## About this document

## Associated documentation

## Supplementary documentation

## Manufacturer's certificates

## Manufacturer address

iThis document has been translated into several languages. Legally determined is solely the English source text.

This document is an integral part of the following Operating Instructions:

- KA00229F/00 (FTM50, FTM51)
- KA00230F/00 (FTM52)

Explosion-protection brochure: CP00021Z/11
The Explosion-protection brochure is available:

- In the download area of the Endress+Hauser website:
www.endress.com -> Downloads -> Brochures and Catalogs -> Text Search: CP00021Z
- On the CD for devices with CD-based documentation

## NEPSI Declaration of Conformity

Certificate number:
GYJ21.3324

Affixing the certificate number certifies conformity with the following standards (depending on the device version):

- GB/T 3836.1-2021
- GB/T 3836.4-2021
- GB/T 3836.31-2021

## Endress+Hauser SE+Co. KG

Hauptstraße 1
79689 Maulburg, Germany
Address of the manufacturing plant: See nameplate.

The extended order code is indicated on the nameplate, which is affixed to the device in such a way that it is clearly visible. Additional information about the nameplate is provided in the associated Operating Instructions.

## Structure of the extended order code

| FTM5x | - | ************ | + | $A^{*} B^{*} C^{*} D^{*} E^{*} F^{*} G^{*} .$. |

| (Device type) |  | (Basic specifications) |  | (Optional specifications) |
| * $=$ Placeholder |  |  |  |  |
| At this position, an option (number or letter) selected from the |  |  |  |  |

## Basic specifications

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available. The selected option of a feature can consist of several positions.

## Optional specifications

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available. The features have a 2-digit structure to aid identification (e.g. JA). The first digit (ID) stands for the feature group and consists of a number or a letter (e.g. J = Test, Certificate). The second digit constitutes the value that stands for the feature within the group (e.g. A = 3.1 material (wetted parts), inspection certificate).

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

## Extended order code: Soliphant M

Device type
FTM50, FTM51, FTM52
Basic specifications

| Position 1 (Approval) |  |  |

|  | F17 Alu IP66/67 NEMA Type 4X Encl. |
| 6 | F13 Alu IP66/68 NEMA Type 4X/6P Encl. |
| 7 | F15 316L hygiene IP66/67 NEMA Type 4X Encl. |

| Position 11 (Additional Option 2) |  |  |
| :---: | :---: | :---: |
| Selected option |  | Description |
| FTM50FTM51 | A | Not selected |
|  | C | EN10204-3.1 material (wetted parts), inspection certificate |
|  | D, E | Temp. separator $\leq 150^{\circ} \mathrm{C}$ |
|  | F, H | High temperature $\leq 280^{\circ} \mathrm{C}$ |
|  | J, K | High temperature $\leq 230^{\circ} \mathrm{C}$ |
|  | Y | Special version: High temperature $\leq 300^{\circ} \mathrm{C}$ |
| FTM52 | A | Not selected |

Optional specifications
No options specific to hazardous locations are available.

## Safety instructions: General

- The device is intended to be used in explosive atmospheres as defined in the scope of IEC 60079-0 or equivalent national standards. If no potentially explosive atmospheres are present or if additional protective measures have been taken: The device may be operated according to the manufacturer's specifications.
- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
- Be suitably qualified for their role and the tasks they perform
- Be trained in explosion protection
- Be familiar with national regulations
- For installation, use and maintenance of the device, users must also observe the requirements stated in the Operating Instructions and the standards:
- GB 50257-2014: "Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering".
- GB/T 3836.13-2021: "Explosive atmospheres, Part 13: Equipment repair, overhaul, reclamation and modification".
- GB/T 3836.15-2017: "Explosive atmospheres, Part 15: Electrical installations design, selection and erection".
- GB/T 3836.16-2017: "Explosive atmospheres, Part 16: Electrical installations inspection and maintenance".
- GB 15577-2018: "Safety regulations for dust explosive prevention and protection". (Only if installed in dust hazardous area.)
- Install the device according to the manufacturer's instructions and national regulations.
- Do not operate the device outside the specified electrical, thermal and mechanical parameters.
- Only use the device in media to which the wetted materials have sufficient durability.
- Avoid electrostatic charging:
- Of plastic surfaces (e.g. enclosure, sensor element, special varnishing, attached additional plates, ..)
- Of isolated capacities (e.g. isolated metallic plates)
- Refer to the temperature tables for the relationship between the permitted ambient temperature for the sensor and/or transmitter, depending on the range of application and the temperature class.
- Modifications to the device can affect the explosion protection and must be carried out by staff authorized to perform such work by Endress+Hauser.

Safety instructions:
Special conditions

- To avoid electrostatic charging: Do not rub surfaces with a dry cloth.
- In the event of additional or alternative special varnishing on the enclosure or other metal parts or for adhesive plates:
- Observe the danger of electrostatic charging and discharge.
- Do not install in the vicinity of processes ( $\leq 0.5 \mathrm{~m}$ ) generating strong electrostatic charges.
Basic specification, Position $6=4$
In an explosive atmosphere: Waiting time before opening the electronics compartment after switching off the power supply:
17 minutes.

## Safety

 instructions: Installation

4 Temperature separator (optional at $150^{\circ} \mathrm{C}$ )
5 Electronic insert; Electronic compartment Ex tb
6 Electronics enclosure
7 Power supply
8 Potential equalization line
9 Potential equalization

- After mounting and connecting the sensor, ingress protection of the enclosure must be at least IP65.
- Perform the following to achieve the degree of protection IP66/67 or IP66/68:
- Screw the cover tight.
- Mount the cable entry correctly.
- Use a process connection seal that meets the materials compatibility and temperature requirements.
- When connecting the cables, ensure there is adequate strain relief at place of installation.
- Protect the connecting cable between the separate enclosure and the level sensor from tension and friction (e.g. due to electrostatic charge from medium flow).
- Observe the maximum process conditions according to the manufacturer's Operating Instructions.
- At high medium temperatures, note flange pressure load capacity as a factor of temperature.
- Max. heat-up of device surface in Zone 20 under fault conditions: $\leq 10 \mathrm{~K}$ (measured with deposited material with a layer >200 mm in thickness).
- Max. heat-up of device surface in Zone 21 or Zone 22 under fault conditions: $\leq 23 \mathrm{~K}$.
- Install the device to exclude any mechanical damage or friction during the application. Pay particular attention to flow conditions and tank fittings.
- Support extension tube of the device if a dynamic load is expected.
- Only use certified cable entries suitable for the application. Observe national regulations and standards.
- When operating the transmitter enclosure at an ambient temperature under $-20^{\circ} \mathrm{C}$, use appropriate cables and cable entries permitted for this application.
- Seal unused entry glands with approved sealing plugs that correspond to the type of protection. The plastic transport sealing plug does not meet this requirement and must therefore be replaced during installation.
- Continuous service temperature of the connecting cable: $-50^{\circ} \mathrm{C}$ to $\geq$ $+93^{\circ} \mathrm{C}$; in accordance with the range of service temperature taking into account additional influences of the process conditions ( $\mathrm{T}_{\mathrm{a}, \min }$ ), $\left(\mathrm{T}_{\mathrm{a}, \max }+23 \mathrm{~K}\right)$.
- Before operation:
- Screw in the cover all the way.
- Tighten the securing clamp on the cover.
- In potentially explosive atmospheres:
- Do not disconnect the electrical connection of the power supply circuit when energized.
- Do not open the connection compartment cover and the electronics compartment cover when energized.

## Accessory high pressure sliding sleeve

The high pressure sliding sleeve can be used for a continuous setting of the switch point and is suited for zone separation if mounted properly (see Operating Instructions).

## Potential equalization

Integrate the device into the local potential equalization.

Temperature tables
