Technical Information Liquicap M FTI51

Capacitance

Point level switch for liquids

Application

For liquids that tend to form build-up. Interface detection of different liquids. Twopoint control (pump control) with just one process connection. Foam detection of conductive liquids.

- Process connections: flanges, threads, special hygienic process connections
- International explosion protection certificates, overfill prevention WHG, SIL, hygienic certificates, marine approval

Benefits

- Cost savings thanks to easy and fast commissioning as calibration takes place at the press of a button
- Reliable and safe measurement due to active build-up compensation
- Reliable and universal application thanks to wide range of certificates and approvals
- Short reaction time
- Material in contact with the process made of corrosion-resistant and FDA-listed materials
- Two-stage overvoltage protection
- No need for recalibration after replacing electronics

Function and system design

Measuring principle

The principle of capacitance point level detection is based on the change in capacitance of the capacitor due to the probe being covered by liquid. The probe and container wall (conductive material) form an electric capacitor. When the probe is in air (1), a certain low initial capacitance is measured. When the container is filled, the capacitance of the capacitor increases the more the probe is covered (2), (3). The point level switch switches when the capacitance C_S specified during calibration is reached. In addition, a probe with inactive length ensures that the effects of medium buildup or condensate near the process connection are avoided. Active buildup compensation compensates influences resulting from buildup on the probe.

A ground tube is used as a counter electrode for containers made of non-conductive materials.

- I Measuring principle of capacitance point level detection
- 1 The probe in the air
- 2 The probe covered by the liquid
- 3 The probe covered by the liquid (switching mode)
- R Conductivity of the liquid
- C Capacitance of the liquid
- C_A Initial capacitance when the probe is not covered
- *C_S Switching capacitance*
- ΔC Change in capacitance

The selected electronic insert of the probe determines the change in capacitance on how much the probe is covered and thereby allows precise switching at the calibrated point level.

Interface

Function

■ 2 The interface overview

1 Non-conductive medium < 1 μ S/cm

- 2 Emulsion
- 3 Conductive medium \geq 100 μ S/cm

A prior adjustment also ensures a certain and definite switch point even if the emulsion layer is of varying thickness.

Foam detection

Use partially insulated probes.

Point level switch

The compact measuring system consists of:

- the Liquicap M FTI51 point level switch
- an electronic insert FEI51, FEI52 or FEI54

Image: Probe as a point level switch

Pump control (Δs)

Only possible with a fully insulated probe.

The point level switch can also be used to control a pump, where the switch-on and switch-off point can be defined.

■ 5 Probe as a two-point control switch

 Δs Two-point control range

Point level switch and separate switching unit

Liquicap M FTI51 with electronic versions FEI53, FEI57S and FEI58 for connecting to a separate switching unit.

The complete measuring system consists of:

- the capacitance Liquicap M FTI51 point level switch
- an electronic insert FEI53,FEI57S and FEI58
- a transmitter power supply unit FTC325, FTL325N, FTL325P

6 Probe as a point level switch

 Δs Two-point control range. Only with FEI53

1 Transmitter power supply unit

Point level switch 8 to 16 mA

The complete measuring system consists of:

- the Liquicap M FTI51 point level switch
- the FEI55 electronic insert
- a transmitter power supply unit, e.g. RMA42

■ 7 Probe as a point level swich 8 to 16 mA

 Δs Two-point control range

- 1 Transmitter power supply unit
- 2 PLC

Electronic inserts

FEI51

- Two-wire AC connection:
- load switched directly into the power supply circuit via the thyristor
- point level adjustment at the touch of a button

FEI52

- 3-wire direct current version:
- switch the load via the transistor (PNP) and separate supply voltage connection
- point level adjustment at the touch of a button

FEI53

- 3-wire direct current version with 3 to 16 V signal output:
- for separate switching unit, Nivotester FTC325 3–WIRE
- self-test from the switching unit without changing levels
- point level adjustment at the touch of a button

FEI54

Universal current version with relay output:

- switch the loads via 2 floating changeover contacts (DPDT)
- point level adjustment at the touch of a button

FEI55

Signal transmission 8 to 16 on two-wire cabling:

- SIL2 approval for the hardware
- SIL3 approval for the software
- for separate switching unit (e.g. RMA42)
- point level adjustment at the touch of a button

FEI57S

PFM signal transmission (current pulses are superimposed on the supply current):

- for separate switching unit with PFM signal transmission e.g. Nivotester FTC325 PFM, FTL325P
 - self-test from the switching unit without changing levels
 - point level adjustment at the touch of a button
 - cyclical checking (function check) from the switching unit

	 FEI58 (NAMUR) Signal transmission H-L edge 2.2 to 3.5 mA or 0.6 to 1.0 mA as per IEC 60947-5-6 on two-wire cable: for a separate switching unit (e.g. Nivotester FTL325N) point level adjustment at the touch of a button connection cables and slaves tested at the touch of a button
System integration via	Vendor managed inventory
Fieldgate	The remote interrogation of tank or silo levels via Fieldgate enables suppliers of raw materials to gather information about the current inventories of their regular customers at any time and, for example, to take this into account in their own production planning. The Fieldgate monitors the configured point levels and automatically triggers the next order as required. Here, the range of possibilities ranges from simple requisitioning by e-mail through to fully automatic order processing by incorporating XML data into the planning systems on both sides.
	Remote maintenance of measuring systems
	Not only does Fieldgate transmit the current measured values, it also alerts the standby personnel responsible by e-mail or SMS as required. Fieldgate forwards the information transparently. In this way, all options of the operating software in question are available remotely. By using remote diagnosis and remote configuration some onsite service operations can be avoided and all others can at least be planned and prepared better.

Input

 $\Delta C_{\rm min}$

Measured variable	Measurement of cha depends on the level	nge in capacitance between probe rod and tank wall or ground of a liquid.	tube and
	Probe covered = high	capacitance	
	Probe not covered = 1	ow capacitance	
Measuring range	Measuring frequen 500 Hz	ry	
	Span • ΔC = 5 to 1600 pF • FEI58: ΔC = 5 to 50	00 pF	
	Final capacitance C _E = maximum 1600	pF	
	Adjustable initial ca range 1 - factory so C _A = 5 to 500 pF range 2 - not avail C _A = 5 to 1600 pF	pacitance etting able with FEI58	
	The minimum chan ≥ 5 pF	ge in capacitance for point level detection	
Minimum probe length for nonconductive media	The minimum probe	length can be calculated using the formula:	
< 1 µS/cm		$l_{\min} = \frac{\Delta C_{\min}}{C_{s} \cdot (\epsilon_{r} - 1)}$	
	L		A0040204
	l _{min}	minimum probe length	

5 pF

Cs	probe capacitance in air
ε _r	relative dielectric constant, e.g. for dried grain = 3.0

Measuring condition

- When installing in a nozzle, use inactive length L3.
 - Probes with active buildup compensation must be used for high-viscosity liquids that tend to form buildup.
 - Fully insulated rod probes must be used for pump control (Δ S operation). The switch-on and switch-off points are determined by the empty and full calibration. The maximum length depends on the probe used. A Ø16 mm (0.63 in) rod generates a capacitance of 380 pF/m (114 pF/ft) in a conductive liquid. With a maximum span of 1600 pF, this gives 1600 pF/380 pF per meter = 4 m (13 ft) of total length.
 - Use a ground tube for non-conductive media.

- Measuring condition. Unit of measurement mm (in)
- L1 Measuring range
- L3 Inactive length
- ΔS Two-points control range

The 0 % and 100 % calibration can be inverted.

Output

Switch behavior	Binary or Δs operation.	
	The pump control is not possible with FEI58.	
 Switch-on behaviour	When the power supply is switched on, the switching status of the outputs corresponds to the signal on the alarm.	
	The correct switch condition is reached after a maximum of 3 s.	
Fail-safe mode	Minimum and maximum quiescent current safety can be switched at the electronic insert ¹⁾ .	

¹⁾ For FEI53 and FEI57S only on the associated Nivotester: FTC325.

MIN

Minimum safety: the output switches safety-oriented when the probe is uncovered ²⁾ (signal on alarm).

MAX

Maximum safety: the output switches safety-oriented when the probe is covered ³ (signal on alarm).

Switching delay	FEI51, FEI52, FEI54, FEI55 Can be adjusted incrementally at the electronic insert: 0.3 to 10 s.
	FEI53, FEI57S Depends on the connected Nivotester (transmitter): FTC325.
	FEI58 Can be adjusted alternately at the electronic insert: 1 s or 5 s
Galvanic isolation	FEI51 and FEI52 between the probe and power supply
	FEI54 between the probe, power supply and load
	FEI53, FEI55, FEI57S and FEI58 see connected switching device ⁴⁾

Power supply

Electrical connectionDepending on explosion protection, the connection compartment is available in the following
variants:Standard protection, Ex ia protection
• polyester housing F16
• stainless steel housing F15
• aluminum housing F17
• aluminum housing F13 with gas-tight process seal
• stainless steel housing F27 with gas-tight process seal
• aluminum housing T13 with a separate connection compartmentEx d protection, Gas-tight process seal
• aluminum housing F13 with gas-tight process seal
• aluminum housing F13 with gas-tight process seal
• aluminum housing T13 with a separate connection compartment

Connector

For the version with a connector M12, the housing does not have to be opened for connecting the signal line.

PIN assignment for M12 connector

9 M12 connector with 2-wire-electronic insert FEI55, FEI57, FEI58, FEI57C

- 1 Positive potential
- 2 Not used
- 3 Negative potential
- 4 Ground
- 2) E.g. for dry running protection and pump protection.
- 3) E.g. for use with overfill protection.
- 4) Functional galvanic isolation in the electronic insert.

■ 10 M12 connector with 3-wire-electronic insert FEI52, FEI53

- 1 Positive potential
- 2 Not used
- 3 Negative potential
- 4 External load / signal

Cable entry

Cable gland

M20x1.5 for Ex d only cable entry M20 Two cable glands are included in scope of delivery.

Cable entry

- G½
- NPT¹/₂
- NPT³/₄
- M20 thread

Performance characteristics

Reference operating conditions	Room temperature: 20 °C (68 °F) ±5 °C (±8 °F)		
	Span: • FEI51, FEI52, FEI53, FEI54, FEI55, FEI57S ΔC = 5 to 1 600 pF • FEI58 (NAMUR) ΔC = 5 to 500 pF		
Switch-on behaviour	When the power supply is switched on, the switching status of the outputs corresponds to the signal on the alarm.		
	The correct switch condition is reached after a maximum of 3 s.		
Ambient temperature effect	Electronic insert < 0.06 % per 10 K related to the full-scale value		
	Separate housing capacitance change of connecting cable per meter 0.15 pF per 10 K		

Installation

Installation instructions	Mounting the sensor
	The Liquicap M FTI51 can be installed from the top or the bottom or from the side.
	 Make sure that: the probe is not installed in the area of the filling curtain the probe is not in contact with the container wall the distance from the container floor is ≥10 mm (0.39 in) multiple probes are mounted next to each other at the minimum distance between the probes of 500 mm (19.7 in) the probe is at a sufficient distance from the agitator if using the probe in agitator tanks the rod probes with a ground tube are used in the event of severe lateral load

☑ 11 Mounting the sensor in electrically conductive tanks. Unit of measurement mm (in)

■ 12 Mounting the sensor in nonconductive tanks. Unit of measurement mm (in)

Support with marine approval (GL)

Conductive or non-conductive support can be provided for fully insulated rod probes. Partially insulated rod probes may only be supported with insulation at the uninsulated end of the probe.

Rod probes with a diameter of 10 mm (0.39 in) and 16 mm (0.63 in), and a length \geq 1 m (3.3 ft) must be supported, see \rightarrow m 13, m 14 F

🖻 13 Rod support overview. Unit of measurement mm (in)

L/4 ¼ probe length

L/2 ½ probe length

L Active probe length

Example of calculating distances

- probe length L = 2 m (6.6 ft)
 L/4 = 500 mm (19.7 in)
- L/2 = 1 m (3.3 ft)

Measured from the end of the probe rod = 300 mm (11.8 in).

Probe with separate housing

■ 14 Connection of the probe and separate housing. Unit of measurement mm (in)

- A Explosive zone 1
- B Explosive zone 0
- L1 Rod length: max. 4 m (13 ft)
- L4 Cable length

The maximum cable length L4 and rod length L1 cannot exceed 10 m (33 ft).

The maximum cable length between the probe and separate housing is 6 m (20 ft). The required cable length must be indicated in the ordering process of a Liquicap M with separate housing.

If the cable connection has to be shortened or led through a wall, then it must be separated from the process connection.

Extension heights: separate housing

- a minimum bending radius of $r \ge 100 \text{ mm} (3.94 \text{ in})$
- Ø 10.5 mm (0.14 in)
- outer jacket made of silicone, notch resistance

■ 15 Housing side: wall mounting, pipe mounting, and sensor side. Unit of measurement mm (in)

Values of parameters ⁵):

Polyester housing (F16)

- B: 76 mm (2.99 in)
- H1: 172 mm (6.77 in)

Stainless steel housing (F15)

- B: 64 mm (2.52 in)
- H1: 166 mm (6.54 in)

Aluminum housing (F17)

- B: 65 mm (2.56 in)
- H1: 177 mm (6.97 in)

D and H5 parameter value

- Probes Ø10 mm (0.39 in) rod:
 - D: 38 mm (1.5 in)
 - H5: 66 mm (2.6 in)
- Probes Ø16 mm (0.63 in) rod, without fully insulated inactive length and threads G½",G¾", G1", NPT½",NPT¾", NPT1", Clamp 1", Clamp 1½", Universal Ø44 mm (1.73 in), flange < DN50, ANSI 2", 10K50:
 - D: 38 mm (1.5 in)
 - H5: 66 mm (2.6 in)
- Probes Ø16 mm (0.63 in) rod, without fully insulated inactive length and threads: G1½", NPT1½", Clamp 2", DIN 11851, flange ≥ DN50, ANSI 2", 10K50:
 - D: 50 mm (1.97 in)
 - H5: 89 mm (3.5 in)
- Probes Ø22 mm (0.87 in) rod, with fully insulated inactive length:
 - D: 38 mm (1.5 in)
 - H5: 89 mm (3.5 in)

H3 parameter value

H3 is the height of the cone head. The height H3 depends on the type of process connection.

Wall bracket

- The wall bracket is a part of the scope of delivery.
- To use the wall bracket as a drill template, the wall bracket must be first screwed to the separate housing.
- The distance between the holes is reduced by screwing it to the separate housing.

⁵⁾ See parameters on the drawings.

🖻 16 Wall bracket overview. Unit of measurement mm (in)

Environment

Ambient temperature range	 F16 housing: -40 to +70 °C (-40 to +158 °F) remaining housing: -50 to +70 °C (-58 to +158 °F) observe derating use a protective cover, when operating outdoors 	
Storage and transport	For storage and transportation, pack the device to protect it against impact. The original packing offers the best protection for this. The permitted storage temperature is -50 to $+85$ °C (-58 to $+185$ °F).	
Climate class	DIN EN 60068-2-38/IEC 68-2-38: Z/AD check	
Vibration resistance	DIN EN 60068-2-64/IEC 68-2-64: 20 to 2 000 Hz, 0.01 g ² /Hz	
Shock resistance	DIN EN 60068-2-27/IEC 68-2-27: 30 g acceleration	
Cleaning	Housing	
	Make sure that the cleaning agent used does not corrode the housing surface or the seals.	
	Probe	
	Depending on the application, buildup (contamination and soiling) can form on the probe rod. A high degree of material buildup can affect the measurement result. If the medium tends to create a high degree of buildup, regular cleaning is recommended. When cleaning, it is important to make sure that the insulation of the probe rod is not damaged. Make sure the material is resistant to used cleaning agent.	
Degree of protection	All protection degree regarding EN60529.	
	Type4X protection degree regarding NEMA250.	
	Polyester housing F16 Protection degree: IP66 IP67 Type4X Stainless steel housing F15 Protection degree: IP66 IP67 Type4X	

	Aluminum housing F17 Protection degree: • IP66 • IP67 • Type4X
	Aluminum housing F13 with gas-tight process seal Protection degree: IP66 IP68 ⁶⁾ Type4X
	Stainless steel housing F27 with gas-tight process seal Protection degree: IP66 IP67 IP68 ⁶⁾ Type4X
	Aluminum housing T13 with gas-tight process seal and separate connection compartment (Ex d) Protection degree: IP66 IP68 ⁶⁾ Type4X
	Separate housing Protection degree: IP66 IP68 ⁶⁾ Type4X
Electromagnetic compatibility (EMC)	Interference emission to EN 61326, Electrical Equipment Class B. Interference immunity to EN 61326, Annex A (Industrial) and NAMUR Recommendation NE 21 (EMC). A standard commercial instrument cable can be used.

Process

Process temperature range	 The following diagrams apply for: insulation PTFE PFA standard applications outside hazardous areas
	The temperature is restricted to $T_a -40 \degree C$ (-40 $\degree F$) when the polyester housing F16 is used or if additional option B is selected: free from paint-wetting impairment substances, only FTI51.

⁶⁾ Only with M20 cable entry or $G^{1/2}$ thread.

Probe with compact housing

🖻 17 Process pressure range diagram: probe with compact housing

T_a Ambient temperature

 T_p Process temperature

Probe with separate housing

🖻 18 Process pressure range diagram: probe with separate housing

- *T_a Ambient temperature*
- *T_p Process temperature*

1 The permitted ambient temperature at the separate housing is the same as indicated for the compact housing.

Influence of process temperature

Error in case of fully insulated probes typically 0.13 %/K related to the full-scale value.

Process pressure limits

The process pressure limits depends on process connections.

See also chapter "Process connections" → 🖺 26

Probe Ø10 mm (0.39 in) including insulation

-1 to 25 bar (-14.5 to 362.5 psi)

Probe Ø16 mm (0.63 in) including insulation

- -1 to 100 bar (-14.5 to 1450 psi)
- in regards to an inactive length, the maximum permitted process pressure is 63 bar (913.5 psi)
- for CRN approval and inactive length: the maximum permitted process pressure is 32 bar (464 psi)

Probe Ø22 mm (0.87 in) including insulation

-1 to 50 bar (-14.5 to 725 psi)

Refer to the following standards for the pressure values permitted at higher temperatures:

• EN 1092-1: 2005 Table, Appendix G2

With regard to its resistance and temperature property, the material 1.4435 is identical to 1.4404 (AISI 316L) which is grouped under 13E0 in EN 1092-1 Tab. 18. The chemical composition of the two materials can be identical.

- ASME B 16.5a 1998 Tab. 2-2.2 F316
- ASME B 16.5a 1998 Tab. 2.3.8 N10276
- JIS B 2220

The lowest value from the derating curves of the device and the selected flange applies.

Pressure and temperature derating

For process connections ¹/₂", ³/₄", 1", flanges <DN50, <ANSI 2", <JIS 10K (Ø 10 mm (0.39 in) rod) and process connections ³/₄", 1", flanges <DN50, <ANSI 2", <JIS 10K (Ø 16 mm (0.63 in) rod)

Rod insulation: PTFE, PFA

A0040709

Fully insulated rod probes

The active rod probe lenght L1 is always fully insulated.

Total length of probe from sealing surface: L = L1 + L3 (+ 125 mm (4.92 in) with active buildup compensation + H3 $^{7)}$)

Thickness of insulation:

1

- 10 mm (0.39 in) rod probe: 1 mm (0.04 in)
- 16 mm (0.63 in) rod probe: 2 mm (0.08 in)
- 22 mm (0.87 in) rod probe: 2 mm (0.08 in)

Length tolerances L1, L3:

- 1 m (3.3 ft): 0 to -5 mm (0 to -0.2 in)
- 1 to 3 m (3.3 to 9.8 ft): 0 to −10 mm (0 to −0.39 in)
- 3 to 6 m (9.8 to 20 ft): 0 to -20 mm (0 to -0.79 in)

- 31 The probe with G thread
- *L* The total length of the probe

Operability

2-wire AC electronic insert FEI51

Power supply

- Supply voltage: 19 to 253 V_{AC}
- Power consumption: < 1.5 W
- Residual current consumption: < 3.8 mA
- Short-circuit protection
- Overvoltage category: II

Electrical connection

Connect the electronic insert in series with an external load. -

- L1 L1 phase cable
- Neutral cable Ν
- *PE Grounding cable*
- External load R

Make sure that:

- the residual current consumption is in blocked state.
- for low voltage:
 - voltage drop across the load is such that the minimum terminal voltage at the electronic insert 19 V when blocked is not undershot
 - voltage drop across the electronics when switched through is observed (up to 12 V)
- a relay cannot de-energize with holding power below 1 mA⁹⁾

When selecting the relay, pay attention to the holding power and rated power.

							1	

Output signal

Output signal on power failure or in the event of damage to the sensor: < 3.8 mA

Connectable load

- For relays with a minimum holding power or rated power:
 - > 2.5 VA at 253 V_{AC} (10 mA)
 - > 0.5 VA at 24 V_{AC} (20 mA)
- Relays with a lower holding power or rated power can be operated by means of an RC module connected in parallel.
- For relays with a maximum holding power or rated power:
 - < 89 VA at 253 V_{AC}
 - < 8.4 VA at 24 V_{AC}
- Voltage drop across FEI51:
 - maximum 12 V
- Residual current with blocked thyristor: 3.8 mA
- Load switched directly into the power supply circuit via the thyristor.

 DC PNP electronic insert
 Power supply

 FEI52
 Supply voltage: 10 to 55 V_{DC}

 • Ripple:
 • maximum 1.7 V

 • 0 to 400 Hz
 • Current consumption: < 20 mA</td>

 • Power consumption without load: maximum 0.9 W

 • Power consumption with full load (350 mA): 1.6 W

9) If not: A resistor should be connected parallel to the relay (RC module available on request).

- Reverse polarity protection: yes
- Separation voltage: 3.7 kV
- Overvoltage category: II

Electrical connection

- L+ Power input +
- L- Power input -
- F Fuse 0.5 A
- R External load: $I_{max} = 350 \text{ mA } U_{max} = 55 \text{ V}_{DC}$

Preferably in conjunction with programmable logic controllers (PLC), DI modules in accordance with EN 61131-2.

Positive signal present at the switch output of the electronic system (PNP).

Output signal

Signal on alarm

Output signal on power failure or in the event of device failure: $I_R < 100 \; \mu A$

Connectable load

- Load switched via transistor and separate PNP connection: maximum 55 V
- Load current: maximum 350 mA cyclical overload and short-circuit protection
- Residual current: < 100 μ A with transistor blocked
- Capacitance load:
 - maximum 0.5 µF at 55 V
 - maximum 1 µF at 24 V
- Residual voltage: < 3 V for transistor switched through

3-wire electronic insert	
FEI53	

Power supply

- Supply voltage: 14.5 V_{DC}
- Current consumption: < 15 mA
- Power consumption: maximum 230 mW
- Reverse polarity protection: yes
- Separation voltage: 0.5 kV

Electrical connection

- 11 The negative terminal in Nivotester FTC325
- 12 The positive terminal in Nivotester FTC325
- S Signal terminal in Nivotester FTC325

3 to 12 V signal.

For connecting to the switching unit, Nivotester FTC325 3–WIRE from Endress+Hauser.

Switching between minimum and maximum Safety in the Nivotester FTC325 3-WIRE.

Point level adjustment directly at the Nivotester.

Output signal

Signal on alarm

Voltage at terminal 3 opposite terminal 1: < 2.7 V

Connectable load

- Floating relay contacts in the connected switching unit Nivotester FTC325 3-WIRE
- For the contact load capacity, refer to the technical data of the switching device

AC and DC with relay output	Power supply
electronic insert FEI54	 Supply voltage: 19 to 253 V_{AC}50 to 60 Hz 19 to 55 V_{DC} Power consumption: 1.6 W

- Reverse polarity protection: yes
- Separation voltage: 3.7 kV
- Overvoltage category: II

Electrical connection

-

Please note the different voltage ranges for AC and DC.

- F Fuse 0.5 A
- L1 Phase (AC) terminal
- L+ The positive (DC) terminal
- N Neutral (AC) terminal
- L- The negative (DC) terminal
- PE Grounding cable
- 1 Refer also to connectable load

When connecting an instrument with high inductance, provide a spark arrester to protect the relay contact. A fine-wire fuse (depending on the load connected) protects the relay contact on short-circuiting. Both relay contacts switch simultaneously.

Output signal

Signal on alarm

Output signal on power failure or in the event of device failure: relay de-energized

Connectable load

- Loads switched via 2 floating changeover contacts (DPDT)
- maximum values (AC):

 - $I_{max} = 6 A$ $= U_{max} = 253 V_{AC}$ $= P_{max} = 1500 VA at cos \phi = 1$ $= P_{max} = 750 VA at cos \phi > 0.7$
- maximum values (DC):
- I_{max} = 6 A at 30 V_{DC}
 I_{max} = 0.2 A at 125 V_{DC}
 The following applies when connecting a functional low-voltage circuit with double isolation as per IEC 1010:

sum of voltages of relay output and power supply maximum 300 V

SIL2 / SIL3 electronic insert	Power supply
FEI55	 Supply voltage: 11 to 36 V_{DC} Power consumption: < 600 mW Reverse polarity protection: yes Separation voltage: 0.5 kV

Electrical connection

Connect the insert to programmable logic controllers (PLC), AI modules 4 to 20 mA in accordance with EN 61131-2.

The point level signal is sent via an output signal jump from 8 to 16 mA.

			GN	GN	RD	GN	GN	YE	\bigcirc

		÷.	-)	•	-)	•	•	•	+ 2 ~8/16 mA
		L L	- `	•	-),	•	•	•	+ 2 < 3.6 mA

Output signal

Signal on alarm

Output signal on power failure or in the event of device failure: < 3.6 mA

Connectable load

- U:
 - = 11 to 36 V_{DC} for non-hazardous area and Ex ia = 14.4 to 30 V_{DC} for Ex d
- I_{max} = 16 mA

PFM electronic insert FEI57S Power supply

🖻 35 PFM signal with frequency 17 to 185 Hz

- Supply voltage: 9.5 to 12.5 V_{DC}
- Power consumption: < 150 mW
- Reverse polarity protection: yes
- Separation voltage: 0.5 kV

Electrical connection

11 The negative terminal in Nivotester FTC325

12 The positive terminal in Nivotester FTC325

For connecting to switching units Nivotester FTC325 and FTL325P from Endress+Hauser. PFM signal 17 to 185 Hz.

Switching between minimum and maximum safety in the Nivotester.

Output signal

PFM 60 to 185 Hz.

Signal on alarm

Connectable load

- Floating relay contacts in the connected switching unit Nivotester: FTC325 PFM
- For the contact load capacity, refer to the technical data of the switching device.

NAMUR electronic insert FEI58

Power consumption:

Power supply

- < 6 mW at I < 1 mA
- < 38 mW at I = 2.2 to 4 mA
- Interface connection data: IEC 60947-5-6

Electrical connection

In the case of Ex-d operation, the additional function can only be used if the housing is not exposed to an explosive atmosphere.

₪ 36 Terminals must be connected to isolating amplifier (NAMUR) IEC 60947-5-6

For connecting to isolating amplifiers as per NAMUR (IEC 60947-5-6), e.g. Nivotester FTL325N from Endress+Hauser. Change in output signal from high to low current in event of point level detection.

Additional function: Test key on the electronic insert. Pressing the key interrupts the connection to the isolating amplifier.

Connection to Multiplexer: Set 3 s as the cycle time at least.

Output signal

Signal on alarm

Output signal in the event of damage to the sensor: < 1.0 mA

Connectable load

- The technical data of the connected isolating amplifier as per IEC 60947-5-6 (NAMUR).
- Connection also to isolating amplifiers which have special safety circuits I > 3.0 mA.

Certificates and approvals

Current certificates and approvals for the product are available at www.endress.com on the relevant product page:

- 1. Select the product using the filters and search field.
- 2. Open the product page.
- 3. Select **Downloads**.

Other certificates and approvals for the product are available under https://www.endress.com-> Downloads.

Ordering information

Detailed ordering information is available from the nearest sales organization www.addresses.endress.com or in the Product Configurator under www.endress.com:

1. Select the product using the filters and search field.

2. Open the product page.

	The Configuration button opens the Product Configurator.
	 Product Configurator - the tool for individual product configuration Up-to-the-minute configuration data Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language Automatic verification of exclusion criteria Automatic creation of the order code and its breakdown in PDF or Excel output format Ability to order directly in the Endress+Hauser Online Shop
TAG	Measuring point (TAG)
	The device can be ordered with a tag name.
	Location of the tag name Select in the additional specification: Stainless steel wired-on tag plate Plastic film Plate provided RFID TAG RFID TAG + stainless steel wired-on tag plate RFID TAG + plastic film RFID TAG + plate provided
	Definition of tag name Specify in the additional specification: 3 lines with a maximum of 18 characters per line The specified tag name appears on the selected plate and/or on the RFID TAG.
	Visualization in SmartBlue app The first 32 characters of the tag name The tag name can always be changed specifically for the measuring point via Bluetooth.
Test reports, declarations and inspection certificates	All test reports, declarations and inspection certificates are provided electronically in the <i>W@M Device Viewer</i> : Enter the serial number from the nameplate (www.endress.com/deviceviewer)
	Product documentation on paper Test reports, declarations and inspection certificates in hard copy can optionally be ordered with feature 570 "Service", Version I7 "Product documentation on paper". The documents are then provided with the device upon delivery.
	Accessories
Protective cover	Protective cover for F13, F17 and F27 housing (without display) order number: 71040497
	Protective cover for F16 housing order number: 71127760

HAW562 For supply lines: BA00302K.
For signal lines: BA00303K.

Documentation

For an overview of the scope of the associated Technical Documentation, refer to the following: • Device Viewer (www.endress.com/deviceviewer): Enter the serial number from the

- nameplate
- *Endress+Hauser Operations app*: Enter serial number from nameplate or scan matrix code on nameplate.

Document function

The following documentation may be available depending on the version ordered:

Document type	Purpose and content of the document					
Technical Information (TI)	Planning aid for your device The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.					
Brief Operating Instructions (KA)	Guide that takes you quickly to the 1st measured value The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.					
Operating Instructions (BA)	Your reference document The Operating Instructions contain all the information that is required in the various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.					
Description of Device Parameters (GP)	Reference for your parameters The document provides a detailed explanation of each individual parameter. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.					
Safety Instructions (XA)	Depending on the approval, safety instructions for electrical equipment in hazardous areas are also supplied with the device. The Safety Instructions are an integral part of the Operating Instructions. Information on the Safety Instructions (XA) relevant to the device is provided on the nameplate.					
Supplementary device-dependent documentation (SD/FY)	Always comply strictly with the instructions in the relevant supplementary documentation. The supplementary documentation is an integral part of the device documentation.
