1  About this document

1.1  Document function
These Operating Instructions provide all of the information that is required in various phases of the life cycle of the device including:
- Product identification
- Incoming acceptance
- Storage
- Installation
- Connection
- Operation
- Commissioning
- Troubleshooting
- Maintenance
- Disposal

1.2  Symbols

1.2.1  Safety symbols

⚠️ DANGER
This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

⚠️ WARNING
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

⚠️ CAUTION
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

⚠️ NOTICE
This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2  Symbols for certain types of information

1.5  Documentation

FieldPort SWA50
Technical Information TI01468S

1.5.1  Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

The nameplate indicates the Safety Instructions (XA) that are relevant to the device.
1.6 Registered trademarks

HART®
Registered trademark of the FieldComm Group, Austin, Texas, USA

Bluetooth®
The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth SIG, Inc. and any use of such marks by Endress+Hauser is under license. Other trademarks and trade names are those of their respective owners.

Apple®
Apple, the Apple logo, iPhone, and iPod touch are trademarks of Apple Inc., registered in the U.S. and other countries. App Store is a service mark of Apple Inc.

Android®
Android, Google Play and the Google Play logo are trademarks of Google Inc.

2 Basic safety instructions

2.1 Requirements for personnel

The personnel for installation, commissioning, diagnostics and maintenance must meet the following requirements:

‣ Trained, qualified specialists: must have a relevant qualification for this specific role and task and have been trained by Endress+Hauser. Experts at the Endress+Hauser service organization.
‣ Personnel must be authorized by the plant owner/operator.
‣ Personnel must be familiar with regional and national regulations.
‣ Before starting work: personnel must read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
‣ Personnel must follow instructions and comply with general policies.

Operating personnel must meet the following requirements:

‣ Personnel are instructed and authorized according to the requirements of the task by the facility's owner-operator.
‣ Personnel follow the instructions in this manual.

2.2 Designated use

The FieldPort SWA50 is a loop-powered adapter that converts the HART signal of the connected HART field device into a reliable and encrypted Bluetooth signal. The FieldPort SWA50 can be retrofitted to all 2-wire or 4-wire HART field devices.

The Bluetooth signal may not be used to replace the wiring in the case of safety applications with a control function.

Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.
2.3  **Workplace safety**

For work on and with the device:
- Wear the required personal protective equipment according to federal/national regulations.

If working on and with the device with wet hands:
- Due to the increased risk of electric shock, gloves must be worn.

2.4  **Operational safety**

Risk of injury!
- Operate the device only if it is in proper technical condition, free from errors and faults.
- The operator is responsible for interference-free operation of the device.

**Modifications to the device**

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers:
- If modifications are nevertheless required, consult with Endress+Hauser.

2.5  **Product safety**

This device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

The device fulfills general safety requirements and legal requirements. It also complies with the EU/EC directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

2.6  **IT security**

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings.

IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.
2.7 Device-specific IT security

2.7.1 Access via Bluetooth® wireless technology

Signal transmission via Bluetooth® wireless technology uses a cryptographic technique tested by Fraunhofer AISEC.

- Connection via Bluetooth® is not possible without specific Endress+Hauser devices or the SmartBlue app.
- Only one point-to-point connection between one FieldPort SWA50 device and one smartphone or tablet is established.
- The Bluetooth® wireless technology interface can be protected incrementally by means of hardware locking. → 51
- The hardware locking cannot be disabled or bypassed using operating tools.

3 Product description

3.1 Function

The FieldPort SWA50 converts the HART signal of the connected HART field device to a reliable and encrypted Bluetooth® or WirelessHART signal. The FieldPort SWA50 can be retrofitted to all 2-wire or 4-wire HART field devices.

With the Endress+Hauser SmartBlue app and the Endress+Hauser Field Xpert, you have the following capabilities:

- Configuration of the FieldPort SWA50
- Visualization of the measured values of the connected HART field device
- Visualization of the current combined status, consisting of the status for the FieldPort SWA50 and the status of the connected HART field device

HART field devices can be connected to the Netilion Cloud via the FieldPort SWA50 and a FieldEdge device.

Detailed information on Netilion Cloud: https://netilion.endress.com

NOTICE

Safety applications with control functions via Bluetooth signal

Undesirable behavior of safety application

- Do not use a wireless signal such as Bluetooth in a safety application with a control function.
3.2 System architecture of the FieldPort SWA50 Bluetooth version

1. HART field device with FieldPort SWA50, remote mounting
2. Encrypted wireless connection via Bluetooth®
3. HART field device with FieldPort SWA50, direct mounting
4. FieldEdge SGC200
5. LTE connection
6. Netilion Cloud
7. Application Programming Interface (API)
8. https Internet connection
9. Internet browser-based Netilion Service app or user application
10. Endress+Hauser SmartBlue app
11. Endress+Hauser Field Xpert, e.g. SMTxx
4   Incoming acceptance and product identification

4.1   Incoming acceptance

- Check the packaging for visible damage arising from transportation
- Open the packaging carefully
- Check the contents for visible damage
- Check that the delivery is complete and nothing is missing
- Retain all the accompanying documents

The device may not be put into operation if the contents are found to be damaged beforehand. In this case, please contact your Endress+Hauser Sales Center:

www.addresses.endress.com

Return the device to Endress+Hauser in the original packaging where possible.

Scope of delivery
- FieldPort SWA50
- Cable glands as per ordered version
- Optional: mounting bracket

Documentation included in delivery
- Operating Instructions
- Depends on the version ordered: Safety Instructions

4.2   Product identification

4.2.1   Nameplate

The nameplate of the device is lasered onto the housing.

Additional information about the device is available as follows:
- Enter the serial number specified on the nameplate into the Device Viewer
  (www.endress.com → Product tools → Access device specific information → Device Viewer
  (from the serial number to device information and documentation) → Select option → Enter
  serial number): All information relating to the device is then displayed.
- Enter the serial number specified on the nameplate into the
  Endress+Hauser Operations App: All information relating to the device is then displayed.

4.2.2   Manufacturer's address

Endress+Hauser SE+Co. KG
Hauptstraße 1
79689 Maulburg
Germany

www.endress.com
4.3 Storage and transport
- The components are packed in such a way that they are fully protected against shock when in storage and during transportation.
- The permitted storage temperature is –40 to +85 °C (–40 to 185 °F).
- Store the components in the original packaging in a dry place.
- Where possible, only transport the components in the original packaging.

5 Mounting

5.1 Mounting instructions
- Pay attention to the alignment and range. → 13
- Observe a distance of at least 6 cm from walls and pipes. Pay attention to the expansion of the Fresnel zone.
- Avoid mounting in close proximity to high-voltage devices.
- For a better connection, mount the FieldPort SWA50 in sight of a FieldEdge SGC200.
- Pay attention to the effect of vibrations at the mounting location.

For detailed information on the range and vibration resistance, see the Technical Information for FieldPort SWA50 → 7

We recommend that you protect the FieldPort SWA50 against precipitation and direct sunlight. In order not to reduce signal quality, do not use a metal cover.

5.2 Range

The range depends on the alignment of the FieldPort SWA50, the mounting location and the environmental conditions.

As the antenna of the WirelessHART gateway or FieldEdge is normally aligned vertically, we also recommend mounting the FieldPort SWA50 vertically. If the antennas are aligned differently, this can greatly reduce the antenna range.
Different ranges depending on the position of the transmission window

**Bluetooth**
Up to 40 m without obstacles when FieldPort SWA50 is optimally aligned

**WirelessHART**
Up to 200 m without obstacles when FieldPort SWA50 is optimally aligned
5.3 Mounting methods

5.3.1 "Direct mounting" version

3 Example of direct mounting

1 Cable
2 FieldPort SWA50 "direct mounting" version
3 HART field device
4 Bottom housing section
5 Transmission window
6 Design ring
7 Top housing section

Montage sequence for the "direct mounting" version: → 16
5.3.2  "Remote mounting" version

Example of remote mounting

1  HART field device
2  Cable
3  FieldPort SWA50 "remote mounting" version
4  Bottom housing section
5  Transmission window
6  Design ring
7  Top housing section

For remote mounting, we recommend the optional mounting bracket. Alternatively, you can secure the remote version using pipe clips.

Mounting sequence for the "remote mounting" version: → 27

5.4  Mounting the "direct mounting" version

NOTICE
Damaged seals.
IP degree of protection is no longer guaranteed.
- Do not damage seals.
NOTICE
Supply voltage is present during installation.
Possible damage to the device.
‣ Switch off supply voltage prior to installation.
‣ Make sure the device is de-energized.
‣ Secure it against being switched back on.

"Direct mounting" overview: → 15

Electrical connection: → 38

Tools required
■ Wrench AF24
■ Wrench AF36

Mounting the FieldPort SWA50

1.

2.

3.
Mounting FieldPort SWA50

3.

4.

5.
6.
Ensure that the cores are of sufficient length to be connected in the field device. Do not shorten the cores to the required length until you are connecting them in the field device.

If you use a cable gland for a shielded cable, pay attention to the information on stripping the wire → 39.

- Electrical connection for 2-wire HART field devices with passive current output: → 40
- Electrical connection for 4-wire HART field devices with passive current output: → 40
- Electrical connection for 4-wire HART field devices with active current output: → 41
- Electrical connection for FieldPort SWA50 without HART field device: → 42
8. Tighten screws for strain relief. Torque: 0.4 Nm ± 0.04 Nm

9. Slide the electronic insert into the guide inside the housing.
For information regarding torque, see the field device documentation.
Ensure that the cores are of sufficient length to be connected in the field device. Shorten the cores in the field device to the required length.
12.

Do not tighten the top housing section yet, so that you are still able to rotate the bottom housing section.
13.

Align the bottom housing section with the transmission window according to the network architecture → 13.

To avoid wire breaks, rotate the bottom housing section by a maximum of ± 180°.
Tighten the top housing section so that the blue design ring can still be rotated afterwards. Torque: 5 Nm ± 0.05 Nm
16. Perform commissioning \(\rightarrow\) 45.

5.5 Mounting the "remote mounting" version

**NOTICE**

**Damaged seal.**

IP degree of protection is no longer guaranteed.

- Do not damage seal.
**NOTICE**

Supply voltage is present during installation.
Possible damage to the device.
- Switch off supply voltage prior to installation.
- Make sure the device is de-energized.
- Secure it against being switched back on.

Overview of "remote mounting": \[ \rightarrow \ 15 \]
Electrical connection: \[ \rightarrow \ 38 \]

**Tools required**
- Wrench AF27
- Wrench AF36

**Mounting the FieldPort SWA50**

1.

2.
3. If you are mounting the FieldPort SWA50 using the optional mounting bracket, follow the instructions in the "Mounting the mounting bracket and FieldPort SWA50" section → 36.

4.  

5. If you are mounting the FieldPort SWA50 using the optional mounting bracket, follow the instructions in the "Mounting the mounting bracket and FieldPort SWA50" section → 36.
If you use a cable gland for a shielded cable, pay attention to the information on stripping the wire → 39.

- Electrical connection for 2-wire HART field devices with passive current output:
  → 40
- Electrical connection for 4-wire HART field devices with passive current output:
  → 40
- Electrical connection for 4-wire HART field devices with active current output:
  → 41
- Electrical connection for FieldPort SWA50 without HART field device: → 42
10. Tighten screws for strain relief. Torque: 0.4 Nm ± 0.04 Nm

11. Slide the electronic insert into the guide inside the housing.
12. Tighten the top housing section so that the blue design ring can still be rotated afterwards. Torque: 5 Nm ± 0.05 Nm

13. Perform commissioning →  45.

5.6 Installing the FieldPort SWA50 with mounting bracket

5.6.1 Mounting and alignment options
The mounting bracket can be mounted as follows:
- On pipes with a maximum diameter of 65 mm
- On walls
The FieldPort can be aligned as follows using the support bracket:
- Via the various mounting positions on the mounting bracket
- By rotating the support bracket

Pay attention to the alignment and range → 13.

5 Alignment options via support bracket

1 Various mounting positions on support bracket
2 By rotating the support bracket
5.6.2  Dimensions

6  Dimensions of mounting bracket – pipe mounting

7  Dimensions of retaining bracket – wall mounting
5.6.3 Installing the mounting bracket and FieldPort SWA50

![Diagram of mounting bracket and FieldPort SWA50](image)

1. Hexagonal-headed bolt for securing and grounding
2. Support bracket
3. Mounting bracket
4. Round bracket

If you are mounting the FieldPort SWA50 using the mounting bracket, you must remove the design ring between the top housing section and the bottom housing section.

**Tools required**
- Wrench AF10
- Allen key size 4

**Installing the mounting bracket on a pipe**
- Secure the mounting bracket to the pipe at the desired location. Torque: minimum 5 Nm

If you change the position of the support bracket on the mounting bracket, tighten the four hexagonal-headed bolts with a torque of 4 Nm to 5 Nm.

**Installing the mounting bracket on a wall**
- Secure the support bracket to the wall at the desired location. The screws must be suitable for the wall.
Mounting the FieldPort SWA50

1. Unscrew the cable glands of the FieldPort SWA50.
2. Unscrew the top housing section.
3. Remove the electronic insert from the housing.
4. Remove the design ring from the bottom housing section.
5. Slide the bottom housing section into the eyelet of the support bracket.
6. Carry out electrical connection for the FieldPort SWA50.
7. Slide the electronic insert into the bottom housing section.
8. Loosely screw on the top housing section.
9. Align the bottom housing section with the transmission window of the FieldPort SWA50 according to the network architecture. The transmission window is located under the black plastic seal.
10. Tighten the top housing section. Torque: 5 Nm ± 0.05 Nm
11. Connect the protective ground to the hexagonal-headed bolt.
12. Tighten the hexagonal-headed bolt so that the FieldPort SWA50 is secured in the mounting bracket.

5.7  Post-mounting check

6 Electrical connection

NOTICE
Short-circuit at OUT+ and OUT– terminals
Damage to device
- Depending on the application, connect either the field device, PLC, transmitter or resistor to the OUT+ and OUT– terminals.
- Never short-circuit the OUT+ and OUT– terminals.

6.1 Supply voltage
- Loop-powered 4 to 20 mA
- 24 V DC (min. 4 V DC, max. 30 V DC): min. 3.6 mA loop current required for start-up
- The supply voltage or the power unit must be tested to ensure it meets safety requirements and the requirements for SELV, PELV or Class 2

Voltage drop
- If internal HART communication resistor is deactivated
  - 3.2 V in operation
  - < 3.8 V at start-up
- If internal HART communication resistor is activated (270 Ohm)
  - < 4.2 V at 3.6 mA loop current
  - < 9.3 V at 22.5 mA loop current

To select the supply voltage, pay attention to the voltage drop via the FieldPort SWA50. The remaining voltage must be high enough to enable the start-up and operation of the HART field device.

6.2 Cable specification
Use cables that are suitable for the anticipated minimum and maximum temperatures.

Observe grounding concept of the plant.
2 x 0.25 mm² to 2 x 1.5 mm²

You can use unshielded cable with or without ferrules and shielded cable with or without ferrules.

If you select the "direct mounting" version and the "4-wire HART field device with active current output and PLC or transmitter" electrical connection version, you can use core cross-sections of 0.75 mm² at maximum. If larger core cross-sections are required, we recommend remote mounting.

6.4  Stripping in the case of a cable gland for shielded cable

If you are using shielded cables and wish to connect the cable shield to the FieldPort SWA50, you must use cable glands for shielded cable.

If you have ordered the "Brass M20 for shielded cable" option for the cable glands, you will receive the following cable glands:

- "Direct mounting" version: 1 cable gland for shielded cable
- "Remote mounting" version: 2 cable glands for shielded cable

When mounting a cable gland for shielded cable, we recommend the following dimensions for stripping. The dimensions for input terminal IN and output terminal OUT are different.
Electrical connection

### 6.5 2-wire HART field device with passive current output

Some grounding concepts require shielded cables. If connecting the cable shield to the FieldPort SWA50, you must use a cable gland for shielded cable. See ordering information.

#### 11 Electrical connection for 2-wire HART field devices with passive current output (optional grounding not shown)

1. Supply voltage (SELV, PELV or Class 2) or PLC with active current input or transmitter with active current input
2. Electronic insert SWA50
3. 2-wire field device 4 to 20 mA-HART

### 6.6 4-wire HART field device with passive current output

Some grounding concepts require shielded cables. If connecting the cable shield to the FieldPort SWA50, you must use a cable gland for shielded cable. See ordering information.
12 Electrical connection for 4-wire HART field devices with passive current output (optional grounding not shown)

1 Supply voltage (SELV, PELV or Class 2) or PLC with active current input or transmitter with active current input
2 Electronic insert SWA50
3 4-wire field device with passive 4 to 20 mA-HART output
4 Supply voltage for 4-wire field device

6.7 4-wire HART field device with active current output

Some grounding concepts require shielded cables. If connecting the cable shield to the FieldPort SWA50, you must use a cable gland for shielded cable. See ordering information.

13 Electrical connection for 4-wire HART field devices with active current output (optional grounding not shown) – PLC or transmitter at OUT terminals

1 Supply voltage (SELV, PELV or Class 2) for 4-wire HART field device
2 4-wire field device with active 4 to 20 mA-HART output
3 Electronic insert SWA50
4 PLC or transmitter with passive current input
Electrical connection for 4-wire HART field devices with active current output (optional grounding not shown) – resistor at OUT terminals

1. Supply voltage (SELV, PELV or Class 2) for 4-wire HART field device
2. 4-wire field device with active 4 to 20 mA-HART output
3. Electronic insert SWA50
4. Resistor 250 to 500 Ohm min. 250 mW between OUT+ and OUT− terminals

If you select the "direct mounting" version and the "4-wire HART field device with active current output and PLC or transmitter" electrical connection version, you can use core cross-sections of 0.75 mm² at maximum. The wires that you insert into the shorter top housing section must be connected to the IN terminals opposite, and the wires that you insert into the longer bottom housing section must be connected to the OUT terminals opposite. If larger core cross-sections are required, we recommend remote mounting.

6.8 FieldPort SWA50 without HART field device

With this connection version, you can preconfigure the FieldPort SWA50.

FieldPort SWA50 without HART field device (optional grounding not showing)

1. Supply voltage of FieldPort SWA50, 20 to 30 VDC (SELV, PELV or Class 2)
2. Electronic insert SWA50
3. Resistor 1.5 kOhm and min. 0.5 W between terminals OUT+ and OUT−
6.9 FieldPort SWA50 grounding

6.9.1 "Direct mounting" version
With the "direct mounting" version, the FieldPort SWA50 is grounded via the field device or the metal conduit.

6.9.2 "Remote mounting" version
With the "remote mounting" version, ground the FieldPort SWA50 via the optional mounting bracket or a grounding clamp provided by the customer.

Optional mounting bracket
If using the mounting bracket, ground the FieldPort SWA50 via the grounding screw.

![Diagram of FieldPort SWA50 with mounting bracket and grounding connections]

16 Optional mounting bracket
1 Hexagonal-headed bolt for securing and grounding
2 Optional mounting bracket

Grounding clamp provided by customer
The grounding clamp provided by the customer must meet the following requirements:
- Diameter: approx. 40 mm
- Stainless steel
- If the FieldPort SWA50 is used in a hazardous area: suitable for hazardous areas as per DIN EN 62305, Sheet 3 and DIN EN 62561-1
7.1 Overview of operating options

The FieldPort SWA50 can be operated as follows via Bluetooth:
- Via a smartphone or tablet with the Endress+Hauser SmartBlue app
- Via Endress+Hauser Field Xpert SMTxx tablet PC

In addition, you can connect the FieldPort SWA50 with the connected HART field device to the Netilion Cloud via the FieldEdge SGC200.

- Detailed information on Netilion Cloud: https://netilion.endress.com
- For detailed information on the FieldEdge SGC200, see TI01468S.
7.2 **SmartBlue app**
The FieldPort SWA50 and the connected HART field device are not visible via Bluetooth without the SmartBlue app. One point-to-point connection is established between the FieldPort SWA50 and one smartphone or tablet.

The SmartBlue app is available for download from the Google Play Store for mobile devices with Android and from the Apple App Store for devices with iOS.

Scan the QR code.

The Google Play or App Store site opens where you can download the SmartBlue app.

**System requirements**
Please see either the Google Play or App Store site for the system requirements of the SmartBlue app.

7.3 **Field Xpert SMTxx**
- For detailed information on operating with the Field Xpert SMT70, see BA01709S.
- For detailed information on operating with the Field Xpert SMT77, see BA01923S.

8 **Commissioning**

8.1 **Prerequisites**
8.1.1 **Requirements of the FieldPort SWA50**
- The FieldPort SWA50 is electrically connected.
- Post-mounting check has been carried out → 37.
- Post-connection check has been carried out → 44.
- DIP switch 1 for Bluetooth communication must be set to ON → 51.
  (Factory setting for DIP switch 1: ON)
8.1.2 Information required for commissioning

You will need the following information for commissioning:
- HART device address of HART field device
- Device tag of HART field device in Bluetooth network
  - Long tag for HART-6 and HART-7 field devices
  - (Short) tag for HART-5 field devices

8.1.3 Points to check before commissioning

HART master

In addition to the FieldPort SWA50, only one other HART master is permitted in the HART loop. The master type of this additional HART master and the FieldPort SWA50 may not be identical. Configure the master type via the "HART master type" parameter → 58.

HART communication resistor

For HART communication, you require either the internal HART communication resistor of the FieldPort SWA50 or a HART communication resistor outside the FieldPort SWA50 in the 4 to 20 mA loop.

Requirements for the "Internal HART communication resistor" version:
The "Internal" option is configured for the "Communication risistor" parameter → 58.

Requirements for the "HART communication resistor outside the FieldPort SWA50" version:
- The HART communication resistor of ≥ 250 Ohm is located outside the FieldPort SWA50 in the 4 to 20 mA loop
- The HART communication resistor must be wired in series between the "IN+" terminal of the FieldPort SWA50 and the supply voltage, such as the PLC or active barrier
- The "External" option is configured for the "Communication risistor" parameter → 58

8.1.4 Initial password

The initial password can be found on the nameplate.

8.2 Putting the FieldPort SWA50 into operation

The FieldPort SWA50 can be operated as follows via Bluetooth:
- Via a smartphone or tablet with the Endress+Hauser SmartBlue app
- Via the Endress+Hauser tablet PC Field Xpert SMTxx

8.2.1 Commissioning via SmartBlue app

Starting the SmartBlue app and logging in

1. Switch on the supply voltage for the FieldPort SWA50.
2. Start the SmartBlue app on the smartphone or tablet. An overview of accessible devices is displayed.

1. Example of FieldPort SWA50 with Endress+Hauser HART field device, already connected to SmartBlue app
2. Example of FieldPort SWA50 with HART field device of another manufacturer, already connected to SmartBlue app
3. Example of FieldPort SWA50, not yet connected to SmartBlue app
4. Example of FieldPort SWA50 without HART field device, already connected to SmartBlue app
3. **Select device from list.**

   ➔ The "Login to device" page is displayed.

You can establish only **one** point-to-point connection between **one** FieldPort SWA50 and **one** smartphone or tablet.

- **Log in.** Enter **admin** as the user name and enter the initial password. The password can be found on the nameplate.

  ➔ Once the connection has been established successfully, the "Device information" page is displayed for the selected device. →  53

**Change the password after logging in for the first time.** →  57

### Checking and adjusting the HART configuration

Perform the following steps to ensure good communication between the FieldPort SWA50 and the connected HART field device.

- The parameters listed in this section can be found in the "HART Configuration" menu.
- **Navigation:** Root menu > System > FieldPort SWA50 > Connectivity > HART configuration
- **Menu overview:** →  66
1. Use the "HART address field device" parameter to check the HART address of the HART field device and set the address if necessary. In the HART field device and in the FieldPort SWA50, the same HART address must be used for the HART field device. → 58

2. Via the "Communication resistor" parameter, check the setting for the HART communication resistor. If there is no HART communication resistor outside of the FieldPort SWA50 in the 4 to 20 mA loop, you must activate the internal HART communication resistor. → 58

3. Via the "HART master type" parameter, check the setting for an additional HART master in the HART loop. In addition to the FieldPort SWA50, only one other HART master is permitted in the HART loop. The master type of this additional HART master and the FieldPort SWA50 may not be identical. → 58

**Connecting the FieldPort SWA50 to the Netilion Cloud**

If you wish to connect the FieldPort SWA50 to the Netilion Cloud, you must configure the FieldEdge SGC200 accordingly.

![Operating Instructions for FieldEdge SGC200: BA02058S](image)

**8.2.2 Commissioning via Field Xpert**

**Starting the Field Xpert and logging in**

1. Switch on the supply voltage for the FieldPort SWA50.
2. Start the Field Xpert tablet PC. To do so, double-click Field Xpert on the start screen.
   - The following view is displayed:

   ![Connection](image)

   ![Automatic](image) Connect to HART and IO-Link device automatically
   ![Assistant](image) Connect to device step-by-step
   ![Wireless](image) Connect to Endress+Hauser Bluetooth and WLAN device

3. Tap the ![](image) icon.
   - A list of all available WIFI and Bluetooth devices appears.
4. Click the symbol to filter for Bluetooth devices.
   ➤ A list of all available Bluetooth devices appears.

20  Reachable devices (live list)
1  Example of FieldPort SWA50 with HART field device, never connected to Field Xpert before
2  Example of FieldPort SWA50 with or without HART field device, already connected to Field Xpert

5. Tap the symbol next to the device that should be configured.
   ➤ The Login dialog box appears.
6. Log in. Enter **admin** as the user name and enter the initial password. The initial password can be found on the nameplate.

   The dialog box for initial commissioning opens.

   Change the password after logging in for the first time. → 57

**Checking and adjusting the HART configuration**

Perform the following steps to ensure good communication between the FieldPort SWA50 and the connected HART field device.

- The parameters listed in this section can be found in the "HART Configuration" menu.
- Navigation: Root menu > System > FieldPort SWA50 > Connectivity > HART configuration
- Menu overview: → 66

1. Use the "HART address field device" parameter to check the HART address of the HART field device and set the address if necessary. In the HART field device and in the FieldPort SWA50, the same HART address must be used for the HART field device. → 58

2. Via the "Communication resistor" parameter, check the setting for the HART communication resistor. If there is no HART communication resistor outside of the FieldPort SWA50 in the 4 to 20 mA loop, you must activate the internal HART communication resistor. → 58

3. Via the "HART master type" parameter, check the setting for an additional HART master in the HART loop. In addition to the FieldPort SWA50, only one other HART master is permitted in the HART loop. The master type of this additional HART master and the FieldPort SWA50 may not be identical. → 58

**Connecting the FieldPort SWA50 to the Netilion Cloud**

If you wish to connect the FieldPort SWA50 to the Netilion Cloud, you must configure the FieldEdge SGC200 accordingly.

Operating Instructions for FieldEdge SGC200: BA02058S

9  **Operation**

9.1  **Hardware locking**

The DIP switches for hardware-locking are located on the electronic insert.

### 9.2 LED

1 LED

Green: Flashes four times at start-up to indicate that the device is operational

The LED is located on the electronic insert and is not visible from the outside.
10  Description of SmartBlue app for SWA50

10.1  Menu overview (Navigation)
Menu overview (Navigation): → 66

10.2  "Device information" page
The following display options are possible for the "Device information" page:
• FieldPort SWA50 with HART field device from Endress+Hauser
• FieldPort SWA50 with HART field device from another manufacturer
• FieldPort SWA50 without connected or accessible HART field device

Information about the serial number shown
For Endress+Hauser field devices with HART 6 and HART 7, the actual serial number is displayed. For field devices from other manufacturers and for Endress+Hauser field devices with HART 5, a unique serial number is calculated. The calculated serial number does not correspond to the actual serial number of the field device.

Information about the status signal shown
When the Endress+Hauser field device is connected, the status signal displayed is a combination of the status signal of the connected HART field device and the status signal of the FieldPort SWA50.

If the HART field device does not support the extended device status according to NAMUR NE 107, limitations may apply to the display of status information.
22  "Device information" view – example for SWA50 with Endress+Hauser HART field device

1  Combined status signal, consisting of the status for the SWA50 and the status of the connected HART field device
2  Information about the HART field device connected to the SWA50. Firmware version, order code and device type are only displayed for Endress+Hauser field devices with HART 6 and HART 7.
3  Serial number
4  Process values of HART field device
5  Product image of Endress+Hauser HART field device with SWA50
"Device information" view – example for SWA50 with HART field device from another manufacturer

1. Information about the HART field device connected to the SWA50. Firmware version, order code, device type and status are displayed only for Endress+Hauser field devices with HART 6 and HART 7.
2. Serial number
3. Output current of HART field device
4. Product image of HART field device from another manufacturer with SWA50
1 Status signal for SWA50
2 Information about the SWA50
3 Measured values of the SWA50, 20 mA is always displayed as the output current in this case
4 Product image of SWA50, since HART field device is either not connected or not accessible

10.3 "Application" menu

10.3.1 "Measured values" page

Navigation: Root menu > Application > Measured values

The "Measured values" page shows the measured values of the HART field device that is connected to the FieldPort SWA50. If a HART field device is not connected or the HART field device cannot be reached, this page shows the measured values of the FieldPort SWA50.

The measured values PV, SV, TV and QV are displayed only for Endress+Hauser devices.

<table>
<thead>

</table>
11 Maintenance

11.1 General maintenance
We recommend periodic visual inspections of the device.

11.2 Updating the firmware
You can perform firmware updates for the FieldPort SWA50 via the SmartBlue app.

Prerequisites
- The smartphone battery is charged or the smartphone is connected to a power supply.
- The Bluetooth signal quality of the smartphone is sufficient.
- In the case of the FieldPort SWA50, DIP switch 2 must be set to ON → 51.
  (Factory setting of DIP switch 2: ON)

NOTICE
Error during firmware update
Incorrect firmware installation
- The supply voltage must be applied during the entire firmware update process.
- The loop current must be at least 10 mA during the entire firmware update process.
- Wait until the firmware update has finished. The firmware update takes approx. 5 to 20 minutes. If the FieldPort SWA50 is actively connected to a WirelessHART network, the firmware download process takes longer.

During the firmware update, at least 10 mA must be transmitted from the connected HART field device. This can be achieved by simulating the current output at the HART field device, for example. You can check the current value in the SmartBlue app on the "Device information" page. → 53

If a HART field device is not connected to the FieldPort SWA50 or if the HART field device cannot be reached, it is presumed that the loop current is large enough. → 42

1. Copy update packages to the SmartBlue app.
2. Open the Firmware update page. Navigation: Root menu > System > FieldPort SWA50 > Connectivity > Bluetooth configuration
3. Select update package from the list of available packages.
25  "Firmware update" page

1  Example of a package

4. Tap the **Start update** button to download the firmware update to the FieldPort SWA50. If the update cannot be downloaded, the error message "Internal firmware update error" is displayed.

5. Wait until the firmware update has been downloaded. The remaining time is displayed.

   The following view is displayed:
6. Ensure that a loop current of at least 10 mA is also transmitted during the restart and the installation of the firmware update.

7. Tap either the **Apply** button or **Later** button.
   - **Apply** button: The FieldPort SWA50 is restarted and the firmware update is installed on the FieldPort SWA50.
   - **Later** button: The firmware update is only installed the next time the FieldPort SWA50 is restarted.

8. Wait until the device restarts and the firmware update is installed.

9. Connect the FieldPort SWA50 to the SmartBlue app again.

10. Via the "Firmware version" parameter, check whether the new firmware is installed. → 59

   If the firmware update is not fully downloaded or is not correctly installed, the FieldPort SWA50 works with the old firmware.
12  Diagnostics and troubleshooting

12.1  Diagnostics

If a diagnostic event has occurred, the status signal appears in the SmartBlue app and in Field Xpert together with the corresponding symbol for the event level according to NAMUR NE 107.

- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)

If the HART field device does not support the extended device status according to NAMUR NE 107, limitations may apply to the display of status information. If a symbol for an event level is displayed, make sure that this status is not caused by the connected HART field device.

<table>
<thead>
<tr>
<th>Status signal</th>
<th>Possible cause</th>
<th>Remedial measure</th>
</tr>
</thead>
</table>
| F             | FieldPort cannot communicate with the HART field device. | • Connect the HART field device.  
• Check the HART field device and wiring.  
• Check the HART address of the HART field device. |
|               | HART field device not working correctly. | Check the HART field device. |
|               | Loop current outside permitted range. | • Check wiring. The current loop must be between 3.6 mA and 22.5 mA.  
• Change HART field device. |
|               | Self-test active. | Wait until self-test is completed. |
|               | The hardware of the FieldPort is defective. | Change the FieldPort. |
| S             | Operating temperature outside permitted range. | • Check ambient temperature.  
• Check process temperature. |
| M             | Critical number of write cycles to memory reached. | • Make sure that no cyclic configuration change is automatically sent to the FieldPort.  
• Change the FieldPort. |

12.2  Troubleshooting

<table>
<thead>
<tr>
<th>Fault</th>
<th>Corrective action</th>
</tr>
</thead>
</table>
| No communication between HART field device and FieldPort. | Check settings of HART parameters in the FieldPort.  
SmartBlue app and FieldXpert:  
Root menu > System > FieldPort SWA50 > Connectivity > HART Configuration → 58 |
| No Bluetooth communication between the FieldPort and the SmartBlue app. | Check if Bluetooth communication is enabled → 51. |
13 Repair

13.1 General notes
Repairs may only be performed by Endress+Hauser staff or by individuals authorized and trained by Endress+Hauser.

13.2 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to Endress+Hauser for disposal under the applicable conditions.

14 Accessories
Optional accessories:
Mounting bracket (order number: 71520242)

Detailed information about the accessories is available from your Endress+Hauser sales organization: www.addresses.endress.com or on the product page

15 Technical data
For detailed information on "technical data": see Technical Information TI01468S
