Technical Information

**Micropilot FMR20**

HART

Free space radar
For bulk solids

Level measurement for bulk solids

Application

- Ingress protection: IP66/68 / NEMA 4X/6P
- Maximum measuring range up to 10 m (32.8 ft)
- Process temperature: –40 to 80 °C (–40 to 176 °F)
- Accuracy: up to ± 5 mm (0.2 in)

Your benefits

- Level measurement for solids
- Simple, safe and secure wireless remote access – ideal for installation in places difficult to reach
- Commissioning, operation and maintenance via free iOS / Android app SmartBlue – saves time and reduces costs
- Hermetically sealed wiring and fully potted electronics – eliminate dust ingress and allow operation under harsh environmental conditions

---

### Product life cycle

| Engineering | • Proven radar measuring technology  
• Level measurement for hazardous and non-hazardous areas  
• Wide range of installation possibilities and accessories  
• Highest degree of ingress protection  
• 2D/3D drawings  
• Spec Sheet Producer  
• Applicator Selection tool for selecting the perfect measurement solution

| Device not compatible with transmitters and sensors that use ultrasonic measurement technology (e.g. Prosonic FMU9x, FDU9x) |

| Procurement | • Global availability  
• Order code comprises a wide range of installation accessories and a local RIA15 process indicator for HART |

| Installation | • Rear thread for flexible installation  
• Slip-on flange for nozzle installation  
• Complete measuring point: including installation accessories, RIA15 and flooding protection tube |

| Commissioning | • Quick and easy setup with SmartBlue (app) and DeviceCare / FieldCare or RIA15  
• No additional tools or adapters required  
• Local languages (up to 15) |

| Operation | • Continuous self-monitoring  
• Diagnostics information according to NAMUR NE107 with remedial measures in the form of plain text messages  
• Signal curve via SmartBlue (app) and DeviceCare / FieldCare  
• Encrypted single point-to-point data transmission (tested by Fraunhofer AISEC) and password-protected communication via Bluetooth® wireless technology |

| Maintenance | • No maintenance required  
• Technical experts on call around the world |

| Retirement | • Environmentally responsible recycling concepts  
• RoHS compliance (restriction of certain hazardous substances), lead-free soldering of electronic components |

---

### Measuring principle

The Micropilot is a "downward-looking" measuring system that functions according to the time-of-flight (ToF) method. It measures the distance from the reference point \( R \) to the product surface. Radar impulses are emitted by an antenna, reflected off the product surface and received again by the radar system.
Setup parameters of the Micropilot

- **R**: Reference point of the measurement (lower edge of the flange or threaded connection)
- **E**: Empty calibration (= zero)
- **F**: Full calibration (= span)
- **D**: Measured distance
- **L**: Level \(L = E - D\)

### Input

The reflected radar pulses are received by the antenna and transmitted to the electronics. A microprocessor evaluates the signals and identifies the level echo caused by the reflection of the radar pulses at the product surface. This clear signal detection system benefits from over 30 years' experience with time-of-flight procedures.

The distance \(D\) to the product surface is proportional to the time of flight \(t\) of the pulse:

\[D = c \cdot \frac{t}{2},\]

where \(c\) is the speed of light.

Based on the known empty distance \(E\), the level \(L\) is calculated:

\[L = E - D\]

### Output

The Micropilot is calibrated by entering the empty distance \(E\) (= zero point) and the full distance \(F\) (= span).

- Current output: 4 to 20 mA
- Digital output (HART, SmartBlue): 0 to 10 m (0 to 32.8 ft)

### Input

**Measured variable**

The measured variable is the distance between the reference point and the product surface. The level is calculated based on \(E\), the empty distance entered.

**Measuring range**

Maximum measuring range

10 m (32.8 ft)

**Installation requirements**

- No agitators
- No buildup
- Relative dielectric constant \(\varepsilon_r > 2\)
  
  Contact Endress+Hauser for lower \(\varepsilon_r\) values
Usable measuring range
The usable measuring range depends on the medium’s reflective properties, the installation position and any possible interference reflections.

Optimum results are achieved with coarse-grained material and the use of the flooding protection tube.

Reduction of the max. possible measuring range by:
- Media with bad reflective properties (= low $\varepsilon_r$ value)
- Product cone
- Extremely loose surfaces of bulk solids, e.g. bulk solids with low bulk weight in the case of pneumatic filling.
- Formation of buildup, particularly of moist products.

For dielectric constants (DC values) of many media commonly used in various industries refer to:
- the Endress+Hauser DC manual (CP01076F)
- the Endress+Hauser "DC Values App" (available for Android and iOS)

Operating frequency
K-band (~ 26 GHz)

Transmission power
Mean power density in the direction of the beam
- At a distance of 1 m (3.3 ft): < 12 nW/cm$^2$
- At a distance of 5 m (16 ft): < 0.4 nW/cm$^2$

Output

Output signal
4 to 20 mA
An 4 to 20 mA interface is used for measured value output and to power to the device.

Digital output
HART®
- Signal encoding; FSK ±0.5 mA over current signal
- Data transmission rate; 1200 Bit/s

Bluetooth® wireless technology (available as an optional extra)
The device has a Bluetooth® wireless technology interface and can be operated and configured via this interface using the SmartBlue app.
- The range under reference conditions is 25 m (82 ft)
- Incorrect operation by unauthorized persons is prevented by means of encrypted communication and password encryption
- The Bluetooth® wireless technology interface can be deactivated

Signal on alarm
Depending on the interface, failure information is displayed as follows:
- Current output
  - Alarm current: 22.5 mA (in accordance with NAMUR recommendation NE 43)
  - Operating tool via digital communication (HART) or SmartBlue (app)
  - Status signal (as per NAMUR Recommendation NE 107)
  - Plain text display with remedial action

Linearization
The device’s linearization function allows the user to convert the measured value to any units of length, weight or volume. In DeviceCare and FieldCare, there are pre-programmed linearization tables for volume calculation in vessels.

Pre-programmed linearization curves
- Horizontal cylindrical tank
- Spherical tank
- Tank with pyramid bottom
- Tank with conical bottom
- Tank with flat bottom

Other linearization tables of up to 32 value pairs can be entered manually.

Connection of the device with HART communication, power source and 4 to 20 mA display

4  \[ Block\ diagram\ of\ HART\ connection \]

1  Device with HART communication
2  HART resistor
3  Power supply

![Diagram](image)

The HART communication resistor of 250 Ω in the signal line is always necessary in the case of a low-impedance power supply.

**The voltage drop to be taken into account is:**

Max. 6 V for 250 Ω communication resistor
HART device block diagram, connection with RIA15
FMR20 with RIA15 (incl. option for FMR20 basic configuration)

The RIA15 remote indicator can be ordered together with the device.

**Product structure, feature 620 "Accessory enclosed":**
- Option R4 "Remote indicator RIA15 non-hazardous area, field housing"
- Option R5 "Remote indicator RIA15 with explosion protection approval, field housing"

Alternatively available as an accessory, for details see Technical Information TI01043K and Operating Instructions BA01170K

**Terminal assignment RIA15**
- +
  - Positive connection, current measurement
- -
  - Negative connection, current measurement (without backlighting)
- LED
  - Negative connection, current measurement (with backlighting)
-
  Functional grounding: Terminal in housing

The RIA15 process indicator is loop-powered and does not require any external power supply.

**The voltage drop to be taken into account is:**
- ≤ 1 V in the standard version with 4 to 20 mA communication
- ≤ 1.9 V with HART communication
- and an additional 2.9 V if display light is used

**Connection of the HART device and RIA15 without backlighting**

![Block diagram of HART device with RIA15 process indicator without light](image1)

1. Device with HART communication
2. Power supply
3. HART resistor

**Connection of the HART device and RIA15 with backlighting**

![Block diagram of HART device with RIA15 process indicator with light](image2)

1. Device with HART communication
2. Power supply
3. HART resistor
**Block diagram of HART device, RIA15 with installed HART communication resistor module**

The HART communication module for installation in the RIA15 can be ordered together with the device.

**Product structure, feature 620 "Accessory enclosed":**

Option R6 'HART communication resistor hazardous / non-hazardous area'

**The voltage drop to be taken into account is:**

Max. 7 V

Alternatively available as an accessory, for details see Technical Information TI01043K and Operating Instructions BA01170K

**Connection of the HART communication resistor module, RIA15 without backlighting**

**Cable specification**

Unshielded cable, wire cross-section 0.75 mm²
- Resistant to UV and weather conditions as per ISO 4892-2
- Flame resistance according to IEC 60332-1-2

As per IEC/EN 60079-11 section 10.9, the cable is designed for a tensile strength of 30 N (6.74 lbf) (over a period of 1 h).

The device is supplied with 5 m (16 ft) cable length as standard. Cable lengths 10 m (33 ft) and 20 m (66 ft) are optionally available.

Lengths can be selected by the user up to an overall length of 300 m (980 ft) and are available by the meter (order option "B") or foot (order option "A").

**Overvoltage protection**

The device is equipped with integrated overvoltage protection.
Performance characteristics

Reference operating conditions
- Temperature = +24 °C (+75 °F) ±5 °C (±9 °F)
- Pressure = 960 mbar abs. (14 psia) ±100 mbar (±1.45 psi)
- Humidity = 60 % ±15 %
- Reflector: metal plate with diameter ≥ 1 m (40 in)
- No major interference reflections inside the signal beam

Maximum measured error
Typical data under reference operating conditions: DIN EN 61298-2, percentage values in relation to the span.

Output, digital
(HART, SmartBlue (app))
- Sum of non-linearity, non-repeatability and hysteresis: ±5 mm (±0.2 in)
- Offset/zero point: ±4 mm (±0.16 in)

Output, analog
Only relevant for 4-20mA current output; add error of the analog value to the digital value
- Sum of non-linearity, non-repeatability and hysteresis: ±0.02 %
- Offset/zero point: ±0.03 %

Differing values in near-range applications

</tr>
</tbody>
</table>

Maximum measured error in near-range applications; values for standard version

\[ \Delta \] Maximum measured error
\[ R \] Reference point of the distance measurement
\[ D \] Distance from reference point of antenna

Measured value resolution
Dead band as per EN61298-2:
- Digital: 1 mm (0.04 in)
- Analog: 4 µA

Response time
The response time can be configured. The following step response times apply (in accordance with DIN EN 61298-2) when damping is switched off:

- Tank height
  <10 m (32.8 ft)

- Sampling rate
  1 s⁻¹
Response time

<3 s

In accordance with DIN EN 61298-2, the step response time is the time following an abrupt change in the input signal up until the changed output signal has adopted 90% of the steady-state value for the first time.

Influence of ambient temperature

The measurements are carried out in accordance with EN 61298-3

- Digital (HART, Bluetooth® wireless technology):
  Standard version: average $T_C = \pm 3$ mm ($\pm 0.12$ in)/10 K
- Analog (current output):
  - Zero point (4 mA): average $T_K = 0.02$ %/10 K
  - Span (20 mA): average $T_K = 0.05$ %/10 K

</tbody>
</table>

Caution!

- The sensor cables are not designed as supporting cables. Do not use them for suspension purposes.
- Always operate the device in a vertical position in free-space applications.
Position for installation on a vessel

- If possible install the sensor so that its lower edge is inside the vessel.
- Recommended distance A wall - nozzle outer edge: ~ \( \frac{1}{6} \) of the vessel diameter. Under no circumstances should the device be mounted closer than 15 cm (5.91 in) to the vessel wall.
- Do not install the sensor in the middle of the vessel.
- Avoid measurements through the filling curtain.
- Avoid internal fixtures such as limit switches.
- No signals are evaluated within the Blocking distance (BD). It can therefore be used to suppress interference signals (e.g. the effects of condensate) in the vicinity of the antenna. An automatic Blocking distance of at least 0.1 m (0.33 ft) is configured as standard. However, this can be overwritten manually (0 m (0 ft) is also permitted).
  Automatic calculation:
  \[
  \text{Blocking distance} = \text{Empty calibration} \cdot \text{Full calibration} - 0.2 \text{ m (0.656 ft)}.
  \]
  Each time a new entry is made in the Empty calibration parameter or Full calibration parameter, the Blocking distance parameter is recalculated automatically using this formula. If the result of the calculation is a value <0.1 m (0.33 ft), the Blocking distance of 0.1 m (0.33 ft) will continue to be used.

Nozzle installation

The antenna should project out of the nozzle for optimum measurement. The interior of the nozzle must be smooth and may not contain any edges or welded joints. The edge of the nozzle should be rounded if possible.
The maximum nozzle length $L$ depends on the nozzle diameter $D$.

Please note the limits for the diameter and length of the nozzle.

**80 mm (3 in) antenna, installation inside nozzle**
- $D$: min. 120 mm (4.72 in)
- $L$: max. 205 mm (8.07 in) + $D \times 4.5$

**80 mm (3 in) antenna, installation outside nozzle**
- $D$: min. 80 mm (3 in)
- $L$: max. $D \times 4.5$

**Device alignment for installation on a vessel**
- Align the antenna so that it is perpendicular to the product surface
- Align the eyelet with lug towards the vessel wall as well as possible

![Diagram showing device alignment for installation on a vessel]
14  Aligning the sensor with the product cone

A  Installation with adjustable flange seal
B  Installation with FAU40 alignment unit

To avoid disturbance echoes, use metal plates installed at an angle (where necessary)

Beam angle

15  Relationship between beam angle $\alpha$, distance $D$ and beamwidth diameter $W$

The beam angle is defined as the angle $\alpha$ at which the power energy of the radar waves reaches half the value of the maximum power density (3dB width). Microwaves are also emitted outside the signal beam and can be reflected off interfering installations.

Beam diameter $W$ as a function of beam angle $\alpha$ and distance $D$.

80 mm (3 in) antenna with or without a flooding protection tube, $\alpha$ 12 “

$W = D \times 0.21$
Measurement in plastic vessels

If the outer wall of the vessel is made of a non-conductive material (e.g. GFR), microwaves can also be reflected by interfering installations outside of the vessel.

Optimization options
- **Adjustable flange seal**: The device can be aligned with the product surface using the adjustable flange seal.
- **Alignment unit**: In the case of devices with an alignment unit, the sensor can be optimally aligned with the conditions at the vessel. The maximum angle $\beta$ is $\pm 15^\circ$.

  The purpose of sensor alignment is primarily to:
  - Prevent interference reflections
  - Increase the maximum possible measuring range in conical outlets
  - Please ensure there are no interfering installations made of a conductive material in the signal beam (see the beam angle section for information on calculating the beamwidth diameter).

For more information: contact the Endress+Hauser sales organization.

Weather protection cover
A weather protection cover is recommended for outdoor use.

The weather protection cover can be ordered as an accessory or together with the device via the product structure "Accessory enclosed".
The sensor is not completely covered by the weather protection cover.

**Free-field measurement with flooding protection tube**

In free-field installations and/or in applications where there is a risk of flooding, the flooding protection tube must be used.

The flooding protection tube can be ordered as an accessory or together with the device via the product structure 'Accessory enclosed'.

The tube is screwed directly onto the sensor and seals off the system by means of an O-ring making it air-tight. In the event of flooding, the empty space that develops in the tube ensures a defined detection of the maximum level directly at the end of the tube. Due to the fact that the Blocking distance is inside the tube, multiple echoes are not analyzed.
Installation with mounting bracket, adjustable

The mounting bracket can be ordered as an accessory or together with the device via the product structure "Accessory enclosed".

- Wall or ceiling installation is possible.
- Using the mounting bracket, position the antenna so that it is perpendicular to the product surface.

**NOTICE**

There is no conductive connection between the mounting bracket and transmitter housing. Electrostatic charging possible.
- Integrate the mounting bracket in the local potential equalization system.

Cantilever installation, with pivot

The cantilever, wall bracket and mounting frame are available as accessories.

Installation with the horizontal mounting bracket

The mounting bracket can be ordered together with the device via the product structure "Accessory enclosed".
Installation with the horizontal mounting bracket (without flooding protection tube)

The pivotable mounting bracket can be ordered together with the device via the product structure "Accessory enclosed".

Installation, pivotable and adjustable

A Cantilever with wall bracket
B Cantilever pivotable and adjustable (to align the device with the medium to be measured)

FAU40 alignment unit

An angle of inclination of up to 15° in all directions can be set for the antenna axis using the FAU40 alignment unit. The alignment unit is used to optimally direct the radar beam at the bulk solids.

The FAU40 alignment unit is available as an accessory.
**Adjustable flange seal**

The radar beam can be optimally directed at the bulk solids using the adjustable flange seal. The adjustable flange seal can be ordered together with the device via the product structure "Accessory enclosed".

![Micropilot FMR20 with adjustable flange seal](image)

### Environment

**Ambient temperature range**

Measuring device: –40 to +80 °C (–40 to +176 °F)

*It may not be possible to use the Bluetooth connection at ambient temperatures > 60 °C (140 °F).*

Outdoor operation in strong sunlight:
- Mount the device in the shade.
- Avoid direct sunlight, particularly in warm climatic regions.
- Use a weather protection cover.

**Storage temperature**

–40 to +80 °C (–40 to +176 °F)

**Climate class**

DIN EN 60068-2-38 (test Z/AD)

**Operating altitude as per IEC 61010-1 Ed.3**

Generally up to 2 000 m (6 600 ft) above sea level.

**Degree of protection**

Tested acc. to:
- IP66, NEMA 4X
- IP68, NEMA 6P (24 h at 1.83 m (6.00 ft) 1.83 m under water)

**Vibration resistance**

DIN EN 60068-2-64/IEC 60068-2-64: 20 to 2 000 Hz, 1 (m/s²)²/Hz

**Electromagnetic compatibility (EMC)**

Electromagnetic compatibility in accordance with all of the relevant requirements outlined in the EN 61000 series and NAMUR Recommendation EMC (NE 21). Details are provided in the Declaration of Conformity (www.endress.com/downloads).
Process

Process temperature range
–40 to +80 °C (–40 to +176 °F)

Process pressure range, threaded process connection
- $p_{\text{gauge}} = –1$ to 3 bar (–14.5 to 43.5 psi)
- $p_{\text{abs}} < 4$ bar (58 psi)

Process pressure range, UNI flange process connection
- $p_{\text{gauge}} = –1$ to 1 bar (–14.5 to 14.5 psi)
- $p_{\text{abs}} < 2$ bar (29 psi)

The pressure range may be further restricted in the event of a CRN approval.

Dielectric constant
For solids
- $\varepsilon_r \geq 2$
- Contact Endress+Hauser for lower $\varepsilon_r$ values

For dielectric constants (DC values) of many media commonly used in various industries refer to:
- the Endress+Hauser DC manual (CP01076F)
- the Endress+Hauser "DC Values App" (available for Android and iOS)
Mechanical construction

Dimensions

80 mm (3 in) Antenna

A cable gland
B FNPT ½" conduit
80 mm (3 in) antenna with flooding protection tube

The flooding protection tube, metalized PBT-PC, can be ordered together with the device via the product structure 'Accessory enclosed'.
80 mm (3 in) antenna with slip-on flange 3”/DN80

The slip-on flange 3”/DN80, PVDF, can be ordered together with the device via the product structure "Accessory enclosed".

80 mm (3 in) antenna with slip-on flange 4”/DN100

The slip-on flange 4”/DN100, PVDF, can be ordered together with the device via the product structure "Accessory enclosed".
80 mm (3 in) antenna with slip-on flange 6"/DN150

The slip-on flange 6"/DN150, PVDF, can be ordered together with the device via the product structure 'Accessory enclosed'.

Counter nut for process connection, rear side

- The counter nut with seal (EPDM) is included in the scope of supply
- Material: PA66

**Weight**

<table>
<thead>
<tr>

</table>
Materials

Overview of materials

80 mm (3 in) antenna
1 Sensor housing; PVDF
2 Seal; EPDM
3 Process connection, rear side; PVDF
4 Cable gland; PA
5 Conduit adapter; CuZn nickel-plated
6 O-ring; EPDM
7 Counter nut; PA6.6
8 Design ring; PBT-PC
9 Process connection, front side; PVDF

Connecting cable
Available cable length: 5 to 300 m (16 to 980 ft)
Material: PVC

Operability

Operating concept
- 4 to 20 mA, HART
- Menu guidance with brief explanations of the individual parameter functions in the operating tool
- Optional: SmartBlue (app) via Bluetooth® wireless technology

Operation via Bluetooth® wireless technology

Possibilities for remote operation via Bluetooth® wireless technology
1 Transmitter power supply unit
2 Smartphone / tablet with SmartBlue (app)
3 Transmitter with Bluetooth® wireless technology
Via HART protocol

Options for remote operation via HART protocol

1. PLC (programmable logic controller)
2. Transmitter power supply unit, e.g. RN221N (with communication resistor)
3. Connection for Commubox FXA195
4. Loop-powered RIA15 process indicator
5. Commubox FXA195 (USB)
6. Computer with operating tool (FieldCare, DeviceCare)
7. Smartphone / tablet with SmartBlue (app)
8. Transmitter with Bluetooth® wireless technology

Certificates and approvals

The availability of approvals and certificates can be called up daily via the Product Configurator.

CE mark

The measuring system meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

The manufacturer confirms successful testing of the device by affixing to it the CE mark.

RoHS

The measuring system complies with the substance restrictions of the Restriction on Hazardous Substances Directive 2011/65/EU (RoHS 2).

EAC conformity

The measuring system meets the legal requirements of the applicable EAC guidelines. These are listed in the corresponding EAC Declaration of Conformity together with the standards applied.

The manufacturer confirms successful testing of the device by affixing to it the EAC mark.

RCM marking

The supplied product or measuring system meets the ACMA (Australian Communications and Media Authority) requirements for network integrity, interoperability, performance characteristics as well as health and safety regulations. Here, especially the regulatory arrangements for electromagnetic compatibility are met. The products bear the RCM marking on the nameplate.

Approvals

- Non-hazardous area
- ATEX II 1 G Ex ia IIC T4 Ga
- ATEX II 1/2 G Ex ia IIC T4 Ga/Gb
- CSA C/US General Purpose
- CSA C/US IS Cl.I Div.1 Gr.A-D, AEx ia / Ex ia T4
- CSA C/US Cl.I Div.2 Gr.A-D, T4
Additional safety instructions must be followed for use in hazardous areas. Please refer to the separate "Safety Instructions" (XA) document included in the delivery. Reference to the applicable XA can be found on the nameplate.

### Explosion-protected smartphones and tablets

Only mobile end devices with Ex approval may be used in hazardous areas.

### Pressure equipment with allowable pressure \( \leq 200 \text{ bar (2 900 psi)} \)

Pressure instruments with a flange and threaded boss that do not have a pressurized housing do not fall within the scope of the Pressure Equipment Directive, irrespective of the maximum allowable pressure.

**Reasons:**

According to Article 2, point 5 of EU Directive 2014/68/EU, pressure accessories are defined as 'devices with an operational function and having pressure-bearing housings'.

If a pressure instrument does not have a pressure-bearing housing (no identifiable pressure chamber of its own), there is no pressure accessory present within the meaning of the Directive.

### EN 302729-1/2 radio standard

The devices comply with the LPR (Level Probing Radar) radio standard EN 302729-1/2 and are approved for unrestricted use inside and outside of closed vessels in countries of the EU and EFTA. As a prerequisite, the countries in question must have already implemented this standard.

The following countries are those that have currently implemented the standard:

- Belgium, Bulgaria, Germany, Denmark, Estonia, France, Greece, UK, Ireland, Iceland, Italy, Liechtenstein, Lithuania, Latvia, Malta, The Netherlands, Norway, Austria, Poland, Portugal, Romania, Sweden, Switzerland, Slovakia, Spain, Czech Republic and Cyprus.

Implementation is still underway in all of the countries not listed.

Please note the following for operation of the devices outside of closed vessels:

1. The device must be mounted in accordance with the instructions in the 'Installation' section.
2. Installation must be carried out by properly trained, expert staff.
3. The device antenna must be installed in a fixed location pointing vertically downwards.
4. The installation site must be located at a distance of 4 km from the astronomy stations listed below or otherwise approval must be provided by the relevant authority. If the device is installed at a distance of 4 to 40 km from one of the listed stations, it must not be installed at a height of more than 15 m (49 ft) above the ground.

As a general rule, the requirements outlined in EN 302729-1/2 must be observed.

**FCC / Industry Canada**

This device complies with Part 15 of the FCC Rules [and with Industry Canada license-exempt RSS standard(s)]. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible de compromettre le fonctionnement.

[|Any|] Changes or modifications made to this equipment not expressly approved by Endress+Hauser may void the FCC authorization to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected
- Consult the dealer or an experienced radio/TV technician for help

The installation of the LPR/TLPR device shall be done by trained installers, in strict compliance with the manufacturer’s instructions.

The use of this device is on a “no-interference, no-protection” basis. That is, the user shall accept operations of high-powered radar in the same frequency band which may interfere with or damage this device. However, devices found to interfere with primary licensing operations will be required to be removed at the user’s expense.

Only for usage without the accessory “flooding protection tube”, i.e. NOT in the free-field: This device shall be installed and operated in a completely enclosed container to prevent RF emissions, which can otherwise interfere with aeronautical navigation.

### Ordering information

Detailed ordering information is available from your nearest sales organization [www.addresses.endress.com](http://www.addresses.endress.com) or in the Product Configurator under [www.endress.com](http://www.endress.com):

1. Click Corporate
2. Select the country
3. Click Products
4. Select the product using the filters and search field
5. Open the product page

The Configuration button opens the Product Configurator.

#### Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

**RIA15 in the field housing**

The RIA15 remote indicator can be ordered together with the device. Product structure, feature 620 "Accessories enclosed":
- Option R4 'Remote indicator RIA15 non-hazardous area, field housing'
- Option R5 'Remote indicator RIA15 Ex= explosion protection approval, field housing'

Field housing material: Plastic (PBT with steel fibers, antistatic)

Other housing versions are available via the RIA15 product structure.

Alternatively available as an accessory, for details see Technical Information TI01043K and Operating Instructions BA01170K

**HART communication resistor**

A communication resistor is required for HART communication. If this is not already present (e.g. in the power supply RMA, RN221N, RNS221, ...), it can be ordered with the device via the product structure, feature 620 "Accessories enclosed": option R6 'HART communication resistor hazardous / non-hazardous area'.

Alternatively, it is available as an accessory; order number 'RK01-BC'

Alternatively available as an accessory, for details see Technical Information TI01043K and Operating Instructions BA01170K

The HART communication resistor is specially designed for use with the RIA15 and can be attached easily.
1. Disconnect plug-in terminal block.
2. Insert the terminal block into the slot provided on the HART communication resistor module.
3. Insert the HART communication resistor in the slot in the housing.

### System components

**Memograph M graphic data manager**  
The Memograph M graphic data manager provides information on all the relevant process variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on an SD card or USB stick.

- For details, see Technical Information TI01180R and Operating Instructions BA01338R

**RNS221**  
Supply unit for powering two 2-wire measuring devices. Bidirectional communication is possible via the HART communication jacks.

- For details, see Technical Information TI00081R and Brief Operating Instructions KA00110R

**RN221N**  
Active barrier with power supply for safe separation of 4 to 20 mA standard signal circuits. Bidirectional HART communication is possible via integrated communication jacks (R=250 Ω).

- For details, see Technical Information TI073R and Operating Instructions BA202R

**RMA42**  
Digital process transmitter for monitoring and displaying analog measured values.

- For details, see Technical Information TI00150R and Operating Instructions BA00287R

**RIA452**  
RIA452 digital process indicator, panel mounted housing for monitoring and displaying analog measured values with batch and pump control functions and flow calculation.

- For details, see Technical Information TI113R and Operating Instructions BA00254R

**HAW562**  
Overvoltage protection device for DIN rail as per IEC 60715, suitable for protecting electronics against destruction as a result of overvoltage.

- For details, see Technical Information TI01012K

### Supplementary documentation

The following documentation types are available in the Downloads section of the Endress+Hauser website (www.endress.com/downloads):

- For an overview of the scope of the associated Technical Documentation, refer to the following:
  - W@M Device Viewer (www.endress.com/deviceviewer): Enter the serial number from nameplate
  - Endress+Hauser Operations App: Enter the serial number from the nameplate or scan the 2D matrix code (QR code) on the nameplate

**Brief Operating Instructions (KA)**  
**Guide that takes you quickly to the 1st measured value**  
The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

**Operating Instructions (BA)**  
**Your reference guide**  
These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

**Safety Instructions (XA)**  
Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

- The nameplate indicates the Safety Instructions (XA) that are relevant to the device.
