2 Basic safety instructions

2.1 Requirements for the personnel
- Installation, commissioning, operation and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- The technical personnel must be authorized by the plant operator to carry out the specified activities.
- The electrical connection may be performed only by an electrical technician.
- The technical personnel must have read and understood these Operating Instructions and must follow the instructions contained therein.
- Faults at the measuring point may only be rectified by authorized and specially trained personnel.

Repairs not described in the Operating Instructions provided must be carried out only directly at the manufacturer's site or by the service organization.

2.2 Intended use
The Cleanfit CPA875 retractable assembly, which can be manually or pneumatically operated, is designed for the installation of sensors in vessels and pipes. Thanks to its design, it can be operated in pressurized systems (→  67).

Use of the device for any purpose other than that described, poses a threat to the safety of people and of the entire measuring system and is therefore not permitted. The manufacturer is not liable for damage caused by improper or non-designated use.

2.2.1 Use in hazardous areas
As a manufacturer of products used for analysis, we declare that the product supplied has undergone an ignition risk assessment and may be used in hazardous atmospheres once the following conditions for safe usage have been met:
- The protective ring is labeled as follows: “CAUTION, DANGER DUE TO ELECTROSTATIC CHARGES, CLEAN USING ONLY AN ANTISTATIC CLOTH”. This instruction must be observed.
- Assemblies comprising wetted parts made of non-conductive material, must not be used in potentially explosive atmospheres.
- The compressed air supply, sensors and limit position switches must comply with the applicable guidelines and standards for use in hazardous atmospheres, be labeled with the degree of protection and meet the requirements of the relevant range of application. The ambient temperatures must be observed. The limit position switch used in the product complies with this requirement.
- Ensure that the compressed air does not contain a potentially explosive atmosphere.
- Please ensure that movements associated with the retraction and insertion of the sensor do not damage the connection.
- The product must be incorporated into the local potential equalization system.
- The Operating Instructions for the product and in particular the conditions for safe usage must be read, understood and implemented.

The product does not need to be labeled with the degree of protection.

2.3 Workplace safety
As the user, you are responsible for complying with the following safety conditions:
- Installation guidelines
- Local standards and regulations
- Regulations for explosion protection
2.4 Operational safety

Before commissioning the entire measuring point:

1. Verify that all connections are correct.
2. Ensure that electrical cables and hose connections are undamaged.
3. Do not operate damaged products, and protect them against unintentional operation.
4. Label damaged products as defective.

During operation:

- If faults cannot be rectified:
  products must be taken out of service and protected against unintentional operation.

2.5 Product safety

2.5.1 State-of-the-art technology

The product is designed to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. The relevant regulations and international standards have been observed.
3 Product description

3.1 Product design

A0046119

1 Assembly with pneumatic drive (without cover)

3.1.1 Operating principle

A0029435

2 Sealing system, assembly in service position

1 Leakage hole
2 Rinse chamber, inlet
3 Process seal, seal for DN25 with 1 x O-ring
4 Rinse chamber
5 Rinse chamber, outlet
6 Seal, rinse chamber (1 x O-ring)
7 Seal drive (1 x O-ring)
Process seal

Moving sealing rings, only refers to the double chamber

A  Service position
B  Measuring position
1  "Moving" seals in the double chamber
2  Chamber volume in service position
3  Molded seal
4  Chamber volume in measuring position
4  Incoming acceptance and product identification

4.1  Incoming acceptance

1. Verify that the packaging is undamaged.
   Notify the supplier of any damage to the packaging.
   Keep the damaged packaging until the issue has been resolved.

2. Verify that the contents are undamaged.
   Notify the supplier of any damage to the delivery contents.
   Keep the damaged goods until the issue has been resolved.

3. Check that the delivery is complete and nothing is missing.
   Compare the shipping documents with your order.

4. Pack the product for storage and transportation in such a way that it is protected against impact and moisture.
   The original packaging offers the best protection.
   Make sure to comply with the permitted ambient conditions.

If you have any questions, please contact your supplier or your local Sales Center.

4.2  Scope of delivery

The scope of delivery comprises:
- Assembly in the version ordered
- Operating Instructions
- Adapter for plug-in connector, 6 mm (0.24 in) to 4 mm (0.16 in) (outer diameter)
- Optional accessories ordered
4.3  Product identification

4.3.1  Nameplate
The nameplate provides you with the following information on your device:
• Manufacturer identification
• Order code
• Extended order code
• Serial number
• Ambient and process conditions
• Safety information and warnings

▶ Compare the information on the nameplate with the order.

4.3.2  Product identification
The order code and serial number of your product can be found in the following locations:
• On the nameplate
• In the delivery papers

Obtaining information on the product
2. Call up the site search (magnifying glass).
3. Enter a valid serial number.
4. Search.
   ✷ The product structure is displayed in a popup window.
5. Click on the product image in the popup window.
   ✷ A new window (Device Viewer) opens. All of the information relating to your device is displayed in this window as well as the product documentation.

Dieselstraße 24
D-70839 Gerlingen
5 Mounting

5.1 Mounting requirements

5.1.1 Information regarding hygiene-compliant installation according to EHEDG

Easily cleanable installation of equipment according to the criteria of the EHEDG must be free of dead legs. If a dead leg is unavoidable, it shall be kept as short as possible. Under no circumstances shall the length of a dead leg $L$ exceed the pipe's inner diameter $D$ minus the equipment's enveloping diameter $d$. The condition $L \leq D - d$ applies. Furthermore, the dead leg must be self-draining, so neither product nor process fluids are retained therein. Within tank installations, the cleaning device must be located so that it directly flushes the dead leg.

For further reference, see the recommendations concerning hygienic seals and installations in EHEDG Doc. 10 and the Position Paper: “Easy cleanable Pipe couplings and Process connections”.

5.1.2 Information regarding hygiene-compliant installation according to 3-A

For 3-A-compliant installation, please observe the following:

1. After mounting the device, ensure its hygienic integrity. For this purpose, the assembly must be installed in such a way that the leakage holes are located at the lowest point on the device.

2. Use 3-A-compliant process connections.

The leakage paths serve as an indicator for damaged seals. If medium escapes at one of the leakage paths, the assembly must be serviced, the seals must be replaced and the assembly must be cleaned thoroughly.
Due to the operating principle, there is a connection between the process and the service chamber during insertion/retraction. This serves a number of purposes:

- **Prevention of contamination of the process**: due to the pressure in the process, small volumes of process medium are flushed into the service chamber, thereby preventing any negative interference with the process.
- **Implementation of the sealing water function**: in applications with media that cake easily, suitable media (e.g. condensate) can be flushed into the process to extend the service life of the seals.

1. Connect the rinsing chamber connections accordingly.
2. Include the assembly in the maintenance concept.
3. Clean the assembly regularly.

### 5.1.3 Orientation

The assembly is designed for installation on vessels and pipes. Suitable process connections must be available for this.

**NOTICE**

**Frost damage to the assembly**

- If used outdoors, ensure that water cannot penetrate the drive.

The assembly is designed in such a way that there are no restrictions with regard to the orientation.

- The sensor that is used can restrict the orientation.
The assembly can be installed in a way that it is self-draining.

5 Installation angle for self-draining
1 Rinse
2 Rinse
3 Drain

Install the assembly at an angle of 0° to 15° in relation to the horizontal.

The service chambers are now self-draining.

Ensure compliance with the Operating Instructions of the sensor installed.
5.1.4 Dimensions

Short version

![Diagram showing dimensions of Mounting Cleanfit CPA875](image)

- **Dimensions for short version (36 mm stroke) with manual drive in service position in mm (in)**

- **XP**  Height of particular process connection (see table below)

- **XA**  Necessary mounting distance for sensor replacement = 425 mm (16.73")
7 Dimensions for short version (36 mm stroke) with pneumatic drive in service position in mm (in)

XP Height of particular process connection (see table below)
XA Necessary mounting distance for sensor replacement = 425 mm (16.73")
Long version

- **XP**: Height of particular process connection (see table below)
- **XA**: Necessary mounting distance for sensor replacement

Dimensions for long version (78 mm stroke) with pneumatic drive in service position in mm (in)
Dimensions for long version (78 mm stroke) with manual drive in service position in mm (in)

XP  Height of particular process connection (see table below)
XA  Necessary mounting distance for sensor replacement

A free path length XA above the drive is required to replace the sensors:
XA is 440 mm (17.32") for 225 mm sensors
XA is 610 mm (24.02") for 360 mm sensors
Double chamber

A free path length $X_A$ above the drive is required to replace the sensors:

- $X_A$ is 440 mm (17.32") for 225 mm sensors
- $X_A$ is 610 mm (24.02") for 360 mm sensors

### Dimensions of double chamber in mm (in)

- 117 mm (4.61"")
- 68 mm (2.68"")
- 65 mm (2.55"")
- 285 mm (11.21"")
- 148 mm (5.82"")
- 34 mm (1.34"")
- 10 Dimensions of double chamber in mm (in)

$XP$ Height of particular process connection (see table below)

$XA$ Necessary mounting distance for sensor replacement

7. Control signals (electric/pneumatic)
8. Limit position switch relay signal
11/12 Inlet/outlet of “inner” service chamber
21/22 Inlet/outlet of “front” service chamber
31/32 Drive control

Installation recommendation

The process seal seals the process in the end position. The assembly is open to the process during insertion/retraction; the rinse connections must either be pipe-fitted or sealed.

The connection between the service chamber and the process is open during movement; the sealing water function can be used as a result. The rinse chamber outlet must be blocked (e.g., with a shutoff valve) to implement the sealing water function.
Example of a sealing system via a bypass.

1. Check valve
2. Valve open/closed, sealing water function
3. Wastewater
4. Shut-off valve open/closed (optional)
5. Water/cleaning agent

The seals must be checked and serviced regularly. Therefore measures must be taken to separate the assembly from the process, e.g., by installing a bypass.

**NOTICE**

There is a connection between the process and the service chamber during insertion/retraction.

Contamination of the assembly.

- Include the assembly in the cleaning concept.
- Ensure regular cleaning.
Installing/removing the assembly from the process

**WARNING**

Risk of injury from high pressure, high temperature or chemical hazards if process medium escapes.

- Wear protective gloves, protective goggles and protective clothing.
- Mount the assembly only if vessels or pipes are empty and unpressurized.

Prior to installation, check the flange seal between the flanges.

1. Move the assembly to the service position.
   \[\text{The triangle position marking is visible (→ 19).}\]
2. Secure the assembly on the tank or piping via the process connection.
3. Follow the instructions in the next section to connect pipes for compressed air and rinse water (for the relevant assembly version).
Mounting

Pneumatic connection for automatic operation
Prerequisites:
- Air pressure 4 to 7 bar (absolute pressure) (58 to 102 psi)
- Compressed air quality in accordance with ISO 8573-1:2001
  Quality class 3.3.3 or 3.4.3
- Solids class 3 (max. 5 μm, max. 5 mg/m³, contamination with particles)
- Water content for temperatures ≥ 15 °C: Class 4 pressure condensation point 3 °C or lower
- Water content for temperatures of 5 to 15 °C: Class 3 pressure condensation point -20 °C or lower
- Oil content: Class 3 (max. 1 mg/m³)
- Air temperature: 5 °C or higher
- No continuous air consumption
- Minimum nominal diameter of air pipes: 2 mm (0.08")

Connection: Push connector M5, hose 4/2 mm OD/ID (adapter for 6/4 mm OD/ID enclosed)

NOTICE
Air pressure too high
Damage to seals.
- Connect a pressure-reducing valve upstream if the air pressure is likely to rise to above 7 bar (absolute pressure) (102 psi) (even short pressure surges).

1 Rinse connection (inlet)
2 Automatic limit position lock, process
3 Connection for limit position switch
4 Automatic limit position lock, service
5 Sensor head
6 Fastening ring for cover
7 Pneumatic connection (move to measuring position)
8 Pneumatic connection (move to service position)
9 Rinse connection (outlet)

Use a pneumatic pilot valve (4/2-way or 5/2-way) to insert/retract the assembly. Connect the two inputs of the assembly.
Connection 1 is attached to the compressed air supply.
Connections 2 and 4 are used to attach to the pneumatic drive.
Connection 3 and, if present, connection 5 are not attached; they are used to vent the drive.
Rinse connections

The service chamber connections of the sterile CPA875 retractable assembly make it possible to rinse the chamber (including the sensor) with water or cleaning solution or to sterilize it with steam (SIP) at a maximum pressure of 6 bar (87 psi).

The retractable assembly can be selected with a single-chamber system or double-chamber system. If the double-chamber system is used, all four connections must be connected to inlet and outlet lines.

Install a pressure-reducing valve upstream if there is the possibility that water pressures can exceed the specified sealing water pressure (8 bar (116 psi) or 16 bar (232 psi)).

**NOTICE**

**Pressure difference too high between process and wastewater system or if rinse connections are not properly connected.**

Damage to seals

- Close rinse connections.
- Pipe-fit rinse connections.
- Use sealing water function.

Assignment of rinse connections for double chamber

![Diagram](image)

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
</tr>
</thead>
<tbody>
<tr>

<td>1</td>
</tr>
</tbody>
</table>

**Assignment of rinse inlet and outlet**

A  *'Clean' function: connection and water/cleaner flow direction*

B  *Aeration/de-aeration when moving from the service position to the measuring position*

C  *Aeration/de-aeration when moving from the measuring position to the service position*

1  *Service chamber inlet*

2  *Service chamber outlet*

In the "Cleaning" state (A), the inlet and outlet of the "inner" service chamber are used as follows (the internal volume of the "front" service chamber does not change, and so no pressure compensation measures are required here):

- Depending on the cleaning method, cleaning agent and purge gas are supplied via the inlet (1).
- These media are removed via the outlet (2).

In the "Move from service position to measuring position" state (B), the pressure conditions in the service chamber must be balanced when moving. The inlet and outlet of the service chamber are assigned as follows:

- The air is removed via the inlet (1) (inlet is open).
- Air is supplied via the outlet (2).
In the "Move from measuring position to service position" state (C), the pressure conditions in the service chamber must be balanced when moving. The inlet and outlet of the service chamber are assigned as follows:
- The air is supplied via the inlet (1).
- The air is removed via the outlet (2) (outlet is open).

The drive must be controlled simultaneously with the control of the inlets and outlets of the "inner service chamber".

The controller for the inlets, outlets and the drive is installed at the place of installation. It is not included in the assembly delivery.

Assignment of rinse connections for single chamber

![Diagram](A0043570)

- Connection and water/cleaner flow direction
- "Clean" function: connection and water/cleaner flow direction
- 1 Service chamber inlet
- 2 Service chamber outlet

In the "Cleaning" state (A), the inlet and outlet of the service chamber are used as follows (the internal volume of the service chamber does not change, and so no pressure compensation measures are required here):
- Depending on the cleaning method, cleaning agent is supplied via the inlet (1).
- These media are removed via the outlet (2).
Connecting the limit position switches

With limit position detection, you can notify a system located downstream (transmitter, switching amplifier, output interface terminal) whether the assembly is in the measuring or service position (in the case of manual drive, only the measuring position is queried).

The limit position switches must be connected to output interface terminals (can be ordered as accessories) to enable power supply.

The assembly can be ordered directly with limit position detection, or it can be retrofitted at a later stage. The cable for the limit position switches must be ordered as an accessory.

Feedback devices

The feedback devices are intrinsically safe. The approval for the feedback devices is no longer valid if they are not installed or connected correctly.

1. Ensure full compliance with manufacturer documentation.
2. Connect the feedback devices in accordance with the relevant instructions.

Switching element function: NAMUR NC contact (inductive)
Switching distance: 1.5 mm (0.06 “)
Nominal voltage: 8 V DC
Switching frequency: 0 to 5000 Hz
Housing material: Stainless steel

25 Inductive limit position switches
A Limit position switch, service position
B Limit position switch, measuring position
C Connector, M12, solder side (inside of assembly)
D Coding
E Connector, pin side (outside of assembly)
26 Connecting cable for limit position switch on transmitter, switching amplifier, output interface terminal etc.

1 Measuring position  
2 Measuring position  
3 Service position  
4 Service position

Only pins 1 and 2 are assigned for manually activated assemblies with one switch (measuring position).

If the feedback devices are operated with a 24 V DC power supply, e.g. at Liquiline CM442/CM444/CM448, NAMUR terminals must be used. → 60

NAMUR terminal (8 V DC) and connecting cable with blue marking available as accessories.

A Movement starts  
B Limit position reached
5.2.2 Sensor installation

Preparing the sensor and assembly

**NOTICE**
Danger of medium penetrating if a defective sensor is installed.
- Inspect the sensor and use a new, intact sensor if necessary.

![Sensor installation diagram]

**28 Sensor installation**

1. **Thrust collar with O-ring**

1. Remove protective cap from sensor. Make sure that the O-ring and thrust collar (→ 28, item 1) are provided.
2. To aid installation, immerse the sensor shaft in water.
3. Move the assembly to the service position.

3-A variants

Leakage path at sensor screw-in for 3-A variants
- Replace the pressure ring of the sensor with the enclosed slotted pressure ring.

Installing and removing sensors

**WARNING**
Risk resulting from temperature, pressure and chemical composition!
- Before removing, clean and rinse the sensor adequately in the rinse chamber.
- Check process seals. (There can be no leakage of medium from the rinse chamber in limit position when rinsing is disabled)
Sensor installation options

1. Sensor adapter
2. Retraction pipe
A. Sensor adapter is on top of the retraction pipe
B. Sensor adapter is below the retraction pipe (not visible)

Depending on the assembly version, the sensor adapter is either visible (pos. A) or installed inside the retraction pipe where it is not visible (pos. B). As a result, the procedures for installing and removing the sensors differ as follows:
Installing and removing sensors if the sensor adapter is visible (item A)

Gel and KCl sensors can be installed in this version.

Install the sensor as follows:

1. Remove the cover (→ 30, item 2) (only possible if the assembly is in the service position).
2. Remove the yellow dummy plug (item 3).
3. Use the open-ended wrench (item 1) to screw in the sensor (item 4) in place of the dummy plug and hand-tighten (3 Nm (2.2 lbf ft)).
4. Secure the open-ended wrench back in the cover.
5. Mount the cover on the assembly. When doing so, guide the measuring cable through the cable grommet (top of cover).

Always mount the cover before you move the assembly to the measuring position. The cover cannot be removed in the measuring position and therefore prevents the removal of the sensor.
Installing and removing sensors if the sensor adapter is not visible (item B)

Gel sensors can be installed in this version. To install KCl sensors, you will need a "Gel - KCl adapter".

Install the sensor as follows:

1. Remove the cover (→ 31, item 2) (only possible if the assembly is in the service position).
2. Unscrew the retraction pipe (item 5) in a counterclockwise direction.
3. Remove the yellow dummy plug (item 3).
4. Use the open-ended wrench (item 1) to screw in the sensor (item 4) in place of the dummy plug and hand-tighten (3 Nm (2.2 lbf ft)).
5. Screw in the retraction pipe again.
6. Secure the open-ended wrench back in the cover.
7. Mount the cover on the assembly. When doing so, guide the measuring cable through the cable grommet (top of cover).

Always mount the cover before you move the assembly to the measuring position. The cover cannot be removed in the measuring position and therefore prevents the removal of the sensor.

**Installation of 360 mm gel and KCL sensors with the "Gel - KCl adapter"**

Gel sensors can be installed in this version. To install KCl sensors, you will need a "Gel - KCl adapter".

Install the sensor as follows:

1. Remove the cover (→ 32, item 2) (only possible if the assembly is in the service position).
2. Unscrew the retraction pipe (item 5) (in a counterclockwise direction).
3. Turn the lock nut (item 7) on the "Gel - KCl adapter" (item 6) as far as it will go in an upward direction.
4. Remove the yellow dummy plug (item 3).

5. Screw in the “Gel - KCl adapter” (item 6) in place of the dummy plug and hand-tighten (3 Nm (2.2 lbf ft)).

6. Hand-tighten the lock nut in a clockwise direction, and then use an open-ended wrench (AF 24 mm) to tighten it by ¼ turn.

7. Screw in the retraction pipe again.

8. Screw in the sensor (→ 33, item 4) using the open-ended wrench (item 1) and hand-tighten (3 Nm (2.2 lbf ft)).

9. Secure the open-ended wrench back in the cover.

10. Mount the cover on the assembly. When doing so, guide the measuring cable through the cable grommet (top of cover).

Always mount the cover before moving the assembly to measuring position. The cover cannot be removed in the measuring position and therefore prevents the removal of the sensor.
5.3  Post-mounting check
Put the sensor into operation only if you can answer "yes" to the following questions:
- Are the sensor and cable undamaged?
- Is the orientation correct?
- Is the sensor installed in an assembly and not suspended from the cable?

5.3.1  Checking that the sealing system is intact
Check the seals after mounting or removing the sensor and when maintenance work is performed. At regular intervals.

1. Move the assembly to the service position
2. If provided, open the ball valve of the service chamber outlet
   It is normal for a slight amount of medium to escape (connection between the service chamber and process during insertion/retraction).
3. If provided, rinse the service chamber/sensor.
4. Observe the outlet. No more medium should escape after a short period of time.
5. If medium continues to escape, the sealing system is damaged; take the measuring point out of service and perform maintenance on the assembly.
6 Commissioning

6.1 Preliminaries

Before commissioning, ensure that:
- all seals are correctly seated (on the assembly and on the process connection).
- the sensor is correctly installed and connected.
- the water connection at the rinse connections is correct (if present) or the rinse connections are sealed.

⚠️ WARNING
Risk of injury from high pressure, high temperature or chemical hazards if process medium escapes.
- Check the connections to ensure they are sealed tightly.

⚠️ WARNING
Process medium may escape during insertion/retraction.
- Check that the process seal is intact.
- Pipe-fit the rinse chamber outlet accordingly.
- Seal the rinse connections with dummy plugs.

⚠️ Note that when the assembly is inserted/retracted, an open connection exists for a short period between the process and service chamber. This intermediate position can be used for what is known as 'sealing water' or for the third lock position (see Optional cleaning/sterilization of process seal).

Install the service chamber connections accordingly.
7 Operation

7.1 Adapting the assembly to the process conditions

⚠️ CAUTION
Due to the operating principle, there is a connection between the process and the service chamber. The service chamber can be pressurized as a result. Process medium may escape during insertion/retraction.
- Check that the process seal is intact.
- Pipe-fit the rinse chamber outlet accordingly.
- Seal the rinse connections with dummy plugs.

Assembly with pneumatic drive
The assembly with pneumatic drive does not have any operating elements.

Assembly with manual drive

3 Manual drive
6 Unlocking button (service position)
8 Unlocking button (measuring position)
7.1.1 Manual operation

Moving the assembly from the service position to the measuring position

The assembly can only be inserted/retracted if a sensor is installed.

1. Press the unlocking button (A).
2. With the unlocking button (A) pressed, during the first quarter turn, rotate the drive in a clockwise direction so that the sensor holder moves into the process (only possible with the sensor installed). The button can be released while turning the rest of the way.
3. Rotate the drive until the lock engages.

Moving the assembly from the measuring position to the service position

1. Press the unlocking button (B).
2. With the unlocking button (B) pressed during the first quarter turn, rotate the drive in a counterclockwise direction until the stop (service position).
3. Perform the required service activities.

7.1.2 Pneumatic operation

The assembly can only be inserted/retracted if a sensor is installed.

The operation of the pneumatic version depends on the controller. Consult the controller manual for instructions.

Use a pneumatic pilot valve (4/2-way or 5/2-way) to insert/retract the assembly.

- Connect the two inputs.

  - If only one input is connected (e.g. for test purposes), the piston is blocked as the sensor guide moves before the limit position lock is disabled.
Inserting/retracting the assembly if the compressed air supply fails

1. Use an open-ended wrench (AF 17 mm) to unscrew both limit position locks (item 1 and 2).
2. Move the assembly to the desired position.
3. Screw the limit position lock back in (Only in the case of optional sterilization of the process seal: Re-install the lock in the normal position (item 3)).

Optional cleaning/sterilization of process seal

In this version, you can clean and sterilize the process seal. To do so, proceed as follows:
1. Move the assembly to service position.
2. Use the open-ended wrench to rotate the pin for the limit position lock (item 1) from item 3 to item 4.
3. Move the assembly to measuring position.
   - The assembly now moves in the direction of the measuring position and remains in the "third lock position". When cleaning/sterilizing the service chamber, the process seal is now also cleaned/sterilized.
4. Following cleaning/sterilization, move the assembly to service position.
5. Use the open-ended wrench to rotate the pin for the limit position lock from item 4 to item 3.

Move the assembly to measuring position and continue measuring.

Failure of compressed air supply

1. Limit position lock for service position
2. Limit position lock for measuring position
3. Normal position (flat side at top)
4. Position for optional sterilization of the seal (flat side is on left)

CAUTION
Risk of injury due to high medium pressure

- Depressurize the system.

If the compressed air supply fails, you can still move the assembly manually. Proceed as follows here:

1. Use an open-ended wrench (AF 17 mm) to unscrew both limit position locks (item 1 and 2).
2. Move the assembly to the desired position.
3. Screw the limit position lock back in (Only in the case of optional sterilization of the process seal: Re-install the lock in the normal position (item 3)).
8 Maintenance

**WARNING**

Risk of injury if medium escapes

- Before each maintenance task, ensure that the process pipe is empty and rinsed.
- Move the assembly to service position.
- The assembly may contain residual medium; please rinse thoroughly before commencing work.

The assembly drive is maintenance-free. It is not possible to carry out maintenance or repair work on the drive.

8.1 Maintenance schedule

A maintenance log is recommended to adapt to the correct maintenance intervals.

The specified intervals serve as a guide. For harsh process or ambient conditions, it is recommended that the intervals be reduced accordingly. Cleaning intervals for the sensor and assembly are dependent on the medium.

Following cleaning or replacement, apply a generous layer of Klüber XPC0003-V+R8 grease to the seals.

<table>
<thead>
<tr>
<th>Interval</th>
<th>Maintenance measures</th>
</tr>
</thead>
</table>
| During initial commissioning / when putting back into service after maintenance | ➤ Perform an initial inspection.  
➤ Check the locking mechanism (no movement without a sensor).  
➤ Check the stop bolt (no movement without compressed air). |
| Regularly | Visual inspection:  
➤ Check that all connections are sealed tightly.  
Check for tightness:  
• Rinse lines  
• Process connection  
• Compressed air hoses (pneumatic drive).  
Clean the process seal using the sealing water function:  
➤ Close the rinse chamber outlet.  
➤ Rinse in the process in order to clean the seals. |
| Monthly or after 500 strokes (whichever comes first) | ➤ Check that the process seal is intact.  
➤ Replace the seals if medium is escaping.  
➤ Check the leakage hole: remove the screw for this purpose.  
Does medium escape from the leakage hole when the assembly is inserted/retracted? This can be an indicator of faulty inner O-rings in the service chamber or faulty immersion tube O-rings in the case of the double chamber assembly.  
Version without 3-A:  
1. Check the leakage hole of the service chamber.  
2. Clean the assembly thoroughly.  
3. Replace seals in contact with the medium.  
Version with 3-A:  
1. Check the leak paths.  
2. Clean the assembly thoroughly.  
3. Replace seals in contact with the medium.  
1. Inspect the sensor.  
2. Disassemble the sensor.  
3. Check the sensor for deposits.  
4. If deposits are found: check the cleaning cycle (cleaning media, temperature, duration, flow rate). |
### Maintenance measures

When process pressure is applied and cleaning disabled, there should be no discharge of medium from the assembly's rinse chamber outlet.

- Check for defective process seal(s).

<table>
<thead>
<tr>
<th>Interval</th>
<th>Maintenance measures</th>
</tr>
</thead>
</table>
| Biannually or after 5000 strokes (whichever comes first) | - Clean the assembly thoroughly.  
- Remove the residual medium.  
- Replace all seals in contact with the medium.  
- Clean the retraction pipe.  
- Lubricate the retraction pipe.  

1. Check mobility of retraction protection.  
2. Remove the sensor.  
   - The contact surface of the sensor in the assembly is spring-loaded and must be free to move.  
Possible cause of failure: contamination inside the drive, e.g. caused by a broken sensor.

### 8.2 Maintenance tasks

#### 8.2.1 Cleaning agent

**WARNING**

**Organic solvents containing halogens**  
Limited evidence of carcinogenicity! Dangerous for the environment with long-term effects!  
- Do not use organic solvents that contain halogens.

**WARNING**

**Thiocarbamide**  
Harmful if swallowed! Limited evidence of carcinogenicity! Possible risk of harm to the unborn child! Dangerous for the environment with long-term effects!  
- Wear protective goggles, protective gloves and appropriate protective clothing.  
- Avoid all contact with the eyes, mouth and skin.  
- Avoid discharge into the environment.

The most common types of soiling and the appropriate cleaning agents in each case are shown in the following table.

Pay attention to the material compatibility of the materials to be cleaned.

<table>
<thead>
<tr>
<th>Type of soiling</th>
<th>Cleaning agent</th>
</tr>

</tr>
</tbody>
</table>
» Choose a cleaning agent to suit the degree and type of soiling.
8.2.2 Cleaning the assembly

**WARNING**

Risk of injury if medium escapes
- Before each maintenance task, ensure that the process pipe is empty and rinsed.
- Move the assembly to service position.
- The assembly may contain residual medium; please rinse thoroughly before commencing work.

**WARNING**

Loss of proper functionality.
- Do not open or disassemble the drive.
- Only remove the O-ring on the base of the retraction pipe.

For stable and safe measurements:

1. Clean the assembly and sensor regularly. The frequency and intensity of the cleaning depend on the medium.
2. Use isopropyl alcohol to clean metal parts, but not the O-rings.

**Manually operated assembly**

All parts in contact with the medium, such as the sensor and the sensor guide, must be cleaned regularly.

1. Remove the sensor in the logically reverse sequence to the mounting procedure.
   → 32
2. Remove light dirt and fouling with suitable cleaning solutions. (→ 44
3. Remove heavy soiling using a soft brush and a suitable cleaning agent.
4. For very persistent dirt, soak the parts in a cleaning solution. Then clean the parts with a brush.

A typical example of a cleaning interval would be 6 months in the case of drinking water.

**Pneumatically controlled assembly**

Regular, pneumatically controlled cleaning is recommended using the rinse water connection and the appropriate equipment.

1. Take apart parts that are in contact with the medium.
2. Clean parts that are in contact with the medium.
3. Clean metal parts with isopropyl alcohol. Do not use isopropyl alcohol to clean the O-rings.

8.2.3 Cleaning the sensor

→ Documentation of the connected sensor

1. Always clean ORP electrodes mechanically and with water.
2. Do not use chemical cleaning agents.
   ↴ Such cleaning agents cause a potential to build up at the electrode which takes a few hours to dissipate. The potential causes errors in the measurement.
3. Do not use abrasive cleaning agents.
   ↴ These can cause irreparable damage to the sensor.
4. Perform another calibration following cleaning if necessary.
Clean the sensor:
- Before every calibration
- Regularly during operation
- Before returning it for repairs

You can remove the sensor and clean it manually, or you can clean it in automatic mode\(^1\) using the rinse water connection.

In event of minor deposit build-up:
1. Place the sensor in warm water.
2. Clean the sensor with a mild dishwashing detergent.

---
\(^1\) only if the assembly is fitted out accordingly
8.2.4 Replacing seals

To replace the seals in the assembly, you must interrupt the process and remove the assembly completely.

⚠️ CAUTION

Risk of injury due to residual medium and elevated temperatures

› When handling parts that are in contact with the medium, protect against residual medium and elevated temperatures. Wear protective goggles and safety gloves.

⚠️ CAUTION

Increased wear on seals subject to dynamic load

› Lubricate seals sufficiently, e.g. with Paraliq GTE 703.
› Reduce maintenance cycles.

› Clean the assembly prior to replacing seals. (→ 46)

Preparation:

1. Interrupt the process. Pay attention to residual medium, residual pressure as well as elevated temperatures.
2. Move the assembly to service position.
3. Completely detach the assembly from the process connection.
4. Clean the assembly. (→ 46)

The following sections describe how to replace the seals. The following table serves as a guide to the relevant sections.

<table>
<thead>
<tr>
<th>Molded seal - process connection (A)</th>
<th>O-rings - single chamber (B)</th>
<th>Molded seal - process connection, double chamber (C)</th>
<th>Molded seal - front chamber (D)</th>

</tr>
</thead>
</table>

Checking that the sealing system is intact

Check the seals after mounting or removing the sensor and when maintenance work is performed. At regular intervals.

1. Move the assembly to the service position
2. If provided, open the ball valve of the service chamber outlet
   ․ It is normal for a slight amount of medium to escape (connection between the service chamber and process during insertion/retraction).
3. If provided, rinse the service chamber/sensor.
4. Observe the outlet. No more medium should escape after a short period of time.
5. If medium continues to escape, the sealing system is damaged; take the measuring point out of service and perform maintenance on the assembly.
**Molded seal - process connection (A)**

![Image of molded seal process connection](image)

### 38 Replacing seals, Part 1

1. **Securing screws**
   
   1. Release four securing screws (pos. 1).

### 39 Replacing seals, Part 2

2. **Process connection**
3. **Gasket**
4. **Service chamber**
5. **Molded seal**
6. **Immersion tube**

   2. Remove the process connection (pos. 2).
   3. Take the molded seal (pos. 5) out of the process connection.
   4. Apply a thin layer of grease to the new molded seal (e.g., Klüber Paraliq GTE 703).
   5. Slide the molded seal over the immersion tube (pos. 8) and into the guide groove of the service chamber. Ensure that the molded seal is seated correctly.
   6. Position the gasket (pos. 3) on the service chamber.
   7. Attach the process connection to the service chamber.
   8. Tighten the four securing screws with a torque of 4 Nm.
O-rings - single chamber (B)

O-rings

1. Release the four securing screws (item 1).
2. Remove the service chamber (item 3) with the process connection (item 2).

3. Use a tweezers to remove both O-rings (item 4) from the service chamber.
4. Pneumatic drive only: Use a thin screwdriver to push through the leakage hole (item 9).
   - The slide bushing (item 8) is pushed out of the guide groove.
5. Use a tweezers to remove the slide bushing.
6. Apply a thin layer of grease (e.g., Klüber Paraliq GTE 703) to the new O-rings and the new slide bushing.
7. Pneumatic drive only: Insert the slide bushing into the middle guide groove.
8. Insert the two O-rings into the corresponding grooves in the service chamber.
Molded seal

1. Remove the molded seal (→ 41, 51 item 5) using a tweezers or long-nosed pliers.
2. Apply a thin layer of grease to the molded seal.
3. Press the molded seal into the guide groove of the immersion tube. Ensure that the molded seal is seated correctly.

If you insert a dummy sensor or circular rod (Ø 12 mm) until it protrudes just above the seal, the molded seal cannot move upwards while it is being inserted.

Pneumatic drive

Pneumatic drive only:

1. Remove the O-ring (→ 41, 51 item 7).
2. Apply a thin layer of grease to the molded seal.
3. Press the molded seal into the guide groove of the immersion tube. Ensure that the molded seal is seated correctly.
4. Mount the service chamber together with the process connection on the assembly. Pay attention to the positioning pin (item 6).
5. Tighten the four securing screws with a torque of 4 Nm.
Molded seal - process connection, double chamber (C)

1. Release the four securing screws (pos. 1).

2. Remove the process connection (pos. 2).
3. Remove the molded seal (pos. 4) from the process connection.
4. Apply a thin layer of grease to the new molded seal (e.g., Klüber Paraliq GTE 703).
5. Slide the molded seal over the immersion tube (pos. 8) and into the guide groove of the service chamber. Ensure that the molded seal is seated correctly.
6. Position the gasket (pos. 3) on the rinse chamber.
7. Attach the process connection to the "inner" service chamber.
8. Tighten the four securing screws with a torque of 4 Nm.
Replacing seals, Part 1

1. Release the four securing screws (item 1).

Replacing seals, Part 2

2. Remove the "front" service chamber with process connection (item 2).
3. Remove the molded seal (item 5) from the "front" service chamber.
4. Apply a thin layer of grease to the new molded seal (e.g., Klüber Paraliq GTE 703).
5. Slide the molded seal over the immersion tube (item 8) and into the guide groove of the service chamber. Ensure that the molded seal is seated correctly.
6. Position the gasket (item 3) on the front chamber.
7. Attach the front chamber together with the process connection to the "inner" service chamber.
8. Tighten the four securing screws with a torque of 4 Nm.
Seals - inner double chamber (E)

O-ring in process connection

46 Replacing seals, Part 1

1. Release the four securing screws (item 1).
2. Remove the service chamber with front chamber and process connection (item 2).

47 Replacing seals, Part 2

3. Remove the O-ring (item 3).
4. Apply a thin layer of grease to the new O-ring (e.g., Klüber Paraliq GTE 703) and position the O-ring in the groove.
### Molded seal

1. Remove the molded seal (item 5) using a tweezers or long-nosed pliers.
2. Apply a thin layer of grease to the new molded seal (e.g., Klüber Paraliq GTE 703).
3. Press the molded seal into the guide groove of the immersion tube. Ensure that the molded seal is seated correctly.

   If you insert a dummy sensor or circular rod (Ø 12 mm) until it protrudes just above the seal, the molded seal cannot move upwards while it is being inserted.

### O-rings in the immersion tube

1. Remove both O-rings (→ 48, 57 item 4).
2. Apply a thin layer of grease to the new O-rings.
3. Position the O-rings in the two grooves.
4. Attach the 'inner' service chamber with 'front' service chamber and process connection to the assembly. Pay attention to the positioning pin (item 6).
5. Tighten the securing screws with a torque of 4 Nm.
9 Repair

9.1 General notes
The repair and conversion concept provides for the following:
- The product has a modular design
- Spare parts are grouped into kits which include the associated kit instructions
- Only use original spare parts from the manufacturer
- Repairs are carried out by the manufacturer's Service Department or by trained users
- Certified devices can only be converted to other certified device versions by the manufacturer's Service Department or at the factory
- Observe applicable standards, national regulations, Ex documentation (XA) and certificates

1. Carry out the repair according to the kit instructions.
2. Document the repair and conversion and enter, or have entered, in the Life Cycle Management tool (W@M).

⚠️ WARNING
Danger resulting from improper repair!
- Any damage to the assembly that compromises pressure safety must be repaired only by authorized and qualified personnel.
- Damage to the drive can be repaired only at the place of manufacture. Repairs cannot be carried out onsite.
- Following each repair and maintenance task, check the assembly for leaks using appropriate procedures. Following this, the assembly must again comply with the specifications in the technical data.
- Replace all other damaged components immediately.
- Following repairs, check that the device is complete, in a safe condition and functioning correctly.

9.2 Spare parts
Device spare parts that are currently available for delivery can be found on the website: www.endress.com/device-viewer

- Quote the serial number of the device when ordering spare parts.

9.3 Return
The product must be returned if repairs or a factory calibration are required, or if the wrong product was ordered or delivered. As an ISO-certified company and also due to legal regulations, Endress+Hauser is obliged to follow certain procedures when handling any returned products that have been in contact with medium.

To ensure the swift, safe and professional return of the device:
- Refer to the website www.endress.com/support/return-material for information on the procedure and conditions for returning devices.
9.4 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.
10 Accessories

The following are the most important accessories available at the time this documentation was issued.

- For accessories not listed here, please contact your Service or Sales Center.

The following accessories can be ordered via the product structure or the spare parts structure XPC0001:

- Weld-in adapter G1¼, straight, 35 mm, 1.4435 (AISI 316 L), safety nozzle
- Weld-in adapter G1¼, angled, 35 mm, 1.4435 (AISI 316 L), safety nozzle

- Dummy plug G1¼, 1.4435 (AISI 316 L), FPM - FDA
- Sensor dummy 225 mm, 1.4435 (AISI 316 L), Ra = 0.38 µm
- Sensor dummy 360 mm, 1.4435 (AISI 316 L), Ra = 0.38 µm
- Kit, EPDM FDA seals only for process connection G1¼, wetted parts, single chamber
- Kit, FKM FDA seals only for process connection G1¼, wetted parts, single chamber
- Kit, EPDM FDA seals, wetted parts, single chamber, not for process connection G1¼
- Kit, FKM FDA seals, wetted parts, single chamber, not for process connection G1¼
- Kit, EPDM FDA seals, wetted parts, double chamber, all process connections
- Kit, FKM FDA seals, wetted parts, double chamber, all process connections
- Kit, seals not in contact with the medium
- Cable, plug-in, limit switch, M12, 5 m
- Cable, plug-in, limit switch, M12, 10 m
- Tool in case for installation/removal
- Kit, Klüber lubricant Paraliq GTE 703 (60g)
- Output interface terminals, version: CPA871-620-R7
  NAMUR terminals for limit position switch
- Operation of 8V DC feedback devices on 24V DC devices
- Suitable for DIN rail mounting
10.1 Device-specific accessories

10.1.1 Sensors

pH sensors

Memosens CPS11E
- pH sensor for standard applications in process and environmental engineering
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps11e

Orbisint CPS11D / CPS11
- pH sensor for process technology
- With dirt-repellent PTFE diaphragm
- Product Configurator on the product page: www.endress.com/cps11dor
  www.endress.com/cps11

Memosens CPS31E
- pH sensor for standard applications in drinking water and swimming pool water
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps31e

Technical Information TI01493C

Technical Information TI00028C

Technical Information TI01574C
Memosens CPS41E  
- pH sensor for process technology  
- With ceramic junction and KCl liquid electrolyte  
- Digital with Memosens 2.0 technology  
- Product Configurator on the product page: www.endress.com/cps41e  
  Technical Information TI01495C

Ceraliquid CPS41D / CPS41  
- pH electrode with ceramic junction and KCl liquid electrolyte  
- Product Configurator on the product page: www.endress.com/cps41d or www.endress.com/cps41  
  Technical Information TI00079C

Memosens CPS61E  
- pH sensor for bioreactors in life sciences and for the food industry  
- Digital with Memosens 2.0 technology  
- Product Configurator on the product page: www.endress.com/cps61e  
  Technical Information TI01566C

Memosens CPS71E  
- pH sensor for chemical process applications  
- Digital with Memosens 2.0 technology  
- Product Configurator on the product page: www.endress.com/cps71e  
  Technical Information TI01496C

Ceragel CPS71D / CPS71  
- pH electrode with reference system including ion trap  
- Product Configurator on the product page: www.endress.com/cps71d or www.endress.com/cps71  
  Technical Information TI00245C

Memosens CPS91E  
- pH sensor for heavily polluted media  
- Digital with Memosens 2.0 technology  
- Product Configurator on the product page: www.endress.com/cps91e  
  Technical Information TI01497C

Orbipore CPS91D / CPS91  
- pH electrode with open aperture for media with high dirt load  
- Product Configurator on the product page: www.endress.com/cps91d or www.endress.com/cps91  
  Technical Information TI00375C

ORP sensors  
Memosens CPS12E  
- ORP sensor for standard applications in process and environmental engineering  
- Digital with Memosens 2.0 technology  
- Product Configurator on the product page: www.endress.com/cps12e  
  Technical Information TI01494C
Orbisint CPS12D / CPS12
- ORP sensor for process technology
- Product Configurator on the product page: www.endress.com/cps12d or www.endress.com/cps12
- Technical Information TI00367C

Memosens CPS42E
- ORP sensor for process technology
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps42e
- Technical Information TI01575C

Ceraliquid CPS42D / CPS42
- ORP electrode with ceramic junction and KCl liquid electrolyte
- Product Configurator on the product page: www.endress.com/cps42d or www.endress.com/cps42
- Technical Information TI00373C

Memosens CPS72E
- ORP sensor for chemical process applications
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps72e
- Technical Information TI01576C

Ceragel CPS72D / CPS72
- ORP electrode with reference system including ion trap
- Product Configurator on the product page: www.endress.com/cps72d or www.endress.com/cps72
- Technical Information TI00374C

pH-ISFET sensors

Memosens CPS47D
- Sterilizable and autoclavable ISFET sensor for pH measurement
- Refillable KCl liquid electrolyte
- Product Configurator on the product page: www.endress.com/cps47d
- Technical Information TI01412C

Memosens CPS77D
- Sterilizable and autoclavable ISFET sensor for pH measurement
- Product Configurator on the product page: www.endress.com/cps77d
- Technical Information TI01396

Combined pH/ORP sensors

Memosens CPS16E
- pH/ORP sensor for standard applications in process technology and environmental engineering
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps16e
- Technical Information TI01600C
Memosens CPS16D
- Combined pH/ORP sensor for process technology
- With dirt-repellent PTFE diaphragm
- With Memosens technology
- Product Configurator on the product page: www.endress.com/cps16D
Technical Information TI00503C

The 120 mm version in the CPS16D is not suitable.

Memosens CPS76E
- pH/ORP sensor for process technology
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps76e
Technical Information TI01601C

Memosens CPS76D
- Combined pH/ORP sensor for process technology
- Hygienic and sterile applications
- With Memosens technology
- Product Configurator on the product page: www.endress.com/cps76d
Technical Information TI00506C

Memosens CPS96E
- pH/ORP sensor for heavily polluted media and suspended solids
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cps96e
Technical Information TI01602C

Memosens CPS96D
- Combined pH/ORP sensor for chemical processes
- With poison-resistant reference with ion trap
- With Memosens technology
- Product Configurator on the product page: www.endress.com/cps96d
Technical Information TI00507C

Conductivity sensors

Memosens CLS82E
- Hygienic conductivity sensor
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cls82e
Technical Information TI01529C

Memosens CLS82D
- Four-electrode sensor
- With Memosens technology
- Product Configurator on the product page: www.endress.com/cls82d
Technical Information TI01188C
Oxygen sensors

Oxymax COS22E
- Sterilizable sensor for dissolved oxygen
- Digital with Memosens 2.0 technology
- Product Configurator on the product page: www.endress.com/cos22e
- Technical Information TI00446C

Oxymax COS22D / COS22
- Sterilizable sensor for dissolved oxygen
- With Memosens technology or as an analog sensor
- Product Configurator on the product page: www.endress.com/cos22d or www.endress.com/cos22
- Technical Information TI00446C

Absorption sensor

OUSBT66
- NIR absorption sensor for measuring cell growth and biomass
- Sensor version suitable for pharmaceutical industry
- Product Configurator on the product page: www.endress.com/ousbt66
- Technical Information TI00469C

10.2 Service-specific accessories

10.2.1 Cleaning systems

Air-Trol 500
- Control unit for Cleanfit retractable assemblies
- Order No. 50051994
- Technical Information TI00038C/07/EN

Cleanfit Control CYC25
- Converts electrical signals into pneumatic signals to control pneumatically-operated retractable assemblies or pumps in conjunction with Liquiline CM44x
- Wide range of control options
- Product Configurator on the product page: www.endress.com/cyc25
- Technical Information TI01231C

Liquiline Control CDC90
- Fully automatic cleaning and calibration system for pH and ORP measuring points in all industries
- Cleaned, validated, calibrated and adjusted
- Product Configurator on the product page: www.endress.com/cdc90
- Technical Information TI01340C
10.3 Installation material for rinse connections

**Kit, water filter**
- Water filter (dirt trap) 100 µm, complete, incl. angle bracket
- Order No. 71390988

**Pressure reducer kit**
- Complete, incl. manometer and angle bracket
- Order No. 71390993

**Hose connection set G¹/₄, DN 12**
- 1.4404 (AISI 316L) 2 x
- Order No. 51502808

**Hose connection set G¹/₄, DN 12**
- PVDF (2 x)
- Order No. 50090491

11.2 Environment

Ambient temperature -10 to +70 °C (+10 to +160 °F)

Storage temperature -10 to +70 °C (+10 to +160 °F)

11.3 Process

Process temperature -10 to 140 °C (14 to 284 °F)

Process pressure range

| Pneumatic drive | 16 bar (232 psi) up to 140 °C (284 °F) |
| Manual drive    | 8 bar (116 psi) up to 140 °C (284 °F)  |

The service life of the seals is reduced if process temperatures are constantly high or if SIP is used. The other process conditions may also reduce the service life of the seals.
