22 m (C2) (NMS80/NMS81/NMS83)
- c 28 m (D1) (NMS80/NMS81)
- d 36 m (F1) (NMS80/NMS81)
- e 47 m (G1) (NMS81)
- f 55 m (H1) (NMS81)

Upper diameter of stilling well

The dimension of \( D_1 \) has to be the largest value of the dimensions \( D_{1a} \), \( D_{1b} \), \( D_{1c} \), and \( D_{1d} \) according to the following formula.

<table>
<thead>
<tr>
<th>( D_1 ) Dimension (Example)</th>
<th>( D_{1x} ) Dimension (Example)</th>
<th>Description</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>( &gt;68.1 \text{ mm} ) (2.68 in)</td>
<td>68.1 mm (2.68 in)</td>
<td>( D_{1a} ) dimension when the displacer is at the center of the calibration window</td>
<td>( = 2 \times (</td>
</tr>
<tr>
<td>65.6 mm (2.58 in)</td>
<td>( D_{1b} )</td>
<td>( D_{1} ) dimension when the displacer is at the upper part of the stilling well</td>
<td>( = 2 \times (</td>
</tr>
</tbody>
</table>
### Lower diameter of stilling well

The dimension of $D_2$ has to be the larger value of the dimensions $D_1$ and $D_{2b}$.

See the table below.

#### Concentric pipe

<table>
<thead>
<tr>
<th>$D_1$ Dimension (Example)</th>
<th>$D_{2b}$ Dimension</th>
<th>Description</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>50.9 mm (2.00 in)</td>
<td>$D_{1c}$</td>
<td>$D_1$ dimension when the displacer is at the bottom of the stilling well</td>
<td>$= 2 \times (</td>
</tr>
<tr>
<td></td>
<td>$D_{1d}$</td>
<td>$D_1$ dimension when the radial direction offset is considered. This calculation is used only with the 47 m (154.20 ft) wire drum (G1 in Feature110) and 55 m (180.45 ft) (H1 in feature 110)</td>
<td>$= 2 \times (d/2 + r + s)$</td>
</tr>
</tbody>
</table>

Example: $L_1 = 10000$ mm, $L_2 = 20000$ mm, $d = 50$ mm, $s = 5.0$, 28 m drum

#### Asymmetric pipe

<table>
<thead>
<tr>
<th>$D_1$ Dimension (Example)</th>
<th>$D_{2b}$ Dimension</th>
<th>Description</th>
<th>Formula</th>
</tr>
</thead>
<tbody>
<tr>
<td>&gt;100.9 mm (3.97 in)</td>
<td>68.1 mm (2.68 in)</td>
<td>$D_1$ Calculated $D_1$ value</td>
<td>$= 2 \times (</td>
</tr>
<tr>
<td></td>
<td>100.9 mm (3.97 in)</td>
<td>$D_{2b}$ Dimension when the displacer is in $L_2$ length</td>
<td>$=</td>
</tr>
</tbody>
</table>

Example: $L_2 = 20000$ mm, $d = 50$ mm, $s = 5.0$, 28 m drum

### Recommendations for NMS8x mounting with a stilling well

- Follow the recommendations for mounting NMS8x with a stilling well.
- Keep the pipe connection welds smooth.
- When drilling holes into the pipe, keep the interior surface of the holes clear of metal chips and burrs.
- Coat or paint the interior surface of the pipe to prevent corrosion.
- Keep the pipe as vertical as possible. Check using a plumb bob.
- Install the asymmetric pipe under the valve and align the centers of the NMS8x and the valve.
- Set the center of the lower part of the asymmetric pipe in the direction of the lateral motion.
- Observe the recommendations as per API MPMS chapter 3.1B.
- Confirm grounding between NMS8x and the tank nozzle.
Mounting with guide wires

It is also possible to guide the displacer with guide wires to prevent swinging.

### Classification of environmental conditions according to DIN EN 60721-3-4

| Classification of environmental conditions | 4M4 |

### Storage temperature

| Storage temperature | −50 to +80 °C (−58 to +176 °F) |

### Humidity

| Humidity | ≤ 95 % |

### Degree of protection

- IP66/68 according to DIN EN 60529
- Type 6P/4X according to NEMA 250

### Shock resistance

- 10 g (11 ms) according to IEC 60721-3-4 (1995)
- Classification according to IEC 60721-3-4: 4M4 (1995)
- The test condition shows it without displacer.

### Vibration resistance

- 9 to 200 Hz, 1g (10m/s²) according to IEC 60721-3-4 (1995)
- Classification according to IEC 60721-3-4: 4M4 (1995)
- The test condition shows it without displacer.

### Electromagnetic compatibility (EMC)

- Transient emissions according to DIN EN 61326, class B
- Interference resistance according to DIN EN 61326, Appendix A (Industry use) and NAMUR recommendation NE21

### Maximum use altitude

| Maximum use altitude | 2000 m (6,561.68 ft) above sea level |
Process

Process temperature range

−200 to +200 °C (−328 to 392 °F)

If the application exceeds the range listed above, contact Endress+Hauser for technically special products / solutions.

Process sealing

<p>| | | |</p>

<td>VMQ silicone</td>
<td>−45 to 200 °C (−49 to 392 °F)</td>
</tr>
</tbody>
</table>

A temperature difference exists between the liquid in the tank and the NMS8x on the tank nozzle due to the distance from each other. Also, the process sealing temperature of NMS8x does not show the temperature for the liquid temperature. The process sealing temperature shows the temperature of the gas that reaches inside the housing of the NMS8x. In most cases, the gas temperature is the same as the ambient temperature. If there are any temperature differences between the process sealing and the gas, install a pipe or chamber between the NMS8x and the tank nozzle to adjust the temperature or cover the tank with a heat insulating material to control the temperature.

Process pressure range

</table>

Medium density difference for interface measurement

0.1 g/cm³ (6.24 lb/ft³)

Viscosity

0 to 5,000 mPa·s

Maximum displacer movement speed

Approx. 2,200 mm (86.61 in) / min

The displacer speed will be slow down in the area in front of 30 mm in order to stop at the proper position according to the low stop setting which has been specified.
Custody transfer approval

As a prerequisite for custody transfer approval, the device ordered must show either option ITA, ITB, ITC or ITD on ordering feature 150 "Accuracy, Weight + Measure approval".

Options of ordering feature 590 "Additional Approval"

- **LK**
  NMi witnessed initial verification accuracy, Weight + Measure approval
- **LL**
  PTB witnessed initial verification accuracy, Weight + Measure approval
- **LN**
  LNE witnessed initial verification accuracy, Weight + Measure approval
- **LO**
  *NMi type approval
- **LP**
  *PTB type approval
- **LQ**
  *LNE type approval
- **LT**
  METAS, custody transfer
- **LU**
  BEV, custody transfer

- Depending on the displacer (ordering feature 120) some of these versions will not be available.
  - Proservo NMS8x that are certified for Custody Transfer applications are calibrated on a certified production rig. The production rig reference standard is a laser tracker with an absolute accuracy of ±0.010 mm and a resolution of 0.0002 mm. Calibration is performed at 10 equally-spaced measuring points over the full measuring range (up to 40 m (131 ft)). Additionally, hysteresis is checked at three points.
  - The Maximum Permissible Error (MPE) is 0.4 mm (0.016 in) for maximum performance models, and ±1 mm (±0.04 in) for custody transfer models. The resultant factory calibration certificate is included in the scope of delivery along with the respective type approval certificate.
  - Ten-point calibration which is tested in accordance with ISO/IEC 17025, certified by Japan Accreditation Board (JAB) of ILAC MRA, according to the international reference standard (étalon)

**Parts according to NACE standard**  
In accordance with NACE MR 0175 and NACE MR 0103, the following parts highlighted in blue are available as NACE standard materials. For further information of standards, →  52

---

1. Wire drum (28 m (91.86 ft))  
2. Displacer (50 mm (1.97 in), 70 mm (2.76 in) / 50 mm (1.97 in) with guide ring, 70 mm (2.76 in) with guide ring)
Operability

Operating concept
Operator-oriented menu structure for user-specific tasks
- Commissioning
- Operation
- Diagnostics
- Expert level

Operating languages
- English
- Chinese
- German
- Japanese
- Spanish

Feature 500 of the product structure determines which of these languages is preset on delivery.

Quick and safe commissioning
- Guided menus (‘Make-it-run’ wizards) for applications
- Menu guidance with brief explanations of the individual parameter functions

Reliable operation
Standardized operation at the device and in the operating tools

Efficient diagnostics increase measurement reliability
- Remedy information is integrated in plain text
- Diverse simulation options

Operating options
- Local display; operation via the local display is possible without opening the device.
- Tank Gauging system
- Plant Asset Management tool (e.g. FieldCare); connected via
  - HART
  - Service port (CDI)

Operating elements also accessible in various hazardous areas

Remote display and operating module DKX001
The display and operating elements correspond to those of the display module.
Depending on the installation location, the remote display module DKX001 provides better access to the operating elements than the display on the device.

Display elements
- 4-line display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured
- Permitted ambient temperature for the display: –20 to +70 °C (–4 to +158 °F)
  The readability of the display may be impaired at temperatures outside the temperature range.

Operating elements
- External operation via touch control; 3 optical keys: △, ○, ◯
- Operating elements also accessible in various hazardous areas
2.1 Operation via remote display and operating module DKX001

The remote display and operating module DKX001 is available as an accessory. For details refer to SD01763D.

- The measured value is indicated on the DKX001 and on the local display and operating module simultaneously.
- The operating menu cannot be accessed on both modules at the same time. If the operating menu is entered in one of these modules, the other module is automatically locked. This locking remains active until the menu is closed in the first module (back to measured value display).

The housing material of the display and operating module DKX001 can be selected in the order code. There are 2 options: alu and stainless steel.

Remote operation

2.2 Remote operation of Tank Gauging devices

1. Proservo NMS8x
2. Tankside Monitor NRF81
3. Micropilot NMR8x
4. Field protocol (e.g. Modbus, V1)
5. Tankvision Tank Scanner NXA820
6. Ethernet
7. Computer with operating tool (e.g. FieldCare)
23 Operation via service interface

1 Service interface (CDI = Endress+Hauser Common Data Interface)
2 Commubox FXA291
3 Computer with 'FieldCare' operating tool and 'CDI Communication FXA291' COM DTM
Certificates and approvals

Current certificates and approvals for the product are available at www.endress.com on the relevant product page:

1. Select the product using the filters and search field.
2. Open the product page.

The device has a sealable locking switch according to the Weight & Measure requirements. This switch locks all software parameters related to the measurement. The switching status is indicated on the display and via the communication protocol.

**CRN approval**

Some device versions have a CRN approval. Devices are CRN approved if the following two conditions are met:
- The CRN approval is selected (Product structure: Feature 590 "Additional Approval", option LD "CRN")
- The device has a CRN approved process connection according to the following table:

<table>
<thead>
<tr>
<th>Feature 140: Process Connection</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>AFA NPS 3” Cl.150 RF, aluminum flange ASME B16.5</td>
<td></td>

<tr>
<td>AHA NPS 6” Cl.150 RF, aluminum flange ASME B16.5</td>
<td></td>
</tr>
<tr>
<td>AJA NPS 8” Cl.150 RF, aluminum flange ASME B16.5</td>
<td></td>
</tr>
</tbody>
</table>

- Process connections without CRN approval are not included in this table.
- CRN approved devices are marked with the registration number OF18152.5C on the nameplate.

**Test, certificate**

- "Mess- und Eichverordnung" (Calibration regulations for the Federal Republic of Germany)
- PTB-A-5.01: “Automatic level measuring devices for stationary storage containers”

**Calibration**

Calibrations with certificates are available by options.

- 3- or 5-point level calibration by factory traceable to an international reference standard (étalon)
- 10-point level calibration by factory traceable to an international reference standard (étalon)
- 10-point level calibration by laboratory traceable to an international reference standard (étalon) conformed to ISO/IEC 17025 accredited by JAB, Japan Accreditation Board, of ILAC MRA
Ordering information

Detailed ordering information is available from your nearest sales organization www.addresses.endress.com or in the Product Configurator at www.endress.com:
1. Select the product using the filters and search field.
2. Open the product page.
3. Select Configuration.

Product Configurator - the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Calibration certificate
A calibration certificate is included if one of the following options is selected in ordering feature 150 ("Accuracy, Weight + Measure Approval").

<table>
<thead>
<tr>
<th>Option 1)</th>
<th>Meaning</th>
<th>Number of calibration points</th>
</tr>
</thead>
<tbody>
<tr>
<td>ICW</td>
<td>Standard version, 3-point calibration certificate</td>
<td>3</td>
</tr>
<tr>
<td>ICX</td>
<td>Standard version, 5-point calibration certificate</td>
<td>5</td>
</tr>
<tr>
<td>ITA</td>
<td>Maximum performance, 10-point calibration certificate</td>
<td>10</td>
</tr>
<tr>
<td>ITB</td>
<td>Maximum performance, 10-point, extended range, acc. to OIML R85, API 3.1B, ISO4266, factory calibration certificate</td>
<td>10</td>
</tr>
<tr>
<td>ITC</td>
<td>Standard version, 10-point calibration certificate</td>
<td>10</td>
</tr>
<tr>
<td>ITD</td>
<td>Standard version, 10-point, extended range, acc. to OIML R85, API 3.1B, ISO4266, factory calibration certificate</td>
<td>10</td>
</tr>
</tbody>
</table>

1) Option of ordering feature 150 "Accuracy, Weight + Measure Approval", Positions 21 to 23 of the order code

- The calibration points are evenly spaced and spread over the selected calibration range.
- The calibration points are checked under reference conditions.

Marking

<table>
<thead>
<tr>
<th>Option of ordering feature 895 &quot;Marking&quot;</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Z1</td>
<td>Tagging (TAG)</td>
</tr>
<tr>
<td>Z2</td>
<td>Bus address</td>
</tr>
</tbody>
</table>

Optionally, the device can be ordered with a specific tagging and/or bus address according to the table above. When the respective option is selected, the tag or bus address must be defined in an additional specification.

Shipping condition
To enable turnkey operation and commission, NMS8x is shipped in all-in-one condition except for the following specifications.
• 47 m (154.20 ft) measuring range
• 55 m (180.45 ft) measuring range
• 110 mm (4.33 in) displacer
• NPS8 in flange
• Cleaned from oil+grease option
Application packages

Advanced tank measurement methods

The device software provides the following tank measurement methods:
- Direct level measurement → 56
- Hybrid tank measurement system (HTMS) → 57
- Hydrostatic tank shell correction (HyTD) → 58
- Thermal tank shell correction (CTSh) → 58

Direct level measurement

If no advanced tank measurement methods have been selected, level and temperature are measured directly.

Direct level measurement modes

<table>
<thead>
<tr>
<th>Measuring mode</th>

<th>Measured variables</th>
<th>Calculated variables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level only</td>
<td><img src="image1" alt="Diagram" /></td>
<td>Level</td>
<td>None</td>
</tr>
<tr>
<td>Level + temperature</td>
<td><img src="image2" alt="Diagram" /></td>
<td>Level, Temperature (spot or average)</td>
<td>None</td>
</tr>
</tbody>
</table>
Hybrid tank measurement system (HTMS)

HTMS uses level and pressure measurements to calculate the contents of the tank and (optionally) the density of the medium.

**HTMS measuring modes**

</tbody>
</table>
Hydrostatic tank shell correction (HyTD)

The hydrostatic tank shell correction can be used to compensate for vertical movement of the Gauge Reference Height due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels distributed over the full range of the tank.

![Image](image1.png)

Movement $\Delta x$ of the tank reference height due to the bulging of the tank shell caused by hydrostatic pressure

Thermal tank shell correction (CTSh)

The thermal tank shell correction can be used to compensate for vertical movement of the Gauge Reference Height due to temperature effects on the tank shell or stilling well. The calculation is based on the thermal expansion coefficients of steel and on insulation factors for both the dry and wetted part of the tank shell.

- This correction is recommended for any tank gauge operating at conditions deviating considerably from the conditions during calibration and for extremely high tanks. For refrigerated, cryogenic and heated applications this correction is highly recommended.
- Wire length can also be corrected with the parameters related to CTSh.

Level reference check (LRC)

For tanks where a manual dipping cannot be performed the level gauge can be verified by means of the LRC function.

If the measured level value is not verified by the LRC function applied, the device will issue an error message regarding the measured level.

This reference check is recommended for liquefied gas applications.

LRC with reference level

The radar device compares its own level reading with the level reading of another level gauge (e.g. Proservo NMS8x). Based on a configurable deviation value (Allowed difference parameter), a continuous check is performed.
25 Application example with Proservo NMS8x

1. Lower limit of deviation value 'a' as configured in radar level gauge
2. Reference value: Measured level as provided by level gauge Proservo NMS8x
3. Upper limit of deviation
4. Proservo NMS8x provides the reference value
5. Level gauges are interconnected via HART interface
6. Radar level gauge with configured deviation value 'a' for "Allowed difference" parameter
7. The measured level is greater than reference value plus deviation value 'a': Level value is not verified
8. The measured level is within or equal to the limits defined by the deviation value 'a': Level value is verified
9. The measured level is less than reference value minus deviation value 'a': Level value is not verified

Properties
- Frequency: The reference check is performed continuously every 60 seconds.
- Tolerance: Via the Check fail threshold parameter, a configurable number of failures is allowed before the status switches to failed.
- Connection: The level reference device is connected via an optional HART I/O board. See ordering feature 050: "Secondary I/O Analogue".

LRC with reference switch

A level switch (e.g. Liquiphant FTLx) can be mounted within the tank. The check can be performed continuously, each time the level switch is activated or deactivated. The measured level should remain within a configurable deviation.
26 Application example with level switch

1 Lower limit of deviation value "a" as configured in radar level gauge
2 Reference value: The switching point of an installed level switch represents the reference value for verification
3 Upper limit of deviation
4 Level switch and level gauge are interconnected via a digital I/O board
5 Radar level gauge with configured deviation value "a" for "Allowed difference" parameter
6 The measured level is greater than reference value plus deviation value "a": Level value is not verified
7 The measured level is within or equal to the limits defined by the deviation value "a": Level value is verified
8 The measured level is less than reference value minus deviation value "a": Level value is not verified

Properties
- Modes: The device can be set to monitor the switching point while filling or draining the tank.
- Connection: The level switch is connected via a digital I/O board.

See ordering feature 060: "Secondary I/O Digital Ex d/XP".
## Accessories

<table>

### Materials

- Protection cover and mounting brackets
  - Material: 316L (1.4404)
- Screws and washers
  - Material: A4

- The weather protection cover can be ordered together with the device:
  - Ordering feature 620 "Accessory Enclosed", option PA "Weather Protection Cover"
- It can also be ordered as an accessory:
  - Order code: 71305035 (for NMS8x)
**Maintenance chamber**

A maintenance chamber is recommended for use with tank level gauges in order to allow maintenance (removing the 70 mm (2.76 in) displacer or larger), while the tank is in service. Contact your Endress+Hauser Sales Center if necessary.

**Ball valve**

Ball valves are recommended for use with tank level gauges in order to allow maintenance such as removing displacers while tank is in service. Contact your Endress+Hauser Sales Center if necessary.

**Control switch**

A control switch is used for field mounted tank gauges. This provides additional gauge operation contact switching in order to control the gauge’s operation, such as hoisting up the displacer. Contact your Endress+Hauser Sales Center if necessary.

**Relief valve and pressure gauge**

![Diagram of relief valve and pressure gauge]

28 Mounting position of relief valve and pressure gauge

- **A** Standard version
- **B** 90°-degree rotation (optional)
- **1** Pressure gauge
- **2** Relief valve
Relief valve

A relief valve is used to release pressure inside the housing of NMS8x before maintenance.  

Information: Contact your Endress+Hauser Sales Center when applying pressure in an ammonia atmosphere.

[Image: Relief valve]

Pressure gauge

A pressure gauge is used to check process pressure inside the housing.

[Image: Pressure gauge]

Information: The range of the scale for the pressure gauge varies depending on the pressure.  
- Low pressure: 0 to 1 MPa  
- High pressure: 0 to 4 MPa
Cleaning nozzle and gas purging nozzle

A cleaning nozzle used for washing inside housing is especially recommended for F&B or alcohol applications.

A gas purging nozzle used for purging gas inside the housing is especially recommended for a nitrogen blanket for petrochemical or chemical applications.

![Diagram of cleaning nozzle and gas purging nozzle]

### Communication-specific accessories

**WirelessHART adapter SWA70**
- Is used for the wireless connection of field devices
- The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks
- For details, see Operating Instructions BA00061S

**Gauge Emulator, Modbus to BPM**
- Using the protocol converter, it is possible to integrate a field device into a host system even if the field device does not know the communication protocol of the host system. Eliminates vendor lock-in for field devices.
- Field communication protocol (field device): Modbus RS485
- Host communication protocol (host system): Enraf BPM
- 1 measuring device per Gauge Emulator
- Separate power supply: 100 to 240 V<sub>AC</sub>, 50 to 60 Hz, 0.375 A, 15 W
- Several approvals for the hazardous area

### Service-specific accessories

**Commubox FXA195 HART**
For intrinsically safe HART communication with FieldCare via the USB interface
- For details, see ‘Technical Information’ TI00404F

**Commubox FXA291**
Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop
- Order number: 51516983
- For details, see ‘Technical Information’ TI00405C

**DeviceCare SFE100**
Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus field devices
DeviceCare is available for download at www.software-products.endress.com. You need to register in the Endress+Hauser software portal to download the application.
- Technical Information TI01134S

**FieldCare SFE500**
FDT-based plant asset management tool
- It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.
- Technical Information TI00028S

### System components

**RIA15**
Compact process display unit with very low voltage drop for universal use to display 4 to 20 mA/HART signals
- Technical Information TI01043K

**Tankvision Tank Scanner NXA820 / Tankvision Data Concentrator NXA821 / Tankvision Host Link NXA822**
Inventory Management System with completely integrated software for operation via standard web browser
- Technical Information TI00419G
**Documentation**

The following documentation types are available in the Downloads area of the Endress+Hauser website (www.endress.com/downloads):

1. For an overview of the scope of the associated Technical Documentation, refer to the following:
   - Device Viewer (www.endress.com/deviceviewer): Enter the serial number from the nameplate
   - Endress+Hauser Operations app: Enter serial number from nameplate or scan matrix code on nameplate.
