

# Description of Device Parameters

## Proline Teqwave M 300

Total solids measurement via microwave transmission  
Modbus RS485

## Table of contents

<b>1</b>	<b>About this document .....</b>	<b>4</b>																																																																																																																																																								
1.1	Document function .....	4	3.8.4 "Main electronic module + I/O module 1" submenu .....	142																																																																																																																																																						
1.2	Target group .....	4	3.8.5 "Sensor electronic module (ISEM)" submenu .....	143																																																																																																																																																						
1.3	Using this document .....	4	3.8.6 "I/O module 2" submenu .....	144																																																																																																																																																						
	1.3.1 Information on the document structure .....	4	3.8.7 "I/O module 3" submenu .....	145																																																																																																																																																						
	1.3.2 Structure of a parameter description ..	6	3.8.8 "Display module" submenu .....	147																																																																																																																																																						
1.4	Symbols used .....	6	3.8.9 "Data logging" submenu .....	148																																																																																																																																																						
	1.4.1 Symbols for certain types of information ..	6	3.8.10 "Min/max values" submenu .....	155																																																																																																																																																						
	1.4.2 Symbols in graphics .....	7	3.8.11 "Heartbeat Technology" submenu ...	160																																																																																																																																																						
1.5	Documentation .....	7	3.8.12 "Simulation" submenu .....	160																																																																																																																																																						
	1.5.1 Standard documentation .....	7																																																																																																																																																								
	1.5.2 Supplementary device-dependent documentation .....	7																																																																																																																																																								
<b>2</b>	<b>Overview of the Expert operating menu .....</b>	<b>8</b>																																																																																																																																																								
<b>3</b>	<b>Description of device parameters ...</b>	<b>11</b>

# 1      About this document

## 1.1     Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the operating menu.

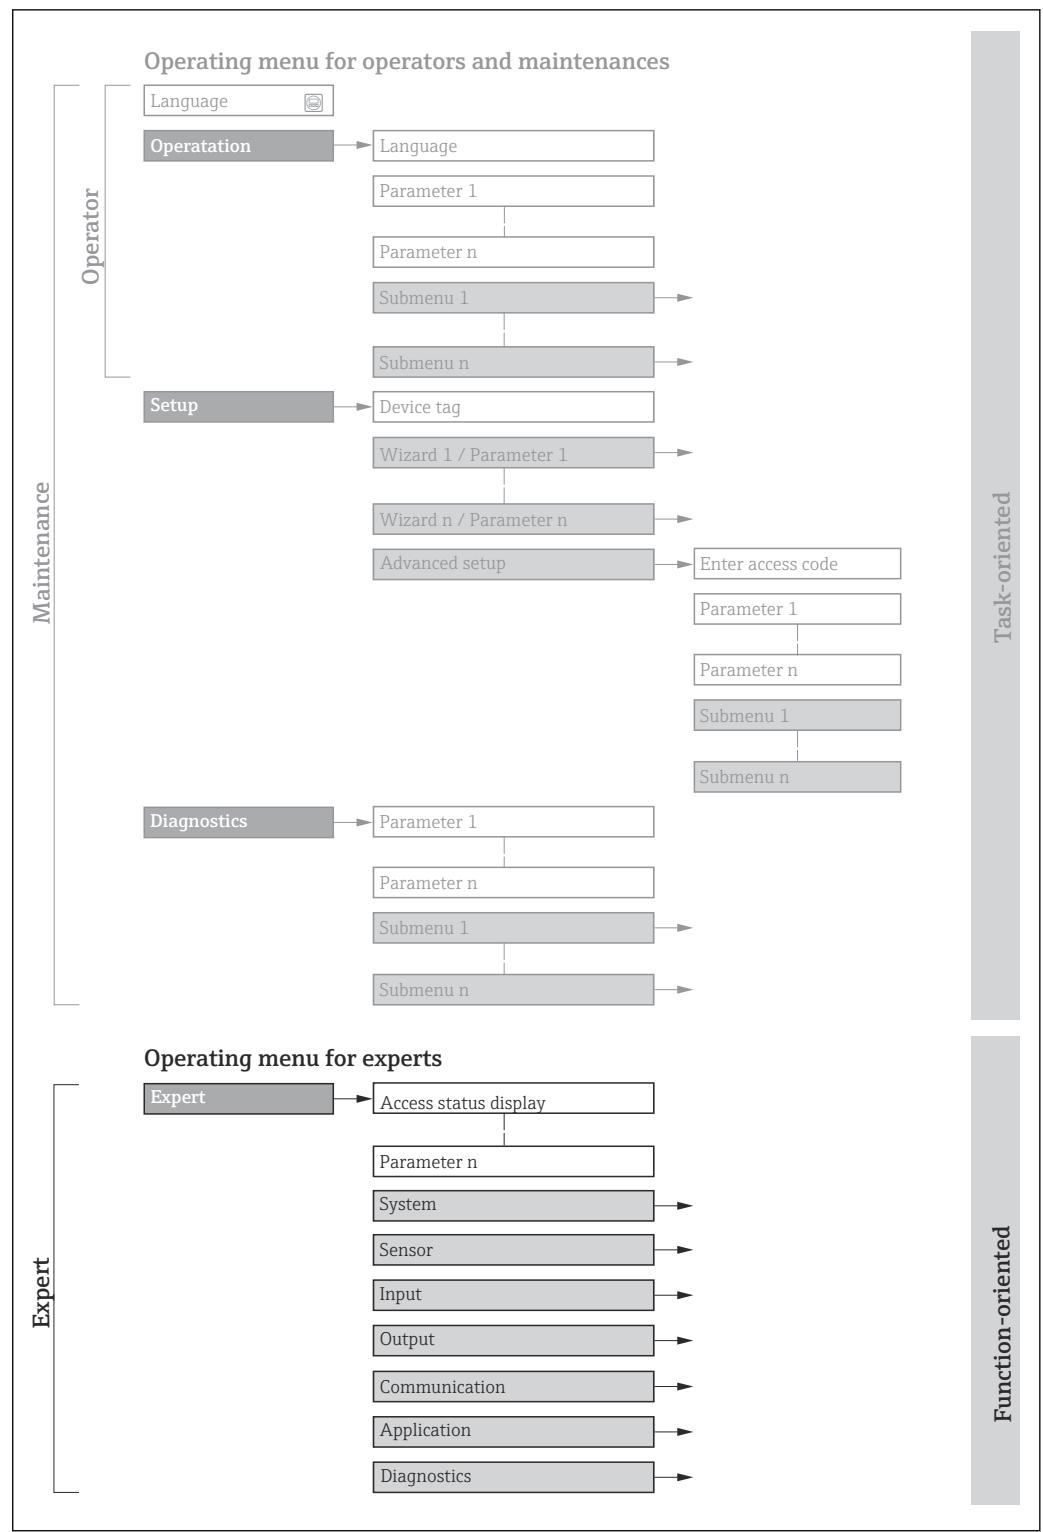

## 1.2     Target group

The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations.

## 1.3     Using this document

### 1.3.1    Information on the document structure

The document lists the submenus and their parameters according to the structure from the **Expert** menu (→ 8), which is displayed when the "**Maintenance**" user role is enabled.

1 Sample graphic for the schematic layout of the operating menu

Additional information regarding:

- The arrangement of the parameters according to the menu structure of the **Operation** menu, **Setup** menu, **Diagnostics** menu with a brief description: Operating Instructions
- Operating concept of the operating menus: Operating Instructions

### 1.3.2 Structure of a parameter description

The individual parts of a parameter description are described in the following section:

Complete parameter name	Write-protected parameter = 
<b>Navigation</b>	 Navigation path to the parameter via the local display or Web browser  Navigation path to the parameter via the operating tool The names of the menus, submenus and parameters are abbreviated to the form in which they appear on the display and in the operating tool.
<b>Prerequisite</b>	The parameter is only available under these specific conditions
<b>Description</b>	Description of the parameter function
<b>Options</b>	List of the individual options for the parameter <ul style="list-style-type: none"> <li>▪ Option 1</li> <li>▪ Option 2</li> </ul>
<b>User entry</b>	Parameter entry range
<b>Display</b>	Display value/data of the parameter
<b>Factory setting</b>	Default setting ex works
<b>Additional information</b>	Additional explanations (e.g. in examples): <ul style="list-style-type: none"> <li>▪ On individual options</li> <li>▪ On display values/data</li> <li>▪ On the input range</li> <li>▪ On the factory setting</li> <li>▪ On the parameter function</li> </ul>

## 1.4 Symbols used

### 1.4.1 Symbols for certain types of information

Symbol	Meaning
	<b>Tip</b> Indicates additional information.
	Reference to documentation
	Reference to page
	Reference to graphic
	Operation via local display <small>A0028662</small>
	Operation via operating tool <small>A0028663</small>
	Write-protected parameter <small>A0028665</small>

### 1.4.2 Symbols in graphics

Symbol	Meaning
1, 2, 3 ...	Item numbers
A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections

## 1.5 Documentation

### 1.5.1 Standard documentation

#### Technical information

Device	Documentation code
Proline Teqwave MW 300	TI01763D

#### Operating instructions

Device	Documentation code
Proline Teqwave MW 300 Modbus RS485	BA02321D

### 1.5.2 Supplementary device-dependent documentation

#### Special documentation

Contents	Documentation code
Heartbeat Verification application package (Modbus RS485)	SD03169D

## 2 Overview of the Expert operating menu

The following table provides an overview of the menu structure of the expert operating menu and its parameters. The page reference indicates where the associated description of the submenu or parameter can be found.

#### Locking status

---

Navigation

Diagram Expert → Locking status

Description

Displays the active write protection.

User interface

- Hardware locked
- Temporarily locked

**Additional information***Display*

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device

*Options*

Options	Description
None	The access authorization displayed in the <b>Access status</b> parameter (→ 12) applies. Only appears on local display.
Hardware locked (priority 1)	The DIP switch for hardware locking is activated on the PCB board. This locks write access to the parameters (e.g. via local display or operating tool).
Temporarily locked	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset, etc.). Once the internal processing has been completed, the parameters can be changed once again.

---

**User role**

---

**Navigation**

 Expert → User role

**Description**

Displays the access authorization to the parameters via the local display, Web browser or operating tool.

**User interface**

- Maintenance
- Service

**Factory setting**

Maintenance

**Additional information***Description*

 Access authorization can be modified via the **Enter access code** parameter (→ 13).

 If additional write protection is active, this restricts the current access authorization even further.

*User interface*

 Detailed information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device

**Enter access code****Navigation**
 Expert → Ent. access code
**Description**

Use this function to enter the user-specific release code to remove parameter write protection.

**User entry**

Max. 16-digit character string comprising numbers, letters and special characters

## Format display

---

**Navigation**

Expert → System → Display → Format display

**Prerequisite**

A local display is provided.

**Description**

Use this function to select how the measured value is shown on the local display.

**Selection**

- 1 value, max. size
- 1 bargraph + 1 value
- 2 values
- 1 value large + 2 values
- 4 values

**Factory setting**

1 value, max. size

**Additional information***Description*

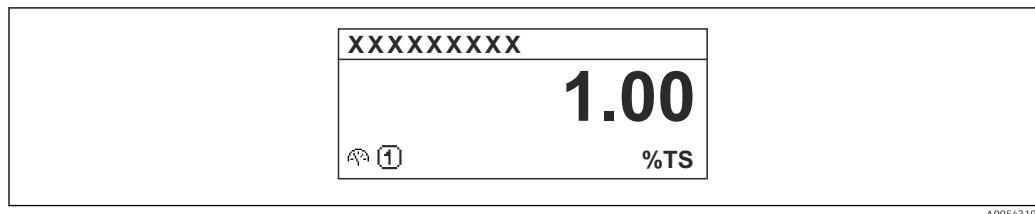

The display format (size, bar graph) and number of simultaneously displayed measured values (1 to 8) can be configured. This setting only applies to normal operation.

- The **Value 1 display** parameter (→ 17)...**Value 8 display** parameter (→ 28) are used to specify which measured values are shown on the local display and in what order.
- If more measured values are specified than the display mode selected permits, then the values alternate on the device display. The display time until the next change is configured using the **Display interval** parameter (→ 29).

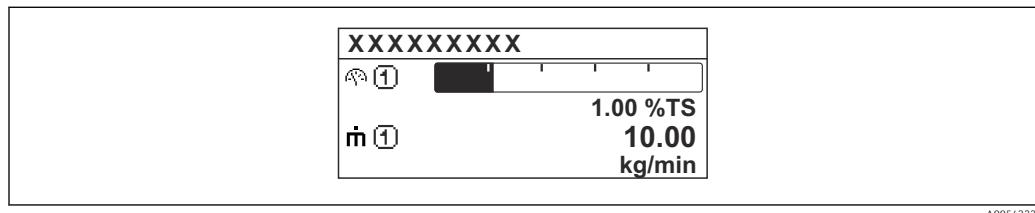

Possible measured values shown on the local display:

"1 value, max. size" option

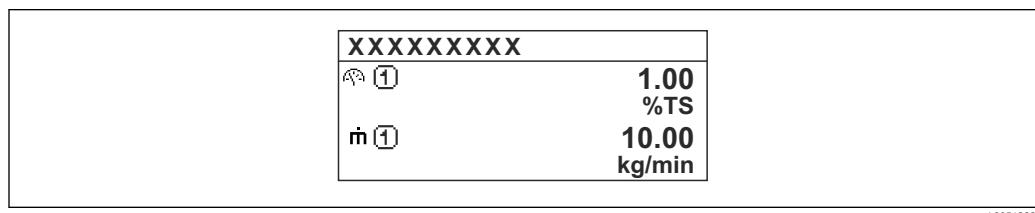

A0054319

"1 bargraph + 1 value" option

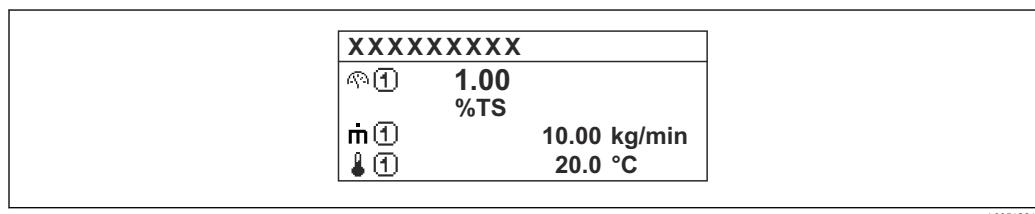

A0054322

"2 values" option

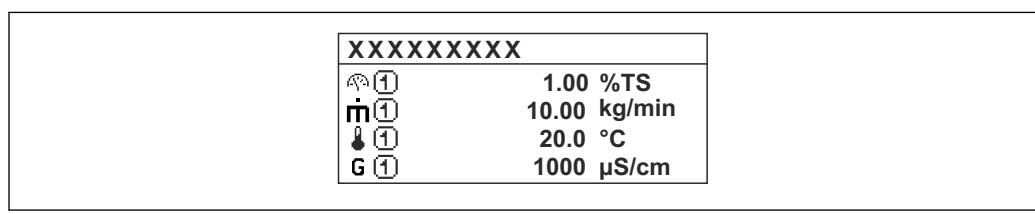

A0054323

"1 value large + 2 values" option

A0054324

"4 values" option

A0054328

**Value 1 display****Navigation**

Expert → System → Display → Value 1 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Use this function to select a measured value that is shown on the local display.

**Selection**

- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity
- Load rate \*
- Totalizer 1 \*
- Current output 1 \*
- Current output 2 \*
- Current output 3 \*
- Current output 4 \*

**Factory setting**

Total solids

**Additional information***Description*

If several measured values are displayed one below the other, the measured value selected here will be the first value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ 14) is used to specify how many measured values are displayed simultaneously and how.

*Dependency*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

**0% bargraph value 1****Navigation**

Expert → System → Display → 0% bargraph 1

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter the 0% bar graph value to be shown on the display for the measured value 1.

**User entry**

Signed floating-point number

**Factory setting**

0 %TS

\* Visibility depends on order options or device settings

**Additional information***Description*

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

---

**100% bargraph value 1****Navigation**

Expert → System → Display → 100% bargraph 1

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 1.

**User entry**

Signed floating-point number

**Factory setting**

Depends on country and nominal diameter

**Additional information***Description*

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

---

**Decimal places 1****Navigation**

Expert → System → Display → Decimal places 1

**Prerequisite**

A measured value is specified in the **Value 1 display** parameter (→ 17).

**Description**

Use this function to select the number of decimal places for measured value 1.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

**Factory setting**

X.XX

**Additional information***Description*

This setting does not affect the accuracy of the device for measuring or calculating the value.

**Value 2 display****Navigation**

Expert → System → Display → Value 2 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Use this function to select a measured value that is shown on the local display.

**Selection**

- None
- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity
- Load rate \*
- Totalizer 1 \*
- Current output 1 \*
- Current output 2 \*
- Current output 3 \*
- Current output 4 \*

**Factory setting**

None

**Additional information***Description*

If several measured values are displayed one below the other, the measured value selected here will be the second value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ 14) is used to specify how many measured values are displayed simultaneously and how.

*Dependency*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

**Decimal places 2****Navigation**

Expert → System → Display → Decimal places 2

**Prerequisite**

A measured value is specified in the **Value 2 display** parameter (→ 19).

**Description**

Use this function to select the number of decimal places for measured value 2.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

\* Visibility depends on order options or device settings

<b>Factory setting</b>	x.xx
<b>Additional information</b>	<i>Description</i>

This setting does not affect the accuracy of the device for measuring or calculating the value.

## Value 3 display

**Navigation** Expert → System → Display → Value 3 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ [49](#)) or the fieldbus.

**Description** Use this function to select a measured value that is shown on the local display.

**Selection** For the picklist, see **Value 1 display** parameter (→ [17](#))

**Factory setting** None

**Additional information** *Description*

If several measured values are displayed one below the other, the measured value selected here will be the third value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ [14](#)) is used to specify how many measured values are displayed simultaneously and how.

### Options

The unit of the displayed measured value is taken from the **System units** submenu (→ [54](#)).

## 0% bargraph value 3

**Navigation** Expert → System → Display → 0% bargraph 3

**Prerequisite** A selection was made in the **Value 3 display** parameter (→ [20](#)).

**Description** Use this function to enter the 0% bar graph value to be shown on the display for the measured value 3.

**User entry** Signed floating-point number

**Factory setting** 0

**Additional information***Description*

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

**100% bargraph value 3****Navigation**

Expert → System → Display → 100% bargraph 3

**Prerequisite**

A selection was made in the **Value 3 display** parameter (→ 20).

**Description**

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 3.

**User entry**

Signed floating-point number

**Factory setting**

0

**Additional information***Description*

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

**Decimal places 3****Navigation**

Expert → System → Display → Decimal places 3

**Prerequisite**

A measured value is specified in the **Value 3 display** parameter (→ 20).

**Description**

Use this function to select the number of decimal places for measured value 3.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

**Factory setting**

X.XX

**Additional information***Description*

This setting does not affect the accuracy of the device for measuring or calculating the value.

## Value 4 display

### Navigation

Expert → System → Display → Value 4 display

### Prerequisite

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

### Description

Use this function to select a measured value that is shown on the local display.

### Selection

For the picklist, see **Value 1 display** parameter (→ 17)

### Factory setting

None

### Additional information

#### Description

If several measured values are displayed one below the other, the measured value selected here will be the fourth value to be displayed. The value is only displayed during normal operation.

**i** The **Format display** parameter (→ 14) is used to specify how many measured values are displayed simultaneously and how.

#### Options

**i** The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

## Decimal places 4

### Navigation

Expert → System → Display → Decimal places 4

### Prerequisite

A measured value is specified in the **Value 4 display** parameter (→ 22).

### Description

Use this function to select the number of decimal places for measured value 4.

### Selection

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

### Factory setting

X.XX

### Additional information

#### Description

**i** This setting does not affect the accuracy of the device for measuring or calculating the value.

## Display language

**Navigation**

  Expert → System → Display → Display language

**Prerequisite**

A local display is provided.

**Description**

Use this function to select the configured language on the local display.

**Selection**

- English
- Deutsch
- Français
- Español
- Italiano
- Nederlands
- Portuguesa
- Polski
- русский язык (Russian)
- Svenska
- Türkçe
- 中文 (Chinese)
- 日本語 (Japanese)
- 한국어 (Korean)
- čeština (Czech)

**Factory setting**

English (alternatively, the ordered language is preset in the device)

## Value 5 display

**Navigation**

  Expert → System → Display → Value 5 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ [49](#)) or the fieldbus.

**Description**

Use this function to select a measured value that is shown on the local display.

**Selection**

For the picklist, see **Value 1 display** parameter (→ [17](#))

**Factory setting**

None

**Additional information**
*Description*

If several measured values are displayed one below the other, the measured value selected here will be the fifth value to be displayed. The value is only displayed during normal operation.

 The **Format display** parameter (→ [14](#)) is used to specify how many measured values are displayed simultaneously and how.

*Options*

 The unit of the displayed measured value is taken from the **System units** submenu (→ [54](#)).

## 0% bargraph value 5

### Navigation

Expert → System → Display → 0% bargraph 5

### Prerequisite

An option was selected in the **Value 5 display** parameter (→ 23).

### Description

Use this function to enter the 0% bar graph value to be shown on the display for the measured value 5.

### User entry

Signed floating-point number

### Factory setting

0

### Additional information

#### Description

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

#### User entry

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

## 100% bargraph value 5

### Navigation

Expert → System → Display → 100% bargraph 5

### Prerequisite

An option was selected in the **Value 5 display** parameter (→ 23).

### Description

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 5.

### User entry

Signed floating-point number

### Factory setting

0

### Additional information

#### Description

The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

#### User entry

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

## Decimal places 5

### Navigation

Expert → System → Display → Decimal places 5

### Prerequisite

A measured value is specified in the **Value 5 display** parameter (→ 23).

**Description** Use this function to select the number of decimal places for measured value 5.

<b>Selection</b>	<ul style="list-style-type: none"> <li><input type="checkbox"/> X</li> <li><input type="checkbox"/> X.X</li> <li><input type="checkbox"/> X.XX</li> <li><input type="checkbox"/> X.XXX</li> <li><input type="checkbox"/> X.XXXX</li> <li><input type="checkbox"/> X.XXXXX</li> <li><input type="checkbox"/> X.XXXXXX</li> </ul>
------------------	---

**Factory setting** X.XX

**Additional information** *Description*

 This setting does not affect the accuracy of the device for measuring or calculating the value.

## Value 6 display

**Navigation**  Expert → System → Display → Value 6 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ [49](#)) or the fieldbus.

**Description** Use this function to select a measured value that is shown on the local display.

**Selection** For the picklist, see **Value 1 display** parameter (→ [17](#))

**Factory setting** None

**Additional information** *Description*

If several measured values are displayed one below the other, the measured value selected here will be the sixth value to be displayed. The value is only displayed during normal operation.

 The **Format display** parameter (→ [14](#)) is used to specify how many measured values are displayed simultaneously and how.

*Options*

 The unit of the displayed measured value is taken from the **System units** submenu (→ [54](#)).

## Decimal places 6

**Navigation**  Expert → System → Display → Decimal places 6

**Prerequisite** A measured value is specified in the **Value 6 display** parameter (→ [25](#)).

**Description** Use this function to select the number of decimal places for measured value 6.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX
- X.XXXXX
- X.XXXXXX

**Factory setting**

x.xx

**Additional information***Description*

 This setting does not affect the accuracy of the device for measuring or calculating the value.

---

**Value 7 display****Navigation**  Expert → System → Display → Value 7 display**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→  49) or the fieldbus.

**Description**

Use this function to select a measured value that is shown on the local display.

**Selection**

For the picklist, see **Value 1 display** parameter (→  17)

**Factory setting**

None

**Additional information***Description*

If several measured values are displayed one below the other, the measured value selected here will be the seventh value to be displayed. The value is only displayed during normal operation.

 The **Format display** parameter (→  14) is used to specify how many measured values are displayed simultaneously and how.

*Options*

 The unit of the displayed measured value is taken from the **System units** submenu (→  54).

---

**0% bargraph value 7****Navigation**  Expert → System → Display → 0% bargraph 7**Prerequisite**

An option was selected in the **Value 7 display** parameter (→  26).

**Description**

Use this function to enter the 0% bar graph value to be shown on the display for the measured value 7.

**User entry**

Signed floating-point number

**Factory setting** 0

**Additional information** *Description*

 The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

 The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

## 100% bargraph value 7

**Navigation**  Expert → System → Display → 100% bargraph 7

**Prerequisite** An option was selected in the **Value 7 display** parameter (→ 26).

**Description** Use this function to enter the 100% bar graph value to be shown on the display for the measured value 7.

**User entry** Signed floating-point number

**Factory setting** 0

**Additional information** *Description*

 The **Format display** parameter (→ 14) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

 The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

## Decimal places 7

**Navigation**  Expert → System → Display → Decimal places 7

**Prerequisite** A measured value is specified in the **Value 7 display** parameter (→ 26).

**Description** Use this function to select the number of decimal places for measured value 7.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX
- X.XXXXX
- X.XXXXXX

**Factory setting** X.XX

**Additional information***Description*

This setting does not affect the accuracy of the device for measuring or calculating the value.

**Value 8 display****Navigation**

Expert → System → Display → Value 8 display

**Prerequisite**

- A local display is provided.
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Use this function to select a measured value that is shown on the local display.

**Selection**

For the picklist, see **Value 1 display** parameter (→ 17)

**Factory setting**

None

**Additional information***Description*

If several measured values are displayed one below the other, the measured value selected here will be the eighth value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ 14) is used to specify how many measured values are displayed simultaneously and how.

*Options*

The unit of the displayed measured value is taken from the **System units** submenu (→ 54).

**Decimal places 8****Navigation**

Expert → System → Display → Decimal places 8

**Prerequisite**

A measured value is specified in the **Value 8 display** parameter (→ 28).

**Description**

Use this function to select the number of decimal places for measured value 8.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX
- X.XXXXX
- X.XXXXXX

**Factory setting**

X.XX

**Additional information***Description*

This setting does not affect the accuracy of the device for measuring or calculating the value.

**Display interval****Navigation**

Expert → System → Display → Display interval

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter the length of time the measured values are displayed if the values alternate on the display.

**User entry**

1 to 10 s

**Factory setting**

5 s

**Additional information***Description*

This type of alternating display only occurs automatically if the number of measured values defined exceeds the number of values the selected display format can display simultaneously.

- The **Value 1 display** parameter (→ 17)...**Value 8 display** parameter (→ 28) are used to specify which measured values are shown on the local display.
- The display format for the measured values displayed is defined in the **Format display** parameter (→ 14).

**Display damping****Navigation**

Expert → System → Display → Display damping

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter a time constant for the reaction time of the local display to fluctuations in the measured value caused by process conditions.

**User entry**

0.0 to 999.9 s

**Factory setting**

0.0 s

**Additional information***User entry*

Use this function to enter a time constant (PT1 element<sup>1)</sup>) for display damping:

- At a low time constant, the display reacts quickly to fluctuating measured variables.
- If a high time constant is entered, the display reacts more slowly.

The damping is not active if the value **0** (factory setting) is entered.

1) proportional transmission behavior with first order delay

**Header****Navigation**

Expert → System → Display → Header

**Prerequisite**

A local display is provided.

**Description**

Use this function to select the contents of the header of the local display.

**Selection**

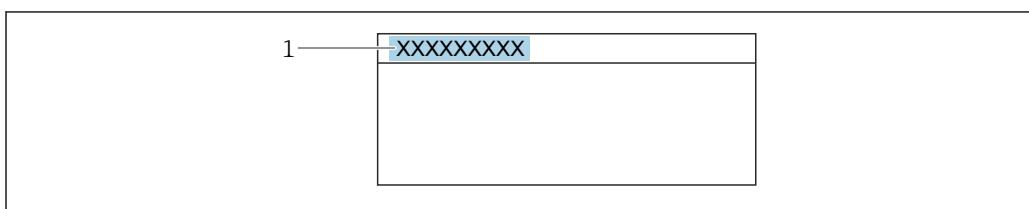

- Device tag
- Free text

**Factory setting**

Device tag

**Additional information***Description*

The header text only appears during normal operation.

A0029422

1 Position of the header text on the display

*Selection*

- Device tag
  - Is defined in the **Device tag** parameter (→ 139).
- Free text
  - Is defined in the **Header text** parameter (→ 30).

**Header text****Navigation**

Expert → System → Display → Header text

**Prerequisite**

The **Free text** option is selected in the **Header** parameter (→ 30).

**Description**

Use this function to enter a customer-specific text for the header of the local display.

**User entry**

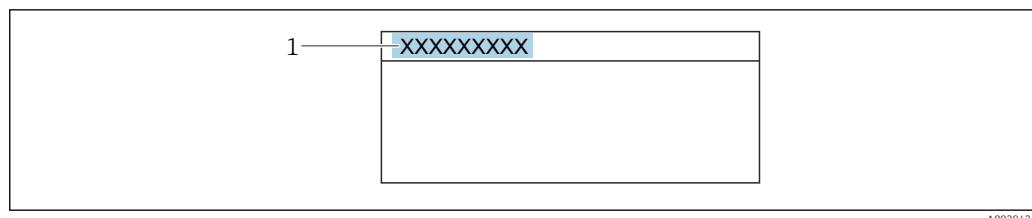

Max. 12 characters, such as letters, numbers or special characters (e.g. @, %, /)

**Factory setting**

-----

**Additional information***Description*

The header text only appears during normal operation.

A0029422

1 Position of the header text on the display

#### User entry

The number of characters displayed depends on the characters used.

---

## Separator

**Navigation** Expert → System → Display → Separator

**Prerequisite** A local display is provided.

**Description** Use this function to select the decimal separator.

**Selection**  
■ . (point)  
■ , (comma)

**Factory setting** . (point)

---

## Contrast display

**Navigation** Expert → System → Display → Contrast display

**Prerequisite** A local display is provided.

**Description** Use this function to enter a value to adapt the display contrast to the ambient conditions (e.g. the lighting or viewing angle).

**User entry** 20 to 80 %

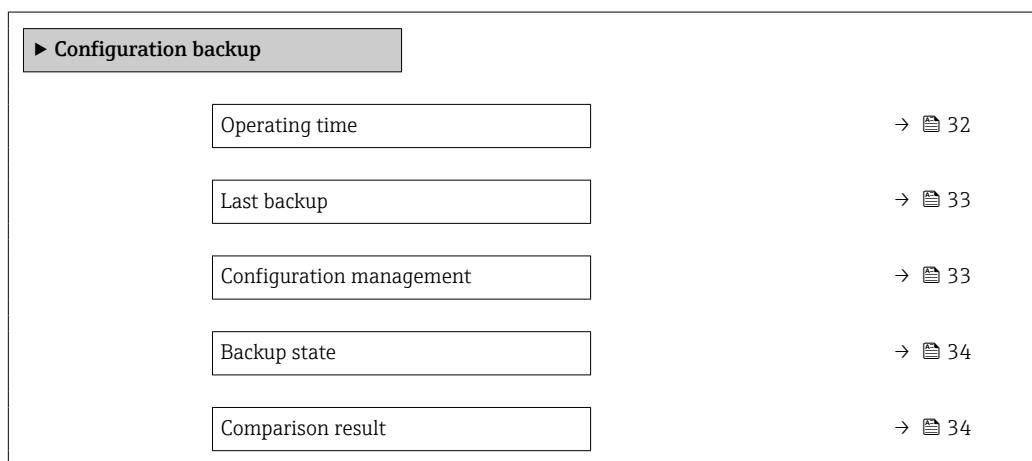

**Factory setting** Depends on the display

## Backlight

<b>Navigation</b>	Expert → System → Display → Backlight
<b>Prerequisite</b>	<p>One of the following conditions is met:</p> <ul style="list-style-type: none"> <li>■ Order code for "Display; operation", option <b>F</b> "4-line, illum.; touch control"</li> <li>■ Order code for "Display; operation", option <b>G</b> "4-line, illum.; touch control +WLAN"</li> <li>■ Order code for "Display; operation", option <b>O</b> "Remote display 4-line illuminated; 10m/30ft cable; touch control"</li> </ul>
<b>Description</b>	Use this function to switch the backlight of the local display on and off.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Disable</li> <li>■ Enable</li> </ul>
<b>Factory setting</b>	Enable

### 3.1.2 "Configuration backup" submenu

*Navigation*      Expert → System → Config. backup

---

## Operating time

---

<b>Navigation</b>	Expert → System → Config. backup → Operating time
<b>Description</b>	Displays the length of time the device has been in operation.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)
<b>Additional information</b>	<p><i>Indication</i></p> <p>Maximum number of days: 9 999 (corresponds to approx. 27 years and 5 months)</p>

**Last backup**

<b>Navigation</b>	 Expert → System → Config. backup → Last backup
<b>Description</b>	Displays the time since a backup copy of the data was last saved to the device memory.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)

**Configuration management**

<b>Navigation</b>	 Expert → System → Config. backup → Config. managem.
<b>Description</b>	Use this function to select an action to save the data to the device memory.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Cancel</li> <li>■ Execute backup</li> <li>■ Restore *</li> <li>■ Compare *</li> <li>■ Clear backup data</li> </ul>
<b>Factory setting</b>	Cancel
<b>Additional information</b>	<i>Selection</i>

Options	Description
Cancel	No action is executed and the user exits the parameter.
Execute backup	A backup copy of the current device configuration is saved from the HistoROM backup to the memory of the device. The backup copy includes the transmitter data of the device. The following message appears on local display: Backup active, please wait!
Restore	The last backup copy of the device configuration is restored from the device memory to the device's HistoROM backup. The backup copy includes the transmitter data of the device. The following message appears on local display: Restore active! Do not interrupt power supply!
Compare	The device configuration saved in the device memory is compared with the current device configuration of the HistoROM backup. The following message appears on local display: Comparing files The result can be viewed in <b>Comparison result</b> parameter.
Clear backup data	The backup copy of the device configuration is deleted from the memory of the device. The following message appears on local display: Deleting file

*HistoROM*

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

\* Visibility depends on order options or device settings

## Backup state

**Navigation**  Expert → System → Config. backup → Backup state

**Description** Displays the status of the data backup process.

**User interface**

- None
- Backup in progress
- Restoring in progress
- Delete in progress
- Compare in progress
- Restoring failed
- Backup failed

**Factory setting** None

## Comparison result

**Navigation**  Expert → System → Config. backup → Compar. result

**Description** Displays the last result of the comparison of the data records in the device memory and in the HistoROM.

**User interface**

- Settings identical
- Settings not identical
- No backup available
- Backup settings corrupt
- Check not done
- Dataset incompatible

**Factory setting** Check not done

**Additional information** *Description*

 The comparison is started via the **Compare** option in the **Configuration management** parameter (→  33).

*Options*

Options	Description
Settings identical	The current device configuration of the HistoROM is not identical to the backup copy in the device memory. If the transformer configuration of another device has been transmitted to the device via HistoROM in <b>Configuration management</b> parameter, the current device configuration of the HistoROM is only partially identical to the backup copy in the device memory: The settings for the transmitter are not identical.
Settings not identical	The current device configuration of the HistoROM is not identical to the backup copy in the device memory.
No backup available	There is no backup copy of the device configuration of the HistoROM in the device memory.
Backup settings corrupt	The current device configuration of the HistoROM is corrupt or not compatible with the backup copy in the device memory.

Options	Description
Check not done	The device configuration of the HistoROM has not yet been compared to the backup copy in the device memory.
Dataset incompatible	The backup copy in the device memory is not compatible with the device.

*HistoROM*

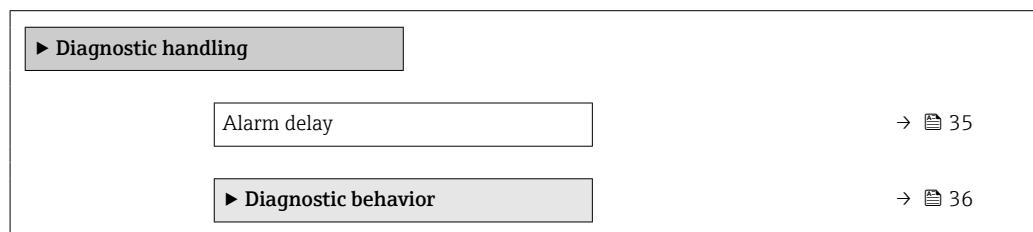

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

### 3.1.3 "Diagnostic handling" submenu

*Navigation*

Expert → System → Diagn. handling

---

#### Alarm delay

**Navigation**

Expert → System → Diagn. handling → Alarm delay

**Description**

Use this function to enter the time interval until the device generates a diagnostic message.

The diagnostic message is reset without a time delay.

**User entry**

0 to 60 s

**Factory setting**

0 s

**Additional information**

*Effect*

This setting affects the following diagnostic messages:

- 832 Electronics temperature too high
- 833 Electronics temperature too low
- 834 Process temperature too high
- 835 Process temperature too low
- 881 Signal to noise ratio too low
- 907 Permittivity out of specification
- 908 Volume fraction out of specification
- 909 Conductivity out of specification

### "Diagnostic behavior" submenu

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu (→ 36).

The following options are available in the **Assign behavior of diagnostic no. xxx** parameters:

Options	Description
Alarm	The device stops measurement. The measured value output via Modbus RS485 and the totalizers assume the defined alarm condition. A diagnostic message is generated. The background lighting changes to red.
Warning	The device continues to measure. The measured value output via Modbus RS485 and the totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is only displayed in the <b>Event logbook</b> submenu (→ 137) ( <b>Event list</b> submenu (→ 138)) and is not displayed in alternating sequence with the operational display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

 For a list of all the diagnostic events, see the Operating Instructions for the device

*Navigation*

  Expert → System → Diagn. handling → Diagn. behavior

**► Diagnostic behavior**

- Assign behavior of diagnostic no. 302** → 38
- Assign behavior of diagnostic no. 444** → 38
- Assign behavior of diagnostic no. 441** → 37
- Assign behavior of diagnostic no. 442** → 37
- Assign behavior of diagnostic no. 443** → 37
- Assign behavior of diagnostic no. 832** → 38
- Assign behavior of diagnostic no. 833** → 39
- Assign behavior of diagnostic no. 834** → 39
- Assign behavior of diagnostic no. 835** → 40
- Assign behavior of diagnostic no. 907** → 40
- Assign behavior of diagnostic no. 908** → 40

---

**Assign behavior of diagnostic no. 441 (Current output 1 to n)**

---

<b>Navigation</b>	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 441
<b>Description</b>	Use this function to change the diagnostic behavior of the <b>441 Current output 1 to n</b> diagnostic message.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Off</li><li>▪ Alarm</li><li>▪ Warning</li><li>▪ Logbook entry only</li></ul>
<b>Factory setting</b>	Warning
<b>Additional information</b>	For a detailed description of the options available: → <a href="#">36</a>

---

**Assign behavior of diagnostic no. 442 (Frequency output 1 to n)**

---

<b>Navigation</b>	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 442
<b>Prerequisite</b>	The measuring device has a pulse/frequency/switch output.
<b>Description</b>	Use this function to change the diagnostic behavior of the <b>442 Frequency output 1 to n</b> diagnostic message.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Off</li><li>▪ Alarm</li><li>▪ Warning</li><li>▪ Logbook entry only</li></ul>
<b>Factory setting</b>	Warning
<b>Additional information</b>	For a detailed description of the options available: → <a href="#">36</a>

---

**Assign behavior of diagnostic no. 443 (Pulse output 1 to n)**

---

<b>Navigation</b>	Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 443
<b>Prerequisite</b>	The measuring device has a pulse/frequency/switch output.
<b>Description</b>	Use this function to change the diagnostic behavior of the <b>443 Pulse output 1 to n</b> diagnostic message.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Off</li><li>▪ Alarm</li><li>▪ Warning</li><li>▪ Logbook entry only</li></ul>

**Factory setting** Warning

**Additional information**  For a detailed description of the options available: → [36](#)

## Assign behavior of diagnostic no. 444 (Current input 1 to n)

**Navigation**  Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 444

**Prerequisite** The device has one current input.

**Description** Use this function to change the diagnostic behavior of the **444 Current input 1 to n** diagnostic message.

- Selection**
- Off
  - Alarm
  - Warning
  - Logbook entry only

**Factory setting** Warning

**Additional information**  For a detailed description of the options available: → [36](#)

## Assign behavior of diagnostic no. 302

**Navigation**  Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 302

**Description** Use this function to change the diagnostic behavior of the **302 Device verification active** diagnostic message.

- Selection**
- Off
  - Warning
  - Logbook entry only

**Factory setting** Warning

**Additional information**  For a detailed description of the options available: → [36](#)

## Assign behavior of diagnostic no. 832

**Navigation**  Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 832

**Description** Use this function to change the diagnostic behavior of the **832 Electronics temperature too high** diagnostic message.

<b>Selection</b>	<ul style="list-style-type: none"><li>■ Off</li><li>■ Alarm</li><li>■ Warning</li><li>■ Logbook entry only</li></ul>
------------------	--

<b>Factory setting</b>	Warning
------------------------	---------

<b>Additional information</b>	 For a detailed description of the options available: → <a href="#">36</a>
-------------------------------	---

---

## Assign behavior of diagnostic no. 833

<b>Navigation</b>	  Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 833
<b>Description</b>	Use this function to change the diagnostic behavior of the <b>833 Electronics temperature too low</b> diagnostic message.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ Off</li><li>■ Alarm</li><li>■ Warning</li><li>■ Logbook entry only</li></ul>
<b>Factory setting</b>	Warning

### 3.1.4 "Administration" submenu

*Navigation*

Expert → System → Administration

#### "Define access code" wizard

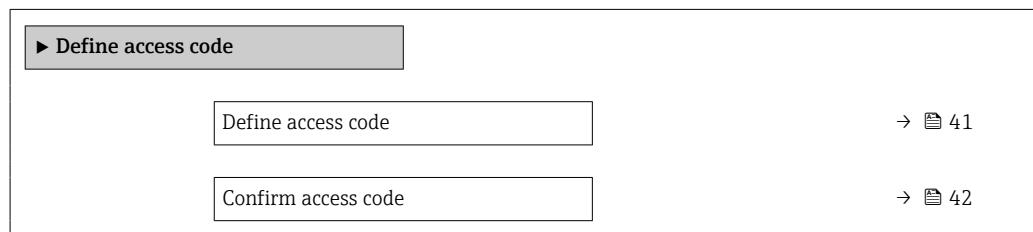

The **Define access code** wizard (→ [41](#)) is only available when operating via the local display or Web browser.

If operating via the operating tool, the **Define access code** parameter can be found directly in the **Administration** submenu. There is no **Confirm access code** parameter if the device is operated via the operating tool.

*Navigation*

Expert → System → Administration → Def. access code

---

## Define access code

**Navigation**

Expert → System → Administration → Def. access code → Def. access code

**Description**

Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the device configuration against any inadvertent modifications via the local display, Web browser, FieldCare or DeviceCare (via CDI-RJ45 service interface).

**User entry** Max. 16-digit character string comprising numbers, letters and special characters

**Additional information** *Description*

The write protection affects all parameters in the document marked with the  symbol.

On the local display, the  symbol in front of a parameter indicates that the parameter is write-protected.

The parameters that cannot be write-accessed are grayed out in the Web browser.

 Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→  13).

 If you lose the access code, please contact your Endress+Hauser sales organization.

*User entry*

A message is displayed if the access code is not in the input range.

*Factory setting*

If the factory setting is not changed or **0** is defined as the access code, the parameters are not write-protected and the device configuration data can be modified. The user is logged on in the "**Maintenance**" role.

## Confirm access code

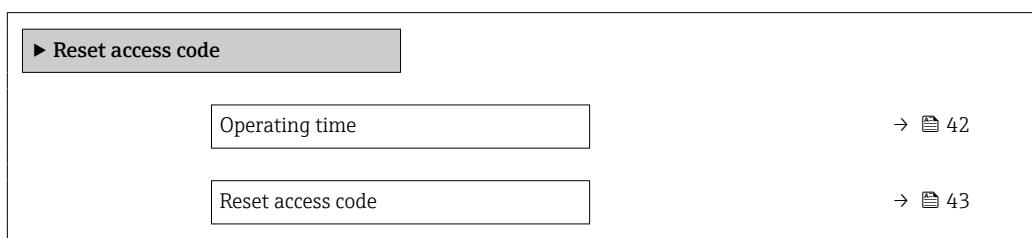

**Navigation**   Expert → System → Administration → Def. access code → Confirm code

**Description** Enter the defined release code a second time to confirm the release code.

**User entry** Max. 16-digit character string comprising numbers, letters and special characters

### "Reset access code" submenu

*Navigation*   Expert → System → Administration → Reset acc. code

## Operating time

**Navigation**   Expert → System → Administration → Reset acc. code → Operating time

**Description** Displays the length of time the device has been in operation.

**User interface** Days (d), hours (h), minutes (m) and seconds (s)

**Additional information** *Indication*

Maximum number of days: 9 999 (corresponds to approx. 27 years and 5 months)

## Reset access code

**Navigation**  Expert → System → Administration → Reset acc. code → Reset acc. code

**Description** Use this function to enter a reset code to reset the user-specific access codes to the factory setting.

**User entry** Character string comprising numbers, letters and special characters

**Factory setting** 0x00

**Additional information** *Description*

 For a reset code, contact your Endress+Hauser service organization.

*User entry*

The reset code can only be entered via:

- Web browser
- DeviceCare, FieldCare (via CDI RJ45 interface)
- Fieldbus

## Additional parameters in the "Administration" submenu

## Device reset

**Navigation**  Expert → System → Administration → Device reset

**Description** Reset the device configuration - either entirely or in part - to a defined state.

**Selection**

- Cancel
- To delivery settings
- Restart device
- Restore S-DAT backup \*

**Factory setting** Cancel

\* Visibility depends on order options or device settings

**Additional information***Selection*

<b>Options</b>	<b>Description</b>
Cancel	No action is executed and the user exits the parameter.
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to the customer-specific value. All other parameters are reset to the factory setting.
Restart device	The restart resets every parameter with data stored in volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
Restore S-DAT backup	Restores the data that is saved on the S-DAT. Additional information: This function can be used to resolve the memory issue "083 Memory content inconsistent" or to restore the S-DAT data when a new S-DAT has been installed.   This option is displayed only in an alarm condition.

**Transmitter identifier****Navigation**  Expert → System → Administration → Transm. identif.**Description**

Select transmitter identifier.

**User interface**

- Unknown
- 500
- 300

**Factory setting**

300

**Activate SW option****Navigation**  Expert → System → Administration → Activate SW opt.**Description**

Use this function to enter an activation code to enable an additional, ordered software option.

**User entry**

Max. 10-digit string of numbers.

**Factory setting**

Depends on the software option ordered

**Additional information***Description*

If a measuring device was ordered with an additional software option, the activation code is programmed in the device at the factory.

 To activate a software option subsequently, please contact your Endress+Hauser sales organization.*Entering the activation code* The activation code is linked to the serial number of the measuring device and varies according to the device and software option.

If an incorrect or invalid code is entered, this results in the loss of software options that have already been activated.

- ▶ Before you enter a new activation code, make a note of the current activation code .
- ▶ Enter the new activation code provided by Endress+Hauser when the new software option was ordered.
- ▶ If the code entered is incorrect or invalid, enter the old activation code .
- ▶ Have your Endress+Hauser sales organization check the new activation code remembering to specify the serial number or ask for the code again.

*Example for a software option*

Order code for "Application package", option EA "Extended HistoROM"

*Web browser*

 Once a software option has been activated, the page must be loaded again in the Web browser.

---

## Software option overview

---

**Navigation**  Expert → System → Administration → SW option overv.

**Description** Displays all the software options that are enabled in the device.

**User interface**

**Additional information** *Description*

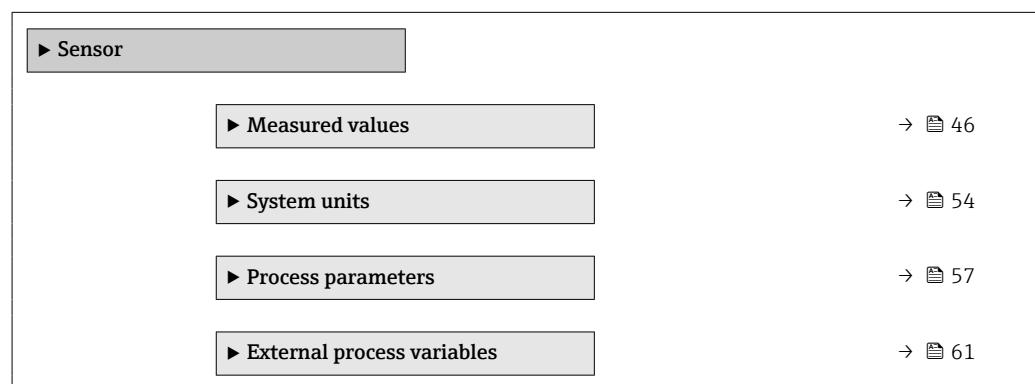

Displays all the options that are available if ordered by the customer.

*"Extended HistoROM" option*

Order code for "Application package", option EA "Extended HistoROM"

## 3.2 "Sensor" submenu

*Navigation*  Expert → Sensor

▶ Sensor adjustment	→  62
▶ Factory adjustment	→  65

### 3.2.1 "Measured values" submenu

Navigation

Expert → Sensor → Measured val.

▶ Measured values	
▶ Process variables	→  46
▶ Totalizer	→  48
▶ Input values	→  49
▶ Output values	→  50

#### "Process variables" submenu

Navigation

Expert → Sensor → Measured val. → Process variab.

▶ Process variables	
Total solids	→  46
Temperature	→  47
Electronics temperature	→  47
Conductivity	→  47
Corrected conductivity	→  47
Load rate	→  47

---

#### Total solids

---

Navigation

Expert → Sensor → Measured val. → Process variab. → Total solids

Description

Shows total solids (fraction of total weight or concentration per volume unit).

User interface

Signed floating-point number

---

## Temperature

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Temperature
<b>Description</b>	Shows the medium temperature currently measured.
<b>User interface</b>	Signed floating-point number

---

## Electronics temperature

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Electronics temp
<b>Description</b>	Shows the electronics temperature currently measured.
<b>User interface</b>	Signed floating-point number

---

## Conductivity

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Conductivity
<b>Description</b>	Shows the conductivity currently measured.
<b>User interface</b>	Floating-point number

---

## Corrected conductivity

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → CorrConductivity
<b>Description</b>	Shows the conductivity measured compensated for temperature.
<b>User interface</b>	Floating-point number

---

## Load rate

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Load rate
<b>Prerequisite</b>	The volume flow of the medium is read in via the Current input 1 to n (→  49) or the fieldbus.
<b>Description</b>	Shows the total solids flow rate.

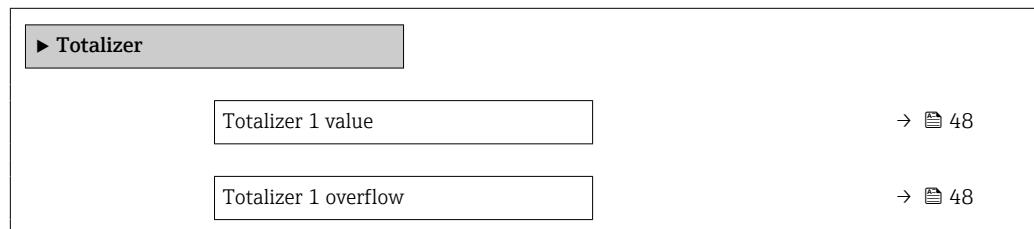

---

User interface	Signed floating-point number
----------------	------------------------------

### "Totalizer" submenu

Navigation

Expert → Sensor → Measured val. → Totalizer

---

## Totalizer 1 value

Navigation

Expert → Sensor → Measured val. → Totalizer → Tot. 1 value

Description

Displays the current totalizer reading.

User interface

Signed floating-point number

Additional information

Description

As it is only possible to display a maximum of 7 digits in the operating tool, the current counter value is the sum of the totalizer value and the overflow value from the **Totalizer overflow 1 to n** parameter if the display range is exceeded.

In the event of an error, the totalizer adopts the mode defined in the **Failure mode** parameter (→ 131).

Display

The unit of the selected process variable is defined in the **Unit totalizer** parameter (→ 129) for the totalizer.

---

## Totalizer 1 overflow

Navigation

Expert → Sensor → Measured val. → Totalizer → Tot. 1 overflow

Description

Displays the current totalizer overflow.

User interface

Integer with sign

Additional information

Description

If the current totalizer reading exceeds 7 digits, which is the maximum value range that can be displayed by the operating tool, the value above this range is output as an overflow.

The current totalizer value is therefore the sum of the overflow value and the totalizer value from the **Totalizer value 1 to n** parameter.

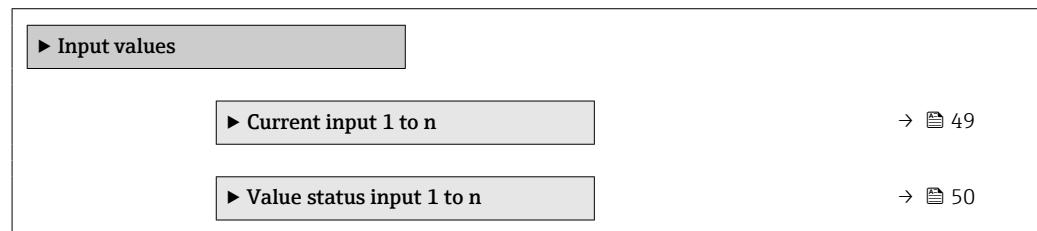

#### Display

 The unit of the selected process variable is defined in the **Unit totalizer** parameter (→ [129](#)) for the totalizer.

#### "Input values" submenu

##### Navigation

 Expert → Sensor → Measured val. → Input values

#### "Current input 1 to n" submenu

##### Navigation

 Expert → Sensor → Measured val. → Input values → Current input 1 to n

## Measured values 1 to n

### Navigation

 Expert → Sensor → Measured val. → Input values → Current input 1 to n  
→ Measured val. 1 to n

### Description

Displays the current input value.

### User interface

Signed floating-point number

---

**Measured current 1 to n**

---

**Navigation**

Expert → Sensor → Measured val. → Input values → Current input 1 to n → Measur. curr. 1 to n

**Description**

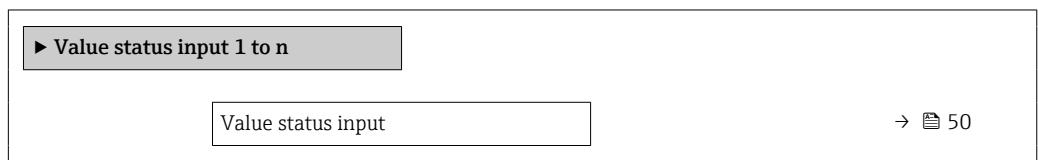

Displays the current value of the current input.

**User interface**

0 to 22.5 mA

*"Value status input 1 to n" submenu*

*Navigation*      Expert → Sensor → Measured val. → Input values → Val.stat.inp. 1 to n

---

**Value status input**

---

**Navigation**

Expert → Sensor → Measured val. → Input values → Val.stat.inp. 1 to n  
→ Val.stat.inp.

**Description**

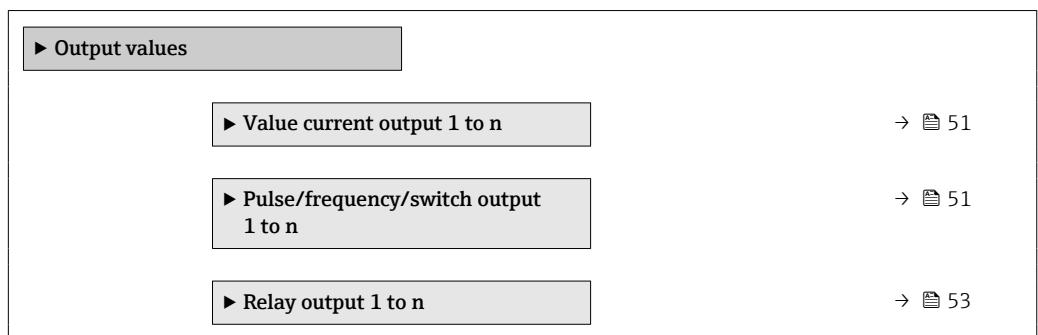

Displays the current input signal level.

**User interface**

- High
- Low

*"Output values" submenu*

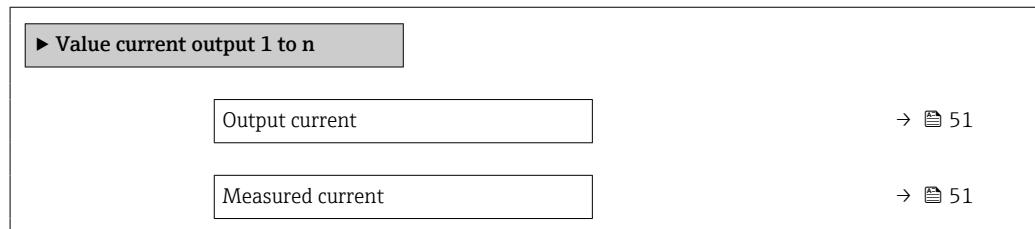

*Navigation*      Expert → Sensor → Measured val. → Output values

*"Value current output 1 to n" submenu*

*Navigation*

Expert → Sensor → Measured val. → Output values → Current output 1 to n

---

## Output current

---

**Navigation**

Expert → Sensor → Measured val. → Output values → Current output 1 to n  
→ Output curr.

**Description**

Displays the current value currently calculated for the current output.

**User interface**

0 to 22.5 mA

---

## Measured current

---

**Navigation**

Expert → Sensor → Measured val. → Output values → Current output 1 to n  
→ Measur. curr.

**Description**

Displays the actual measured value of the output current.

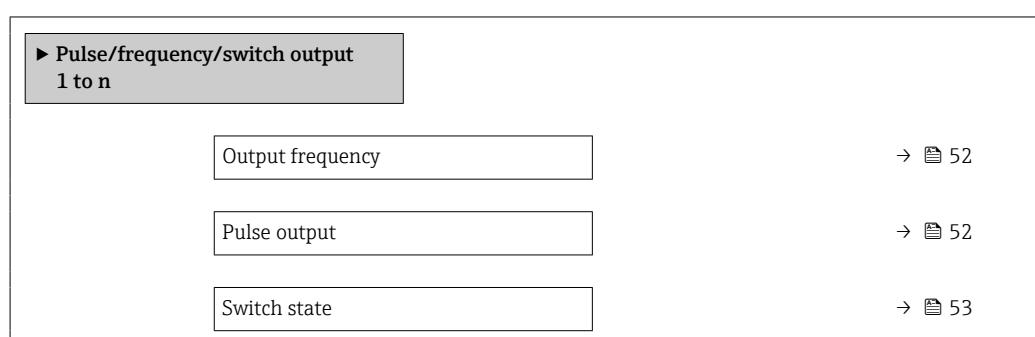

**User interface**

0 to 30 mA

*"Pulse/frequency/switch output 1 to n" submenu*

*Navigation*

Expert → Sensor → Measured val. → Output values → PFS output 1 to n

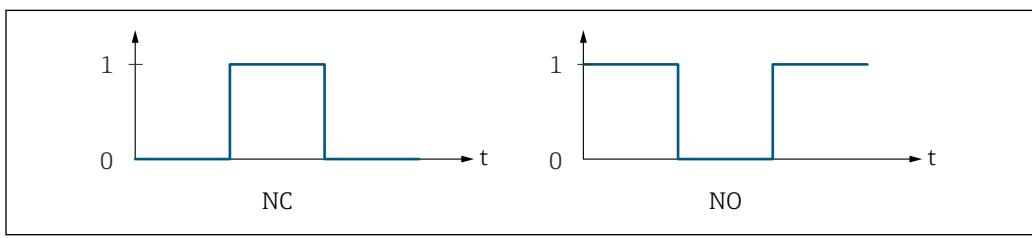

## Output frequency

<b>Navigation</b>	  Expert → Sensor → Measured val. → Output values → PFS output 1 to n → Output freq.
<b>Prerequisite</b>	In the <b>Operating mode</b> parameter (→ 88), the <b>Frequency</b> option is selected.
<b>Description</b>	Displays the actual value of the output frequency which is currently measured.
<b>User interface</b>	0.0 to 12 500.0 Hz

## Pulse output

<b>Navigation</b>	  Expert → Sensor → Measured val. → Output values → PFS output 1 to n → Pulse output
<b>Prerequisite</b>	The <b>Pulse</b> option is selected in the <b>Operating mode</b> parameter (→ 88) parameter.
<b>Description</b>	Displays the pulse frequency currently output.
<b>User interface</b>	Positive floating-point number
<b>Additional information</b>	<p><i>Description</i></p> <ul style="list-style-type: none"> <li>■ The pulse output is an open collector output.</li> <li>■ This is configured at the factory in such a way that the transistor is conductive for the duration of the pulse (NO contact) and is safety-oriented.</li> </ul>

0 Non-conductive  
 1 Conductive  
 NC NC contact (normally closed)  
 NO NO contact (normally open)

The output behavior can be reversed via the **Invert output signal** parameter (→ 104) i.e. the transistor does not conduct for the duration of the pulse.

In addition, the behavior of the output in the event of a device alarm (**Failure mode** parameter (→ 92)) can be configured.

---

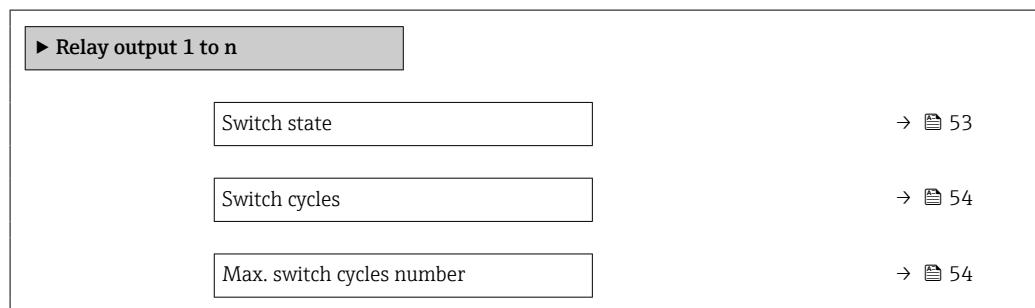

## Switch state

---

<b>Navigation</b>	Expert → Sensor → Measured val. → Output values → PFS output 1 to n → Switch state
<b>Prerequisite</b>	The <b>Switch</b> option is selected in the <b>Operating mode</b> parameter (→ 88).
<b>Description</b>	Displays the current switch status of the status output.
<b>User interface</b>	<ul style="list-style-type: none"> <li>▪ Open</li> <li>▪ Closed</li> </ul>
<b>Additional information</b>	<p><i>User interface</i></p> <ul style="list-style-type: none"> <li>▪ Open The switch output is not conductive.</li> <li>▪ Closed The switch output is conductive.</li> </ul>

"Relay output 1 to n" submenu

*Navigation*      Expert → Sensor → Measured val. → Output values → Relay output 1 to n

---

## Switch state

---

<b>Navigation</b>	Expert → Sensor → Measured val. → Output values → Relay output 1 to n → Switch state
<b>Description</b>	Displays the current status of the relay output.
<b>User interface</b>	<ul style="list-style-type: none"> <li>▪ Open</li> <li>▪ Closed</li> </ul>
<b>Additional information</b>	<p><i>User interface</i></p> <ul style="list-style-type: none"> <li>▪ Open The relay output is not conductive.</li> <li>▪ Closed The relay output is conductive.</li> </ul>

---

**Switch cycles**

---

<b>Navigation</b>	  Expert → Sensor → Measured val. → Output values → Relay output 1 to n → Switch cycles
<b>Description</b>	Displays all the switch cycles performed.
<b>User interface</b>	Positive integer

---

**Max. switch cycles number**

---

<b>Navigation</b>	  Expert → Sensor → Measured val. → Output values → Relay output 1 to n → Max. cycles no.
<b>Description</b>	Displays the maximum number of guaranteed switch cycles.
<b>User interface</b>	Positive integer

<b>Description</b>	Select date and time format.
<b>Selection</b>	<ul style="list-style-type: none"> <li>▪ dd.mm.yy hh:mm</li> <li>▪ dd.mm.yy hh:mm am/pm</li> <li>▪ mm/dd/yy hh:mm</li> <li>▪ mm/dd/yy hh:mm am/pm</li> </ul>
<b>Factory setting</b>	dd.mm.yy hh:mm

**3.2.3 "Process parameters" submenu***Navigation*

Expert → Sensor → Process param.

<b>► Process parameters</b>	
Temperature damping	→  58
Conductivity damping	→  58
Total solids override	→  58
<b>► Total solids monitoring</b>	→  58
<b>► Partially filled pipe detection</b>	→  60

## Temperature damping

### Navigation

Expert → Sensor → Process param. → Temp. damping

### Description

Enter a time constant for damping (PT1 element) of the temperature measured value. Damping reduces the effect of measured value fluctuations.

### User entry

0 to 999.9 s

### Factory setting

0 s

## Conductivity damping

### Navigation

Expert → Sensor → Process param. → Conduct. damping

### Description

Enter a time constant for damping (PT1 element) of the conductivity measured value. Damping reduces the effect of measured value fluctuations.

### User entry

0 to 999.9 s

### Factory setting

0 s

## Total solids override

### Navigation

Expert → Sensor → Process param. → TotalSolOverride

### Description

If suppression of the total solids measurement is enabled (**On** option), zero is output for the measured value. This is suitable for the cleaning processes for the pipeline, for example.

### Selection

- Off
- On

### Factory setting

Off

### "Total solids monitoring" submenu

#### Navigation

Expert → Sensor → Process param. → TotSolidsMonitor

▶ Total solids monitoring

Assign process variable

→ 59

Lower range limit	→  59
Upper range limit	→  59
Response time	→  60

## Assign process variable

**Navigation** Expert → Sensor → Process param. → TotSolidsMonitor → Assign variable

**Description** Select the process variable for total solids monitoring.

**Selection**

- Off
- Total solids

**Factory setting** Total solids

## Lower range limit

**Navigation** Expert → Sensor → Process param. → TotSolidsMonitor → LowerRangeLimit

**Description** Enter the lower limit value for the measuring range of the total solids.

**User entry** Signed floating-point number

**Factory setting** -1 %TS

## Upper range limit

**Navigation** Expert → Sensor → Process param. → TotSolidsMonitor → UpperRangeLimit

**Description** Enter the upper limit value for the measuring range of the total solids.

**User entry** Signed floating-point number

**Factory setting** 51 %TS

**Response time**

**Navigation** Expert → Sensor → Process param. → TotSolidsMonitor → Response time

**Description** Enter a delay until the diagnostic message is generated in the event the measuring range is exceeded.

**User entry** 0 to 100 s

**Factory setting** 60 s

**"Partially filled pipe detection" submenu**

*Navigation* Expert → Sensor → Process param. → Partial pipe det

▶ Partially filled pipe detection	
Partially filled pipe detection	→  60
Threshold	→  60
Response time	→  61

**Partially filled pipe detection**

**Navigation** Expert → Sensor → Process param. → Partial pipe det → Partial pipe det

**Description** If activated, a diagnostic message is generated if the antennas are no longer in full contact with the medium.

**Selection**

- Off
- On

**Factory setting** Off

**Threshold**

**Navigation** Expert → Sensor → Process param. → Partial pipe det → Threshold

**Description** Enter threshold for partially filled pipe detection. If the measured value drops below the threshold, a diagnostic message is generated.

**User entry** Decibel as negative floating point number

**Factory setting** -6 dB

## Response time

**Navigation**  Expert → Sensor → Process param. → Partial pipe det → Response time

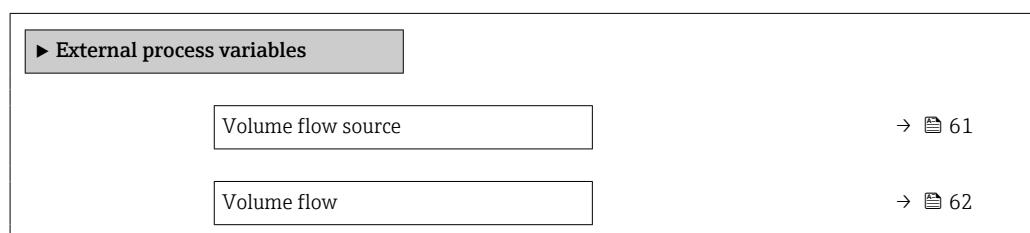

**Description** Enter a delay until the diagnostic message is generated in the event the pipe is detected as partially filled.

**User entry** 0 to 20.0 s

**Factory setting** 3 s

## 3.2.4 "External compensation" submenu

*Navigation*  Expert → Sensor → External comp.

## Volume flow source

**Navigation**  Expert → Sensor → ExternalProcVar. → VolumeFlowSource

**Description** Select the input via which the measured value of the volume flow is read in. The volume flow is used to calculate the load rate.

**Selection**

- Off
- Current input 1 \*
- Current input 2 \*
- Current input 3 \*
- External value

**Factory setting** Off

\* Visibility depends on order options or device settings

**Volume flow****Navigation**

Expert → Sensor → ExternalProcVar. → Volume flow

**Description**

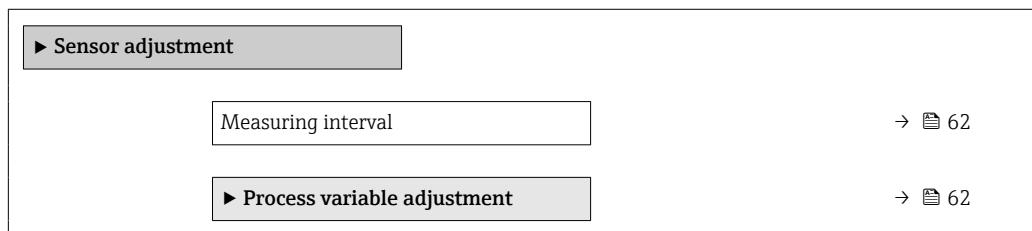

Shows the volume flow reported by the external measuring device.

**User entry**

Signed floating-point number

**3.2.5 "Sensor adjustment" submenu***Navigation*

Expert → Sensor → Sensor adjustm.

**Measuring interval****Navigation**

Expert → Sensor → Sensor adjustm. → Measur. interval

**Description**

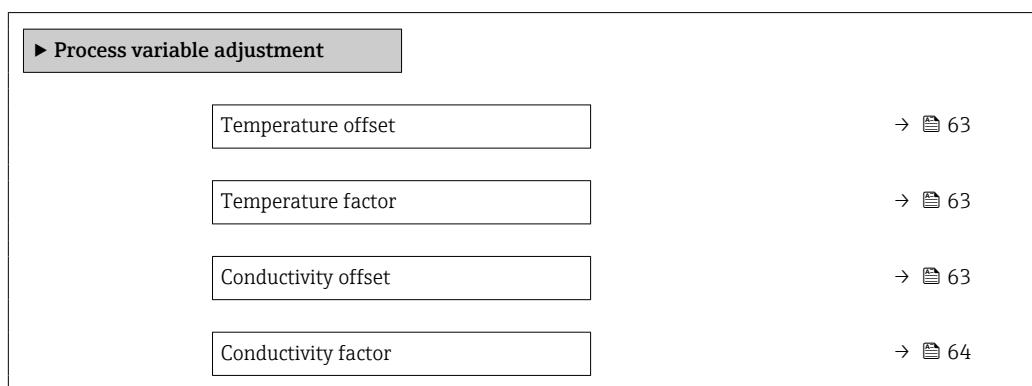

Displays the interval between two measuring periods.

**User interface**

0 to 10 000 ms

**"Process variable adjustment" submenu***Navigation*

Expert → Sensor → Sensor adjustm. → Variable adjust

Corrected conductivity offset	→  64
Corrected conductivity factor	→  64
Electronics temperature offset	→  64
Electronics temperature factor	→  65
Load rate offset	→  65
Load rate factor	→  65

**Temperature offset**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. offset
<b>Description</b>	Enter the offset by which to shift the zero point for temperature.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0

**Temperature factor**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. factor
<b>Description</b>	Enter the multiplication factor to apply to the temperature value.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1

**Conductivity offset**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Conduct. offset
<b>Description</b>	Enter the offset by which to shift the zero point for conductivity.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0

**Conductivity factor**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Conduct. factor
<b>Description</b>	Enter the multiplication factor to apply to the conductivity value.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1

**Corrected conductivity offset**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Corr.cond.offset
<b>Description</b>	Enter the offset by which to shift the zero point for the corrected conductivity.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0

**Corrected conductivity factor**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Corr.cond.factor
<b>Description</b>	Enter the multiplication factor to apply to the corrected conductivity value.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1

**Electronics temperature offset**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → ElectrTempOffset
<b>Description</b>	Enter the offset by which to shift the zero point for the electronics temperature.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0

**Electronics temperature factor**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → ElectrTempFactor
<b>Description</b>	Enter the multiplication factor to apply to the electronics temperature.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1

**Load rate offset**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Load rate offset
<b>Prerequisite</b>	The volume flow of the medium is read in via the Current input 1 to n (→ 49).
<b>Description</b>	Enter the offset by which to shift the zero point for the load rate.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0

**Load rate factor**

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Load rate factor
<b>Prerequisite</b>	The volume flow of the medium is read in via the Current input 1 to n (→ 49).
<b>Description</b>	Enter the multiplication factor to apply to the load rate value.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1

**3.2.6 "Factory adjustment" submenu***Navigation*

Expert → Sensor → FactoryAdjustm.

▶ Factory adjustment	Nominal diameter	→ 66
	Date/time	→ 66

**Nominal diameter**

<b>Navigation</b>	Expert → Sensor → FactoryAdjustm. → Nominal diameter
<b>Description</b>	Shows the nominal diameter of the sensor.
<b>User interface</b>	Character string comprising numbers, letters and special characters

**Date/time**

<b>Navigation</b>	Expert → Sensor → FactoryAdjustm. → Date/time
<b>Description</b>	Shows the date and time of the factory adjustment.
<b>User interface</b>	Character string comprising numbers, letters and special characters

### 3.3 "I/O configuration" submenu

*Navigation*      Expert → I/O config.

<b>► I/O configuration</b>	
I/O module 1 to n terminal numbers	→  66
I/O module 1 to n information	→  67
I/O module 1 to n type	→  67
Apply I/O configuration	→  68
I/O alteration code	→  68

**I/O module 1 to n terminal numbers**

<b>Navigation</b>	Expert → I/O config. → I/O 1 to n terminals
<b>Description</b>	Displays the terminal numbers used by the I/O module.
<b>User interface</b>	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 26-27 (I/O 1)</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>

**I/O module 1 to n information**

**Navigation**  Expert → I/O config. → I/O 1 to n info

**Description** Displays information about the plugged in I/O module.

- User interface**
- Not plugged
  - Invalid
  - Not configurable
  - Configurable
  - MODBUS

**Additional information** *"Not plugged" option*

The I/O module is not plugged in.

*"Invalid" option*

The I/O module is not plugged correctly.

*"Not configurable" option*

The I/O module is not configurable.

*"Configurable" option*

The I/O module is configurable.

*"MODBUS" option*

The I/O module is configured for Modbus.

**I/O module 1 to n type**

**Navigation**  Expert → I/O config. → I/O 1 to n type

**Prerequisite** For the following order code:

- "Output; input 2", option **D** "Configurable I/O initial setting off"
- "Output; input 3", option **D** "Configurable I/O initial setting off"

**Description** Use this function to select the I/O module type for the configuration of the I/O module.

- Selection**
- Off
  - Current output \*
  - Current input \*
  - Status input \*
  - Pulse/frequency/switch output \*
  - Relay output

**Factory setting** Off

\* Visibility depends on order options or device settings

## Apply I/O configuration

### Navigation

Expert → I/O config. → Apply I/O config

### Description

Use this function to activate the newly configured I/O module type.

### Selection

- No
- Yes

### Factory setting

No

## I/O alteration code

### Navigation

Expert → I/O config. → I/O alterat.code

### Description

Use this function to enter the ordered activation code to activate the I/O configuration change.

### User entry

Positive integer

### Factory setting

0

### Additional information

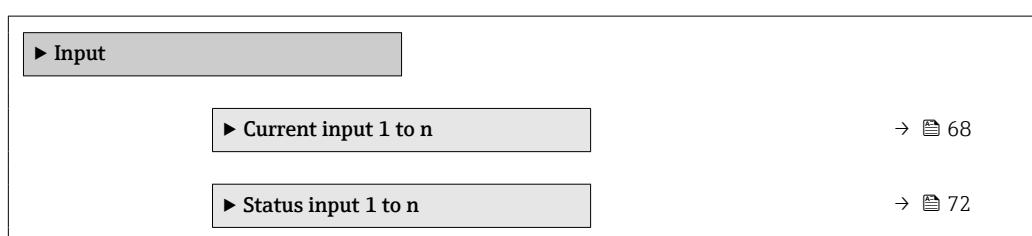

#### Description

The I/O configuration is changed in the **I/O module type** parameter (→ 67).

## 3.4 "Input" submenu

---

## Signal mode

---

<b>Navigation</b>	Expert → Input → Current input 1 to n → Signal mode
<b>Description</b>	Use this function to select the signal mode for the current input.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Passive</li> <li>■ Active *</li> </ul>
<b>Factory setting</b>	Passive

\* Visibility depends on order options or device settings

**Current span****Navigation**

Expert → Input → Current input 1 to n → Current span

**Description**

Use this function to select the current range for the process value output and the upper and lower level for signal on alarm.

**Selection**

- 4...20 mA (4...20.5 mA)
- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 0...20 mA (0...20.5 mA)

**Factory setting**

Country-specific:

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)

**Additional information***Examples*

Sample values for the current range: **Current span** parameter (→ 76)

**0/4 mA value****Navigation**

Expert → Input → Current input 1 to n → 0/4 mA value

**Description**

Enter 4 mA value.

**User entry**

Signed floating-point number

**Factory setting**

0 % TS

**Additional information***Current input behavior*

The current input behaves differently depending on the settings configured in the following parameters:

- Current span (→ 70)
- Failure mode (→ 71)

*Configuration examples*

Pay attention to the configuration examples for **4 mA value** parameter (→ 77).

**20 mA value****Navigation**

Expert → Input → Current input 1 to n → 20 mA value

**Description**

Enter 20 mA value.

**User entry**

Signed floating-point number

**Factory setting** 12 %TS

**Additional information** *Configuration examples*

Pay attention to the configuration examples for **4 mA value** parameter (→ 77).

## Failure mode

**Navigation** Expert → Input → Current input 1 to n → Failure mode

**Description** Use this function to select the input behavior when measuring a current outside the configured **Current span** parameter (→ 70).

**Selection**

- Alarm
- Last valid value
- Defined value

**Factory setting** Alarm

**Additional information** *Options*

- Alarm  
An error message is set.
- Last valid value  
The last valid measured value is used.
- Defined value  
A user-defined measured value is used (**Failure value** parameter (→ 71)).

## Failure value

**Navigation** Expert → Input → Current input 1 to n → Failure value

**Prerequisite** In the **Failure mode** parameter (→ 71), the **Defined value** option is selected.

**Description** Use this function to enter the value that the device uses if it does not receive an input signal from the external device, or if the input signal is invalid.

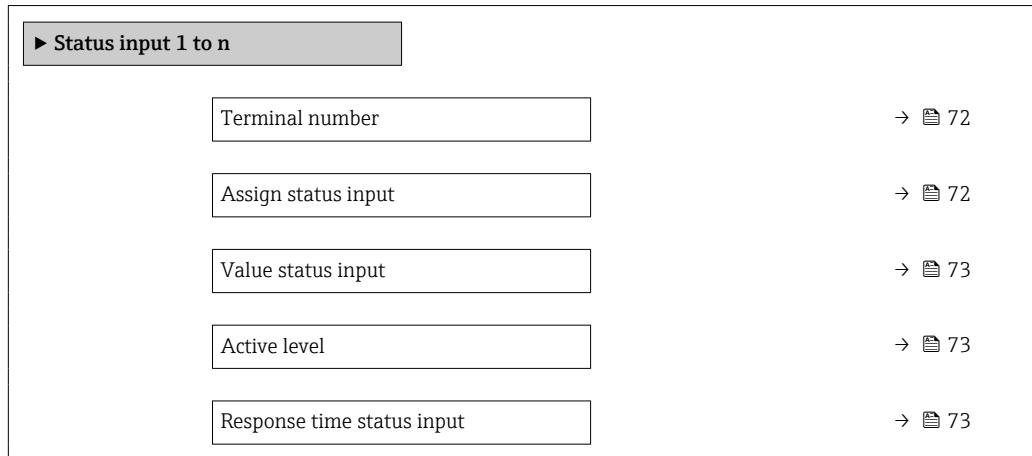

**User entry** Signed floating-point number

**Factory setting** 0

### 3.4.2 "Status input 1 to n" submenu

Navigation

Expert → Input → Status input 1 to n

---

#### Terminal number

---

Navigation

Expert → Input → Status input 1 to n → Terminal no.

Description

Displays the terminal numbers used by the status input module.

User interface

- Not used
- 24-25 (I/O 2)
- 22-23 (I/O 3)

Additional information

"Not used" option

The status input module does not use any terminal numbers.

---

#### Assign status input

---

Navigation

Expert → Input → Status input 1 to n → Assign stat.inp.

Description

Use this function to select the function for the status input.

Selection

- Off
- Reset totalizer 1
- Flow override

Factory setting

Off

**Additional information***Options*

- Off  
The status input is switched off.
- Reset totalizer 1  
The totalizer is reset.
- Flow override  
The Flow override is activated.

Note on the Flow override:

- The Flow override is enabled as long as the level is at the status input (continuous signal).
- All other assignments react to a change in level (pulse) at the status input.

**Value status input****Navigation**

Expert → Input → Status input 1 to n → Val.stat.inp.

**Description**

Displays the current input signal level.

**User interface**

- High
- Low

**Active level****Navigation**

Expert → Input → Status input 1 to n → Active level

**Description**

Use this function to determine the input signal level at which the assigned function is activated.

**Selection**

- High
- Low

**Factory setting**

High

**Response time status input****Navigation**

Expert → Input → Status input 1 to n → Response time

**Description**

Use this function to enter the minimum time period for which the input signal level must be present before the selected function is activated.

**User entry**

5 to 200 ms

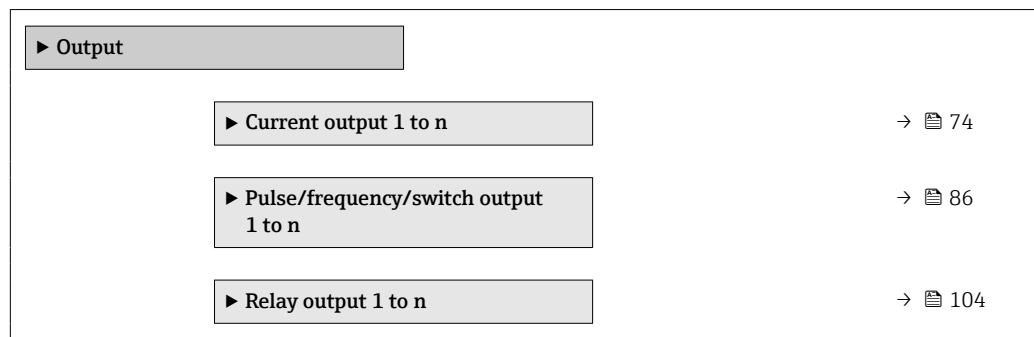

**Factory setting**

50 ms

### 3.5 "Output" submenu

Navigation

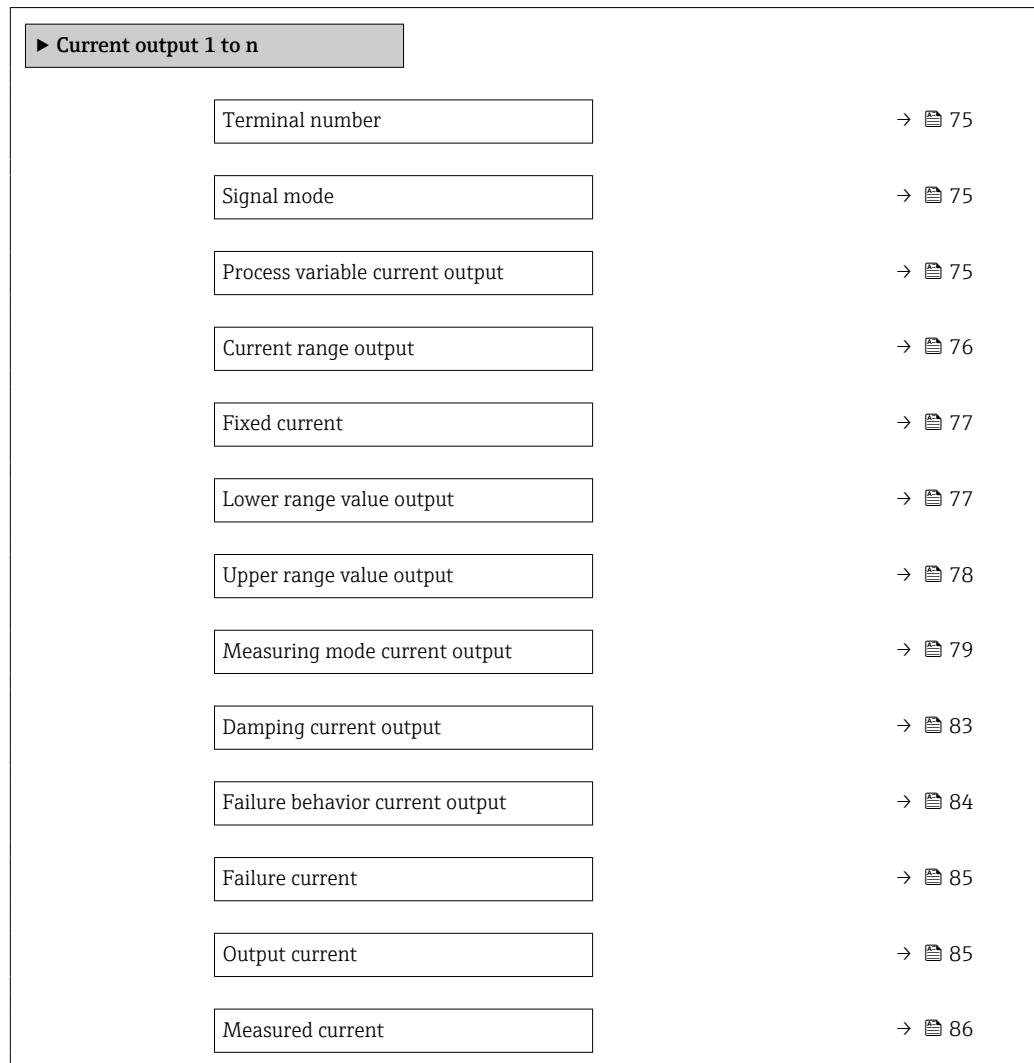

Expert → Output

#### 3.5.1 "Current output 1 to n" submenu

Navigation

Expert → Output → Curr.output 1 to n

---

**Terminal number**

---

<b>Navigation</b>	  Expert → Output → Curr.output 1 to n → Terminal no.
<b>Description</b>	Displays the terminal numbers used by the current output module.
<b>User interface</b>	<ul style="list-style-type: none"> <li>■ Not used</li> <li>■ 24-25 (I/O 2)</li> <li>■ 22-23 (I/O 3)</li> </ul>
<b>Additional information</b>	<p>"Not used" option</p> <p>The current output module does not use any terminal numbers.</p>

---

**Signal mode**

---

<b>Navigation</b>	  Expert → Output → Curr.output 1 to n → Signal mode
<b>Description</b>	Use this function to select the signal mode for the current output.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Active <sup>*</sup></li> <li>■ Passive <sup>*</sup></li> </ul>
<b>Factory setting</b>	Active

---

**Process variable current output**

---

<b>Navigation</b>	  Expert → Output → Curr.output 1 to n → Proc.var. outp
<b>Prerequisite</b>	The <b>Load rate</b> option is only available if the volume flow of the medium is read in via the Current input 1 to n (→  49) or the fieldbus.
<b>Description</b>	Use this function to select a process variable for the current output.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Off</li> <li>■ Total solids</li> <li>■ Temperature</li> <li>■ Electronics temperature</li> <li>■ Conductivity</li> <li>■ Corrected conductivity</li> <li>■ Load rate <sup>*</sup></li> </ul>
<b>Factory setting</b>	Total solids

\* Visibility depends on order options or device settings

**Current range output****Navigation**

Expert → Output → Curr.output 1 to n → Curr.range out

**Description**

Select current range for process value output and upper/lower level for alarm signal.

**Selection**

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)
- Fixed value

**Factory setting**

Depends on country:

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)

**Additional information***Description*

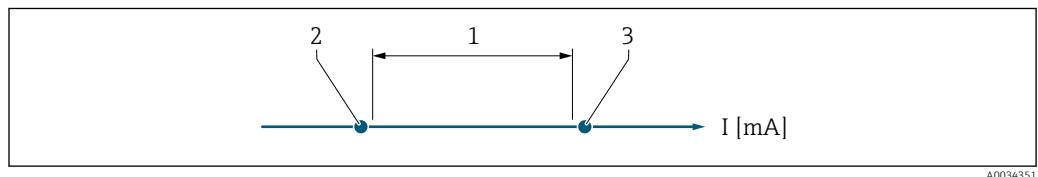

- In the event of a device alarm, the current output adopts the value specified in the **Failure mode** parameter (→ [84](#)).
- The measuring range is specified via the **Lower range value output** parameter (→ [77](#)) and **Upper range value output** parameter (→ [78](#)).

*"Fixed current" option*

The current value is set via the **Fixed current** parameter (→ [77](#)).

*Example*

Shows the relationship between the current range for the output of the process value and the two signal on alarm levels:

- 1 Current range for process value  
2 Lower level for signal on alarm  
3 Upper level for signal on alarm

*Selection*

Selection	1	2	3
4...20 mA NE (3.8...20.5 mA)	3.8 to 20.5 mA	< 3.6 mA	> 21.95 mA
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA US	< 3.6 mA	> 21.95 mA
4...20 mA (4...20.5 mA)	4 to 20.5 mA	< 3.6 mA	> 21.95 mA
0...20 mA (0...20.5 mA)	0 to 20.5 mA	0 mA	> 21.95 mA

---

**Fixed current**

**Navigation** Expert → Output → Curr.output 1 to n → Fixed current

**Prerequisite** The **Fixed current** option is selected in the **Current span** parameter (→ 76).

**Description** Use this function to enter a constant current value for the current output.

**User entry** 0 to 22.5 mA

**Factory setting** 22.5 mA

---

**Lower range value output**

**Navigation** Expert → Output → Curr.output 1 to n → Low.range outp

**Prerequisite** In **Current span** parameter (→ 76), one of the following options is selected:

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)

**Description** Use this function to enter a value for the start of measuring range.

**User entry** Floating point number with sign

**Factory setting** 0 %TS

**Additional information** *Description*

Positive and negative values are permitted depending on the process variable assigned in the **Assign current output** parameter (→ 75). In addition, the value can be greater

than or smaller than the value assigned for the 20 mA current in the **Upper range value output** parameter (→ 78).

#### *Dependency*

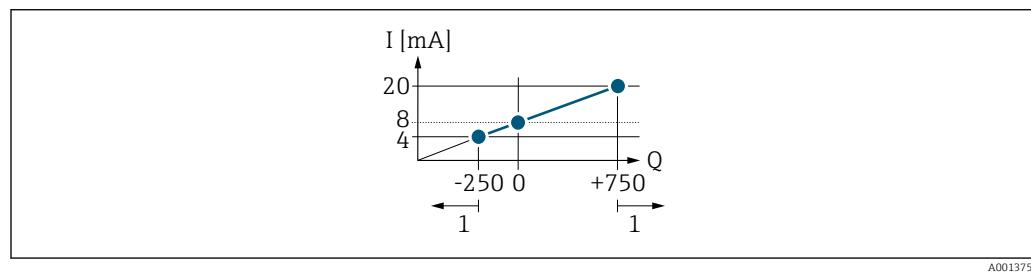

**i** The unit depends on the process variable selected in the **Assign current output** parameter (→ 75).

#### *Current output behavior*

The current output behaves differently depending on the settings configured in the following parameters:

- Current span (→ 76)
- Failure mode (→ 84)

#### *Configuration examples*

## Upper range value output

### Navigation

Expert → Output → Curr.output 1 to n → Upp.range outp

### Prerequisite

In **Current span** parameter (→ 76), one of the following options is selected:

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)

### Description

Use this function to enter a value for the end of measuring range.

### User entry

Floating point number with sign

### Factory setting

12 %TS

### Additional information

#### *Description*

Positive and negative values are permitted depending on the process variable assigned in the **Assign current output** parameter (→ 75). In addition, the value can be greater

than or smaller than the value assigned for the 0/4 mA current in the **Lower range value output** parameter (→ 77).

#### *Dependency*

 The unit depends on the process variable selected in the **Assign current output** parameter (→ 75).

#### *Example*

##### *Configuration examples*

 Pay attention to the configuration examples for the **Lower range value output** parameter (→ 77).

## Measuring mode current output

### Navigation

 Expert → Output → Curr.output 1 to n → Output mode

### Prerequisite

The following option is selected in the **Process variable current output** parameter (→ 75):

Load rate

One of the following options is selected in the **Current span** parameter (→ 76):

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)

### Description

Use this function to select the measuring mode for the current output.

### Selection

- Forward flow
- Forward/Reverse flow \*
- Reverse flow compensation

### Factory setting

Forward flow

### Additional information

#### *Description*

 The process variable that is assigned to the current output via the **Assign current output** parameter (→ 75) is displayed below the parameter.

#### *"Forward flow" option*

The current output signal is proportional to the process variable assigned. The measuring range is defined by the values that are assigned to the **Lower range value output** parameter (→ 77) and the **Upper range value output** parameter (→ 78).

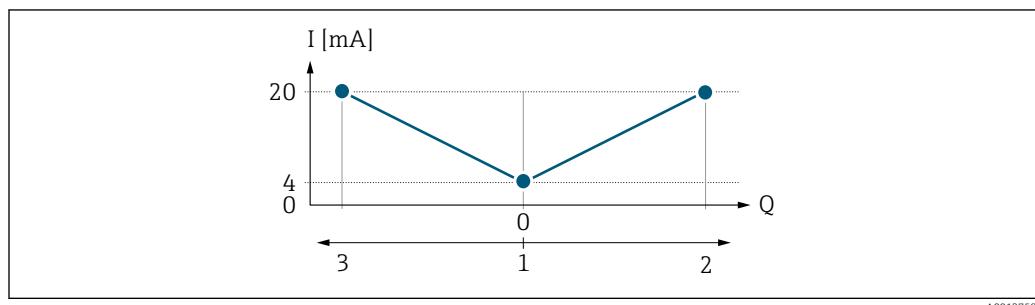

\* Visibility depends on order options or device settings

The flow components outside the scaled measuring range are taken into account for signal output as follows:

Both values are defined such that they are not equal to zero flow e.g.:

- Start of measuring range = -50 kg/h
- End of measuring range = 100 kg/h

*"Forward/Reverse flow" option*

- |   |  |
|---|--|
| I | Current                                  |
| Q | Flow                                     |
| 1 | Start of measuring range output (0/4 mA) |
| 2 | Forward flow                             |
| 3 | Reverse flow                             |

- The current output signal is independent of the direction of flow (absolute amount of the measured variable). The values for the **Lower range value output** parameter (→ 77) and **Upper range value output** parameter (→ 78) must have the same sign.
- The value for the **Upper range value output** parameter (→ 78) (e.g. reverse flow) corresponds to the mirrored value for the **Upper range value output** parameter (→ 78) (e.g. forward flow).

*"Reverse flow compensation" option*

The **Reverse flow compensation** option is primarily used to compensate for intermittent reverse flow that can arise with displacement pumps due to wear or high-viscosity medium. The reverse flow is recorded in a buffer memory and offset against the next forward flow.

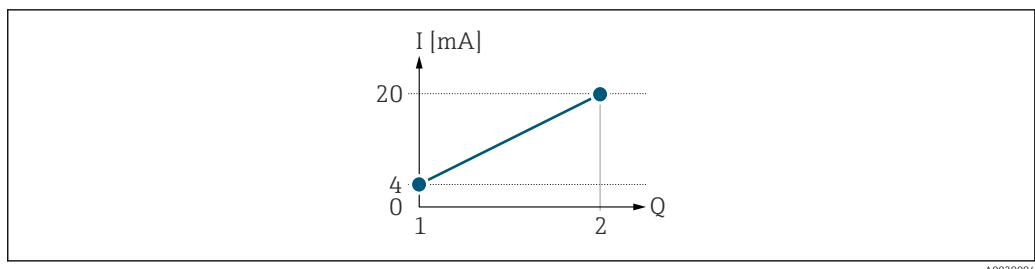

In the event of prolonged and undesired reverse flow, flow values can accumulate in the buffer memory. Due to the configuration of the current output, these values are not factored in, however, i.e. there is no compensation for the reverse flow.

If this option is set, the measuring device does not smoothen the flow signal. The flow signal is not attenuated.

*Examples of how the current output behaves*

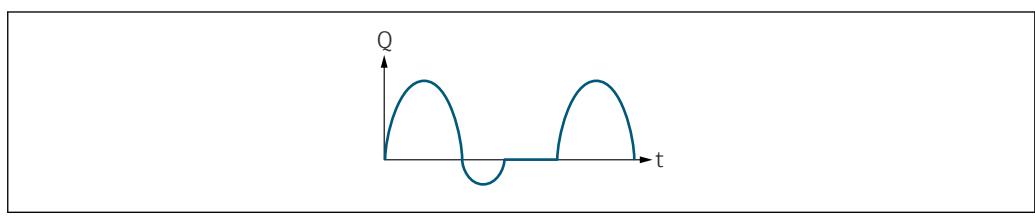

#### Example 1

Defined measuring range: lower range value and upper range value with the **same** sign

**Fig 2 Measuring range**

- $I$  Current
- $Q$  Flow
- 1 Lower range value (Start of measuring range output)
- 2 Upper range value (end of measuring range output)

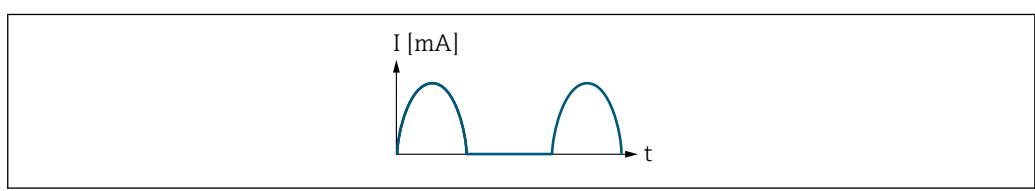

With the following flow response:

**Fig 3 Flow response**

- $Q$  Flow
- $t$  Time

With **Forward flow** option

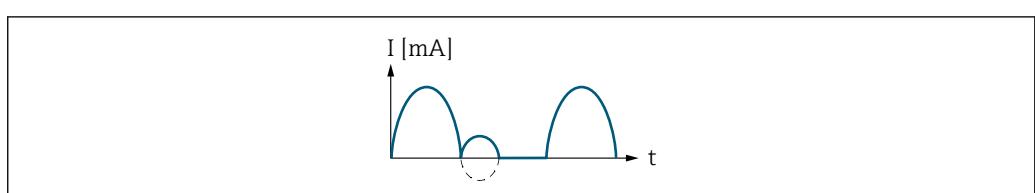

The current output signal is proportional to the process variable assigned. The flow components outside the scaled measuring range are not taken into account for signal output:.

- $I$  Current
- $t$  Time

With **Forward/Reverse flow** option

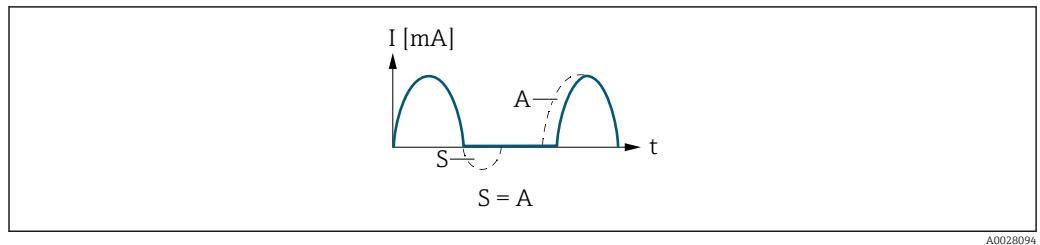

The current output signal is independent of the direction of flow.

- $I$  Current
- $t$  Time

With **Reverse flow compensation** option

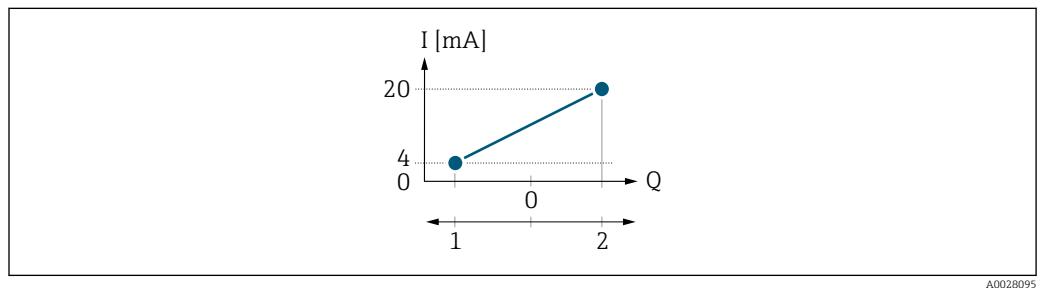

Flow components outside the measuring span are buffered, balanced and output after a maximum delay of 60 s.

$I$  Current  
 $t$  Time  
 $S$  Flow components saved  
 $A$  Balancing of saved flow components

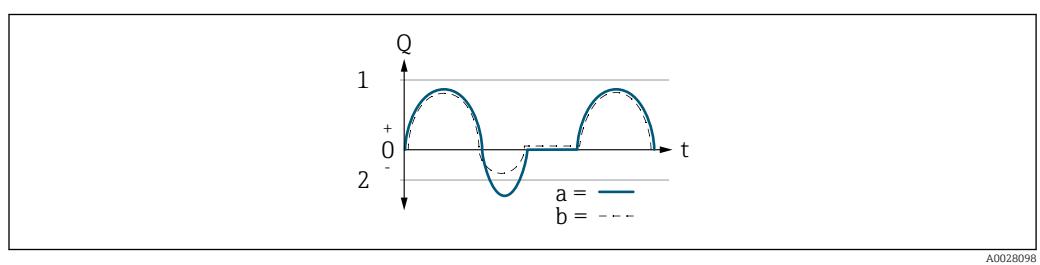

### Example 2

Defined measuring range: lower range value and upper range value with **different signs**

**Fig. 4 Measuring range**  
 $I$  Current  
 $Q$  Flow  
1 Lower range value (Start of measuring range output)  
2 Upper range value (end of measuring range output)

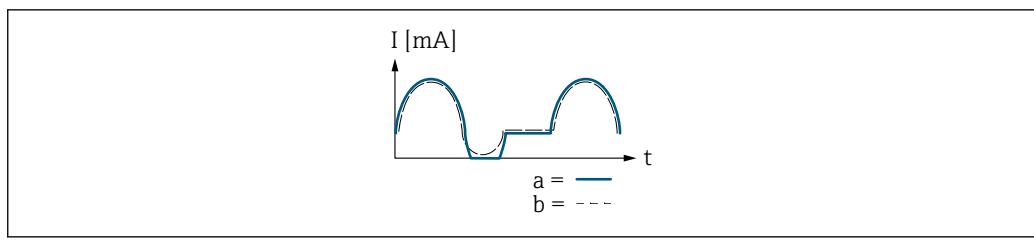

With flow a ( $\rightarrow$ ) outside, b ( $- -$ ) inside the measuring range

$Q$  Flow  
 $t$  Time  
1 Lower range value (Start of measuring range output)  
2 Upper range value (end of measuring range output)

With **Forward flow** option

- a ( $\rightarrow$ ): The flow components outside the scaled measuring range cannot be taken into account for signal output.
- b ( $- -$ ): The current output signal is proportional to the process variable assigned.

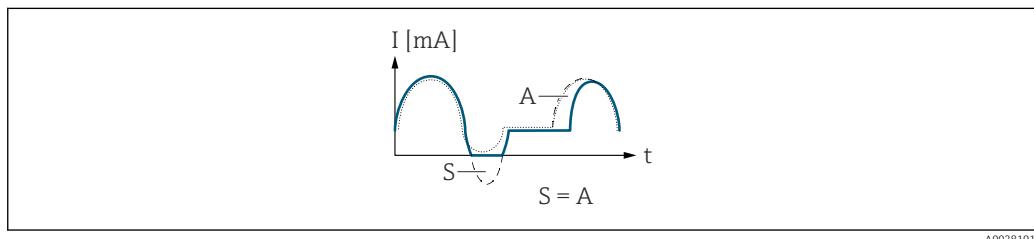

*I* Current  
*t* Time

#### With Forward/Reverse flow option

This option cannot be selected here since the values for the **Lower range value output** parameter (→ 77) and **Upper range value output** parameter (→ 78) have different signs.

#### With Reverse flow compensation option

Flow components outside the measuring span are buffered, balanced and output after a maximum delay of 60 s.

*I* Current  
*t* Time  
*S* Flow components saved  
*A* Balancing of saved flow components

---

## Damping current output

### Navigation

Expert → Output → Curr.output 1 to n → Damp.curr.outp

### Prerequisite

A process variable is selected in the **Assign current output** parameter (→ 75) and one of the following options is selected in the **Current span** parameter (→ 76):

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)

### Description

Use this function to enter a time constant for the reaction time of the current output signal to fluctuations in the measured value caused by process conditions.

### User entry

0.0 to 999.9 s

### Factory setting

1.0 s

**Additional information***User entry*

Use this function to enter a time constant (PT1 element<sup>2)</sup>) for current output damping:

- If a low time constant is entered, the current output reacts quickly to fluctuating measured variables.
- If a high time constant is entered, the current output reacts more slowly.

Damping is switched off if **0** is entered (factory setting).

---

**Failure behavior current output****Navigation**

Expert → Output → Curr.output 1 to n → Failure behav.

**Prerequisite**

A process variable is selected in the **Assign current output** parameter (→ 75) and one of the following options is selected in the **Current span** parameter (→ 76):

- 4...20 mA NE (3.8...20.5 mA)
- 4...20 mA US (3.9...20.8 mA)
- 4...20 mA (4...20.5 mA)
- 0...20 mA (0...20.5 mA)

**Description**

Use this function to select the value of the current output in the event of a device alarm.

**Selection**

- Min.
- Max.
- Last valid value
- Actual value
- Fixed value

**Factory setting**

Max.

---

2) proportional transmission behavior with first order delay

**Additional information***Description*

 This setting does not affect the failsafe mode of other outputs and totalizers. This is specified in separate parameters.

*"Min." option*

The current output adopts the value of the lower level for signal on alarm.

 The signal on alarm level is defined via the **Current span** parameter (→  76).

*"Max." option*

The current output adopts the value of the upper level for signal on alarm.

 The signal on alarm level is defined via the **Current span** parameter (→  76).

*"Last valid value" option*

The current output adopts the last measured value that was valid before the device alarm occurred.

*"Actual value" option*

The current output adopts the measured value on the basis of the current flow measurement; the device alarm is ignored.

*"Defined value" option*

The current output adopts a defined measured value.

 The measured value is defined via the **Failure current** parameter (→  85).

---

**Failure current****Navigation**

  Expert → Output → Curr.output 1 to n → Fail. current

**Prerequisite**

The **Defined value** option is selected in the **Failure mode** parameter (→  84).

**Description**

Use this function to enter a fixed value that the current output adopts in the event of a device alarm.

**User entry**

0 to 22.5 mA

**Factory setting**

22.5 mA

---

**Output current****Navigation**

  Expert → Output → Curr.output 1 to n → Output curr.

**Description**

Displays the current value currently calculated for the current output.

**User interface**

3.59 to 22.5 mA

**Measured current****Navigation** Expert → Output → Curr.output 1 to n → Measur. curr.**Description**

Displays the actual measured value of the output current.

**User interface**

0 to 30 mA

## Terminal number

---

**Navigation**

Expert → Output → PFS output 1 to n → Terminal no.

**Description**

Displays the terminal numbers used by the pulse/frequency/switch output module.

**User interface**

- Not used
- 24-25 (I/O 2)
- 22-23 (I/O 3)

**Additional information**

"Not used" option

The pulse/frequency/switch output module does not use any terminal numbers.

**Signal mode****Navigation**

Expert → Output → PFS output 1 to n → Signal mode

**Description**

Use this function to select the signal mode for the pulse/frequency/switch output.

**Selection**

- Passive
- Active \*
- Passive NE

**Factory setting**

Passive

**Operating mode****Navigation**

Expert → Output → PFS output 1 to n → Operating mode

**Prerequisite**

If the **Pulse** option is selected, the **Load rate** option must be selected in the **Assign pulse output** parameter (→ 89).

**Description**

Use this function to select the operating mode of the output as a pulse, frequency or switch output.

**Selection**

- Pulse
- Frequency
- Switch

**Factory setting**

Pulse

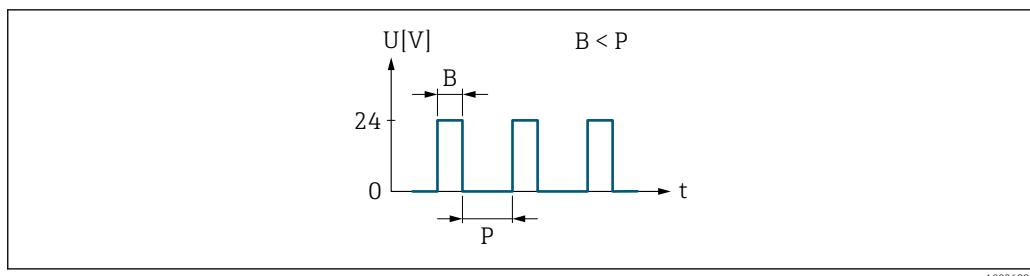

**Additional information**

"Pulse" option

**Example**

- Flow rate approx. 100 g/s
- Pulse value 0.1 g
- Pulse width 0.05 ms
- Pulse rate 1 000 Impuls/s

\* Visibility depends on order options or device settings

5 Quantity-proportional pulse (pulse value) with pulse width to be configured

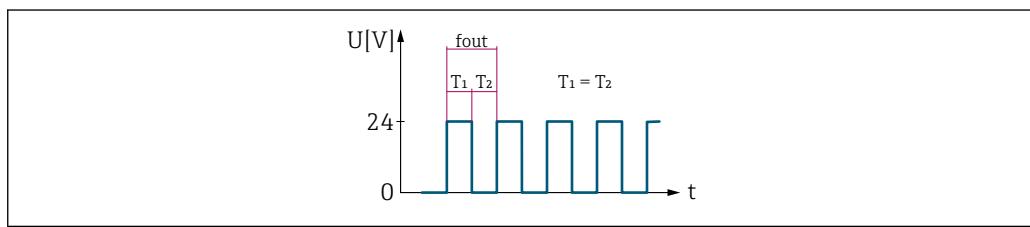

B Pulse width entered

P Pauses between the individual pulses

#### "Frequency" option

Example

- Flow rate approx. 100 g/s
- Max. frequency 10 kHz
- Flow rate at max. frequency 1000 g/s
- Output frequency approx. 1000 Hz

6 Flow-proportional frequency output

## Assign pulse output

### Navigation

Expert → Output → PFS output 1 to n → Assign pulse

### Prerequisite

The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n ( $\rightarrow$  49) or the fieldbus.

### Prerequisite

The **Pulse** option is selected in **Operating mode** parameter ( $\rightarrow$  88).

### Description

Use this function to select the process variable for the pulse output.

### Selection

- Off
- Load rate \*

### Factory setting

Off

\* Visibility depends on order options or device settings

---

**Pulse scaling****Navigation**

Expert → Output → PFS output 1 to n → Pulse scaling

**Prerequisite**

The **Pulse** option is selected in the **Operating mode** parameter (→ 88) and a process variable is selected in the **Assign pulse output** parameter (→ 89).

**Description**

Use this function to enter the value for the measured value that a pulse is equivalent to.

**User entry**

Positive floating point number

**Factory setting**

Depends on country and nominal diameter

**Additional information***User entry*

Weighting of the pulse output with a quantity.

The lower the pulse value, the

- better the resolution.
- the higher the frequency of the pulse response.

---

**Pulse width****Navigation**

Expert → Output → PFS output 1 to n → Pulse width

**Prerequisite**

The **Pulse** option is selected in the **Operating mode** parameter (→ 88) and a process variable is selected in the **Assign pulse output** parameter (→ 89).

**Description**

Use this function to enter the duration of the output pulse.

**User entry**

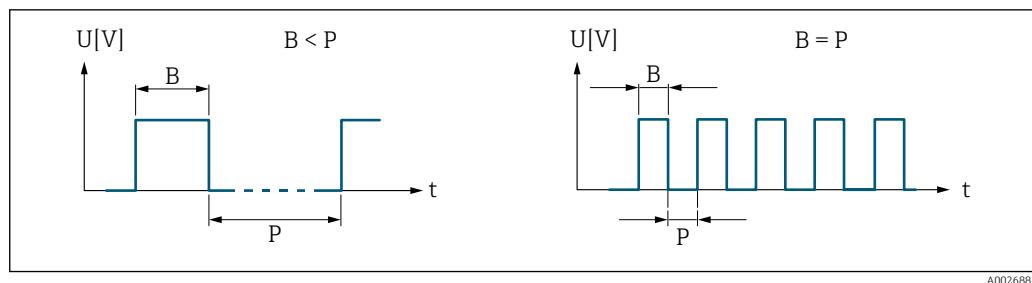

0.05 to 2 000 ms

**Factory setting**

100 ms

**Additional information***Description*

- Define how long a pulse is (duration).
- The maximum pulse rate is defined by  $f_{max} = 1 / (2 \times \text{pulse width})$ .
- The interval between two pulses lasts at least as long as the set pulse width.
- The maximum flow is defined by  $Q_{max} = f_{max} \times \text{pulse value}$ .
- If the flow exceeds these limit values, the measuring device displays the **443 Pulse output 1 to n** diagnostic message.

*B* Pulse width entered  
*P* Pauses between the individual pulses

### Example

- Pulse value: 0.1 g
- Pulse width: 0.1 ms
- $f_{\max}$ :  $1 / (2 \times 0.1 \text{ ms}) = 5 \text{ kHz}$
- $Q_{\max}$ :  $5 \text{ kHz} \times 0.1 \text{ g} = 0.5 \text{ kg/s}$

## Measuring mode

### Navigation

Expert → Output → PFS output 1 to n → Measuring mode

### Description

Use this function to select the measuring mode for the pulse output.

### Selection

- Forward flow
- Forward/Reverse flow
- Reverse flow
- Reverse flow compensation

### Factory setting

Forward flow

### Additional information

#### Options

- Forward flow  
Positive flow is output, negative flow is not output.
- Forward/Reverse flow  
Positive and negative flow are output (absolute value), but a distinction is not made between positive and negative flow.
- Reverse flow  
Negative flow is output, positive flow is not output.
- Reverse flow compensation  
The flow components outside the measuring range are buffered, balanced and output after a maximum delay of 60 s.

For a detailed description of the options available, see the **Measuring mode** parameter (→ 79)

### Examples

For a detailed description of the configuration examples, see the **Measuring mode** parameter (→ 79)

**Failure mode****Navigation**

Expert → Output → PFS output 1 to n → Failure mode

**Prerequisite**

The **Pulse** option is selected in the **Operating mode** parameter (→ 88) and a process variable is selected in the **Assign pulse output** parameter (→ 89).

**Description**

Use this function to select the failure mode of the pulse output in the event of a device alarm.

**Selection**

- Actual value
- No pulses

**Factory setting**

No pulses

**Additional information***Description*

The dictates of safety render it advisable to ensure that the pulse output shows a predefined behavior in the event of a device alarm.

*Options*

- Actual value  
In the event of a device alarm, the pulse output continues on the basis of the current flow measurement. The fault is ignored.
- No pulses  
In the event of a device alarm, the pulse output is "switched off".

**NOTICE!** A device alarm indicates a serious fault with the measuring device. The measurement quality may possibly be influenced and may no longer be guaranteed. The **Actual value** option is only recommended if it is ensured that all possible alarm conditions do not influence the measurement quality.

---

**Pulse output****Navigation**

Expert → Output → PFS output 1 to n → Pulse output

**Prerequisite**

The **Pulse** option is selected in the **Operating mode** parameter (→ 88) parameter.

**Description**

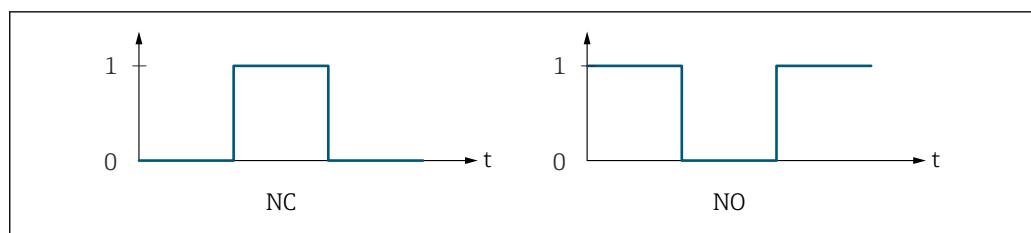

Displays the pulse frequency currently output.

**User interface**

Positive floating-point number

**Additional information***Description*

- The pulse output is an open collector output.
- This is configured at the factory in such a way that the transistor is conductive for the duration of the pulse (NO contact) and is safety-oriented.

0 Non-conductive  
 1 Conductive  
 NC NC contact (normally closed)  
 NO NO contact (normally open)

The output behavior can be reversed via the **Invert output signal** parameter (→ 104) i.e. the transistor does not conduct for the duration of the pulse.

In addition, the behavior of the output in the event of a device alarm (**Failure mode** parameter (→ 92)) can be configured.

## Assign frequency output

### Navigation

Expert → Output → PFS output 1 to n → Assign freq.

### Prerequisite

- The **Frequency** option is selected in the **Operating mode** parameter (→ 88).
- The **Load rate** option is only available if the volume flow of the medium is read via the Current input 1 to n (→ 49) or the fieldbus.

### Description

Use this function to select the process variable for the frequency output.

### Selection

- Off
- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity
- Load rate \*

### Factory setting

Off

## Minimum frequency value

### Navigation

Expert → Output → PFS output 1 to n → Min. freq. value

### Prerequisite

The **Frequency** option is selected in the **Operating mode** parameter (→ 88) and a process variable is selected in the **Assign frequency output** parameter (→ 93).

### Description

Use this function to enter the minimum frequency.

### User entry

0.0 to 10 000.0 Hz

\* Visibility depends on order options or device settings

---

Factory setting	0.0 Hz
-----------------	--------

---

## Maximum frequency value

Navigation	Expert → Output → PFS output 1 to n → Max. freq. value
------------	--

**Prerequisite** The **Frequency** option is selected in the **Operating mode** parameter (→ [88](#)) and a process variable is selected in the **Assign frequency output** parameter (→ [93](#)).

**Description** Use this function to enter the end value frequency.

**User entry** 0.0 to 10 000.0 Hz

**Factory setting** 10 000.0 Hz

---

## Measuring value at minimum frequency

Navigation	Expert → Output → PFS output 1 to n → Val. at min.freq
------------	--

**Prerequisite** The **Frequency** option is selected in the **Operating mode** parameter (→ [88](#)) and a process variable is selected in the **Assign frequency output** parameter (→ [93](#)).

**Description** Use this function to enter the measured value for the start value frequency.

**User entry** Signed floating-point number

**Factory setting** Depends on country and nominal diameter

**Additional information** *Dependency*

The entry depends on the process variable selected in the **Assign frequency output** parameter (→ [93](#)).

---

## Measuring value at maximum frequency

Navigation	Expert → Output → PFS output 1 to n → Val. at max.freq
------------	--

**Prerequisite** The **Frequency** option is selected in the **Operating mode** parameter (→ [88](#)) and a process variable is selected in the **Assign frequency output** parameter (→ [93](#)).

**Description** Use this function to enter the measured value for the end value frequency.

**User entry** Signed floating-point number

**Factory setting** Depends on country and nominal diameter

**Additional information***Description*

Use this function to enter the maximum measured value at the maximum frequency. The selected process variable is output as a proportional frequency.

*Dependency*

 The entry depends on the process variable selected in the **Assign frequency output** parameter (→ 93).

---

**Measuring mode****Navigation**

 Expert → Output → PFS output 1 to n → Measuring mode

**Description**

Use this function to select the measuring mode for the frequency output.

**Selection**

- Forward flow
- Forward/Reverse flow
- Reverse flow compensation

**Factory setting**

Forward flow

**Additional information***Options*

 For a detailed description of the options available, see the **Measuring mode** parameter (→ 79)

*Examples*

 For a detailed description of the configuration examples, see the **Measuring mode** parameter (→ 79)

---

**Damping output****Navigation**

 Expert → Output → PFS output 1 to n → Damping out.

**Description**

Use this function to enter a time constant for the reaction time of the output signal to fluctuations in the measured value.

**User entry**

0 to 999.9 s

**Factory setting**

0.0 s

**Additional information***User entry*

Use this function to enter a time constant (PT1 element<sup>3)</sup>) for frequency output damping:

- If a low time constant is entered, the current output reacts particularly quickly to fluctuating measured variables.
- On the other hand, the current output reacts more slowly if a high time constant is entered.

 Damping is switched off if **0** is entered (factory setting).

The frequency output is subject to separate damping that is independent of all preceding time constants.

---

**Response time**

---

**Navigation**

 Expert → Output → PFS output 1 to n → Response time

**Prerequisite**

The **Frequency** option is selected in the **Operating mode** parameter (→ 88) and an option is selected in the **Assign frequency output** parameter (→ 93).

**Description**

Shows how quickly the output reaches 63% of a measured value change.

**User interface**

Positive floating-point number

**Factory setting**

0 s

---

**Failure mode**

---

**Navigation**

 Expert → Output → PFS output 1 to n → Failure mode

**Prerequisite**

The **Frequency** option is selected in the **Operating mode** parameter (→ 88) and a process variable is selected in the **Assign frequency output** parameter (→ 93).

**Description**

Use this function to select the failure mode of the frequency output in the event of a device alarm.

**Selection**

- Actual value
- Defined value
- 0 Hz

**Factory setting**

0 Hz

---

3) proportional transmission behavior with first order delay

**Additional information***Options*

## ■ Actual value

In the event of a device alarm, the frequency output continues on the basis of the current flow measurement. The device alarm is ignored.

## ■ Defined value

In the event of a device alarm, the frequency output continues on the basis of a predefined value. The Failure frequency (→ 97) replaces the current measured value, making it possible to bypass the device alarm. The actual measurement is switched off for the duration of the device alarm.

## ■ 0 Hz

In the event of a device alarm, the frequency output is "switched off".

**NOTICE!** A device alarm indicates a serious fault with the measuring device. The measurement quality may possibly be influenced and may no longer be guaranteed. The **Actual value** option is only recommended if it is ensured that all possible alarm conditions do not influence the measurement quality.

**Failure frequency****Navigation**

Expert → Output → PFS output 1 to n → Failure freq.

**Prerequisite**

In the **Operating mode** parameter (→ 88), the **Frequency** option is selected, in the **Assign frequency output** parameter (→ 93) a process variable is selected, and in the **Failure mode** parameter (→ 96), the **Defined value** option is selected.

**Description**

Enter frequency output value in alarm condition.

**User entry**

0.0 to 12 500.0 Hz

**Factory setting**

0.0 Hz

**Output frequency****Navigation**

Expert → Output → PFS output 1 to n → Output freq.

**Prerequisite**

In the **Operating mode** parameter (→ 88), the **Frequency** option is selected.

**Description**

Displays the actual value of the output frequency which is currently measured.

**User interface**

0.0 to 12 500.0 Hz

**Switch output function****Navigation**

Expert → Output → PFS output 1 to n → Switch out funct

**Prerequisite**

The **Switch** option is selected in the **Operating mode** parameter (→ 88).

---

<b>Description</b>	Use this function to select a function for the switch output.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Off</li><li>▪ On</li><li>▪ Diagnostic behavior</li><li>▪ Limit</li><li>▪ Flow direction check</li><li>▪ Status</li></ul>
<b>Factory setting</b>	Off
<b>Additional information</b>	<ul style="list-style-type: none"><li>▪ Off The switch output is permanently switched off (open, non-conductive).</li><li>▪ On The switch output is permanently switched on (closed, conductive).</li><li>▪ Diagnostic behavior The switch output is switched on (closed, conductive), if there is a pending diagnostic event of the assigned behavioral category.</li><li>▪ Limit The switch output is switched on (closed, conductive), if a limit value specified for the process variable is reached.</li><li>▪ Flow direction check The switch output is switched on (closed, conductive), when the flow direction changes (forward or reverse flow).</li><li>▪ Status The switch output is switched on (closed/conductive) to display the device status for the selected detection method, e.g. empty pipe detection.</li></ul>

---

## Assign diagnostic behavior

<b>Navigation</b>	Expert → Output → PFS output 1 to n → Assign diag. beh
<b>Prerequisite</b>	<ul style="list-style-type: none"><li>▪ In the <b>Operating mode</b> parameter (→ 88), the <b>Switch</b> option is selected.</li><li>▪ In the <b>Switch output function</b> parameter (→ 97), the <b>Diagnostic behavior</b> option is selected.</li></ul>
<b>Description</b>	Use this function to select the diagnostic event category that is displayed for the switch output.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Alarm</li><li>▪ Alarm or warning</li><li>▪ Warning</li></ul>
<b>Factory setting</b>	Alarm

**Additional information***Description*

If no diagnostic event is pending, the switch output is closed and conductive.

*Selection*

- Alarm  
The switch output signals only diagnostic events in the alarm category.
- Alarm or warning  
The switch output signals diagnostic events in the alarm and warning category.
- Warning  
The switch output signals only diagnostic events in the warning category.

**Assign limit****Navigation**

Expert → Output → PFS output 1 to n → Assign limit

**Prerequisite**

- The **Switch** option is selected in **Operating mode** parameter (→ 88).
- The **Limit** option is selected in **Switch output function** parameter (→ 97).
- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Use this function to select a process variable for the limit function.

**Selection**

- Off
- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity
- Load rate \*
- Totalizer 1 \*

**Factory setting**

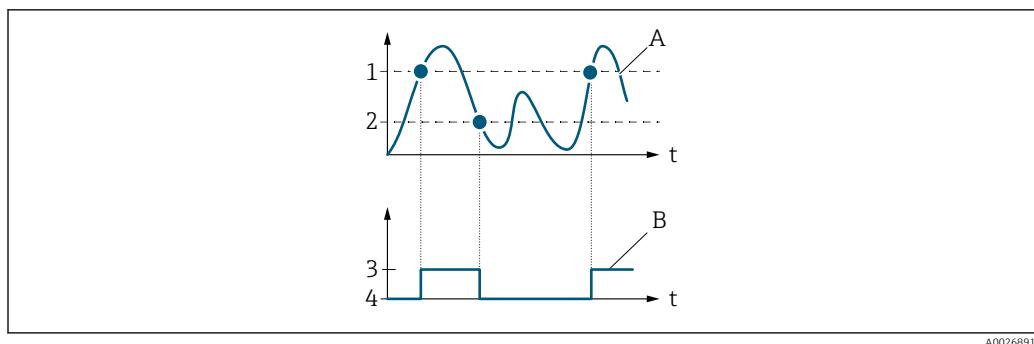

Temperature

**Additional information***Description*

Behavior of status output when Switch-on value > Switch-off value:

- Process variable > Switch-on value: transistor is conductive
- Process variable < Switch-off value: transistor is non-conductive

\* Visibility depends on order options or device settings

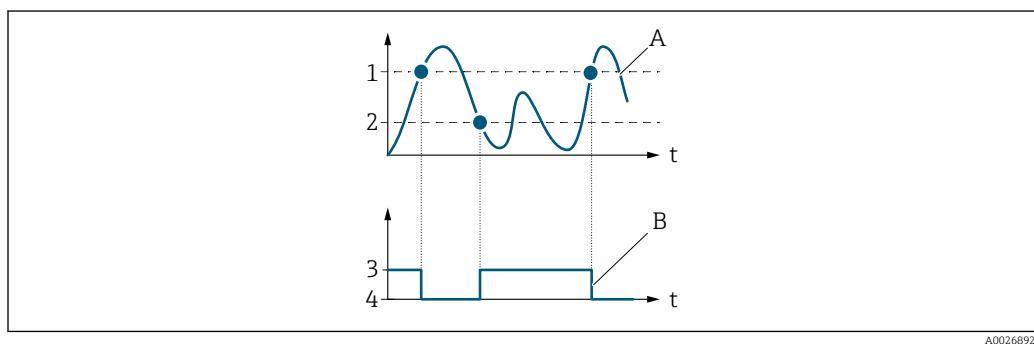

- 1 Switch-on value
- 2 Switch-off value
- 3 Conductive
- 4 Non-conductive
- A Process variable
- B Status output

A0026891

Behavior of status output when Switch-on value < Switch-off value:

- Process variable < Switch-on value: transistor is conductive
- Process variable > Switch-off value: transistor is non-conductive

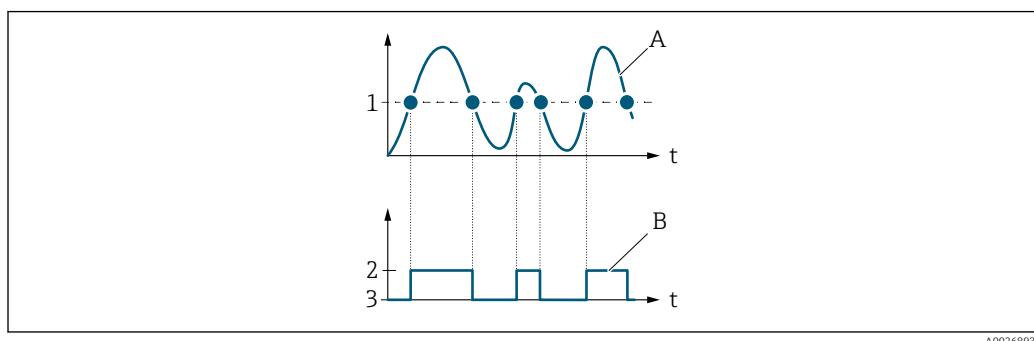

- 1 Switch-off value
- 2 Switch-on value
- 3 Conductive
- 4 Non-conductive
- A Process variable
- B Status output

A0026892

Behavior of status output when Switch-on value = Switch-off value:

- Process variable > Switch-on value: transistor is conductive
- Process variable < Switch-off value: transistor is non-conductive

- 1 Switch-on value = Switch-off value
- 2 Conductive
- 3 Non-conductive
- A Process variable
- B Status output

A0026893

---

**Switch-on value**

**Navigation** Expert → Output → PFS output 1 to n → Switch-on value

**Prerequisite**

- The **Switch** option is selected in the **Operating mode** parameter (→ 88).
- The **Limit** option is selected in the **Switch output function** parameter (→ 97).

**Description** Use this function to enter the measured value for the switch-on point.

**User entry** Floating point number with sign

**Factory setting** 0 °C

**Additional information** *Description*

Use this function to enter the limit value for the switch-on value (process variable > switch-on value = closed, conductive).

When using a hysteresis: Switch-on value > Switch-off value.

*Dependency*

The unit depends on the process variable selected in the **Assign limit** parameter (→ 99).

---

**Switch-off value**

**Navigation** Expert → Output → PFS output 1 to n → Switch-off value

**Prerequisite**

- The **Switch** option is selected in the **Operating mode** parameter (→ 88).
- The **Limit** option is selected in the **Switch output function** parameter (→ 97).

**Description** Use this function to enter the measured value for the switch-off point.

**User entry** Floating point number with sign

**Factory setting** 0 °C

**Additional information** *Description*

Use this function to enter the limit value for the switch-off value (process variable < switch-off value = open, non-conductive).

When using a hysteresis: Switch-on value > Switch-off value.

*Dependency*

The unit depends on the process variable selected in the **Assign limit** parameter (→ 99).

## Assign flow direction check

<b>Navigation</b>	Expert → Output → PFS output 1 to n → Assign dir.check
<b>Prerequisite</b>	<ul style="list-style-type: none"><li>■ The <b>Switch</b> option is selected in the <b>Operating mode</b> parameter (→ <a href="#">88</a>).</li><li>■ The <b>Flow direction check</b> option is selected in the <b>Switch output function</b> parameter (→ <a href="#">97</a>).</li></ul>
<b>Description</b>	Use this function to select a process variable for monitoring the flow direction.
<b>Selection</b>	
<b>Factory setting</b>	Off

## Assign status

<b>Navigation</b>	Expert → Output → PFS output 1 to n → Assign status
<b>Prerequisite</b>	<ul style="list-style-type: none"><li>■ The <b>Switch</b> option is selected in <b>Operating mode</b> parameter (→ <a href="#">88</a>).</li><li>■ The <b>Status</b> option is selected in <b>Switch output function</b> parameter (→ <a href="#">97</a>).</li></ul>
<b>Description</b>	Select the device function whose status you want to display.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ Off</li><li>■ Partially filled pipe detection</li></ul>
<b>Factory setting</b>	Partially filled pipe detection
<b>Additional information</b>	<i>Options</i> When the switch-on point for the selected device function is reached, the output is switched on (closed, conductive). Otherwise, the output is non-conductive.

## Switch-on delay

<b>Navigation</b>	Expert → Output → PFS output 1 to n → Switch-on delay
<b>Prerequisite</b>	<ul style="list-style-type: none"><li>■ The <b>Switch</b> option is selected in the <b>Operating mode</b> parameter (→ <a href="#">88</a>).</li><li>■ The <b>Limit</b> option is selected in the <b>Switch output function</b> parameter (→ <a href="#">97</a>).</li></ul>
<b>Description</b>	Use this function to enter a delay time for switching on the switch output.
<b>User entry</b>	0.0 to 100.0 s
<b>Factory setting</b>	0.0 s

**Switch-off delay**

**Navigation** Expert → Output → PFS output 1 to n → Switch-off delay

**Prerequisite**

- The **Switch** option is selected in the **Operating mode** parameter (→ 88).
- The **Limit** option is selected in the **Switch output function** parameter (→ 97).

**Description** Use this function to enter a delay time for switching off the switch output.

**User entry** 0.0 to 100.0 s

**Factory setting** 0.0 s

**Failure mode**

**Navigation** Expert → Output → PFS output 1 to n → Failure mode

**Description** Use this function to select a failsafe mode for the switch output in the event of a device alarm.

**Selection**

- Actual status
- Open
- Closed

**Factory setting** Open

**Additional information** *Options*

- Actual status  
In the event of a device alarm, faults are ignored and the current behavior of the input value is output by the switch output. The **Actual status** option behaves in the same way as the current input value.
- Open  
In the event of a device alarm, the switch output's transistor is set to **non-conductive**.
- Closed  
In the event of a device alarm, the switch output's transistor is set to **conductive**.

**Switch state**

**Navigation** Expert → Output → PFS output 1 to n → Switch state

**Prerequisite** The **Switch** option is selected in the **Operating mode** parameter (→ 88).

**Description** Displays the current switch status of the status output.

**User interface**

- Open
- Closed

**Additional information***User interface*

- Open  
The switch output is not conductive.
- Closed  
The switch output is conductive.

**Invert output signal****Navigation**

Expert → Output → PFS output 1 to n → Invert outp.sig.

**Description**

Use this function to select whether to invert the output signal.

**Selection**

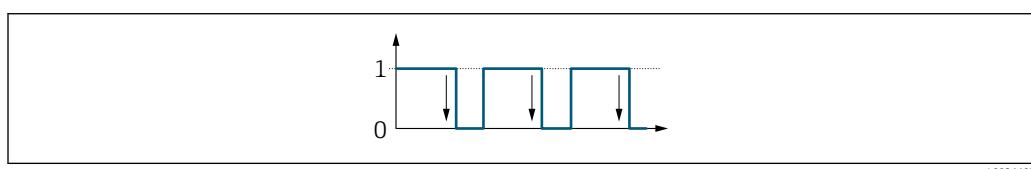

- No
- Yes

**Factory setting**

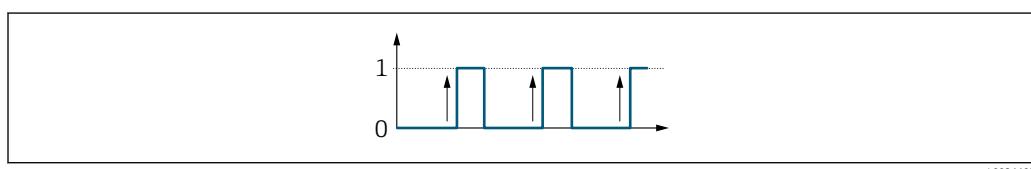

No

**Additional information***Selection*

**No** option (passive - negative)

**Yes** option (passive - positive)

### 3.5.3 "Relay output 1 to n" submenu

**Navigation**

Expert → Output → Relay output 1 to n

<b>► Relay output 1 to n</b>	
Terminal number	→  105
Relay output function	→  105
Assign flow direction check	→  106

Assign limit	→  106

<b>Selection</b>	<ul style="list-style-type: none"><li>■ Off</li><li>■ Total solids</li><li>■ Temperature</li><li>■ Electronics temperature</li><li>■ Conductivity</li></ul>

- Corrected conductivity \*
- Load rate \*
- Totalizer 1 \*

**Factory setting** Temperature

## Assign diagnostic behavior

**Navigation**

Diagram: Expert → Output → Relay output 1 to n → Assign diag. beh

**Prerequisite**

In the **Relay output function** parameter (→ 105), the **Diagnostic behavior** option is selected.

**Description**

Use this function to select the category of the diagnostic events that are displayed for the relay output.

**Selection**

- Alarm
- Alarm or warning
- Warning

**Factory setting** Alarm

**Additional information**

*Description*

If no diagnostic event is pending, the relay output is closed and conductive.

*Selection*

- Alarm  
The relay output signals only diagnostic events in the alarm category.
- Alarm or warning  
The relay output signals diagnostic events in the alarm and warning category.
- Warning  
The relay output signals only diagnostic events in the warning category.

## Assign status

**Navigation**

Diagram: Expert → Output → Relay output 1 to n → Assign status

**Prerequisite**

In the **Relay output function** parameter (→ 105), the **Digital Output** option is selected.

**Description**

Use this function to select the device status for the relay output.

**Selection**

- Off
- Partially filled pipe detection

**Factory setting** Off

\* Visibility depends on order options or device settings

## Switch-off value

### Navigation

Expert → Output → Relay output 1 to n → Switch-off value

### Prerequisite

The **Limit** option is selected in the **Relay output function** parameter (→ 105).

### Description

Use this function to enter the measured value for the switch-off point.

### User entry

Floating point number with sign

### Factory setting

0 °C

### Additional information

#### Description

Use this function to enter the limit value for the switch-off value (process variable < switch-off value = open, non-conductive).

When using a hysteresis: Switch-on value > Switch-off value.

#### Dependency

The unit is dependent on the process variable selected in the **Assign limit** parameter (→ 106).

## Switch-off delay

### Navigation

Expert → Output → Relay output 1 to n → Switch-off delay

### Prerequisite

In the **Relay output function** parameter (→ 105), the **Limit** option is selected.

### Description

Use this function to enter a delay time for switching off the switch output.

### User entry

0.0 to 100.0 s

### Factory setting

0.0 s

## Switch-on value

### Navigation

Expert → Output → Relay output 1 to n → Switch-on value

### Prerequisite

The **Limit** option is selected in the **Relay output function** parameter (→ 105).

### Description

Use this function to enter the measured value for the switch-on point.

### User entry

Floating point number with sign

### Factory setting

0 °C

**Additional information***Description*

Use this function to enter the limit value for the switch-on value (process variable > switch-on value = closed, conductive).

When using a hysteresis: Switch-on value > Switch-off value.

*Dependency*

The unit is dependent on the process variable selected in the **Assign limit** parameter (→ 106).

**Switch-on delay****Navigation**

Expert → Output → Relay output 1 to n → Switch-on delay

**Prerequisite**

In the **Relay output function** parameter (→ 105), the **Limit** option is selected.

**Description**

Use this function to enter a delay time for switching on the switch output.

**User entry**

0.0 to 100.0 s

**Factory setting**

0.0 s

**Failure mode****Navigation**

Expert → Output → Relay output 1 to n → Failure mode

**Description**

Use this function to select the failure mode of the relay output in the event of a device alarm.

**Selection**

- Actual status
- Open
- Closed

**Factory setting**

Open

**Additional information***Selection*

- Actual status

In the event of a device alarm, faults are ignored and the current behavior of the input value is output by the relay output. The **Actual status** option behaves in the same way as the current input value.

- Open

In the event of a device alarm, the relay output's transistor is set to **non-conductive**.

- Closed

In the event of a device alarm, the relay output's transistor is set to **conductive**.

---

**Switch state**

---

  Expert → Output → Relay output 1 to n → Switch state

**Description** Displays the current status of the relay output.

**User interface**

- Open
- Closed

**Additional information** *User interface*

- Open  
The relay output is not conductive.
- Closed  
The relay output is conductive.

---

**Powerless relay status**

---

  Expert → Output → Relay output 1 to n → Powerless relay

**Description** Use this function to select the quiescent state for the relay output.

**Selection**

- Open
- Closed

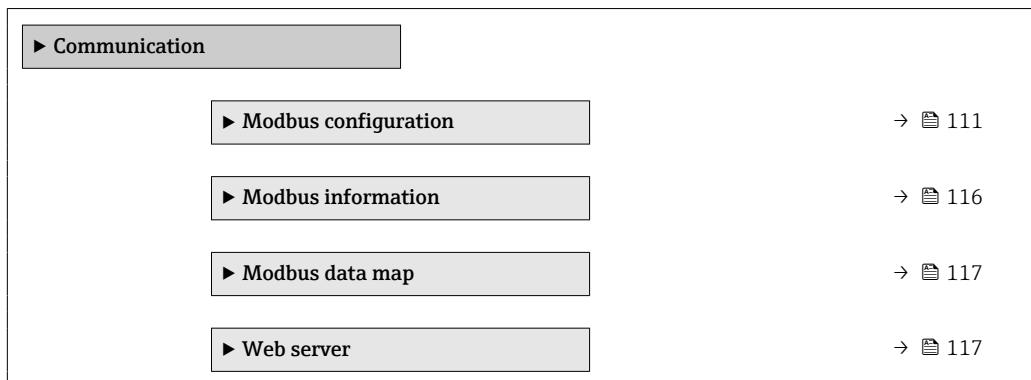

**Factory setting** Open

**Additional information** *Selection*

- Open  
The relay output is not conductive.
- Closed  
The relay output is conductive.

## 3.6 "Communication" submenu

*Navigation*   Expert → Communication

### 3.6.1 "Modbus configuration" submenu

*Navigation*

Expert → Communication → Modbus config.

► Modbus configuration	
Bus address	→  111
Baudrate	→  111
Data transfer mode	→  112
Parity	→  112
Byte order	→  113
Telegram delay	→  114
Failure mode	→  114
Bus termination	→  115
Fieldbus writing access	→  115

---

#### Bus address

**Navigation**

Expert → Communication → Modbus config. → Bus address

**Description**

For entering the device address.

**User entry**

1 to 247

**Factory setting**

247

---

#### Baudrate

**Navigation**

Expert → Communication → Modbus config. → Baudrate

**Description**

Use this function to select a transmission rate.

**Selection**

- 1200 BAUD
- 2400 BAUD
- 4800 BAUD
- 9600 BAUD
- 19200 BAUD
- 38400 BAUD

- 57600 BAUD
- 115200 BAUD
- 230400 BAUD

**Factory setting** 19200 BAUD

---

## Data transfer mode

**Navigation** Expert → Communication → Modbus config. → Data trans. mode

**Description** Use this function to select the data transmission mode.

**Selection**

- ASCII
- RTU

**Factory setting** RTU

**Additional information** *Options*

- ASCII  
Transmission of data in the form of readable ASCII characters. Error protection via LRC.
- RTU  
Transmission of data in binary form. Error protection via CRC16.

---

## Parity

**Navigation** Expert → Communication → Modbus config. → Parity

**Description** Use this function to select the parity bit.

**Selection**

- Odd
- Even
- None / 1 stop bit
- None / 2 stop bits

**Factory setting** Even

**Additional information** *Options*

Picklist **ASCII** option:

- 0 = **Even** option
- 1 = **Odd** option

Picklist **RTU** option:

- 0 = **Even** option
- 1 = **Odd** option
- 2 = **None / 1 stop bit** option
- 3 = **None / 2 stop bits** option

**Byte order****Navigation**

Expert → Communication → Modbus config. → Byte order

**Description**

Use this function to select the sequence in which the bytes are transmitted. The transmission sequence must be coordinated with the Modbus master.

**Selection**

- 0-1-2-3
- 3-2-1-0
- 1-0-3-2
- 2-3-0-1

**Factory setting**

1-0-3-2

**Additional information***Description*

The byte sequence is not standardized by the Modbus protocol. However, if the host system and the measuring device do not use the same byte sequence, correct data exchange is not possible.

Changing the byte sequence in the host system often requires extensive knowledge and significant programming efforts. Endress+Hauser introduced the **Byte order** parameter (→ 113) for this reason.

This makes it possible to use the standard settings of the host system and change the byte sequence on the measuring device by trial and error. If correct data exchange cannot be achieved by changing the byte sequence, the settings for the byte sequence of the host system must be adapted accordingly.

*Byte transmission sequence*

Byte addressing, i.e. the transmission sequence of the bytes, is not specified in the Modbus specification. For this reason, it is important to coordinate or match the addressing method between the master and slave during commissioning. This can be configured in the measuring device using the **Byte order** parameter (→ 113).

The bytes are transmitted depending on the selection in the **Byte order** parameter (→ 113):

FLOAT				
	Sequence			
Options	1.	2.	3.	4.
1 – 0 – 3 – 2 *	Byte 1 (MMMMMMMM)	Byte 0 (MMMMMMMM)	Byte 3 (SEEEEEEE)	Byte 2 (EMMMMMMM)
0 – 1 – 2 – 3	Byte 0 (MMMMMMMM)	Byte 1 (MMMMMMMM)	Byte 2 (EMMMMMMM)	Byte 3 (SEEEEEEE)
2 – 3 – 0 – 1	Byte 2 (EMMMMMMM)	Byte 3 (SEEEEEEE)	Byte 0 (MMMMMMMM)	Byte 1 (MMMMMMMM)
3 – 2 – 1 – 0	Byte 3 (SEEEEEEE)	Byte 2 (EMMMMMMM)	Byte 1 (MMMMMMMM)	Byte 0 (MMMMMMMM)

\* = factory setting, S = sign, E = exponent, M = mantissa

**INTEGER**

	Sequence	
Options	1.	2.

<b>1 - 0 - 3 - 2 *</b> 3 - 2 - 1 - 0	Byte 1 (MSB)	Byte 0 (LSB)
<b>0 - 1 - 2 - 3</b> 2 - 3 - 0 - 1	Byte 0 (LSB)	Byte 1 (MSB)
* = factory setting, MSB = most significant byte, LSB = least significant byte		

<b>STRING</b> Presentation taking the example of a device parameter with a data length of 18 bytes.					
	Sequence				
Options	1.	2.	...	17.	18.
<b>1 - 0 - 3 - 2 *</b> 3 - 2 - 1 - 0	Byte 17 (MSB)	Byte 16	...	Byte 1	Byte 0 (LSB)
<b>0 - 1 - 2 - 3</b> 2 - 3 - 0 - 1	Byte 16	Byte 17 (MSB)	...	Byte 0 (LSB)	Byte 1

\* = factory setting, MSB = most significant byte, LSB = least significant byte

## Telegram delay

### Navigation

Expert → Communication → Modbus config. → Telegram delay

### Description

Use this function to enter a delay time after which the measuring device replies to the request telegram of the Modbus master. This allows communication to be adapted to slow Modbus RS485 masters.

### User entry

0 to 100 ms

### Factory setting

6 ms

## Failure mode

### Navigation

Expert → Communication → Modbus config. → Failure mode

### Description

Use this function to select the measured value output in the event of a diagnostic message via Modbus communication.

### Selection

- NaN value
- Last valid value

### Factory setting

NaN value

**Additional information***Options*

- NaN value  
The device outputs the NaN value<sup>4)</sup>.
- Last valid value  
The device outputs the last valid measured value before the fault occurred.

 This effect of this parameter depends on the option selected in the **Assign diagnostic behavior** parameter.

**Bus termination****Navigation**

 Expert → Communication → Modbus config. → Bus termination

**Description**

Displays whether the terminating resistor is enabled or disabled.

**User interface**

- Off
- On

**Factory setting**

Off

**Additional information***Selection*

- Off  
The terminating resistor is disabled.
- On  
The terminating resistor is enabled.

 For detailed information about enabling the terminating resistor, see the Operating Instructions for the device, "Enabling the terminating resistor" section

**Fieldbus writing access****Navigation**

 Expert → Communication → Modbus config. → Fieldb.writ.acc.

**Description**

Use this function to restrict access to the measuring device via fieldbus (Modbus protocol).

**Selection**

- Read + write
- Read only

**Factory setting**

Read + write

4) Not a Number

**Additional information***Description*

If read and/or write protection is enabled, the parameter can only be controlled and reset via local operation. Access is no longer possible via operating tools.

This does not affect cyclic measured value transmission to the higher-order system, which is always guaranteed.

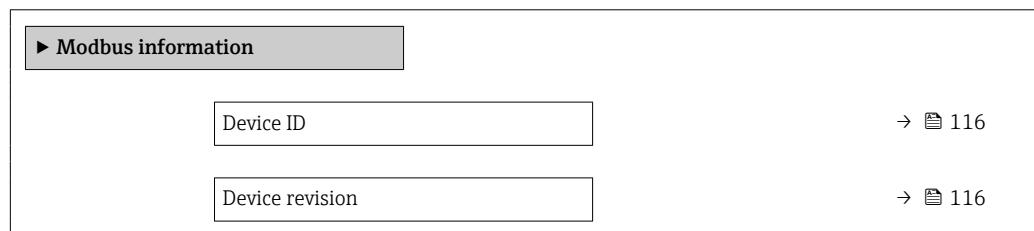

*Selection*

- Read + write  
The parameters are read and write parameters.
- Read only  
The parameters are read only parameters.

### 3.6.2 "Modbus information" submenu

**Navigation**

Expert → Communication → Modbus info

---

**Device ID**

---

**Navigation**

Expert → Communication → Modbus info → Device ID

**Description**

Displays the device ID for identifying the measuring device.

**User interface**

4-digit hexadecimal number

---

**Device revision**

---

**Navigation**

Expert → Communication → Modbus info → Device revision

**Description**

Displays the device revision.

**User interface**

4-digit hexadecimal number

### 3.6.3 "Modbus data map" submenu

*Navigation*

Expert → Communication → Modbus data map

The screenshot shows a menu structure. At the top is a header bar with the title 'Modbus data map'. Below it is a main menu item 'Scan list register 0 to 15'. In the bottom right corner of the menu area, there is a small note '→ 117'.

#### Scan list register 0 to 15

**Navigation**

Expert → Communication → Modbus data map → Scan list reg.0 to 15

**Description**

Use this function to enter the scan list register. By entering the register address (1-based), up to 16 device parameters can be grouped by assigning them to the scan list registers 0 to 15. The data of the device parameters assigned here are read out via the register addresses 5051 to 5081.

**User entry** 1 to 65 535

**Factory setting** 1

### 3.6.4 "Web server" submenu

*Navigation*

Expert → Communication → Web server

The screenshot shows a menu structure. At the top is a header bar with the title 'Web server'. Below it is a list of configuration items: 'Web server language', 'MAC address', 'DHCP client', 'IP address', 'Subnet mask', 'Default gateway', 'Web server functionality', and 'Login page'. To the right of each item, there is a small note indicating the page number: '→ 118', '→ 118', '→ 118', '→ 119', '→ 119', '→ 119', '→ 120', and '→ 120' respectively.

---

## Web server language

---

<b>Navigation</b>	  Expert → Communication → Web server → Webserv.language
<b>Description</b>	Use this function to select the language configured for the Web server.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ English</li><li>▪ Deutsch</li><li>▪ Français</li><li>▪ Español</li><li>▪ Italiano</li><li>▪ Nederlands</li><li>▪ Portuguesa</li><li>▪ Polski</li><li>▪ русский язык (Russian)</li><li>▪ Svenska</li><li>▪ Türkçe</li><li>▪ 中文 (Chinese)</li><li>▪ 日本語 (Japanese)</li><li>▪ 한국어 (Korean)</li><li>▪ čeština (Czech)</li></ul>
<b>Factory setting</b>	English

---

## MAC address

---

<b>Navigation</b>	  Expert → Communication → Web server → MAC Address
<b>Description</b>	Displays the MAC <sup>5)</sup> address of the measuring device.
<b>User interface</b>	Unique 12-digit character string comprising letters and numbers
<b>Factory setting</b>	Each measuring device is given an individual address.
<b>Additional information</b>	<i>Example</i> For the display format 00:07:05:10:01:5F

---

## DHCP client

---

<b>Navigation</b>	  Expert → Communication → Web server → DHCP client
<b>Description</b>	Use this function to activate and deactivate the DHCP client functionality.
<b>Selection</b>	<ul style="list-style-type: none"><li>▪ Off</li><li>▪ On</li></ul>

---

5) Media Access Control

<b>Factory setting</b>	On
<b>Additional information</b>	<p><b>Effect</b></p> <p>If the DHCP client functionality of the web server is selected, the IP address (→ 119), Subnet mask (→ 119) and Default gateway (→ 119) are set automatically.</p> <p><b>i</b> ▪ Identification is via the MAC address of the measuring device.  ▪ The IP address (→ 119) in the <b>IP address</b> parameter (→ 119) is ignored as long as the <b>DHCP client</b> parameter (→ 118) is active. This is also the case, in particular, if the DHCP server cannot be reached. The IP address (→ 119) in the parameter of the same name is only used if the <b>DHCP client</b> parameter (→ 118) is inactive.</p>

<b>IP address</b>	
<b>Navigation</b>	 Expert → Communication → Web server → IP address
<b>Description</b>	Display or enter the IP address of the Web server integrated in the measuring device.
<b>User entry</b>	4 octet: 0 to 255 (in the particular octet)
<b>Factory setting</b>	192.168.1.212

<b>Subnet mask</b>	
<b>Navigation</b>	 Expert → Communication → Web server → Subnet mask
<b>Description</b>	Display or enter the subnet mask.
<b>User entry</b>	4 octet: 0 to 255 (in the particular octet)
<b>Factory setting</b>	255.255.255.0

<b>Default gateway</b>	
<b>Navigation</b>	 Expert → Communication → Web server → Default gateway
<b>Description</b>	Display or enter the Default gateway (→ 119).
<b>User entry</b>	4 octet: 0 to 255 (in the particular octet)
<b>Factory setting</b>	0.0.0.0

**Web server functionality****Navigation**

Expert → Communication → Web server → Webserver funct.

**Description**

Use this function to switch the Web server on and off.

**Selection**

- Off
- HTML Off
- On

**Factory setting**

On

**Additional information***Description*

Once disabled, the Web server functionality can only be enabled again via the local display, the FieldCare operating tool or the DeviceCare operating tool.

*Selection*

Option	Description
Off	<ul style="list-style-type: none"> <li>▪ The Web server is completely disabled.</li> <li>▪ Port 80 is locked.</li> </ul>
HTML Off	The HTML version of the Web server is not available.
On	<ul style="list-style-type: none"> <li>▪ The complete Web server functionality is available.</li> <li>▪ JavaScript is used.</li> <li>▪ The password is transferred in an encrypted state.</li> <li>▪ Any change to the password is also transferred in an encrypted state.</li> </ul>

**Login page****Navigation**

Expert → Communication → Web server → Login page

**Description**

Use this function to select the format of the login page.

**Selection**

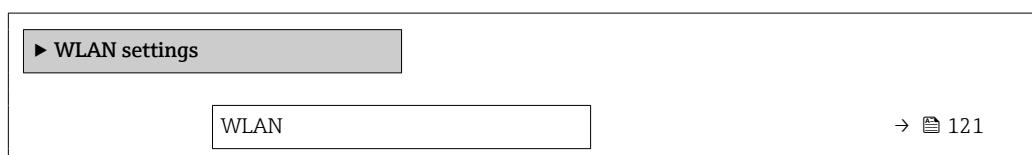

- Without header
- With header

**Factory setting**

With header

**3.6.5 "WLAN settings" wizard***Navigation*

Expert → Communication → WLAN settings

WLAN mode	→  122
SSID name	→  122
Network security	→  122
Security identification	→  123

Gateway IP address	→  127
IP address domain name server	→  127

**WLAN****Navigation**

Expert → Communication → WLAN settings → WLAN

**Description**

Use this function to enable and disable the WLAN connection.

**Selection**

- Disable
- Enable

**Factory setting**

Enable

---

## WLAN mode

**Navigation**

Expert → Communication → WLAN settings → WLAN mode

**Description**

Use this function to select the WLAN mode.

**Selection**

- WLAN access point
- WLAN Client

**Factory setting**

WLAN access point

---

## SSID name

**Navigation**

Expert → Communication → WLAN settings → SSID name

**Prerequisite**

The client is activated.

**Description**

Use this function to enter the user-defined SSID name (max. 32 characters) of the WLAN network.

**User entry**

—

**Factory setting**

—

---

## Network security

**Navigation**

Expert → Communication → WLAN settings → Network security

**Description**

Use this function to select the type of security for the WLAN interface.

**Selection**

- Unsecured
- WPA2-PSK
- EAP-PEAP with MSCHAPv2 \*
- EAP-PEAP MSCHAPv2 no server authentic. \*
- EAP-TLS \*

**Factory setting**

WPA2-PSK

---

\* Visibility depends on order options or device settings

**Additional information***Selection*

- Unsecured  
Access the WLAN connection without identification.
- WPA2-PSK  
Access the WLAN connection with a network key.
- EAP-PEAP with MSCHAPv2  
Access the WLAN connection with a password-based authentication protocol.
- EAP-PEAP MSCHAPv2 no server authentic.  
Access the WLAN connection with a password-based protocol without server authentication.
- EAP-TLS  
Access the WLAN connection with a certificate-based, two-way authentication of the client and network.

**Security identification****Navigation**
 Expert → Communication → WLAN settings → Sec. identific.
**Description**

Use this function to select the security settings (download via the menu: Data Management > Security > Download WLAN).

**User interface**

- Trusted issuer certificate
- Device certificate
- Device private key

**User name****Navigation**
 Expert → Communication → WLAN settings → User name
**Description**

Use this function to enter the username of the WLAN network.

**User entry**

–

**Factory setting**

–

**WLAN password****Navigation**
 Expert → Communication → WLAN settings → WLAN password
**Description**

Use this function to enter the WLAN password for the WLAN network.

**User entry**

–

**Factory setting**

–

---

**WLAN IP address**

**Navigation** Expert → Communication → WLAN settings → WLAN IP address

**Description** Use this function to enter the IP address of the measuring device's WLAN connection.

**User entry** 4 octet: 0 to 255 (in the particular octet)

**Factory setting** 192.168.1.212

---

**WLAN MAC address**

**Navigation** Expert → Communication → WLAN settings → WLAN MAC address

**Description** Displays the MAC<sup>6)</sup> address of the measuring device.

**User interface** Unique 12-digit character string comprising letters and numbers

**Factory setting** Each measuring device is given an individual address.

**Additional information** *Example*

For the display format

00:07:05:10:01:5F

---

**WLAN subnet mask**

**Navigation** Expert → Communication → WLAN settings → WLAN subnet mask

**Description** Use this function to enter the subnet mask.

**User entry** 4 octet: 0 to 255 (in the particular octet)

**Factory setting** 255.255.255.0

---

**WLAN passphrase**

**Navigation** Expert → Communication → WLAN settings → WLAN passphrase

**Prerequisite** The **WPA2-PSK** option is selected in the **Security type** parameter (→ 122).

**Description** Use this function to enter the network key.

---

6) Media Access Control

<b>User entry</b>	8 to 32-digit character string comprising numbers, letters and special characters (without spaces)
<b>Factory setting</b>	Serial number of the measuring device (e.g. L100A802000)

**Assign SSID name**

<b>Navigation</b>	Expert → Communication → WLAN settings → Assign SSID name
<b>Description</b>	Use this function to select which name is used for the SSID <sup>7)</sup> .
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Device tag</li> <li>■ User-defined</li> </ul>
<b>Factory setting</b>	User-defined
<b>Additional information</b>	<p><i>Selection</i></p> <ul style="list-style-type: none"> <li>■ Device tag The device tag name is used as the SSID.</li> <li>■ User-defined A user-defined name is used as the SSID.</li> </ul>

**SSID name**

<b>Navigation</b>	Expert → Communication → WLAN settings → SSID name
<b>Prerequisite</b>	<ul style="list-style-type: none"> <li>■ The <b>User-defined</b> option is selected in the <b>Assign SSID name</b> parameter (→ <a href="#">125</a>).</li> <li>■ The <b>WLAN access point</b> option is selected in the <b>WLAN mode</b> parameter (→ <a href="#">122</a>).</li> </ul>
<b>Description</b>	Use this function to enter a user-defined SSID name.
<b>User entry</b>	Max. 32-digit character string comprising numbers, letters and special characters
<b>Factory setting</b>	

**2.4 GHz WLAN channel**

<b>Navigation</b>	Expert → Communication → WLAN settings → WLAN channel
<b>Description</b>	Use this function to enter the 2.4 GHz WLAN channel.
<b>User entry</b>	1 to 11
<b>Factory setting</b>	6

7) Service Set Identifier

**Additional information***Description*

- It is only necessary to enter a 2.4 GHz WLAN channel if multiple WLAN devices are in use.
- If just one measuring device is in use, it is recommended to keep the factory setting.

---

**Select antenna****Navigation**

Expert → Communication → WLAN settings → Select antenna

**Description**

Use this function to select whether the external or internal antenna is used for reception.

**Selection**

- External antenna
- Internal antenna

**Factory setting**

Internal antenna

---

**Connection state****Navigation**

Expert → Communication → WLAN settings → Connection state

**Description**

The connection status is displayed.

**User interface**

- Connected
- Not connected

**Factory setting**

Not connected

---

**Received signal strength****Navigation**

Expert → Communication → WLAN settings → Rec.sig.strength

**Description**

Displays the signal strength received.

**User interface**

- Low
- Medium
- High

**Factory setting**

High

---

**Gateway IP address**

---

<b>Navigation</b>	Expert → Communication → WLAN settings → Gateway IP addr.
<b>Description</b>	Use this function to enter the IP address of the gateway.
<b>User interface</b>	Character string comprising numbers, letters and special characters
<b>Factory setting</b>	192.168.1.212

---

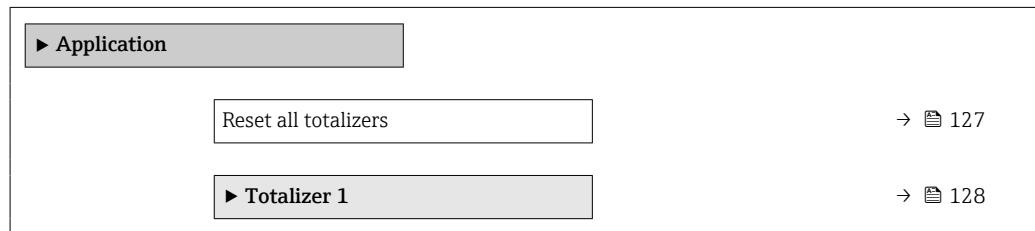

**IP address domain name server**

---

<b>Navigation</b>	Expert → Communication → WLAN settings → IP address DNS
<b>Description</b>	Use this function to enter the IP address of the domain name server.
<b>User interface</b>	Character string comprising numbers, letters and special characters
<b>Factory setting</b>	192.168.1.212

### 3.7 "Application" submenu

*Navigation*        Expert → Application

---

**Reset all totalizers**

---

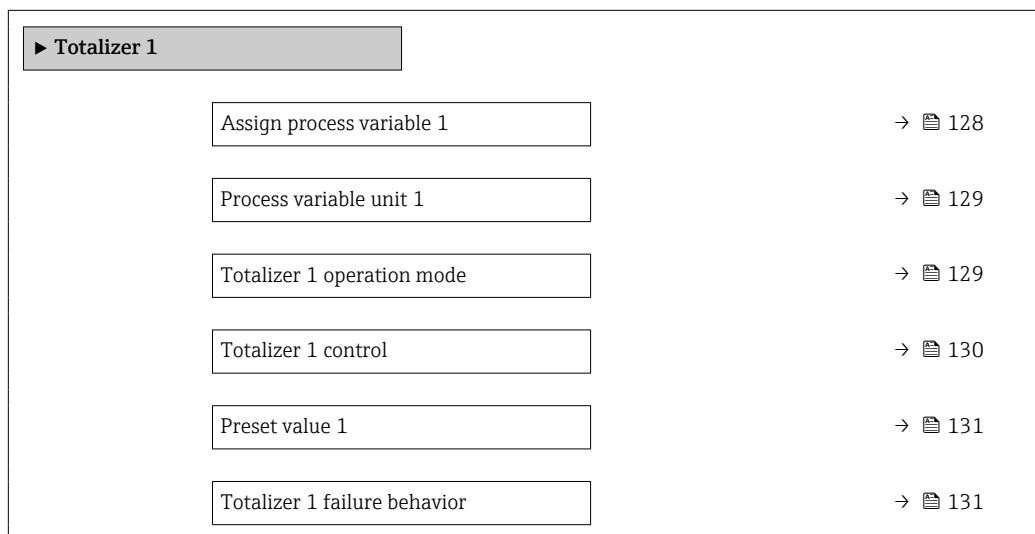

<b>Navigation</b>	Expert → Application → Reset all tot.
<b>Description</b>	Use this function to reset all totalizers to the value <b>0</b> and restart the totaling process. This deletes all the previously aggregated flow values.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Cancel</li> <li>■ Reset + totalize</li> </ul>
<b>Factory setting</b>	Cancel

**Additional information***Selection*

Options	Description
Cancel	No action is executed and the user exits the parameter.
Reset + totalize	Resets the totalizer to 0 and restarts the totaling process. The previously aggregated load quantity is thus deleted.

**3.7.1 "Totalizer 1 to n" submenu***Navigation*

Expert → Application → Totalizer 1 to n

**Assign process variable 1***Navigation*

Expert → Application → Totalizer 1 → AssignVariab. 1

**Prerequisite**

The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Use this function to select a process variable for the Totalizer 1 to n.

**Selection**

- Off
- Load rate \*

**Factory setting**

Off

\* Visibility depends on order options or device settings

**Additional information***Description*

If the option selected is changed, the device resets the totalizer to 0.

*Options*

If the **Off** option is selected, only the **Assign process variable** parameter (→ 128) is still displayed in the **Totalizer 1 to n** submenu. All other parameters in the submenu are hidden.

**Process variable unit 1****Navigation**

Expert → Application → Totalizer 1 → VariableUnit 1

**Prerequisite**

A process variable is selected in the **Assign process variable** parameter (→ 128) of the **Totalizer 1 to n** submenu.

**Description**

Use this function to select the process variable unit for the Totalizer 1 to n (→ 128).

**Selection***SI units*

- kg
- t

*US units*

- oz
- lb
- STon

or

*Other units*

None \*

\* Visibility depends on order options or device settings

**Factory setting**

Depends on country

**Additional information***Description*

The unit is selected separately for the totalizer and is independent of the option selected in the **System units** submenu (→ 54).

*Options*

The selection is dependent on the process variable selected in the **Assign process variable** parameter (→ 128).

**Totalizer 1 operation mode****Navigation**

Expert → Application → Totalizer 1 → Operat. mode 1

**Prerequisite**

A process variable is selected in the **Assign process variable** parameter (→ 128) of the **Totalizer 1 to n** submenu.

**Description**

Use this function to select how the totalizer summates the flow.

<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Net</li> <li>■ Forward</li> <li>■ Reverse</li> </ul>
<b>Factory setting</b>	Net
<b>Additional information</b>	<p><i>Selection</i></p> <ul style="list-style-type: none"> <li>■ Net flow total Flow values in the forward and reverse flow direction are totalized and balanced against one another. Net flow is registered in the flow direction.</li> <li>■ Forward flow total Only the flow in the forward flow direction is totalized.</li> <li>■ Reverse flow total Only the flow in the reverse flow direction is totalized (= reverse flow quantity).</li> </ul>

---

## Totalizer 1 control

---

<b>Navigation</b>	  Expert → Application → Totalizer 1 → Tot. 1 control														
<b>Prerequisite</b>	A process variable is selected in the <b>Assign process variable</b> parameter (→ <a href="#">128</a> ) of the <b>Totalizer 1 to n</b> submenu.														
<b>Description</b>	Use this function to select the control of totalizer value 1-3.														
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Totalize</li> <li>■ Reset + hold</li> <li>■ Preset + hold</li> <li>■ Reset + totalize</li> <li>■ Preset + totalize</li> <li>■ Hold</li> </ul>														
<b>Factory setting</b>	Totalize														
<b>Additional information</b>	<p><i>Selection</i></p> <table border="1"> <thead> <tr> <th>Options</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>Totalize</td> <td>The totalizer is started or continues running.</td> </tr> <tr> <td>Reset + hold</td> <td>The totaling process is stopped and the totalizer is reset to 0.</td> </tr> <tr> <td>Preset + hold<sup>1)</sup></td> <td>The totaling process is stopped and the totalizer is set to its defined start value from the <b>Preset value</b> parameter.</td> </tr> <tr> <td>Reset + totalize</td> <td>The totalizer is reset to 0 and the totaling process is restarted.</td> </tr> <tr> <td>Preset + totalize<sup>1)</sup></td> <td>The totalizer is set to the defined start value in the <b>Preset value</b> parameter and the totaling process is restarted.</td> </tr> <tr> <td>Hold</td> <td>Totalizing is stopped.</td> </tr> </tbody> </table>	Options	Description	Totalize	The totalizer is started or continues running.	Reset + hold	The totaling process is stopped and the totalizer is reset to 0.	Preset + hold <sup>1)</sup>	The totaling process is stopped and the totalizer is set to its defined start value from the <b>Preset value</b> parameter.	Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.	Preset + totalize <sup>1)</sup>	The totalizer is set to the defined start value in the <b>Preset value</b> parameter and the totaling process is restarted.	Hold	Totalizing is stopped.
Options	Description														
Totalize	The totalizer is started or continues running.														
Reset + hold	The totaling process is stopped and the totalizer is reset to 0.														
Preset + hold <sup>1)</sup>	The totaling process is stopped and the totalizer is set to its defined start value from the <b>Preset value</b> parameter.														
Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.														
Preset + totalize <sup>1)</sup>	The totalizer is set to the defined start value in the <b>Preset value</b> parameter and the totaling process is restarted.														
Hold	Totalizing is stopped.														

1) Visible depending on the order options or device settings

## Preset value 1

<b>Navigation</b>	  Expert → Application → Totalizer 1 → Preset value 1
<b>Prerequisite</b>	A process variable is selected in the <b>Assign process variable</b> parameter (→ 128) of the <b>Totalizer 1 to n</b> submenu.
<b>Description</b>	Use this function to enter a start value for the Totalizer 1 to n.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0 kg
<b>Additional information</b>	<i>User entry</i>  The unit of the selected process variable is defined in the <b>Unit totalizer</b> parameter (→ 129) for the totalizer.

## Totalizer 1 failure behavior

<b>Navigation</b>	  Expert → Application → Totalizer 1 → FailureBehav. 1
<b>Prerequisite</b>	A process variable is selected in the <b>Assign process variable</b> parameter (→ 128) of the <b>Totalizer 1 to n</b> submenu.
<b>Description</b>	Use this function to select how a totalizer behaves in the event of a device alarm.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ Hold</li><li>■ Continue</li><li>■ Last valid value + continue</li></ul>
<b>Factory setting</b>	Hold
<b>Additional information</b>	<i>Description</i>  This setting does not affect the failsafe mode of other totalizers and the outputs. This is specified in separate parameters.  <i>Selection</i> <ul style="list-style-type: none"><li>■ Stop The totalizer is stopped in the event of a device alarm.</li><li>■ Actual value The totalizer continues to count based on the actual (current) measured value; the device alarm is ignored.</li><li>■ Last valid value The totalizer continues to count based on the last valid measured value before the device alarm occurred.</li></ul>

#### Actual diagnostics

Navigation

Expert → Diagnostics → Actual diagnos.

Prerequisite

A diagnostic event has occurred.

Description

Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Display*

Additional pending diagnostic messages can be viewed in the **Diagnostic list** submenu (→ 135).

Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the **Esc** key.

*Example*

For the display format:

**xF271 Main electronic failure**

**Timestamp****Navigation**

Expert → Diagnostics → Timestamp

**Description**

Displays the operating time when the current diagnostic message occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information***Display*

The diagnostic message can be viewed via the **Actual diagnostics** parameter (→ 132).

*Example*

For the display format:

24d12h13m00s

**Previous diagnostics****Navigation**

Expert → Diagnostics → Prev.diagnostics

**Prerequisite**

Two diagnostic events have already occurred.

**Description**

Displays the diagnostic message that occurred before the current message.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Display*

Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the **Esc** key.

*Example*

For the display format:

**xF271 Main electronic failure**

---

**Timestamp**

---

<b>Navigation</b>	 Expert → Diagnostics → Timestamp
<b>Description</b>	Displays the operating time when the last diagnostic message before the current message occurred.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)
<b>Additional information</b>	<i>Display</i>  The diagnostic message can be viewed via the <b>Previous diagnostics</b> parameter (→  133).
	<i>Example</i> For the display format: 24d12h13m00s

---

**Operating time from restart**

---

<b>Navigation</b>	  Expert → Diagnostics → Time fr. restart
<b>Description</b>	Use this function to display the time the device has been in operation since the last device restart.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)

---

**Operating time**

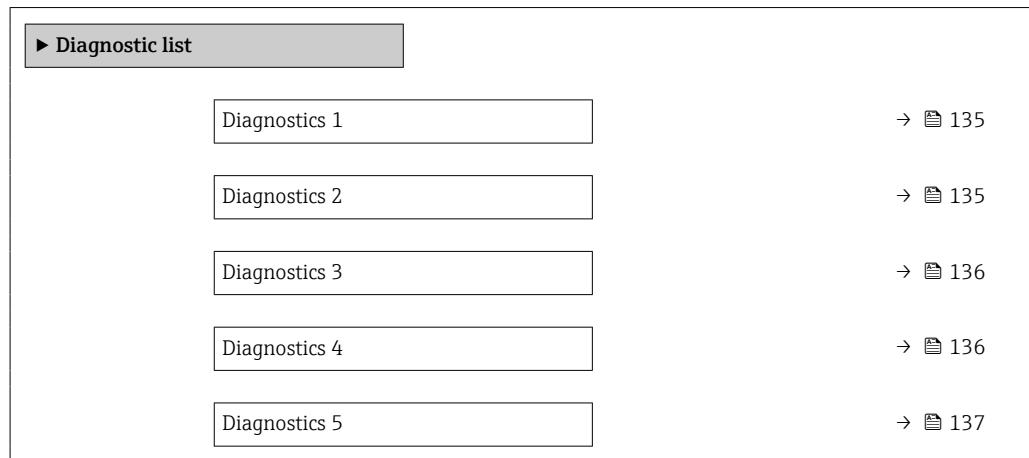

---

<b>Navigation</b>	  Expert → Diagnostics → Operating time
<b>Description</b>	Displays the length of time the device has been in operation.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)
<b>Additional information</b>	<i>Indication</i> Maximum number of days: 9 999 (corresponds to approx. 27 years and 5 months)

### 3.8.1 "Diagnostic list" submenu

*Navigation*

Expert → Diagnostics → Diagnostic list

---

#### Diagnostics 1

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 1

**Description**

Displays the current diagnostics message with the highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**

*Display*

Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the key.

*Examples*

For the display format:

- F271 Main electronic failure
- F276 I/O module failure

---

#### Diagnostics 2

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 2

**Description**

Displays the current diagnostics message with the second-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Display*

 Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

*Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Diagnostics 3**

---

**Navigation**

  Expert → Diagnostics → Diagnostic list → Diagnostics 3

**Description**

Displays the current diagnostics message with the third-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Display*

 Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

*Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Diagnostics 4**

---

**Navigation**

  Expert → Diagnostics → Diagnostic list → Diagnostics 4

**Description**

Displays the current diagnostics message with the fourth-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Display*

 Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

*Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

## Diagnostics 5

### Navigation

  Expert → Diagnostics → Diagnostic list → Diagnostics 5

### Description

Displays the current diagnostics message with the fifth-highest priority.

### User interface

Symbol for diagnostic behavior, diagnostic code and short message.

### Additional information

#### Display

 Via the local display: the time stamp and corrective measures referring to the cause of the diagnostic message can be accessed via the  key.

#### Examples

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

## 3.8.2 "Event logbook" submenu

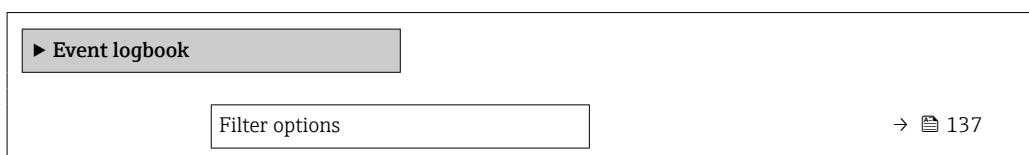

Displays event messages

Event messages are displayed in chronological order. The event history includes both diagnostic events and information events. The symbol in front of the timestamp indicates whether the event has started or ended.

### Navigation

Expert → Diagnostics → Event logbook

## Filter options

### Navigation

 Expert → Diagnostics → Event logbook → Filter options

### Description

Use this function to select the category whose event messages are displayed in the event list of the local display.

### Selection

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

### Factory setting

All

**Additional information***Description*

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:

- F = Failure
- C = Function Check
- S = Out of Specification
- M = Maintenance Required

**"Event list" submenu**

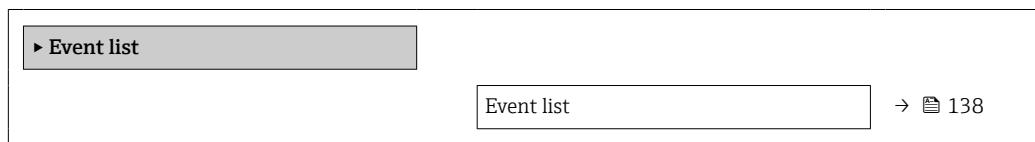

The **Event list** submenu is only displayed if operating via the local display.

If operating via the FieldCare operating tool, the event list can be read out with a separate FieldCare module.

If operating via the Web browser, the event messages can be found directly in the **Event logbook** submenu.

*Navigation*

Expert → Diagnostics → Event logbook → Event list

---

**Event list**

---

**Navigation**

Expert → Diagnostics → Event logbook → Event list

**Description**

Displays the history of event messages of the category selected in the **Filter options** parameter (→ 137).

**User interface**

- For a "Category I" event message

Information event, short message, symbol for event recording and operating time when error occurred

- For a "Category F, C, S, M" event message (status signal)

Diagnostics code, short message, symbol for event recording and operating time when error occurred

**Additional information***Description*

A maximum of 20 event messages are displayed in chronological order.

If the **Extended HistoROM** application package (order option) is enabled in the device, the event list can contain up to 100 entries .

The following symbols indicate whether an event has occurred or has ended:

- ⊖: Occurrence of the event
- ⊕: End of the event

#### *Examples*

For the display format:

- I1091 Configuration modified  
⊖ 24d12h13m00s
- ✗ F271 Main electronic failure  
⊖ 01d04h12min30s

#### *HistoROM*

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

### 3.8.3 "Device information" submenu

#### *Navigation*

Expert → Diagnostics → Device info

► Device information	
Device tag	→ 139
Serial number	→ 140
Firmware version	→ 140
Device name	→ 141
Order code	→ 141
Extended order code 1	→ 141
Extended order code 2	→ 141
Extended order code 3	→ 142
ENP version	→ 142

---

#### Device tag

#### *Navigation*

Expert → Diagnostics → Device info → Device tag

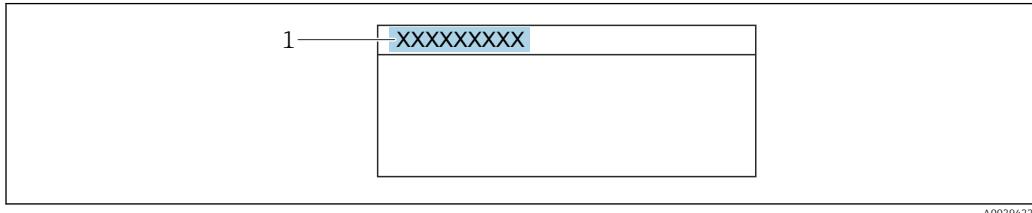

#### *Description*

Displays a unique name for the measuring point so it can be identified quickly within the plant. It is displayed in the header.

**User interface** Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).

**Factory setting** Teqwave M

**Additional information** *User interface*

A0029422

1 Position of the header text on the display

The number of characters displayed depends on the characters used.

---

## Serial number

---

**Navigation** Expert → Diagnostics → Device info → Serial number

**Description** Displays the serial number of the measuring device.

The number can be found on the nameplate of the sensor and transmitter.

**User interface** Max. 11-digit character string comprising letters and numbers.

**Additional information** *Description*

**Uses of the serial number**

- To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
- To obtain specific information on the measuring device using the Device Viewer:  
[www.endress.com/deviceviewer](http://www.endress.com/deviceviewer)

---

## Firmware version

---

**Navigation** Expert → Diagnostics → Device info → Firmware version

**Description** Displays the device firmware version installed.

**User interface** Character string in the format xx.yy.zz

**Additional information** *Display*

The Firmware version is also located:

- On the title page of the Operating instructions
- On the transmitter nameplate

**Device name**

<b>Navigation</b>	 Expert → Diagnostics → Device info → Device name
<b>Description</b>	Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.
<b>User interface</b>	Character string comprising numbers, letters and special characters

**Order code**

<b>Navigation</b>	 Expert → Diagnostics → Device info → Order code
<b>Description</b>	Displays the device order code.
<b>User interface</b>	Character string composed of letters, numbers and certain punctuation marks (e.g. /).
<b>Additional information</b>	<p><i>Description</i></p> <p>The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.</p> <p> <b>Uses of the order code</b></p> <ul style="list-style-type: none"> <li>▪ To order an identical spare device.</li> <li>▪ To identify the device quickly and easily, e.g. when contacting Endress+Hauser.</li> </ul>

**Extended order code 1**

<b>Navigation</b>	 Expert → Diagnostics → Device info → Ext. order cd. 1
<b>Description</b>	Displays the first part of the extended order code. On account of length restrictions, the extended order code is split into a maximum of 3 parameters.
<b>User interface</b>	Character string
<b>Additional information</b>	<p><i>Description</i></p> <p>The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.</p>

**Extended order code 2**

<b>Navigation</b>	 Expert → Diagnostics → Device info → Ext. order cd. 2
<b>Description</b>	Displays the second part of the extended order code.

**User interface** Character string

**Additional information** For additional information, see **Extended order code 1** parameter (→ 141)

---

### Extended order code 3

**Navigation** Expert → Diagnostics → Device info → Ext. order cd. 3

**Description** Displays the third part of the extended order code.

**User interface** Character string

**Additional information** For additional information, see **Extended order code 1** parameter (→ 141)

---

### ENP version

**Navigation** Expert → Diagnostics → Device info → ENP version

**Description** Displays the version of the electronic nameplate.

**User interface** Character string

**Factory setting** 2.02.00

**Additional information** *Description*

This electronic nameplate stores a data record for device identification that includes more data than the nameplates attached to the outside of the device.

### 3.8.4 "Main electronic module + I/O module 1" submenu

**Navigation** Expert → Diagnostics 1 → Main elec.+I/O1

Positive integer

### 3.8.9 "Data logging" submenu

Navigation

Expert → Diagnostics → Data logging

► Data logging	
Assign channel 1	→ 148
Assign channel 2	→ 149
Assign channel 3	→ 149
Assign channel 4	→ 150
Logging interval	→ 150
Clear logging data	→ 151
Data logging	→ 151
Logging delay	→ 152
Data logging control	→ 152
Data logging status	→ 152
Entire logging duration	→ 153

#### Assign channel 1

Navigation

Expert → Diagnostics → Data logging → Assign chan. 1

Prerequisite

- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.
- The **Extended HistoROM** application package is available.

**i** The software options currently enabled are displayed in the **Software option overview** parameter (→ 45).

Description

Use this function to assign a process variable to the data logging channel.

Selection

- Off
- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity

- Load rate \*
- Current output 1 \*
- Current output 2 \*
- Current output 3 \*
- Current output 4 \*

**Factory setting** Off

**Additional information** *Description*

A total of 1000 measured values can be logged. This means:

- 1000 data points if 1 logging channel is used
- 500 data points if 2 logging channels are used
- 333 data points if 3 logging channels are used
- 250 data points if 4 logging channels are used

Once the maximum number of data points is reached, the oldest data points in the data log are cyclically overwritten in such a way that the last 1000, 500, 333 or 250 measured values are always in the log (ring memory principle).

 The log contents are cleared if the option selected is changed.

## Assign channel 2

**Navigation**  Expert → Diagnostics → Data logging → Assign chan. 2

**Prerequisite**

- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ [49](#)) or the fieldbus.
- The **Extended HistoROM** application package is available.

 The software options currently enabled are displayed in the **Software option overview** parameter (→ [45](#)).

**Description** Use this function to assign a process variable to the logging channel.

**Selection** For the picklist, see **Assign channel 1** parameter (→ [148](#))

**Factory setting** Off

## Assign channel 3

**Navigation**  Expert → Diagnostics → Data logging → Assign chan. 3

**Prerequisite**

- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ [49](#)) or the fieldbus.
- The **Extended HistoROM** application package is available.

 The software options currently enabled are displayed in the **Software option overview** parameter (→ [45](#)).

\* Visibility depends on order options or device settings

**Description** Use this function to assign a process variable to the logging channel.

**Selection** For the picklist, see **Assign channel 1** parameter (→ 148)

**Factory setting** Off

---

## Assign channel 4

**Navigation** Expert → Diagnostics → Data logging → Assign chan. 4

**Prerequisite**

- The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.
- The **Extended HistoROM** application package is available.

The software options currently enabled are displayed in the **Software option overview** parameter (→ 45).

**Description** Use this function to assign a process variable to the logging channel.

**Selection** For the picklist, see **Assign channel 1** parameter (→ 148)

**Factory setting** Off

---

## Logging interval

**Navigation** Expert → Diagnostics → Data logging → Logging interval

**Prerequisite** The **Extended HistoROM** application package is available.

The software options currently enabled are displayed in the **Software option overview** parameter (→ 45).

**Description** Use this function to enter the logging interval  $T_{log}$  for data logging.

**User entry** 0.1 to 3 600.0 s

**Factory setting** 1.0 s

**Additional information** *Description*

This defines the interval between the individual data points in the data log, and thus the maximum loggable process time  $T_{log}$ :

- If 1 logging channel is used:  $T_{log} = 1000 \times t_{log}$
- If 2 logging channels are used:  $T_{log} = 500 \times t_{log}$
- If 3 logging channels are used:  $T_{log} = 333 \times t_{log}$
- If 4 logging channels are used:  $T_{log} = 250 \times t_{log}$

Once this time elapses, the oldest data points in the data log are cyclically overwritten such that a time of  $T_{\log}$  always remains in the memory (ring memory principle).

 The log contents are cleared if the length of the logging interval is changed.

#### Example

If 1 logging channel is used:

- $T_{\log} = 1000 \times 1 \text{ s} = 1 \text{ 000 s} \approx 15 \text{ min}$
- $T_{\log} = 1000 \times 10 \text{ s} = 10 \text{ 000 s} \approx 3 \text{ h}$
- $T_{\log} = 1000 \times 80 \text{ s} = 80 \text{ 000 s} \approx 1 \text{ d}$
- $T_{\log} = 1000 \times 3 \text{ 600 s} = 3 \text{ 600 000 s} \approx 41 \text{ d}$

---

## Clear logging data

### Navigation

  Expert → Diagnostics → Data logging → Clear logging

### Prerequisite

The **Extended HistoROM** application package is available.

 The software options currently enabled are displayed in the **Software option overview** parameter (→  45).

### Description

Use this function to clear the entire logging data.

### Selection

- Cancel
- Clear data

### Factory setting

Cancel

### Additional information

#### Selection

- Cancel  
The data is not cleared. All the data is retained.
- Clear data  
The logging data is cleared. The logging process starts from the beginning.

---

## Data logging

### Navigation

  Expert → Diagnostics → Data logging → Data logging

### Description

Use this function to select the data logging method.

### Selection

- Overwriting
- Not overwriting

### Factory setting

Overwriting

### Additional information

#### Selection

- Overwriting  
The device memory applies the FIFO principle.
- Not overwriting  
Data logging is canceled if the measured value memory is full (single shot).

## Logging delay

<b>Navigation</b>	Expert → Diagnostics → Data logging → Logging delay
<b>Prerequisite</b>	In the <b>Data logging</b> parameter (→ 151), the <b>Not overwriting</b> option is selected.
<b>Description</b>	Use this function to enter the time delay for measured value logging.
<b>User entry</b>	0 to 999 h
<b>Factory setting</b>	0 h
<b>Additional information</b>	<i>Description</i> Once data logging has been started with the <b>Data logging control</b> parameter (→ 152), the device does not save any data for the duration of the delay time entered.

## Data logging control

<b>Navigation</b>	Expert → Diagnostics → Data logging → Data log.control
<b>Prerequisite</b>	In the <b>Data logging</b> parameter (→ 151), the <b>Not overwriting</b> option is selected.
<b>Description</b>	Use this function to start and stop measured value logging.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ None</li><li>■ Delete + start</li><li>■ Stop</li></ul>
<b>Factory setting</b>	None
<b>Additional information</b>	<i>Selection</i> <ul style="list-style-type: none"><li>■ None Initial measured value logging status.</li><li>■ Delete + start All the measured values recorded for all the channels are deleted and measured value logging starts again.</li><li>■ Stop Measured value logging is stopped.</li></ul>

## Data logging status

<b>Navigation</b>	Expert → Diagnostics → Data logging → Data log. status
<b>Prerequisite</b>	In the <b>Data logging</b> parameter (→ 151), the <b>Not overwriting</b> option is selected.
<b>Description</b>	Displays the measured value logging status.

<b>User interface</b>	<ul style="list-style-type: none"> <li>■ Done</li> <li>■ Delay active</li> <li>■ Active</li> <li>■ Stopped</li> </ul>
<b>Factory setting</b>	Done
<b>Additional information</b>	<p><i>Selection</i></p> <ul style="list-style-type: none"> <li>■ Done Measured value logging has been performed and completed successfully.</li> <li>■ Delay active Measured value logging has been started but the logging interval has not yet elapsed.</li> <li>■ Active The logging interval has elapsed and measured value logging is active.</li> <li>■ Stopped Measured value logging is stopped.</li> </ul>

---

### Entire logging duration

---

<b>Navigation</b>	  Expert → Diagnostics → Data logging → Logging duration
<b>Prerequisite</b>	In the <b>Data logging</b> parameter (→ <a href="#">151</a> ), the <b>Not overwriting</b> option is selected.
<b>Description</b>	Displays the total logging duration.
<b>User interface</b>	Positive floating-point number
<b>Factory setting</b>	0 s

### "Display channel 1" submenu

*Navigation*  Expert → Diagnostics → Data logging → Displ.channel 1

---

### Display channel 1

---

<b>Navigation</b>	 Expert → Diagnostics → Data logging → Displ.channel 1
<b>Prerequisite</b>	<p>The <b>Extended HistoROM</b> application package is available.</p> <p> The software options currently enabled are displayed in the <b>Software option overview</b> parameter (→ <a href="#">45</a>).</p>

**Description** Displays the measured value trend for the logging channel in the form of a chart.

**Additional information** *Description*

- x-axis: depending on the number of channels selected displays 250 to 1000 measured values of a process variable.
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.

#### "Display channel 2" submenu

## Assign simulation process variable

**Navigation**

Expert → Diagnostics → Simulation → Assign proc.var.

**Prerequisite**

The **Load rate** option is only available if the volume flow of the medium is read in via the Current input 1 to n (→ 49) or the fieldbus.

**Description**

Select a process variable for the simulation process that is activated.

**Selection**

- Off
- Load rate \*
- Total solids
- Temperature
- Electronics temperature
- Conductivity
- Corrected conductivity

**Factory setting**

Off

## Process variable value

**Navigation**

Expert → Diagnostics → Simulation → Proc. var. value

**Description**

Enter the simulation value for the selected process variable.

**User entry**

Signed floating-point number

**Factory setting**

0

\* Visibility depends on order options or device settings

**Current input 1 to n simulation****Navigation**

Expert → Diagnostics → Simulation → Curr.inp 1 to n sim.

**Description**

Option for switching simulation of the current input on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

The desired simulation value is defined in the **Value current input 1 to n** parameter.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Selection*

- Off  
Current simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- On  
Current simulation is active.

**Value current input 1 to n****Navigation**

Expert → Diagnostics → Simulation → Value curr.inp 1 to n

**Prerequisite**

In the **Current input 1 to n simulation** parameter, the **On** option is selected.

**Description**

Use this function to enter the current value for the simulation. In this way, users can verify the correct configuration of the current input and the correct function of upstream feed-in units.

**User entry**

0 to 22.5 mA

**Status input 1 to n simulation****Navigation**

Expert → Diagnostics → Simulation → Status inp 1 to n sim

**Description**

Use this function to switch simulation of the status input on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Description*

The desired simulation value is defined in the **Input signal level** parameter (→ 163).

*Selection*

- Off

Simulation for the status input is switched off. The device is in normal measuring mode or another process variable is being simulated.

- On

Simulation for the status input is active.

**Input signal level 1 to n****Navigation**

Expert → Diagnostics → Simulation → Signal level 1 to n

**Prerequisite**

In the **Status input simulation** parameter (→ 162), the **On** option is selected.

**Description**

Use this function to select the signal level for the simulation of the status input. In this way, users can verify the correct configuration of the status input and the correct function of upstream feed-in units.

**Selection**

- High
- Low

**Current output 1 to n simulation****Navigation**

Expert → Diagnostics → Simulation → Curr.outp 1 to n sim.

**Description**

Use this function to switch simulation of the current output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Description*

The desired simulation value is defined in the **Value current output 1 to n** parameter.

*Selection*

- Off

Current simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.

- On

Current simulation is active.

## Current output value

### Navigation

Expert → Diagnostics → Simulation → Curr.outp val.

### Prerequisite

In the **Current output 1 to n simulation** parameter, the **On** option is selected.

### Description

Use this function to enter a current value for the simulation. In this way, users can verify the correct adjustment of the current output and the correct function of downstream switching units.

### User entry

3.59 to 22.5 mA

### Additional information

*Dependency*

The input range is dependent on the option selected in the **Current span** parameter (→ 76).

## Frequency output 1 to n simulation

### Navigation

Expert → Diagnostics → Simulation → Freq.outp 1 to n sim.

### Prerequisite

In the **Operating mode** parameter (→ 88), the **Frequency** option is selected.

### Description

Use this function to switch simulation of the frequency output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

### Selection

- Off
- On

### Factory setting

Off

### Additional information

*Description*

The desired simulation value is defined in the **Frequency value 1 to n** parameter.

*Selection*

- Off  
Frequency simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- On  
Frequency simulation is active.

## Frequency output 1 to n value

### Navigation

Expert → Diagnostics → Simulation → Freq.outp 1 to n val.

### Prerequisite

In the **Frequency simulation 1 to n** parameter, the **On** option is selected.

**Description** Use this function to enter a frequency value for the simulation. In this way, users can verify the correct adjustment of the frequency output and the correct function of downstream switching units.

**User entry** 0.0 to 12 500.0 Hz

## Pulse output simulation 1 to n

**Navigation** Expert → Diagnostics → Simulation → Puls.outp.sim. 1 to n

**Prerequisite** In the **Operating mode** parameter (→ 88), the **Pulse** option is selected.

**Description** Use this function to switch simulation of the pulse output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Selection**

- Off
- Fixed value
- Down-counting value

**Factory setting** Off

**Additional information** *Description*

The desired simulation value is defined in the **Pulse value 1 to n** parameter.

*Selection*

- Off  
Pulse simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- Fixed value  
Pulses are continuously output with the pulse width specified in the **Pulse width** parameter (→ 90).
- Down-counting value  
The pulses specified in the **Pulse value** parameter (→ 165) are output.

## Pulse value 1 to n

**Navigation** Expert → Diagnostics → Simulation → Pulse value 1 to n

**Prerequisite** In the **Pulse output simulation 1 to n** parameter, the **Down-counting value** option is selected.

**Description** Use this function to enter a pulse value for the simulation. In this way, users can verify the correct adjustment of the pulse output and the correct function of downstream switching units.

**User entry** 0 to 65 535

**Switch output simulation 1 to n****Navigation**

Expert → Diagnostics → Simulation → Switch sim. 1 to n

**Prerequisite**In the **Operating mode** parameter (→ 88), the **Switch** option is selected.**Description**

Use this function to switch simulation of the switch output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Description* The desired simulation value is defined in the **Switch state 1 to n** parameter.*Selection*

- Off  
Switch simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- On  
Switch simulation is active.

**Switch state 1 to n****Navigation**

Expert → Diagnostics → Simulation → Switch state 1 to n

**Description**

Use this function to select a switch value for the simulation. In this way, users can verify the correct adjustment of the switch output and the correct function of downstream switching units.

**Selection**

- Open
- Closed

**Additional information***Selection*

- Open  
Switch simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- Closed  
Switch simulation is active.

---

**Relay output 1 to n simulation**

---

**Navigation**

Expert → Diagnostics → Simulation → Relay out. 1 to n sim

**Description**

Use this function to switch simulation of the relay output on and off. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Description* The desired simulation value is defined in the **Switch state 1 to n** parameter.*Selection*

- Off  
Relay simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- On  
Relay simulation is active.

---

**Switch state 1 to n**

---

**Navigation**

Expert → Diagnostics → Simulation → Switch state 1 to n

**Prerequisite**

The **On** option is selected in the **Switch output simulation 1 to n** parameter parameter.

**Description**

Use this function to select a relay value for the simulation. In this way, users can verify the correct adjustment of the relay output and the correct function of downstream switching units.

**Selection**

- Open
- Closed

**Additional information***Selection*

- Open  
Relay simulation is switched off. The device is in normal measuring mode or another process variable is being simulated.
- Closed  
Relay simulation is active.

**Device alarm simulation****Navigation**

Expert → Diagnostics → Simulation → Dev. alarm sim.

**Description**

Use this function to switch the device alarm on and off.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information****Description**

The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

**Diagnostic event category****Navigation**

Expert → Diagnostics → Simulation → Event category

**Description**

Use this function to select the category of the diagnostic events that are displayed for the simulation in the **Diagnostic event simulation** parameter (→ 168).

**Selection**

- Sensor
- Electronics
- Configuration
- Process

**Factory setting**

Process

**Diagnostic event simulation****Navigation**

Expert → Diagnostics → Simulation → Diagnostic event

**Description**

Use this function to select a diagnostic event for the simulation process that is activated.

**Selection**

- Off
- Diagnostic event picklist (depends on the category selected)

**Factory setting**

Off

**Additional information****Description**

For the simulation, you can choose from the diagnostic events of the category selected in the **Diagnostic event category** parameter (→ 168).

## 4 Country-specific factory settings

### 4.1 SI units

 The country-specific factory setting in SI units is made for all countries except the USA and Canada.

#### 4.1.1 System units

Process variable	Unit
Total solids	%TS
Density	g/l
Mass flow	kg/h
Mass	kg
Volume	l/h
Temperature	°C
Conductivity	µS/cm
Load rate	kg/h

 For further information on system units, see: **System units** submenu (→  54)

#### 4.1.2 Output current span

Output	Current range
Current output 1 to n	4 to 20 mA NAMUR

 For further information on the current ranges, see: **Current range output** parameter (→  76)

### 4.2 US units

 The country-specific factory setting in US units is made for the USA and Canada.

#### 4.2.1 System units

Process variable	Unit
Total solids	%TS
Density	lb/ft <sup>3</sup>
Mass flow	lb/h
Mass	lb
Volume	l/h
Temperature	°F

Process variable	Unit
Conductivity	µS/cm
Load rate	lb/h

 For further information on system units, see: **System units** submenu (→  54)

#### 4.2.2 Output current span

Output	Current range
Current output 1 to n	4 to 20 mA US

 For further information on the current ranges, see: **Current range output** parameter (→  76)

## 5 Modbus RS485 register information

### 5.1 Notes

#### 5.1.1 Adapted Modbus RS485 registers for process variables

There are four-digit Modbus RS485 registers now available for the process variables **Total solids** and **Load rate**.

 The Modbus RS485 registers for the process variables **Total solids** and **Load rate** listed in the following chapter 5.3 "Register information" → 5.3.2 "Sensor" → "Measured values" → "Process variables") are **no longer valid**. The valid Modbus RS485 registers are described in the following table.

Navigation: Expert → Sensor → Measured values → Process variables					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 
Total solids	5089 ... 5090	Float	Read	Signed floating-point number	→  46
Load rate	5091 ... 5092	Float	Read	Signed floating-point number	→  47

#### 5.1.2 Structure of the register information

The individual parts of a parameter description are described in the following section:

Navigation: navigation path to the parameter					
Parameter	Register	Data type	Access type	User interface/ Selection/User entry	→ 
Name of parameter	Indicated in decimal numerical format	<ul style="list-style-type: none"> <li>▪ Float length = 4 byte</li> <li>▪ Integer length = 2 byte</li> <li>▪ String length, depending on parameter</li> </ul>	Possible type of access to parameter: <ul style="list-style-type: none"> <li>▪ Read access via function codes 03, 04 or 23</li> <li>▪ Write access via function codes 06, 16 or 23</li> </ul>	<b>Options</b> List of the individual options for the parameter <ul style="list-style-type: none"> <li>▪ Option 1</li> <li>▪ Option 2</li> <li>▪ Option 3 <sup>(+)</sup></li> </ul>  <sup>(+)</sup> = Factory setting depends on country, order options or device settings <b>User entry</b> Specific value or input range for the parameter	Page number information and cross-reference to the standard parameter description

#### NOTICE

If non-volatile device parameters are modified via the MODBUS RS485 function codes 06, 16 or 23, the change is saved in the EEPROM of the measuring device.

The number of writes to the EEPROM is technically restricted to a maximum of 1 million.

- ▶ Make sure to comply with this limit since, if it is exceeded, data loss and measuring device failure will result.
- ▶ Avoid constantly writing non-volatile device parameters via the MODBUS RS485.

### 5.1.3 Address model

The Modbus RS485 register addresses of the measuring device are implemented in accordance with the "Modbus Applications Protocol Specification V1.1".

In addition, systems are used that work with the register address model "Modicon Modbus Protocol Reference Guide (PI-MBUS-300 Rev. J)".

Depending on the function code used, a number is added at the start of the register address with this specification:

- "3" → "Read" access
- "4" → "Write" access

Function code	Access type	Register in accordance with "Modbus Applications Protocol Specification"	Register in accordance with "Modicon Modbus Protocol Reference Guide"
03 04 23	Read	XXXX Example: total solids = 52245	3XXXX Example: total solids = 352245
06 16 23	Write	XXXX Example: reset totalizer = 2609	4XXXX Example: reset totalizer = 42609

## 5.2 Overview of the Expert operating menu

## 5.3 Register information

Navigation: Expert					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Locking status	4918	Integer	Read	256 = Hardware locked 512 = Temporarily locked	11
User role	2178	Integer	Read	<b>1 = Maintenance</b> 2 = Service	12
Enter access code	2177	Integer	Read / Write	Max. 16-digit character string comprising numbers, letters and special characters	13

### 5.3.1 "System" submenu

#### "Display" submenu

Navigation: Expert → System → Display					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Display language	3673	Integer	Read / Write	0 = English 1 = Deutsch 2 = Français 3 = Español 4 = Italiano 5 = Nederlands 8 = Svenska 11 = 日本語 (Japanese) 12 = Portuguesa 13 = Polski 14 = русский язык (Russian) 15 = čeština (Czech) 16 = 中文 (Chinese) 18 = Türkçe 20 = 한국어 (Korean)	23
Format display	3625	Integer	Read / Write	<b>0 = 1 value, max. size</b> 1 = 1 bargraph + 1 value 2 = 2 values 3 = 1 value large + 2 values 4 = 4 values	14
Value 1 display	3963	Integer	Read / Write	4 = Conductivity <b>6 = Total solids</b> 6 = Temperature 7 = Load rate * 8 = Corrected conductivity 9 = Totalizer 1 * 39 = Electronics temperature 121 = Current output 1 * 122 = Current output 2 * 123 = Current output 3 * 124 = Current output 4 *	17
0% bargraph value 1	4136 to 4137	Float	Read / Write	Signed floating-point number	17
100% bargraph value 1	4142 to 4143	Float	Read / Write	Signed floating-point number	18
Decimal places 1	3365	Integer	Read / Write	0 = x 1 = x.x <b>2 = x.xx</b> 3 = x.xxx 4 = xxxxx	18

Navigation: Expert → System → Display					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Value 2 display	3964	Integer	Read / Write	4 = Conductivity 6 = Total solids 6 = Temperature 7 = Load rate * 8 = Corrected conductivity 9 = Totalizer 1 * 39 = Electronics temperature 121 = Current output 1 * 122 = Current output 2 * 123 = Current output 3 * 124 = Current output 4 * <b>251 = None</b>	19
Decimal places 2	4049	Integer	Read / Write	0 = x 1 = x.x <b>2 = x.xx</b> 3 = x.xxx 4 = xxxxx	19
Value 3 display	3966	Integer	Read / Write	For the picklist, see <b>Value 1 display</b> parameter (→  17)	20
0% bargraph value 3	4138 to 4139	Float	Read / Write	Signed floating-point number	20
100% bargraph value 3	4140 to 4141	Float	Read / Write	Signed floating-point number	21
Decimal places 3	4050	Integer	Read / Write	0 = x 1 = x.x <b>2 = x.xx</b> 3 = x.xxx 4 = xxxxx	21
Value 4 display	3965	Integer	Read / Write	For the picklist, see <b>Value 1 display</b> parameter (→  17)	22
Decimal places 4	4051	Integer	Read / Write	0 = x 1 = x.x <b>2 = x.xx</b> 3 = x.xxx 4 = xxxxx	22
Display interval	3604 to 3605	Float	Read / Write	1 to 10 s	29
Display damping	3554 to 3555	Float	Read / Write	0.0 to 999.9 s	29
Header	3624	Integer	Read / Write	<b>0 = Device tag</b> 1 = Free text	30
Header text	3968 to 3973	String	Read / Write	Max. 12 characters, such as letters, numbers or special characters (e.g. @, %, /)	30
Separator	3671	Integer	Read / Write	<b>■ . (point)</b> <b>■ , (comma)</b>	31
Contrast display	3674 to 3675	Float	Read / Write	20 to 80 %	31
Backlight	3967	Integer	Read / Write	<b>0 = Disable</b> <b>1 = Enable</b>	32

\* Visibility depends on order options or device settings

**"Configuration backup" submenu**

Navigation: Expert → System → Configuration backup					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Operating time	2631	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	32
Last backup	6430	String	Read	Days (d), hours (h), minutes (m) and seconds (s)	33
Configuration management	5500	Integer	Read / Write	<b>0 = Cancel</b> 1 = Execute backup 2 = Restore 4 = Clear backup data 5 = Compare *	33
Backup state	5502	Integer	Read	1 = Backup in progress 2 = Restoring in progress 4 = Delete in progress 5 = Compare in progress 6 = Restoring failed 7 = Backup failed <b>251 = None</b>	34
Comparison result	5514	Integer	Read	0 = Settings identical 1 = Settings not identical 2 = No backup available <b>3 = Check not done</b> 4 = Backup settings corrupt 5 = Dataset incompatible	34

\* Visibility depends on order options or device settings

**"Diagnostic handling" submenu**

Navigation: Expert → System → Diagnostic handling					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Alarm delay	6808 to 6809	Float	Read / Write	0 to 60 s	35

**"Diagnostic behavior" submenu**

Navigation: Expert → System → Diagnostic handling → Diagnostic behavior					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Assign behavior of diagnostic no. 302	6484	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b>	38
Assign behavior of diagnostic no. 444	5120	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	38
Assign behavior of diagnostic no. 441	4742	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	37
Assign behavior of diagnostic no. 442	4919	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	37

Navigation: Expert → System → Diagnostic handling → Diagnostic behavior					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Assign behavior of diagnostic no. 443	5000	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	37
Assign behavior of diagnostic no. 832	6440	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	38
Assign behavior of diagnostic no. 833	6439	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	39
Assign behavior of diagnostic no. 834	6438	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	39
Assign behavior of diagnostic no. 835	6437	Integer	Read / Write	0 = Off 1 = Logbook entry only <b>2 = Warning</b> 3 = Alarm	40
Assign behavior of diagnostic no. 907	48428	Integer	Read / Write	0 = Off 1 = Logbook entry only 2 = Warning 3 = Alarm	40
Assign behavior of diagnostic no. 908	48440	Integer	Read / Write	0 = Off 1 = Logbook entry only 2 = Warning 3 = Alarm	40

### "Administration" submenu

Navigation: Expert → System → Administration					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Device reset	6817	Integer	Read / Write	<b>0 = Cancel</b> 1 = Restart device 2 = To delivery settings 25 = Restore S-DAT backup *	43
Transmitter identifier	4510	Integer	Read	0 = Unknown 1 = 300 2 = 500	44
Activate SW option	2795	Integer	Read / Write	Max. 10-digit string of numbers.	44
Software option overview	2902	Integer	Read		45

\* Visibility depends on order options or device settings

### "Define access code" wizard

Navigation: Expert → System → Administration → Define access code					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Define access code	8677 to 8684	String	Read / Write	Max. 16-digit character string comprising numbers, letters and special characters	41
Confirm access code	8685 to 8692	String	Read / Write	Max. 16-digit character string comprising numbers, letters and special characters	42

*"Reset access code" submenu*

<b>Navigation:</b> Expert → System → Administration → Reset access code				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Operating time	2631	String	Read	Days (d), hours (h), minutes (m) and seconds (s)
Reset access code	8880 to 8895	String	Read / Write	Character string comprising numbers, letters and special characters

### 5.3.2 "Sensor" submenu

*"Measured values" submenu*

*"Process variables" submenu*

<b>Navigation:</b> Expert → Sensor → Measured values → Process variables				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Total solids	52245 to 52246	Float	Read	Signed floating-point number
Temperature	2017 to 2018	Float	Read	Signed floating-point number
Electronics temperature	2271 to 2272	Float	Read	Signed floating-point number
Conductivity	2099 to 2100	Float	Read	Floating-point number
Corrected conductivity	3977 to 3978	Float	Read	Floating-point number
Load rate	52263 to 52264	Float	Read	Signed floating-point number

*"Totalizer" submenu*

<b>Navigation:</b> Expert → Sensor → Measured values → Totalizer				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Totalizer 1 value	2610 to 2611	Float	Read	Signed floating-point number
Totalizer 1 overflow	2612 to 2613	Float	Read	Integer with sign

*"Input values" submenu*

*"Current input 1 to n" submenu*

<b>Navigation:</b> Expert → Sensor → Measured values → Input values → Current input 1 to n				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Measured values 1 to n	1: 6151 to 6152 2: 6153 to 6154 3: 6155 to 6156	Float	Read	Signed floating-point number
Measured current 1 to n	1: 6131 to 6132 2: 6133 to 6134 3: 6135 to 6136	Float	Read	0 to 22.5 mA

*"Value status input 1 to n" submenu*

<b>Navigation:</b> Expert → Sensor → Measured values → Input values → Value status input 1 to n				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Value status input	1: 2746 2: 4699 3: 4700	Integer	Read	0 = Low 1 = High

*"Output values" submenu**"Value current output 1 to n" submenu*

Navigation: Expert → Sensor → Measured values → Output values → Value current output 1 to n					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Output current	1: 5931 to 5932 2: 5933 to 5934 3: 5935 to 5936	Float	Read	0 to 22.5 mA	51
Measured current	1: 5779 to 5780 2: 5781 to 5782 3: 5783 to 5784	Float	Read	0 to 30 mA	51

*"Pulse/frequency/switch output 1 to n" submenu*

Navigation: Expert → Sensor → Measured values → Output values → Pulse/frequency/switch output 1 to n					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Output frequency	1: 3462 to 3463 2: 3464 to 3465 3: 9910 to 9911	Float	Read	0.0 to 12 500.0 Hz	52
Pulse output	1: 3082 to 3083 2: 3084 to 3085 3: 4718 to 4719	Float	Read	Positive floating-point number	52
Switch state	1: 2485 2: 2486 3: 9917	Integer	Read	1 = Open 6 = Closed	53

*"Relay output 1 to n" submenu*

Navigation: Expert → Sensor → Measured values → Output values → Relay output 1 to n					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Switch state	1: 3518 2: 3519 3: 9875	Integer	Read	1 = Open 6 = Closed	53
Switch cycles	1: 7625 2: 7627 3: 7629	Integer	Read	Positive integer	54
Max. switch cycles number	1: 21919 2: 21921 3: 21923	Integer	Read	Positive integer	54

**"System units" submenu**

Navigation: Expert → Sensor → System units					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→ 
Total solids unit	52093	Integer	Read / Write	= 4 = kg/m <sup>3</sup> 11 = lb/ft <sup>3</sup> 12 = lb/gal (us) 22 = mg/cm <sup>3</sup> 97 = g/l 139 = ppm 170 = mg/l	55
Density unit	2107	Integer	Read / Write	4 = kg/m <sup>3</sup> 11 = lb/ft <sup>3</sup> 12 = lb/gal (us) 22 = mg/cm <sup>3</sup> 97 = g/l 170 = mg/l	55
Mass flow unit	2101	Integer	Read / Write	6 = kg/h 7 = kg/d 10 = t/h 11 = t/d 14 = oz/h 15 = oz/d 18 = lb/h 19 = lb/d 22 = STon/h 23 = STon/d	55
Mass unit	2102	Integer	Read / Write	51 = kg 52 = t 53 = oz 54 = lb 55 = STon	56
Volume flow unit	2103	Integer	Read / Write	5 = dm <sup>3</sup> /min 8 = m <sup>3</sup> /s 10 = m <sup>3</sup> /h 16 = l/s <b>18 = l/h</b>	56
Temperature unit	2109	Integer	Read / Write	0 = °C 1 = K 2 = °F 3 = °R	56
Conductivity unit	2121	Integer	Read / Write	3 = S/m 4 = S/cm 5 = mS/m 7 = µS/m 9 = µS/mm 10 = nS/cm 66 = mS/cm <b>67 = µS/cm</b>	57
Date/time format	2150	Integer	Read / Write	<b>0 = dd.mm.yy hh:mm</b> 1 = mm/dd/yy hh:mm am/pm 2 = dd.mm.yy hh:mm am/pm 3 = mm/dd/yy hh:mm	57

**"Process parameters" submenu**

Navigation: Expert → Sensor → Process parameters					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Temperature damping	30006 to 30007	Float	Read / Write	0 to 999.9 s	58
Conductivity damping	46420 to 46421	Float	Read / Write	0 to 999.9 s	58
Total solids override	29992	Integer	Read / Write	<b>0 = Off</b> 1 = On	58

**"Total solids monitoring" submenu**

Navigation: Expert → Sensor → Process parameters → Total solids monitoring					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Assign process variable	48877	Integer	Read / Write	0 = Off <b>6 = Total solids</b>	59
Lower range limit	50894 to 50895	Float	Read / Write	Signed floating-point number	59
Upper range limit	50898 to 50899	Float	Read / Write	Signed floating-point number	59
Response time	50896 to 50897	Float	Read / Write	0 to 100 s	60

**"Partially filled pipe detection" submenu**

Navigation: Expert → Sensor → Process parameters → Partially filled pipe detection					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Partially filled pipe detection	52238	Integer	Read / Write	<b>0 = Off</b> 1 = On	60
Threshold	52236 to 52237	Float	Read / Write	Decibel as negative floating point number	60
Response time	52239 to 52240	Float	Read / Write	0 to 20.0 s	61

**"External process variables" submenu**

Navigation: Expert → Sensor → External process variables					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Volume flow source	48284	Integer	Read / Write	<b>0 = Off</b> 2 = External value 11 = Current input 1 * 12 = Current input 2 * 13 = Current input 3 *	61
Volume flow	50100 to 50101	Float	Read / Write	Signed floating-point number	62

\* Visibility depends on order options or device settings

**"Sensor adjustment" submenu**

Navigation: Expert → Sensor → Sensor adjustment					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Measuring interval	31066 to 31067	Float	Read	0 to 10 000 ms	62

*"Process variable adjustment" submenu*

Navigation: Expert → Sensor → Sensor adjustment → Process variable adjustment				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Temperature offset	29988 to 29989	Float	Read / Write	Signed floating-point number
Temperature factor	48221 to 48222	Float	Read / Write	Positive floating-point number
Conductivity offset	29990 to 29991	Float	Read / Write	Signed floating-point number
Conductivity factor	48869 to 48870	Float	Read / Write	Positive floating-point number
Corrected conductivity offset	25094 to 25095	Float	Read / Write	Signed floating-point number
Corrected conductivity factor	29976 to 29977	Float	Read / Write	Positive floating-point number
Electronics temperature offset	46301 to 46302	Float	Read / Write	Signed floating-point number
Electronics temperature factor	46303 to 46304	Float	Read / Write	Positive floating-point number
Load rate offset	48873 to 48874	Float	Read / Write	Signed floating-point number
Load rate factor	46448 to 46449	Float	Read / Write	Positive floating-point number

*"Factory adjustment" submenu*

Navigation: Expert → Sensor → Factory adjustment				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Nominal diameter	2048 to 2057	String	Read	Character string comprising numbers, letters and special characters
Date/time	10166 to 10175	String	Read	Character string comprising numbers, letters and special characters

**5.3.3 "I/O configuration" submenu**

Navigation: Expert → I/O configuration				
Parameter	Register	Data type	Access	Selection / User entry / User interface
I/O module 1 to n terminal numbers	1: 6541 2: 6542 3: 6543 4: 6544	Integer	Read	0 = Not used 1 = 26-27 (I/O 1) 2 = 24-25 (I/O 2) 3 = 22-23 (I/O 3)
I/O module 1 to n information	1: 8659 2: 8660 3: 8661 4: 8662	Integer	Read	1 = MODBUS 2 = Configurable 3 = Not configurable 254 = Not plugged 255 = Invalid
I/O module 1 to n type	1: 6417 2: 6418 3: 6419 4: 6420	Integer	Read / Write	<b>0 = Off</b> 1 = Current output * 2 = Current input * 3 = Pulse/frequency/switch output * 5 = Status input * 6 = Relay output *
Apply I/O configuration	8665	Integer	Read / Write	0 = Yes <b>1 = No</b>
I/O alteration code	6427	Integer	Read / Write	Positive integer

\* Visibility depends on order options or device settings

### 5.3.4 "Input" submenu

#### "Current input 1 to n" submenu

Navigation: Expert → Input → Current input 1 to n					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Terminal number	1: 6548 2: 6549 3: 6550	Integer	Read	0 = Not used 2 = 24-25 (I/O 2) 3 = 22-23 (I/O 3)	69
Signal mode	1: 6424 2: 6425 3: 6426	Integer	Read / Write	<b>0 = Passive</b> 2 = Active *	69
Current span	1: 6147 2: 6148 3: 6149	Integer	Read / Write	0 = 4...20 mA (4...20.5 mA) 1 = 4...20 mA US (3.9...20.8 mA) <b>2 = 4...20 mA NE (3.8...20.5 mA) (+)</b> 3 = 0...20 mA (0...20.5 mA)	70
0/4 mA value	1: 6111 to 6112 2: 6113 to 6114 3: 6115 to 6116	Float	Read / Write	Signed floating-point number	70
20 mA value	1: 6119 to 6120 2: 6121 to 6122 3: 6123 to 6124	Float	Read / Write	Signed floating-point number	70
Failure mode	1: 6159 2: 6160 3: 6161	Integer	Read / Write	1 = Last valid value <b>2 = Alarm</b> 6 = Defined value	71

Navigation: Expert → Diagnostics → Min/max values → Sensor electronics temperature (ISEM)					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Maximum value	30003 to 30004	Float	Read	Signed floating-point number	157
Minimum value	30013 to 30014	Float	Read	Signed floating-point number	157

*"Medium temperature" submenu*

Navigation: Expert → Diagnostics → Min/max values → Medium temperature				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Maximum value	48675 to 48676	Float	Read	Signed floating-point number
Minimum value	48677 to 48678	Float	Read	Signed floating-point number

*"Total solids" submenu*

Navigation: Expert → Diagnostics → Min/max values → Total solids				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Maximum value	53238 to 53239	Float	Read	Positive floating-point number
Minimum value	53236 to 53237	Float	Read	Positive floating-point number

*"Conductivity" submenu*

Navigation: Expert → Diagnostics → Min/max values → Conductivity				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Maximum value	48591 to 48592	Float	Read	Positive floating-point number
Minimum value	48593 to 48594	Float	Read	Positive floating-point number

*"Heartbeat Technology" submenu**"Simulation" submenu*

Navigation: Expert → Diagnostics → Simulation				
Parameter	Register	Data type	Access	Selection / User entry / User interface
Assign simulation process variable	29999	Integer	Read / Write	<b>0 = Off</b> 4 = Conductivity 6 = Total solids 6 = Temperature 7 = Load rate * 8 = Corrected conductivity 39 = Electronics temperature
Process variable value	30000 to 30001	Float	Read / Write	Signed floating-point number
Current input 1 to n simulation	1: 6127 2: 6128 3: 6129	Integer	Read / Write	<b>0 = Off</b> 1 = On
Value current input 1 to n	1: 6139 to 6140 2: 6141 to 6142 3: 6143 to 6144	Float	Read / Write	0 to 22.5 mA
Status input 1 to n simulation	1: 2620 2: 4693 3: 4694	Integer	Read / Write	<b>0 = Off</b> 1 = On
Input signal level 1 to n	1: 2638 2: 4696 3: 4697	Integer	Read / Write	0 = Low 1 = High
Current output 1 to n simulation	1: 5939 2: 5940 3: 5941	Integer	Read / Write	<b>0 = Off</b> 1 = On
Current output value	5995 to 5996	Float	Read / Write	3.59 to 22.5 mA

Navigation: Expert → Diagnostics → Simulation					
Parameter	Register	Data type	Access	Selection / User entry / User interface	→
Frequency output 1 to n simulation	1: 6203 2: 6204 3: 6205	Integer	Read / Write	<b>0 = Off</b> 1 = On	164
Frequency output 1 to n value	1: 6207 to 6208 2: 6209 to 6210 3: 6211 to 6212	Float	Read / Write	0.0 to 12 500.0 Hz	164
Pulse output simulation 1 to n	1: 6215 2: 6216 3: 6217	Integer	Read / Write	<b>0 = Off</b> 1 = Down-counting value 2 = Fixed value	165
Pulse value 1 to n	1: 6219 2: 6220 3: 6221	Integer	Read / Write	0 to 65 535	165
Switch output simulation 1 to n	1: 6223 2: 6224 3: 6225	Integer	Read / Write	<b>0 = Off</b> 1 = On	166
Switch state 1 to n	1: 6227 2: 6228 3: 6229	Integer	Read / Write	1 = Open 6 = Closed	166
Relay output 1 to n simulation	1: 7523 2: 7524 3: 7525	Integer	Read / Write	<b>0 = Off</b> 1 = On	167
Switch state 1 to n	1: 8239 2: 8240 3: 8241	Integer	Read / Write	1 = Open 6 = Closed	167
Device alarm simulation	6812	Integer	Read / Write	<b>0 = Off</b> 1 = On	168
Diagnostic event category	4261	Integer	Read / Write	0 = Sensor 1 = Electronics 2 = Configuration <b>3 = Process</b>	168
Diagnostic event simulation	4259	Integer	Read / Write	■ Off ■ Diagnostic event picklist (depends on the category selected)	168

Switch-on delay (Parameter) . . . . .	102, 109
Switch-on value (Parameter) . . . . .	101, 108
System (Submenu) . . . . .	13
System units (Submenu) . . . . .	54

**T**

Target group . . . . .	4
Telegram delay (Parameter) . . . . .	114
Temperature (Parameter) . . . . .	47
Temperature damping (Parameter) . . . . .	58
Temperature factor (Parameter) . . . . .	63
Temperature offset (Parameter) . . . . .	63
Temperature unit (Parameter) . . . . .	56
Terminal number (Parameter) . . . . .	69, 72, 75, 87, 105
Threshold (Parameter) . . . . .	60
Timestamp (Parameter) . . . . .	133, 134
Total solids (Parameter) . . . . .	46
Total solids (Submenu) . . . . .	158
Total solids monitoring (Submenu) . . . . .	58
Total solids override (Parameter) . . . . .	58
Total solids unit (Parameter) . . . . .	55
Totalizer (Submenu) . . . . .	48
Totalizer 1 control (Parameter) . . . . .	130
Totalizer 1 failure behavior (Parameter) . . . . .	131
Totalizer 1 operation mode (Parameter) . . . . .	129
Totalizer 1 overflow (Parameter) . . . . .	48
Totalizer 1 to n (Submenu) . . . . .	128
Totalizer 1 value (Parameter) . . . . .	48
Transmitter identifier (Parameter) . . . . .	44

**U**

Upper range limit (Parameter) . . . . .	59
Upper range value output (Parameter) . . . . .	78
User name (Parameter) . . . . .	123
User role (Parameter) . . . . .	12

**V**

Value 1 display (Parameter) . . . . .	17
Value 2 display (Parameter) . . . . .	19
Value 3 display (Parameter) . . . . .	20
Value 4 display (Parameter) . . . . .	22
Value 5 display (Parameter) . . . . .	23
Value 6 display (Parameter) . . . . .	25
Value 7 display (Parameter) . . . . .	26
Value 8 display (Parameter) . . . . .	28
Value current input 1 to n (Parameter) . . . . .	162
Value current output 1 to n (Submenu) . . . . .	51
Value status input (Parameter) . . . . .	50, 73
Value status input 1 to n (Submenu) . . . . .	50
Volume flow unit (Parameter) . . . . .	56

**W**

Web server (Submenu) . . . . .	117
Web server functionality (Parameter) . . . . .	120
Web server language (Parameter) . . . . .	118
Wizard	
Define access code . . . . .	41
WLAN settings . . . . .	120
WLAN (Parameter) . . . . .	121
WLAN IP address (Parameter) . . . . .	124
WLAN MAC address (Parameter) . . . . .	124
WLAN mode (Parameter) . . . . .	122
WLAN passphrase (Parameter) . . . . .	124
WLAN password (Parameter) . . . . .	123
WLAN settings (Wizard) . . . . .	120
WLAN subnet mask (Parameter) . . . . .	124
