Table of contents

1   About this document

1.1   Document function

The document is part of the Operating Instructions and serves as a reference for parameters. The document provides a detailed explanation of each individual parameter.

Performance of tasks that require detailed knowledge of the functioning of the device:
- Commissioning measurements under difficult conditions
- Optimal adaptation of the measurement to difficult conditions
- Detailed configuration of the communication interface
- Error diagnostics in difficult cases

1.2   Target group

The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations.

1.3   Using this document

1.3.1   Information on the document structure

This document lists the submenus and parameters that are available when the **"Maintenance" option** user role is enabled.

For the operating concept of the operating menus, see the Operating Instructions.

1.3.2   Structure of a parameter description

The individual parts of a parameter description are described in the following section:

- Navigation: Navigation path to the parameter via the local display
- Prerequisite: The parameter is only available under these specific conditions
- Description: Description of the parameter function
- Selection: List of the individual options for the parameter
- User entry: Input range for the parameter
- User interface: Display value/data of the parameter
- Additional information:
  - On individual options
  - On display values/data
  - On the input range
  - On the factory setting
  - On the parameter function

1.4   Symbols used

1.4.1   Symbols for certain types of Information

Additional information: 🛈

Reference to documentation: 📖

Operation via local display: 🖳

Operation via operating tool: 🖵

Write-protected parameter: 🔒

1.5   Documentation

1.5.1   Standard documentation

Operating Instructions

3 Description of device parameters

In the following section, the parameters are listed according to the menu structure of the operating tool.

The operating menu is dynamic and adapts the choice of parameters to the selected options.

3.1 User navigation

The Guidance main menu contains functions which enable users to perform basic tasks swiftly, e.g. commissioning.
These are primarily guided wizards and cross-subject special functions.

Navigation   🖩   Guidance

3.1.1 Overview of the operating menu

"Guidance" menu
- Commissioning (→ 🖺 34)
- Heartbeat Technology (→ 🖺 55)
- Safety mode (→ 🖺 81)
- Proof test (→ 🖺 94)

"Diagnostics" menu
- Active diagnostics (→ 🖺 106)
- Event logbook (→ 🖺 108)
- Minimum/maximum values (→ 🖺 109)
- Simulation (→ 🖺 113)
- Heartbeat Technology (→ 🖺 114)
- Diagnostic settings (→ 🖺 69)

"Application" menu
- Measuring units (→ 🖺 131)

3.1.2 Commissioning

Run this wizard to put the device into operation. Enter the appropriate value in each parameter or select the appropriate option.

ℹ️ If the wizard is canceled before all the necessary parameters have been configured, any settings already made are saved. For this reason, the device may then be in an undefined state!

In such situations, it is advisable to reset the device to the factory default settings.

The following parameters are configured in the Commissioning wizard:
- Device identification (→ 🖥 34)
  - Device tag (→ 🖥 34)
  - Device name (→ 🖥 34)
  - Serial number (→ 🖥 34)
  - Extended order code 1 (→ 🖥 35)
  - Extended order code 2 (→ 🖥 35)
  - Extended order code 3 (→ 🖥 35)
  - Locking status (→ 🖥 36)
  - HART short tag (→ 🖥 37)
  - HART date code (→ 🖥 37)
  - HART descriptor (→ 🖥 37)
  - HART message (→ 🖥 37)
  - HART address (→ 🖥 38)
- Measurement adjustments (→ 🖥 38)
  - Assign PV (→ 🖥 38)
  - Damping (→ 🖥 38)
  - Pressure unit (→ 🖥 39)
  - Temperature unit (→ 🖥 39)
  - Scaled variable unit (→ 🖥 40)

  - Assign PV (→ 🖥 38)
  - Assign SV (→ 🖥 53)
  - Assign TV (→ 🖥 53)
  - Assign QV (→ 🖥 54)

3.1.3   Heartbeat Technology

Heartbeat Technology offers diagnostic functionality through continuous self-monitoring, the transmission of additional measured variables to an external Condition Monitoring system and the in-situ verification of measuring devices in the application.
Special Documentation "Heartbeat Monitoring + Verification"

📖   SD02525P

"Heartbeat Verification" wizard

This wizard is used to start an automatic verification of the device functionality.
The results can be documented as a verification report.

"SSD: Statistical Sensor Diagnostics" wizard

Using statistical analysis of the pressure signal, process anomalies such as plugged impulse lines can be detected. This wizard supports the settings and thresholds that should lead to a diagnostic message.

"Loop diagnostics" wizard

Using this wizard, changes in the current-voltage loop characteristics (baseline) can be used to detect unwanted installation anomalies such as creep currents caused by terminal corrosion or a deteriorating power supply that can lead to an incorrect 4-20 mA measured value.

"Process window" wizard

This wizard uses user-defined limits for pressure and temperature to detect unwanted installation or application anomalies.

Applications:
- Defective heat tracer or insulation
- Frozen process connections
- Dynamic pressure peaks etc.

3.1.4   Safety mode

The write protection guards the device settings against overwriting. In addition, it is recommended for safety applications to confirm the safety relevant device settings. This ensures that the correct values have been entered and downloaded to device.

This input can be used as the confirmation sequence instead of manual checklists.
After the safety relevant device settings have been confirmed, the device is marked with the property Safety-locked. This indicates that the safety relevant parameter settings have been checked and evaluated as correct.

To unlock the safety locking the sequence needs to be restarted. The safety locking is deactivated when the safety unlocking code (= safety locking code) is entered.

3.1.5   Proof testing

The proof test will simulate the current output.
The safety function is not guaranteed during proof test. Alternative process control in manual must be taken to ensure process safety.

Note: It is only possible to perform a proof test when the device has no alarm and the hardware write protection switch is off.

3.2 "Guidance" menu

Navigation   ▣   Guidance

3.2.1 "Commissioning" wizard

Navigation   ▣   Guidance → Commissioning

"Device identification" wizard

Navigation   ▣   Guidance → Commissioning → Device ident.

Device tag	🔒

Navigation	▣	Guidance → Commissioning → Device ident. → Device tag

Description   Enter a unique name for the measuring point to identify the device quickly within the plant.

User entry   Character string comprising numbers, letters and special characters (32)

Device name

Navigation	▣	Guidance → Commissioning → Device ident. → Device name

Description   Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.

User interface   Max. 32 characters such as letters or numbers.

Serial number	🔒

Navigation	▣	Guidance → Commissioning → Device ident. → Serial number

Description   Displays the serial number of the measuring device.

ℹ️ The number can be found on the nameplate of the sensor and transmitter.

User interface   Max. 11-digit character string comprising letters and numbers.

Additional information	*Description*

Uses of the serial number
- To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
- To obtain specific information on the measuring device using the Device Viewer: www.endress.com/deviceviewer

---

Extended order code 1

Navigation	Guidance → Commissioning → Device ident. → Ext. order cd. 1
Description	The extended order code is an alphanumeric code containing all information to identify the device and its options.
User interface	Character string
Factory setting	–
Additional information	*Description*

The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.

Extended order code 2

Navigation	Guidance → Commissioning → Device ident. → Ext. order cd. 2
Description	The extended order code is an alphanumeric code containing all information to identify the device and its options.

The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.

User interface	Character string
Factory setting	–

Extended order code 3

Navigation	Guidance → Commissioning → Device ident. → Ext. order cd. 3
Description	The extended order code is an alphanumeric code containing all information to identify the device and its options.

The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.

User interface	Character string

Factory setting   –

"Device identification" wizard

Navigation   🖳   Guidance → Commissioning → Device ident.

Locking status

Navigation   🖳   Guidance → Commissioning → Device ident. → Locking status

Description   Displays the active write protection.

User interface   • Hardware locked
                          • Safety locked
                          • Temporarily locked

Additional information *User interface*

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

📖 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

Selection

Function scope of the "Locking status" parameter

Options	Description
None	The access status displayed in the **Access status display** parameter applies. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the main electronics module. This prevents write access to the parameters (e.g. via the local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed once again.

"Device identification" wizard

Navigation   ▣   Guidance → Commissioning → Device ident.

HART short tag   🔒

Navigation	▣	Guidance → Commissioning → Device ident. → HART short tag

Description   Defines the short tag for the measuring point.

Maximum length: 8 characters
Allowed characters: A-Z, 0-9, certain special characters

User entry   Max. 8 characters: A to Z, 0 to 9 and certain special characters (e.g. punctuation marks, @, %).

HART date code   🔒

Navigation   ▣   Guidance → Commissioning → Device ident. → HART date code

Description   Date of the last configuration change

User entry   Character string comprising numbers, letters and special characters (10)

Additional information   Date format: YYYY-MM-DD

ℹ️ Make sure you adhere to this format when entering the date. Otherwise errors may occur in individual HART commands.

HART descriptor   🔒

Navigation   ▣   Guidance → Commissioning → Device ident. → HART descriptor

Description   Description for the measuring point.

User entry   Character string comprising numbers, letters and special characters (16)

HART message   🔒

Navigation   ▣   Guidance → Commissioning → Device ident. → HART message

Description   A HART message which is sent via the HART protocol when requested by the master.

User entry   Character string comprising numbers, letters and special characters (32)

HART address	🔒

Navigation	▤	Guidance → Commissioning → Device ident. → HART address

Description   Define the HART address of the device.

User entry   0 to 63

Additional information   • The measured value can only be transmitted via the current value if the address is set to
                                "0". The current is fixed at 4.0 mA for all other addresses (Multidrop mode).
                                • Only addresses in the range 0 to 15 are permitted for a system according to HART 5.0.
                                • All addresses in the range 0 to 63 are permitted for a system with HART 6.0 and higher.

"Measurement adjustments" wizard

Navigation   ▤   Guidance → Commissioning → Meas. adjust.

Assign PV	🔒

Navigation	▤	Guidance → Commissioning → Meas. adjust. → Assign PV

Description   Use this function to select a measured variable (HART device variable) for the primary
                                dynamic variable (PV).

Selection   • Pressure
                                • Scaled variable

Damping	🔒

Navigation	▤	Guidance → Commissioning → Meas. adjust. → Damping

Description   The damping is effective before the measured value is further processed, i.e., before the
                                following processes:
                                - Scaling
                                - Limit value monitoring
                                - Forwarding to display
                                - Forwarding to Analog Input Block

                                Note:
                                The Analog Input Block has its own "Damping" parameter. In the measurement chain, only
                                one of the two attenuation parameters shall have a value other than 0.
                                Otherwise, the signal will be attenuated several times.

User entry   0 to 999.0 s

Assign HART variables?

Navigation	🖥	Guidance → Commissioning → Output settings → Assign HART var?

Description   Up to four HART variables can be transmitted via the HART protocol.

                                Select "Yes" to show/assign measuring variables to these HART variables.

Selection   • No
                                • Yes

"Output settings" wizard

Navigation   🖥   Guidance → Commissioning → Output settings

Assign PV   🔒

Navigation	🖥	Guidance → Commissioning → Output settings → Assign PV

Description   Use this function to select a measured variable (HART device variable) for the primary dynamic variable (PV).

Selection   • Pressure
- Scaled variable

Assign SV	🔒

Navigation	🖮	Guidance → Commissioning → Output settings → Assign SV

Description   Use this function to select a measured variable (HART device variable) for the secondary dynamic variable (SV).

Selection
- Pressure
- Scaled variable
- Sensor temperature
- Sensor pressure
- Electronics temperature
- Terminal current *
- Terminal voltage *
- Median of pressure signal *
- Noise of pressure signal *
- Signal noise detected *
- Percent of range
- Loop current
- Not used

Additional information   *Selection*

- **Sensor pressure** option
  Sensor Pressure is the raw signal from sensor before damping and position adjustment.
- **Terminal current** option
  The terminal current is the read-back current on terminal block.
- **Signal noise detected** option
  0 % - Signal noise is within the permissible range.
  100 % - Signal noise is outside of the permissible range.
- **Loop current** option
  The loop current is the output current set by the applied pressure.

Assign TV	🔒

Navigation	🖮	Guidance → Commissioning → Output settings → Assign TV

Description   Use this function to select a measured variable (HART device variable) for the tertiary (third) dynamic variable (TV).

Selection
- Pressure
- Scaled variable
- Sensor temperature
- Sensor pressure
- Electronics temperature
- Terminal current *

---

*   Visibility depends on order options or device settings

- Terminal voltage [*]
- Median of pressure signal [*]
- Noise of pressure signal [*]
- Signal noise detected [*]
- Percent of range
- Loop current
- Not used

Additional information   *Selection*

- **Sensor pressure** option
  Sensor Pressure is the raw signal from sensor before damping and position adjustment.
- **Terminal current** option
  The terminal current is the read-back current on terminal block.
- **Signal noise detected** option
  0 % - Signal noise is within the permissible range.
  100 % - Signal noise is outside of the permissible range.
- **Loop current** option
  The loop current is the output current set by the applied pressure.

Assign QV   🔒

Navigation   ▯   Guidance → Commissioning → Output settings → Assign QV

Description   Use this function to select a measured variable (HART device variable) for the quaternary (fourth) dynamic variable (QV).

Selection
- Pressure
- Scaled variable
- Sensor temperature
- Sensor pressure
- Electronics temperature
- Terminal current [*]
- Terminal voltage [*]
- Median of pressure signal [*]
- Noise of pressure signal [*]
- Signal noise detected [*]
- Percent of range
- Loop current
- Not used

Additional information   *Selection*

- **Sensor pressure** option
  Sensor Pressure is the raw signal from sensor before damping and position adjustment.
- **Terminal current** option
  The terminal current is the read-back current on terminal block.
- **Signal noise detected** option
  0 % - Signal noise is within the permissible range.
  100 % - Signal noise is outside of the permissible range.
- **Loop current** option
  The loop current is the output current set by the applied pressure.

3.2.2   "Heartbeat Technology" submenu

"Heartbeat Verification" wizard

Navigation   🖥   Guidance → Heartbeat Techn. → Heartbeat Verif.

Heartbeat Verification

Navigation   🖥   Guidance → Heartbeat Techn. → Heartbeat Verif. → Heartbeat Config → Heartbeat
                              Verif.

Selection   • Start verification
                              • Show results

"Mainboard module" wizard

Navigation   🖥   Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard
                              module

System status

Navigation   🖥   Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → System
                              status

Description   Checks active measurement device errors at diagnostical behavior "alarm".
                              If an active error is detected, then verification will be performed but the overall result will
                              always be "Failed".

User interface   • Not done
                              • Passed
                              • Not done
                              • Failed

Output current

Navigation   🖥   Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → Output
                              curr.

Description   Checks whether read-back current at the output matches the current set by the device.

User interface
- Not done
- Passed
- Not done
- Failed

Software integrity

Navigation	🔲 Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → Software integ.
Description	Checks whether the function blocks of the software are executed in the correct order.
User interface	▪ Not done ▪ Passed ▪ Not done ▪ Failed

RAM check

Navigation	🔲 Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → RAM check
Description	Checks the correct function of the RAM (Random Access Memory).
User interface	▪ Not done ▪ Passed ▪ Not done ▪ Failed

ROM check

Navigation	🔲 Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → ROM check
Description	Checks the correct function of the ROM memory (Read-Only-Memory).
User interface	▪ Not done ▪ Passed ▪ Not done ▪ Failed

Loop diagnostics

Navigation   🔲   Guidance → Heartbeat Techn. → Heartbeat Verif. → Mainboard module → Loop
                          diagn.

Description   Checks whether the voltage/current values are within range or the voltage/current
                          baseline defined with wizard.
                          "Failed" can indicate faulty power supply or grounding / wiring.

User interface   • Not done
                          • Passed
                          • Not done
                          • Failed

Sensor integrity

Navigation   🔲   Guidance → Heartbeat Techn. → Heartbeat Verif. → Sensor module → Sensor
                          integrity

Description   Checks the integrity of the sensor. Scope of check depends on sensor type used.

User interface   • Not done
                          • Passed
                          • Not done
                          • Failed

Membrane integrity

Navigation   🔲   Guidance → Heartbeat Techn. → Heartbeat Verif. → Sensor module → Membrane
                          integr.

Description   Checks the integrity of the membrane.

                          Notice:
                          Not included in the scope of testing for metallic membranes.

User interface   • Not done
                          • Passed
                          • Not done
                          • Failed

Sensor/membrane integrity

Navigation   🖳   Guidance → Heartbeat Techn. → Heartbeat Verif. → Sensor module → Sensor/
membrane

Description   Checks the integrity of the sensor and membrane.

User interface   • Not done
- Passed
- Not done
- Failed

Statistical Sensor Diagnostics

Navigation   🖳   Guidance → Heartbeat Techn. → Heartbeat Verif. → Sensor module → SSD

Description   Checks whether the actual values are within the defined signal noise thresholds.

User interface   • Not done
- Passed
- Not done
- Failed

Analog path integrity

Navigation   🖳   Guidance → Heartbeat Techn. → Heartbeat Verif. → Sensor module → Path integrity

Description   Checks if the analog path of the sensor has changed from state of delivery.

User interface   • Not done
- Passed
- Not done
- Failed

Verification result

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Verific. result → Verific. result

User interface
- Not done
- Passed

Save protocol?

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Verific. result → Save protocol?

Description   The Report can be saved for archiving.

Selection
- No
- Yes

Inspector

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Inspector

Description   The entered inspector name will be included in the report.

User entry   Character string comprising numbers, letters and special characters (96)

Location

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Location

Description   The entered value will be included in the report.

User entry   Character string comprising numbers, letters and special characters (96)

Notes

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Notes
Description		The entered value will be included in the report.
User entry		Character string comprising numbers, letters and special characters (255)

Plant operator

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Plant operator
Description		The entered value will be included in the report.
User entry		Character string comprising numbers, letters and special characters (96)

Operating time (Verification)

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Operating time
User interface		Days (d), hours (h), minutes (m), seconds (s)

Date/time Heartbeat Verification

Navigation	▣	Guidance → Heartbeat Techn. → Heartbeat Verif. → Finish → Date/time Heartbeat Verification
Description		Date and time of last Heartbeat Verification.
		This value is updated with every Heartbeat verification.
		Note: If time information is not available, e.g. Heartbeat verification is started from display, '--------' is shown.
User interface		Character string comprising numbers, letters and special characters

Status summary

Navigation	⊟ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	Activate SSD.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

Status summary

Navigation	⊟ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	Please wait. Function is not ready.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

Status summary

Navigation	⊟ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	The signal noise is too small for the teach-in phase. Note: Teach-in is only possible while the process is running. Measures: Check valve position. If necessary, perform the teach-in procedure later while the process is running.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

Status summary

Navigation	▣ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	The teach-in phase is completed. Continue or terminate the configuration.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

Status summary

Navigation	▣ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	The SSD is not active because the average value of the raw signal is outside the limits. The SSD is reactivated as soon as the average value is within the limits again. Adjust the limits if necessary.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

Status summary

Navigation	▣ Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary
Description	The SSD has detected an event (e.g. blocked impulse line). Check whether maintenance work is required.
User interface	• Deactivated • Learning phase • Monitoring inactive • Monitoring active • Monitoring active with event • No baseline

---

Status summary

Navigation	▣	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary

Description   The SSD is not active because the process conditions are too dynamic for reliable operation. If necessary, teach in a new baseline or adjust the sampling rate.

The SSD is reactivated as soon as the average value of the raw signal is within the limits.

User interface
- Deactivated
- Learning phase
- Monitoring inactive
- Monitoring active
- Monitoring active with event
- No baseline

Status summary

Navigation	▣	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary

Description   The current signal noise is too small to activate the SSD.

User interface
- Deactivated
- Learning phase
- Monitoring inactive
- Monitoring active
- Monitoring active with event
- No baseline

Status summary

Navigation	▣	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Status summary

Description   Baseline could not be created with following reasons:
- There is not enough signal noise during building baseline phase.
- There is a process change during building baseline phase.

User interface
- Deactivated
- Learning phase
- Monitoring inactive
- Monitoring active
- Monitoring active with event
- No baseline

System status

Navigation	⌨	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → System status

User interface
- Idle
- No sufficient signal noise
- Stable
- Not stable
- Verify System Dynamics
- Process dynamic too high

Signal status

Navigation	⌨	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Signal status

User interface
- Idle
- Building Baseline
- Verifying Baseline
- Verifying baseline failed
- Monitoring
- Out of range
- Monitoring inactive

Signal noise status

Navigation	⌨	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Noise status

User interface
- Idle
- Building Baseline
- Verifying Baseline
- Verifying baseline failed
- Monitoring
- Out of range
- Monitoring inactive

Baseline build process

Navigation	⌨	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Baseline process

User interface   0 to 100 %

Sample rate   🔒

Navigation	🖳	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Sample rate

Description   Determines the sampling rate depending on the process conditions:

"Fast'
homogeneous stable process with Gauss distribution.

"Medium'
dynamic process

"Slow'
extremely dynamic variable process

Selection
- Fast
- Medium
- Slow

Counter Baseline creation SSD

Navigation	🖳	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Counter Baseline

Description   Specifies how often the baseline has been rebuilt.

User interface   Positive integer

Baseline is available

Navigation	🖳	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Configuration → Baseline avail.

Description   Indicates whether a baseline already exists.

User interface
- Please select
- No
- Yes

Current Baseline signal

| Navigation | ▣ | Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Curr. Baseline |

Description   Current average of the raw signal.

User interface   Signed floating-point number

Baseline Signal Upper Control Line   🔒

| Navigation | ▣ | Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline S. UCL |

Description   Upper limit for the average value of the raw signal. If the average value is above this limit, the SSD is inactive.

Note:
This parameter should not be greater than "Signal maximum value".

User entry   Signed floating-point number

Baseline Signal Control Line

| Navigation | ▣ | Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline S. CL |

Description   Learned-in mean of the raw signal.

User interface   Signed floating-point number

Baseline Signal Lower Control Line   🔒

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline S. LCL
Description	Lower limit for the average value of the raw signal. If the average value is below this limit, the SSD is inactive. Note: This parameter should not be less than "Signal minimum value".
User entry	Signed floating-point number

Signal minimum value

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Minimum value
Description	Minimum mean of the raw signal during the learning phase.
User interface	Signed floating-point number

Signal maximum value

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Maximum value
Description	Maximum mean of the raw signal during the learning phase.
User interface	Signed floating-point number

Signal noise status

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Noise status
User interface	• Idle • Building Baseline • Verifying Baseline • Verifying baseline failed • Monitoring • Out of range • Monitoring inactive

Current Baseline noise

Navigation	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Current noise
Description	Current signal noise (standard deviation) of the raw signal.
User interface	Signed floating-point number

Baseline Signal Noise Upper Control Line 🔒

Navigation	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline SN. UCL
Description	Upper limit for the noise of the raw signal. If the noise is above this limit, the SSD is inactive. Note: This parameter should not be greater than "Signal noise maximum value".
User entry	Signed floating-point number

Baseline Signal Noise Control Line

Navigation	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline SN. CL
Description	Learned-in noise of the raw signal.
User interface	Signed floating-point number

Baseline Signal Noise Lower Control Line 🔒

Navigation	Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline SN. LCL
Description	Lower limit for the noise of the raw signal. If the noise is below this limit, the SSD is inactive. Note: This parameter should not be less than "Signal noise minimum value".
User entry	Signed floating-point number

Baseline Signal Noise Minimum	🔒

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Baseline SN. Min
Description	Minimum value of the signal noise. Below this value, the SSD cannot be activated.
User entry	Signed floating-point number

Signal noise minimum value	

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Min. noise value
Description	Minimum measured signal noise during the learning phase.
User interface	Signed floating-point number

Signal noise maximum value	

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Monitoring → Max noise value
Description	Maximum measured signal noise during the learning phase.
User interface	Signed floating-point number

SSD Monitoring delay time	🔒

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Diag. settings → SSD Verz. Zeit
User entry	0 to 86 400 s

900 Event category	🔒

Navigation	🔘🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Diag. settings → 900Event category
Description	Select category for diagnostic message.

Selection	• Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • No effect (N)

---

900 Diagnostic behavior

Navigation	🖬🖵 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Diag. settings → 900 Diag. behav.
Description	Select event behavior
	"Logbook entry only": no digital or analog transmission of the message.
	"Warning": Current output unchanged. Message is output digitally (default).
	If the permissible conditions are reached again, the warning is no longer available in the instrument.
Selection	• Warning • Logbook entry only

SSD Out of range delay time

Navigation	🖵 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Diag. settings → SSD Delay time
User entry	0 to 604 800 s

---

906 Event category

Navigation	🖬🖵 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Diag. settings → 906Event category
Description	Select category for diagnostic message.
Selection	• Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • No effect (N)

SSD: Statistical Sensor Diagnostics	🔒

Navigation	🖥 Guidance → Heartbeat Techn. → Stat. Sens. Diag → Activ./Deactiv. → Stat. Sens. Diag
Description	Enable or disable SSD. After selecting "Disable", no statistical sensor diagnosis takes place. No diagnostic messages are output.
Selection	• Disable • Enable

I have read the warning texts.	🔒

Navigation	🖥 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → warning texts
Description	The characterization of the electrical loop requires intermediate generation of a current output of 4 mA and 20 mA. Therefore, do not use the device in an active current loop during initialization of the Signal Loop Diagnostics.
Selection	Yes

Baseline status	

Navigation	🖥 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Baseline status
Description	"Failed" Means, baseline is not available or creation not possible. "Success" Baseline is available.
User interface	• Failed • Success

Baseline build process

Navigation	🖳 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Baseline process
User interface	0 to 100 %

Timestamp Baseline

Navigation	🖳 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Timestamp BL
Description	Time stamp when the baseline was recorded (current-voltage curve). At this time, the upper terminal voltage (U1) was determined at 4 mA and the lower terminal voltage (U2) was determined at 20 mA.
User interface	Character string comprising numbers, letters and special characters

Resistance Baseline

Navigation	🖳 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Resistance BL
Description	Displays the resistance value of the baseline (slope of the current-voltage curve).
User interface	Positive floating-point number

Supply voltage Baseline

Navigation	🖳 Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Supply volt. BL
Description	Displays the point from which the baseline is built (voltage at the point where the current-voltage curve is generated).
User interface	0.0 to 50.0 V

Timestamp previous Baseline

Navigation   ⊟   Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Timestamp pre BL

Description   Time stamp when the previous baseline was recorded (current-voltage curve).
                              At this time, the upper terminal voltage (U1) was determined at 4 mA and the lower
                              terminal voltage
                              (U2) was determined at 20 mA.

User interface   Character string comprising numbers, letters and special characters

Resistance previous Baseline

Navigation   ⊟   Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Resist. pre. BL

Description   Displays the resistance value of the previous baseline (slope of the previous current-
                              voltage curve).

User interface   Positive floating-point number

Supply voltage previous Baseline

Navigation   ⊟   Guidance → Heartbeat Techn. → Loop diagn. → Configuration → Voltage pre. BL

Description   Displays the point from which the previous baseline is built (voltage at the point where the
                              previous current-voltage curve was generated).

User interface   0.0 to 50.0 V

Tolerated deviation +/-   🔒

Navigation   ⊟   Guidance → Heartbeat Techn. → Loop diagn. → Monitoring → Toler. deviation

Description   A value should be chosen to ensure that normal voltage deviations do not lead to
                              unwanted messages.
                              Default
                              1.5 V DC

User entry   0.5 to 3.0 V

806 Event delay	🔒

Navigation	▤ Guidance → Heartbeat Techn. → Loop diagn. → Diag. settings → 806 Event delay
Description	Displays how long the triggering status must be present until an event message is issued. Used to filter out short-term signal interference.
User entry	0 to 60 s

806 Event category	🔒

Navigation	▣▤ Guidance → Heartbeat Techn. → Loop diagn. → Diag. settings → 806Event category
Description	Select category for diagnostic message.
Selection	• Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • No effect (N)

806 Diagnostic behavior	🔒

Navigation	▣▤ Guidance → Heartbeat Techn. → Loop diagn. → Diag. settings → 806 Diag. behav.
Description	Select event behavior "Logbook entry only": no digital or analog transmission of the message. "Warning": Current output unchanged. Message is output digitally (default). If the permissible conditions are reached again, the warning is no longer available in the instrument.
Selection	• Warning • Logbook entry only

Loop diagnostics   🔒

Navigation	▣	Guidance → Heartbeat Techn. → Loop diagn. → Activ./Deactiv. → Loop diagn.

Description   Enable/disable loop diagnostics.

Note:
If the function is disabled, there is no analysis and no event message.

Selection   ▪ Disable
                     ▪ Enable

500 Process alert pressure   🔒

Navigation	▣	Guidance → Heartbeat Techn. → Process window → Pressure range → 500 Pressure

Description   Define whether user-defined pressure limits should be set.
If "Off" is selected, no analysis will take place and no event message will be generated.

Selection   ▪ Off
                     ▪ On

Low alert value   🔒

Navigation	▣	Guidance → Heartbeat Techn. → Process window → Pressure range → Low alert value

Description   Set range.
If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.

User entry   Signed floating-point number

High alert value   🔒

Navigation   𝣵   Guidance → Heartbeat Techn. → Process window → Pressure range → High alert value

Description   Set range.
                        If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.

User entry   Signed floating-point number

Counter underruns of user limit Pmin

Navigation   𝣵   Guidance → Heartbeat Techn. → Process window → Pressure range → Counter < P user

Description   Counts how many times the value underruns the minimum values defined by the user. User defined minimum values are shown in Diagnostic/Diagnostic settings/Properties menu.

User interface   0 to 65 535

Counter overruns of user limit Pmax

Navigation   𝣵   Guidance → Heartbeat Techn. → Process window → Pressure range → Counter > P user

Description   Counts how many times the value overruns the maximum values defined by the user. User defined maximum values are shown in Diagnostic/Diagnostic settings/Properties menu.

User interface   0 to 65 535

500 Diagnostic behavior	⏏

Navigation	⏏⊟ Guidance → Heartbeat Techn. → Process window → Pressure range → 500 Diag. behav.
Description	Select event behavior
	"Logbook entry only": no digital or analog transmission of the message
	"Warning": Current output unchanged. Message is output digitally (default).
	"Alarm": Current output assumes the set alarm current.
	Regardless of the setting, the message appears on the display. If the permissible conditions are reached again, the warning is no longer available in the instrument.
Selection	• Off • Alarm • Warning • Logbook entry only

500 Event category	⏏

Navigation	⏏⊟ Guidance → Heartbeat Techn. → Process window → Pressure range → 500Event category
Selection	• Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • No effect (N)

501 Process alert scaled variable	⏏

Navigation	⊟ Guidance → Heartbeat Techn. → Process window → Pressure range → 501 Scaled var.
Description	Define whether user-defined limits should be set. If "Off" is selected, no analysis will take place and no event message will be generated.
Selection	• Off • On

Low alert value	🔒

Navigation	▤	Guidance → Heartbeat Techn. → Process window → Pressure range → Low alert value
Description		Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry		Signed floating-point number

High alert value	🔒

Navigation	▤	Guidance → Heartbeat Techn. → Process window → Pressure range → High alert value
Description		Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry		Signed floating-point number

501 Diagnostic behavior	🔒

Navigation	▤▥	Guidance → Heartbeat Techn. → Process window → Pressure range → 501 Diag. behav.
Description		Select event behavior
		"Logbook entry only": no digital or analog transmission of the message
		"Warning": Current output unchanged. Message is output digitally (default).
		"Alarm": Current output assumes the set alarm current.
		Regardless of the setting, the message appears on the display. If the permissible conditions are reached again, the warning is no longer available in the instrument.
Selection		• Off • Alarm • Warning • Logbook entry only

---

501 Event category   🔒

Navigation	◎🖳 Guidance → Heartbeat Techn. → Process window → Pressure range → 501Event category
Selection	• Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • No effect (N)

User temperature process alert   🔒

Navigation	🖳 Guidance → Heartbeat Techn. → Process window → Temp. range → UserTemp alert
Description	Define whether the user-defined sensor temperature limits should be set. If "Off" no analysis and therefore no event message will take place.
Selection	• Off • On

Low alert value   🔒

Navigation	🖳 Guidance → Heartbeat Techn. → Process window → Temp. range → Low alert value
Description	Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry	−50 to 150 ℃

High alert value   🔒

Navigation	🖳 Guidance → Heartbeat Techn. → Process window → Temp. range → High alert value
Description	Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry	−50 to 150 ℃

Counter underruns of user limit Tmin

Navigation	▤	Guidance → Heartbeat Techn. → Process window → Temp. range → Counter < T user
User interface		0 to 65 535

Counter overruns of user limit Tmax

Navigation	▤	Guidance → Heartbeat Techn. → Process window → Temp. range → Counter > T user
User interface		0 to 65 535

---

502 Diagnostic behavior   🔒

Navigation   ▣▤ Guidance → Heartbeat Techn. → Process window → Temp. range → 502 Diag. behav.

Description   Select event behavior

"Logbook entry only":
no digital or analog transmission of the message

"Warning": Current output unchanged. Message is output digitally (default).

"Alarm": Current output assumes the set alarm current.

Regardless of the setting, the message appears on the display. If the permissible conditions are reached again, the warning is no longer available in the instrument.

Selection   • Off
• Alarm
• Warning
• Logbook entry only

• No effect (N)

3.2.3 "Safety mode" wizard

Navigation   ▤   Guidance → Safety mode

"Preparation" wizard

Navigation   ▤   Guidance → Safety mode → Preparation

I have read the warning texts.

Navigation   ▤   Guidance → Safety mode → Preparation → warning texts

Description   - Prior to using the wizard, read the Functional Safety Manual or the WHG documentation.
- In the wizard, safety-relevant parameter settings of the device will be shown.
- The user must confirm the correctness of these settings.
- By clicking "Finish" at the end of the wizard, the device is safety locked.
- A documentation of the safety-relevant parameter settings can be generated at the end of the wizard.
- The device can be unlocked via this wizard in case the device is safety locked.
- If the wizard is aborted, the device locking status will not be changed!

Selection   Yes

"Preparation" wizard

Navigation   ▤   Guidance → Safety mode → Preparation

Enter safety unlocking code   🔒

Navigation   ▤   Guidance → Safety mode → Preparation → Safe.unlock code

Description   The Safety locking/unlocking code can be found in the corresponding safety manual or the WHG documentation.

User entry   0 to 65 535

Locking status

Navigation   ▤   Guidance → Safety mode → Preparation → Locking status

Description   Displays the active write protection.

User interface	• Hardware locked
	• Safety locked
	• Temporarily locked

Additional information   *User interface*

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

📖 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

Selection

Function scope of the "Locking status" parameter

Options	Description
None	The access status displayed in the **Access status display** parameter applies. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the main electronics module. This prevents write access to the parameters (e.g. via the local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed once again.

"Preparation" wizard

Navigation   ▣   Guidance → Safety mode → Preparation

Proof test via Bluetooth allowed?   🔒

Navigation   ▣   Guidance → Safety lock → Preparation → BLE proof test

Description   After completion of the Safety mode wizard, the device will be write protected via software lock.

To use the proof test wizard (optional), the device does not have to be unlocked.

It must be defined, if the proof test wizard via Bluetooth is allowed.

Selection   • No
                    • Yes

"Preparation" wizard

Navigation   ⊟   Guidance → Safety lock → Preparation

Enter safety locking code	🔒

Navigation	⊚ Guidance → Safety lock → Preparation → Safety code
Description	Enter the locking code to start the SIL/WHG locking sequence.
User entry	0 to 65 535
Additional information	**Locking codes** • WHG: 7450 • SIL: 7452 • SIL and WHG: 7454

"Preparation" wizard

Navigation   ⊟   Guidance → Safety mode → Preparation

Character test string	

Navigation	⊟ Guidance → Safety mode → Preparation → Char.test string
Description	The following character string is displayed: 0123456789+-,. Set the "Confirm" parameter to "Yes" if this string is rendered correctly. Set the "Confirm" parameter to "No" if this string is not rendered correctly. Safety locking is not possible in this case.
User interface	Character string comprising numbers, letters and special characters

Confirm	🔒

Navigation	⊟ Guidance → Safety mode → Preparation → Confirm
Description	The following character string is displayed: 0123456789+-,. Set the "Confirm" parameter to "Yes" if this string is rendered correctly. Set the "Confirm" parameter to "No" if this string is not rendered correctly. Safety locking is not possible in this case.

Selection   • No
                                                • Yes

"Preparation" wizard

Navigation   ⊟   Guidance → Safety mode → Preparation

Device tag

|	
Navigation	⊟ Guidance → Safety mode → Preparation → Device tag
Description	Displays a unique name for the measuring point so it can be identified quickly within the plant. The name is displayed in the header.
User interface	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).
Additional information	*User interface*

1   Position of the header text on the display

The number of characters displayed depends on the characters used.

Device name

Navigation	⊟ Guidance → Safety mode → Preparation → Device name
Description	Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.
User interface	Max. 32 characters such as letters or numbers.

                                                   Endress+Hauser

---

Serial number	🔒

Navigation	▤ Guidance → Safety mode → Preparation → Serial number
Description	Displays the serial number of the measuring device.
	ℹ️ The number can be found on the nameplate of the sensor and transmitter.
User interface	Max. 11-digit character string comprising letters and numbers.
Additional information	*Description*
	ℹ️ Uses of the serial number • To identify the measuring device quickly, e.g. when contacting Endress+Hauser. • To obtain specific information on the measuring device using the Device Viewer: www.endress.com/deviceviewer

---

Firmware version

Navigation	▤ Guidance → Safety mode → Preparation → Firmware version
Description	Displays the device firmware version that is installed.
User interface	Character string in the format xx.yy.zz
Additional information	*User interface*
	ℹ️ The Firmware version is also located: • On the title page of the Operating instructions • On the transmitter nameplate

---

Hardware version

Navigation	▤ Guidance → Safety mode → Preparation → Hardware version
User interface	Character string comprising numbers, letters and special characters

---

Confirm

Navigation	▤ Guidance → Safety mode → Preparation → Confirm
Description	Confirm connection to the correct device.
Selection	• No • Yes

"Preparation" wizard

Navigation   🖳   Guidance → Safety mode → Preparation

CRC device configuration

Navigation	🖳 Guidance → Safety mode → Preparation → CRC device conf.
Description	CRC device configuration based on current settings of safety relevant parameters. The CRC device configuration is unique and can be used to detect changes in safety relevant parameter settings.
User interface	0 to 65 535

Stored CRC device configuration

Navigation	🖳 Guidance → Safety mode → Preparation → Stored CRC conf.
Description	Stored CRC after the last safety lock. Factory delivery is 65535 means that the device has not yet been safety locked.
User interface	0 to 65 535

Timestamp stored CRC device config.

Navigation	🖳 Guidance → Safety mode → Preparation → Time stored CRC
Description	Gives the time stamp when the CRC was last stored following completion of the safety lock wizard.
User interface	Character string comprising numbers, letters and special characters

---

Operating time

Navigation	🖳 Guidance → Safety mode → Preparation → Operating time
Description	Indicates how long the device has been in operation.
Additional information	Maximum time: 9 999 d (≈ 27 years)

Configuration counter

Navigation	⌨ Guidance → Safety mode → Preparation → Config. counter
Description	Displays the counter for changes to the device parameters.
	Additional information: - If the value for a static parameter is changed when optimizing or configuring the parameter, the counter is incremented by 1. This is to enable tracking different parameter versions. - When multiple parameters are changed simultaneously, e.g. when loading parameters into the device from an external source such as FieldCare, the counter may display a higher value. The counter cannot be reset, nor is it reset to a default value on performing a device reset. - Once the counter has reached the value 65535, it restarts at 0.
User interface	0 to 65 535

"Confirmation" wizard

Navigation	⌨ Guidance → Safety mode → Confirmation

Zero adjustment offset

Navigation	⌨ Guidance → Safety mode → Confirmation → Zero offset
	⌨ Guidance → Safety mode → Confirmation → Zero offset
Description	Assigned value of zero adjustment due to mounting position.
User interface	Character string comprising numbers, letters and special characters

HP/LP swap

Navigation	⌨ Guidance → Safety mode → Confirmation → HP/LP swap
Description	Assigned setting high pressure / low pressure.
User interface	• No • Yes

Damping

Navigation	Guidance → Safety mode → Confirmation → Damping
Description	Assigned damping value.
User interface	Character string comprising numbers, letters and special characters

Sensor pressure range behavior

Navigation	Guidance → Safety mode → Confirmation → P-range behavior
Description	Assigned event behavior in case of over/under pressure outside of measuring range.
User interface	• Alarm • Warning • Remark • Special

Confirm

Navigation	Guidance → Safety mode → Confirmation → Confirm
	Guidance → Safety mode → Confirmation → Confirm
Selection	• No • Yes

"Confirmation" wizard

Navigation   Guidance → Safety mode → Confirmation

Output current transfer function

Navigation	Guidance → Safety mode → Confirmation → Curr. trans.func
Description	Assigned transfer function for current output. NOTE "Square root" is only available with differential pressure measurement.
User interface	• Linear • Square root

Low cutoff

Navigation	▣	Guidance → Safety mode → Confirmation → Low cutoff
User interface		Character string comprising numbers, letters and special characters

Confirm   🔒

Navigation	▣	Guidance → Safety mode → Confirmation → Confirm
Selection		▪ No
		▪ Yes

"Confirmation" wizard

Navigation	▣	Guidance → Safety mode → Confirmation

Measuring mode current output

Navigation	▣	Guidance → Safety mode → Confirmation → Output mode
Description		Assigned setting of curve form of current output.
User interface		▪ Standard
		▪ Inverse
		▪ Bi-directional

Failure behavior current output

Navigation	▣	Guidance → Safety mode → Confirmation → Failure behav.
Description		Assigned value of current output in case of an error.
User interface		▪ Min.
		▪ Max.

Current range output

Navigation	▤ Guidance → Safety mode → Confirmation → Current range
Description	Assigned current range used to transmit the measured value.
User interface	▪ 4…20 mA (4…20.5 mA) ▪ 4…20 mA NE (3.8…20.5 mA) ▪ 4…20 mA US (3.9…20.8 mA) ▪ Customer specific

Lower range value output

Navigation	▤ Guidance → Safety mode → Confirmation → Low.range outp
Description	Assigned value 4 mA.
User interface	Character string comprising numbers, letters and special characters

Upper range value output

Navigation	▤ Guidance → Safety mode → Confirmation → Upp.range outp
Description	Assigned value 20 mA.
User interface	Character string comprising numbers, letters and special characters

Assign PV

Navigation	▤ Guidance → Safety mode → Confirmation → Assign PV
Description	Identifies the process variable linked with the primary variable. Primary variable is used in HART as current output.
User interface	▪ Pressure ▪ Scaled variable

Confirm	🔒

Navigation	🖥	Guidance → Safety mode → Confirmation → Confirm

Selection
• No
• Yes

"Confirmation" wizard

Navigation   🖥   Guidance → Safety mode → Confirmation

Zero adjustment offset	

Navigation   🖥   Guidance → Safety mode → Confirmation → Zero offset

Description   Assigned value of zero adjustment due to mounting position.

User interface   Character string comprising numbers, letters and special characters

Confirm	🔒

Navigation   🖥   Guidance → Safety mode → Confirmation → Confirm

Selection   • No
               • Yes

"Locking" wizard

Navigation   🖥   Guidance → Safety mode → Locking

Enter safety locking code	🔒

Navigation   🖥   Guidance → Safety mode → Locking → Safety code

Description   Enter the locking code to start the SIL/WHG locking sequence.

User entry   0 to 65 535

Additional information	**Locking codes** • WHG: 7450 • SIL: 7452 • SIL and WHG: 7454

Locking status

Navigation	⊟ Guidance → Safety mode → Locking → Locking status

Description	Displays the active write protection.

User interface	• Hardware locked • Safety locked • Temporarily locked

Additional information	*User interface*

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

📖 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

Selection

Function scope of the "Locking status" parameter

Options	Description
None	The access status displayed in the **Access status display** parameter applies. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the main electronics module. This prevents write access to the parameters (e.g. via the local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed once again.

Save protocol?

Navigation	⊟ Guidance → Safety mode → Locking → Save protocol?

Description	The Report can be saved for archiving.

Selection	• No • Yes

"Finish" wizard

"Preparation Proof test" wizard

Navigation   ▣   Guidance → Proof test → Prep. test

Device tag

**Navigation**   ▣   Guidance → Proof test → Prep. test → Device tag

Description   Displays a unique name for the measuring point so it can be identified quickly within the plant. The name is displayed in the header.

User interface   Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).

Additional information   *User interface*

1   Position of the header text on the display

The number of characters displayed depends on the characters used.

Device name

Navigation   Guidance → Proof test → Prep. test → Device name

Description   Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.

User interface   Max. 32 characters such as letters or numbers.

Serial number

Navigation   Guidance → Proof test → Prep. test → Serial number

Description   Displays the serial number of the measuring device.

    🛈 The number can be found on the nameplate of the sensor and transmitter.

User interface   Max. 11-digit character string comprising letters and numbers.

Additional information   *Description*

    🛈 Uses of the serial number
- To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
- To obtain specific information on the measuring device using the Device Viewer: www.endress.com/deviceviewer

Firmware version

Navigation   Guidance → Proof test → Prep. test → Firmware version

Description   Displays the device firmware version that is installed.

User interface   Character string in the format xx.yy.zz

Additional information	*User interface*

The Firmware version is also located:
• On the title page of the Operating instructions
• On the transmitter nameplate

Hardware version

Navigation	🖳	Guidance → Proof test → Prep. test → Hardware version

User interface	Character string comprising numbers, letters and special characters

"Preparation Proof test" wizard

Navigation 🖳 Guidance → Proof test → Prep. test

CRC device configuration

Navigation	🖳	Guidance → Proof test → Prep. test → CRC device conf.

Description	CRC device configuration based on current settings of safety relevant parameters. The CRC device configuration is unique and can be used to detect changes in safety relevant parameter settings.

User interface	0 to 65 535

Stored CRC device configuration

Navigation	🖳	Guidance → Proof test → Prep. test → Stored CRC conf.

Description	Stored CRC after the last safety lock. Factory delivery is 65535 means that the device has not yet been safety locked.

User interface	0 to 65 535

Timestamp stored CRC device config.

Navigation	🖳	Guidance → Proof test → Prep. test → Time stored CRC

Description	Gives the time stamp when the CRC was last stored following completion of the safety lock wizard.

| User interface | Character string comprising numbers, letters and special characters |

Operating time

| Navigation | ▤ | Guidance → Proof test → Prep. test → Operating time |

| Description | Indicates how long the device has been in operation. |

| Additional information | Maximum time: 9 999 d (≈ 27 years) |

Configuration counter

| Navigation | ▤ | Guidance → Proof test → Prep. test → Config. counter |

Description   Displays the counter for changes to the device parameters.

Additional information:
- If the value for a static parameter is changed when optimizing or configuring the parameter, the counter is incremented by 1. This is to enable tracking different parameter versions.
- When multiple parameters are changed simultaneously, e.g. when loading parameters into the device from an external source such as FieldCare, the counter may display a higher value. The counter cannot be reset, nor is it reset to a default value on performing a device reset.
- Once the counter has reached the value 65535, it restarts at 0.

| User interface | 0 to 65 535 |

"Preparation Proof test" wizard

Navigation   　　□   Guidance → Proof test → Prep. test

Select test procedure

Navigation	□	Guidance → Proof test → Prep. test → Select test proc

Description   The proof test of the device can be done using the following test procedures:

Test procedure A with wizard (PTC > 90%):
- Simulate and check the min and max alarm current.
- Approach and check the lower and upper measured value.
- Confirm safety function.

Test procedure B with wizard (PTC > 50%):
-Verify the current measured value with a plausibility check.
- Simulate and check the min and max alarm current.
- Confirm safety function.

For additional test procedures without wizard, refer to safety manual.

Selection   • Please select
• Test procedure A
• Test procedure B

Safety function?

Navigation	□	Guidance → Proof test → Prep. test → Safety function?

Selection   • Please select
• MAX monitoring
• MIN monitoring
• Range monitoring

"Simulation and check failure current" wizard

Navigation   　　□   Guidance → Proof test → Simulation

Failure current (high alarm)

Navigation	□	Guidance → Proof test → Simulation → Fail. current (high alarm)

Description   Actually set value for high failure current.

User interface	21.5 to 23 mA

Confirm

Navigation	🖳 Guidance → Proof test → Simulation → Confirm
Description	Confirm that the displayed value corresponds to the set high failure current.
Selection	• Please select • No • Yes

(High) Is safety function triggered?

Navigation	🖳 Guidance → Proof test → Simulation → (High)Funct. trigg?
Description	Confirm that the output current triggers the required safety function.
Selection	Yes

Terminal current (high alarm)

Navigation	🖳 Guidance → Proof test → Simulation → Term. curr. (HA)
Description	Internally readback terminal current (high alarm).
User interface	Signed floating-point number

Confirm

Navigation	🖳 Guidance → Proof test → Simulation → Confirm
Description	Confirm that the readback terminal current corresponds to the set high failure current within tolerance +-0,32mA.
Selection	• Please select • No • Yes

(Low) Is safety function triggered?

Navigation	▣	Guidance → Proof test → Simulation → (Low)Funct. trigg?
Description		Confirm that the output current triggers the required safety function.
Selection		Yes

"Proof test" wizard

Navigation   ▣   Guidance → Proof test → Proof test

Setpoint 1

Navigation	▣	Guidance → Proof test → Proof test → Setpoint 1
Description		Physically apply a reference pressure for upper range.

3.3 "Diagnostics" menu

Navigation   ▣   Diagnostics

3.3.1 "Active diagnostics" submenu

Navigation   ▣   Diagnostics → Active diagnos.

Active diagnostics

Navigation	▣▣ Diagnostics → Active diagnos. → Active diagnos.
Prerequisite	A diagnostic event has occurred.
Description	Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.
Additional information	*User interface*

Additional pending diagnostic messages can be viewed in the **Diagnostic list** submenu.

Example

For the display format:
⊗F271 Main electronic failure

Timestamp

Navigation	▣▣ Diagnostics → Active diagnos. → Timestamp
Description	Displays the operating time when the current diagnostic message occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*User interface*

The diagnostic message can be viewed via the **Actual diagnostics** parameter (→ 🖺 103).

Example

For the display format:
24d12h13m00s

Previous diagnostics

Navigation	⌷⌷⌷ Diagnostics → Active diagnos. → Prev.diagnostics
Prerequisite	Two diagnostic events have already occurred.
Description	Displays the diagnostic message that occurred before the current message.
User interface	Symbol for diagnostic behavior, diagnostic code and short message.
Additional information	*User interface*

ℹ️ Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the ⅇ key.

Example

For the display format:
⊗F271 Main electronic failure

Timestamp

Navigation	⌷⌷⌷ Diagnostics → Active diagnos. → Timestamp
Description	Displays the operating time when the last diagnostic message before the current message occurred.
User interface	Days (d), hours (h), minutes (m) and seconds (s)
Additional information	*User interface*

ℹ️ The diagnostic message can be viewed via the **Previous diagnostics** parameter (→ 🖹 107).

Example

For the display format:
24d12h13m00s

Operating time from restart

Navigation	⌷⌷⌷ Diagnostics → Active diagnos. → Time fr. restart
Description	Indicates how long the device has been in operation since the last time the device was restarted.
User interface	Days (d), hours (h), minutes (m), seconds (s)

Operating time	
Navigation	🔘🔲 Diagnostics → Active diagnos. → Operating time
Description	Indicates how long the device has been in operation.
Additional information	Maximum time: 9 999 d (≈ 27 years)

3.3.2   "Event logbook" submenu

Navigation   🔲   Diagnostics → Event logbook

Filter options	
Navigation	🔲 Diagnostics → Event logbook → Filter options
Description	Use this function to select the category whose event messages are displayed in the event list of the operating tool.
Selection	• All • Failure (F) • Function check (C) • Out of specification (S) • Maintenance required (M) • Information (I) • Not categorized
Additional information	*Description* ℹ️ The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107: • F = Failure • C = Function Check • S = Out of Specification • M = Maintenance Required

Clear event list	🔏
Navigation	🔲 Diagnostics → Event logbook → Clear event list
Description	Use this function to process the current values in the event logbook.
Selection	• Cancel • Clear data

Additional information   *Description*

Once this function has been executed, the events list is empty and all the events are deleted.

ℹ️ The events list can be exported using an operating tool (e.g. FieldCare.

3.3.3   "Minimum/maximum values" submenu

Navigation   ▯   Diagnostics → Min/max val.

Pressure min

Navigation   ▣▯   Diagnostics → Min/max val. → Pressure min

Description   Minimum or maximum value measured by device.

User interface   Signed floating-point number

Counter limit underruns sensor Pmin

Navigation   ▣▯   Diagnostics → Min/max val. → Counter P < Pmin

Description   Counts how many times the value underruns the sensor specific minimum values.
                           Sensor specific minimum values are shown in Application/Sensor menu.

User interface   0 to 65 535

Counter underruns of user limit Pmin

Navigation   ▣▯   Diagnostics → Min/max val. → Counter < P user

Description   Counts how many times the value underruns the minimum values defined by the user.
                           User defined minimum values are shown in Diagnostic/Diagnostic settings/Properties
                           menu.

User interface   0 to 65 535

Minimum sensor temperature

Navigation	◉▣ Diagnostics → Min/max val. → Min. sensor temp
Description	Minimum or maximum value measured by device. Users cannot reset this value.
User interface	−273.15 to 9 726.85 ℃

Counter limit underruns sensor Tmin

Navigation	◉▣ Diagnostics → Min/max val. → Counter T < Tmin
Description	Counts how many times the value underruns/overruns the sensor specific minimum/ maximum values. Sensor specific minimum/maximum values are shown in Application/Sensor menu.
User interface	0 to 65 535

Counter underruns of user limit Tmin

Navigation	◉▣ Diagnostics → Min/max val. → Counter < T user
User interface	0 to 65 535

Minimum terminal voltage

Navigation	◉▣ Diagnostics → Min/max val. → Min.term.volt.
Description	Minimum or maximum measured terminal (supply) voltage.
User interface	0.0 to 50.0 V

Minimum electronics temperature

Navigation	◉▣ Diagnostics → Min/max val. → Min.electr.temp.
Description	Minimum or maximum measured main electronics temperature.
User interface	Signed floating-point number

Reset user defined counters P and T	🔒

Navigation	🎮🖥 Diagnostics → Min/max val. → Reset count. P T

Selection	• Cancel
	• Confirm

Pressure max	

Navigation	🎮🖥 Diagnostics → Min/max val. → Pressure max

Description	Minimum or maximum value measured by device.

User interface	Signed floating-point number

Counter limit overruns sensor Pmax	

Navigation	🎮🖥 Diagnostics → Min/max val. → Counter P > Pmax

Description	Counts how many times the value overruns the sensor specific maximum values.
	Sensor specific maximum values are shown in Application/Sensor menu.

User interface	0 to 65 535

Counter overruns of user limit Pmax	

Navigation	🎮🖥 Diagnostics → Min/max val. → Counter > P user

Description	Counts how many times the value overruns the maximum values defined by the user.
	User defined maximum values are shown in Diagnostic/Diagnostic settings/Properties
	menu.

User interface	0 to 65 535

Maximum sensor temperature	

Navigation	🎮🖥 Diagnostics → Min/max val. → Max. sensor temp

Description	Minimum or maximum value measured by device.
	Users cannot reset this value.

User interface	−273.15 to 9 726.85 °C

Counter limit overruns sensor Tmax

Navigation	▣▤ Diagnostics → Min/max val. → Counter T > Tmax
Description	Counts how many times the value underruns/overruns the sensor specific minimum/maximum values. Sensor specific minimum/maximum values are shown in Application/Sensor menu.
User interface	0 to 65 535

Counter overruns of user limit Tmax

Navigation	▣▤ Diagnostics → Min/max val. → Counter > T user
User interface	0 to 65 535

Maximum terminal voltage

Navigation	▣▤ Diagnostics → Min/max val. → Max.term.voltage
Description	Minimum or maximum measured terminal (supply) voltage.
User interface	0.0 to 50.0 V

Maximum electronics temperature

Navigation	▣▤ Diagnostics → Min/max val. → Max.electr.temp.
Description	Minimum or maximum measured main electronics temperature.
User interface	Signed floating-point number

3.3.4 "Simulation" submenu

Navigation   ▣   Diagnostics → Simulation

Simulation	🔒

Navigation	▣▣ Diagnostics → Simulation → Simulation
Description	Simulates one or more process variables and/or events. Warning: Output will reflect the simulated value or event.
Selection	• Off • Current output • Diagnostic event simulation • Pressure

Value pressure simulation	🔒

Navigation	▣▣ Diagnostics → Simulation → Pressure
User entry	Signed floating-point number

Value current output	🔒

Navigation	▣▣ Diagnostics → Simulation → Current output
Description	Defines the value of the simulated output current.
User entry	3.59 to 23 mA

Diagnostic event simulation	🔒

Navigation	▣▣ Diagnostics → Simulation → Diagnostic event
Description	Use this function to select a diagnostic event for the simulation process that is activated.
Selection	• Off • Diagnostic event picklist (depends on the category selected)

Additional information   *Description*

> For the simulation, you can choose from the diagnostic events of the category selected in the **Diagnostic event category** parameter.

3.3.5   "Heartbeat Technology" submenu

Navigation   Diagnostics → Heartbeat Techn.

"Heartbeat Verification" submenu

Navigation   Diagnostics → Heartbeat Techn. → Heartbeat Verif.

Date/time Heartbeat Verification

Navigation	Diagnostics → Heartbeat Techn. → Heartbeat Verif. → Date/time Heartbeat Verification
Description	Date and time of last Heartbeat Verification.
	This value is updated with every Heartbeat verification.
	Note: If time information is not available, e.g. Heartbeat verification is started from display, '--------' is shown.
User interface	Character string comprising numbers, letters and special characters

---

Operating time (Verification)

Navigation	Diagnostics → Heartbeat Techn. → Heartbeat Verif. → Operating time
User interface	Days (d), hours (h), minutes (m), seconds (s)

Verification result

Navigation	Diagnostics → Heartbeat Techn. → Heartbeat Verif. → Verific. result
User interface	▪ Not done ▪ Passed ▪ Not done ▪ Failed

Status

Navigation	🎛🖵 Diagnostics → Heartbeat Techn. → Heartbeat Verif. → Status
Description	Displays the current status of the verification.
User interface	• Done • Busy • Failed • Not done

"Loop diagnostics" submenu

Navigation   🖵   Diagnostics → Heartbeat Techn. → Loop diagn.

Rebuild baseline   🔒

Navigation	🎛🖵 Diagnostics → Heartbeat Techn. → Loop diagn. → Reb. baseline
Description	Notice The current output is simulated. Bridge the PLC or take other appropriate measures to prevent an erroneous triggering of alarm messages or changes in the control loop behavior. The baseline should be rebuilt if planned changes have been made in the loop.
Selection	• No • Yes

Tolerated deviation +/-   🔒

Navigation	🎛🖵 Diagnostics → Heartbeat Techn. → Loop diagn. → Toler. deviation
Description	A value should be chosen to ensure that normal voltage deviations do not lead to unwanted messages. Default 1.5 V DC
User entry	0.5 to 3.0 V

Baseline status

Navigation	🖥🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → Baseline status

Description

"Failed"
Means, baseline is not available or creation not possible.

"Success"
Baseline is available.

User interface
- Failed
- Success

Loop diagnostics   🔒

Navigation	🖥🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → Loop diagn.

Description

Enable/disable loop diagnostics.

Note:
If the function is disabled, there is no analysis and no event message.

Selection
- Disable
- Enable

Terminal voltage 1

Navigation	🖥🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → Terminal volt. 1

Description   Shows the current terminal voltage that is applied at the output

User interface   0.0 to 50.0 V

Clamping voltage lower threshold

Navigation	🖥🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → Lower threshold

User interface   0.0 to 50.0 V

Clamping voltage upper threshold

Navigation	🖥🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → Upper threshold

User interface   0.0 to 50.0 V

---

806 Event delay	🔒

Navigation	🔏🖳 Diagnostics → Heartbeat Techn. → Loop diagn. → 806 Event delay
Description	Displays how long the triggering status must be present until an event message is issued. Used to filter out short-term signal interference.
User entry	0 to 60 s

"Statistical Sensor Diagnostics" submenu

Navigation	🖳	Diagnostics → Heartbeat Techn. → SSD

SSD: Statistical Sensor Diagnostics	🔒

Navigation	🔏🖳 Diagnostics → Heartbeat Techn. → SSD → Stat. Sens. Diag
Description	Enable or disable SSD. After selecting "Disable", no statistical sensor diagnosis takes place. No diagnostic messages are output.
Selection	• Disable • Enable

System status

Navigation	🔏🖳 Diagnostics → Heartbeat Techn. → SSD → System status
User interface	• Idle • No sufficient signal noise • Stable • Not stable • Verify System Dynamics • Process dynamic too high

---

Signal status

Navigation	🔏🖳 Diagnostics → Heartbeat Techn. → SSD → Signal status
User interface	• Idle • Building Baseline • Verifying Baseline

- Verifying baseline failed
- Monitoring
- Out of range
- Monitoring inactive

Signal noise status

Navigation   ◉▣   Diagnostics → Heartbeat Techn. → SSD → Noise status

User interface   • Idle
                                  • Building Baseline
                                  • Verifying Baseline
                                  • Verifying baseline failed
                                  • Monitoring
                                  • Out of range
                                  • Monitoring inactive

Counter Baseline creation SSD

Navigation   ◉▣   Diagnostics → Heartbeat Techn. → SSD → Counter Baseline

Description   Specifies how often the baseline has been rebuilt.

User interface   Positive integer

3.3.6   "Diagnostic settings" submenu

Navigation   ▣   Diagnostics → Diag. settings

"Properties" submenu

Navigation   ▣   Diagnostics → Diag. settings → Properties

SSD Out of range delay time   🔒

Navigation   ▣   Diagnostics → Diag. settings → Properties → SSD Delay time

User entry   0 to 604 800 s

SSD Monitoring delay time	🔒

Navigation	🖥	Diagnostics → Diag. settings → Properties → SSD Verz. Zeit
User entry		0 to 86 400 s

500 Process alert pressure	🔒

Navigation	🖥	Diagnostics → Diag. settings → Properties → 500 Pressure
Description		Define whether user-defined pressure limits should be set. If "Off" is selected, no analysis will take place and no event message will be generated.
Selection		• Off • On

Low alert value	🔒

Navigation	🖥	Diagnostics → Diag. settings → Properties → Low alert value
Description		Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry		Signed floating-point number

High alert value	🔒

Navigation	🖥	Diagnostics → Diag. settings → Properties → High alert value
Description		Set range. If this limit value is exceeded or undercut, a diagnostic event is generated. There is no hysteresis.
User entry		Signed floating-point number

501 Process alert scaled variable	🔒

Navigation	🖥	Diagnostics → Diag. settings → Properties → 501 Scaled var.
Description		Define whether user-defined limits should be set. If "Off" is selected, no analysis will take place and no event message will be generated.

Selection   • Off
                                  • On

Low alert value   🔒

Navigation   🖳   Diagnostics → Diag. settings → Properties → Low alert value

Description   Set range.
                                  If this limit value is exceeded or undercut, a diagnostic event is generated. There is no
                                  hysteresis.

User entry   Signed floating-point number

High alert value   🔒

Navigation   🖳   Diagnostics → Diag. settings → Properties → High alert value

Description   Set range.
                                  If this limit value is exceeded or undercut, a diagnostic event is generated. There is no
                                  hysteresis.

User entry   Signed floating-point number

User temperature process alert   🔒

Navigation   🖳   Diagnostics → Diag. settings → Properties → UserTemp alert

Description   Define whether the user-defined sensor temperature limits should be set. If "Off" no
                                  analysis and therefore no event message will take place.

Selection   • Off
                                  • On

Low alert value   🔒

Navigation   🖳   Diagnostics → Diag. settings → Properties → Low alert value

Description   Set range.
                                  If this limit value is exceeded or undercut, a diagnostic event is generated. There is no
                                  hysteresis.

User entry   −50 to 150 ℃

High alert value	ⓐ

Navigation	▣	Diagnostics → Diag. settings → Properties → High alert value

Description   Set range.
                     If this limit value is exceeded or undercut, a diagnostic event is generated. There is no
                     hysteresis.

User entry   −50 to 150 ℃

806 Diagnostic behavior	ⓐ

Navigation	▣▣	Diagnostics → Diag. settings → Properties → 806 Diag. behav.

Description   Select event behavior

                     "Logbook entry only": no digital or analog transmission of the message.

                     "Warning": Current output unchanged. Message is output digitally (default).

                     If the permissible conditions are reached again, the warning is no longer available in the
                     instrument.

Selection   • Warning
                     • Logbook entry only

806 Event category	ⓐ

Navigation	▣▣	Diagnostics → Diag. settings → Properties → 806Event category

Description   Select category for diagnostic message.

Selection   • Failure (F)
                     • Function check (C)
                     • Out of specification (S)
                     • Maintenance required (M)
                     • No effect (N)

806 Event delay	ⓐ

Navigation	▣	Diagnostics → Diag. settings → Properties → 806 Event delay

Description   Displays how long the triggering status must be present until an event message is issued.
                     Used to filter out short-term signal interference.

User entry   0 to 60 s

"Configuration" submenu

Sensor pressure range behavior	🔒

Navigation	🔲 Diagnostics → Diag. settings → Configuration → Process → P-range behavior
Description	Select event behavior "Alarm": Current output adopts the set alarm current. "Warning": Current output unchanged. Message is displayed digitally (factory setting). "Logbook entry only": No digital or analog forwarding of the message. "Special": – Lower sensor limit undercut: Current output < 3.6 mA. – Upper sensor limit exceeded: Current output 21 to 23 mA, depending on the setting. Regardless of the setting, the message appears on the display. If the permissible conditions are reached again, the warning message disappears.
Selection	• Alarm • Warning • Logbook entry only • Special

"Basic settings" submenu

Navigation   ⊟   Application → Sensor → Basic settings

Output current transfer function

Navigation   ⊞⊟   Application → Sensor → Basic settings → Curr. trans.func

Description   Linear
                         The linear pressure signal is used for the current output. The flow must be calculated in
                         the evaluation unit.

                         Square root - differential pressure only
                         The root flow signal is used for the current output. The 'Flow (square root)'
                         current signal is indicated on the on-site display with a root symbol.

User interface	• Linear
	• Square root [*]

Damping	🔒

Navigation	🖩🖳 Application → Sensor → Basic settings → Damping

Description	The damping is effective before the measured value is further processed, i.e., before the following processes: - Scaling - Limit value monitoring - Forwarding to display - Forwarding to Analog Input Block
	Note: The Analog Input Block has its own "Damping" parameter. In the measurement chain, only one of the two attenuation parameters shall have a value other than 0. Otherwise, the signal will be attenuated several times.

User entry	0 to 999.0 s

"Sensor calibration" submenu

Navigation	🖳 Application → Sensor → Sensor cal.

Zero adjustment	🔒

Navigation	🖩🖳 Application → Sensor → Sensor cal. → Zero adjustment

Description	Due to the mounting position of the measuring instrument, a pressure shift may occur. The pressure shift can be corrected with the zero adjustment.

Selection	• No
	• Confirm

Calibration offset	🔒

Navigation	🖩🖳 Application → Sensor → Sensor cal. → Calibr offset

Prerequisite	Absolute pressure sensor

---

* Visibility depends on order options or device settings

Description   Enter the value by which the measured value should be corrected, e.g., a position
                               adjustment for absolute pressure sensors.

User entry   Signed floating-point number

Lower sensor trim measured value

Navigation   🖳   Application → Sensor → Sensor cal. → LowerTrimMeasVal

User interface   Signed floating-point number

| Lower sensor trim | 🔒 |

| Navigation | ⊟ | Application → Sensor → Sensor cal. → LowerSensor trim |

Description   These two parameters allow a recalibration of the sensor, i.e., if you want to fit the sensor to the measuring range. The highest accuracy is obtained when the value for the "Lower sensor trim" is as close as possible to "LRV" (lower range value) and the value for "Upper sensor trim" as close as possible to "URV" (upper range value).

There must be a known reference pressure when setting a new lower or upper sensor characteristic curve value. The more accurate the reference pressure is during recalibration, the higher the accuracy of the pressure transmitter later. A new value is assigned to the applied pressure using "Lower sensor trim" and "Upper sensor trim" parameters.

Note:

The value entered can be at maximum "Sensor pressure" +/- 10 % of the permitted maximum pressure (URL).

Proceed as follows:
- Apply reference pressure for lower range value ("LRV")
- Enter the measured reference pressure at "Lower sensor trim" and confirm
- Apply reference pressure for upper range value ("URV")
- Enter the measured reference pressure at "Upper sensor trim" and confirm
- The sensor is now calibrated

User entry   Signed floating-point number

| Upper sensor trim measured value | |

| Navigation | ⊟ | Application → Sensor → Sensor cal. → UpperTrimMeasVal |

User interface   Signed floating-point number

Upper sensor trim	🔒

Navigation	🖥 Application → Sensor → Sensor cal. → UpperSensor trim
Description	These two parameters allow a recalibration of the sensor, i.e., if you want to fit the sensor to the measuring range. The highest accuracy is obtained when the value for the "Lower sensor trim" is as close as possible to "LRV" (lower range value) and the value for the "Upper sensor trim" as close as possible to "URV" (upper range value).
	There must be a known reference pressure when setting a new lower or upper sensor characteristic curve value. The more accurate the reference pressure is during recalibration, the higher the accuracy of the pressure transmitter later. A new value is assigned to the applied pressure using "Lower sensor trim" and "Upper sensor trim" parameters.
	Note:
	The value entered can be at maximum "Sensor pressure" +/- 10 % of the permitted maximum pressure (URL).
	Proceed as follows: - Apply reference pressure for lower range value ("LRV") - Enter the measured reference pressure at "Lower sensor trim" and confirm - Apply reference pressure for upper range value ("URV") - Enter the measured reference pressure at "Upper sensor trim" and confirm - The sensor is now calibrated

3.4.4 "Current output" submenu

Navigation   ⊠   Application → Curr.output

Assign PV	ⓐ

Navigation	⊠	Application → Curr.output → Assign PV

Description   Use this function to select a measured variable (HART device variable) for the primary
                              dynamic variable (PV).

Selection   • Pressure
                              • Scaled variable

Measuring mode current output	ⓐ

Navigation	ⓐⓑ	Application → Curr.output → Output mode

Description   Select curve of current output.

Selection   • Standard
                              • Inverse
                              • Bi-directional

Current range output	ⓐ

Navigation	ⓐⓑ	Application → Curr.output → Current range

Description   Defines the current range used to transmit the measured or calculated value.
                              In brackets are indicated the "low saturation value" and the "high saturation value".
                              If Measured value ≤ "low saturation", the output current is set to "low saturation".
                              If Measured value ≥ "high saturation", the output current is set to "high saturation".

                              Note:
                              Currents below 3.6 mA or above 21.5 mA can be used to signal an alarm.

Selection   • 4...20 mA (4...20.5 mA)
                              • 4...20 mA NE (3.8...20.5 mA)
                              • 4...20 mA US (3.9...20.8 mA)

Lower range value output   🔒

Navigation	🎛🖳 Application → Curr.output → Low.range outp
Description	Depending on which variable has been selected as "Process variable output current ", define the related lower (4 mA) and upper range values (20 mA).
User entry	Signed floating-point number

Upper range value output   🔒

Navigation	🎛🖳 Application → Curr.output → Upp.range outp
Description	Depending on which variable has been selected as "Process variable output current ", define the related lower (4 mA) and upper range values (20 mA).
User entry	Signed floating-point number

Failure behavior current output   🔒

Navigation	🎛🖳 Application → Curr.output → Failure behav.
Description	Defines which current the output assumes in the case of an error. Min: < 3.6 mA Max: >21.5 mA Note: The hardware DIP Switch for alarm current has priority over software setting.
Selection	• Min. • Max.

Failure current   🔒

Navigation	🖳 Application → Curr.output → Failure current
Description	Enter current output value in alarm condition
User entry	21.5 to 23 mA

Output current

Navigation	ⓘ▣ Application → Curr.output → Output curr.
Description	Shows the value currently calculated for the current output
User interface	3.59 to 23 mA

Terminal current

Navigation	ⓘ▣ Application → Curr.output → Terminal curr.
Description	Shows the current value of the current output which is currently measured
User interface	0 to 30 mA

4 mA trim value   🔒

Navigation	▣ Application → Curr.output → 4 mA trim value
Description	Enter the trim value for the 4 mA current output. Note: Simulation must be active.
User entry	3 to 5 mA

20 mA trim value   🔒

Navigation	▣ Application → Curr.output → 20 mA trim value
Description	Enter the trim value for the 20 mA current output. Note: Simulation must be active.
User entry	18 to 22 mA

3.4.5 "HART output" submenu

Navigation   ▣   Application → HART output

"Configuration" submenu

Navigation   ▣   Application → HART output → Configuration

HART address   🔒

Navigation	▣▣ Application → HART output → Configuration → HART address
Description	Define the HART address of the device.
User entry	0 to 63
Additional information	• The measured value can only be transmitted via the current value if the address is set to "0". The current is fixed at 4.0 mA for all other addresses (Multidrop mode). • Only addresses in the range 0 to 15 are permitted for a system according to HART 5.0. • All addresses in the range 0 to 63 are permitted for a system with HART 6.0 and higher.

HART short tag   🔒

Navigation	▣▣ Application → HART output → Configuration → HART short tag
Description	Defines the short tag for the measuring point. Maximum length: 8 characters Allowed characters: A-Z, 0-9, certain special characters
User entry	Max. 8 characters: A to Z, 0 to 9 and certain special characters (e.g. punctuation marks, @, %).

Device tag   🔒

Navigation	▣▣ Application → HART output → Configuration → Device tag
Description	Enter a unique name for the measuring point to identify the device quickly within the plant.
User entry	Character string comprising numbers, letters and special characters (32)

No. of preambles	🔒

Navigation	🖥🖳 Application → HART output → Configuration → No. of preambles
Description	Defines the number of preambles in the HART telegram
User entry	5 to 20

Loop current mode	🔒

Navigation	🖥🖳 Application → HART output → Configuration → Loop curr mode
Description	If Loop current mode is disabled, Multi-drop communication mode is activated. Multi-drop is a HART digital communication mode where multiple devices may share the same pair of wires for power and communications. In this mode the output current is fixed.
Selection	• Disable • Enable

"HART output" submenu

Navigation	🖳 Application → HART output → HART output

Assign PV	🔒

Navigation	🖥🖳 Application → HART output → HART output → Assign PV
Description	Use this function to select a measured variable (HART device variable) for the primary dynamic variable (PV).
Selection	• Pressure • Scaled variable

Primary variable (PV)	

Navigation	🖳 Application → HART output → HART output → Primary var (PV)
Description	Shows the first HART value (PV).
Additional information	

Assign SV	🔒

Navigation	🖥️🔲 Application → HART output → HART output → Assign SV

Description	Use this function to select a measured variable (HART device variable) for the secondary dynamic variable (SV).

Selection	• Pressure

Additional information	*Selection*
	• **Sensor pressure** option
	Sensor Pressure is the raw signal from sensor before damping and position adjustment.
	• **Terminal current** option
	The terminal current is the read-back current on terminal block.
	• **Signal noise detected** option
	0 % - Signal noise is within the permissible range.
	100 % - Signal noise is outside of the permissible range.
	• **Loop current** option
	The loop current is the output current set by the applied pressure.

Secondary variable (SV)	

Navigation	🔲 Application → HART output → HART output → Second.var(SV)

Description	Shows the second HART value (SV).

Assign TV	🔒

Navigation	🖥️🔲 Application → HART output → HART output → Assign TV

Description	Use this function to select a measured variable (HART device variable) for the tertiary (third) dynamic variable (TV).

---

*   Visibility depends on order options or device settings

Selection	• Pressure
	• Scaled variable
	• Sensor temperature
	• Sensor pressure
	• Electronics temperature
	• Terminal current [*]
	• Terminal voltage [*]
	• Median of pressure signal [*]
	• Noise of pressure signal [*]
	• Signal noise detected [*]
	• Percent of range
	• Loop current
	• Not used

Additional information   *Selection*

• **Sensor pressure** option
  Sensor Pressure is the raw signal from sensor before damping and position adjustment.
• **Terminal current** option
  The terminal current is the read-back current on terminal block.
• **Signal noise detected** option
  0 % - Signal noise is within the permissible range.
  100 % - Signal noise is outside of the permissible range.
• **Loop current** option
  The loop current is the output current set by the applied pressure.

Tertiary variable (TV)

Navigation	☒	Application → HART output → HART output → Tertiary var(TV)

Description	Shows the third HART value (TV).

Assign QV   ⓐ

Navigation	☷☐	Application → HART output → HART output → Assign QV

Description	Use this function to select a measured variable (HART device variable) for the quaternary (fourth) dynamic variable (QV).

Selection	• Pressure
	• Scaled variable
	• Sensor temperature
	• Sensor pressure
	• Electronics temperature
	• Terminal current [*]
	• Terminal voltage [*]
	• Median of pressure signal [*]
	• Noise of pressure signal [*]
	• Signal noise detected [*]

---

*   Visibility depends on order options or device settings

- Percent of range
- Loop current
- Not used

Additional information   *Selection*

- **Sensor pressure** option
  Sensor Pressure is the raw signal from sensor before damping and position adjustment.
- **Terminal current** option
  The terminal current is the read-back current on terminal block.
- **Signal noise detected** option
  0 % - Signal noise is within the permissible range.
  100 % - Signal noise is outside of the permissible range.
- **Loop current** option
  The loop current is the output current set by the applied pressure.

Quaternary variable (QV)

Navigation   🔲   Application → HART output → HART output → Quaterna.var(QV)

Description   Shows the fourth value (QV).

"Burst configuration 1" submenu

Navigation   🔲   Application → HART output → Burst config. 1

Burst mode 1   🔒

Navigation   🔲   Application → HART output → Burst config. 1 → Burst mode 1

Description   Use this function to select whether to activate the HART burst mode for burst message X.

Selection
- Off
  The measuring device transmits data only when requested by the HART master.
- On
  The measuring device transmits data regularly without being requested.

Additional information   *Selection*

- Off
  The measuring device transmits data only when requested by the HART master.
- On
  The measuring device transmits data regularly without being requested.

Burst command 1	🔒

Navigation	▣ Application → HART output → Burst config. 1 → Burst command 1
Description	Use this function to select the HART command that is sent to the HART master.
Selection	• Primary variable (PV) • Loop Current and Percent of Range • Dynamic Variables • Device variables with status • Device variables • Additional device status

Additional information	*Selection*
	
	• Command 1
	  Read out the primary variable.
	• Command 2
	  Read out the current and the main measured value as a percentage.
	• Command 3
	  Read out the dynamic HART variables and the current.
	• Command 9
	  Read out the dynamic HART variables including the related status.
	• Command 33
	  Read out the dynamic HART variables including the related unit.
	• Command 48
	  Read out the complete device diagnostics.
	
	"Command 33" option
	
	The HART device variables are defined via Command 107.
	
	Commands
	
	ℹ️ • Information about the defined details of the command: HART specifications
	     • The measured variables (HART device variables) are assigned to the dynamic
	       variables in the **Output** submenu.

Burst variable 0	🔒

Navigation	▣ Application → HART output → Burst config. 1 → Burst variable 0
Description	For HART command 9 and 33: select the HART device variable or the process variable.
Selection	• Pressure • Scaled variable • Sensor temperature • Sensor pressure • Electronics temperature • Measured current [*] • Terminal voltage 1 [*] • Median of pressure signal [*] • Noise of pressure signal [*]

---

[*]   Visibility depends on order options or device settings

- Signal noise detected *
- Percent of range
- Measured current
- Primary variable (PV)
- Secondary variable (SV)
- Tertiary variable (TV)
- Quaternary variable (QV)
- Not used

Additional information   *Selection*

If a burst message is not configured, the **Not used** option is set.

Burst variable 1

Navigation   Application → HART output → Burst config. 1 → Burst variable 1

Description   For HART command 9 and 33: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🖺 155).

Burst variable 2

Navigation   Application → HART output → Burst config. 1 → Burst variable 2

Description   For HART command 9 and 33: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🖺 155).

Burst variable 3

Navigation   Application → HART output → Burst config. 1 → Burst variable 3

Description   For HART command 9 and 33: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🖺 155).

Burst variable 4

Navigation   Application → HART output → Burst config. 1 → Burst variable 4

Description   For HART command 9: select the HART device variable or the process variable.

---

*   Visibility depends on order options or device settings

Selection   Please refer to the **Burst variable 0** parameter (→ 🕮 155).

Burst variable 5	🔒

Navigation   🖥   Application → HART output → Burst config. 1 → Burst variable 5

Description   For HART command 9: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🕮 155).

Burst variable 6	🔒

Navigation   🖥   Application → HART output → Burst config. 1 → Burst variable 6

Description   For HART command 9: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🕮 155).

Burst variable 7	🔒

Navigation   🖥   Application → HART output → Burst config. 1 → Burst variable 7

Description   For HART command 9: select the HART device variable or the process variable.

Selection   Please refer to the **Burst variable 0** parameter (→ 🕮 155).

Burst trigger mode	🔒

Navigation   🖥   Application → HART output → Burst config. 1 → Trigger mode

Description   Use this function to select the event that triggers burst message X.

Selection   • Continuous
                      • Window *
                      • Rising *
                      • Falling *
                      • On change

_____

*   Visibility depends on order options or device settings

Additional information   *Selection*

- Continuous
  The message is sent continuously, at least at intervals corresponding to the time frame
  specified in the **Burst min period** parameter (→ 🗎 158).
- Window
  The message is sent if the specified measured value has changed by the value in the
  Burst trigger level parameter (→ 🗎 158).
- Rising
  The message is sent if the specified measured value exceeds the value in the **Burst
  trigger level** parameter (→ 🗎 158).
- Falling
  The message is sent if the specified measured value drops below the value in the **Burst
  trigger level** parameter (→ 🗎 158).
- On change
  The message is sent if a measured value changes in the burst message.

Burst trigger level	🔒

Navigation   ☒   Application → HART output → Burst config. 1 → Trigger level

Description   Use this function to enter the burst trigger value.

User entry   Signed floating-point number

Additional information   *Description*

Together with the option selected in the **Burst trigger mode** parameter (→ 🗎 157) the
burst trigger value determines the time of burst message X.

Min. update period	🔒

Navigation   ☒   Application → HART output → Burst config. 1 → Min. upd. per.

Description   Use this function to enter the minimum time span between two burst commands of burst
message X.

User entry   Positive integer

Max. update period	🔒

Navigation   ☒   Application → HART output → Burst config. 1 → Max. upd. per.

Description   Use this function to enter the maximum time span between two burst commands of burst
message X.

User entry   Positive integer

"Information" submenu

Navigation   🔲   Application → HART output → Information

Device ID

Navigation	🔳🔲 Application → HART output → Information → Device ID
Description	Use this function to view the device ID for identifying the measuring device in a HART network.
User interface	6-digit hexadecimal number
Additional information	*Description*

ℹ️ In addition to the device type and manufacturer ID, the device ID is part of the unique ID. Each HART device is uniquely identified by the unique device ID.

Device type

Navigation	🔳🔲 Application → HART output → Information → Device type
Description	Displays the device type with which the measuring device is registered with the HART Communication Foundation.
User interface	2-digit hexadecimal number
Factory setting	0x54
Factory setting	0x5A
Additional information	*Description*

ℹ️ The device type is specified by the manufacturer. It is needed to assign the appropriate device description file (DD) to the device.

Device revision

Navigation	🔳🔲 Application → HART output → Information → Device revision
Description	Displays the device revision with which the device is registered with the HART Communication Foundation.
User interface	2-digit hexadecimal number

Additional information   *Description*

> ℹ️ The device revision is needed to assign the appropriate device description file (DD) to the device.

HART short tag   🔒

Navigation   ⓘⓢ   Application → HART output → Information → HART short tag

Description   Defines the short tag for the measuring point.

Maximum length: 8 characters
Allowed characters: A-Z, 0-9, certain special characters

User entry   Max. 8 characters: A to Z, 0 to 9 and certain special characters (e.g. punctuation marks, @, %).

HART revision

Navigation   ⓘⓢ   Application → HART output → Information → HART revision

Description   Shows the HART revision of the device.

HART descriptor   🔒

Navigation   ⓘⓢ   Application → HART output → Information → HART descriptor

Description   Description for the measuring point.

User entry   Character string comprising numbers, letters and special characters (16)

HART message   🔒

Navigation   ⓘⓢ   Application → HART output → Information → HART message

Description   A HART message which is sent via the HART protocol when requested by the master.

User entry   Character string comprising numbers, letters and special characters (32)

HART date code	🔒

Navigation   🖩🖵   Application → HART output → Information → HART date code

Description   Date of the last configuration change

User entry   Character string comprising numbers, letters and special characters (10)

Additional information   Date format: YYYY-MM-DD

ℹ️ Make sure you adhere to this format when entering the date. Otherwise errors may occur in individual HART commands.

3.5   "System" menu

Navigation   ▣   System

3.5.1   "Device management" submenu

Navigation   ▣   System → Device manag.

Device tag   ⏏

Navigation   ▣▣   System → Device manag. → Device tag

Description   Enter a unique name for the measuring point to identify the device quickly within the plant.

User entry   Character string comprising numbers, letters and special characters (32)

Locking status

Navigation   ▣▣   System → Device manag. → Locking status

Description   Displays the active write protection.

User interface   • Hardware locked
                                     • Safety locked
                                     • Temporarily locked

Additional information   *User interface*

                                     If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

                                     📖 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

                                     Selection

                                     Function scope of the "Locking status" parameter

Options	Description
None	The access status displayed in the **Access status display** parameter applies. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the main electronics module. This prevents write access to the parameters (e.g. via the local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed once again.

Configuration counter

Navigation	⊞⊟ System → Device manag. → Config. counter
Description	Displays the counter for changes to the device parameters.
	Additional information: - If the value for a static parameter is changed when optimizing or configuring the parameter, the counter is incremented by 1. This is to enable tracking different parameter versions. - When multiple parameters are changed simultaneously, e.g. when loading parameters into the device from an external source such as FieldCare, the counter may display a higher value. The counter cannot be reset, nor is it reset to a default value on performing a device reset. - Once the counter has reached the value 65535, it restarts at 0.
User interface	0 to 65 535

Reset device   🔒

Navigation	⊞⊟ System → Device manag. → Reset device
Description	Use this function to choose whether to reset the device configuration - either entirely or in part - to a defined state.
Selection	• Cancel • To factory defaults * • To delivery settings * • Restart device

Additional information   *Selection*

Options	Description
Cancel	No action is executed and the user exits the parameter.
To factory defaults	Every parameter is reset to its factory setting.
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting. ℹ This option is not visible if no customer-specific settings have been ordered.
Restart device	The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.

---

*   Visibility depends on order options or device settings

3.5.2   "User management" submenu

Navigation   🔲   System → User manag.

User role

Navigation	🔲🔲	System → User manag. → User role
Description		Displays the access authorization to the parameters via the operating tool.
User interface		• Operator • Maintenance • Expert
Additional information		*Description*

Access authorization can be modified via the **Enter access code** parameter.

If additional write protection is active, this restricts the current access authorization even further.

User interface

Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

Password

Navigation	🔲	System → User manag. → Password
Description		Enter the password for the "Maintenance" user role to get access to the functionality of this role.
User entry		Character string comprising numbers, letters and special characters (16)

Enter access code	🔒

Navigation	🔲	System → User manag. → Ent. access code
Description		Use this function to enter the user-specific release code to remove parameter write protection in the operating tool.
User entry		0 to 9 999

Status password entry

Navigation	🖩🖳 System → User manag. → Status pw entry
Description	Use this function to display the status of the password verification.
User interface	• -------- • Wrong password • Password rule violated • Password accepted • Permission denied • Confirm PW mismatch • Reset password accepted • Invalid user role • Wrong sequence of entry

---

New password   🔒

Navigation	🖩🖳 System → User manag. → New password
Description	Define the new "Maintenance" password. A new password is valid after it has been confirmed within the "Confirm new password" parameter. Any valid password consists of 4 to 16 characters and can contain letters and numbers.
User entry	Character string comprising numbers, letters and special characters (16)

Confirm new password   🔒

Navigation	🖩🖳 System → User manag. → Confirm password
Description	Enter the new password again to confirm.
User entry	Character string comprising numbers, letters and special characters (16)

Old password   🔒

Navigation	🖩🖳 System → User manag. → Old password
Description	Enter the current password, to subsequently change the existing password.
User entry	Character string comprising numbers, letters and special characters (16)

Reset password

Navigation	⊟ System → User manag. → Reset password
Description	Enter a code to reset the current "Maintenance" password. The code is delivered by your local support.
User entry	Character string comprising numbers, letters and special characters (16)

3.5.3   "Bluetooth configuration" submenu

Navigation   ⊟   System → Bluetooth conf.

Bluetooth activation

Navigation	▣⊟ System → Bluetooth conf. → Bluetooth active
Description	If Bluetooth is deactivated, it can only be reactivated via the display or the operating tool. Reactivating via the SmartBlue app is not possible.
Selection	• Disable • Enable

3.5.4   "Display" submenu

Navigation   ⊟   System → Display

Language

Navigation	▣⊟ System → Display → Language
Prerequisite	A local display is provided.
Description	Use this function to select the configured language on the local display.
Selection	• English • Deutsch • Français • Español • Italiano • Nederlands

- Portuguesa
- Polski
- русский язык (Russian)
- Svenska
- Türkçe
- 中文 (Chinese)
- 日本語 (Japanese)
- 한국어 (Korean)
- Bahasa Indonesia
- tiếng Việt (Vietnamese)
- čeština (Czech)

Factory setting   English (alternatively, the ordered language is preset in the device)

Format display

Navigation   ▣▤   System → Display → Format display

Prerequisite   A local display is provided.

Description   Use this function to select how the measured value is shown on the local display.

Selection
- 1 value, max. size
- 1 bargraph + 1 value
- 2 values

Additional information   *Description*

The display format (size, bar graph etc.) and number of measured values displayed simultaneously (1 to 4) can be configured. This setting only applies to normal operation.

- The **Value 1 display** parameter (→ 🖺 167)…**Value 8 display** parameter **Value 4 display** parameter (→ 🖺 169) are used to specify which measured values are shown on the local display and in what order.
- If more measured values are specified than the display mode selected permits, then the values alternate on the device display. The display time until the next change is configured using the **Display interval** parameter.

Value 1 display

Navigation   ▣▤   System → Display → Value 1 display

Prerequisite   A local display is provided.

Description   Use this function to select one of the measured values shown on the local display.

Selection
- Pressure
- Scaled variable
- Current output
- Sensor temperature
- Percent of range

Additional information   *Description*

If several measured values are displayed at once, the measured value selected here will be the first value to be displayed. The value is only displayed during normal operation.

ℹ The **Format display** parameter (→ 🕮 167) is used to specify how many measured values are displayed simultaneously and how.

Dependency

ℹ The unit of the displayed measured value is taken from the **System units** submenu.

Value 2 display   🔒

Navigation	⊞⊟	System → Display → Value 2 display

Prerequisite   A local display is provided.

Description   Use this function to select one of the measured values shown on the local display.

Selection
- None
- Pressure
- Scaled variable
- Current output
- Sensor temperature
- Percent of range

Additional information   *Description*

If several measured values are displayed at once, the measured value selected here will be the second value to be displayed. The value is only displayed during normal operation.

ℹ The **Format display** parameter (→ 🕮 167) is used to specify how many measured values are displayed simultaneously and how.

Dependency

ℹ The unit of the displayed measured value is taken from the **System units** submenu.

Value 3 display   🔒

Navigation	⊞⊟	System → Display → Value 3 display

Prerequisite   A local display is provided.

Description   Use this function to select one of the measured values shown on the local display.

Selection
- None
- Pressure
- Scaled variable
- Current output
- Sensor temperature
- Percent of range

Additional information   *Description*

If several measured values are displayed at once, the measured value selected here will be the third value to be displayed. The value is only displayed during normal operation.

ℹ The **Format display** parameter (→ 🖹 167) is used to specify how many measured values are displayed simultaneously and how.

Selection

ℹ The unit of the displayed measured value is taken from the **System units** submenu.

Value 4 display   🔒

Navigation	⌨🖥 System → Display → Value 4 display
Prerequisite	A local display is provided.
Description	Use this function to select one of the measured values shown on the local display.
Selection	• None • Pressure • Scaled variable • Current output • Sensor temperature • Percent of range

Additional information   *Description*

If several measured values are displayed at once, the measured value selected here will be the fourth value to be displayed. The value is only displayed during normal operation.

ℹ The **Format display** parameter (→ 🖹 167) is used to specify how many measured values are displayed simultaneously and how.

Selection

ℹ The unit of the displayed measured value is taken from the **System units** submenu.

Contrast display

Navigation	⌨🖥 System → Display → Contrast display
Description	Adjust local display contrast setting to ambient conditions (e.g. lighting or reading angle)
User entry	20 to 80 %
Factory setting	Depends on the display

Additional information　　　ℹ️　Set the contrast via the push-buttons:
- Weaker: Press the ⊙ and ⓔ buttons simultaneously
- Stronger: Press the ⊕ and ⓔ buttons simultaneously

3.5.5   "Geolocation" submenu

Navigation　　　🖥　System → Geolocation

Process Unit Tag   🔒

Navigation　　　🖥　System → Geolocation → Process Unit Tag

Description　　　Enter the process unit in which the device is installed.

User entry　　　Character string comprising numbers, letters and special characters (32)

Location Description   🔒

Navigation　　　🖥　System → Geolocation → Location Descr.

Description　　　Use this function to enter a description of the location so that the device can be located in the plant.

User entry　　　Character string comprising numbers, letters and special characters (32)

Longitude   🔒

Navigation　　　🖥　System → Geolocation → Longitude

Description　　　Use this function to enter the longitude coordinates that describe the device location.

User entry　　　−180 to 180 °

Latitude   🔒

Navigation　　　🖥　System → Geolocation → Latitude

Description　　　Use this function to enter the latitude coordinates that describe the device location.

User entry   −90 to 90 ˚

Altitude   🔒

Navigation   🔲   System → Geolocation → Altitude

Description   Use this function to enter the altitude data that describe the device location.

User entry   Signed floating-point number

Location method   🔒

Navigation   🔲   System → Geolocation → Location method

Description   Use this function to select the data format for specifying the geographic location. The
                             codes for specifying the location are based on the US National Marine Electronics
                             Association (NMEA) Standard NMEA 0183.

Selection   ▪ No fix
                             ▪ GPS or Standard Positioning Service fix
                             ▪ Differential GPS fix
                             ▪ Precise positioning service (PPS) fix
                             ▪ Real Time Kinetic (RTK) fixed solution
                             ▪ Real Time Kinetic (RTK) float solution
                             ▪ Estimated dead reckoning
                             ▪ Manual input mode
                             ▪ Simulation Mode

3.5.6   "Information" submenu

Navigation   🔲   System → Information

Device name

Navigation   🔳🔲   System → Information → Device name

Description   Displays the name of the transmitter. It can also be found on the nameplate of the
                             transmitter.

User interface   Max. 32 characters such as letters or numbers.

Manufacturer

Navigation	⊞⊟ System → Information → Manufacturer
User interface	Character string comprising numbers, letters and special characters

Serial number	🔒

Navigation	⊞⊟ System → Information → Serial number
Description	Displays the serial number of the measuring device.
	ℹ The number can be found on the nameplate of the sensor and transmitter.
User interface	Max. 11-digit character string comprising letters and numbers.
Additional information	*Description*
	ℹ **Uses of the serial number**
	• To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
	• To obtain specific information on the measuring device using the Device Viewer: www.endress.com/deviceviewer

Order code	🔒

Navigation	⊞⊟ System → Information → Order code
Description	Shows the device order code.
User interface	Character string composed of letters, numbers and certain punctuation marks (e.g. /).
Factory setting	–
Additional information	*Description*
	The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.
	ℹ **Uses of the order code**
	• To order an identical spare device.
	• To identify the device quickly and easily, e.g. when contacting Endress+Hauser.

Firmware version	

Navigation	System → Information → Firmware version
Description	Displays the device firmware version that is installed.
User interface	Character string in the format xx.yy.zz
Additional information	*User interface* ℹ The Firmware version is also located: • On the title page of the Operating instructions • On the transmitter nameplate

Hardware version	

Navigation	System → Information → Hardware version
User interface	Character string comprising numbers, letters and special characters

Extended order code 1	🔒

Navigation	System → Information → Ext. order cd. 1
Description	The extended order code is an alphanumeric code containing all information to identify the device and its options.
User interface	Character string
Factory setting	–
Additional information	*Description* The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.

Extended order code 2	🔒

Navigation	System → Information → Ext. order cd. 2
Description	The extended order code is an alphanumeric code containing all information to identify the device and its options. ℹ The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.
User interface	Character string

Factory setting   –

Extended order code 3	🔒

Navigation   🖫   System → Information → Ext. order cd. 3

Description   The extended order code is an alphanumeric code containing all information to identify the device and its options.

ℹ️ The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.

User interface   Character string

Factory setting   –

XML build number

Navigation   🖫🖫   System → Information → XML build no.

User interface   Positive integer

Checksum

Navigation   🖫🖫   System → Information → Checksum

Description   Checksum for Firmware version.

User interface   Positive integer

3.5.7 "Software configuration" submenu

Navigation   🖳   System → Softw. config.

CRC device configuration

Navigation	🎛🖳 System → Softw. config. → CRC device conf.
Description	CRC device configuration based on current settings of safety relevant parameters. The CRC device configuration is unique and can be used to detect changes in safety relevant parameter settings.
User interface	0 to 65 535

Stored CRC device configuration

Navigation	🎛🖳 System → Softw. config. → Stored CRC conf.
Description	Stored CRC after the last safety lock. Factory delivery is 65535 means that the device has not yet been safety locked.
User interface	0 to 65 535

Timestamp stored CRC device config.

Navigation	🎛🖳 System → Softw. config. → Time stored CRC
Description	Gives the time stamp when the CRC was last stored following completion of the safety lock wizard.
User interface	Character string comprising numbers, letters and special characters

---

Activate SW option   🔒

Navigation	🎛🖳 System → Softw. config. → Activate SW opt.
Description	Use this function to enter an activation code to enable an additional, ordered software option.
User entry	Max. 10-digit string of numbers.
Factory setting	Depends on the software option ordered

Additional information   *Description*

If a measuring device was ordered with an additional software option, the activation code is programmed in the device at the factory.

User entry

To activate a software option subsequently, please contact your Endress+Hauser sales organization.

NOTE!

The activation code is linked to the serial number of the measuring device and varies according to the device and software option.

If an incorrect or invalid code is entered, this results in the loss of software options that have already been activated.

▸ Before you enter a new activation code, make a note of the current activation code from the parameter protocol.

▸ Enter the new activation code provided by Endress+Hauser when the new software option was ordered.

▸ If the code entered is incorrect or invalid, enter the old activation code from the parameter protocol.

▸ Have the Endress+Hauser sales organization check the new activation code remembering to specify the serial number or ask for the code again.

Example for a software option

Order code for "Application package", option **EA** "Extended HistoROM"

Software option overview

Navigation   System → Softw. config. → SW option overv.

Description   Shows all enabled software options

User interface   ▪ SIL
                       ▪ WHG
                       ▪ Heartbeat Verification
                       ▪ Heartbeat Monitoring
