Operating Instructions **Proline Teqwave MW 500**

Total solids measurement via microwave transmission HART

- Make sure the document is stored in a safe place such that it is always available when working on or with the device.
- To avoid danger to individuals or the facility, read the "Basic safety instructions" section carefully, as well as all other safety instructions in the document that are specific to working procedures.
- The manufacturer reserves the right to modify technical data without prior notice. Your Endress+Hauser sales organization will supply you with current information and updates to this manual.

1 About this document

1.1 Document function

These Operating Instructions contain all the information required in the various life cycle phases of the device: from product identification, incoming acceptance and storage, to installation, connection, operation and commissioning, through to troubleshooting, maintenance and disposal.

1.2 Symbols

1.2.1 Safety symbols

⚠ DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

▲ WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

A CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Symbol	Meaning	
===	Direct current	
~	Alternating current	
$\overline{}$	Direct current and alternating current	
=	Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.	
Potential equalization connection (PE: protective earth) Ground terminals that must be connected to ground prior to establishing any connections.		
	The ground terminals are located on the interior and exterior of the device: Interior ground terminal: potential equalization is connected to the supply network. Exterior ground terminal: device is connected to the plant grounding system.	

1.2.3 Communication-specific symbols

Symbol	Meaning	
©	Wireless Local Area Network (WLAN) Communication via a wireless, local network.	
•	LED Light emitting diode is off.	

Symbol	Meaning
举	LED Light emitting diode is on.
	LED Light emitting diode is flashing.

1.2.4 Tool symbols

Symbol	Meaning
Torx screwdriver	
06	Phillips head screwdriver
Ó	Open-ended wrench

1.2.5 Symbols for certain types of information

Symbol	Meaning
✓	Permitted Procedures, processes or actions that are permitted.
✓ ✓	Preferred Procedures, processes or actions that are preferred.
X	Forbidden Procedures, processes or actions that are forbidden.
i	Tip Indicates additional information.
	Reference to documentation
	Reference to page
	Reference to graphic
•	Notice or individual step to be observed
1., 2., 3	Series of steps
L	Result of a step
?	Help in the event of a problem
	Visual inspection

1.2.6 Symbols in graphics

Symbol	Meaning
1, 2, 3,	Item numbers
1., 2., 3.,	Series of steps
A, B, C,	Views
A-A, B-B, C-C,	Sections
EX	Hazardous area

Symbol	Meaning	
×	Safe area (non-hazardous area)	
≋ →	Flow direction	

1.3 Documentation

- *Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- Endress+Hauser Operations app: Enter serial number from nameplate or scan matrix code on nameplate.

1.3.1 Document function

The following documentation may be available depending on the version ordered:

Document type	Purpose and content of the document
Technical Information (TI)	Planning aid for your device The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.
Brief Operating Instructions (KA)	Guide that takes you quickly to the 1st measured value The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.
Operating Instructions (BA)	Your reference document The Operating Instructions contain all the information that is required in the various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.
Description of Device Parameters (GP)	Reference for your parameters The document provides a detailed explanation of each individual parameter. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.
Safety Instructions (XA)	Depending on the approval, safety instructions for electrical equipment in hazardous areas are also supplied with the device. The Safety Instructions are an integral part of the Operating Instructions.
	Information on the Safety Instructions (XA) relevant to the device is provided on the nameplate.
Supplementary device-dependent documentation (SD/FY)	Always comply strictly with the instructions in the relevant supplementary documentation. The supplementary documentation is an integral part of the device documentation.

1.4 Registered trademarks

HART®

Registered trademark of the FieldComm Group, Austin, Texas USA

2 Safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

- ► Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ► Are authorized by the plant owner/operator.
- ► Are familiar with federal/national regulations.
- ▶ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▶ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:

- ► Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- Follow the instructions in this manual.

2.2 Intended use

Application and media

The measuring device described in this manual is intended only for solids content measurement in water-based liquids.

Measuring devices for use in explosive atmospheres are labeled accordingly on the nameplate.

To ensure that the measuring device is in proper condition during the operation period:

- ▶ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
- ▶ Refer to the nameplate to check whether the ordered device can be operated for the intended application in areas requiring specific approvals (e.g. explosion protection, pressure equipment safety).
- ► Use the measuring device only for media to which the process-wetted materials are sufficiently resistant.
- ► Keep within the specified pressure and temperature range.
- ▶ Keep within the specified ambient temperature range.
- ► Protect the measuring device permanently against corrosion from environmental influences.

Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

▲ WARNING

Danger of breakage due to corrosive or abrasive fluids and ambient conditions!

- ▶ Verify the compatibility of the process fluid with the sensor material.
- ▶ Ensure the resistance of all fluid-wetted materials in the process.
- ► Keep within the specified pressure and temperature range.

NOTICE

Verification for borderline cases:

► For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

Residual risks

A CAUTION

Risk of hot or cold burns! The use of media and electronics with high or low temperatures can produce hot or cold surfaces on the device.

- ► Mount suitable touch protection.
- ▶ Use suitable protective equipment.

2.3 Workplace safety

When working on and with the device:

▶ Wear the required personal protective equipment as per national regulations.

2.4 Operational safety

Damage to the device!

- ▶ Operate the device in proper technical condition and fail-safe condition only.
- ▶ The operator is responsible for the interference-free operation of the device.

Modifications to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers!

▶ If modifications are nevertheless required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability:

- Carry out repairs on the device only if they are expressly permitted.
- ▶ Observe federal/national regulations pertaining to the repair of an electrical device.
- ▶ Use only original spare parts and accessories.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity..

2.6 IT security

Our warranty is valid only if the product is installed and used as described in the Operating Instructions. The product is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the product and associated data transfer, must be implemented by the operators themselves in line with their security standards.

2.7 Device-specific IT security

The device offers a range of specific functions to support protective measures on the operator's side. These functions can be configured by the user and guarantee greater inoperation safety if used correctly. The following list provides an overview of the most important functions:

Function/interface	Factory setting	Recommendation
Write protection via hardware write protection switch $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $	Not enabled	On an individual basis following risk assessment
Access code (also applies to web server login or FieldCare connection) → 🖺 11	Not enabled (0000)	Assign a customized access code during commissioning
WLAN (order option in display module)	Enabled	On an individual basis following risk assessment
WLAN security mode	Enabled (WPA2- PSK)	Do not change
WLAN passphrase (Password) → 🖺 12	Serial number	Assign an individual WLAN passphrase during commissioning
WLAN mode	Access point	On an individual basis following risk assessment
Web server → 🗎 12	Enabled	On an individual basis following risk assessment
CDI-RJ45 service interface→ 🖺 12	-	On an individual basis following risk assessment

2.7.1 Protecting access via hardware write protection

Write access to the parameters of the device via the local display, web browser or operating tool (e.g. FieldCare, DeviceCare) can be disabled via a write protection switch (DIP switch on the main electronics module). When hardware write protection is enabled, only read access to the parameters is possible.

Hardware write protection is disabled when the device is delivered $\rightarrow \equiv 116$.

2.7.2 Protecting access via a password

Different passwords are available to protect write access to the device parameters or access to the device via the WLAN interface.

- User-specific access code
- Protect write access to the device parameters via the local display, web browser or operating tool (e.g. FieldCare, DeviceCare). Access authorization is clearly regulated through the use of a user-specific access code.
- WLAN passphrase
 - The network key protects a connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface which can be ordered as an option.
- Infrastructure mode
 When the device is operated in infrastructure mode, the WLAN passphrase corresponds to the WLAN passphrase configured on the operator side.

User-specific access code

When the device is delivered, the device does not have an access code and is equivalent to 0000 (open).

WLAN passphrase: Operation as WLAN access point

A connection between an operating unit (e.g. notebook or tablet) and the device via the WLAN interface ($\Rightarrow \triangleq 68$), which can be ordered as an optional extra, is protected by the network key. The WLAN authentication of the network key complies with the IEEE 802.11 standard.

When the device is delivered, the network key is pre-defined depending on the device. It can be changed via the **WLAN settings** submenu in the **WLAN passphrase** parameter $(\rightarrow \blacksquare 107)$.

Infrastructure mode

A connection between the device and WLAN access point is protected by means of an SSID and passphrase on the system side. Please contact the relevant system administrator for access.

General notes on the use of passwords

- The access code and network key supplied with the device should be changed during commissioning for safety reasons.
- Follow the general rules for generating a secure password when defining and managing the access code and network key.
- The user is responsible for the management and careful handling of the access code and network key.
- For information on configuring the access code or on what to do if you lose the password, for example, see "Write protection via access code" $\rightarrow \blacksquare 115$.

2.7.3 Access via web server

 \rightarrow \blacksquare 60With the integrated web server, the device can be operated and configured via a web browser. The connection is via the service interface (CDI-RJ45) or the WLAN interface.

The web server is enabled when the device is delivered. The web server can be disabled via the **Web server functionality** parameter if necessary (e.g., after commissioning).

The device and status information can be hidden on the login page. This prevents unauthorized access to the information.

For detailed information on device parameters, see: "Description of device parameters" document $\rightarrow \triangleq 193$.

2.7.4 Access via service interface (CDI-RJ45)

The device can be connected to a network via the service interface (CDI-RJ45). Devicespecific functions guarantee the secure operation of the device in a network.

The use of relevant industrial standards and guidelines that have been defined by national and international safety committees, such as IEC/ISA62443 or the IEEE, is recommended. This includes organizational security measures such as the assignment of access authorization as well as technical measures such as network segmentation.

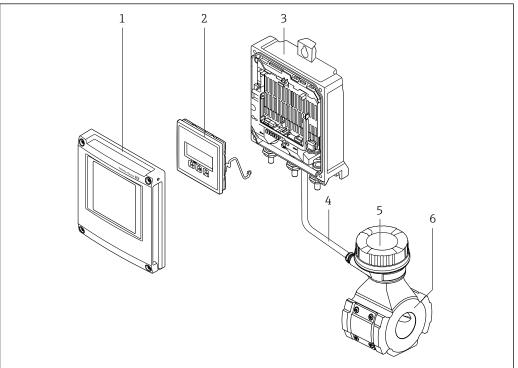

3 Product description

The device consists of a transmitter and a sensor.

The device is available as a remote version:

The transmitter and sensor are mounted in physically separate locations. They are interconnected by connecting cables.

3.1 Product design

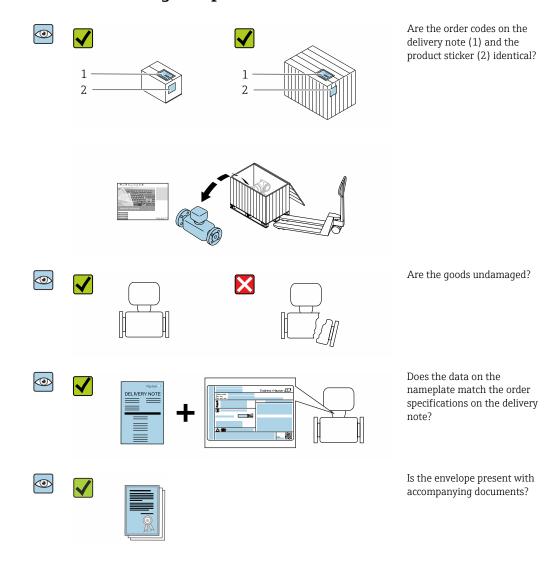

A005161

 \blacksquare 1 Important components of a measuring device

- 1 Electronics compartment cover
- 2 Display module
- 3 Transmitter housing
- 4 Connecting cable
- Sensor connection housing with integrated ISEM electronics
- 6 Sensor

4 Incoming acceptance and product identification

4.1 Incoming acceptance

- If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
 - The Technical Documentation is available via the Internet or via the Endress+Hauser Operations app: Product identification → ■ 15.

4.2 **Product identification**

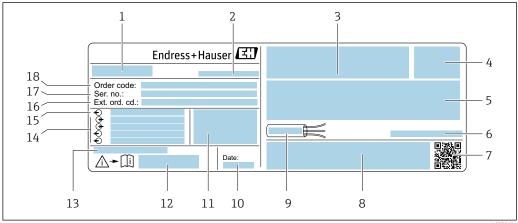

The following options are available for identification of the device:

- Nameplate
- Order code with details of the device features on the delivery note
- Enter the serial numbers from the nameplates in the *Device Viewer* (www.endress.com/deviceviewer): all the information about the device is displayed.
- Enter the serial numbers from the nameplates into the *Endress+Hauser Operations app* or scan the DataMatrix code on the nameplate with the *Endress+Hauser Operations app*: all the information about the device is displayed.

For an overview of the scope of the associated Technical Documentation, refer to the following:

- The "Additional standard documentation on the device" and "Supplementary devicedependent documentation" sections
- The *Device Viewer*: Enter the serial number from the nameplate (www.endress.com/deviceviewer)
- The *Endress+Hauser Operations app*: Enter the serial number from the nameplate or scan the DataMatrix code on the nameplate.

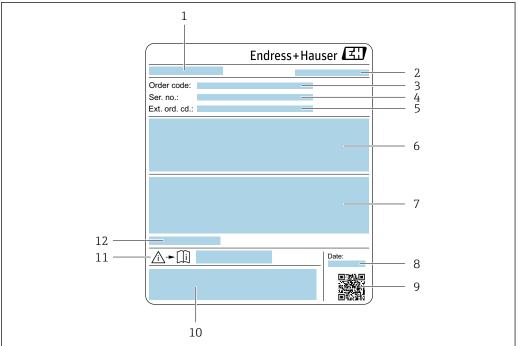

4.2.1 Transmitter nameplate

₽ 2 Example of a transmitter nameplate

- Name of the transmitter
- Manufacturer address/certificate holder 2
- Space for approvals: use in hazardous areas
- 4 Degree of protection
- Electrical connection data: available inputs and outputs
- 6 Permitted ambient temperature (T_a)
- 2-D matrix code
- 8 Space for approvals and certificates: e.g. CE mark, RCM tick
- Permitted temperature range for cable
- 10 Date of manufacture: year-month
- Firmware version (FW) and device revision (Dev.Rev.) from the factory
- Document number of safety-related supplementary documentation 12
- Space for additional information in the case of special products 13
- Available inputs and outputs, supply voltage
- 15 Electrical connection data: supply voltage
- Extended order code (ext. ord. cd.)
- Serial number (Ser. no.) 17
- Order code

4.2.2 Sensor nameplate

A005131

Endress+Hauser

- 1 Name of sensor
- 2 Manufacturer address/certificate holder
- 3 Order code
- 4 Serial number (Ser. no.)
- 5 Extended order code (Ext. ord. cd.)
- 6 Full scale value; nominal diameter of the sensor; pressure rating; nominal pressure; static pressure; medium temperature range; measuring tube material, antennas, temperature sensor and gasket between antenna holder and cast body, antenna ceramic
- 7 Approval information for explosion protection, Pressure Equipment Directive and degree of protection
- 8 Date of manufacture: year-month
- 9 2-D matrix code
- 10 CE mark, RCM-Tick mark
- 11 Document number of safety-related supplementary documentation
- 12 Permitted ambient temperature (T_a)

🚹 Order code

The measuring device is reordered using the order code.

Extended order code

- The device type (product root) and basic specifications (mandatory features) are always listed.
- Of the optional specifications (optional features), only the safety and approvalrelated specifications are listed (e.g. LA). If other optional specifications are also ordered, these are indicated collectively using the # placeholder symbol (e.g. #LA#).
- If the ordered optional specifications do not include any safety and approval-related specifications, they are indicated by the + placeholder symbol (e.g. XXXXXX-ABCDE +).

16

4.2.3 Symbols on the device

Symbol	Meaning
\triangle	WARNING! This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury. Please consult the documentation for the measuring device to discover the type of potential danger and measures to avoid it.
(i	Reference to documentation Refers to the corresponding device documentation.
	Protective ground connection A terminal that must be connected to the ground prior to establishing any other connections.

5 Storage and transport

5.1 Storage conditions

Observe the following notes for storage:

- ▶ Store in the original packaging to ensure protection from shock.
- ▶ Do not remove protective covers or protective caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.
- ▶ Protect from direct sunlight to avoid unacceptably high surface temperatures.
- ▶ Store in a dry and dust-free place.
- ▶ Do not store outdoors.

Storage temperature $\rightarrow \triangleq 177$

5.2 Transporting the product

Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

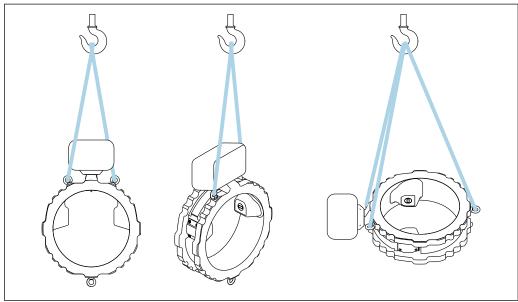

5.2.1 Measuring devices with lifting lugs

Devices with a nominal diameter of DN 200 to 300 mm (8 to 12 in) have two options for mounting lifting lugs (eyebolts) for the purpose of transport. The two upper threaded holes are provided for vertically transporting the device, while the two upper threaded holes and one of the opposite lower threaded holes are provided for horizontal transport.

A CAUTION

Special transportation instructions for devices with lifting lugs

- ▶ Only use the lifting lugs fitted to the device for transport.
- ► The device must always be attached to two lifting lugs when transported vertically and three lifting lugs when transported horizontally.

■ 3 Vertical and horizontal transport of the device using mounted lifting lugs

18 Endress+Hauser

A005315

5.3 Packaging disposal

All packaging materials are environmentally friendly and 100% recyclable:

- Outer packaging of device Stretch wrap made of polymer in accordance with EU Directive 2002/95/EC (RoHS)
- Packaging
 - Wood crate treated in accordance with ISPM 15 standard, confirmed by IPPC logo
 - Cardboard box in accordance with European packaging guideline 94/62/EC, recyclability confirmed by Resy symbol
- Transport material and fastening fixtures
 - Disposable plastic pallet
 - Plastic straps
 - Plastic adhesive strips
- Filler material

Paper pads

6 Mounting procedure

6.1 Mounting requirements

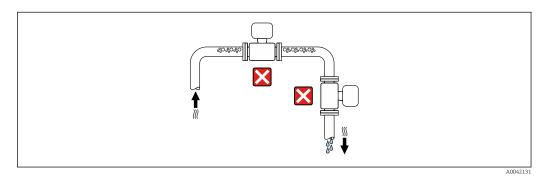

6.1.1 Mounting position

Installation point

Installation in pipe

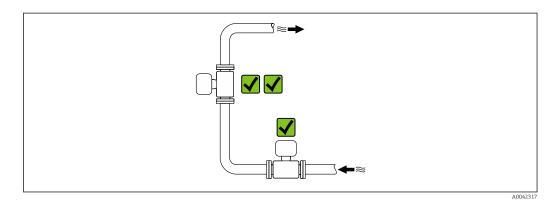

Do **not** install the device:

- At the highest point of the pipe (risk of gas bubbles accumulating in the measuring tube)
- Upstream of a free pipe outlet in a down pipe

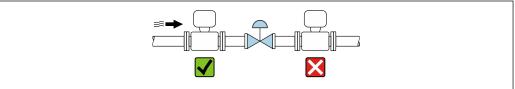

Install the device:

- Ideally in an ascending pipe
- Upstream of an ascending pipe or in areas where the device is filled with medium

Installation near valves

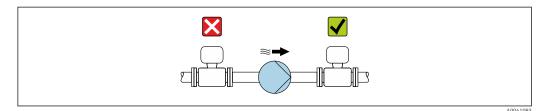

Mount the sensor upstream from control valves if possible.

A004109

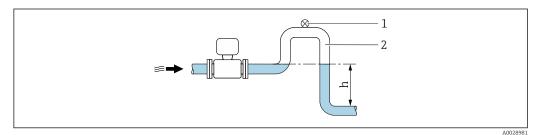

Installation near pumps

- Install the device in the direction of flow downstream from the pump.
- Also install pulsation dampers if reciprocating, diaphragm or peristaltic pumps are used.

Installation upstream from a down pipe

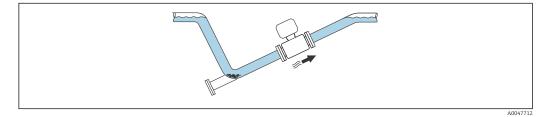

If installing upstream of down pipes with a length $h \ge 5$ m (16.4 ft): Install a siphon with a vent valve downstream of the device.

- 🖪 4 This arrangement prevents the flow of liquid stopping in the pipe and the formation of air pockets.
- 1 Vent valve
- 2 Pipe siphon
- h Length of down pipe

Installation with partially filled pipes

- Partially filled pipes with a gradient require a drain-type configuration.
- The installation of a cleaning valve is recommended.

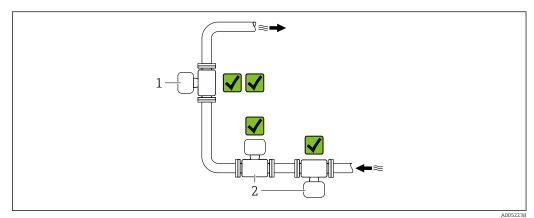

Installation in event of pipe vibrations

NOTICE

Pipe vibrations can damage the device!

▶ Do not expose the device to strong vibrations.

Orientation

- 1 Vertical orientation
- 2 Horizontal orientation

Vertical orientation

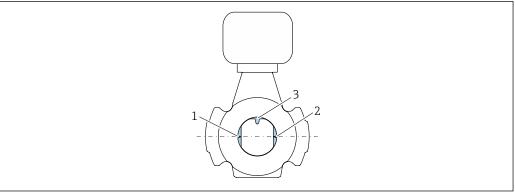

The device should ideally be installed in a rising pipe:

- To avoid having a partially filled pipe
- To avoid any gas accumulation
- The measuring tube can be completely drained and protected against the buildup of deposits.
- In the case of total solids of \geq 20 %TS:

Install the device vertically. If it is installed horizontally, separating layers can form as a result of sedimentation, separating liquid and solids. This can lead to measurement errors.

Horizontal orientation

The antennas (transmitter and receiver) should be positioned horizontally in order to avoid interference to the measurement signal caused by entrained air bubbles.

A004771

- 1 Antenna transmitter
- 2 Antenna receiver
- 3 Temperature sensor

Flow direction

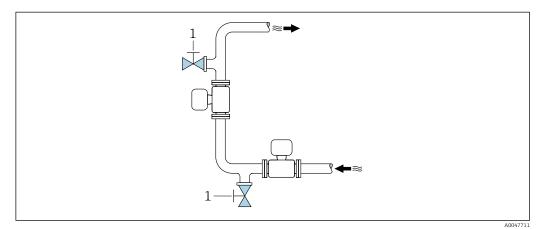

The device can be installed independently of the flow direction.

Inlet and outlet runs

When installing the device, no inlet and outlet runs need to be taken into account. No special precautions need to be taken for fittings that create turbulence, such as valves, elbows or T-pieces, as long as no cavitation occurs.

Installation with sampling points

To obtain a representative sample, the sampling points should be installed in the immediate vicinity of the device. This also makes it easier to take the sample and run the wizards via the device's local operation.

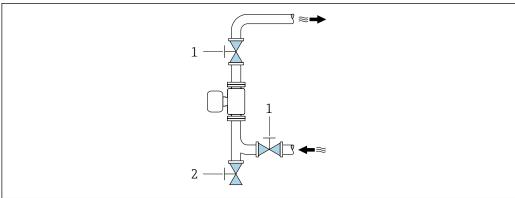

Sampling point

Installation with option for cleaning

Depending on the process conditions (e.g. grease deposits), it may be necessary to clean the device. Additional components can be fitted to avoid any need to remove the device for cleaning:

- Rinse connection
- Cleaning shaft

A004774

- 1 Shutoff valve
- 2 Shut-off flap for cleaning

If there is a risk of deposits building up in the measuring tube, as a result of grease for example, a flow velocity of >2 m/s (6.5 ft/s) is recommended.

Dimensions

For the dimensions and installation lengths of the device, see the "Technical Information" document, "Mechanical construction" section .→ 🖺 193

6.1.2 Environmental and process requirements

Ambient temperature range

Technical data for the ambient temperature range $\rightarrow \triangleq 176$

If operating outdoors:

- Install the measuring device in a shady location.
- Avoid direct sunlight, particularly in warm climatic regions.
- Avoid direct exposure to weather conditions.

A weather protection cover is available as an accessory. $\rightarrow = 163$

Static pressure

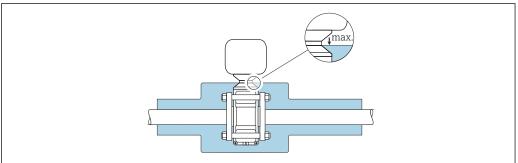

Technical data for the static pressure $\rightarrow \triangleq 178$

Vibration and shock resistance

Technical data for vibration and shock resistance $\rightarrow \implies 177$

Thermal insulation

- For very hot media: To reduce energy losses and prevent accidental contact with hot
- In cold environments: To prevent cooling of the pipe wall and the sensor from the outside, which could promote the formation of grease deposits

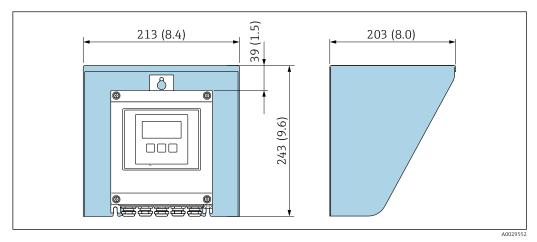

MARNING

Electronics overheating on account of thermal insulation!

- ▶ Do not insulate the sensor connection housing.
- ▶ Insulation may be provided as far as the connection between the sensor and the sensor connection housing.
- ▶ Maximum permitted temperature at the lower end of the sensor connection housing: 75°C (167°F)

6.1.3 Special mounting instructions

Weather protection cover

■ 5 Unit mm (in)

ho A weather protection cover is available as an accessory.ho ho 163

6.2 Mounting the measuring device

6.2.1 Preparing the measuring device

- 1. Remove all remaining transport packaging.
- 2. Remove any protective covers or protective caps present from the sensor.
- 3. Remove stick-on label on the electronics compartment cover.

6.2.2 Mounting the sensor

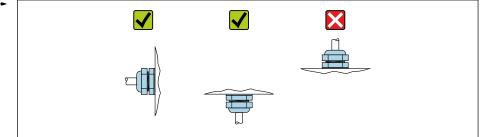

A WARNING

Danger due to improper process sealing!

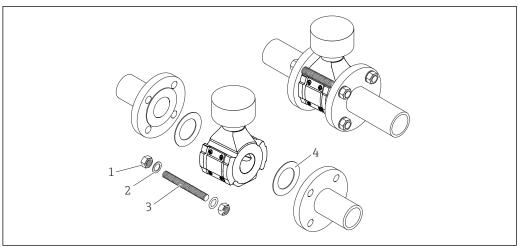

- ► Ensure that the inside diameters of the gaskets are greater than or equal to that of the process connections and piping.
- Ensure that the gaskets are clean and undamaged.
- ► Secure the gaskets correctly.
- ▶ Apply the correct screw tightening torques and comply with the mounting instructions \rightarrow $\stackrel{ riangle}{=}$ 27.

Center the sensor between the pipe flanges and mount it in the measuring path.

- A mounting kit consisting of screws/mounting bolts, gaskets, nuts and washers can be ordered as an optional extra:
 - Directly with the device: Order code for "Accessory enclosed", option PE
 - Separately as an accessory → 🖺 163
- 1. Position the device so that the cable entries do not point upwards.

A00292

€ 6 Mounting the sensor

- Nut
- 2 Washer
- Screw/mounting bolt
- Gasket

Screw tightening torques

NOTICE

Failure to observe screw tightening torques or mounting instructions

The process connection may be overloaded if screw tightening torques are not observed or the mounting instructions cannot be followed. This can produce a leaking process connection from which the medium escapes.

▶ Apply the correct screw tightening torques and comply with the mounting instructions.

The following mounting instructions must be observed:

- The specified screw tightening torques only apply when using the mounting kit, which can be ordered as an accessory $\rightarrow \blacksquare 164$.
- Nuts, threads and screw head surfaces must be greased before assembly.
- The pipes must be free of tensile stress.
- The screws must be tightened evenly in diagonally opposite sequence.
- The values for the screw tightening torques depend on variables such as seals, screws, lubricants, tightening methods etc. These variables are outside the control of the manufacturer. The values indicated are therefore quideline values only.

Maximum screw tightening torques for EN 1092-1

Nominal	diameter	Pressure rating	Screws	Max. screw tightening torque		
[mm] [in]			[mm]			
50	2	PN 10	4 x M16	85 Nm (62.7 lbf ft)

6.2.3 Mounting the transmitter

A CAUTION

Ambient temperature too high!

Danger of electronics overheating and housing deformation.

- lacktriangle Do not exceed the permitted maximum ambient temperature .
- ► If operating outdoors: Avoid direct sunlight and exposure to weathering, particularly in warm climatic regions.

A CAUTION

Excessive force can damage the housing!

► Avoid excessive mechanical stress.

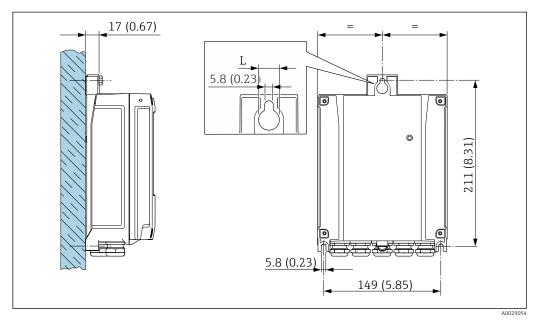

The transmitter can be mounted in the following ways:

- Wall mounting $\rightarrow \triangle$ 29
- Pipe mounting → 🖺 30

28

Wall mounting

Required tools: Drill with drill bit \emptyset 6.0 mm

■ 7 Engineering unit mm (in)

L Depends on order code for "Transmitter housing"

Order code for "Transmitter housing" Option A, aluminum, coated: L = 14 mm (0.55 in)

- 1. Drill the holes.
- 2. Insert wall plugs into the drilled holes.
- 3. Screw in the fixing screws slightly.
- 4. Fit the transmitter housing over the fixing screws and mount in place.
- 5. Tighten the fixing screws.

Pipe mounting

Required tools:

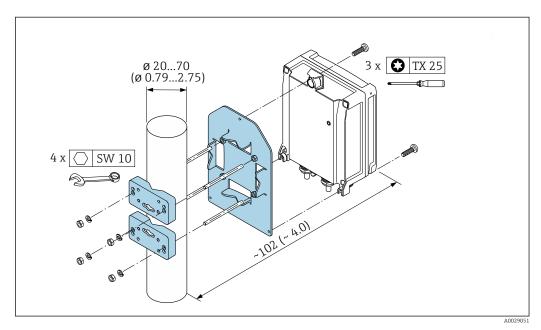

- Open-ended wrench AF 10
- Torx screwdriver TX 25

NOTICE

Excessive tightening torque applied to the fixing screws!

Risk of damaging the plastic transmitter.

► Tighten the fixing screws as per the tightening torque: 2.5 Nm (1.8 lbf ft)

🖪 8 💮 Engineering unit mm (in)

- The pipe mounting set can be ordered:
 - Directly with the device: order code for "Accessory enclosed", option PC
 - Separately as an accessory → 🗎 163

6.3 Post-mounting check

Is the device undamaged (visual inspection)?		
Does the measuring device conform to the measuring point specifications? For example: Process temperature Pressure (refer to the "Pressure-temperature ratings" section of the "Technical Information" document) Ambient temperature Measuring range		
Has the correct orientation for the sensor been selected? According to sensor type According to medium temperature According to medium properties		
Are the measuring point identification and labeling correct (visual inspection)?		
Is the device adequately protected against precipitation and direct sunlight?		
Have the fixing screws been tightened with the correct tightening torque?		

7 Electrical connection

▲ WARNING

Live parts! Incorrect work performed on the electrical connections can result in an electric shock.

- ► Set up a disconnecting device (switch or power-circuit breaker) to easily disconnect the device from the supply voltage.
- ▶ In addition to the device fuse, include an overcurrent protection unit with max. 10 A in the plant installation.

7.1 Electrical safety

In accordance with applicable national regulations.

7.2 Connecting requirements

7.2.1 Required tools

- For cable entries: use appropriate tool
- For securing clamp: Allen key 3 mm
- Wire stripper
- When using stranded cables: crimper for wire end ferrule
- For removing cables from terminal: flat blade screwdriver ≤ 3 mm (0.12 in)

7.2.2 Requirements for connecting cable

The connecting cables provided by the customer must fulfill the following requirements.

Protective grounding cable for the outer ground terminal

Conductor cross-section < 2.1 mm² (14 AWG)

The use of a cable lug enables the connection of larger cross-sections.

The grounding impedance must be less than 2 Ω .

Permitted temperature range

- The installation quidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

Power supply cable (incl. conductor for the inner ground terminal)

Standard installation cable is sufficient.

Signal cable

Current output 4 to 20 mA HART

A shielded cable is recommended. Observe grounding concept of the plant.

Current output 0/4 to 20 mA

Standard installation cable is sufficient

Pulse / frequency / switch output

Standard installation cable is sufficient

Relay output

Standard installation cable is sufficient.

Current input 0/4 to 20 mA

Standard installation cable is sufficient

Status input

Standard installation cable is sufficient

Cable diameter

■ Cable glands supplied: $M20 \times 1.5$ with cable Ø 6 to 12 mm (0.24 to 0.47 in)

Spring-loaded terminals: Suitable for strands and strands with ferrules.
 Conductor cross-section 0.2 to 2.5 mm² (24 to 12 AWG).

Sensor/transmitter connecting cable

Standard cable

A standard cable with the following specifications can be used as the connecting cable.

Design	4 cores (2 pairs); uninsulated stranded CU wires; pair-stranded with common shield				
Shield	Tin-plated copper braid, optical coverage ≥ 85 %				
Cable length	Maximum 300 m (900 ft), depending on cross-section:				
	Cross-section	Cable length			
	0.34 mm ² (AWG 22)	80 m (240 ft)			
	0.50 mm ² (AWG 20) 120 m (360 ft)				
	0.75 mm ² (AWG 18) 180 m (540 ft)				
	1.00 mm ² (AWG 17)	240 m (720 ft)			
	1.50 mm ² (AWG 15)	300 m (900 ft)			
	2.50 mm ² (AWG 13) 300 m (900 ft)				

Optional connecting cable available

A connecting cable can be ordered as an optional extra $\rightarrow \triangleq 163$.

Design	$2 \times 2 \times 0.34 \text{ mm}^2$ (AWG 22) PVC cable $^{1)}$ with common shield (2 pairs, uninsulated stranded CU wires; pair-stranded)				
Flame resistance	According to DIN EN 60332-1-2				
Oil resistance	According to DIN EN 60811-2-1				
Shield	Tin-plated copper braid, optical cover \geq 85 %				
Operating temperature	When mounted in a fixed position: -50 to $+105$ °C (-58 to $+221$ °F); when cable can move freely: -25 to $+105$ °C (-13 to $+221$ °F)				
Available cable lengths	The following cable lengths are available: order code for "Cable, sensor connection" Option B, fixed: 20 m (65 ft) Option E, variable: user-configurable up to max. 50 m Option F, variable: user-configurable up to max. 165 ft				

1) UV radiation can impair the cable outer sheath. Protect the cable from direct sunshine where possible.

7.2.3 Terminal assignment

Transmitter: supply voltage, input/outputs

The terminal assignment of the inputs and outputs depends on the individual order version of the device. The device-specific terminal assignment is documented on an adhesive label in the terminal cover.

Supply voltage		Input/output 1		Input/output 2		Input/output 3		Input/output 4	
1 (+)	2 (-)	26 (+)	27 (-)	24 (+)	25 (-)	22 (+)	23 (-)	20 (+)	21 (-)
		Device-specific terminal assignment: adhesive label in terminal cover.							

Transmitter and sensor connection housing: connecting cable

The sensor and transmitter, which are mounted in separate locations, are interconnected by a connecting cable. The cable is connected via the sensor connection housing and the transmitter housing.

Terminal assignment and connection of the connecting cable $\rightarrow \implies 35$

7.2.4 Preparing the measuring device

Carry out the steps in the following order:

- 1. Mount the sensor and transmitter.
- 2. Connection housing, sensor: Connect connecting cable.
- 3. Transmitter: Connect connecting cable.
- 4. Transmitter: Connect signal cable and cable for supply voltage.

NOTICE

Insufficient sealing of the housing!

Operational reliability of the measuring device could be compromised.

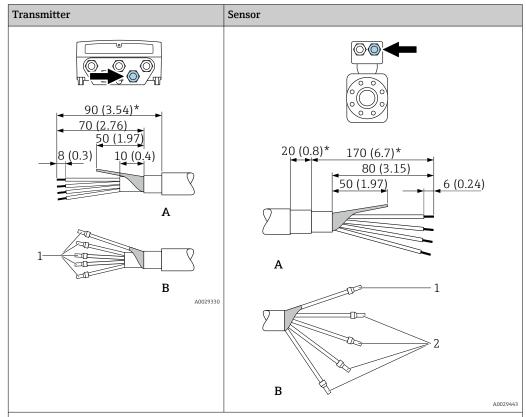

- ▶ Use suitable cable glands corresponding to the degree of protection.
- 1. Remove dummy plug if present.
- 2. If the measuring device is supplied without cable glands:
 Provide suitable cable gland for corresponding connection cable.
- 3. If the measuring device is supplied with cable glands:

 Observe the requirements for connection cables → 🗎 31.

7.2.5 Preparing the connecting cable

When terminating the connecting cable, pay attention to the following points:

► For cables with fine-wire cores (stranded cables): Fit the cores with ferrules.

Unit mm (in)

- A = Terminate the cable
- B = Fit ferrules on cables with fine-wire cores (stranded cables)
- $1 = \text{Red ferrules}, \phi 1.0 \text{ mm } (0.04 \text{ in})$
- 2 = White ferrules, ϕ 0.5 mm (0.02 in) * = Stripping only for reinforced cables

34

7.3 Connecting the measuring device

NOTICE

An incorrect connection compromises electrical safety!

- ▶ Only properly trained specialist staff may perform electrical connection work.
- Observe applicable federal/national installation codes and regulations.
- ► Comply with local workplace safety regulations.
- ▶ Always connect the protective ground cable ⊕ before connecting additional cables.
- ► When using in potentially explosive atmospheres, observe the information in the device-specific Ex documentation.

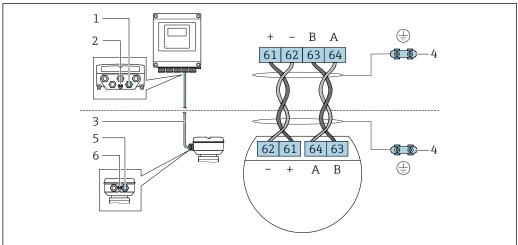

7.3.1 Connecting the connecting cable

A WARNING

Risk of damaging electronic components!

- ► Connect the sensor and transmitter to the same potential equalization.
- ▶ Only connect the sensor to a transmitter with the same serial number.

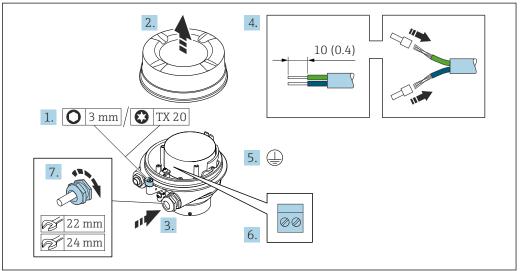

Connecting cable terminal assignment

A0028198

- 1 Cable entry for cable on transmitter housing
- 2 Protective earth (PE)
- 3 Connecting cable ISEM communication
- 4 Grounding via ground connection; in the version with a device plug, grounding is ensured through the plug itself.
- 5 Cable entry for cable or connection of device plug on sensor connection housing
- 6 Protective earth (PE)

Connecting the connecting cable to the sensor connection housing

A002961

- 1. Loosen the securing clamp of the housing cover.
- 2. Unscrew the housing cover.
- 3. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.
- 4. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.
- 5. Connect the protective ground.
- 6. Connect the cable in accordance with the connecting cable terminal assignment.
- 7. Firmly tighten the cable glands.
 - The process for connecting the connecting cable is now complete.

A WARNING

Housing degree of protection voided due to insufficient sealing of the housing.

- ► Screw in the thread on the cover without using any lubricant. The thread on the cover is coated with a dry lubricant.
- 8. Screw on the housing cover.
- 9. Tighten the securing clamp of the housing cover.

Connecting the connecting cable to the transmitter

1. Loosen the 4 fixing screws on the housing cover.

7.

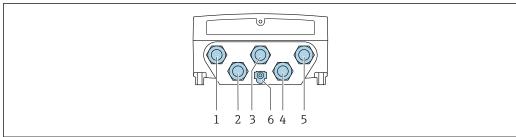

- 2. Open the housing cover.
- 3. Fold open the terminal cover.
- 4. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.

6.

- 5. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.
- 6. Connect the protective ground.
- 7. Connect the cable in accordance with the connecting cable terminal assignment $\rightarrow \implies 35$.
- 8. Firmly tighten the cable glands.
 - The process for connecting the connecting cable is now complete.
- 9. Close the housing cover.
- 10. Tighten the securing screw of the housing cover.
- 11. After connecting the connecting cable:Connect the signal cable and the supply voltage cable →

 38.

7.3.2 Connecting the signal cable and the supply voltage cable

A002820

- 1 Terminal connection for supply voltage
- 2 Terminal connection for signal transmission, input/output
- 3 Terminal connection for signal transmission, input/output
- 4 Terminal connection for connecting cable between sensor and transmitter
- 5 Terminal connection for signal transmission, input/output; optional: connection for external WLAN antenna
- 6 Protective earth (PE)

A002959

- 1. Loosen the 4 fixing screws on the housing cover.
- 2. Open the housing cover.
- 3. Fold open the terminal cover.
- 4. Push the cable through the cable entry. To ensure tight sealing, do not remove the sealing ring from the cable entry.
- 5. Strip the cable and cable ends. In the case of stranded cables, fit ferrules.
- 6. Connect the protective ground.
- 7. Connect the cable according to the terminal assignment.
 - ► **Signal cable terminal assignment:** The device-specific terminal assignment is documented on an adhesive label in the terminal cover.

- 8. Firmly tighten the cable glands.
 - ► This concludes the cable connection process.
- 9. Close the terminal cover.
- 10. Close the housing cover.

▲ WARNING

Housing degree of protection may be voided due to insufficient sealing of the housing.

► Screw in the screw without using any lubricant.

NOTICE

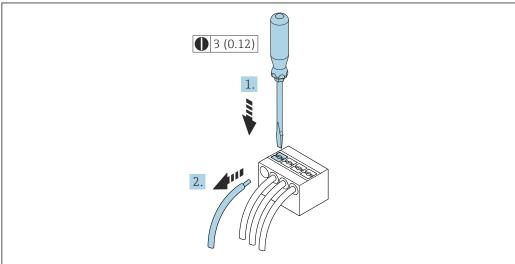

Excessive tightening torque applied to the fixing screws!

Risk of damaging the plastic transmitter.

- ► Tighten the fixing screws as per the tightening torque: 2.5 Nm (1.8 lbf ft)
- 11. Tighten the 4 fixing screws on the housing cover.

Removing a cable

To remove a cable from the terminal:

A002959

- 9 Engineering unit mm (in)
- 1. Use a flat-blade screwdriver to press down on the slot between the two terminal holes.
- 2. Remove the cable end from the terminal.

7.4 Potential equalization

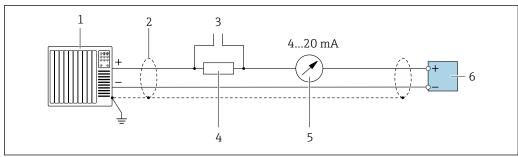

7.4.1 Requirements

- Pay attention to in-house grounding concepts
- Take account of operating conditions like the pipe material and grounding
- Connect the medium, sensor connection housing and transmitter to the same electrical potential.
- Use a ground cable with a minimum cross-section of 6 mm² (0.0093 in²) and a cable lug for potential equalization connections

7.5 Special connection instructions

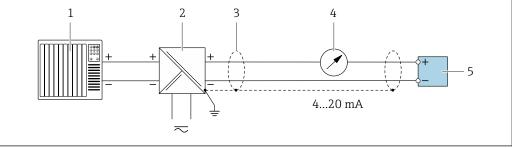

7.5.1 Connection examples

Current output 4 to 20 mA HART

7.6 Ensuring the degree of protection

The measuring device fulfills all the requirements for the degree of protection IP66/67, Type 4X enclosure.

To guarantee the degree of protection IP66/67, Type 4X enclosure, carry out the following steps after electrical connection:

- 1. Check that the housing seals are clean and fitted correctly.
- 2. Dry, clean or replace the seals if necessary.
- 3. Tighten all housing screws and screw covers.
- 4. Firmly tighten the cable glands.
- 5. To ensure that moisture does not enter the cable entry:

 Route the cable so that it loops down before the cable entry ("water trap").

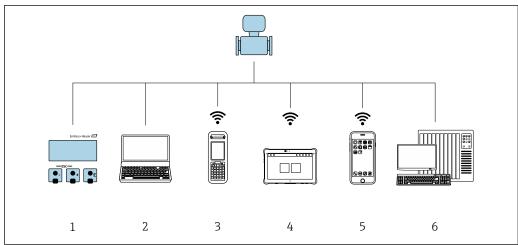

6. The cable glands supplied do not ensure housing protection when not in use. They must therefore be replaced by dummy plus corresponding to the housing protection.

7.7 Post-connection check

Are cables or the device undamaged (visual inspection)?	
Do the cables used comply with the requirements $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $	
Does the supply voltage match the specifications on the transmitter nameplate $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $	
Is the terminal assignment correct $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $	
Are the power supply and signal cables correctly connected?	
Is the protective earthing established correctly?	
Is the cable type route completely isolated? Without loops and cross-overs?	
Do the cables have adequate strain relief? Are they routed securely?	
 Are all cable glands installed, securely tightened and leak-tight? Cable run with "water trap" → ≅ 44? 	
Is the sensor connected to the right transmitter? Check the serial number on the nameplate of the sensor and transmitter.	
Is the housing cover fitted and the screws tightened with the correct tightening torque?	
Are dummy plugs inserted in unused cable entries and have transportation plugs been replaced with dummy plugs?	

8 Operation options

8.1 Overview of operation options

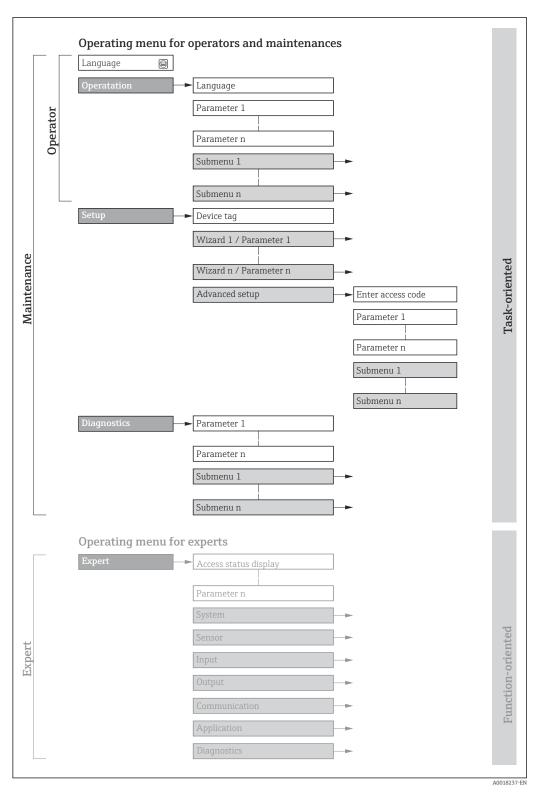

A003451

- 1 Local operation via display module
- 2 Computer with Web browser (e.g. Internet Explorer) or with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM)
- 3 Field Xpert SFX350 or SFX370
- 4 Field Xpert SMT70
- 5 Mobile handheld terminal
- 6 Control system (e.g. PLC)

8.2 Structure and function of the operating menu

8.2.1 Structure of the operating menu

For an overview of the operating menu for experts: see the "Description of Device Parameters" document supplied with the device

 \blacksquare 20 Schematic structure of the operating menu

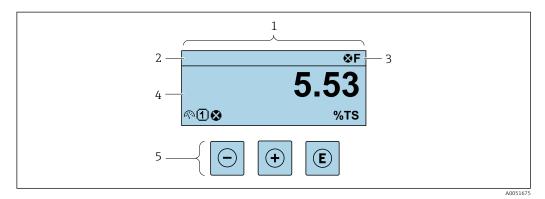

8.2.2 Operating philosophy

The individual parts of the operating menu are assigned to certain user roles (e.g. operator, maintenance etc.). Each user role contains typical tasks within the device life cycle.

Menu/pa	arameter	User role and tasks	Content/meaning
Language	Task- oriented	Role "Operator", "Maintenance" Tasks during operation: Configuration of the operational	 Defining the operating language Defining the Web server operating language Resetting and controlling totalizers
Operation	Operation	display Reading measured values	 Configuration of the operational display (e.g. display format, display contrast) Resetting and controlling totalizers
Setup		 "Maintenance" role Commissioning: Configuration of the measurement Configuration of the inputs and outputs Configuration of the communication interface 	Wizards for fast commissioning: Configuring the system units Displaying the I/O configuration Configuring the inputs Configuring the outputs Configuration of the operational display Configuring the low flow cut off Advanced setup For more customized configuration of the measurement (adaptation to special measuring conditions) Configuration of totalizers Configuration of WLAN settings Administration (define access code, reset measuring device)
Diagnostics		"Maintenance" role Troubleshooting: Diagnostics and elimination of process and device errors Measured value simulation	Contains all parameters for error detection and analyzing process and device errors: Diagnostic list Contains up to 5 currently pending diagnostic messages. Event logbook Contains event messages that have occurred. Device information Contains information for identifying the device Measured values Contains all current measured values. Data logging submenu with the "Extended HistoROM" order option Storage and visualization of measured values Heartbeat Technology Verification of device functionality on request and documentation of verification results Simulation Used to simulate measured values or output values.
Expert	Function- oriented	Tasks that require detailed knowledge of the function of the device: Commissioning measurements under difficult conditions Optimal adaptation of the measurement to difficult conditions Detailed configuration of the communication interface Error diagnostics in difficult cases	Contains all of the device parameters and allows direct access to these by means of an access code. The structure of this menu is based on the function blocks of the device: System Contains all higher-level device parameters that do not affect measurement or measured value communication Sensor Configuration of the measurement. Input Configuration of the status input Output Configuration of the analog current outputs as well as the pulse/frequency and switch output Communication Configuration of the digital communication interface and the Web server Application Configuration of the functions that go beyond the actual measurement (e.g. totalizer) Diagnostics Error detection and analysis of process and device errors and for device simulation and Heartbeat Technology.

8.3 Access to operating menu via local display

8.3.1 Operational display

- 1 Operational display
- 2 Device tag
- 3 Status area
- 4 Display range for measured values (up to 4 lines)
- 5 Operating elements

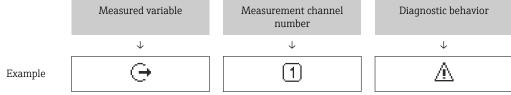

Status area

The following symbols appear in the status area of the operational display at the top right:

- Status signals → 🗎 138
 - **F**: Failure
 - **C**: Function check
 - **S**: Out of specification
 - M: Maintenance required
- Diagnostic behavior → 🖺 139
 - 🐼: Alarm
 - <u>M</u>: Warning
- 🛱: Locking (the device is locked via the hardware)
- ←: Communication (communication via remote operation is active)

Display area

In the display area, each measured value is prefaced by certain symbol types for further description:

Appears only if a diagnostics event is present for this measured variable.

Measured variables

Symbol	Meaning
P	Dry matter concentration
ṁ	Solids load

å.	Temperature
G	Conductivity

The number and display format of the measured variables can be configured via the **Format display** parameter ($\rightarrow \triangleq 97$).

Totalizer

Symbol	Meaning
Σ	Totalizer

Output

Symbol	Meaning
(-)	Output The measurement channel number indicates which of the outputs is displayed.

Input

Symbol	Meaning
€	Status input

Measurement channel numbers

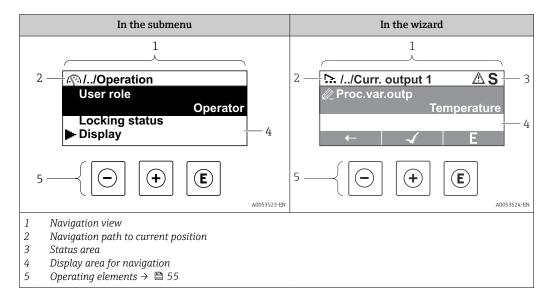

Symbol	Meaning
14	Measurement channel 1 to 4 The measurement channel number is displayed only if more than one channel is present for the same measured variable type .

Diagnostic behavior

Symbol	Meaning
8	 Alarm Measurement is interrupted. Signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated.
Δ	 Warning Measurement is resumed. The signal outputs and totalizers are not affected. A diagnostic message is generated.

The diagnostic behavior pertains to a diagnostic event that is relevant to the displayed measured variable.

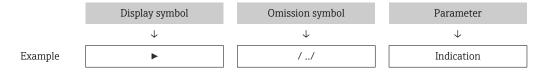

8.3.2 Navigation view

Navigation path

The navigation path to the current position is displayed at the top left in the navigation view and consists of the following elements:

- The display symbol for the menu/submenu (►) or the wizard (►).
- An omission symbol (/ ../) for operating menu levels in between.
- Name of the current submenu, wizard or parameter

For more information about the icons in the menu, refer to the "Display area" section $\Rightarrow \triangle 51$

Status area

The following appears in the status area of the navigation view in the top right corner:

- In the submenu
 - If a diagnostic event is present, the diagnostic behavior and status signal
- In the wizard
 - If a diagnostic event is present, the diagnostic behavior and status signal
- For information on the diagnostic behavior and status signal ightarrow 🖺 138

Display area

Menus

Symbol	Meaning
P	Operation Is displayed: In the menu next to the "Operation" selection At the left in the navigation path in the Operation menu

۶	Setup Is displayed: In the menu next to the "Setup" selection At the left in the navigation path in the Setup menu
ધ	Diagnosis Is displayed: ■ In the menu next to the "Diagnostics" selection ■ At the left in the navigation path in the Diagnostics menu
₹.	Expert Is displayed: In the menu next to the "Expert" selection At the left in the navigation path in the Expert menu

Submenus, wizards, parameters

Symbol	Meaning
•	Submenu
<u>:</u>	Wizards
Ø.	Parameters within a wizard No display symbol exists for parameters in submenus.

Locking procedure

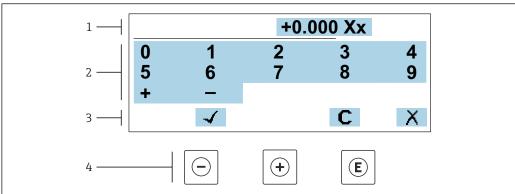

Symbol	Meaning	
û	Parameter locked When displayed in front of a parameter name, indicates that the parameter is locked. ■ By a user-specific access code ■ By the hardware write protection switch	

Wizards

Symbol	Meaning
←	Switches to the previous parameter.
✓	Confirms the parameter value and switches to the next parameter.
E	Opens the editing view of the parameter.

8.3.3 Editing view

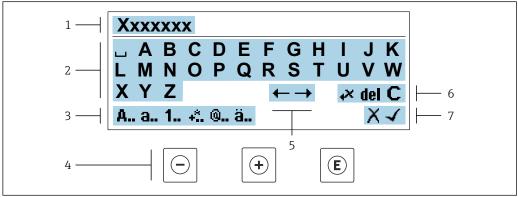

Numeric editor

A0034250

- 21 For entering values in parameters (e.g. limit values)
- 1 Entry display area
- 2 Input screen
- 3 Confirm, delete or reject entry
- 4 Operating elements

Text editor

A003411

- 22 For entering text in parameters (e.g. device tag)
- 1 Entry display area
- 2 Current input screen
- 3 Change input screen
- 4 Operating elements
- 5 Move entry position
- 6 Delete entry
- 7 Reject or confirm entry

Using the operating elements in the editing view

Operating key	Meaning
	Minus key Move the entry position to the left.
(+)	Plus key Move the entry position to the right.

Operating key	Meaning
E	 Enter key Pressing the key briefly confirms your selection. Pressing the key for 2 s confirms your entry. Pressing the key for > 3 s calls up the wizards: Compare measured value with reference value.
-++	Escape key combination (press keys simultaneously) Close the editing view without accepting a change.

Input screens

Symbol	Meaning
А	Upper case
a	Lower case
1	Numbers
+*	Punctuation marks and special characters: = + - * / 2 3 1/4 1/2 3/4 () [] < > { }
@	Punctuation marks and special characters: ' " `^. , ; : ? ! % μ ° \in \$ £ ¥ § @ # / \ I ~ & _
ä	Umlauts and accents

Controlling data entries

Symbol	Meaning	
←→	Move entry position	
X	Reject entry	
4	Confirm entry	
**	Delete character immediately to the left of the entry position	
del	Delete character immediately to the right of the entry position	
С	Clear all the characters entered	

8.3.4 Operating elements

Operating key	Meaning		
	Minus key		
	In menu, submenu Moves the selection bar upwards in a picklist		
	In wizards Goes to previous parameter		
	In the text and numeric editor Move the entry position to the left.		
	Plus key		
	In menu, submenu Moves the selection bar downwards in a picklist		
(+)	In wizards Goes to the next parameter		
	In the text and numeric editor Move the entry position to the right.		
	Enter key		
E	 In the operational display Pressing the key briefly opens the operating menu. Pressing the key for > 3 s opens a context menu with the options: Call up the wizards: Compare measured value with reference value Activate keypad lock 		
	 In menu, submenu Pressing the key briefly: Opens the selected menu, submenu or parameter. Starts the wizard. If help text is open, closes the help text of the parameter. Pressing the key for 2 s in a parameter: If present, opens the help text for the function of the parameter. 		
	In wizards Opens the editing view of the parameter and confirms the parameter value		
	 In the text and numeric editor Pressing the key briefly confirms your selection. Pressing the key for 2 s confirms your entry. 		
	Escape key combination (press keys simultaneously)		
(<u>)</u> +(+)	 In menu, submenu Pressing the key briefly: Exits the current menu level and takes you to the next higher level. If help text is open, closes the help text of the parameter. Pressing the key for 2 s returns you to the operational display ("home position"). 		
	In wizards Exits the wizard and takes you to the next higher level		
	In the text and numeric editor Exits the Editing view without applying the changes.		
	Minus/Enter key combination (press and hold down the keys simultaneously)		
-+E	 If keypad lock is active: Pressing the key for 3 s deactivates the keypad lock. If keypad lock is not active: Pressing the key for 3 s opens the context menu including the option for activating the keypad lock. 		

8.3.5 Opening the context menu

Using the context menu, the user can call up the following menus quickly and directly from the operational display:

- Setup
- Data backup
- Simulation

Calling up and closing the context menu

The user is in the operational display.

- 1. Press the \Box and \Box keys for longer than 3 seconds.
 - ► The context menu opens.

A0034608-EN

- 2. Press \Box + \pm simultaneously.
 - The context menu is closed and the operational display appears.

Calling up the menu via the context menu

- 1. Open the context menu.
- 2. Press 🛨 to navigate to the desired menu.
- 3. Press **E** to confirm the selection.
 - ► The selected menu opens.

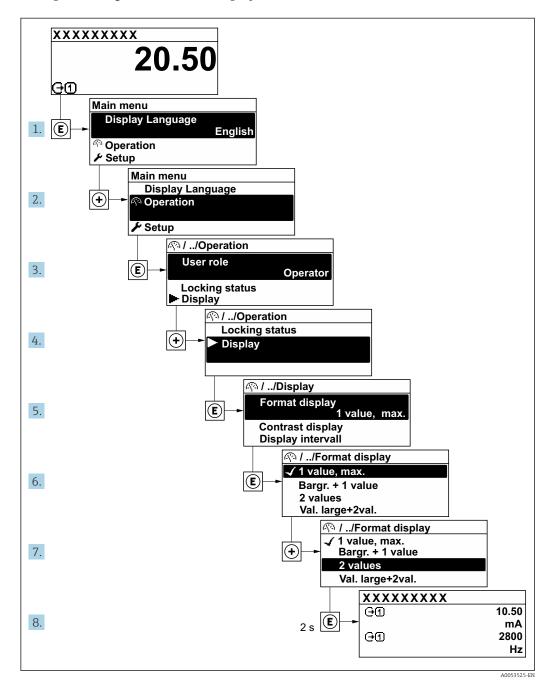

56

8.3.6 Navigating and selecting from list

Different operating elements are used to navigate through the operating menu. The navigation path is displayed on the left in the header. Icons are displayed in front of the individual menus. These icons are also shown in the header during navigation.

For an explanation of the navigation view with symbols and operating elements $\Rightarrow \implies 51$

Example: Setting the number of displayed measured values to "2 values"

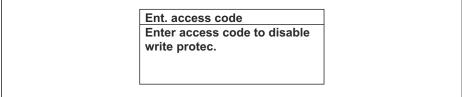

8.3.7 Calling up help text

Help text is available for some parameters and can be called up from the navigation view. The help text provides a brief explanation of the parameter function and thereby supports swift and safe commissioning.

Calling up and closing the help text

The user is in the navigation view and the selection bar is on a parameter.

- 1. Press E for 2 s.
 - ► The help text for the selected parameter opens.

A0014002-E

Example: Help text for parameter "Enter access code"

- 2. Press \Box + \pm simultaneously.
 - The help text is closed.

8.3.8 Changing the parameters

Parameters can be changed via the numeric editor or text editor.

- Numeric editor: Change values in a parameter, e.g. specifications for limit values.
- Text editor: Enter text in a parameter, e.g. tag name.

A message is displayed if the value entered is outside the permitted value range.

Ent. access code
Invalid or out of range input
value
Min:0
Max:9999

A0014049-E

8.3.9 User roles and related access authorization

The two user roles "Operator" and "Maintenance" have different write access to the parameters if the customer defines a user-specific access code. This protects the device configuration via the local display from unauthorized access $\rightarrow \implies 115$.

Defining access authorization for user roles

An access code is not yet defined when the device is delivered from the factory. Access authorization (read and write access) to the device is not restricted and corresponds to the "Maintenance" user role.

- ▶ Define the access code.
 - The "Operator" user role is redefined in addition to the "Maintenance" user role. Access authorization differs for the two user roles.

Access authorization to parameters: "Maintenance" user role

Access code status	Read access	Write access
An access code has not yet been defined (factory setting).	V	V
After an access code has been defined.	V	✓ ¹⁾

1) The user only has write access after entering the access code.

Access authorization to parameters: "Operator" user role

Access code status	Read access	Write access
After an access code has been defined.	V	_ 1)

- Despite the defined access code, certain parameters can always be modified and thus are excluded from the write protection as they do not affect the measurement: write protection via access code →

 □ 115
- The user role with which the user is currently logged on is indicated by the **Access** status parameter. Navigation path: Operation \rightarrow Access status

8.3.10 Disabling write protection via access code

Parameter write protection via local operation can be disabled by entering the user-specific access code in the **Enter access code** parameter ($\rightarrow \implies 101$) via the respective access option.

- 1. After you press E, the input prompt for the access code appears.
- 2. Enter the access code.
 - → The 🗈-symbol in front of the parameters disappears; all previously write-protected parameters are now re-enabled.

8.3.11 Enabling and disabling the keypad lock

The keypad lock makes it possible to block access to the entire operating menu via local operation. As a result, it is no longer possible to navigate through the operating menu or change the values of individual parameters. Users can only read the measured values on the operational display.

The keypad lock is switched on and off via the context menu.

Switching on the keypad lock

- The keypad lock is switched on automatically:
 - If the device has not been operated via the display for > 1 minute.
 - Each time the device is restarted.

To activate the keylock manually:

- 1. The device is in the measured value display.
 - Press the \square and \square keys for 3 seconds.
 - ► A context menu appears.
- 2. In the context menu select the **Keylock on** option.
 - ► The keypad lock is switched on.
- If the user attempts to access the operating menu while the keypad lock is active, the **Keylock on** message appears.

Switching off the keypad lock

- ► The keypad lock is switched on. Press the □ and □ keys for 3 seconds.
 - The keypad lock is switched off.

8.4 Access to operating menu via web browser

8.4.1 Function range

With the integrated web server, the device can be operated and configured via a web browser service interface (CDI-RJ45) or WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, status information on the device is displayed and can be used to monitor device health. Furthermore the device data can be managed and the network parameters can be configured.

A device that has a WLAN interface (can be ordered as an option) is required for the WLAN connection: order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN". The device acts as an Access Point and enables communication by computer or a mobile handheld terminal.

8.4.2 Requirements

Computer hardware

Hardware	Interface		
	CDI-RJ45	WLAN	
Interface	The computer must have a RJ45 interface. ¹⁾	The operating unit must have a WLAN interface.	
Connection	Standard Ethernet cable Connection via Wireless LAN.		
Screen	Recommended size: ≥12" (depends on the screen resolution)		

 Recommended cable: CAT5e, CAT6 or CAT7, with shielded plug (e.g. YAMAICHI product; part no. Y-ConProfixPlug63/Prod. ID: 82-006660)

Computer software

Software	Interface		
	CDI-RJ45	WLAN	
Recommended operating systems	 Microsoft Windows 8 or higher. Mobile operating systems: iOS Android Microsoft Windows XP and Windows 7 is supported. 		
Web browsers supported	 Microsoft Internet Explorer 8 or higher Microsoft Edge Mozilla Firefox Google Chrome Safari 		

Computer settings

Settings	Interface		
	CDI-RJ45	WLAN	
User rights	Appropriate user rights (e.g. administrator rights) for TCP/IP and proxy server settings are necessary (e.g. for adjusting the IP address, subnet mask etc.).		
Proxy server settings of the web browser	The web browser setting <i>Use a proxy server for your LAN</i> must be disabled .		

Settings	Interface	
	CDI-RJ45	WLAN
JavaScript	JavaScript must be enabled. If JavaScript cannot be enabled: Enter http://192.168.1.212/servlet/	JavaScript must be enabled. The WLAN display requires JavaScript
	basic.html in the address bar of the web browser. A fully functional but simplified version of the operating menu structure starts in the web browser.	support.
	When installing a new firmware version: To enable correct data display, clear the temporary memory (cache) under Internet options in the web browser.	
Network connections	Only use the active network connections to the measuring device.	
	Switch off all other network connections such as WLAN for example.	Switch off all other network connections.

In the event of connection problems:

Measuring device: Via CDI-RJ45 service interface

Device	CDI-RJ45 service interface
Measuring device	The measuring device has an RJ45 interface.
Web server	Web server must be enabled; factory setting: ON For information on enabling the Web server → 🖺 65

Measuring device: via WLAN interface

WLAN interface	
The measuring device has a WLAN antenna: Transmitter with integrated WLAN antenna Transmitter with external WLAN antenna	
Web server and WLAN must be enabled; factory setting: ON ☐ For information on enabling the Web server → ☐ 65	

8.4.3 Connecting the device

Via service interface (CDI-RJ45)

Preparing the measuring device

- 1. Loosen the 4 fixing screws on the housing cover.
- 2. Open the housing cover.
- 3. The location of the connection socket depends on the measuring device and the communication protocol.

Connect the computer to the RJ45 plug via the standard Ethernet cable .

Configuring the Internet protocol of the computer

The following information refers to the default Ethernet settings of the device.

IP address of the device: 192.168.1.212 (factory setting)

1. Switch on the measuring device.

- 2. Connect the computer to the RJ45 plug via the standard Ethernet cable $\rightarrow \triangleq$ 68.
- 3. If a 2nd network card is not used, close all the applications on the notebook.
 - Applications requiring Internet or a network, such as e-mail, SAP applications, Internet or Windows Explorer.
- 4. Close any open Internet browsers.
- 5. Configure the properties of the Internet protocol (TCP/IP) as defined in the table:

IP address	192.168.1.XXX; for XXX all numerical sequences except: 0, 212 and 255 \rightarrow e.g. 192.168.1.213
Subnet mask	255.255.255.0
Default gateway	192.168.1.212 or leave cells empty

Via WLAN interface

Configuring the Internet protocol of the mobile terminal

NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

▶ Make sure that the WLAN connection is not disconnected while configuring the device.

NOTICE

Note the following to avoid a network conflict:

- ► Avoid accessing the measuring device simultaneously from the same mobile terminal via the service interface (CDI-RJ45) and the WLAN interface.
- ▶ Only activate one service interface (CDI-RJ45 or WLAN interface).
- ▶ If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

Preparing the mobile terminal

► Enable WLAN on the mobile terminal.

Establishing a WLAN connection from the mobile terminal to the measuring device

- 1. In the WLAN settings of the mobile terminal: Select the measuring device using the SSID (e.g. EH__500_A802000).
- 2. If necessary, select the WPA2 encryption method.
- 3. Enter the password:

Serial number of the measuring device ex-works (e.g. L100A802000).

- The LED on the display module flashes. It is now possible to operate the measuring device with the web browser, FieldCare or DeviceCare.
- The serial number can be found on the nameplate.
- To ensure the safe and swift assignment of the WLAN network to the measuring point, it is advisable to change the SSID name. It should be possible to clearly assign the new SSID name to the measuring point (e.g. tag name) because it is displayed as the WLAN network.

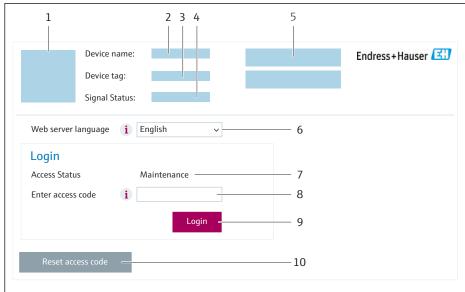

Terminating the WLAN connection

After configuring the device:
 Terminate the WLAN connection between the mobile terminal and measuring device.

Starting the web browser

1. Start the web browser on the computer.

- 2. Enter the IP address of the web server in the address line of the web browser: 192.168.1.212
 - ► The login page appears.

A00E267

- 1 Picture of device
- 2 Device name
- *3 Device tag (→ 🖺 82)*
- 4 Status signal
- 5 Current measured values
- 6 Operating language
- 7 User role
- 8 Access code
- 9 Login
- 10 Reset access code ($\rightarrow \equiv 111$)
- If a login page does not appear, or if the page is incomplete

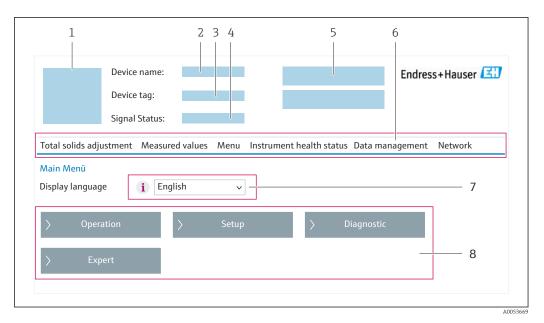

8.4.4 Logging on

- 1. Select the preferred operating language for the Web browser.
- 2. Enter the user-specific access code.
- 3. Press **OK** to confirm your entry.

Access code 0000 (factory setting); can be changed by customer

If no action is performed for 10 minutes, the Web browser automatically returns to the login page.

8.4.5 User interface

1 Picture of device

- 2 Device name
- 3 Device tag
- 4 Status signal
- 5 Current measured values
- 6 Function row
- 7 Local display language
- 8 Navigation area

Header

The following information appears in the header:

- Device name
- Device tag
- Device status with status signal → 🖺 141
- Current measured values

Function row

Functions	Meaning
Adjustment of solids content	Call up the wizards: adjust measured value based on reference value
Measured values	Displays the measured values of the device
Menu	 Access to the operating menu from the measuring device The structure of the operating menu is the same as for the local display Detailed information on the operating menu structure: Description of Device Parameters
Device status	Displays the diagnostic messages currently pending, listed in order of priority

Functions	Meaning
Data management	Data exchange between computer and measuring device: Device configuration: Load settings from the device (XML format, save configuration) Save settings to the device (XML format, restore configuration) Logbook - Export Event logbook (.csv file) Documents - Export documents: Export backup data record (.csv file, create documentation of the measuring point configuration) Verification report (PDF file, only available with the "Heartbeat Verification" application package) Firmware update - Flashing a firmware version
Network	Configuration and checking of all the parameters required for establishing the connection to the measuring device: Network settings (e.g. IP address, MAC address) Device information (e.g. serial number, firmware version)
Logout	End the operation and call up the login page

Navigation area

The menus, the associated submenus and parameters can be selected in the navigation area.

Working area

Depending on the selected function and the related submenus, various actions can be performed in this area:

- Configuring parameters
- Reading measured values
- Calling up help text
- Starting an upload/download

8.4.6 Disabling the Web server

The Web server of the measuring device can be switched on and off as required using the **Web server functionality** parameter.

Navigation

"Expert" menu \rightarrow Communication \rightarrow Web server

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Web server functionality	Switch the Web server on and off.	OffHTML OffOn	On

Function scope of the "Web server functionality" parameter

Option	Description
Off	The Web server is completely disabled.Port 80 is locked.
HTML Off	The HTML version of the Web server is not available.
On	 The complete Web server functionality is available. JavaScript is used. The password is transferred in an encrypted state. Any change to the password is also transferred in an encrypted state.

Enabling the Web server

If the Web server is disabled it can only be re-enabled with the **Web server functionality** parameter via the following operating options:

- Via local display
- Via Bedientool "FieldCare"
- Via "DeviceCare" operating tool

8.4.7 Logging out

- Before logging out, perform a data backup via the **Data management** function (upload configuration from device) if necessary.
- 1. Select the **Logout** entry in the function row.
 - ► The home page with the Login box appears.
- 2. Close the Web browser.

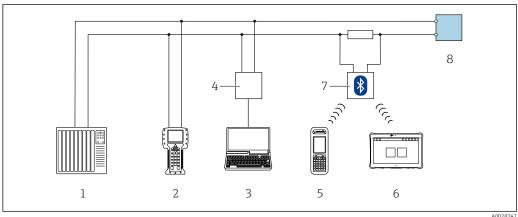

8.5 Access to the operating menu via the operating tool

The structure of the operating menu in the operating tools is the same as for operation via the local display.

8.5.1 Connecting the operating tool

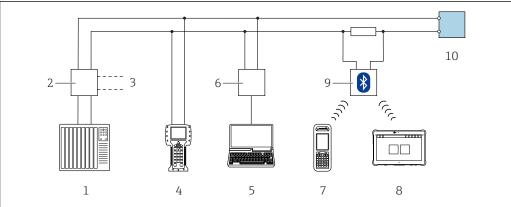

Via HART protocol

This communication interface is available in device versions with a HART output.

₽ 24 Options for remote operation via HART protocol (active)

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with web browser (e.g. Microsoft Edge) to access the integrated device web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- Commubox FXA195 (USB)
- 5 Field Xpert SFX350 or SFX370
- 6 Field Xpert SMT70
- VIATOR Bluetooth modem with connecting cable
- Transmitter

25 € Options for remote operation via HART protocol (passive)

- 1 Control system (e.g. PLC)
- *Transmitter power supply unit, e.g. RN221N (with communication resistor)*
- 3 Connection for Commubox FXA195 and Field Communicator 475
- Field Communicator 475
- Computer with web browser (e.g. Microsoft Edge) to access the integrated device web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- Commubox FXA195 (USB) 6
- Field Xpert SFX350 or SFX370
- 8 Field Xpert SMT70
- VIATOR Bluetooth modem with connecting cable
- 10 Transmitter

Service interface

Via service interface (CDI-RJ45)

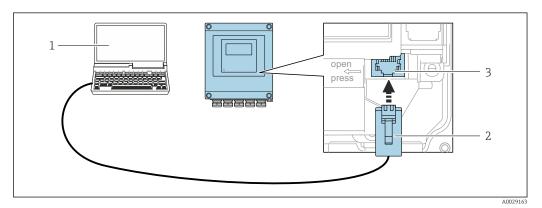

A point-to-point connection can be established to configure the device onsite. With the housing open, the connection is established directly via the service interface (CDI-RJ45) of the device.

i

An adapter for the RJ45 to the M12 plug is optionally available for the non-hazardous area:

Order code for "Accessories", option NB: "Adapter RJ45 M12 (service interface)"

The adapter connects the service interface (CDI-RJ45) to an M12 plug mounted in the cable entry. The connection to the service interface can be established via an M12 plug without opening the device.

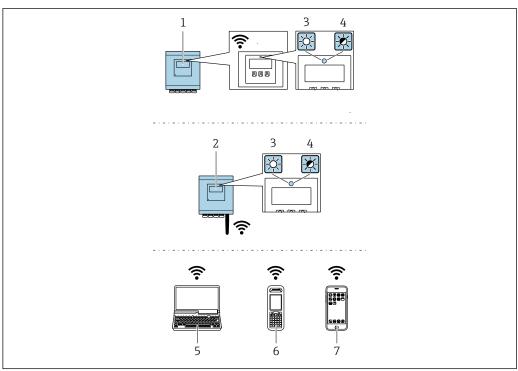

■ 26 Connection via service interface (CDI-RJ45)

- 1 Computer with web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated web server or with "FieldCare" operating tool, "DeviceCare" with COM DTM "CDI Communication TCP/IP"
- 2 Standard Ethernet connecting cable with RJ45 plug
- 3 Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server

Via WLAN interface

The optional WLAN interface is available on the following device version:

Order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN"

- Transmitter with integrated WLAN antenna
- 2 Transmitter with external WLAN antenna
- 3 LED lit constantly: WLAN reception is enabled on measuring device
- LED flashing: WLAN connection established between operating unit and measuring device
- Computer with WLAN interface and web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device web server or with operating tool (e.g. FieldCare, DeviceCare)
- Mobile handheld terminal with WLAN interface and web browser (e.g. Microsoft Internet Explorer, Microsoft Edge) for accessing the integrated device web server or operating tool (e.g. FieldCare, DeviceCare)
- Smart phone or tablet (e.g. Field Xpert SMT70)

Function	WLAN: IEEE 802.11 b/g (2.4 GHz)
Encryption	WPA2-PSK AES-128 (in accordance with IEEE 802.11i)
Configurable WLAN channels	1 to 11
Degree of protection	IP67
Available antennas	 Internal antenna External antenna (optional) In the event of poor transmission/reception conditions at the place of installation. Only 1 antenna is active at any one time!
Range	 Internal antenna: typically 10 m (32 ft) External antenna: typically 50 m (164 ft)
Materials (external antenna)	 Antenna: ASA plastic (acrylonitrile styrene acrylate) and nickel-plated brass Adapter: Stainless steel and nickel-plated brass Cable: Polyethylene Plug: Nickel-plated brass Angle bracket: Stainless steel

Configuring the Internet protocol of the mobile terminal

NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

Make sure that the WLAN connection is not disconnected while configuring the device.

NOTICE

Note the following to avoid a network conflict:

- ► Avoid accessing the measuring device simultaneously from the same mobile terminal via the service interface (CDI-RJ45) and the WLAN interface.
- ▶ Only activate one service interface (CDI-RJ45 or WLAN interface).
- ▶ If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

Preparing the mobile terminal

► Enable WLAN on the mobile terminal.

Establishing a WLAN connection from the mobile terminal to the measuring device

- 1. In the WLAN settings of the mobile terminal: Select the measuring device using the SSID (e.g. EH__500_A802000).
- 2. If necessary, select the WPA2 encryption method.
- 3. Enter the password:

Serial number of the measuring device ex-works (e.g. L100A802000).

- The LED on the display module flashes. It is now possible to operate the measuring device with the web browser, FieldCare or DeviceCare.
- 🚰 The serial number can be found on the nameplate.
- To ensure the safe and swift assignment of the WLAN network to the measuring point, it is advisable to change the SSID name. It should be possible to clearly assign the new SSID name to the measuring point (e.g. tag name) because it is displayed as the WLAN network.

Terminating the WLAN connection

► After configuring the device:

Terminate the WLAN connection between the mobile terminal and measuring device.

8.5.2 Field Xpert SFX350, SFX370

Function scope

Field Xpert SFX350 and Field Xpert SFX370 are mobile computers for commissioning and maintenance. They enable efficient device configuration and diagnostics for HART and FOUNDATION Fieldbus devices in the **non-hazardous area** (SFX350, SFX370) and **hazardous area** (SFX370).

Source for device description files

See information $\rightarrow \blacksquare 74$

8.5.3 FieldCare

Function range

FDT-based (Field Device Technology) plant asset management tool from Endress+Hauser. It can configure all smart field units in a system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

Access is via:

- HART protocol → 🖺 66
- CDI-RJ45 service interface → 🗎 68
- WLAN interface → 🗎 68

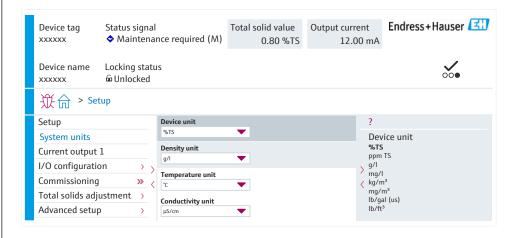

Typical functions:

- Transmitter parameter configuration
- Loading and saving of device data (upload/download)
- Documentation of the measuring point
- Visualization of the measured value memory (line recorder) and event logbook
 - Operating Instructions BA00027SOperating Instructions BA00059S
- Source for device description files $\rightarrow \stackrel{\triangle}{=} 74$

Establishing a connection

- 1. Start FieldCare and launch the project.
- 2. In the network: Add a device.
 - ► The **Add device** window opens.
- 3. Select the **CDI Communication TCP/IP** option from the list and press **OK** to confirm.
- Right-click CDI Communication TCP/IP and select the Add device option in the context menu that opens.
- 5. Select the desired device from the list and press **OK** to confirm.
 - ► The **CDI Communication TCP/IP (Configuration)** window opens.
- 6. Enter the device address in the **IP address** field: 192.168.1.212 and press **Enter** to confirm.
- 7. Establish the online connection to the device.
- Operating Instructions BA00027S
 - Operating Instructions BA00059S

User interface

A0053667

8.5.4 DeviceCare

Function range

Tool for connecting and configuring Endress+Hauser field devices.

The fastest way to configure Endress+Hauser field devices is with the dedicated "DeviceCare" tool. Together with the device type managers (DTMs) it presents a convenient, comprehensive solution.

Innovation brochure IN01047S

Source for device description files $\rightarrow \triangleq 74$

8.5.5 AMS Device Manager

Function range

Program from Emerson Process Management for operating and configuring measuring devices via the HART protocol.

Source for device description files $\rightarrow \stackrel{\triangle}{=} 74$

8.5.6 Field Communicator 475

Function scope

Industrial handheld terminal from Emerson Process Management for remote configuration and measured value display via HART protocol.

Source for device description files

See information \rightarrow \blacksquare 74

8.5.7 SIMATIC PDM

Function range

SIMATIC PDM is a standardized, manufacturer-independent program from Siemens for the operation, configuration, maintenance and diagnosis of intelligent field devices via HART protocol.

9 System integration

9.1 Overview of device description files

9.1.1 Current version data for the device

Firmware version	01.00.zz	 On the title page of the manual On the transmitter nameplate Firmware version Diagnostics → Device information → Firmware version
Release date of firmware version	03.2024	
Manufacturer ID	0x11	Manufacturer ID Diagnostics → Device information → Manufacturer ID
Device type code	11B3	Device type Diagnostics → Device information → Device type
HART protocol revision	7	HART revision Expert → Communication → HART output → Information → HART revision
Device revision	1	 On the transmitter nameplate Device revision Diagnostics → Device information → Device revision

For an overview of the various firmware versions for the device

9.1.2 Operating tools

Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

Supported operating tools	Operating unit	Interface	Additional information
Web browser	Notebook, PC or tablet with web browser	CDI-RJ45 service interfaceWLAN interface	Special Documentation for the device → 🖺 193
DeviceCare SFE100	Notebook, PC or tablet with Microsoft Windows system	 CDI-RJ45 service interface WLAN interface Fieldbus protocol 	Service-specific accessories → 🖺 165 Sources for obtaining device descriptions www.endress.com → Download-Area
FieldCare SFE500	Notebook, PC or tablet with Microsoft Windows system	CDI-RJ45 service interfaceWLAN interfaceFieldbus protocol	Service-specific accessories → 🖺 165 Sources for obtaining device descriptions www.endress.com → Download-Area

- Other operating tools based on FDT technology with a device driver such as DTM/ iDTM or DD/EDD can be used for device operation. These operating tools are available from the individual manufacturers. Integration into the following operating tools, among others, is supported:
 - FactoryTalk AssetCentre (FTAC) from Rockwell Automation → www.rockwellautomation.com
 - Process Device Manager (PDM) from Siemens → www.siemens.com
 - Asset Management Solutions (AMS) from Emerson → www.emersonprocess.com
 - FieldCommunicator 375/475 from Emerson → www.emersonprocess.com
 - Field Device Manager (FDM) from Honeywell → www.process.honeywell.com
 - FieldMate from Yokogawa → www.yokogawa.com
 - PACTWare → www.pactware.com

The related device description files are available: www.endress.com → Download Area

9.2 Measured variables via HART protocol

9.2.1 Dynamic variables

Measured variables can be assigned to the dynamic variables (PV, SV, TV and QV). This assignment of variables can take place via local operation or via an operating tool.

The following parameters are available for the assignment of variables:

- Assign PV parameter (primary dynamic variable)
- Assign SV parameter (second dynamic variable)
- Assign TV parameter (third dynamic variable)
- **Assign QV** parameter (fourth dynamic variable)

Navigation

"Expert" menu → Communication → HART output → Output

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection	Factory setting
Assign PV	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Assign measured variable to primary dynamic variable (PV).	 Off Total solids Temperature Electronics temperature Conductivity Corrected conductivity Load rate 	Total solids
Assign SV	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Assign measured variable to the second dynamic variable (SV).	 Conductivity Corrected conductivity Temperature Electronics temperature Total solids Load rate * Volume flow * Totalizer 1 * Current input 1 * Current input 2 * Current input 3 * HART input 	Temperature

Parameter	Prerequisite	Description	Selection	Factory setting
Assign TV	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Assign measured variable to the third dynamic variable (TV).	 Conductivity Corrected conductivity Temperature Electronics temperature Total solids Load rate* Volume flow* Totalizer 1* Current input 1* Current input 2* Current input 3* HART input 	Electronics temperature
Assign QV	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Assign measured variable to quaternary (fourth) dynamic variable (QV).	 Conductivity Corrected conductivity Temperature Electronics temperature Total solids Load rate* Volume flow* Totalizer 1* Current input 1* Current input 2* Current input 3* HART input 	Conductivity

Visibility depends on order options or device settings

9.2.2 Device variables

Measured variables are permanently assigned to the device variables. This assignment cannot be changed.

The following measured variables are assigned to the device variables:

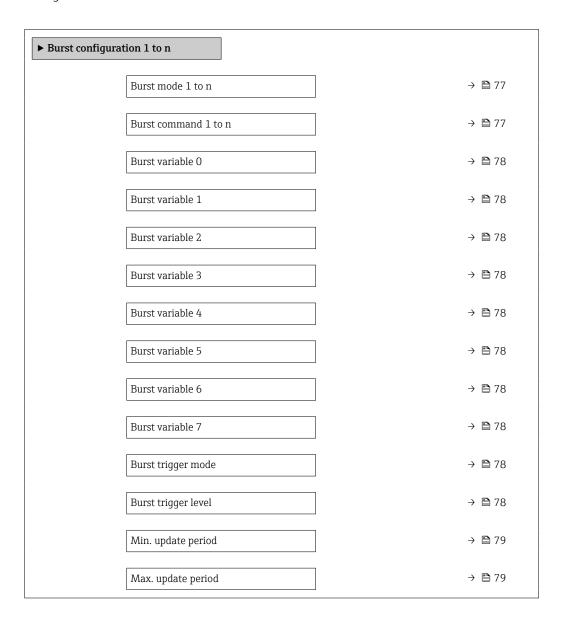

- \bullet 0 = conductivity
- 1 = corrected conductivity
- 2 = temperature
- 3 = electronic temperature
- 4 = total solids
- 5 = load rate
- 6 = volume flow
- 7 = totalizer
- 8 = current input 1
- 9 = current input 2
- 10 = current input 3
- 11 = catch device variable
- 12 = percent range
- 13 = current output
- Only a maximum of 8 device variables can be transmitted.

9.3 Other settings

Burst mode functionality in accordance with HART 7 Specification:

Navigation

"Expert" menu \to Communication \to HART output \to Burst configuration \to Burst configuration 1 to n

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Burst mode 1 to n	-	Activate the HART burst mode for burst message X.	Off On	Off
Burst command 1 to n	-	Select the HART command that is sent to the HART master.	 Command 1 Command 2 Command 3 Command 9 Command 33 Command 48 	Command 2

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Burst variable 0	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	For HART command 9 and 33: select the HART device variable or the process variable.	■ Conductivity ■ Corrected conductivity ■ Temperature ■ Electronics temperature ■ Total solids ■ Load rate ■ Totalizer 1 ■ Percent of range ■ Measured current ■ Current input 1 ■ Current input 2 ■ Current input 3 ■ Primary variable (PV) ■ Secondary variable (SV) ■ Tertiary variable (TV) ■ Quaternary variable (QV) ■ HART input ■ Not used	Total solids
Burst variable 1	-	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 2	-	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 3	-	For HART command 9 and 33: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 4	-	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 5	-	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 6	-	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst variable 7	-	For HART command 9: select the HART device variable or the process variable.	See the Burst variable 0 parameter.	Not used
Burst trigger mode	-	Select the event that triggers burst message X.	■ Continuous ■ Window* ■ Rising* ■ Falling* ■ On change	Continuous
Burst trigger level	_	Enter the burst trigger value. Together with the option selected in the Burst trigger mode parameter the burst trigger value determines the time of burst message X.	Signed floating-point number	_

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Min. update period	-	Enter the minimum time span between two burst commands of burst message X.	Positive integer	1000 ms
Max. update period	-	Enter the maximum time span between two burst commands of burst message X.	Positive integer	2 000 ms

^{*} Visibility depends on order options or device settings

10 Commissioning

10.1 Post-mounting and post-connection check

Before commissioning the device:

- ► Make sure that the post-installation and post-connection checks have been performed successfully.
- Checklist for "Post-mounting" check → 🗎 30
- Checklist for "Post-connection check" → 🖺 45

10.2 Switching on the measuring device

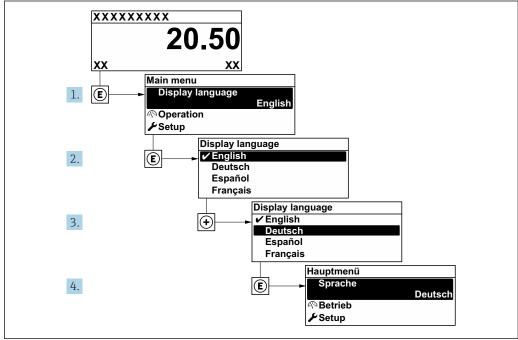

- Switch on the device upon successful completion of the post-mounting and postconnection check.
 - After a successful startup, the local display switches automatically from the startup display to the operational display.
- If nothing appears on the local display or if a diagnostic message is displayed, refer to the section on "Diagnostics and troubleshooting".

10.3 Connecting via FieldCare

- For connecting via FieldCare $\rightarrow = 71$
- For user interface of FieldCare → 🗎 71

10.4 Setting the operating language

Factory setting: English or ordered local language

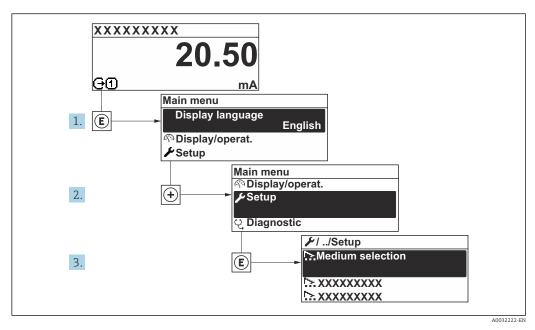

Using the example of the local display

80 Endress+Hauser

A00537

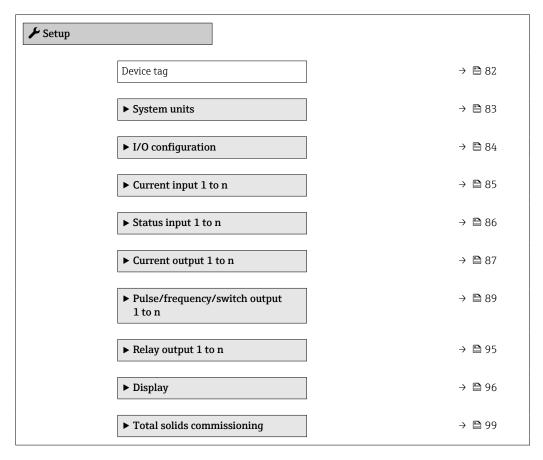

10.5 Configuring the measuring device

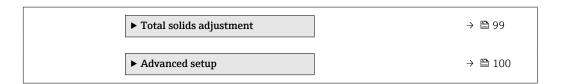

The **Setup** menu with its guided wizards contains all the parameters needed for standard operation.

 $lap{1}{2}$ 28 Navigation to "Setup" menu using the example of the local display

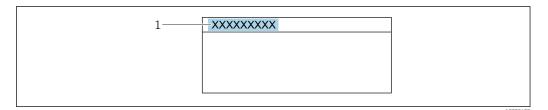

The number of submenus and parameters can vary depending on the device version. Certain submenus and parameters in these submenus are not described in the Operating Instructions. Instead a description is provided in the Special Documentation for the device ("Supplementary documentation").

10.5.1 Defining the tag name

To enable fast identification of the measuring point within the system, you can enter a unique designation using the **Device tag** parameter and thus change the factory setting.

 \blacksquare 29 Header of the operational display with tag name

- 1 Tag name

Navigation

"Setup" menu \rightarrow Device tag

Parameter overview with brief description

Parameter	Description	User entry	Factory setting
Device tag	Enter the name for the measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Teqwave M

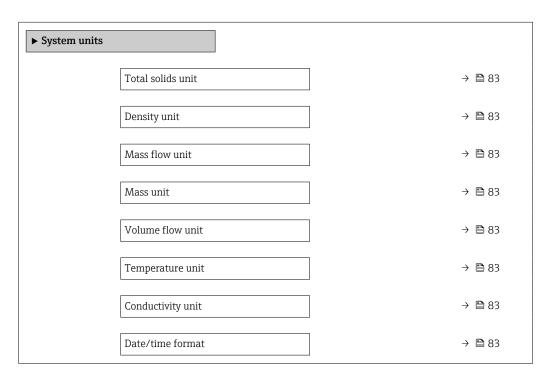

10.5.2 Setting the system units

In the **System units** submenu the units of all the measured values can be set.

The number of submenus and parameters can vary depending on the device version. Certain submenus and parameters in these submenus are not described in the Operating Instructions. Instead a description is provided in the Special Documentation for the device ("Supplementary documentation").

Navigation

"Expert" menu \rightarrow Sensor \rightarrow System units

Parameter overview with brief description

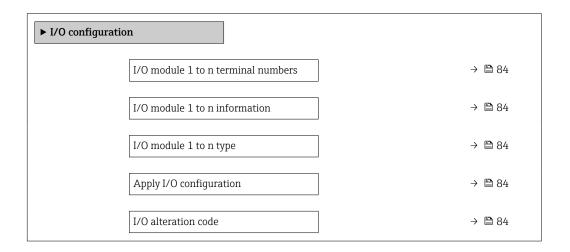

Parameter	Prerequisite	Description	Selection	Factory setting
Total solids unit	-	Select total solids unit.	Unit choose list	Depends on country
Density unit	-	Select density unit.	Unit choose list	Depends on country
Mass flow unit	The volume flow of the medium is read in via the Current input 1 to n.	Select mass flow unit.	Unit choose list	Depends on country
Mass unit	The volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Select mass unit.	Unit choose list	Depends on country
Volume flow unit	The volume flow of the medium is read in via the Current input 1 to n.	Select volume flow unit.	Unit choose list	l/h
Temperature unit	-	Select temperature unit.	Unit choose list	Depends on country
Conductivity unit	-	Select conductivity unit.	Unit choose list	μS/cm
Date/time format	-	Select date and time format.	 dd.mm.yy hh:mm dd.mm.yy hh:mm am/pm mm/dd/yy hh:mm mm/dd/yy hh:mm am/pm 	dd.mm.yy hh:mm

10.5.3 Displaying the I/O configuration

The **I/O configuration** submenu guides the user systematically through all the parameters in which the configuration of the I/O modules is displayed.

Navigation

"Setup" menu \rightarrow I/O configuration

Parameter overview with brief description

Parameter	Description	User interface / Selection / User entry	Factory setting
I/O module 1 to n terminal numbers	Shows the terminal numbers used by the I/O module.	 Not used 26-27 (I/O 1) 24-25 (I/O 2) 22-23 (I/O 3) 20-21 (I/O 4) 	-
I/O module 1 to n information	Shows information of the plugged I/O module.	Not pluggedInvalidNot configurableConfigurableHART	-
I/O module 1 to n type	Shows the I/O module type.	 Off Current output * Current input * Status input * Pulse/frequency/switch output * Relay output * 	Off
Apply I/O configuration	Apply parameterization of the freely configurable I/O module.	■ No ■ Yes	No
I/O alteration code	Enter the code in order to change the I/O configuration.	Positive integer	0

Visibility depends on order options or device settings

10.5.4 Configuring the current input

The **"Current input" wizard** guides the user systematically through all the parameters that have to be set for configuring the current input.

Navigation

"Setup" menu \rightarrow Current input

► Current input 1 to n	
Terminal number	→ 🖺 85
Signal mode	→ 🖺 85
0/4 mA value	→ 🖺 85
20 mA value	→ 🗎 85
Current span	→ 🖺 85
Failure mode	→ 🖺 85
Failure value	→ 🖺 85

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Terminal number	-	Shows the terminal numbers used by the current input module.	 Not used 24-25 (I/O 2) 22-23 (I/O 3) 20-21 (I/O 4) 	-
Signal mode	-	Select the signal mode for the current input.	PassiveActive*	Passive
0/4 mA value	-	Enter 4 mA value.	Signed floating-point number	0 % TS
20 mA value	-	Enter 20 mA value.	Signed floating-point number	12 %TS
Current span	-	Select current range for process value output and upper/lower level for alarm signal.	 420 mA (420.5 mA) 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA) 020 mA (020.5 mA) 	Country-specific: 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA)
Failure mode	-	Define input behavior in alarm condition.	AlarmLast valid valueDefined value	Alarm
Failure value	In the Failure mode parameter, the Defined value option is selected.	Enter value to be used by the device if input value from external device is missing.	Signed floating-point number	0

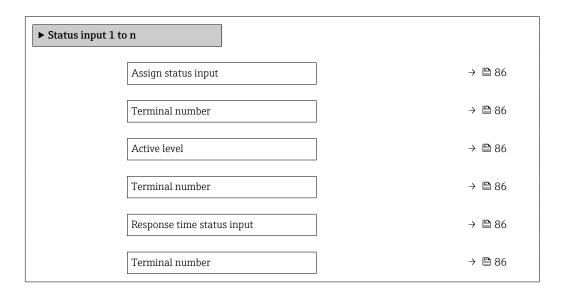

^{*} Visibility depends on order options or device settings

10.5.5 Configuring the status input

The **Status input** submenu guides the user systematically through all the parameters that have to be set for configuring the status input.

Navigation

"Setup" menu \rightarrow Status input 1 to n

Parameter overview with brief description

Parameter	Description	Selection / User interface / User entry	Factory setting
Assign status input	Select function for the status input.	 Off Reset totalizer 1 Flow override	Off
Terminal number	Shows the terminal numbers used by the status input module.	 Not used 24-25 (I/O 2) 22-23 (I/O 3) 20-21 (I/O 4) 	-
Active level	Define input signal level at which the assigned function is triggered.	■ High ■ Low	High
Response time status input	Define the minimum amount of time the input signal level must be present before the selected function is triggered.	5 to 200 ms	50 ms

10.5.6 Configuring the current output

The $\pmb{\text{Current output}}$ wizard guides you systematically through all the parameters that have to be set for configuring the current output.

Navigation

"Setup" menu \rightarrow Current output

► Current output	1 to n	
	Terminal number	→ 🖺 87
	Signal mode	→ 🖺 87
	Process variable current output	→ 🖺 87
	Current range output	→ 🖺 88
	Lower range value output	→ 🖺 88
	Upper range value output	→ 🖺 88
	Fixed current	→ 🖺 88
	Damping current output	→ 🖺 88
	Failure behavior current output	→ 🖺 88
	Failure current	→ 🖺 88

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Terminal number	-	Shows the terminal numbers used by the current output module.	 Not used 26-27 (I/O 1) 24-25 (I/O 2) 22-23 (I/O 3) 20-21 (I/O 4) 	-
Signal mode	-	Select the signal mode for the current output.	Active *Passive *	Active
Process variable current output	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Select the process variable for the current output.	Off Total solids Temperature Electronics temperature Conductivity Corrected conductivity Load rate*	Total solids

Parameter	Prerequisite	Description	User interface / Selection / User entry	Factory setting
Current range output	-	Select current range for process value output and upper/lower level for alarm signal.	 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA) 420 mA (420.5 mA) 020 mA (020.5 mA) Fixed value 	Depends on country: 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA)
Lower range value output	In Current span parameter (→ ≧ 88), one of the following options is selected: ■ 420 mA NE (3.820.5 mA) ■ 420 mA US (3.920.8 mA) ■ 420 mA (420.5 mA) ■ 020 mA (020.5 mA)	Enter lower range value for the measured value range.	Floating point number with sign	0 %TS
Upper range value output	In Current span parameter (→ ≧ 88), one of the following options is selected: ■ 420 mA NE (3.820.5 mA) ■ 420 mA US (3.920.8 mA) ■ 420 mA (420.5 mA) ■ 020 mA (020.5 mA)	Enter upper range value for the measured value range.	Floating point number with sign	12 %TS
Fixed current	The Fixed current option is selected in the Current span parameter (→ 🖺 88).	Defines the fixed output current.	0 to 22.5 mA	22.5 mA
Damping current output	A process variable is selected in the Assign current output parameter (→ 🖺 87) and one of the following options is selected in the Current span parameter (→ 🖺 88): 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA) 420 mA (420.5 mA) 020 mA (020.5 mA)	Enter time constant for output damping (PT1 element). Damping reduces the effect of fluctuations in the measured value on the output signal.	0.0 to 999.9 s	1.0 s
Failure behavior current output	A process variable is selected in the Assign current output parameter (→ 🖺 87) and one of the following options is selected in the Current span parameter (→ 🖺 88): 420 mA NE (3.820.5 mA) 420 mA US (3.920.8 mA) 420 mA (420.5 mA) 020 mA (020.5 mA)	Select output behavior in the event of a device alarm.	 Min. Max. Last valid value Actual value Fixed value 	Max.
Failure current	The Defined value option is selected in the Failure mode parameter.	Enter current output value in alarm condition.	0 to 22.5 mA	22.5 mA

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
WLAN	-	Switch WLAN on and off.	DisableEnable	Enable
WLAN mode	-	Select WLAN mode.	WLAN access pointWLAN Client	WLAN access point
SSID name	The client is activated.	Enter the user-defined SSID name (max. 32 characters).	-	-

106

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Network security	-	Select the security type of the WLAN network.	 Unsecured WPA2-PSK EAP-PEAP with MSCHAPv2* EAP-PEAP MSCHAPv2 no server authentic.* EAP-TLS* 	WPA2-PSK
Security identification	-	Select security settings and download these settings via menu Data management > Security > WLAN.	Trusted issuer certificateDevice certificateDevice private key	-
User name	_	Enter user name.	_	_
WLAN password	-	Enter WLAN password.	_	-
WLAN IP address	-	Enter IP address of the WLAN interface of the device.	4 octet: 0 to 255 (in the particular octet)	192.168.1.212
WLAN MAC address	-	Enter MAC address of the WLAN interface of the device.	Unique 12-digit character string comprising letters and numbers	Each measuring device is given an individual address.
WLAN passphrase	The WPA2-PSK option is selected in the Security type parameter.	Enter the network key (8 to 32 characters). The network key supplied with the device should be changed during commissioning for security reasons.	8 to 32-digit character string comprising numbers, letters and special characters (without spaces)	Serial number of the measuring device (e.g. L100A802000)
Assign SSID name	-	Select which name will be used for SSID: device tag or user-defined name.	Device tagUser-defined	User-defined
SSID name	 The User-defined option is selected in the Assign SSID name parameter. The WLAN access point option is selected in the WLAN mode parameter. 	Enter the user-defined SSID name (max. 32 characters). The user-defined SSID name may only be assigned once. If the SSID name is assigned more than once, the devices can interfere with one another.	Max. 32-digit character string comprising numbers, letters and special characters	
Connection state	-	Displays the connection status.	ConnectedNot connected	Not connected
Received signal strength	-	Shows the received signal strength.	LowMediumHigh	High

^{*} Visibility depends on order options or device settings

10.6.5 Heartbeat Technology application package

Navigation

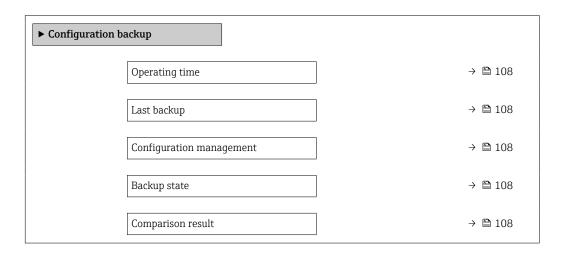

"Setup" menu \rightarrow Advanced setup \rightarrow Heartbeat setup

10.6.6 Configuration management

After commissioning, you can save the current device configurationor restore the previous device configuration. The device configuration is managed via the **Configuration management** parameter.

Navigation

"Setup" menu → Advanced setup → Configuration backup

Parameter overview with brief description

Parameter	Description	User interface / Selection	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	-
Last backup	Shows when the last data backup was saved to HistoROM backup.	Days (d), hours (h), minutes (m) and seconds (s)	-
Configuration management	Select action for managing the device data in the HistoROM backup.	 Cancel Execute backup Restore* Compare* Clear backup data 	Cancel
Backup state	Shows the current status of data saving or restoring.	 None Backup in progress Restoring in progress Delete in progress Compare in progress Restoring failed Backup failed 	None
Comparison result	Comparison of current device data with HistoROM backup.	 Settings identical Settings not identical No backup available Backup settings corrupt Check not done Dataset incompatible 	Check not done

Visibility depends on order options or device settings

Function scope of the "Configuration management" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Execute backup	A backup copy of the current device configuration is saved from the HistoROM backup to the memory of the device. The backup copy includes the transmitter data of the device.
Restore	The last backup copy of the device configuration is restored from the device memory to the device's HistoROM backup. The backup copy includes the transmitter data of the device.
Compare	The device configuration saved in the device memory is compared with the current device configuration of the HistoROM backup.
Clear backup data	The backup copy of the device configuration is deleted from the memory of the device.

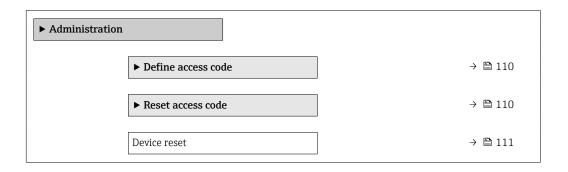

- HistoROM backup
 A HistoROM is a "non-volatile" device memory in the form of an EEPROM.
- While this action is in progress, the configuration cannot be edited via the local display and a message on the processing status appears on the display.

10.6.7 Using parameters for device administration

The **Administration** submenu systematically guides the user through all the parameters that can be used for device administration purposes.

Navigation

"Setup" menu \rightarrow Advanced setup \rightarrow Administration

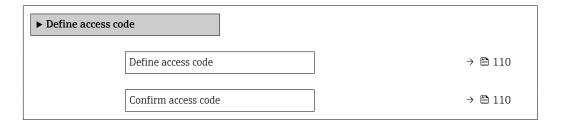

Using the parameter to define the access code

Complete this wizard to specify an access code for the Maintenance role.

Navigation

"Setup" menu \rightarrow Advanced setup \rightarrow Administration \rightarrow Define access code

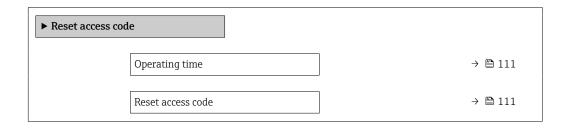

Parameter overview with brief description

Parameter	Description	User entry
Define access code	1 1	Max. 16-digit character string comprising numbers, letters and special characters
Confirm access code		Max. 16-digit character string comprising numbers, letters and special characters

Using the parameter to reset the access code

Navigation

"Setup" menu → Advanced setup → Administration → Reset access code

Parameter overview with brief description

Parameter	Description	User interface / User entry	Factory setting
Operating time	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)	-
Reset access code	Enter the code provided by Endress+Hauser Technical Support to reset the Maintenance code. For a reset code, contact your Endress+Hauser service organization.	Character string comprising numbers, letters and special characters	0x00
	The reset code can only be entered via: Web browser DeviceCare, FieldCare (via CDI-RJ45 service interface) Fieldbus		

Using the parameter to reset the device

	Switch output simulation 1 to n	→ 🗎 113
	Switch state 1 to n	→ 🖺 113
	Relay output 1 to n simulation	→ 🗎 113
	Switch state 1 to n	→ 🗎 113
	Device alarm simulation	→ 🗎 113
	Diagnostic event category	→ 🗎 114
	Diagnostic event simulation	→ 🖺 114

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Assign simulation process variable	The Load rate option is only available if the volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Select a process variable for the simulation process that is activated.	Off Load rate Total solids Temperature Electronics temperature Conductivity Corrected conductivity	Off
Process variable value	-	Enter the simulation value for the selected process variable.	Signed floating-point number	0
Current input 1 to n simulation	-	Switch simulation of the current input on and off.	Off On	Off
Value current input 1 to n	In the Current input 1 to n simulation parameter, the On option is selected.	Enter the current value for simulation.	0 to 22.5 mA	0 mA
Status input 1 to n simulation	-	Switch simulation of the status input on and off.	Off On	Off
Input signal level 1 to n	In the Status input simulation parameter, the On option is selected.	Select the signal level for the simulation of the status input.	■ High ■ Low	High
Current output 1 to n simulation	-	Switch the simulation of the current output on and off.	Off On	Off
Current output value	In the Current output 1 to n simulation parameter, the On option is selected.	Enter the current value for simulation.	3.59 to 22.5 mA	3.59 mA
Frequency output 1 to n simulation	In the Operating mode parameter, the Frequency option is selected.	Switch the simulation of the frequency output on and off.	• Off • On	Off
Frequency output 1 to n value	In the Frequency simulation 1 to n parameter, the On option is selected.	Enter the frequency value for the simulation.	0.0 to 12 500.0 Hz	0.0 Hz
Pulse output simulation 1 to n	In the Operating mode parameter, the Pulse option is selected.	Set and switch off the pulse output simulation. For Fixed value option: Pulse width parameter (> 90) defines the pulse width of the pulses output.	OffFixed valueDown-counting value	Off
Pulse value 1 to n	In the Pulse output simulation 1 to n parameter, the Down-counting value option is selected.	Enter the number of pulses for simulation.	0 to 65 535	0
Switch output simulation 1 to n	In the Operating mode parameter, the Switch option is selected.	Switch the simulation of the switch output on and off.	Off On	Off
Switch state 1 to n	-	Select the status of the status output for the simulation.	■ Open ■ Closed	Open
Relay output 1 to n simulation	-	Switch simulation of the relay output on and off.	Off On	Off
Switch state 1 to n	The On option is selected in the Switch output simulation 1 to n parameter parameter.	Select status of the relay output for the simulation.	■ Open ■ Closed	Open
Device alarm simulation	-	Switch the device alarm on and off.	Off On	Off

Parameter	Prerequisite	Description	Selection / User entry	Factory setting
Diagnostic event category	-	Select a diagnostic event category.	SensorElectronicsConfigurationProcess	Process
Diagnostic event simulation	-	Select a diagnostic event to simulate this event.	 Off Diagnostic event picklist (depends on the category selected) 	Off

^{*} Visibility depends on order options or device settings

10.8 Protecting settings from unauthorized access

The following write protection options exist in order to protect the configuration of the measuring device from unintentional modification:

- Protect access to parameters via access code → 115

10.8.1 Write protection via access code

The effects of the user-specific access code are as follows:

- Via local operation, the parameters for the measuring device configuration are writeprotected and their values can no longer be changed.
- Device access is protected via the Web browser, as are the parameters for the measuring device configuration.
- Device access is protected via FieldCare or DeviceCare (via CDI-RJ45 service interface), as are the parameters for the measuring device configuration.

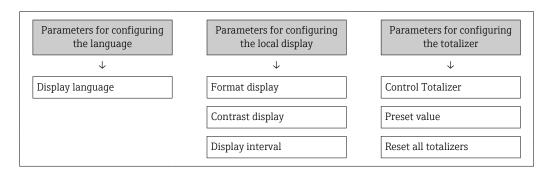

Defining the access code via the local display

- 1. Navigate to the **Define access code** parameter ($\Rightarrow \triangleq 110$).
- 2. Maximum of 16-digit character string comprising numbers, letters and special characters as the access code.
- 3. Enter the access code again in the **Confirm access code** parameter ($\Rightarrow \implies 110$) to confirm.
 - ► The 🗈 symbol appears in front of all write-protected parameters.
- Disabling parameter write protection via access code \rightarrow $\stackrel{\triangle}{=}$ 59.

 - The user role with which the user is currently logged in is displayed in **Access status** parameter.
 - Navigation path: Operation → Access status
- The device automatically locks the write-protected parameters again if a key is not pressed for 10 minutes in the navigation and editing view.
- The device locks the write-protected parameters automatically after 60 s if the user skips back to the operational display mode from the navigation and editing view.

Parameters which can always be modified via the local display

Certain parameters that do not affect the measurement are excepted from parameter write protection via the local display. Despite the user-specific access code, they can always be modified, even if the other parameters are locked.

Defining the access code via the web browser

1. Navigate to the **Define access code** parameter ($\rightarrow \triangleq 110$).

- 2. Define a 16-digit (max.) numeric code as the access code.
- 3. Enter the access code again in the **Confirm access code** parameter ($\rightarrow \triangleq 110$) to confirm.
 - ► The web browser switches to the login page.
- \blacksquare Disabling parameter write protection via access code \rightarrow

 - The Access status parameter shows which user role the user is currently logged in with.
 - Navigation path: Operation → Access status
 - User roles and their access rights $\rightarrow \triangleq 58$

If no action is performed for 10 minutes, the web browser automatically returns to the login page.

Resetting the access code

If you misplace the user-specific access code, it is possible to reset the code to the factory setting. A reset code must be entered for this purpose. The user-specific access code can then be defined again afterwards.

Via Web browser, FieldCare, DeviceCare (via CDI-RJ45 service interface), fieldbus

- You can only obtain a reset code from your local Endress+Hauser service organization. The code must be calculated explicitly for every device.
- 1. Note down the serial number of the device.
- 2. Read off the **Operating time** parameter.
- 3. Contact the local Endress+Hauser service organization and tell them the serial number and the operating time.
 - ► Get the calculated reset code.
- 4. Enter the reset code in the **Reset access code** parameter ($\rightarrow \triangleq 111$).
 - The access code has been reset to the factory setting **0000**. It can be redefined $\rightarrow \boxminus 115$.
- For IT security reasons, the calculated reset code is only valid for 96 hours from the specified operating time and for the specific serial number. If you cannot return to the device within 96 hours, you should either increase the operating time you read out by a few days or switch off the device.

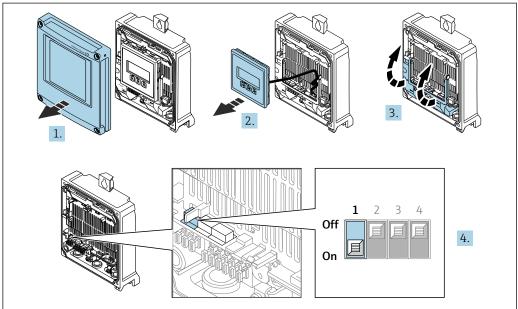

10.8.2 Write protection via write protection switch

Unlike parameter write protection via a user-specific access code, this allows the user to lock write access to the entire operating menu - apart from the **"Contrast display"** parameter.

The parameter values are now read only and cannot be edited any more (exception "Contrast display" parameter):

- Via local display
- Via HART protocol

Enable/disable write protection

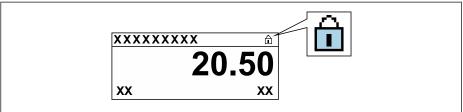

A0020672

- 1. Open the housing cover.
- 2. Remove the display module.
- 3. Fold open the terminal cover.
- 4. Enable or disable write protection:

Move the write protection switch on the main electronics module into position: ON hardware write protection enabled/OFF (factory setting) hardware write protection disabled.

In the Locking status parameter, the Hardware locked option is displayed →
☐ 118. In addition, the ☐ symbol appears on the local display in front of the parameters in the header of the operational display and in the navigation view when hardware write protection is enabled.

Δ002942

- 5. Inserting the display module.
- 6. Close the housing cover.
- 7. NOTICE

Excessive tightening torque applied to the fixing screws!

Risk of damaging the plastic transmitter.

► Tighten the fixing screws as per the tightening torque: 2.5 Nm (1.8 lbf ft)

Tighten the securing screws.

Operation 11

11.1 Reading off the device locking status

Device active write protection: Locking status parameter

Operation → Locking status

Function scope of the "Locking status" parameter

Options	Description
None	The access authorization displayed in the Access status parameter applies → 🖺 58. Only appears on local display.
Hardware locked	The DIP switch for hardware locking is activated on the PCB board. This locks write access to the parameters (e.g. via local display or operating tool) $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
Temporarily locked	Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset, etc.). Once the internal processing has been completed, the parameters can be changed once again.

Adjusting the operating language 11.2

Petailed information:

- To configure the operating language
- For information on the operating languages supported by the measuring device → 🖺 182

11.3 Configuring the display

Detailed information:

- On the basic settings for the local display \rightarrow $\stackrel{\triangle}{=}$ 96
- On the advanced settings for the local display $\rightarrow \triangleq 103$

Adapting the measuring device to the process 11.4 conditions

The following are available for this purpose:

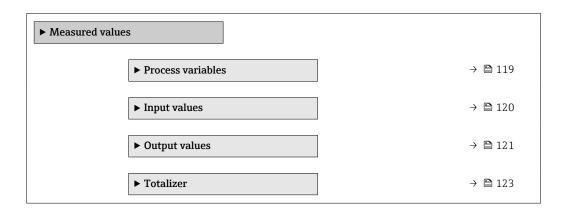

- Basic settings using the **Setup** menu (→ **B** 81)
- Advanced settings using the **Advanced setup** submenu (→ 🖺 100)

11.5 Reading off measured values

With the **Measured values** submenu, it is possible to read all the measured values.

Navigation

"Diagnostics" menu \rightarrow Measured values

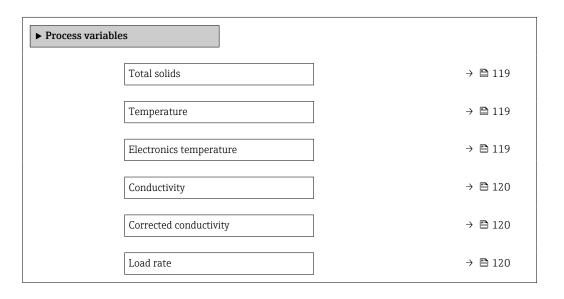

11.5.1 "Process variables" submenu

The contains all the parameters needed to display the current measured values for each process variable.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Process variables

Parameter overview with brief description

Parameter	Prerequisite	Description	User interface
Total solids	-	Shows total solids (fraction of total weight or concentration per volume unit).	Signed floating-point number
Temperature	-	Shows the medium temperature currently measured.	Signed floating-point number
Electronics temperature	-	Shows the electronics temperature currently measured.	Signed floating-point number

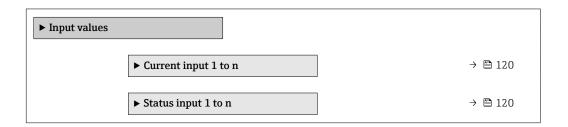

Parameter	Prerequisite	Description	User interface
Conductivity	-	Shows the conductivity currently measured.	Floating-point number
Corrected conductivity	-	Shows the conductivity measured compensated for temperature.	Floating-point number
Load rate	The volume flow of the medium is read in via the Current input 1 to n or the fieldbus.	Shows the total solids flow rate.	Signed floating-point number

11.5.2 "Input values" submenu

The **Input values** submenu guides you systematically to the individual input values.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Input values

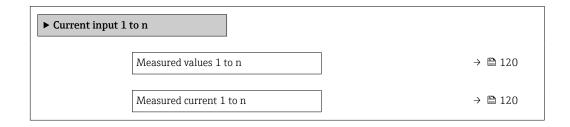

Input values of current input

The **Current input 1 to n** submenu contains all the parameters needed to display the current measured values for every current input.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Input values \rightarrow Current input 1 to n

Parameter overview with brief description

Parameter	Description	User interface
Measured values 1 to n	Displays the current input value.	Signed floating-point number
Measured current 1 to n	Displays the current value of the current input.	0 to 22.5 mA

Input values of status input

The **Status input 1 to n** submenu contains all the parameters needed to display the current measured values for every status input.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Input values \rightarrow Status input 1 to n

Parameter overview with brief description

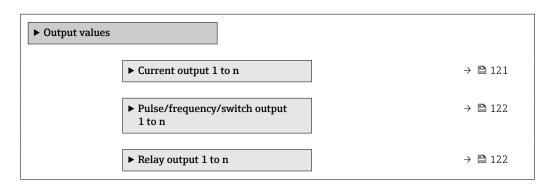

Parameter	Description	User interface
Value status input	Shows the current input signal level.	■ High ■ Low

11.5.3 Output values

The **Output values** submenu contains all the parameters needed to display the current measured values for every output.

Navigation

"Diagnostics" menu → Measured values → Output values

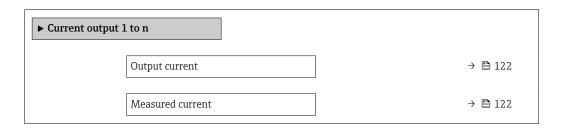

Output values of current output

The **Value current output** submenu contains all the parameters needed to display the current measured values for every current output.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Output values \rightarrow Value current output 1 to n

Parameter overview with brief description

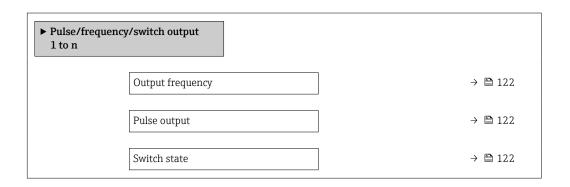

Parameter	Description	User interface	
Output current	Displays the current value currently calculated for the current output.	3.59 to 22.5 mA	
Measured current	Displays the current value currently measured for the current output.	0 to 30 mA	

Output values for pulse/frequency/switch output

The **Pulse/frequency/switch output 1 to n** submenu contains all the parameters needed to display the current measured values for every pulse/frequency/switch output.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Output values \rightarrow Pulse/frequency/switch output 1 to n

Parameter overview with brief description

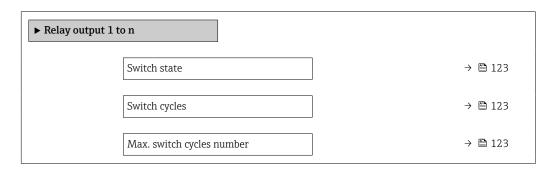

Parameter	Prerequisite	Description	User interface
Output frequency	In the Operating mode parameter, the Frequency option is selected.	Displays the value currently measured for the frequency output.	0.0 to 12 500.0 Hz
Pulse output	The Pulse option is selected in the Operating mode parameter parameter.	Displays the pulse frequency currently output.	Positive floating-point number
Switch state	The Switch option is selected in the Operating mode parameter.	Displays the current switch output status.	■ Open ■ Closed

Output values for relay output

The **Relay output 1 to n** submenu contains all the parameters needed to display the current measured values for every relay output.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Output values \rightarrow Relay output 1 to n

122

Parameter overview with brief description

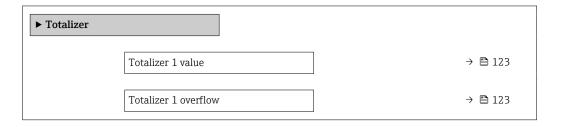

Parameter	Description	User interface	
Switch state	Indicates the current switch state of the output.	OpenClosed	
Switch cycles	Shows number of all performed switch cycles.	Positive integer	
Max. switch cycles number	Shows the maximal number of guaranteed switch cycles.	Positive integer	

11.5.4 "Totalizer" submenu

The **Totalizer** submenu contains all the parameters needed to display the current measured values for every totalizer.

Navigation

"Diagnostics" menu \rightarrow Measured values \rightarrow Totalizer

Parameter overview with brief description

Parameter	Description	User interface	
Totalizer 1 value	Displays the current totalizer counter value.	Signed floating-point number	
Totalizer 1 overflow	Displays the current totalizer overflow.	Integer with sign	

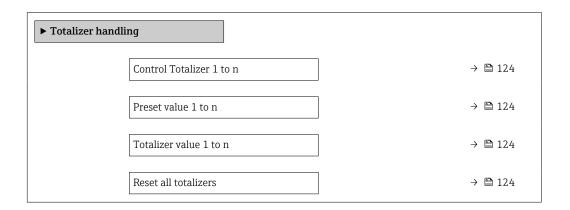

11.6 Performing a totalizer reset

The totalizers are reset in the **Operation** submenu:

- Control Totalizer
- Reset all totalizers

Navigation

"Operation" menu \rightarrow Totalizer handling

Parameter overview with brief description

Parameter	Prerequisite	Description	Selection / User entry / User interface	Factory setting
Totalizer 1 control	A process variable is selected in the Assign process variable parameter (→ 🖺 102) of the Totalizer 1 to n submenu.	Operate the totalizer.	 Totalize Reset + hold Preset + hold Reset + totalize Preset + totalize Hold 	Totalize
Preset value 1	A process variable is selected in the Assign process variable parameter (→ 🖺 102) of the Totalizer 1 to n submenu.	Specify start value for totalizer. Dependency The unit of the selected process variable is defined in the Unit totalizer parameter (→ 102) for the totalizer.	Signed floating-point number	0 kg
Totalizer value	-	Displays the current totalizer counter value.	Signed floating-point number	-
Reset all totalizers	-	Reset all totalizers to 0 and start.	CancelReset + totalize	Cancel

11.6.1 Function scope of "Control Totalizer" parameter

Options	Description
Totalize	The totalizer is started or continues running.
Reset + hold	The totaling process is stopped and the totalizer is reset to 0.
Preset + hold ¹⁾	The totaling process is stopped and the totalizer is set to its defined start value from the Preset value parameter.
Reset + totalize	The totalizer is reset to 0 and the totaling process is restarted.

Options	Description
Preset + totalize 1)	The totalizer is set to the defined start value in the Preset value parameter and the totaling process is restarted.
Hold	Totalizing is stopped.

1) Visible depending on the order options or device settings

11.6.2 Function range of "Reset all totalizers" parameter

Options	Description
Cancel	No action is executed and the user exits the parameter.
Reset + totalize	Resets the totalizer to 0 and restarts the totaling process. The previously aggregated load quantity is thus deleted.

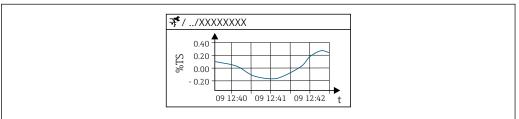

11.7 Displaying the measured value history

The **Extended HistoROM** application package must be enabled in the device (order option) for the **Data logging** submenu to appear. This contains all the parameters for the measured value history.

- Pata logging is also available via:
 - Plant Asset Management Tool FieldCare → 🖺 70.
 - Web browser

Function range

- A total of 1000 measured values can be stored
- 4 logging channels
- Adjustable logging interval for data logging
- Measured value trend for each logging channel displayed in the form of a chart

A0053802

■ 30 Chart of a measured value trend

- x-axis: depending on the number of channels selected displays 250 to 1000 measured values of a process variable.
- y-axis: displays the approximate measured value span and constantly adapts this to the ongoing measurement.
- If the length of the logging interval or the assignment of the process variables to the channels is changed, the content of the data logging is deleted.

Navigation

"Diagnostics" menu \rightarrow Data logging

▶ Data logging	
Assign channel 1	→ 🖺 127

11.8 Adjusting the measured value with the aid of wizards

In practice, the measurement typically needs to be adjusted based a reference value (e.g. lab value) when commissioning the device to ensure optimum measurement performance during subsequent operation. Repeating this adjustment is recommended if there are significant changes to the process conditions or following replacement of the sensor electronics module (ISEM).

The deviation from the value determined by the device can be checked and adjusted if necessary with the aid of manually taken samples of the medium, which are analyzed in the laboratory. The lab value is compared with the measured value of the device for this purpose. The difference between the two values can then be used to decide whether the measurement performance is sufficient or whether the device should be readjusted based on the laboratory value.

The device has four wizards to facilitate this process. After starting each wizard, you are quided through the necessary work steps.

Performing the basic settings for the adjustment:

1. **Commissioning** wizard

Adusting the measured value based on the reference value:

- 2. 1 Take a sample wizard
- 3. 2 Enter lab value wizard
- 4. 3 Perform adjustment wizard
- Adjustment can be carried out directly via local operation of the device or via the web server.

The process using the wizards is essentially the same for both operation methods, but more options and a graphic display are available when operating via the web server in the **3 - Perform adjustment** wizard. Using the web server is therefore recommended.

Online information

Further information on the procedure for performing an adjustment using wizards is also available online.

11.8.1 Performing the basic settings for the adjustment

Commissioning

The **Commissioning** wizard is used to:

- set the system time (when using the wizard for the first time or after disconnecting the device from the supply voltage)
- set the unit for the solids content for the measured total solids and the lab value
- enter the solids density

11.8.2 Adjusting the measured value based on the reference value

- **All three wizards** must be run each time the device is adjusted.

Taking a sample

The **1** - **Take a sample** wizard is used to:

- set the system time (if not already defined in the **Commissioning** wizard)
- have the total solids measured by the device
- calculate the value of the medium sample of the device
- The calculated medium sample of the device is the average of the total solids measured by the device between the start and end of the wizard.
- perform a check as to whether the variability is within the permitted limits You can set the upper limit in the **Maximum variance** parameter.
- save the value of the sample calculated by the device (incl. system time and status).
- At the same time as the total solids in the device are measured, a sample must be taken manually for analysis in the laboratory.

Entering the lab value

The 2 - Enter lab value wizard is used to:

- select a unit for entering the sample of the medium taken manually.
- select the sample measured by the device that is to be used for the lab value
- enter the lab value of the sample of the medium taken manually
- check whether the lab value is within the value range
- save the lab value (incl. status and min./max. values if applicable)

Performing the adjustment

The 3 - Perform adjustment wizard is used to:

- display the respective medium sample with the corresponding lab values and the number of adjustments performed.
- select whether a single-point adjustment or a multi-point adjustment is to be performed
- In the case of a single-point adjustment, the value of the most recent, valid sample taken is always selected automatically.
 - In the case of a multi-point adjustment, the values of the last ten valid samples are always selected automatically.
- display the current and new factor and offset
- display the current and new value of the total solids
- display the time stamp of the completed process and confirm completion.
- igcap Each completed adjustment is documented: Diagnostics ightarrow Event logbook ightarrow Event list

Extended functionality when running the wizard via the web server

In the web server, the samples of the medium are displayed in a table (max. 10 out of 32 stored samples). It is also possible to adjust the selection of samples used for the adjustment.

- In the case of a single-point adjustment, the value of the most recent, valid sample taken is always selected automatically. You can determine the most recent sample you want to use by deleting the most recent sample in the table.
- In the case of a multi-point adjustment, the values of the last ten valid samples taken are always automatically selected. You can determine the samples you want to use for the adjustment by deleting samples from the table.

130

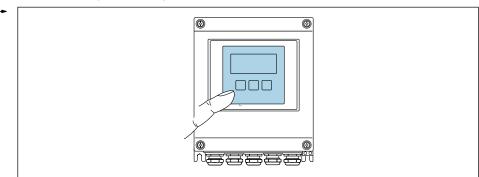

11.8.3 Calling up wizards

- **Commissioning** wizard
 - The wizard is called up via the main menu: Setup \rightarrow Total solids adjustment \rightarrow Commissioning
- Take a sample wizard, Enter lab value wizard and Assistent Perform adjustment: You can call up the wizard options via the operating menu or during local operation from the operational display by holding down the Enter key for longer than 3 seconds.

Performing the adjustment process via local operation

1. Press the Enter key

for longer than 3 seconds.

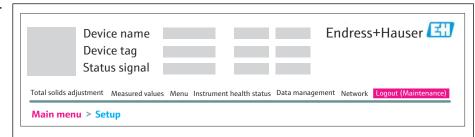

A0032074

A selection field appears with adjustment options.

- 2. Confirm the desired adjustment option in the selection field.
 - └ The available wizards are displayed.
- 3. Select the desired wizard and follow the instructions.

Performing the adjustment process via the web server

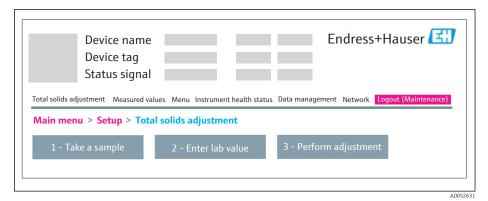

- 1. After starting the web server, select **Main menu > Setup**.

A005263

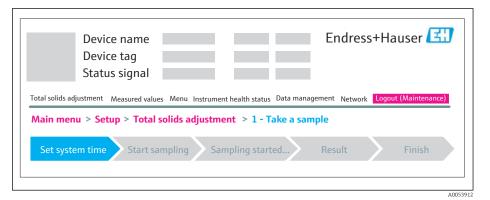

2. Select **Total solids adjustment**.

└ The available wizards are displayed.

3. Select the desired wizard.

└ The individual steps of the wizard are displayed.

4. Follow the instructions provided by the wizard.

└ The wizard guides you through the individual steps.

12 Diagnosis and troubleshooting

12.1 General troubleshooting

For local display

Fault	Possible causes	Remedial action
Local display is dark, but signal output is within the valid range	The cable of the display module is not plugged in correctly.	Insert the plug correctly into the main electronics module and display module.
Local display dark and no output signals	Supply voltage does not match the voltage specified on the nameplate.	Apply the correct supply voltage $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
	Supply voltage has incorrect polarity.	Reverse polarity of supply voltage
	No contact between connection cables and terminals	Ensure electrical contact between the cable and the terminal.
	 Terminals are not plugged into the I/O electronics module correctly. Terminals are not plugged into the main electronics module correctly. 	Check terminals.
	I/O electronics module is defective.Main electronics module is defective.	Order spare part → 🖺 161.
	The connector between the main electronics module and display module is not plugged in correctly.	Check the connection and correct if necessary.
Local display cannot be read, but signal output is within the valid range	Display is set too bright or too dark.	■ Set the display brighter by simultaneously pressing
Local display is dark, but signal output is within the valid range	Display module is defective.	Order spare part → 🖺 161.
Backlighting of local display is red	Diagnostic event with "Alarm" diagnostic behavior has occurred.	Take remedial measures → 🖺 147
Text on local display appears in a language that cannot be understood.	The selected operating language cannot be understood.	1. Press □ + ± for 2 s ("home position"). 2. Press □. 3. Configure the required language in the Display language parameter (→ □ 105).
Message on local display: "Communication Error" "Check Electronics"	Communication between the display module and the electronics is interrupted.	 Check the cable and the connector between the main electronics module and display module. Order spare part → ■ 161.

For output signals

Fault	Possible causes	Remedial action
Signal output outside the valid range	Main electronics module is defective.	Order spare part → 🖺 161.
Signal output outside the valid current range (< 3.6 mA or > 22 mA)	Main electronics module is defective. I/O electronics module is defective.	Order spare part → 🗎 161.
Device shows correct value on local display, but signal output is incorrect, though in the valid range.	Parameter configuration error	Check and adjust parameter configuration.

Fault	Possible causes	Remedial action
Device measures incorrectly.	Configuration error or device is operated outside the application.	Check and correct parameter configuration. Observe limit values specified in the "Technical Data". "Technical Data".
Unexpected and significant difference with regard to the laboratory value	Formation of buildup on the antennas Buildup usually produces a positive difference with regard to the laboratory value.	Remove buildup. Perform a new adjustment → ■ 129. When removing the buildup, make sure that the measuring tube, the antennas and the temperature sensor are neither mechanically damaged nor chemically corroded.

For access

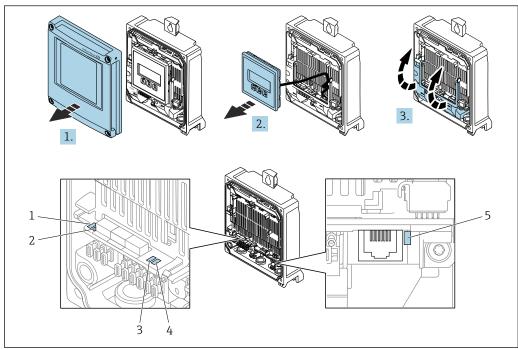

Fault	Possible causes	Remedial action
Write access to parameters is not possible.	Hardware write protection is enabled.	Set the write protection switch on the main electronics module to the OFF position → 🖺 116.
	Current user role has limited access authorization.	1. Check user role → 🗎 58. 2. Enter correct customer-specific access code → 🖺 59.
Connection via HART protocol is not possible.	Missing or incorrectly installed communication resistor	Install the communication resistor (250 Ω) correctly. Observe the maximum load.
	Commubox Incorrectly connected. Incorrectly configured. Driver is not installed correctly. The USB port on the PC is incorrectly configured.	Refer to the documentation on Commubox FXA195 HART: Technical Information TI00404F
Unable to connect to web server, FieldCare or DeviceCare.	WLAN network is not available.	 Check if WLAN reception is present: LED on display module is lit blue. Check if WLAN connection is enabled: LED on display module flashes blue. Switch on instrument function.
Network connection not present or unstable	WLAN network is weak.	 Operating unit outside reception range: Check network status on operating unit. To improve network performance, use an external WLAN antenna.
	Parallel WLAN and Ethernet communication	 Check network settings. Temporarily enable only the WLAN as an interface.
Web browser frozen and operation no longer possible	Data transfer is active.	Wait until data transfer or current action is finished.
	Connection lost	 Check cable connection and power supply. Refresh the web browser and restart if necessary.
Display of web browser content is difficult to read or incomplete.	Web browser version used is not optimal.	 Use correct web browser version → 60. Empty the web browser cache. Restart the web browser.
	Unsuitable view settings.	Change the font size/display ratio of the Web browser.
Incomplete or no display of content in the web browser	JavaScript is not enabled.JavaScript cannot be enabled.	► Enable JavaScript. ► Enter http://XXX.XXX.X.X.XX/servlet/basic.html as the IP address.

Fault	Possible causes	Remedial action
Operation with FieldCare or DeviceCare via service interface CDI-RJ45 (port 8000) is not possible.	Firewall of the PC or network is blocking communication.	Depending on the settings of the firewall used on the PC or in the network, the firewall must be adapted or disabled to allow FieldCare/DeviceCare access.
Flashing the firmware with FieldCare or DeviceCare via service interface CDI-RJ45 (port 8000 or TFTP ports) is not possible.	Firewall of the PC or network is blocking communication.	Depending on the settings of the firewall used on the PC or in the network, the firewall must be adapted or disabled to allow FieldCare/ DeviceCare access.

12.2 Diagnostic information via LEDs

12.2.1 Transmitter

Different LEDs in the transmitter provide information on the device status.

A002968

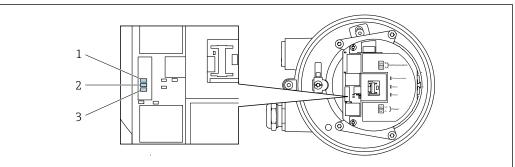

- 1 Supply voltage
- 2 Device status
- 3 Not used
- 4 Communication
- 5 Service interface (CDI) active
- 1. Open the housing cover.
- 2. Remove the display module.
- 3. Fold open the terminal cover.

LED		Color/behavior	Meaning
1	Supply voltage	LED off	Supply voltage is off or too low.
		Green	Supply voltage is OK.
2	Device status: normal	Off	Firmware error
	operation	Green	Device status is OK.
		Flashing green	Device is not configured.
		Flashing red	A diagnostic event with "Warning" diagnostic behavior has occurred.
		Red	A diagnostic event with "Alarm" diagnostic behavior has occurred.
		Flashing red/green	The device restarts.
2	Device status: during start-up	Flashes red slowly	If > 30 seconds: problem with the boot loader.
		Flashes red quickly	If > 30 seconds: compatibility problem when reading the firmware.
3	Not used	-	-
4	Communication	LED off	Communication not active.

LED		Color/behavior	Meaning
		White	Communication active.
5	Service interface (CDI)	LED off	Not connected or no connection established.
		Yellow	Connected and connection established.
		Flashing yellow	Service interface active.

Sensor connection housing 12.2.2

Various light emitting diodes (LED) on the ISEM electronics unit (intelligent sensor electronics module) in the sensor connection housing provide information about the device status.

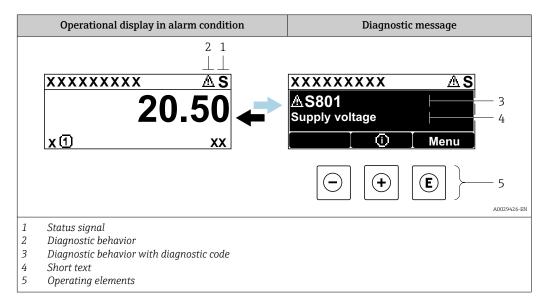

- Communication
- 2 3 Device status
- Supply voltage

LED		Color/behavior	Meaning
1	Communication	White	Communication active.
2 Device status (normal	Red	Error	
	operation)	Flashing red	Warning
	Device status (during	Flashes red slowly	If > 30 seconds: problem with the boot loader.
	start-up)	Flashes red quickly	If > 30 seconds: compatibility problem when reading the firmware.
3	Supply voltage	Green	Supply voltage is OK.
		LED off	Supply voltage is off or too low.

12.3 Diagnostic information on local display

12.3.1 Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the operational display.

If two or more diagnostic events are pending simultaneously, only the message of the diagnostic event with the highest priority is shown.

- Other diagnostic events that have occurred can be displayed in the **Diagnostics** menu:
 - Via parameter $\rightarrow \blacksquare 151$
 - Via submenus $\rightarrow \blacksquare 151$

Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

The status signals are categorized according to VDI/VDE 2650 and NAMUR Recommendation NE 107: F = Failure, C = Function Check, S = Out of Specification, M = Maintenance Required

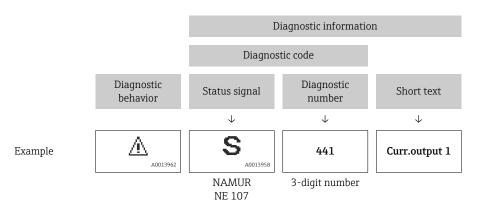

Symbol	Meaning
F	Failure A device error has occurred. The measured value is no longer valid.
С	Function check The device is in service mode (e.g. during a simulation).
s	Out of specification The device is being operated: Outside its technical specification limits (e.g. outside the process temperature range) Outside the parameter configuration carried out by the user (e.g. full scale value of the configured process variable in parameter 20 mA value)
М	Maintenance required Maintenance is required. The measured value remains valid.

Diagnostic behavior

Symbol	Meaning
*	 Alarm Measurement is interrupted. Signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated.
Δ	 Warning Measurement is resumed. The signal outputs and totalizers are not affected. A diagnostic message is generated.

Diagnostic information

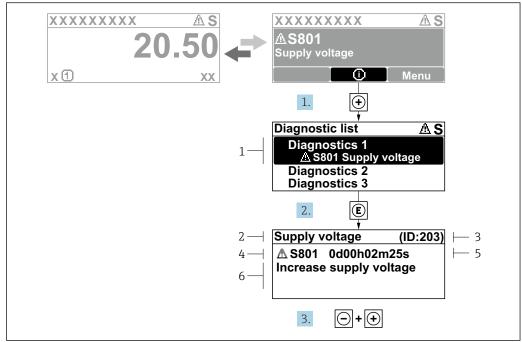

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.

Operating elements

Operating key	Meaning
	Plus key
(+)	In menu, submenu Opens the message about the remedial measures.
	Enter key
E	In menu, submenu Opens the operating menu.
	If pressed > 3 seconds Displays the available wizards.

12.3.2 Calling up remedial measures

A0029431-EN

- 31 Message for remedial measures
- 1 Diagnostic information
- 2 Short text
- 3 Service ID
- 4 Diagnostic behavior with diagnostic code
- 5 Operation time when error occurred
- 6 Remedial measures
- 1. The user is in the diagnostic message.

Press ± (① symbol).

- ► The **Diagnostic list** submenu opens.
- 2. Select the desired diagnostic event with \pm or \Box and press \Box .
 - └ The message about the remedial measures opens.
- 3. Press \Box + \pm simultaneously.
 - ► The message about the remedial measures closes.

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in the **Diagnostic list** submenu or **Previous diagnostics** parameter.

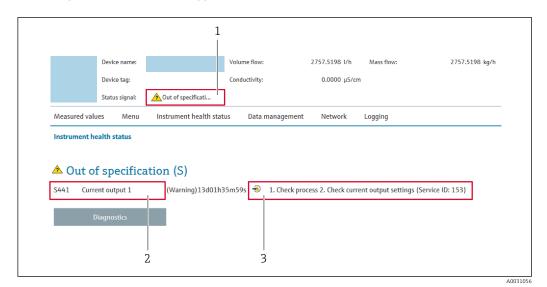

- 1. Press E.
 - ► The message for the remedial measures for the selected diagnostic event opens.
- 2. Press \Box + \pm simultaneously.
 - └ The message for the remedial measures closes.

140

12.4 Diagnostic information in the web browser

12.4.1 Diagnostic options

Any faults detected by the measuring device are displayed in the Web browser on the home page once the user has logged on.

- 1 Status area with status signal
- 2 Diagnostic information
- 3 Remedial measures with service ID
- In addition, diagnostic events which have occurred can be shown in the **Diagnostics**
 - Via parameter →

 151
 - Via submenu → 🗎 151

Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
8	Failure A device error has occurred. The measured value is no longer valid.
	Function check The device is in service mode (e.g. during a simulation).
A	Out of specification The device is being operated: Outside its technical specification limits (e.g. outside the process temperature range) Outside the parameter configuration carried out by the user (e.g. full scale value of the configured process variable in parameter 20 mA value)
&	Maintenance required Maintenance is required. The measured value remains valid.

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

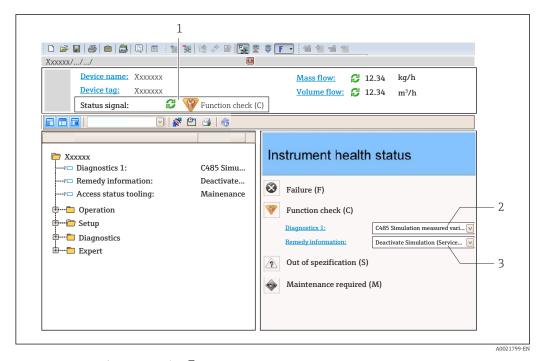

12.4.2 Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly. These measures are displayed in red along with the diagnostic event and the related diagnostic information.

12.5 Diagnostic information in FieldCare or DeviceCare

12.5.1 Diagnostic options

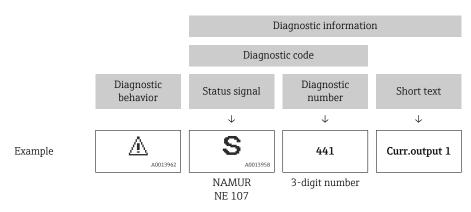

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.

- 2 Diagnostic information \rightarrow $\stackrel{\circ}{=}$ 139
- 3 Remedial measures with service ID
- In addition, diagnostic events which have occurred can be shown in the **Diagnostics** menu:
 - Via parameter $\rightarrow \triangleq 151$
 - Via submenu \rightarrow 🗎 151

Diagnostic information

The fault can be identified using the diagnostic information. The short text helps you by providing information about the fault. In addition, the corresponding symbol for the diagnostic behavior is displayed in front of the diagnostic information on the local display.

12.5.2 Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:

- On the home page
 Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

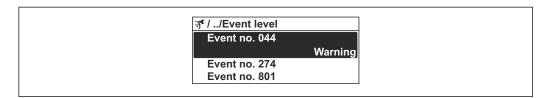

- 1. Call up the desired parameter.
- 2. On the right in the working area, mouse over the parameter.
 - ► A tool tip with remedy information for the diagnostic event appears.

12.6 Adapting the diagnostic information

12.6.1 Adapting the diagnostic behavior

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu.

Expert \rightarrow System \rightarrow Diagnostic handling \rightarrow Diagnostic behavior

 \blacksquare 32 Using the example of the local display

You can assign the following options to the diagnostic number as the diagnostic behavior:

Options	Description
Alarm	The device stops measurement. The signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated. The background lighting changes to red.
Warning	The device continues to measure. The signal outputs and totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is only displayed in the Event logbook submenu (Event list submenu) and is not displayed in alternating sequence with the operational display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

12.6.2 Adapting the status signal

Each item of diagnostic information is assigned a specific status signal at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic event category** submenu.

Expert \rightarrow Communication \rightarrow Diagnostic event category

Available status signals

Configuration as per HART 7 Specification (Condensed Status), in accordance with NAMUR NE107.

Symbol	Meaning
A0013956	Failure A device error has occurred. The measured value is no longer valid.
C	Function check The device is in service mode (e.g. during a simulation).
S	Out of specification The device is being operated: Outside its technical specification limits (e.g. outside the process temperature range) Outside the parameter configuration carried out by the user (e.g. full scale value of the configured process variable in parameter 20 mA value)

Symbol	Meaning
A0013957	Maintenance required Maintenance is required. The measured value remains valid.
A0023076	Has no effect on the condensed status.

12.7 Overview of diagnostic information

In the case of some items of diagnostic information, the status signal and the diagnostic behavior can be changed. Change the diagnostic information $\rightarrow \stackrel{\square}{=} 145$

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]		
Diagnostic of	Diagnostic of sensor					
022	Temperature sensor defective	Change main electronic module Change sensor	F	Alarm		
082	Data storage inconsistent	Check module connections	F	Alarm

12.8 Pending diagnostic events

The **Diagnostics** menu allows the user to view the current diagnostic event and the previous diagnostic event separately.

- To call up the measures to rectify a diagnostic event:
 - Via local display → 🗎 140
 - Via web browser → 🗎 142
 - Via "FieldCare" operating tool → 🗎 144
- Other pending diagnostic events can be displayed in the **Diagnostic list** submenu $\Rightarrow \implies 151$.

Navigation

"Diagnostics" menu

Parameter overview with brief description

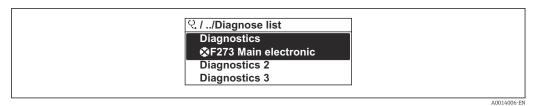

Parameter	Prerequisite	Description	User interface
Actual diagnostics	A diagnostic event has occurred.	Shows the current occured diagnostic event along with its diagnostic information.	Symbol for diagnostic behavior, diagnostic code and short message.
		If two or more messages occur simultaneously, the message with the highest priority is shown on the display.	
Previous diagnostics	Two diagnostic events have already occurred.	Shows the diagnostic event that occurred prior to the current diagnostic event along with its diagnostic information.	Symbol for diagnostic behavior, diagnostic code and short message.
Operating time from restart	-	Shows the time the device has been in operation since the last device restart.	Days (d), hours (h), minutes (m) and seconds (s)
Operating time	-	Indicates how long the device has been in operation.	Days (d), hours (h), minutes (m) and seconds (s)

12.9 Diagnostics list

Up to 5 currently pending diagnostic events can be displayed in the **Diagnostic list** submenu along with the associated diagnostic information. If more than 5 diagnostic events are pending, the events with the highest priority are shown on the display.

Navigation path

Diagnostics → Diagnostic list

33 Using the example of the local display

- To call up the measures to rectify a diagnostic event:
 - Via local display →
 ☐ 140
 Via web browser →
 ☐ 142

 - Via "FieldCare" operating tool → 🗎 144
 - Via "DeviceCare" operating tool → 🖺 144

152

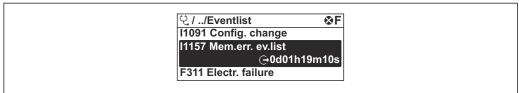

12.10 Event logbook

12.10.1 Reading out the event logbook

A chronological overview of the event messages that have occurred is provided in the **Events list** submenu.

Navigation path

Diagnostics menu → **Event logbook** submenu → Events list

A0014008-E

■ 34 Using the example of the local display

- A maximum of 20 event messages can be displayed in chronological order.
- If the **Extended HistoROM** application package (order option) is enabled in the device, the event list can contain up to 100 entries.

The event history includes entries for:

- Diagnostic events → 🖺 147
- Information events → 🖺 154

In addition to the operating time when the event occurred, each event is also assigned a symbol that indicates whether the event has occurred or is finished:

- Diagnostics event
 - ᢒ: Occurrence of the event
 - 🕒: End of the event
- Information event
 - €: Occurrence of the event
- To call up the measures to rectify a diagnostic event:
 - Via local display → 140
 - Via web browser \rightarrow 🗎 142
- For filtering the displayed event messages $\rightarrow \stackrel{\triangle}{=} 153$

12.10.2 Filtering the event logbook

Using the **Filter options** parameter you can define which category of event message is displayed in the **Events list** submenu.

Navigation path

Diagnostics \rightarrow Event logbook \rightarrow Filter options

Filter categories

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

12.10.3 Overview of information events

Unlike a diagnostic event, an information event is displayed in the event logbook only and not in the diagnostic list.

12.11 Resetting the measuring device

The entire device configuration or some of the configuration can be reset to a defined state with the **Device reset** parameter ($\rightarrow \implies 111$).

12.11.1 Function range of "Device reset" parameter

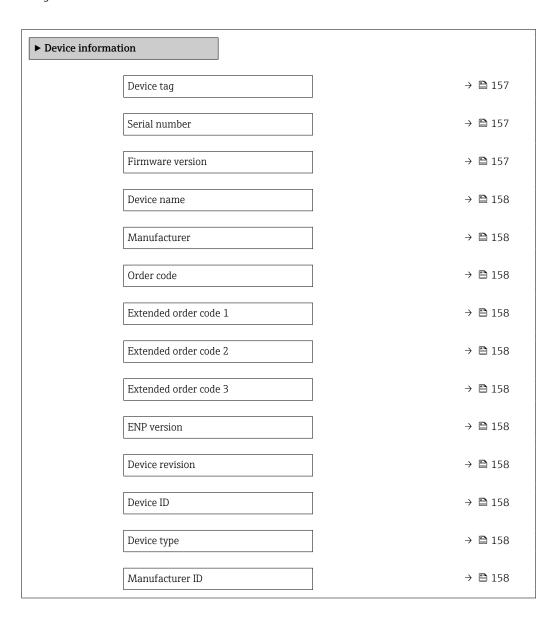

Options	Description	
Cancel	No action is executed and the user exits the parameter.	
To delivery settings	Every parameter for which a customer-specific default setting was ordered is reset to the customer-specific value. All other parameters are reset to the factory setting	
Restart device	The restart resets every parameter with data stored in volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.	
Restore S-DAT backup	Restores the data that is saved on the S-DAT. Additional information: This function can be used to resolve the memory issue "083 Memory content inconsistent" or to restore the S-DAT data when a new S-DAT has been installed. This option is displayed only in an alarm condition.	

12.12 Device information

The **Device information** submenu contains all parameters that display different information for device identification.

Navigation

"Diagnostics" menu \rightarrow Device information

Parameter overview with brief description

Parameter	Description	User interface	Factory setting
Device tag	Shows name of measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).	Teqwave M
Serial number	Shows the serial number of the measuring device.	Max. 11-digit character string comprising letters and numbers.	-
Firmware version	Shows the device firmware version installed.	Character string in the format xx.yy.zz	_

Parameter	Description	User interface	Factory setting	
Device name	Shows the name of the transmitter. The name can be found on the nameplate of the transmitter.	Character string comprising numbers, letters and special characters	-	
Manufacturer	Displays the manufacturer. Character string comprising numbers, letters and special characters Endress+Hauser		Endress+Hauser	
Order code	Shows the device order code.	Character string composed of letters, numbers and certain punctuation marks (e.g. /).	-	
Extended order code 1	Shows the 1st part of the extended order code.	Character string	-	
Extended order code 2	Shows the 2nd part of the extended order code. The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd."		-	
Extended order code 3	Shows the 3rd part of the extended order code. The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.		_	
ENP version	Shows the version of the electronic nameplate (ENP).	Character string	2.02.00	
Device revision	Displays the device revision with which the device is registered with the HART FieldComm Group.	2-digit hexadecimal number	r 1	
Device ID	Shows the device ID for identifying the device in a HART network.	6-digit hexadecimal number –		
Device type	Displays the device type with which the device is registered with the HART FieldComm Group.	Hexadecimal number	11B3	
Manufacturer ID	Displays the device's manufacturer ID 2-digit hexadecimal number registered with the HART FieldComm Group.		0x11 (for Endress+Hauser)	

12.13 Firmware history

Release date	Firmware version	Order code for "Firmware version"	Firmware Changes	Documentation type	Documentation
03.2024	01.00.zz	Option 76	Original firmware	Operating instructions	BA02322D/06/EN/03.24

- It is possible to flash the firmware to the current version or the previous version using the service interface.
- For the compatibility of the firmware version with the previous version, the installed device description files and operating tools, observe the information about the device in the "Manufacturer's information" document.
- The manufacturer's information is available:
 - \blacksquare In the Download Area of the Endress+Hauser web site: www.endress.com \to Downloads
 - Specify the following details:
 - Product root: e.g. 4W5B
 The product root is the first part of the order code: see the nameplate on the device.
 - Text search: Manufacturer's information
 - Media type: Documentation Technical Documentation

13 **Maintenance**

13.1 Maintenance work

No special maintenance work is required.

13.1.1 Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the gaskets.

MARNING

Cleaning agents can damage the plastic transmitter housing!

- ▶ Do not use high-pressure steam.
- Only use the permitted cleaning agents specified.

Permitted cleaning agents for the plastic housing:

- Commercially available household cleaners
- Methyl alcohol or isopropyl alcohol
- Mild soap solutions

13.2 **Endress+Hauser services**

Endress+Hauser offers a wide variety of services for maintenance such as function checks at the place of manufacture, maintenance service or device tests.

Your Endress+Hauser Sales Center can provide detailed information on the services.

14 Repair

14.1 General notes

14.1.1 Repair and conversion concept

The Endress+Hauser repair and conversion concept provides for the following:

- The measuring devices have a modular design.
- Spare parts are grouped into logical kits with the associated Installation Instructions.
- Repairs are carried out by Endress+Hauser Service or by appropriately trained customers.
- Certified devices can only be converted to other certified devices by Endress+Hauser Service or at the factory.

14.1.2 Notes for repair and conversion

For repair and conversion of a measuring device, observe the following notes:

- ▶ Use only original Endress+Hauser spare parts.
- ▶ Carry out the repair according to the Installation Instructions.
- ▶ Observe the applicable standards, federal/national regulations, Ex documentation (XA) and certificates.
- Document all repairs and conversions and enter the details in Netilion Analytics.

14.2 Spare parts

Device Viewer (www.endress.com/deviceviewer):

All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

- Measuring device serial number:
 - Is located on the nameplate of the device.

14.3 Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

14.4 Return

The requirements for safe device return can vary depending on the device type and national legislation.

- 1. Refer to the web page for information: https://www.endress.com/support/return-material
 - ► Select the region.
- 2. If returning the device, pack the device in such a way that it is reliably protected against impact and external influences. The original packaging offers the best protection.

14.5 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.

14.5.1 Removing the measuring device

1. Switch off the device.

▲ WARNING

Danger to persons from process conditions!

- ▶ Beware of hazardous process conditions such as pressure in the measuring device, high temperatures or aggressive media.
- 2. Carry out the mounting and connection steps from the "Mounting the measuring device" and "Connecting the measuring device" sections in reverse order. Observe the safety instructions.

14.5.2 Disposing of the measuring device

A WARNING

Danger to personnel and environment from fluids that are hazardous to health.

► Ensure that the measuring device and all cavities are free of fluid residues that are hazardous to health or the environment, e.g. substances that have permeated into crevices or diffused through plastic.

Observe the following notes during disposal:

- ▶ Observe valid federal/national regulations.
- ► Ensure proper separation and reuse of the device components.

15 Accessories

Various accessories, which can be ordered with the device or subsequently from Endress +Hauser, are available for the device. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

15.1 Device-specific accessories

15.1.1 For the transmitter

Accessories	Description
Proline 500 – digital transmitter	Transmitter for replacement Use the order code to define the following specifications: Approvals Output Input Display/operation Housing Software Order code: 4X5BXX Installation instructions EA01xxxD
External WLAN antenna	External WLAN antenna with 1.5 m (59.1 in) connecting cable and two angle brackets. Order code for "Accessory enclosed", option P8 "Wireless antenna wide area". Further information on the WLAN interface → 🖺 68 Order number: 71351317 Installation Instructions EA01238D
Pipe mounting set	Pipe mounting set for transmitter. ① Order number: 71346427 ① Installation Instructions EA01195D
Weather protection cover	Is used to protect the measuring device from the effects of the weather: e.g. rainwater, excess heating from direct sunlight. Order number: 71343504 Installation Instructions EA01191D
Display guard	Is used to protect the display against impact or scoring, for example from sand in desert areas. Order number: 71228792 Installation Instructions EA01093D
Connecting cable Sensor – transmitter	The connecting cable can be ordered directly with the measuring device (order code for "Cable, sensor connection) or as an accessory (order number DK4012). The following cable lengths are available: order code for "Cable, sensor connection" Option B: 20 m (60 ft) Option E: User-configurable up to max. 50 m Option F: User-configurable up to max. 165 ft Maximum possible cable length for a Proline 500 connecting cable: 300 m (1000 ft)

15.1.2 For the sensor

Accessories	Description
Mounting kit	Consists of: Screws/mounting bolts Gaskets Washers Nuts Order number: DK4M

15.2 Communication-specific accessories

Accessories	Description
Commubox FXA195 HART	For intrinsically safe HART communication with FieldCare via the USB port. Technical Information TI00404F
HART Loop Converter HMX50	Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values. Technical Information TI00429F Operating Instructions BA00371F
Fieldgate FXA42	Transmission of the measured values of connected 4 to 20 mA analog measuring devices, as well as digital measuring devices Technical Information TI01297S Operating Instructions BA01778S Product page: www.endress.com/fxa42
Field Xpert SMT50	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle. Technical Information TI01342S Operating Instructions BA01709S Product page: www.endress.com/smt50
Field Xpert SMT70	The Field Xpert SMT70 tablet PC for device configuration enables mobile plant asset management in hazardous and non-hazardous areas. It is suitable for commissioning and maintenance staff to manage field instruments with a digital communication interface and to record progress. This tablet PC is designed as an all-in-one solution with a preinstalled driver library and is an easy-to-use, touch-sensitive tool which can be used to manage field instruments throughout their entire life cycle. Technical Information TI01342S Operating Instructions BA01709S Product page: www.endress.com/smt70
Field Xpert SMT77	The Field Xpert SMT77 tablet PC for device configuration enables mobile plant asset management in areas categorized as Ex Zone 1. Technical Information TI01418S Operating Instructions BA01923S Product page: www.endress.com/smt77

15.3 Service-specific accessories

Accessories	Description
Applicator	Software for selecting and sizing Endress+Hauser measuring devices: Choice of measuring devices for industrial requirements Graphic display of the calculation results Determination of the partial order code, administration, documentation and access to all project-related data and parameters over the entire life cycle of a project. Applicator is available: Via the Internet: https://portal.endress.com/webapp/applicator
Netilion	lloT ecosystem: Unlock knowledge With the Netilion lloT ecosystem, Endress+Hauser enables you to optimize your plant's performance, digitize workflows, share knowledge and improve collaboration. Drawing on decades of experience in process automation, Endress+Hauser offers process industries an lloT ecosystem that provides customers with data- driven insights. These insights can be used to optimize processes, thus leading to higher plant availability, efficiency and reliability - and ultimately to greater profitability. www.netilion.endress.com
FieldCare	FDT-based plant asset management tool from Endress+Hauser. It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition. Operating Instructions BA00027S and BA00059S
DeviceCare	Tool to connect and configure Endress+Hauser field devices. Innovation brochure IN01047S
Retrofit kit for display/WLAN	Retrofitting the device with a display or a display with WLAN The retrofit kit contains all the necessary parts. Order number: DKZ002 You must state the serial number of the device to be converted when placing the order.
Retrofit kit for inputs/outputs	 For subsequent switching of the functionality of inputs/outputs 2, 3 and 4 using a serial number-based license code For subsequent hardware expansion of empty slots for inputs/outputs 2, 3 and 4 using serial number-based license codes and hardware Order number: DKZ004

15.4 System components

Accessories	Description
Proline flowmeter Promag 400	To calculate the load rate, you need to know the volume flow of the medium. You can measure this value using a flowmeter, e.g. the Proline Promag W 400. The measured value can be read in as an input signal via the HART protocol or via the 4 to 20 mA current input from the Teqwave MW and used to calculate the load rate. The calculated load rate can be shown on the local display and output as an output signal.
	Technical Information Proline Promag W 400: TI01046D
	Order number Proline Promag W 400: 5W4C**-

16 Technical data

16.1 Application

The measuring device is suitable only for the measurement of solids in water-based liquids.

Depending on the version ordered, the measuring device can also measure potentially explosive media.

To ensure that the device remains in proper operating condition for its service life, use the measuring device only for media against which the process-wetted materials are sufficiently resistant.

16.2 Function and system design

Measuring principle

Microwave transmission

Total solids measurement via microwave transmission: The device measures the time of flight and absorption of microwave transmission between two antennas facing each other in the measuring tube. Based on these variables, the permittivity of the medium can be calculated, for example.

The temperature of the medium is determined in order to calculate the compensation factor due to temperature effects. This signal corresponds to the process temperature and is also available as an output signal.

The conductivity of the medium is derived from the change in amplitude and phase of the microwave signal.

Measuring system

The device consists of a transmitter and a sensor.

The device is available as a remote version:

The transmitter and sensor are mounted in physically separate locations. They are interconnected by connecting cables.

Information on the structure of the device $\rightarrow \triangleq 13$

16.3 Input

Measured variable

Direct measured variables

- Total solids
- Electrical conductivity
- Medium temperature

Calculated measured variables

Load rate

The load rate can only be calculated with the volume flow of the medium. This measured value must be read in via a flowmeter $\rightarrow \triangleq 167$.

Endress+Hauser

Example of calculation:

- Volume flow read in by flowmeter: 100 l/min
- Total solids measured by Teqwave MW 500 : 10 q/l

Calculated load rate: 1 kg/min

166

Measuring range

Total solids

0 to 500 q/l (0 to 31 lb/ft 3), 0 to 50 %TS

Medium temperature

0 to 80 °C (32 to 176 °F)

Electrical conductivity

To ensure correct measurement, the electrical conductivity of the medium must not exceed the measuring range of the temperature-compensated electrical conductivity.

Measuring range for temperature-compensated electrical conductivity at 25 °C (77 °F)

Nominal diameter		Electrical conductivity
[mm]	[in]	[mS/cm]
50	2	0 to 100
80	3	0 to 85
100	4	0 to 50
150	6	0 to 20
200	8	0 to 14.5
250	10	0 to 14.5
300	12	0 to 14.5

Input signal

External measured values

To calculate the load rate, you need to know the volume flow of the medium. You can measure this value using a flowmeter, e.g. the Proline Promag W 400.

The volume flow can be read in as an input signal via the HART protocol or via the 4 to 20 mA current input from the Teqwave MW and used to calculate the load rate.

The Proline W Promag 400 flowmeter can be ordered from Endress+Hauser →

165.

Current input

Measured variables can be transferred from the automation system to the device via the current input $\rightarrow \blacksquare 167$.

Digital communication

Measured variables can be transferred from the automation system to the device via the HART protocol.

Current input 4 to 20 mA

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): option I: 4 to 20 mA input
Current input	0/4 to 20 mA (active/passive)
Current range	4 to 20 mA (active)0/4 to 20 mA (passive)
Resolution	1 μΑ
Voltage drop	Typically: 0.6 to 2 V for 3.6 to 22 mA (passive)
Maximum input voltage	≤ 30 V (passive)

Open-circuit voltage	≤ 28.8 V (active)
Possible input variables	Volume flow of the medium for calculating the load rate

Status input

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): option J: status input
Maximum input values	■ DC -3 to 30 V ■ If status input is active (ON): $R_i > 3 \text{ k}\Omega$
Response time	Configurable: 5 to 200 ms
Input signal level	 Low signal (low): DC -3 to +5 V High signal (high): DC 12 to 30 V
Assignable functions	 Disable Flow override Reset totalizer (load rate)

16.4 Output

Output signal

Current output 4 to 20 mA HART

Order code	"Output; input 1" (020): Option BA: current output 4 to 20 mA HART
Signal mode	Can be set to: Active Passive
Current range	Can be set to: 4 to 20 mA NAMUR 4 to 20 mA US 4 to 20 mA 0 to 20 mA (only if the signal mode is active) Fixed current
Open-circuit voltage	DC 28.8 V (active)
Maximum input voltage	DC 30 V (passive)
Load	250 to 700 Ω
Resolution	0.38 μΑ
Damping	Configurable: 0 to 999.9 s
Assignable process variables	 Total solids Conductivity Temperature Electronics temperature Totalizer (load rate) Load rate

Current output 4 to 20 mA

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): option B: current output 4 to 20 mA
Signal mode	Can be set to: Active Passive
Current range	Can be set to: 4 to 20 mA NAMUR 4 to 20 mA US 4 to 20 mA 0 to 20 mA (only if the signal mode is active) Fixed current
Maximum output values	22.5 mA
Open-circuit voltage	DC 28.8 V (active)
Maximum input voltage	DC 30 V (passive)
Load	0 to 700 Ω
Resolution	0.38 μΑ
Damping	Configurable: 0 to 999.9 s
Assignable process variables	 Total solids Conductivity Temperature Electronics temperature Load rate

Pulse/frequency/switch output

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): option E: Pulse/frequency/switch output
Function	Can be configured as pulse, frequency or switch output
Version	Open collector
	Can be set to: Active Passive Passive NAMUR
Maximum input values	DC 30 V, 250 mA (passive)
Open-circuit voltage	DC 28.8 V (active)
Voltage drop	For 22.5 mA: ≤ DC 2 V
Pulse output	
Maximum input values	DC 30 V, 250 mA (passive)
Maximum output current	22.5 mA (active)
Open-circuit voltage	DC 28.8 V (active)
Pulse width	Configurable: 0.05 to 2 000 ms
Maximum pulse rate	10 000 Impulse/s
Pulse value	Configurable
Assignable process variables	Totalizer (load rate)
Frequency output	
Maximum input values	DC 30 V, 250 mA (passive)
Maximum output current	22.5 mA (active)
Open-circuit voltage	DC 28.8 V (active)
Output frequency	Configurable: end value frequency 2 to 10000Hz (f $_{\text{max}}$ = 12500Hz)
Damping	Configurable: 0 to 999.9 s
Pulse/pause ratio	1:1
Assignable process variables	 Total solids Conductivity Temperature Electronics temperature Load rate
Switch output	
Maximum input values	DC 30 V, 250 mA (passive)
Open-circuit voltage	DC 28.8 V (active)
Switching behavior	Binary, conductive or non-conductive
Switching delay	Configurable: 0 to 100 s
Number of switching cycles	Unlimited
Assignable functions	 Disable On Diagnostic behavior Limit value: Total solids Conductivity Temperature Electronics temperature Partially filled pipe Totalizer (load rate) Load rate

170

Relay output

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): option H: relay output
Function	Switch output
Version	Relay output, galvanically isolated
Switching behavior	Can be set to: NO (normally open), factory setting NC (normally closed)
Maximum switching capacity (passive)	 DC 30 V, 0.1 A AC 30 V, 0.5 A
Assignable functions	 Off On Diagnostic behavior Limit value: Total solids Conductivity Temperature Partially filled pipe Totalizer (load rate) Load rate

User-configurable input/output

Order code	"Output; input 2" (021), "Output; input 3" (022) or "Output; input 4" (023): Option D: user-configurable input/output
Function	One specific input or output can be assigned to the user-configurable input/output (configurable I/O) when commissioning the device.
Possible assignment	 Current output 4 to 20 mA Pulse/frequency/switch output Current input 0/4 to 20 mA Status input
Technical values of the inputs and outputs	Correspond to the inputs and outputs described in this section

Signal on alarm

HART current output

Device diagnostics	Device condition can be read out via HART Command 48

Option I	DC 24 V	±20%	_
Option i	AC 100 to 240 V	-15+10%	50/60 Hz

Power consumption

Transmitter

Max. 10 W (active power)

switch-on current	Max. 36 A (<5 ms) as per NAMUR Recommendation NE 21
-------------------	---

Current consumption

Transmitter

- Max. 400 mA (24 V)
- Max. 200 mA (110 V, 50/60 Hz; 230 V, 50/60 Hz)

Power supply failure

- Totalizer stops at the last value measured.
- Depending on the device version, the configuration is retained in the device memory or in the plug-in memory (HistoROM DAT).
- Error messages (incl. total operated hours) are stored.

Overcurrent protection element

The device must be operated with a dedicated circuit breaker, as it does not have an $\mbox{ON/OFF}$ switch of its own.

- The circuit breaker must be easy to reach and labeled accordingly.
- Permitted nominal current of the circuit breaker: 2 A up to maximum 10 A.

Electrical connection

→ 🖺 31

Potential equalization

Requirements

- Pay attention to in-house grounding concepts
- Take account of operating conditions like the pipe material and grounding
- Connect the medium, sensor connection housing and transmitter to the same electrical potential.
- ullet Use a ground cable with a minimum cross-section of 6 mm² (0.0093 in²) and a cable lug for potential equalization connections

Terminals

Spring-loaded terminals: Suitable for strands and strands with ferrules. Conductor cross-section 0.2 to 2.5 $\,\mathrm{mm^2}$ (24 to 12 AWG).

174

Cable entries

- Cable gland: M20 \times 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
- Thread for cable entry:
 - NPT ½"
 - G ½"
 - M20

Optional: M12 device plug for connection to the service interface

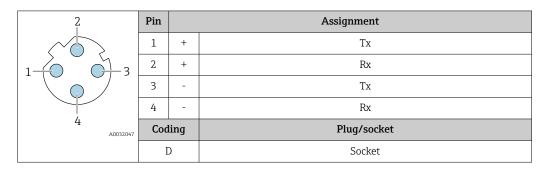

Order code for "Accessories mounted", option NB: "Adapter RJ45 M12 (service interface)"→

Overvoltage protection

Mains voltage fluctuations	→ 🖺 174
Overvoltage category	Overvoltage category II
Short-term, temporary overvoltage	Between cable and ground up to 1200 V, for max. 5 s
Long-term, temporary overvoltage	Between cable and ground up to 500 V

16.6 Performance characteristics

Accuracy of outputs

The outputs have the following base accuracy specifications.

Current output

Accuracy	±5 μA

Pulse/frequency output

Accuracy	Max. ±50 ppm of the measured value (over the entire ambient temperature range)
	range)

Repeatability

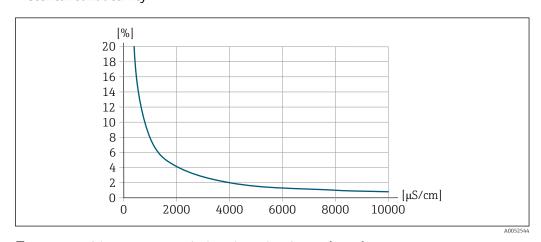

Total solids

Nominal diameter		Standard deviation of total solids
[mm]	[in]	[%TS]
50 to 80	2 to 3	0.02
100 to 300	4 to 12	0.01

Medium temperature

± 0.5 °C (± 0.9 °F)

Electrical conductivity

 \blacksquare 35 Repeatability in % of measured value - electrical conductivity [μ S/cm]

Influence of ambient temperature

Current output

Temperature coefficient	Max. 1 μA/°C
Temperature coefficient	Max. 1 μA/ C

Pulse/frequency output

Temperature coefficient	No additional effect.

16.7 Mounting

Mounting requirements

→ 🖺 20

16.8 Environment

Ambient temperature range

Transmitter and sensor

-20 to +60 °C (-4 to +140 °F)

Readability of the display may be impaired at temperatures outside the temperature range.

176

If operating the device outdoors:

- Install the measuring device in a shady location.
- Avoid direct sunlight, particularly in warm climatic regions.
- Avoid direct exposure to weather conditions.
- Protect the display against impact.
- Protect the display from abrasion, e.g. caused by sand in desert areas.

Storage temperature

$-20 \text{ to } +60 \,^{\circ}\text{C} \, (-4 \text{ to } +140 \,^{\circ}\text{F})$

- Protect the measuring device against direct sunlight during storage in order to avoid unacceptably high surface temperatures.
- Select a storage location where moisture cannot collect in the measuring device.

Relative humidity

The device is suitable for use in outdoor and indoor areas with a relative humidity of 4 to 95%.

Operating height

According to EN 61010-1

- $\le 2000 \text{ m} (6562 \text{ ft})$
- > 2 000 m (6 562 ft) with additional overvoltage protection (e.g. Endress+Hauser HAW Series)

Degree of protection

Transmitter

- IP66/67, Type 4X enclosure, suitable for pollution degree 4
- When the housing is open: IP20, Type 1 enclosure, suitable for pollution degree 2
- Display module: IP20, Type 1 enclosure, suitable for pollution degree 2

Sensor

- IP66/67, Type 4X enclosure, suitable for pollution degree 4
- When the housing is open: IP20, Type 1 enclosure, suitable for pollution degree 2

External WLAN antenna

IP67

Vibration and shock resistance

Sensor connection housing

- Sinusoidal vibration according to IEC 60068-2-6
 - 2 to 8.4 Hz, 7.5 mm peak
 - 8.4 to 2000 Hz, 2 g peak
- Broadband random vibration according to IEC 60068-2-64
 - 10 to 200 Hz, $0.01 \, q^2/Hz$
 - 200 to 2000 Hz, $0.003 \text{ g}^2/\text{Hz}$
 - Total: 2.70 g rms
- Half-sine shocks according to IEC 60068-2-27 6 ms 50 g
- Rough handling shocks according to IEC 60068-2-31

Mechanical load

Transmitter housing and sensor connection housing:

- Protect against mechanical effects, such as shock or impact.
- Do not use as a ladder or climbing aid.

Electromagnetic compatibility (EMC)

As per IEC/EN 61326

16.9 Process

Medium temperature range

0 to +80 °C (+32 to +176 °F)

Electrical conductivity

To ensure correct measurement, the electrical conductivity of the medium must not exceed the measuring range of the temperature-compensated electrical conductivity.

Measuring range for temperature-compensated electrical conductivity at 25 °C (77 °F)

Nominal diameter		Electrical conductivity
[mm]	[in]	[mS/cm]
50	2	0 to 100
80	3	0 to 85
100	4	0 to 50
150	6	0 to 20
200	8	0 to 14.5
250	10	0 to 14.5
300	12	0 to 14.5

Pressure/temperature ratings	For an overview of the pressure-temperature ratings for the process connections, so the Technical Information. $\Rightarrow riangleq $	
Flow velocity	If there is a risk of deposits building up in the measuring tube, as a result of grease example, a flow velocity of >2 m/s (6.5 ft/s) is recommended.

- Option **D** "Polycarbonate": plastic

Cable entries/cable glands

A002835

■ 36 Possible cable entries/cable glands

- 1 Female thread M20 \times 1.5
- 2 Cable gland M20 \times 1.5
- 3 Adapter for cable entry with female thread G $\frac{1}{2}$ or NPT $\frac{1}{2}$ "
- 4 Device plug

Cable entries and adapters	Material
Cable gland M20 × 1.5	Plastic
 Adapter for cable entry with female thread G ½" Adapter for cable entry with female thread NPT ½" 	Nickel-plated brass
Only available for certain device versions: Order code for "Transmitter housing": Option A "Aluminum, coated" Option D "Polycarbonate" Order code for "Sensor connection housing": Option A "Aluminum coated" Option L "Cast, stainless"	
 Adapter for cable entry with female thread G ½" Adapter for cable entry with female thread NPT ½" 	Stainless steel, 1.4404 (316L)
Only available for certain device versions: Order code for "Transmitter housing": Option L "Cast, stainless" Order code for "Sensor connection housing": Option L "Cast, stainless"	

Device plug

Electrical connection	Material
Plug M12x1	 Socket: Stainless steel, 1.4404 (316L) Contact housing: Polyamide Contacts: Gold-plated brass

Connecting cable

PVC cable with copper shield

Sensor connection housing

Aluminum, AlSi10Mg, coated

Measuring pipe

Stainless steel: 1.4408 as per DIN EN 10213 (CF3M as per ASME A351)

Antennas

■ Parts in contact with medium: ceramic

■ Antenna bracket: stainless steel: 1.4435 (316L)

Temperature sensor

Stainless steel: 1.4435 (316L)

Accessories

Protective cover

Stainless steel, 1.4404 (316L)

External WLAN antenna

• Antenna: ASA plastic (acrylonitrile styrene acrylate) and nickel-plated brass

Adapter: Stainless steel and nickel-plated brass

■ Cable: Polyethylene

■ Plug: Nickel-plated brass

■ Angle bracket: Stainless steel

Mounting kit

For installing the sensor

- Screws/mounting bolts, nuts and washers: stainless steel, 1.4301/304, 1.4306/1.4307
- Gaskets: aramid fibers, with NBR binder

Pipe mounting

For mounting the transmitter on a pipe

- Screws, threaded bolts, washers, nuts: stainless steel, 1.4301/304, 1.4306/1.4307
- Metal plates: stainless steel, 1.4301 (304)

16.11 Display and user interface

Operation concept

Operator-oriented menu structure for user-specific tasks

- Commissioning
- Operation
- Diagnosis
- Expert level

Quick and safe commissioning

- Guided menus ("Make-it-run" wizards) for applications
- Menu guidance with brief descriptions of the individual parameter functions
- Access to the device via web server
- WLAN access to the device via mobile handheld terminal, tablet or smart phone

Reliable operation

- Operation in local language
- Uniform operating philosophy applied to device and operating tools
- Guided menus (wizards) for adjusting the device using medium samples
- If replacing electronic modules, transfer the device configuration via the integrated memory (HistoROM backup) which contains the process and measuring device data and the event logbook. No need to reconfigure.

Efficient diagnostics increase measurement reliability

- Troubleshooting measures can be called up via the device and in the operating tools
- Diverse simulation options, logbook for events that occur and optional line recorder functions

Languages

Can be operated in the following languages:

- Via local operation
- English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Korean, Czech, Swedish
- Via web browser
 - English, German, French, Spanish, Italian, Dutch, Portuguese, Polish, Russian, Turkish, Chinese, Japanese, Czech, Swedish
- Via "FieldCare", "DeviceCare" operating tool: English, German, French, Spanish, Italian, Chinese, Japanese

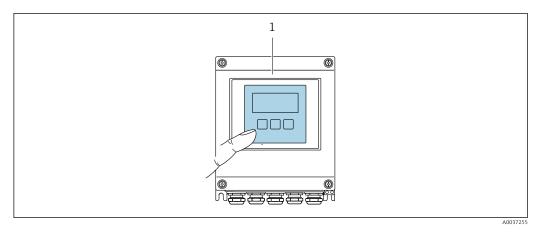

Local operation

Via display module

Equipment:

- Order code for "Display; operation", option F "4-line, illuminated, graphic display; touch control"
- Order code for "Display; operation", option G "4-line, illuminated, graphic display; touch control + WLAN"

■ 37 Operation with touch control

Display elements

- 4-line, illuminated, graphic display
- White background lighting; switches to red in event of device errors
- Format for displaying measured variables and status variables can be individually configured

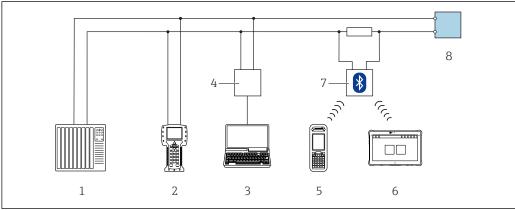

Operating elements

External operation via touch control (3 optical keys) without opening the housing: \boxdot , \Box ,

Remote operation

Via HART protocol

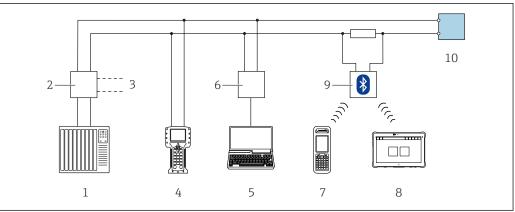

This communication interface is available in device versions with a HART output.

A0028747

■ 38 Options for remote operation via HART protocol (active)

- 1 Control system (e.g. PLC)
- 2 Field Communicator 475
- 3 Computer with web browser (e.g. Microsoft Edge) to access the integrated device web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 4 Commubox FXA195 (USB)
- 5 Field Xpert SFX350 or SFX370
- 6 Field Xpert SMT70
- 7 VIATOR Bluetooth modem with connecting cable
- 8 Transmitter

A002874

■ 39 Options for remote operation via HART protocol (passive)

- 1 Control system (e.g. PLC)
- 2 Transmitter power supply unit, e.g. RN221N (with communication resistor)
- 3 Connection for Commubox FXA195 and Field Communicator 475
- 4 Field Communicator 475
- 5 Computer with web browser (e.g. Microsoft Edge) to access the integrated device web server or computer with operating tool (e.g. FieldCare, DeviceCare, AMS Device Manager, SIMATIC PDM) with COM DTM "CDI Communication TCP/IP"
- 6 Commubox FXA195 (USB)
- 7 Field Xpert SFX350 or SFX370
- 8 Field Xpert SMT70
- 9 VIATOR Bluetooth modem with connecting cable
- 10 Transmitter

Service interface

Via service interface (CDI-RJ45)

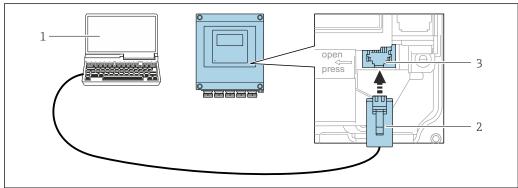

A point-to-point connection can be established to configure the device onsite. With the housing open, the connection is established directly via the service interface (CDI-RJ45) of the device.

An adapter for the RJ45 to the M12 plug is optionally available: Order code for "Accessories", option **NB**: "Adapter RJ45 M12 (service interface)"

The adapter connects the service interface (CDI-RJ45) to an M12 plug mounted in the cable entry. The connection to the service interface can be established via an M12 plug without opening the device.

Transmitter

A00291

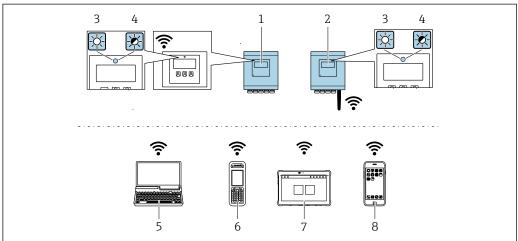

■ 40 Connection via service interface (CDI-RJ45)

- 1 Computer with web browser (e.g. Microsoft Edge) for accessing the integrated web server or with "FieldCare" operating tool, "DeviceCare" with COM DTM "CDI Communication TCP/IP"
- 2 Standard Ethernet connecting cable with RJ45 plug
- Service interface (CDI-RJ45) of the measuring device with access to the integrated Web server

Via WLAN interface

The optional WLAN interface is available on the following device version:

Order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN"

- 1 Transmitter with integrated WLAN antenna
- 2 Transmitter with external WLAN antenna
- 3 LED lit constantly: WLAN reception is enabled on measuring device
- 4 LED flashing: WLAN connection established between operating unit and measuring device
- Computer with WLAN interface and web browser (e.g. Microsoft Edge) for accessing the integrated device web server or with operating tool (e.g. FieldCare, DeviceCare)
- 6 Field Xpert SFX350 or SFX370
- 7 Field Xpert SMT70
- 8 Smartphone or tablet with WLAN interface and web browser (e.g. Microsoft Edge) for accessing the integrated device web server or with operating tool (e.g. FieldCare, DeviceCare)

Function	WLAN: IEEE 802.11 b/g (2.4 GHz) Access point with DHCP server (factory setting) Network
Encryption	WPA2-PSK AES-128 (in accordance with IEEE 802.11i)
Configurable WLAN channels	1 to 11
Degree of protection	IP67
Available antennas	 Internal antenna External antenna (optional) In the event of poor transmission/reception conditions at the place of installation. Available as an accessory . Only one antenna active in each case!
Range	 Internal antenna: typically 10 m (32 ft) External antenna: typically 50 m (164 ft)
Materials (external antenna)	 Antenna: ASA plastic (acrylonitrile-styrene-acrylic ester) and nickel-plated brass Adapter: Stainless steel and nickel-plated brass Cable: Polyethylene Plug: Nickel-plated brass Angle bracket: Stainless steel

Configuring the Internet protocol of the mobile terminal

NOTICE

If the WLAN connection is lost during the configuration, settings made may be lost.

▶ Make sure that the WLAN connection is not disconnected while configuring the device.

NOTICE

Note the following to avoid a network conflict:

- ► Avoid accessing the measuring device simultaneously from the same mobile terminal via the service interface (CDI-RJ45) and the WLAN interface.
- ▶ Only activate one service interface (CDI-RJ45 or WLAN interface).
- ► If simultaneous communication is necessary: configure different IP address ranges, e.g. 192.168.0.1 (WLAN interface) and 192.168.1.212 (CDI-RJ45 service interface).

Preparing the mobile terminal

► Enable WLAN on the mobile terminal.

Establishing a WLAN connection from the mobile terminal to the measuring device

- 1. In the WLAN settings of the mobile terminal: Select the measuring device using the SSID (e.g. EH__500_A802000).
- 2. If necessary, select the WPA2 encryption method.
- 3. Enter the password:

Serial number of the measuring device ex-works (e.g. L100A802000).

- The LED on the display module flashes. It is now possible to operate the measuring device with the web browser, FieldCare or DeviceCare.
- The serial number can be found on the nameplate.
- To ensure the safe and swift assignment of the WLAN network to the measuring point, it is advisable to change the SSID name. It should be possible to clearly assign the new SSID name to the measuring point (e.g. tag name) because it is displayed as the WLAN network.

Terminating the WLAN connection

► After configuring the device:

Terminate the WLAN connection between the mobile terminal and measuring device.

Supported operating tools

Different operating tools can be used for local or remote access to the measuring device. Depending on the operating tool used, access is possible with different operating units and via a variety of interfaces.

Supported operating tools	Operating unit	Interface	Additional information

Web server

With the integrated web server, the device can be operated and configured via a web browser service interface (CDI-RJ45) or WLAN interface. The structure of the operating menu is the same as for the local display. In addition to the measured values, status information on the device is displayed and can be used to monitor device health. Furthermore the device data can be managed and the network parameters can be configured.

A device that has a WLAN interface (can be ordered as an option) is required for the WLAN connection: order code for "Display; operation", option G "4-line, illuminated; touch control + WLAN". The device acts as an Access Point and enables communication by computer or a mobile handheld terminal.

Supported functions

Data exchange between the operating unit (such as a notebook, for example,) and measuring device:

- Upload the configuration from the measuring device (XML format, configuration backup)
- Save the configuration to the measuring device (XML format, restore configuration)
- Export event list (.csv file)
- Export parameter settings (.csv file or PDF file, document the measuring point configuration)
- Export the Heartbeat verification report (PDF file, only available with the Heartbeat Verification application package)

- Flash firmware version for device firmware upgrade, for example
- Download driver for system integration
- Visualize up to 1000 saved measured values (only available with the Extended HistoROM application package)

HistoROM data management

The measuring device features HistoROM data management. HistoROM data management comprises both the storage and import/export of key device and process data, making operation and servicing far more reliable, secure and efficient.

When the device is delivered, the factory settings of the configuration data are stored as a backup in the device memory. This memory can be overwritten with an updated data record, for example after commissioning.

Additional information on the data storage concept

There are different types of data storage units in which device data are stored and used by the device:

	HistoROM backup	T-DAT	S-DAT
Available data	 Event logbook, e.g. diagnostic events Parameter data record backup Device firmware package 	 Measured value logging ("Extended HistoROM" order option) Current parameter data record (used by firmware at run time) Indicator (minimum/maximum values) Totalizer value 	 Sensor data: e.g. nominal diameter Serial number Device configuration (e.g. SW options, fixed I/O or multi I/O)
Storage location	Fixed on the user interface PC board in the connection compartment	Can be plugged into the user interface PC board in the connection compartment	In the sensor plug in the transmitter neck part

Data backup

Automatic

- The most important device data (sensor and transmitter) are automatically saved in the DAT modules
- If the transmitter or measuring device is replaced: once the T-DAT containing the previous device data has been exchanged, the new measuring device is ready for operation again immediately without any errors
- If the sensor is replaced: once the sensor has been replaced, new sensor data are transferred from the S-DAT in the measuring device and the measuring device is ready for operation again immediately without any errors
- If exchanging the electronics module (e.g. I/O electronics module): Once the electronics module has been replaced, the software of the module is compared against the current device firmware. The module software is upgraded or downgraded where necessary. The electronics module is available for use immediately afterwards and no compatibility problems occur.

Manual

Additional parameter data record (complete parameter settings) in the integrated device memory HistoROM backup for:

- Data backup function
 Backup and subsequent restoration of a device configuration in the device memory
 HistoROM backup
- Data comparison function
 Comparison of the current device configuration with the device configuration saved in the device memory HistoROM backup

Data transmission

Manual

Transfer of a device configuration to another device using the export function of the specific operating tool, e.g. with FieldCare, DeviceCare or Web server: to duplicate the configuration or to store in an archive (e.g. for backup purposes)

Event list

Automatic

- Chronological display of up to 20 event messages in the events list
- If the Extended HistoROM application package (order option) is enabled: up to 100
 event messages are displayed in the events list along with a time stamp, plain text
 description and remedial measures
- The events list can be exported and displayed via a variety of interfaces and operating tools e.g. DeviceCare, FieldCare or Web server

Data logging

Manual

If the **Extended HistoROM** application package (order option) is enabled:

- Recording of 1 to 4 channels of up to 1000 measured values (up to 250 measured values per channel)
- User configurable recording interval
- Export the measured value log via a variety of interfaces and operating tools e.g. FieldCare, DeviceCare or web server

16.12 Certificates and approvals

Current certificates and approvals for the product are available at www.endress.com on the relevant product page:

- 1. Select the product using the filters and search field.
- 2. Open the product page.
- 3. Select **Downloads**.

CE mark

The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

UKCA marking

The device meets the legal requirements of the applicable UK regulations (Statutory Instruments). These are listed in the UKCA Declaration of Conformity along with the designated standards. By selecting the order option for UKCA marking, Endress+Hauser confirms a successful evaluation and testing of the device by affixing the UKCA mark.

Contact address Endress+Hauser UK:

Endress+Hauser Ltd.

Floats Road

Manchester M23 9NF

United Kingdom

www.uk.endress.com

RCM marking

The measuring system meets the EMC requirements of the "Australian Communications and Media Authority (ACMA)".

Ex-approval

The devices are certified for use in hazardous areas and the relevant safety instructions are provided in the separate "Safety Instructions" (XA) document. Reference is made to this document on the nameplate.

HART certification

HART interface

The measuring device is certified and registered by the FieldComm Group. The measuring system meets all the requirements of the following specifications:

- Certified according to HART
- The device can also be operated with certified devices of other manufacturers (interoperability)

Radio approval

The measuring device has radio approval.

For detailed information on the radio approval, see the Special Documentation → 🖺 193

Pressure Equipment Directive

Devices with pressure measuring device approval (Pressure Equipment Directive, PED Cat. I/II/III) are optionally available: order code for "Additional approval", option LK

Additional certification

Canadian Registration Number (CRN) approval

Devices with Canadian Registration Number (CRN) approval are optionally available: order code for "Additional approval", option LD.

Tests and certificates

- EN10204-3.1 Material certificate, wetted parts and sensor housing
- Pressure test, internal procedure, inspection certificate
- EN10204-2.1 Confirmation of compliance with the order and EN10204-2.2 test report

Requirements for field devices for standard applications

16.13 Application packages

Many different application packages are available to enhance the functionality of the device. Such packages might be needed to address safety aspects or specific application requirements.

The application packages can be ordered with the device or subsequently from Endress+Hauser. Detailed information on the order code in question is available from your local Endress+Hauser sales center or on the product page of the Endress+Hauser website: www.endress.com.

Diagnostic functionality

Order code for "Application package", option EA "Extended HistoROM"

Comprises extended functions concerning the event log and the activation of the measured value memory.

Event log:

Memory volume is extended from 20 message entries (standard version) to up to 100 entries.

Data logging (line recorder):

- Memory capacity for up to 1000 measured values is activated.
- 250 measured values can be output via each of the 4 memory channels. The recording interval can be defined and configured by the user.
- Measured value logs can be accessed via the local display or operating tool e.g. FieldCare, DeviceCare or Web server.

Heartbeat Technology

Order code for "Application package", option EB "Heartbeat Verification"

Heartbeat Verification

Meets the requirement for traceable verification in accordance with DIN ISO 9001:2008 Clause 7.6 a) "Control of monitoring and measuring equipment"

- Functional testing in the installed state without interrupting the process.
- Traceable verification results on request, including a report
- Simple testing process via local operation or other operating interfaces.
- Clear measuring point assessment (pass/fail) with high test coverage within the framework of manufacturer specifications.

The application package can also be ordered subsequently: order number DK4011.

Supplemental documentation 16.14

For an overview of the scope of the associated Technical Documentation, refer to the following:

- Device Viewer (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- Endress+Hauser Operations app: Enter serial number from nameplate or scan matrix code on nameplate.
