## Associated documentation

Certificates and CSA C/US certificate declarations
www.endress.com/Deviceviewer pertaining to the device:

BA02036F

All documentation is available on the Internet: (enter the serial number from the nameplate).

To commission the device, please observe the Operating Instructions

Certificate number:
CSA19CA80022351

Certificate holder Endress+Hauser SE+Co. KG
Hauptstraße 1
79689 Maulburg, Germany
Address of the manufacturing plant: See nameplate.

The extended order code is indicated on the nameplate, which is affixed to the device in such a way that it is clearly visible. Additional information about the nameplate is provided in the associated Operating Instructions.

Structure of the extended order code

| FTL62 | - | ************ | + | $A^{*} B^{*} C^{*} D^{*} E^{*} F^{*} G^{*} .$. |
| :---: | :---: | :---: | :---: | :---: |
| (Device type) |  | (Basic specifications) |  | (Optional specifications) |
| * $=$ Placeholder |  |  |  |  |
| At this position, an option (number or letter) selected from the specification is displayed instead of the placeholders. |  |  |  |  |

## Basic specifications

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available.
The selected option of a feature can consist of several positions.

## Optional specifications

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available. The features have a 2-digit structure to aid identification (e.g. JA). The first digit (ID) stands for the feature group and consists of a number or a letter (e.g. J = Test, Certificate). The second digit constitutes the value that stands for the feature within the group (e.g. A = 3.1 material (wetted parts), inspection certificate).

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

## Extended order code: Liquiphant

i
The following specifications reproduce an extract from the product structure and are used to assign:

- This documentation to the device (using the extended order code on the nameplate).
- The device options cited in the document.

Device type
FTL62

## Basic specifications

Position 1, 2 (Approval)

| Selected option | Description |

| R $^{3)}$ | Weather protection cover, plastic |

1) Only in connection with Position $6=M$
2) Only in connection with Position $6=B, C$
3) Only in connection with Position 3, $4=\mathrm{A} 2-\mathrm{A} 4, \mathrm{~A} 8$

Safety instructions: General

- The device is intended to be used in hazardous locations as defined in the Canadian Electrical Code, Part I or the National Electrical Code (NFPA70). If no potentially explosive atmospheres are present or if additional protective measures have been taken: The device may be operated according to the manufacturer's specifications.
- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
- Be suitably qualified for their role and the tasks they perform
- Be trained in explosion protection
- Be familiar with national regulations
- Install the device according to the manufacturer's instructions and national regulations.
- Do not operate the device outside the specified electrical, thermal and mechanical parameters.
- Only use the device in media to which the wetted materials have sufficient durability.
- Refer to the temperature tables for the relationship between the permitted ambient temperature for the sensor and/or transmitter, depending on the range of application and the temperature class.
- Avoid electrostatic charging:
- Of plastic surfaces (e.g. enclosure, sensor element, special varnishing, attached additional plates, ...)
- Of isolated capacities (e.g. isolated metallic plates)
- Alterations to the device can affect the explosion protection and must be carried out by staff authorized to perform such work by Endress+Hauser.

## Safety <br> instructions: <br> Specific conditions of use

- The electronics enclosure are permitted to operate in a standard ambient temperature range of -40 to $70{ }^{\circ} \mathrm{C}$.
- Limitations of the maximum ambient temperature at the electronics enclosure may be required dependent on device configuration,
process temperatures and temperature classification.
- Minimum process temperature: $-50^{\circ} \mathrm{C}$.
- Details of limitations: $\rightarrow$ 葛 12, "Temperature tables".
- To avoid electrostatic charging: Do not rub surfaces with a dry cloth.
- In the event of additional or alternative special varnishing on the enclosure or other metal parts or for adhesive plates:
- Observe the danger of electrostatic charging and discharge.
- Do not install in the vicinity of processes ( $\leq 0.5 \mathrm{~m}$ ) generating strong electrostatic charges.

Basic specification, Position $6=B, M$

- Avoid sparks caused by impact and friction.
- Covers with glass window only permitted for the following ambient temperatures:
$-50^{\circ} \mathrm{C} \leq \mathrm{T}_{\mathrm{a}} \leq+70^{\circ} \mathrm{C}$
Basic specification, Position $6=C$
Covers with glass window not permitted.
Optional specification, ID Jx, $K x=J L, J N$, JT
Not applicable for Class I, Division 2 installation.
Optional specification, ID Px, $R x=P A$
Connect the weather protection cover to the local potential equalization.
Optional specification, ID Px, Rx = PB
Avoid electrostatic charging of the weather protection cover (e.g. friction, cleaning, maintenance, strong medium flow).

Optional specification, ID Px, Rx=R6
Suitable for use in explosion hazardous areas.

## For hazardous location Group A, B and C / Group IIC and IIB

Basic specification, Position $9=N, P, Q$

- Probes can be used in gases of Group A and B / Group IIC if avoiding electrostatic charging (e.g. through friction, cleaning, maintenance, strong medium flow). These probes are marked by the warning sign "Avoid Electrostatic Charge".
- If electrostatic charging cannot be avoided: Probe can be used in gases of Group C / Group IIB.

Basic specification, Position $9=R, T$

- Due to the surface resistance $1 \mathrm{G} \Omega$ ([R] PFA-conductive) or the enamel (glass) surface [T], these coatings are suitable without restrictions.
- Prevent damage to the conductive surface layer (e.g. by abrasion).

## Safety

 instructions: Installation

A0025536
图 1
A Zone 1; Class I, II, III, Div. 1, Groups A-G
1 Tank; Zone 0 or Zone 1; Class I, II, III, Div. 1, Groups A-G
2 Electronic insert
3 Enclosure
4 Supply unit
5 Potential equalization line
6 Local potential equalization

- Before operation:
- Screw in the cover all the way.
- Tighten the securing clamp on the cover.
- In potentially explosive atmospheres:
- Do not disconnect the electrical connection of the power supply circuit when energized.
- Do not open the connection compartment cover and the electronics compartment cover.
- Continuous service temperature of the connecting cable / cable gland / cable entry:
- Basic specification, Position 3, $4=A 2: \geq \mathrm{T}_{\mathrm{a}}+35 \mathrm{~K}$
- Basic specification, Position 3, $4=A 4: \geq \mathrm{T}_{\mathrm{a}}+40 \mathrm{~K}$
- Basic specification, Position 3, $4=A 8: \geq \mathrm{T}_{\mathrm{a}}+20 \mathrm{~K}$
- Perform the following to achieve the degree of protection IP66/68:
- Screw the cover tight.
- Mount the cable entry correctly.
- Observe the maximum process conditions according to the manufacturer's Operating Instructions.
- At high medium temperatures, note flange pressure load capacity as a factor of temperature.
- Install the device to exclude any mechanical damage or friction during the application. Pay particular attention to flow conditions and tank fittings.
- Support extension tube of the device if a dynamic load is expected.

## Potential equalization

Integrate the device into the local potential equalization.

## Bluetooth ${ }^{\circledR}$ module

- High cover with inspection window is required.
- Observe the general notes of the Special Documentation SD02389F.
- After installing the Bluetooth ${ }^{\circledR}$ module: Pay attention to the correct installation of the device.

Basic specification, Position 3, 4 = A8

- If the device is equipped with the Bluetooth ${ }^{\circledR}$ module, a battery is required.
- Removal or replacement of the battery is only permitted in nonhazardous areas.

Only use one of the following battery types:

| Manufacturer | Battery type |
| :--- | :--- |
| Saft | LS14500 |
| Tadiran | SL-360/S |

| Manufacturer | Battery type |
| :--- | :--- |
| Varta | ER-AA / 7106 |
| XENO ENERGY | ER14505 / XL-060F |

Explosionproof /
Flameproof

Class I, Div. 2, Groups A-D

## Process seals

Temperature tables

Class I, Div. 1, Groups A, B, C, D, Class II, Div. 1, Groups E, F, G, Class III;
Class I, Zone 0 / Zone 1, AEx db IIC Ga/Gb

- Install per National Electrical Code (NFPA70) or Canadian Electrical Code, Part I (C22.1), as applicable.
- For the maximum supply voltage: See "Connection data" section.
- Seal unused entries with approved plugs that correspond to the type of protection. The plastic transport sealing plug does not meet this requirement and must therefore be replaced during installation.
- Probe is suitable for installation in a Zone 0 location.
- Use a dust-tight seal at the conduit entry in a Class II and III location.
- WARNINGS: Keep covers tight while circuits are alive or when explosive atmosphere is present. Seal entries within 50 mm (2 in) of enclosure.
- Install per National Electrical Code (NFPA70) or Canadian Electrical Code, Part I (C22.1), as applicable.
- Use wiring methods appropriate for the location.
- Associated apparatus not required.
- For the maximum supply voltage: See "Connection data" section.
- WARNINGS: Substitution of components may impair suitability for hazardous locations. Do not disconnect equipment unless power has been switched off or the area is known to be non-hazardous.

The device is rated as a Single Seal device and does not require the use of an external secondary process seal.

1
Optional specification, ID Jx, Kx = JL
Lower limit of the ambient temperature for explosion protection changes to $-50^{\circ} \mathrm{C}$.

Optional specification, ID Jx, $K x=J N$
Lower limit of the ambient temperature for explosion protection changes to $-52^{\circ} \mathrm{C}$.

Optional specification, ID Jx, $K x=J T$
Lower limit of the ambient temperature for explosion protection changes to $-60^{\circ} \mathrm{C}$.

## General notes

1
Optional specification, ID $P x, R x=P B$
When using the weather protection cover: Reduce the values $\mathrm{T}_{\mathrm{a}}$ of P1, P2, P3 by 16 K .

## Description notes

IUnless otherwise indicated, the positions always refer to the basic specification.
