Brief Operating Instructions

Level switch for liquids in the food industry IO-Link

These Brief Operating Instructions are not a substitute for the Operating Instructions pertaining to the device. Detailed information can be found in the Operating Instructions and the additional documentation.

Available for all device versions via:

Products

- Internet: www.endress.com/deviceviewer
- Smartphone/tablet: Endress+Hauser Operations app

Basic safety instructions

Requirements for the personnel

The personnel must fulfill the following requirements to carry out their tasks, e.g. commissioning and maintenance:

- Trained specialists must have a qualification that is relevant to the specific function and task.
- Must be authorized by the plant owner/operator.
- Must be familiar with national regulations.
- Must have read and understood the instructions in the manual and supplementary documentation.
- Personnel must follow instructions and comply with general policies.

Intended use

The device described in this manual may be used only as a level switch for liquids. The device is suitable for use in areas with strict hygiene requirements. Incorrect use of the device may pose a hazard.

To ensure that the device remains in proper condition for the operation time:

- Use the device only for media to which the wetted materials have an adequate
- Comply with the limit values, see the "Technical data" section of the Operating Instructions

Operational safety

Risk of injury!

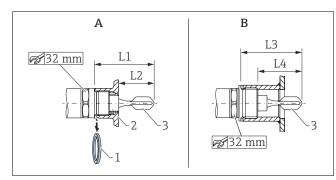

- Operate the device only if it is in proper technical condition, free from errors
- The operator is responsible for the interference-free operation of the device.

Mounting

The mounting process is illustrated in the following section on the basis of sample configurations. For detailed information, see the Operating

Mounting requirements

- Device with weld-in adapter
- Device in customer socket Flat seal
- Weld-in adapter
- Vibrating fork
- With G 1" thread: 66,4 mm (2,61 in) / With G 3/4" thread: 63,9 mm (2,52 in)
- With G 1" thread: 48,0 mm (1,99 in) / With G 3" thread: 38,0 mm (1,5 in) With G 1" thread: 66,4 mm (2,61 in)
- With G 1" thread:47,9 mm (1,8 in)

Installation is possible in any position in a vessel, pipe or tank under the following conditions:

- When installed horizontally in a vessel, the vibrating fork may be located in an installation socket only if liquids with low viscosity (< $2\,000$ mPa·s) are
- Minimum diameter of installation socket: 50 mm (2.0 in)
- Select a maximum length for the installation socket that enables the vibrating fork to project freely into the vessel.
- Ensure that there is sufficient distance between the expected buildup on the $% \left\{ 1\right\} =\left\{ 1\right$ tank wall and the vibrating fork. Recommended distance from wall \geq 10 mm (0.39 in).

Important process conditions

Pressure and temperature (maximum):

- With weld-in adapter
 - +25 bar (+362 psi) at +150 °C (+302 °F)
 - +40 bar (+580 psi) at +100 °C (+212 °F)
- In customer socket
- +40 bar (+580 psi) at +150 °C (+302 °F)

Up to 2 000 m (6 600 ft) above sea level

In the case of seals used at the customer site, pay attention to the temperature and pressure specifications.

Mounting the device

An open-ended wrench (AF 32) is required for mounting.

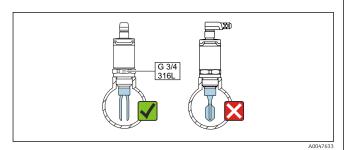

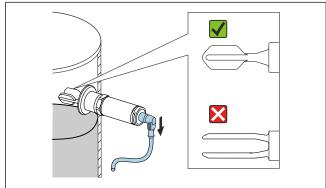

Aligning the vibrating fork

The material specification (e.g. 316L) or the thread designation (e.g. G 3/4) on the device are positioned in line with the opening of the vibrating fork and are therefore used for orientation.

In the pipe: align the opening of the vibrating fork parallel to the flow direction in such a way that the liquid can flow unhindered between the two vibrating fork elements.

- For horizontal installation in a vessel: align the vibrating fork in such a way that both vibrating fork elements are simultaneously covered with liquid.
- Fix the device with a maximum torque of 30 Nm (22 lbf ft). Also pay attention to the alignment of the vibrating fork when doing so.

Electrical connection

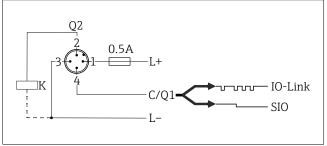

- The connection with the M12 plug with IO-Link communication is presented in the following section. For other connection options, see the Operating Instructions.
- For data and the wiring of the electronic version SIO mode, see the $\,$ Operating Instructions.
- A suitable circuit breaker must be provided for the device in accordance with IEC/EN 61010.

Power supply

Electronic version	Supply voltage	Power consumption	Current consumption
4-wire DC-PNP, IO-Link	18 to 30 V _{DC}	< 975 mW	< 15 mA

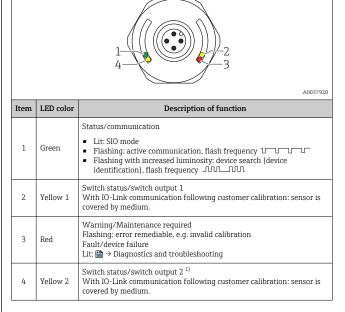

Reverse polarity	Integrated. In the event of reverse polarity, the device is	
protection	deactivated automatically.	

Connection with M12 plug

Pin 1 Supply voltage +

- Pin 2 1st switch output
- Pin 3
- Supply voltage -IO-Link communication or 2nd switch output (SIO mode) Pin 4

1) Activated only if both switch outputs are active.

On the metal housing cover (IP69), there is no external signaling via $\,$
