Extended order code

The extended order code is indicated on the nameplate, which is affixed to the device in such a way that it is clearly visible. Additional information about the nameplate is provided in the associated Operating Instructions.

<i>(Device type)</i>		<i>(Basic specifications)</i>		<i>(Optional specifications)</i>

* = Placeholder

At this position, an option (number or letter) selected from the specification is displayed instead of the placeholders.

Basic specifications

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available.

The selected option of a feature can consist of several positions.

Optional specifications

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available. The features have a 2-digit structure to aid identification (e.g. JA). The first digit (ID) stands for the feature group and consists of a number or a letter (e.g. J = Test, Certificate). The second digit constitutes the value that stands for the feature within the group (e.g. A = 3.1 material (wetted parts), inspection certificate).

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

Safety instructions:
General

- The device is intended to be used in explosive atmospheres as defined in the scope of EN IEC 60079-0 or equivalent national standards. If no potentially explosive atmospheres are present or if additional protective measures have been taken: The device may be operated according to the manufacturer's specifications.
- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
 - Be suitably qualified for their role and the tasks they perform
 - Be trained in explosion protection
 - Be familiar with national regulations
- Install the device according to the manufacturer's instructions and national regulations.
- Only use the device in media to which the wetted materials have sufficient durability.
- Avoid electrostatic charging:
 - Of plastic surfaces (e.g. enclosure, sensor element, special varnishing, attached additional plates, ..)
 - Of isolated capacities (e.g. isolated metallic plates)

Safety instructions:
Special conditions

- Avoid electrostatic charging of the probe (e.g. do not rub dry and install outside the filling flow).
- Do not use in areas where electrostatic charge caused by the process can occur.
- To avoid electrostatic charging: Do not rub surfaces with a dry cloth.
- In the event of additional or alternative special varnishing on the enclosure or other metal parts or for adhesive plates:
 - Observe the danger of electrostatic charging and discharge.
 - Do not install in the vicinity of processes (≤ 0.5 m) generating strong electrostatic charges.

Basic specification, Position 8 (FMI5x), 9 (FTI5x) = 2

- Only suitable for use in Zone 1!
- Avoid electrostatic charging of the enclosure (e.g. friction, cleaning, maintenance, strong medium flow).
- Do not clean the transparent cover in an explosive atmosphere.
- Application of a plug is only suitable for gas group IIB.

Basic specification, Position 8 (FMI5x), 9 (FTI5x) = 3, 4, 5

Avoid sparks caused by impact and friction.

 B Zone 0, Zone 20
 1 Rope or rod probes
 2 Electronic insert
 3 Enclosure
 4 Certified associated apparatus

- Observe the maximum process conditions according to the manufacturer's Operating Instructions.
- At high medium temperatures, note flange pressure load capacity as a factor of temperature.
- Replace cable glands and sealing plugs only with identical parts.
- Perform the following to achieve the degree of protection:
 - Screw the cover tight.
 - Mount the cable entry correctly.
- Mechanically fix probes which are more than 3 m (e.g. using guy ropes).
- Level probes with ground tubes: Suitable for use in Group IIC, IIB, IIA and IIIC, IIIB, IIIA.
- Level probes without ground tubes: Suitable for use in Group IIC, IIB, IIA and IIIC, IIIB, IIIA, if avoiding electrostatic charging of the probe. Designation of the device with warning sign: "Avoid electrostatic charging".
- The device is designed for operation in Zone 1 or Zone 21 (enclosure) as well as Zone 0 or Zone 20 (probe). In the event of potentially explosive gas-air and dust-air mixtures occurring simultaneously: Suitability requires further assessment.

Basic specification, Position 8 (FMI5x), 9 (FTI5x) = 1
Tightening torque of the securing screw: max. 1 Nm.

Intrinsic safety

Observe the pertinent guidelines when interconnecting intrinsically safe circuits.

Potential equalization

Install potential equalization between the certified associated apparatus (non-hazardous area, ) and the device (explosion-hazardous area, ) .

Overvoltage protection

For installations which require overvoltage protection to comply with national regulations or standards, install the device using overvoltage protection (e.g. HAW56x from Endress+Hauser).

Safety instructions:
Zone 20, Zone 21

- Seal the cable entry or piping tight.
- Do not open in a potentially explosive dust atmosphere.
- Avoid electrostatic charging of the sensor cable (e.g. do not rub dry and install outside the filling flow).

Zone 21

Only use cable and wire entries suitable for Zone 21 with the degree of protection IP66. Cable and wire entries must be suitable for an ambient temperature of at least -50 to $+90$ °C.

Basic specification, Position 8 (FMI5x), 9 (FTI5x) = 3, 4, 5, 6

Tighten the cover with torque 12 Nm.

- The tightening torque refers to cable glands installed by the manufacturer:
 - Recommended torque to connect the cable gland into the enclosure: 3.75 Nm
 - Recommended torque to tighten the cable into the cable gland: 3.5 Nm
 - Maximum torque to tighten the cable into the cable gland: 10 Nm
 - This value may be different depending on the type of cable. However, the maximum value must not be exceeded.
- Only suitable for fixed installation. The operator must pay attention to a suitable strain relief of the cable.
- To maintain the ingress protection of the enclosure: Install the enclosure cover, cable glands and blind plugs correctly.
- The cable glands are suitable for a low risk of mechanical danger (4 Joule) and must be mounted in a protected position if larger impact energy levels are expected.
