Brief Operating Instructions

Heat

Transmitter with ultrasonic time-of-flight sensor

These instructions are Brief Operating Instructions; they are not a substitute for the Operating Instructions pertaining to the device.

Transmitter Brief Operating Instructions
Contain information about the transmitter.

Sensor Brief Operating Instructions →  📖 3
1. Scan the QR code to view the Operations App.

3. Refer to the user manual for detailed instructions.
Brief Operating Instructions for the device
The device consists of a transmitter and a sensor.
The process of commissioning these two components is described in two separate manuals:
- Sensor Brief Operating Instructions
- Transmitter Brief Operating Instructions
Please refer to both Brief Operating Instructions when commissioning the device as the contents of the manuals complement one another:

Sensor Brief Operating Instructions
The Sensor Brief Operating Instructions are aimed at specialists with responsibility for installing the measuring device.
- Incoming acceptance and product identification
- Storage and transport
- Installation

Transmitter Brief Operating Instructions
The Transmitter Brief Operating Instructions are aimed at specialists with responsibility for commissioning, configuring and parameterizing the measuring device (until the first measured value).
- Product description
- Installation
- Electrical connection
- Operation options
- System integration
- Commissioning
- Diagnostic information

Additional device documentation
These Brief Operating Instructions are the Transmitter Brief Operating Instructions.
The "Sensor Brief Operating Instructions" are available via:
- Internet: www.endress.com/deviceviewer
- Smart phone/tablet: Endress+Hauser Operations App
Detailed information about the device can be found in the Operating Instructions and the other documentation:
- Internet: www.endress.com/deviceviewer
- Smart phone/tablet: Endress+Hauser Operations App

2  Basic safety instructions

2.1  Requirements for the personnel

The personnel must fulfill the following requirements for its tasks:

‣ Trained, qualified specialists must have a relevant qualification for this specific function and task.
‣ Are authorized by the plant owner/operator.
‣ Are familiar with federal/national regulations.
‣ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
‣ Follow instructions and comply with basic conditions.

2.2  Designated use

Application and media

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:

‣ Keep within the specified pressure and temperature range.
‣ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
‣ Based on the nameplate, check whether the ordered device is permitted for the intended use in the hazardous area (e.g. explosion protection, pressure vessel safety).
‣ Use the measuring device only for media to which the process-wetted materials are sufficiently resistant.
‣ If the measuring device is not operated at atmospheric temperature, compliance with the relevant basic conditions specified in the associated device documentation is absolutely essential: 'Documentation' section.
‣ Protect the measuring device permanently against corrosion from environmental influences.

Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

⚠️ WARNING

Danger of breakage due to corrosive or abrasive fluids!

‣ Verify the compatibility of the process fluid with the sensor material.
‣ Ensure the resistance of all fluid-wetted materials in the process.
‣ Keep within the specified pressure and temperature range.
NOTICE

Verification for borderline cases:
- For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability as minute changes in the temperature, concentration or level of contamination in the process can alter the corrosion resistance properties.

Residual risks

WARNING
The electronics and the medium may cause the surfaces to heat up. This presents a burn hazard!
- For elevated fluid temperatures, ensure protection against contact to prevent burns.

2.3 Workplace safety

For work on and with the device:
- Wear the required personal protective equipment according to federal/national regulations.

For welding work on the piping:
- Do not ground the welding unit via the measuring device.

If working on and with the device with wet hands:
- Due to the increased risk of electric shock, gloves must be worn.

2.4 Operational safety

Risk of injury.
- Operate the device in proper technical condition and fail-safe condition only.
- The operator is responsible for interference-free operation of the device.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

2.6 IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.
3  **Product description**

The device consists of a transmitter and a sensor.

The device is available as a compact version:
The transmitter and sensor form a mechanical unit.

For detailed information on the product description, see the Operating Instructions for the device

4  **Installation**

For detailed information about mounting the sensor, see the Sensor Brief Operating Instructions → 3

4.1  **Product identification**

Measuring devices for use subject to legal metrology controls are supplied with the relevant marking.
4.1.1 Nameplate

Sensor nameplate, subject to mandatory verification

1 Name of the sensor
2 Nominal diameter of sensor
3 K-factor
4 Software version
5 Accuracy class
6 Environmental class
7 Minimum flow rate
8 Permanent flow rate
9 Maximum flow rate
10 Medium temperature
11 Pulse value
12 Number of certificate

4.2 Sealing

It is possible to seal the measuring device. The system operator or the competent authority for legal metrology controls is responsible for sealing the device. The seal can be applied to the housing using a seal screw and the relevant bracket.
4.2.1 Sealing the transmitter

1. Pull the wire through the bore in the housing and through the screw head. In doing so, ensure that the wire is taut and there is no leeway for the screw to loosen.

2. Seal the wire ends.
5 Electrical connection

**NOTICE**
The measuring device does not have an internal circuit breaker.
- For this reason, assign the measuring device a switch or power-circuit breaker so that the power supply line can be easily disconnected from the mains.
- Although the measuring device is equipped with a fuse, additional overcurrent protection (maximum 16 A) should be integrated into the system installation.

5.1 Connection conditions

5.1.1 Required tools
- For cable entries: Use corresponding tools
- For securing clamp (on aluminum housing): Allen screw 3 mm
- For securing screw (for stainless steel housing): open-ended wrench 8 mm
- Wire stripper
- When using stranded cables: crimper for wire end ferrule

5.1.2 Requirements for connecting cable
The connecting cables provided by the customer must fulfill the following requirements.

Electrical safety
In accordance with applicable federal/national regulations.

Permitted temperature range
- The installation guidelines that apply in the country of installation must be observed.
- The cables must be suitable for the minimum and maximum temperatures to be expected.

Power supply cable
Standard installation cable is sufficient.

Signal cable
*Pulse/frequency output*
Standard installation cable is sufficient.

Cable diameter
- Cable glands supplied:
  M20 × 1.5 with cable Ø 6 to 12 mm (0.24 to 0.47 in)
- Spring terminals:
  Wire cross-sections 0.5 to 2.5 mm² (20 to 14 AWG)
5.1.3 Terminal assignment

3 Pulse/frequency output terminal assignment
1 Power supply: DC 24 V
2 Pulse/frequency output
5.1.4   Preparing the measuring device

NOTICE
Insufficient sealing of the housing!
Operational reliability of the measuring device could be compromised.
  ▶ Use suitable cable glands corresponding to the degree of protection.

1.   Remove dummy plug if present.
2.   If the measuring device is supplied without cable glands:
    Provide suitable cable gland for corresponding connecting cable.
3.   If the measuring device is supplied with cable glands:
    Observe requirements for connecting cables →  12.
5.2 Connecting the measuring device

**NOTICE**

Limitation of electrical safety due to incorrect connection!
- Have electrical connection work carried out by appropriately trained specialists only.
- Observe applicable federal/national installation codes and regulations.
- Comply with local workplace safety regulations.

5.2.1 Connecting the transmitter

![Diagram of transmitter](image)

A  **Compact, coated aluminum**
1  **Cable entry for signal transmission**
2  **Cable entry for supply voltage**
Device versions with connection example. Engineering unit mm (in)

1. Cable

- Connect the cable in accordance with the terminal assignment → 13.

5.2.2 Ensuring potential equalization

Prosonic Flow E

Requirements
Company-internal grounding concepts
5.3 Special connection instructions

5.3.1 Connection examples

Pulse/frequency output

![Connection diagram]

5.4 Ensuring the degree of protection

The measuring device fulfills all the requirements for the IP66/67 degree of protection, Type 4X enclosure.

To guarantee IP66/67 degree of protection, Type 4X enclosure, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly.
2. Dry, clean or replace the seals if necessary.
3. Tighten all housing screws and screw covers.
4. Firmly tighten the cable glands.
5. To ensure that moisture does not enter the cable entry:
Route the cable so that it loops down before the cable entry ("water trap").

6. Insert dummy plugs into unused cable entries.

5.5 Post-connection check

<table>

6 Operation options

6.1 Overview of operating options

1 Computer with "FieldCare" or "DeviceCare" operating tool via Commubox FXA291 and service interface
2 Automation system
6.2 Structure and function of the operating menu

6.2.1 Structure of the operating menu

- **Operating menu for operators and maintenances**
  - **Operator**
    - Language
    - Operation
  - **Maintenance**
    - Setup
    - Diagnostics

- **Operating menu for experts**
  - **Expert**

6.2.2 Operating philosophy

The individual parts of the operating menu are assigned to certain user roles (operator, maintenance etc.). Each user role contains typical tasks within the device lifecycle.

For detailed information on the operating philosophy, see the Operating Instructions for the device.

6.3 Access to the operating menu via the operating tool

The operating menu can also be accessed via the FieldCare and DeviceCare operating tools. See the Operating Instructions for the device.

7 System integration

For detailed information on system integration, see the Operating Instructions for the device.

- Overview of device description files:
  - Current version data for the device
  - Operating tools
8 Commissioning

8.1 Function check
Before commissioning the measuring device:

- Make sure that the post-installation and post-connection checks have been performed.

- "Post-installation check" checklist
- "Post-connection check" checklist → 18

8.2 Configuring the measuring device
The Setup menu with its submenus enable fast commissioning of the measuring device. The submenus contain all the parameters required for configuration, such as parameters for measurement or communication.

The submenus available in the particular device can vary on account of the device version (e.g. sensor).

<table>
<thead>
<tr>
<th>Submenu</th>

<td>Set the low flow cut off</td>
</tr>
</tbody>
</table>

9 Diagnostic information
Any faults detected by the measuring device are displayed as a diagnostic message in the operating tool once the connection has been established.

Remedial measures are provided for each diagnostic message to ensure that problems can be rectified quickly.
1 Status area with status signal
2 Diagnostic information
3 Remedy information with Service ID

► Perform the remedial measure displayed.
