Table of contents

1   About this document

1.1   Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2   Symbols

1.2.1   Safety symbols

⚠ DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

⚠ WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

⚠ CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2   Electrical symbols

∼

Alternating current

∼

Direct current and alternating current

⎓

Direct current

⏚

Ground connection

A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

⏚ **Protective earth (PE)**

Ground terminals that must be connected to ground prior to establishing any other connections.

The ground terminals are located on the interior and exterior of the device:
• Interior ground terminal: protective earth is connected to the mains supply.
• Exterior ground terminal: device is connected to the plant grounding system.

1.2.3   Tool symbols

⊕ ✎
Phillips head screwdriver

Flat blade screwdriver

Torx screwdriver

Allen key

Open-ended wrench

1.2.4   Symbols for certain types of information and graphics

Permitted

Procedures, processes or actions that are permitted

Preferred

Procedures, processes or actions that are preferred

Forbidden

Procedures, processes or actions that are forbidden

⚠ → 📖 Safety instructions

Observe the safety instructions contained in the associated Operating Instructions

Temperature resistance of the connection cables

Specifies the minimum value of the temperature resistance of the connection cables

1.3 Documentation

The following documentation types are available in the Downloads area of the Endress +Hauser website (www.endress.com/downloads):

For an overview of the scope of the associated Technical Documentation, refer to the following:
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

1.3.1 Technical Information (TI)

Planning aid
The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.

1.3.2 Brief Operating Instructions (KA)

Guide that takes you quickly to the 1st measured value
The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

1.3.3 Operating Instructions (BA)

The Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

It also contains a detailed explanation of each individual parameter in the operating menu (except the **Expert** menu). The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.4 Description of Device Parameters (GP)

The Description of Device Parameters provides a detailed explanation of each individual parameter in the 2nd part of the operating menu: the **Expert** menu. It contains all the device parameters and allows direct access to the parameters by entering a specific code. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.

1.3.5 Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

The nameplate indicates the Safety Instructions (XA) that are relevant to the device.

1.3.6 Installation instructions (EA)

Installation Instruction are used to replace a faulty unit with a functioning unit of the same type.

1.4 Registered trademarks

Modbus®
Registered trademark of SCHNEIDER AUTOMATION, INC.

2 Basic safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:
▸ Trained, qualified specialists must have a relevant qualification for this specific function and task.
▸ Are authorized by the plant owner/operator.
▸ Are familiar with federal/national regulations.
▸ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
▸ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:
▸ Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
▸ Follow the instructions in this manual.

2.2 Intended use

Application and measured materials
The measuring device described in these Operating Instructions is intended for the continuous, contact-less level measurement of liquids. The device must be installed in metallic stilling wells. Operation is completely harmless to humans and animals.

Depending on the version ordered, the measuring device can also measure potentially explosive, flammable, poisonous and oxidizing media.

Measuring devices for use in hazardous areas, in hygienic applications or in applications where there is an increased risk due to process pressure, are labeled accordingly on the nameplate.

To ensure that the measuring device remains in proper condition for the operation time:
▸ Only use the measuring device in full compliance with the data on the nameplate and the general conditions listed in the Operating Instructions and supplementary documentation.
▸ Check the nameplate to verify if the device ordered can be put to its intended use in the approval-related area (e.g. explosion protection, pressure vessel safety).
▸ Use the measuring device only for media against which the process-wetted materials are adequately resistant.
▸ If the measuring device is not operated at atmospheric temperature, compliance with the relevant basic conditions specified in the associated device documentation is absolutely essential.
▸ Protect the measuring device permanently against corrosion from environmental influences.
▸ Observe the limit values in the "Technical Information".

The manufacturer is not liable for damage caused by improper or non-designated use.

Residual risk
During operation the sensor may assume a temperature near the temperature of the measured material.

Danger of burns due to heated surfaces!
▸ For high process temperatures: Install protection against contact in order to prevent burns.

2.3 Workplace safety

For work on and with the device:
▶ Wear the required personal protective equipment according to federal/national regulations.

2.4 Operational safety

Risk of injury!
▶ Operate the device only if it is in proper technical condition, free from errors and faults.
▶ The operator is responsible for interference-free operation of the device.

Modifications to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers:
▶ If modifications are nevertheless required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability:
▶ Carry out repairs on the device only if they are expressly permitted.
▶ Observe federal/national regulations pertaining to the repair of an electrical device.
▶ Use only original spare parts and accessories from the manufacturer.

Hazardous area

To eliminate danger to persons or the facility when the device is used in the hazardous area (e.g. explosion protection):
▶ Check the nameplate to verify if the device ordered can be put to its intended use in the hazardous area.
▶ Observe the specifications in the separate supplementary documentation that is an integral part of these instructions.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate. It meets the general safety standards and legal requirements.

NOTICE
Loss of degree of protection by opening of the device in humid environments
▶ If the device is opened in a humid environment, the degree of protection indicated on the nameplate is no longer valid. This may also impair the safe operation of the device.

2.5.1 CE mark

The measuring system meets the legal requirements of the applicable EU directives. These are listed in the corresponding EU Declaration of Conformity together with the standards applied.

The manufacturer confirms successful testing of the device by affixing to it the CE mark.
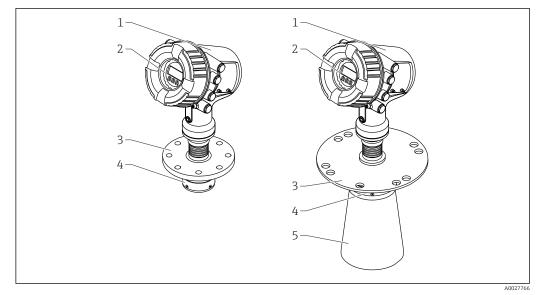

2.5.2 EAC conformity

The measuring system meets the legal requirements of the applicable EAC guidelines. These are listed in the corresponding EAC Declaration of Conformity along with the standards applied.

The manufacturer confirms successful testing of the device by affixing to it the EAC mark.

3   Product description

3.1   Product design

A0027766

⊡ *1   Design of Micropilot NMR84*

1   Electronics housing
2   Display and operating module (can be operated without opening the cover)
3   Process connection (flange)
4   Planar antenna
5   Antenna extension (for antennas ≥ 200 mm (8 in))

4　Incoming acceptance and product identification

4.1　Incoming acceptance

Upon receipt of the goods check the following:
- Are the order codes on the delivery note and the product sticker identical?
- Are the goods undamaged?
- Do the nameplate data match the ordering information on the delivery note?
- If required (see nameplate): Are the Safety Instructions (XA) enclosed?

ℹ️ If one of these conditions is not satisfied, contact your Endress+Hauser Sales Center.

4.2　Product identification
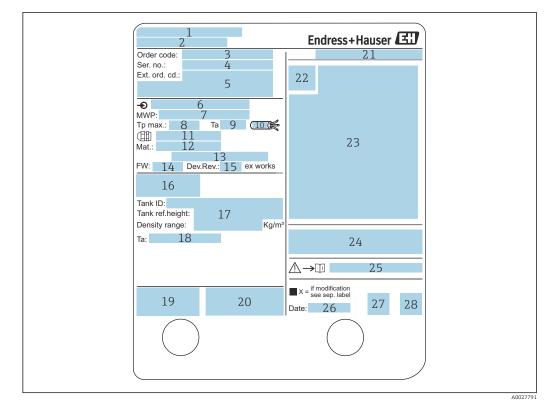

The following options are available for identification of the measuring device:
- Nameplate specifications
- Extended order code with breakdown of the device features on the delivery note
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

ℹ️ For an overview of the scope of the associated Technical Documentation, refer to the following:
- *W@M Device Viewer* (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- *Endress+Hauser Operations App*: Enter the serial number from the nameplate or scan the matrix code on the nameplate

4.2.1 Nameplate

2   Nameplate

1   Manufacturer address
2   Device name
3   Order code
4   Serial number
5   Extended order code
6   Supply voltage
7   Maximum process pressure
8   Maximum process temperature
9   Permitted ambient temperature (T_a)
10 Temperature resistance of cable
11 Thread for cable entry
12 Material in contact with process
13 Not used
14 Firmware version
15 Device revision
16 Metrology certification numbers
17 Customized parametrization data
18 Ambient temperature range
19 CE mark / C-tick mark
20 Additional information on the device version
21 Ingress protection
22 Certificate symbol
23 Data concerning the Ex approval
24 General certificate of approval
25 Associated Safety Instructions (XA)
26 Manufacturing date
27 RoHS mark
28 QR code for the Endress+Hauser Operations App

4.2.2 Manufacturer address

Endress+Hauser SE+Co. KG
Hauptstraße 1
79689 Maulburg, Germany
Place of manufacture: See nameplate.

4.3   Storage and transport

4.3.1   Storage conditions

- Storage temperature: –50 to +80 ℃ (–58 to +176 ℉)
- Store the device in its original packaging.

4.3.2   Transport

⚠ CAUTION

Housing or antenna may be damaged or break away.
Risk of injury
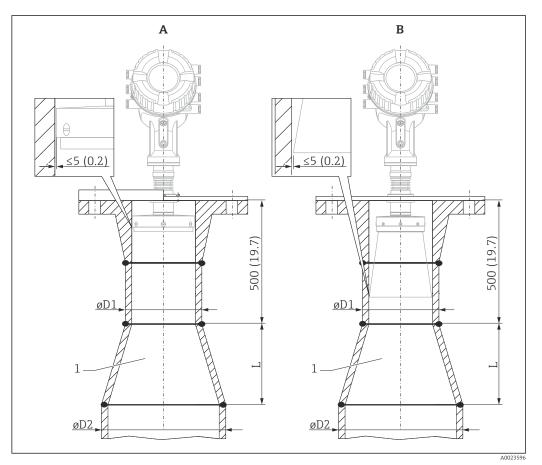

▶ Transport the measuring device to the measuring point in its original packaging or at the process connection.
▶ Do not fasten lifting devices (hoisting slings, lifting eyes etc.) at the housing or the antenna but at the process connection. Take into account the mass center of the device in order to avoid unintended tilting.
▶ Comply with the safety instructions, transport conditions for devices over 18 kg (39.6 lb) (IEC 61010).

5   Installation

5.1   Installation conditions

5.1.1   Conditions for the stilling well

- Metal (no enamel coating)
- Constant diameter (no rectangular stilling wells)
- Weld seam as smooth as possible
- For best radar propagation behavior it is recommended to have holes instead of slots. If slots can not be avoided, they should be as thin and short as possible.
- Maximum gap between antenna/horn and wall of the stilling well: 5 mm (0.2 in).
- At any transition (e.g. when using a ball valve or mending pipe segments) gaps must not exceed 1 mm (0.04 in).
- The stilling well must be smooth on the inside. Average roughness ≤ 6.3 μm (0.248 μin)
- Length and number of the holes do not affect the measurement. The hole diameter (deburred) can be 1/7 of the well diameter, but should not exceed 30 mm (1.2 in).
- An increase of the pipe diameter is possible if the minimum lengths according to the following figure and table are taken into account:

A0023596

🖻 3   *Installation of NMR84 in stilling wells with a larger diameter*

A   Antenna ≤150 mm (6 in) (without horn extension)
B   Antenna ≥ 200 mm (8 in) (with horn extension)
1   Extension from ØD1 to ØD2

D1 [1]	D2	L
100 mm (4 in)	150 mm (6 in)	300 mm (12 in)
150 mm (6 in)	200 mm (8 in)	300 mm (12 in)
200 mm (8 in)	250 mm (10 in)	300 mm (12 in)
250 mm (10 in)	300 mm (12 in)	450 mm (18 in)
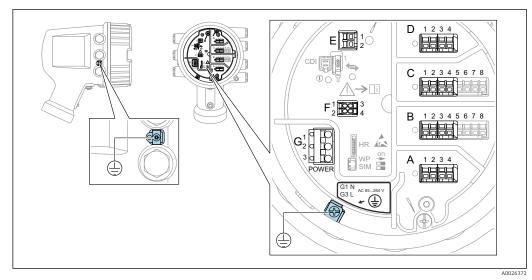

1)   = antenna size

5.2   Post-installation check

❍	Is the device undamaged (visual inspection)?
❍	Does the device conform to the measuring point specifications? For example: • Process temperature • Process pressure (refer to the chapter on "Material load curves" of the "Technical Information" document) • Ambient temperature range • Measuring range
❍	Are the measuring point identification and labeling correct (visual inspection)?
❍	Is the device adequately protected from precipitation and direct sunlight?

6 Electrical connection

6.1 Terminal assignment

🖾 4   *Terminal compartment (typical example) and ground terminals*

Terminal area A/B/C/D (slots for I/O modules)
Module: Up to four I/O modules, depending on the order code
• Modules with four terminals can be in any of these slots.
• Modules with eight terminals can be in slot B or C.

ℹ️ The exact assignment of the modules to the slots is dependent on the device version
→ 🖺 18.

Terminal area E
Module: HART Ex i/IS interface
• E1: H+
• E2: H-

Terminal area F
Remote display
• F1: V_{CC} (connect to terminal 81 of the remote display)
• F2: Signal B (connect to terminal 84 of the remote display)
• F3: Signal A (connec t to terminal 83 of the remote display)
• F4: Gnd (connect to terminal 82 of the remote display)

Terminal area G (for High voltage AC power supply and Low voltage AC power supply)
• G1: N
• G2: not connected
• G3: L

Terminal area G (for Low voltage DC power supply)
• G1: L-
• G2: not connected
• G3: L+
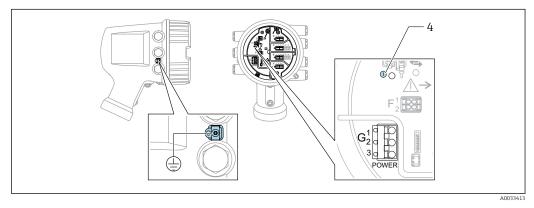

Terminal area: Protective ground
Module: Protective ground connection (M4 screw)

A0018339

☒ *5   Terminal area: Protective ground*

6.1.1   Power supply

A0033413

G1   N
G2   not connected
G3   L
4   Green LED: indicates power supply

ℹ️   The supply voltage is also indicated on the nameplate.

Supply voltage

High voltage AC power supply:
Operational value:
100 to 240 V_{AC} (- 15 % + 10 %) = 85 to 264 V_{AC} , 50/60 Hz

Low voltage AC power supply:
Operational value:
65 V_{AC} (- 20 % + 15 %) = 52 to 75 V_{AC} , 50/60 Hz

Low voltage DC power supply:
Operational value:
24 to 55 V_{DC} (- 20 % + 15 %) = 19 to 64 V_{DC}
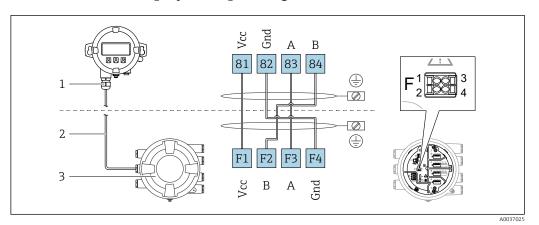

Power consumption

Maximum power varies depending on the configuration of the modules. The value shows
maximum apparent power, select the applicable cables accordingly. The actual consumed
effective power is 12 W.

High voltage AC power supply:
28.8 VA

Low voltage AC power supply:
21.6 VA
Low voltage DC power supply:
13.4 W

6.1.2 Remote display and operating module DKX001
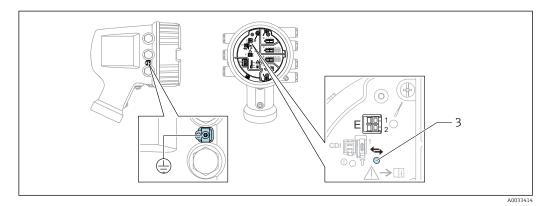

🖻 *6* *Connection of the remote display and operating module DKX001 to the Tank Gauging device (NMR8x, NMS8x or NRF8x)*

1 Remote display and operating module
2 Connecting cable
3 Tank Gauging device (NMR8x, NMS8x or NRF8x)

The remote display and operating module DKX001 is available as an accessory. For details refer to SD01763D.

- The measured value is indicated on the DKX001 and on the local display and operating module simultaneously.
- The operating menu cannot be accessed on both modules at the same time. If the operating menu is entered in one of these modules, the other module is automatically locked. This locking remains active until the menu is closed in the first module (back to measured value display).

6.1.3 HART Ex i/IS interface
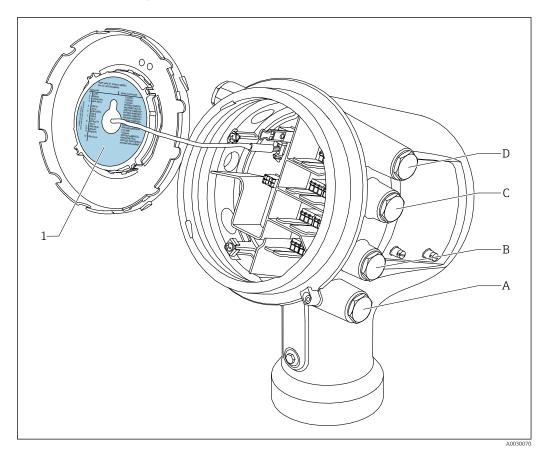

E1 H+
E2 H-
3 Orange LED: indicates data communication

This interface always operates as the main HART master for connected HART slave transmitters. The Analog I/O modules, on the other hand, can be configured as a HART master or slave → 🖺 32 → 🖺 34.

6.1.4   Slots for I/O modules

The terminal compartment contains four slots (A, B, C and D) for I/O modules. Depending on the device version (ordering features 040, 050 and 060) these slots contain different I/O modules. The table below shows which module is located in which slot for a specific device version.

ℹ️ The slot assignment for the device is also indicated on a label attached to the back cover of the display module.

A0030070

1   Label showing (among other things) the modules in the slots A to D.
A   Cable entry for slot A
B   Cable entry for slot B
C   Cable entry for slot C
D   Cable entry for slot D

6.1.5 Terminals of the "Modbus" module, "V1" module or "WM550" module

A0031200

⊠ *7*   *Designation of the "Modbus", "V1" or "WM550" modules (examples); depending on the device version these modules may also be in slot B or C.*

Depending on the device version, the "Modbus" and/or "V1" or "WM550" module may be in different slots of the terminal compartment. In the operating menu the "Modbus" and "V1" or "WM550" interfaces are designated by the respective slot and the terminals within this slot: **A1-4**, **B1-4**, **C1-4**, **D1-4**.

Terminals of the "Modbus" module
Designation of the module in the operating menu: **Modbus X1-4**; (X = A, B, C or D)
- X1 [1]
  - Terminal name: S
  - Description: Cable shielding connected via a capacitor to EARTH
- X2 [1]
  - Terminal name: 0V
  - Description: Common reference
- X3 [1]
  - Terminal name: B-
  - Description: Non-inverting signal line
- X4 [1]
  - Terminal name: A+
  - Description: Inverting signal line
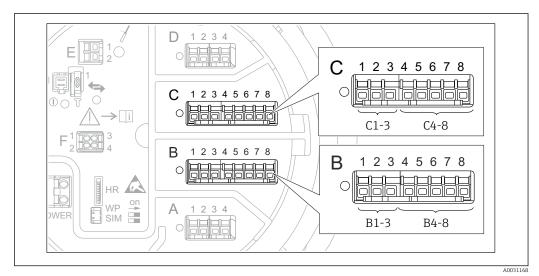

---

1)   Here, "X" stands for one of the slots "A", "B", "C", or "D".

Terminals of the "V1" and "WM550" module
Designation of the module in the operating menu: **V1 X1-4** or **WM550 X1-4**; (X = A, B, C or D)
- X1 [2]
  - Terminal name: S
  - Description: Cable shielding connected via a capacitor to EARTH
- X2 [1]
  - Terminal name: -
  - Description: not connected
- X3 [1]
  - Terminal name: B-
  - Description: Protocol loop signal -
- X4 [1]
  - Terminal name: A+
  - Description: Protocol loop signal +

6.1.6 Terminals of the "Analog I/O" module (Ex d /XP or Ex i/IS)

A0031168

Terminal: B1-3
Function: Analog input or output (configurable)
- Passive usage: → 🗎 32
- Active usage: → 🗎 34
- Designation in the operating menu:
  Analog I/O B1-3 (→ 🗎 140)

Terminal: C1-3
Function: Analog input or output (configurable)
- Passive usage: → 🗎 32
- Active usage: → 🗎 34
- Designation in the operating menu:
  Analog I/O C1-3 (→ 🗎 140)

Terminal: B4-8
Function: Analog input
- RTD: → 🗎 35
- Designation in the operating menu:
  Analog IP B4-8 (→ 🗎 134)

---

2)   Here, "X" stands for one of the slots "A", "B", "C", or "D".

Terminal: C4-8
Function: Analog input
- RTD: → 🖹 35
- Designation in the operating menu:
  Analog IP C4-8 (→ 🖹 134)
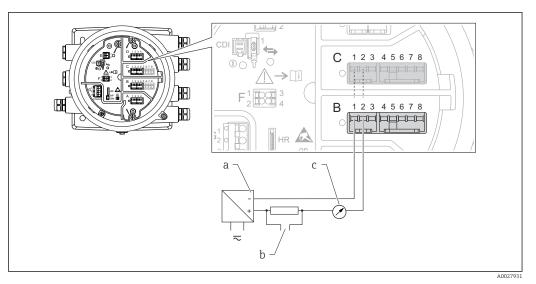

6.1.7   Connection of the "Analog I/O" module for passive usage
ℹ️ • In the passive usage the supply voltage for the communication line must be supplied
      by an external source.
    • The wiring must be in accordance with the intended operating mode of the Analog
      I/O module; see the drawings below.
    • Screened cable must be used for the 4...20mA signal line.

"Operating mode" = "4..20mA output" or "HART slave +4..20mA output"

A0027931
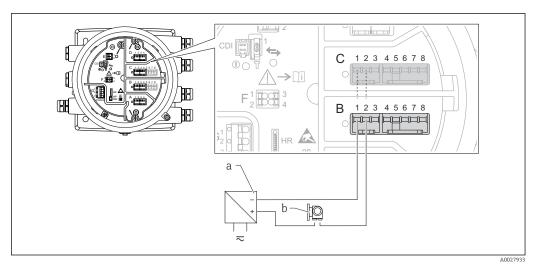

⊞ *8*   *Passive usage of the Analog I/O module in the output mode*
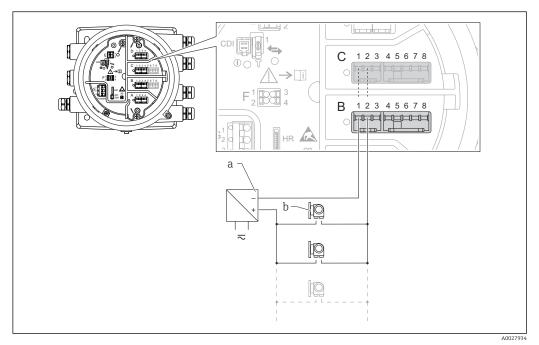

a   *Power supply*
b   *HART signal output*
c   *Analog signal evaluation*

"Operating mode" = "4..20mA input" or "HART master+4..20mA input"

A0027933

⊞ *9*   *Passive usage of the Analog I/O module in the input mode*

a   *Power supply*
b   *External device with 4...20mA and/or HART signal output*

"Operating mode" = "HART master"

⊡ 10   Passive usage of the Analog I/O module in the HART master mode

a   Power supply
b   Up to 6 external devices with HART signal output
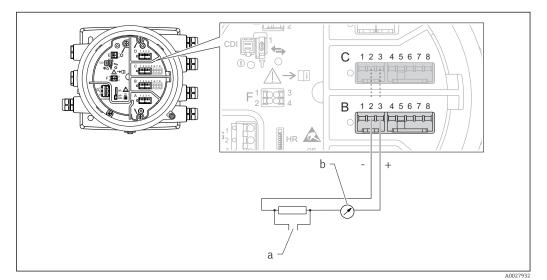

6.1.8   Connection of the "Analog I/O" module for active usage

ℹ️   • In the active usage the supply voltage for the communication line is supplied by the device itself. There is no need of an external power supply.
   • The wiring must be in accordance with the intended operating mode of the Analog I/O module; see the drawings below.
   • Screened cable must be used for the 4...20mA signal line.
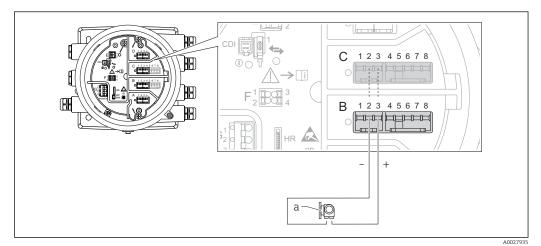

ℹ️   • Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
   • Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
   • Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

"Operating mode" = "4..20mA output" or "HART slave +4..20mA output"

🖼 *11   Active usage of the Analog I/O module in the output mode*

a   HART signal output
b   Analog signal evaluation

"Operating mode" = "4..20mA input" or "HART master+4..20mA input"
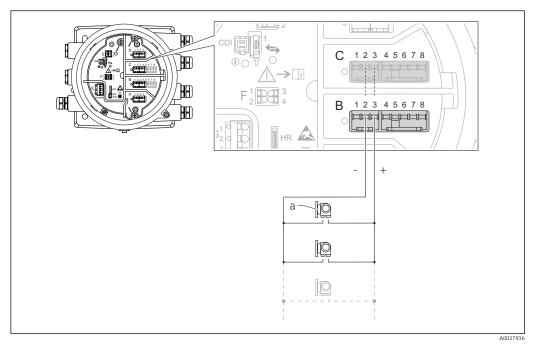

🖼 *12   Active usage of the Analog I/O module in the input mode*

a   External device with 4...20mA and/or HART signal output

"Operating mode" = "HART master"
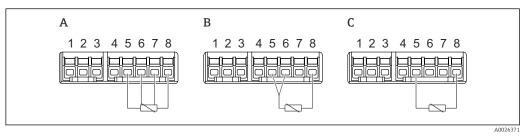

⊞ 13   Active usage of the Analog I/O module in the HART master mode

a   Up to 6 external devices with HART signal output

ℹ The maximum current consumption for the connected HART devices is 24 mA (i.e. 4 mA per device if 6 devices are connected).

6.1.9   Connection of a RTD
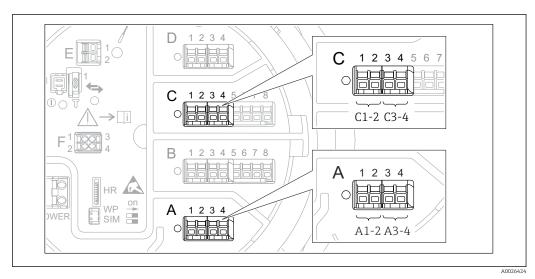

A   4-wire RTD connection
B   3-wire RTD connection
C   2-wire RTD connection

ℹ Screened cable must be used for the connection of the RTD.

6.1.10   Terminals of the "Digital I/O" module

A0026424

⊡ *14   Designation of the digital inputs or outputs (examples)*

• Each Digital IO Module provides two digital inputs or outputs.
• In the operating menu each input or output is designated by the respective slot and two terminals within this slot. **A1-2**, for example, denotes terminals 1 and 2 of slot **A**. The same is valid for slots **B**, **C** and **D** if they contain a Digital IO module.
• For each of these pairs of terminals, one of the following operating modes can be selected in the operating menu:
  • Disable
  • Passive Output
  • Passive Input
  • Active Input

6.2 Connecting requirements

6.2.1 Cable specification

Terminals

Wire cross section 0.2 to 2.5 mm² (24 to 13 AWG)
Use for terminals with function: Signal and power supply
- Spring terminals (NMx8x-xx1...)
- Screw terminals (NMx8x-xx2...)

Wire cross section max. 2.5 mm² (13 AWG)
Use for terminals with function: Ground terminal in the terminal compartment

Wire cross section max. 4 mm² (11 AWG)
Use for terminals with function: Ground terminal at the housing

Power supply line

Standard device cable is sufficient for the power line.

Analog signal lines

Screened cable must be used for:
- the 4 to 20 mA signal lines.
- the RTD connection.

Digital I/O signal lines

- Shielded cable is recommended if using the relays.
- Observe the grounding concept of the plant.

HART communication line

Shielded cable is recommended if using the HART protocol. Observe the grounding concept of the plant.

Modbus communication line

- Observe the cable conditions from the TIA-485-A, Telecommunications Industry Association.
- Additional conditions: Use shielded cable.

V1 communication line

- 2-wire twisted pair, screened or unscreened cable
- Resistance in one cable: ≤ 120 Ω
- Capacitance between lines: ≤ 0.3 µF
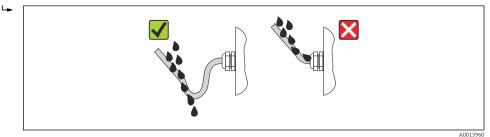

WM550 communication line

- 2-wire twisted pair, unscreened cable
- Cross section minimum 0.5 mm² (20 AWG)
- Maximum total cable resistance: ≤ 250 Ω
- Cable with low capacitance

6.3   Ensuring the degree of protection

To guarantee the specified degree of protection, carry out the following steps after the electrical connection:

1. Check that the housing seals are clean and fitted correctly. Dry, clean or replace the seals if necessary.

2. Tighten all housing screws and screw covers.

3. Firmly tighten the cable glands.

4. To ensure that moisture does not enter the cable entry, route the cable so that it loops down before the cable entry ("water trap").

A0013960

5. Insert blind plugs appropriate for the safety rating of the device (e.g. Ex d/XP).

6.4   Post-connection check

❍	Are cables or the device undamaged (visual inspection)?
❍	Do the cables comply with the requirements?
❍	Do the cables have adequate strain relief?
❍	Are all cable glands installed, firmly tightened and correctly sealed?
❍	Does the supply voltage match the specifications on the transmitter nameplate?
❍	Is the terminal assignment correct → 🕮 15?
❍	If required: Is the protective earth connected correctly ?
❍	If supply voltage is present: Is the device ready for operation and do values appear on the display module?
❍	Are all housing covers installed and firmly tightened?
❍	Is the securing clamp tightened correctly?

7 Operability

7.1 Overview of the operation options

The device is operated via an operating menu → 🖹 40. This menu can be accessed by the following interfaces:

- The display and operating module at the device or the remote display and operating module DKX001 (→ 🖹 41).
- FieldCare connected through the service interface in the terminal compartment of the device (→ 🖹 52).
- FieldCare connected through Tankvision Tank Scanner NXA820 (remote operation; → 🖹 52).
- FieldCare connected through Commubox FXA195 (→ 🖹 100) to a HART interface of the device.

7.2 Structure and function of the operating menu

Menu	Submenu / parameter	Meaning
Operation	Level	Shows the measured and calculated level values.
	Temperature	Shows the measured and calculated temperature values.
	Density	Shows the measured and calculated density values.
	Pressure	Shows the measured and calculated pressure values.
	GP values	Shows the general purpose values.
Setup	Parameters 1 to N	Standard commissioning parameters
	Advanced setup	Contains further parameters and submenus: • to adapt the device to special measuring conditions. • to process the measured value. • to configure the signal output.
Diagnostics	Diagnostic parameters	Indicates: • The latest diagnostic messages and their timestamps. • The operating time (overall time and time since last restart). • The time according to the real-time clock.
	Diagnostic list	Contains up to 5 currently active error messages.
	Device information	Contains information needed to identify the device.
	Simulation	Used to simulate measured values or output values.
	Device check	Contains all parameters needed to check the measurement capability of the device.
Expert [1] Contains all parameters of the device (including those which are already contained in one of the other menus). This menu is organized according to the function blocks of the device. The parameter of the **Expert** menu are described in: GP01071G (NMR84)	System	Contains all general device parameters which do not affect the measurement or the communication interface.
	Sensor	Contains all parameters needed to configure the measurement.
	Input/output	Contains submenus to configure the analog and discrete I/O modules and connected HART devices.
	Communication	Contains all parameters needed to configure the digital communication interface.
	Application	Contains submenus to configure • the tank gauging application • the tank calculations • the alarms.
	Tank values	Shows measured and calculated tank values
	Diagnostics	Contains all parameters needed to detect and analyze operational errors.

1)   On entering the "Expert" menu, an access code is always requested. If a customer specific access code has not been defined, "0000" has to be entered.

7.3   Access to the operating menu via the local or remote display and operating module
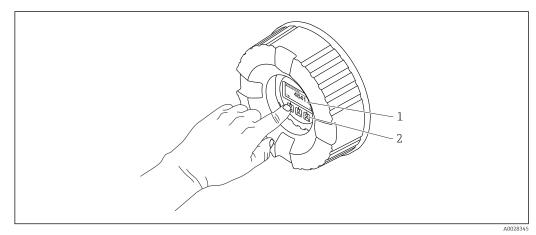

ℹ️ • Operating via the remote display and operating module DKX001 (→ 🖥 17) or the
       local display and operating module at the device are equivalent.
     • The measured value is indicated on the DKX001 and on the local display and
       operating module simultaneously.
     • The operating menu cannot be accessed on both modules at the same time. If the
       operating menu is entered in one of these modules, the other module is
       automatically locked. This locking remains active until the menu is closed in the
       first module (back to measured value display).

7.3.1   Display and operating elements

The device has an illuminated **liquid crystal display (LCD)** that shows measured and
calculated values as well as the device status in the standard view. Other views are used to
navigate through the operating menu and to set parameter values.
The device is operated by **three optical keys**, namely "-", "+" and "E". They are actuated when
the appropriate field on the protective glass of the front is **lightly** touched with the finger
("touch control").

A0028345
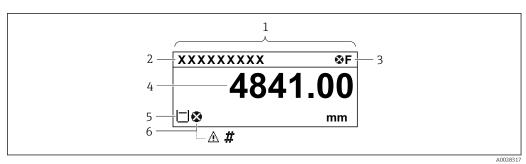

🖼 *15   Display and operating elements*

1   Liquid crystal display (LCD)
*2   Optical keys; can be operated through the cover glass. If used without the cover glass, lightly place your finger
        in front of the optical sensor for activation. Do not press hard.*

7.3.2 Standard view (measured value display)

A0028317

🖾 *16   Typical appearance of the standard view (measured value display)*

1   Display module
2   Device tag
3   Status area
4   Display area for measured values
5   Display area for measured value and status symbols
6   Measured value status symbol

Status symbols

Symbol	Meaning
F A0013956	**"Failure"** A device error is present. The measured value is no longer valid.
C A0013959	**"Function check"** The device is in service mode (e.g. during a simulation).
S A0013958	**"Out of specification"** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)
M A0013957	**"Maintenance required"** Maintenance is required. The measured value is still valid.

Measured value symbols

Symbol 1	Symbol 2	Measured value
A0028148		• Tank level • Measured level • Tank level %
A0028149		Water level
T A0028528		Liquid temperature
T A0028528	V A0027990	Vapor temperature
T A0028528	A A0027991	Air temperature
A0027993		• Tank ullage • Tank ullage %
ρ A0028150		Observed density value

Symbol 1	Symbol 2	Measured value
ⴰ A0028151	① A0028141	P1 (bottom)
ⴰ A0028151	② A0028142	P2 (middle)
ⴰ A0028151	③ A0028146	P3 (top)
ⴳ A0027992	① A0028141	GP 1 value This is used for an external device.
ⴳ A0027992	② A0028142	GP 2 value This is used for an external device.
ⴳ A0027992	③ A0028146	GP 3 value This is used for an external device.
ⴳ A0027992	④ A0028147	GP 4 value This is used for an external device.

Measured value status symbols

Symbol	Meaning
A0012102	**Status "Alarm"** The measurement is interrupted. The output assumes the defined alarm value. A diagnostic message is generated.
A0012103	**Status "Warning"** The device continues measuring. A diagnostic message is generated.
A0031169	**Calibration to regulatory standards disturbed** Is displayed in the following situations: • The write protection switch is OFF. → 🖺 50 • The write protection switch is ON but the level value can currently not be guaranteed.
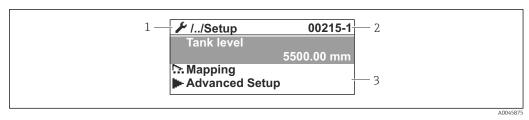

Locking state symbols

Symbol	Meaning
A0011978	**Display parameter** Marks display-only parameters which cannot be edited.
A0011979	**Device locked** • In front of a parameter name: The device is locked via software and/or hardware. • In the header of the measured value screen: The device is locked via hardware.

Meaning of the keys in the standard view

Key	Meaning

A0028326	**Enter key**
	• Pressing the key briefly opens the operating menu.
	• Pressing the key for 2 s opens the context menu:
	  • **Level** (visible if the keylock is inactive):
	    Shows the measured levels.
	  • **Keylock on** (visible if the keylock is inactive):
	    Activates the keylock.
	  • **Keylock off** (visible if the keylock is active):
	    Deactivates the keylock.

7.3.3   Navigation view

図 17   Navigation view

1   Current submenu or wizard
2   Quick access code
3   Display area for navigation

Navigation symbols
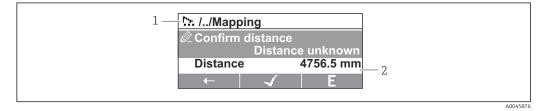

Symbol	Meaning
A0011975	**Operation** Is displayed: • in the main menu next to the selection **Operation** • in the header, if you are in the **Operation** menu.
A0011974	**Setup** Is displayed: • in the main menu next to the selection **Setup** • in the header, if you are in the **Setup** menu
A0011976	**Expert** Is displayed: • in the main menu next to the selection **Expert** • in the header, if you are in the **Expert** menu
A0011977	**Diagnostics** Is displayed: • in the main menu next to the selection **Diagnostics** • in the header, if you are in the **Diagnostics** menu
A0013967	**Submenu**
A0013968	**Wizard**
A0013963	**Parameter locked** When displayed in front of a parameter name, indicates that the parameter is locked.

Meaning of the keys in the navigation view

Key	Meaning
A0028324	**Minus key** Moves the selection bar upwards in a picklist.
A0028325	**Plus key** Moves the selection bar downwards in a picklist.
A0028326	**Enter key** • Pressing the key briefly opens the selected menu, submenu or parameter. • For parameters: Pressing the key for 2 s opens the help text for the function of the parameter (if present).

A0028327	**Escape key combination (press keys simultaneously)**
	• Pressing the keys briefly
	  • Exits the current menu level and takes you to the next higher level.
	  • If help text is open, closes the help text of the parameter.
	• Pressing the keys for 2 s returns you to the measured value display ("standard view").

7.3.4 Wizard view

A0045876

🖾 *18 Wizard view on the display module*

1 Current wizard
2 Display area for navigation
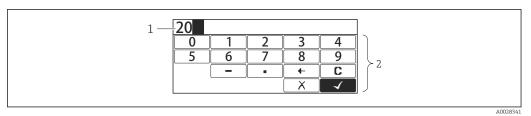

Wizard navigation symbols

Symbol	Meaning
A0013972	Parameters within a wizard
A0013978	Switches to the previous parameter.
A0013976	Confirms the parameter value and switches to the next parameter.
A0013977	Opens the editing view of the parameter.

ℹ️ In the wizard view the meaning of the keys is indicated by the navigation symbol directly above the respective key (softkey functionality).

7.3.5   Numeric editor

🖾 19   Numeric editor on the display module
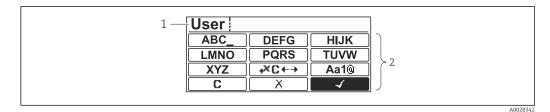

1   Display area of the entered value
2   Input mask

Symbol	Meaning
0 ... **9** A0013998	Selection of numbers from 0 to 9.
. A0016619	Inserts decimal separator at the input position.
– A0016620	Inserts minus sign at the input position.
✓ A0013985	Confirms selection.
← A0016621	Moves the input position one position to the left.
✗ A0013986	Exits the input without applying the changes.
C A0014040	Clears all entered characters.

Meaning of the keys in the numeric editor

Key			Meaning
⊖–	⊕+	⊙E A0028324	**Minus key** In the input mask, moves the selection bar to the left (backwards).
⊖–	⊕+	⊙E A0028325	**Plus key** In the input mask, moves the selection bar to the right (forwards).
⊖–	⊕+	⊙E A0028326	**Enter key** • Pressing the key briefly adds the selected number to the current decimal place or carries out the selected action. • Pressing the key for 2 s confirms the edited parameter value.
⊖–	⊕+	⊙E A0028327	**Escape key combination (press keys simultaneously)** Closes the text or numeric editor without applying changes.

7.3.6   Text editor

20   Text editor on the display module

1   Display area of the entered text
2   Input mask

Text editor symbols

Symbol	Meaning
ABC_ ... XYZ A0013997	Selection of letters from A to Z
Aa1@ A0013981	Toggle • Between upper-case and lower-case letters • For entering numbers • For entering special characters
✓ A0013985	Confirms selection.
✗C↔ A0013987	Switches to the selection of the correction tools.
✗ A0013986	Exits the input without applying the changes.

Correction symbols under ✗C↔

C A0013989	Clears all entered characters.
⊐ A0013991	Moves the input position one position to the right.
⊏ A0013990	Moves the input position one position to the left.
✗ A0013988	Deletes one character immediately to the left of the input position.

Meaning of the keys in the text editor

Key	Meaning
A0028324	**Minus key** In the input mask, moves the selection bar to the left (backwards).
A0028325	**Plus key** In the input mask, moves the selection bar to the right (forwards).

A0028326	**Enter key**
	• Pressing the key briefly
	  • Opens the selected group.
	  • Carries out the selected action.
	• Pressing the key for 2 s confirms the edited parameter value.

A0028327	**Escape key combination (press keys simultaneously)** Closes the text or numeric editor without applying changes.

7.3.7 Keypad lock

Automatic keypad lock

Operation via the local display is automatically locked:
• after a start-up or restart of the device.
• if the device has not been operated via the display for > 1 minute.

When attempting to access the operating menu while the keylock is enabled, the **Keylock on** message appears.

Disabling the keypad lock

1. The keylock is enabled.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. Select **Keylock off** from the context menu.
   ↳ The keylock is disabled.

Manual activation of the keypad lock

After commissioning of the device the keypad lock can be activated manually.

1. The device is in the measured value display.
   Press Ⓔ for at least 2 seconds.
   ↳ A context menu appears.

2. Select **Keylock on** from the context menu.
   ↳ The keylock is enabled.

7.3.8   Access code and user roles

Meaning of the access code

An access code can be defined in order to distinguish between the following user roles:

User role	Definition
Maintenance	• Knows the access code. • Has write access to all parameters (except service parameters).
Operator	• Doesn't know the access code. • Has write access to only a few parameters.

• The description of parameters states which role is needed at least for read and write access to each parameter.
• The current user role is indicated by the **Access status display** parameter.
• If the access code is **"0000"**, every user is in the **Maintenance** role. This is the default setting on delivery of the device.

Defining an access code

1. Navigate to: Setup → Advanced setup → Administration → Define access code → Define access code

2. Enter the intended access code (max. 4 digits).

3. Repeat the same code in the **Confirm access code** parameter.
   ↳ The user is in the **Operator** role. The 🔒-symbol appears in front of all write-protected parameters.

Switching to the "Maintenance" role

If the 🔒-symbol appears on the local display in front of a parameter, the parameter is write-protected because the user is in the **Operator** role. To switch to the **Maintenance** role, proceed as follows:

1. Press Ⓔ.
   ↳ The input prompt for the access code appears.

2. Enter the access code.
   ↳ The user is in the **Maintenance** role. The 🔒-symbol in front of the parameters disappears; all previously write-protected parameters are now re-enabled.
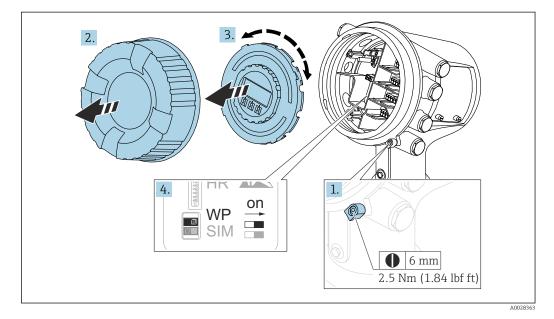

Switching back to the "Operator" role automatically

The user automatically switches back to the **Operator** role:
• if no key is pressed for 10 minutes in the navigation and editing mode.
• 60 s after going back from the navigation and editing mode to the standard view (measured value display).

7.3.9   Write protection switch

The operating menu can be locked by a hardware switch in the connection compartment. In this locking state W&M related parameters are read only.

A0028363
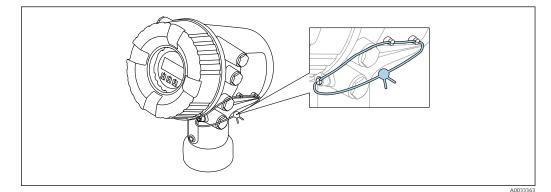

The display module can be attached to the edge of the electronics compartment. This makes it easier to access the lock switch.

1. Loosen the securing clamp.

2. Unscrew the housing cover.
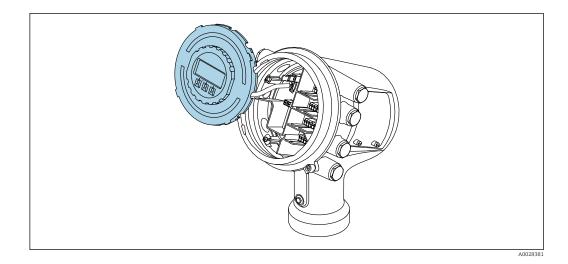

3. Pull out the display module with a gentle rotation movement.

4. Using a flat blade screwdriver or a similar tool, set the write protection switch **(WP)** into the desired position. **ON:** operating menu is locked; **OFF:** operating menu is unlocked.

5. Put the display module onto the connection compartment, screw the cover closed and tighten the securing clamp.

To avoid access to the write protection switch, the cover of the connection compartment can be secured by a lead seal.

A0033363
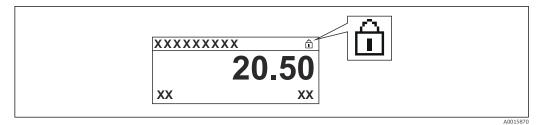

⊠ 21   Sealing of the cover of the connection compartment

For LNE approval, bolts at built in flange additionally must be secured by a lead seal.

A0028381
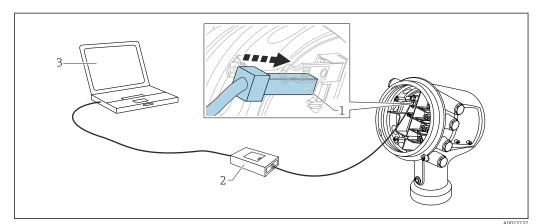

Indication of the locking state

A0015870

🖼 *22   Write protection symbol in the header of the display*

Write protection via locking switch is indicated as follows:
• **Locking status (→ 🖺 126)** = **Hardware locked**
• 🔒 appears in the header of the display.

7.4 Access to the operating menu via the service interface and FieldCare

A0023737

⊠ 23   *Operation via service interface*

1   Service interface (CDI = Endress+Hauser Common Data Interface)
2   Commubox FXA291
3   Computer with "FieldCare" operating tool and "CDI Communication FXA291" COM DTM
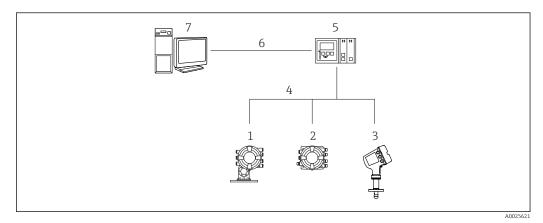

ℹ️ **The "Save/Restore" function**
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → Advanced setup → Administration → Device reset = Restart device.
This ensures correct operation of the device after the restore.

7.5 Access to the operating menu via Tankvision Tank Scanner NXA820 and FieldCare

7.5.1 Wiring scheme

A0025621

⊠ 24   *Connection of Tank Gauging devices to FieldCare via the Tankvision Tank Scanner NXA820*

1   Proservo NMS8x
2   Tankside Monitor NRF81
3   Micropilot NMR8x
4   Field protocol (e.g. Modbus, V1)
5   Tankvision Tank Scanner NXA820
6   Ethernet
7   Computer with FieldCare installed

7.5.2 Establishing the connection between FieldCare and the device
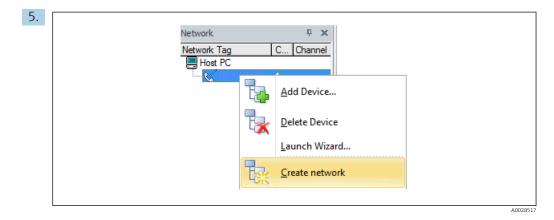

1. Make sure the **HART CommDTM NXA** is installed and update the DTM catalogue if required.
2. Create a new project in FieldCare.
3.

A0028515

Add a new device: **NXA HART Communication**

4.

A0028516

Open the configuration of the DTM and enter the required data (IP address of the NXA820; "Password" = "hart"; "Tank identification" only with NXA V1.05 or higher)

5.

A0028517

Select **Create network** from the context menu.

↳ The device is detected and the DTM is assigned.

6.

A0032933

↳ The device can be configured.

The "Save/Restore" function
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → **Advanced setup** → **Administration** → **Device reset** = **Restart device**.
This ensures correct operation of the device after the restore.
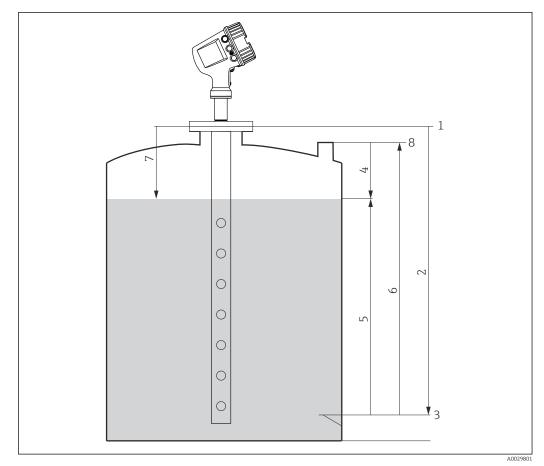

8System integration

8.1Overview of the Device Description files (DTM)

To integrate the device via HART into FieldCare, a Device Description file (DTM) according to the following specification is required:

Manufacturer ID	0x11
Device type (NMR8x)	0x112E
HART specification	7.0
DD files	For information and files see: www.endress.com

9 Commissioning

9.1 Terms related to tank measurement

⊞ 25   Terms related to radar tank measurement

1   Gauge reference height
2   Empty
3   Datum plate
4   Tank ullage
5   Tank level
6   Tank reference height
7   Distance
8   Dipping reference

9.2 Initial settings

9.2.1 Setting the display language

Setting the display language via the display module

1. While in the standard view (→ 🗎 42), press "E". If required, select **Keylock off** from the context menu and press "E" again.
   - ↳ The **Language** parameter appears.

2. Open the **Language** parameter and select the display language.

Setting the display language via an operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Display → Language

2. Select the display language.

ℹ This setting only affects the language on the display module. To set the language in the operating tool use the language setting functionality of FieldCare or DeviceCare, respectively.

9.2.2 Setting the real-time clock

Setting the real-time clock via the display module

1. Navigate to: Setup → Advanced setup → Date / time → Set date

2. Use the following parameters to set the real-time clock to the current date and time: **Year**, **Month**, **Day**, **Hour**, **Minutes**.

Setting the real-time clock via an operating tool (e.g. FieldCare)

1. Navigate to: Setup → Advanced setup → Date / time

2.

   Go to the **Set date** parameter and select the **Start** option.

3.

   Use the following parameters to set the date and time: **Year**, **Month**, **Day**, **Hour**, **Minutes**.

4.

Date/time:	2016-04-20 09:35:49

| Set date: | ? ▶ | Please select ▾ |

Please select
Abort
Start
Confirm time

Year:	
Month:	
Day:	

| Hour: | 9 |
| Minute: | 34 |

Go to the **Set date** parameter and select the **Confirm time** option.

↳ The real-time clock is set to the current date and time.

9.3　Configuring the measuring device

9.3.1　Configuration of the level measurement

The first parameters of the **Setup** menu are used to configure the measurement. A short description is given in the following sections. For a more detailed description refer to the parameter description in the appendix → 🖺 120.

Basic settings

Navigation path: Setup

Parameter	Meaning	Description
Setup → Device tag	Define a name to identify the measuring point within the plant.	→ 🖺 120
Setup → Units preset	Select a set of units for length, pressure and temperature.	→ 🖺 120
Setup → Tube diameter	Enter the diameter of the stilling well.	→ 🖺 222
Setup → Empty	Enter the distance from the lower edge of the device flange to the datum plate.	→ 🖺 121
Setup → Tank level	Shows the measured level. Check whether the indicated value matches the actual level.	→ 🖺 111
Setup → Set level	Can be used to correct a constant shift of the measured level. If the indicated level does not match the actual level: Enter the actual level into this parameter. An offset for the measured level is then automatically defined.	→ 🖺 122

🛈　The **Set level** parameter can only be used to compensate for a constant level error. To eliminate errors resulting from interference echos, use the interference echo suppression (map).

Interference echo suppression (map) in an operating tool (e.g. FieldCare/DeviceCare)

Navigation path: Setup

Parameter	Meaning	Description
Setup → Distance	Shows the measured distance from the lower edge of the device flange to the product surface. Check whether this value is correct.	→ 🖺 125
Setup → Confirm distance	Specify whether the measured distance matches the actual distance. The selection determines up to which distance an interference echo suppression is recorded.	→ 🖺 122
Present mapping	Shows up to which distance a mapping has already been recorded.	
Setup → Mapping end point	Only visible for **Confirm distance** = **Manual map**. Determines up to which distance the new mapping will be recorded. Depending on the selection in **Confirm distance** a suitable value is preset in this parameter. Usually, there is no need to change this value.	
Setup → Record map	Only visible for **Confirm distance** = **Manual map** Select **Record map**. This starts the recording of the new map.	→ 🖺 124

Interference echo suppression on the local display

Navigation path: Setup → Mapping

🛈　For the meaning of the parameters in this wizard see the table above.

Dip table
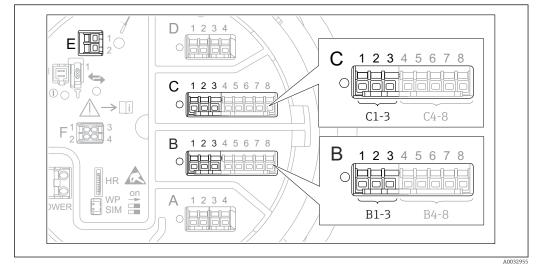

The dip table is used to correct the level readings using independently taken hand dips. The dip table is used in particular to adapt the level gauge to the specific application conditions such as a mechanical offset and the tank or stilling well design.

The dip table is managed in the **Dip-table** submenu → 🖹 207.

9.4   Configuring the tank gauging application

Configuration of the inputs:	Description
HART inputs	→ 🗎 62
NMT532/539/81 connected via HART	→ 🗎 64
4-20mA inputs	→ 🗎 66
RTD input	→ 🗎 67
Digital inputs	→ 🗎 69
Configuration of the data processing in the device:	**Description**
Linking input values to tank variables	→ 🗎 70
Tank calculation: Direct Level Measurement	→ 🗎 71
Tank calculation: Hybrid Tank Measurement System (HTMS)	→ 🗎 72
Tank calculation: Correction of the Hydrostatic Tank Deformation (HyTD)	→ 🗎 73
Tank calculation: Thermal Tank Shell Correction (CTSh)	→ 🗎 74
Alarms (limit evaluation)	→ 🗎 75
Configuration of the signal output:	**Description**
4-20mA output	→ 🗎 76
HART slave + 4-20mA output	→ 🗎 77
Modbus	→ 🗎 78
V1	→ 🗎 79
Digital outputs	→ 🗎 80
WM550	→ 🗎 79

9.4.1   Configuration of the HART inputs

Connecting and addressing HART devices

⊡ *26   Possible terminals for HART loops*

B   Analog I/O module in slot B (availability depending on device version → ⓑ 18)
C   Analog I/O module in slot C (availability depending on device version → ⓑ 18)
E   HART Ex is output (available in all device versions)

ℹ️   HART devices must be configured and given a unique HART address in the range from 1 to 15 via their own user interface before they are connected to the Micropilot NMR8x [3]. Make sure they are connected as defined by the terminal assignment → ⓑ 30. Devices with an address larger than 15 are not recognized by the Micropilot.

Slot B or C: Setting the operating mode of the Analog I/O module

ℹ️   This section is not relevant for the HART Ex is output (Slot E). This output always functions as a HART master for the connected HART slaves.

If HART devices are connected to an Analog I/O module (slot B or C in the terminal compartment), this module must be configured as follows:

1.   Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog I/O X1-3

2.   Go to the **Operating mode** parameter (→ ⓑ 140).

3.   If only one HART device is connected to this loop:
     Select the **HART master+4..20mA input** option. In this case the 4-20mA signal can be used in addition to the HART signal. For the configuration of the 4-20mA input: → ⓑ 66.

4.   If up to 6 HART devices are connected to this loop:
     Select the **HART master** option.

---

3)   The current software does not support HART devices with address 0 (zero).

Defining the type of measured value

ℹ This setting can be skipped for a connected Prothermo NMT5xx and NMT8x as the type of measured value is automatically recognized by the Micropilot NMR8x in this case.

ℹ • The measured values can only be used in the system if the unit of the assigned HART variable fits the type of measured value. The HART variable assigned to **Output temperature**, for example, has to be in ℃ or ℉.
• A HART variable with unit "%" cannot be used for **Output level**. Instead, the HART variable must be in mm, m, ft or in.

The type of measured value must be specified for each HART variable (PV, SV, TV and QV). To do so, proceed as follows:

1. Navigate to: Setup → Advanced setup → Input/output → HART devices
   ↳ There is a submenu for each connected HART device.

2. For each device go to the corresponding submenu.

3. If the device measures a pressure:
   Go to the **Output pressure** parameter (→ 🖹 130) and specify which of the four HART variables contains the measured pressure. Only a HART variable with a pressure unit may be selected.

4. If the device measures a density:
   Go to the **Output density** parameter (→ 🖹 131) and specify which of the four HART variables contains the measured density. Only a HART variable with a density unit may be selected.

5. If the device measures a temperature:
   Go to the **Output temperature** parameter (→ 🖹 131) and specify which of the four HART variables contains the measured temperature. Only a HART variable with a temperature unit may be selected.

6. If the device measures the vapor temperature:
   Go to the **Output vapor temperature** parameter (→ 🖹 132) and specify which of the four HART variables contains the measured vapor temperature. Only a HART variable with a temperature unit may be selected.

7. If the device measures a level:
   Go to the **Output level** parameter (→ 🖹 132) and specify which of the four HART variables contains the measured level. Only a HART variable with a level unit (not "%") may be selected.

Disconnecting HART devices

When a HART device is disconnected from the device, it must also be logically removed as follows:
1. Navigate to Setup → Advanced setup → Input/output → HART devices → Forget device → Forget device

2. Select the HART device to be removed.
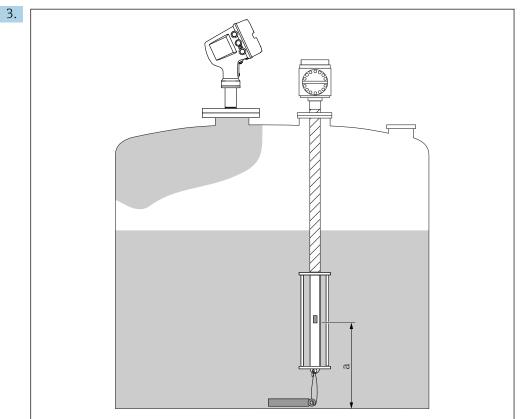

ℹ This procedure is also necessary if a defective device is exchanged.

9.4.2 Configuration of a connected Prothermo temperature transmitter

If a Prothermo NMT532, NMT539 or NMT8x temperature transmitter is connected via HART, it can be configured as follows:

1. Navigate to: Expert → Input/output → HART devices → HART Device(s) → NMT device config; here, **HART Device(s)** is the name of the connected Prothermo.

2. Go to the **Configure device?** parameter and select **Yes**.

3.

A0030098
 27   Prothermo NMT53x: Position of the bottom temperature element

a   Distance from bottom temperature element to zero reference (tank bottom or datum plate).

To configure a **Prothermo NMT53x**: Go to the **Bottom point** parameter and enter the position of the bottom temperature element (see picture above).

↳ The value entered into the **Bottom point** parameter in the Tank Gauging device is handed over to the **Bottom point** parameter in the connected Prothermo NMT53x.

4.

▣ 28   Prothermo NMT8x: Distance between the physical end of the probe and the zero level value
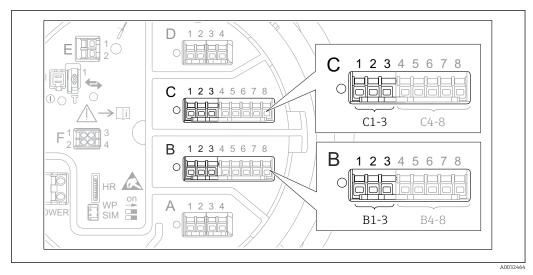

a   Distance between the physical end of the probe and the zero level value in the tank (tank bottom or datum plate).

To configure a **Prothermo NMT8x**: Go to the **Bottom point** parameter and enter the distance between the physical end of the probe and the zero level value in the tank (tank bottom or datum plate).
⮡ The value entered into the **Bottom point** parameter in the Tank Gauging device is handed over to the **End of probe to zero distance** parameter in the connected Prothermo NMT8x.

To check the temperatures measured by the individual elements, go to the following submenu: Operation → Temperature → NMT element values → Element temperature

There is a **Element temperature X** parameter for each element of the Prothermo.

9.4.3   Configuration of the 4-20mA inputs

🖼 *29   Possible locations of the Analog I/O modules, which can be used as a 4-20mA input. The order code of the device determines which of these modules is actually present → 🕮 18.*
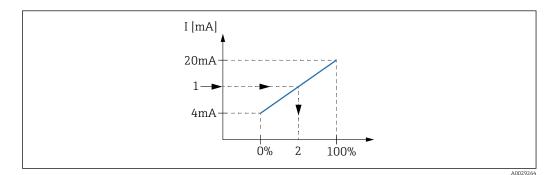

For each Analog I/O module to which a 4-20mA device is connected, proceed as follows:
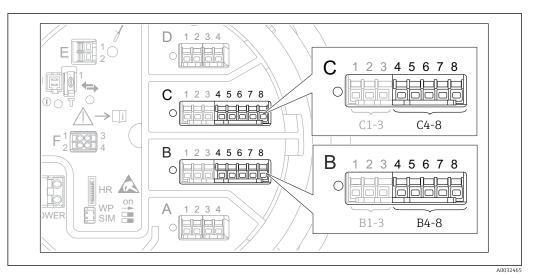

1. Make sure the 4-20mA devices are connected as defined by the terminal assignment → 🕮 30.

2. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog I/O X1-3

3. Go to the **Operating mode** parameter (→ 🕮 140) and select **4..20mA input** or **HART master+4..20mA input**.

4. Go to the **Process variable** parameter (→ 🕮 146) and specify which process variable is transmitted by the connected device.

5. Go to the **Analog input 0% value** parameter (→ 🕮 146) and define which value of the process variable corresponds to an input current of 4 mA (see diagram below).

6. Go to the **Analog input 100% value** parameter (→ 🕮 146) and define which value of the process variable corresponds to an input current of 20 mA (see diagram below).

7. Go to the **Process value** parameter (→ 🕮 147) and check whether the indicated value matches the actual value of the process variable.

🖼 *30   Scaling of the 4-20mA input to the process variable*
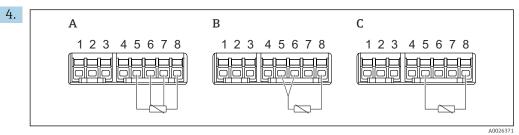

1   Input value in mA

2   Process value

ℹ The **Analog I/O** submenu contains additional parameters for a more detailed configuration of the Analog Input. For a description refer to : → 🕮 140

9.4.4   Configuration of a connected RTD
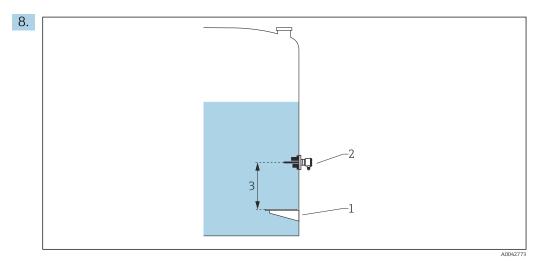

◈ 31   Possible locations of the Analog I/O modules, to which an RTD can be connected. The order code of the device determines which of these modules is actually present → ▤ 18.

1. Make sure the RTD is connected as defined by the terminal assignment → ▤ 35.

2. Navigate to the submenu of the respective Analog I/O module: Setup → Advanced setup → Input/output → Analog IP X4-8.

3. Go to the **RTD type** parameter (→ ▤ 134) and specify the type of the connected RTD.

4.

◈ 32   RTD connection types

A   4 wire RTD connection
B   3 wire RTD connection
C   2 wire RTD connection

   Go to the **RTD connection type** parameter (→ ▤ 135) and specify the type of connection of the RTD (2-, 3- or 4-wire).

5. Go to the **Input value** parameter (→ ▤ 137) and check whether the indicated temperature matches the actual temperature.

6. Go to the **Minimum probe temperature** parameter (→ ▤ 137) and specify the minimum approved temperature of the connected RTD.

7. Go to the **Maximum probe temperature** parameter (→ ▤ 138) and specify the maximum approved temperature of the connected RTD.

8.

A0042773

1   Datum plate
2   RTD
3   Probe position (→ 🖹 138)
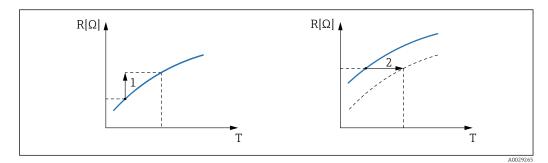

Go to the **Probe position** parameter and enter the mounting position of the RTD (measured from the datum plate).

↳ This parameter, in conjunction with the measured level, determines whether the measured temperature refers to the product or to the gas phase.
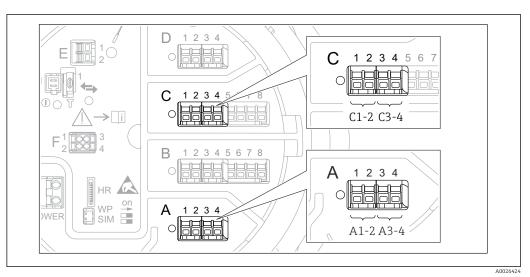

Offset for resistance and/or temperature

ℹ An offset for the resistance or the temperature can be defined in the following submenu: Expert → Input/output → Analog IP X4-8.
   ▪ **Ohms offset** is added to the measured resistance before the calculation of the temperature.
   ▪ **Temperature offset after conversion** is added to the measured temperature.

A0029265

1   Ohms offset
2   Temperature offset after conversion
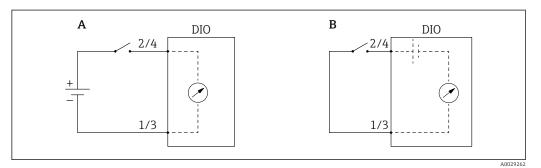

9.4.5   Configuration of the digital inputs

⊞ 33   Possible locations of the Digital I/O modules (examples); the order code defines the number and location of digial input modules → ▤ 18.

There is a **Digital Xx-x** submenu for each digital I/O module of the device. "X" designates the slot in the terminal compartment, "x-x" the terminals within this slot. The most important parameters of this submenu are **Operating mode** and **Contact type**.

The "Operating mode" parameter

Setup → Advanced setup → Input/output → Digital Xx-x → Operating mode

A   "Operating mode" = "Input passive"
B   "Operating mode" = "Input active"

Meaning of the options

- **Input passive**
  The DIO module measures the voltage provided by an external source. Depending on the status of the external switch, this voltage is 0 at the input (switch open) or exceeds a certain limit voltage (switch closed). These two states represent the digital signal.
- **Input active**
  The DIO module provides a voltage and uses it to detect whether the external switch is open or closed.

The "Contact type" parameter

Setup → Advanced setup → Input/output → Digital Xx-x → Contact type

This parameter determines how the state of the external switch is mapped to the internal states of the DIO module:

State of the external switch	Internal state of the DIO module	
	Contact type = Normally open	Contact type = Normally closed
Open	Inactive	Active
Closed	Active	Inactive
Behavior in special situations:		
During start-up	Unknown	Unknown
Fault in measurement	Error	Error

- The internal state of the Digital Input can be transferred to a Digital Output or can be used to control the measurement.
- The **Digital Xx-x** submenu contains additional parameters for a more detailed configuration of the Digital Input. For a description refer to → 🖹 150.

9.4.6   Linking input values to tank variables

Measured values must be linked to tank variables before they can be used in the Tank Gauging application. This is done by defining the source of each tank variable in the following parameters:

Tank variable	Parameter defining the source of this variable
Bottom water level	Setup → Advanced setup → Application → Tank configuration → Level → Water level source
Average or spot temperature of the product	• Setup → Liquid temp source • Setup → Advanced setup → Application → Tank configuration → Temperature → Liquid temp source
Temperature of the air surrounding the tank	Setup → Advanced setup → Application → Tank configuration → Temperature → Air temperature source
Temperature of the vapor above the product	Setup → Advanced setup → Tank configuration → Temperature → Vapor temp source
Density of the product	Setup → Advanced setup → Application → Tank configuration → Density → Observed density source
Bottom pressure (P1)	Setup → Advanced setup → Application → Tank configuration → Pressure → P1 (bottom) source
Top pressure (P3)	Setup → Advanced setup → Application → Tank configuration → Pressure → P3 (top) source
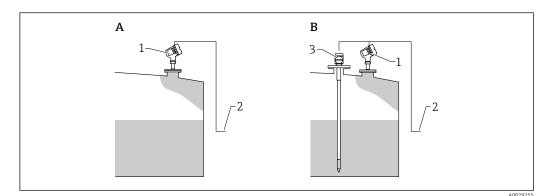

Depending on the application not all these parameters will be relevant in a given situation.

The product level is always the level measured by the Micropilot itself. It needs not to be linked.

9.4.7   Tank calculation: Direct level measurement

If no tank calculation is configured, level and temperature are measured directly.
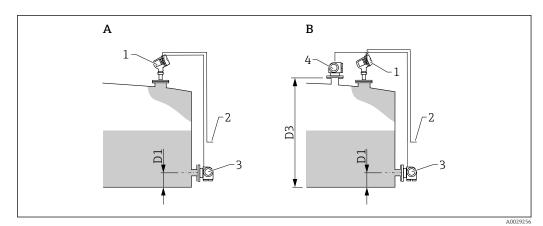

A   Direct level measurement (without temperature)
B   Direct level and temperature measurement
1   Level transmitter
2   To inventory management system
3   Temperature transmitter

▶ If a temperature transmitter is connected:
  Navigate to: "Setup → Liquid temp source" and specify from which device the
  temperature is obtained.

9.4.8 Tank calculation: Hybrid tank measurement system (HTMS)

HTMS uses level and pressure measurements to calculate the density of the medium.

ℹ️ In non-atmospheric (i.e. pressurized) tanks it is recommended to use the **HTMS P1+P3** mode. Two pressure sensors are required in this case. In atmospheric (i.e. unpressurized) tanks the **HTMS P1** with only one pressure sensor is sufficient.

A0029256
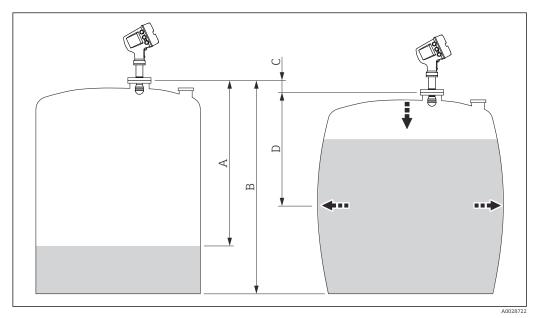

A   *'"HTMS mode" parameter' = '"HTMS P1" option'*
B   *'"HTMS mode" parameter' = '"HTMS P1+P3" option'*
D1   *P1 position*
D3   *P3 position*
1   *Micropilot*
2   *To inventory management system*
3   *Pressure sensor (bottom)*
4   *Pressure sensor (top)*

1. Navigate to Setup → Advanced setup → Application → Tank configuration → Pressure

2. Go to **P1 (bottom) source (→ 🖹 186)** and specify from which device the bottom pressure (P1) is obtained.

3. If a top pressure transmitter (P3) is connected:
    Go to **P3 (top) source (→ 🖹 188)** and specify from which device the top pressure (P3) is obtained.

4. Navigate to: Setup → Advanced setup → Application → Tank calculation → HTMS

5. Go to **HTMS mode (→ 🖹 203)** and specify the HTMS mode.

6. Navigate to Setup → Advanced setup → Application → Tank configuration → Density

7. Go to **Observed density source (→ 🖹 184)** and select **HTMS**.

8. Use the other parameters of the **HTMS** submenu to configure the calculation. For a detailed description: → 🖹 201
9.4.9   Tank calculation: Hydrostatic Tank Deformation (HyTD)

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels divided over the full range of the tank.

🔲 *34   Correction of the hydrostatic tank deformation (HyTD)*

A   "Distance" (tank nearly empty)
B   Gauge Reference Height (GRH)
C   HyTD correction value
D   "Distance" (tank filled)

The Correction of the Hydrostatic Tank Deformation is configured in the **HyTD** submenu (→ 🔲 193)

9.4.10   Tank calculation: Thermal tank shell correction (CTSh)

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

This correction is recommended for the following situations:
- if the operating temperature deviates considerably from the temperature during calibration (ΔT > 10 ℃ (18 ℉))
- for extremely high tanks
- for refrigerated, cryogenic or heated applications

As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.

This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

9.4.11   Configuration of the alarms (limit evaluation)

A limit evaluation can be configured for up to 4 tank variables. The limit evaluation issues an alarm if the value exceeds an upper limit or falls below a lower limit, respectively. The limit values can be defined by the user.

A0029539

🖻 *35   Principle of the limit evaluation*

A   *Alarm mode = On*
B   *Alarm mode = Latching*
1   *HH alarm value*
2   *H alarm value*
3   *L alarm value*
4   *LL alarm value*
5   *HH alarm*
6   *H alarm*
7   *L alarm*
8   *LL alarm*
9   *"Clear alarm" = "Yes" or power off-on*
10 *Hysteresis*

The limit evaluation is configured in the **Alarm 1 to 4** submenus.
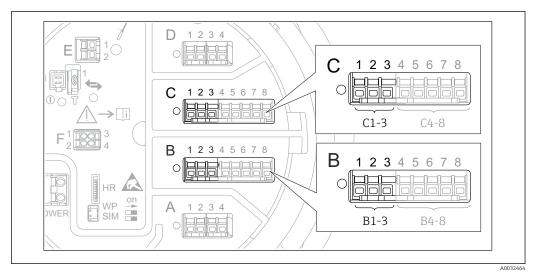

Navigation path: Setup → Advanced setup → Alarm → Alarm 1 to 4
For **Alarm mode** = **Latching** all alarms remain active until the user selects **Clear alarm** = **Yes** or the power is switched off and on.

Make sure to also configure the parameter **"Hysteresis" parameter** accordingly, depending on tank variable and unit used.
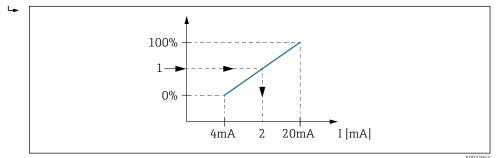

9.4.12   Configuration of the 4-20mA output

🖼 *36   Possible locations of the Analog I/O modules, which can be used as a 4-20mA output. The order code of the device determines which of these modules is actually present → 🖿 18.*

Each Analog I/O module of the device can be configured as a 4...20mA analog output. To do so, proceed as follows:

1. Navigate to: Setup → Advanced setup → Input/output → Analog I/O X1-3.

2. Go to the **Operating mode** parameter and select **4..20mA output** or **HART slave +4..20mA output** [4].

3. Go to the **Analog input source** parameter and select the tank variable which is to be transmitted via the 4...20mA output.

4. Go to the **0 % value** parameter and enter the value of the selected tank variable which will be mapped to 4 mA.

5. Go to the **100 % value** parameter and enter the value of the selected tank variable which will be mapped to 20 mA.

🖼 *37   Scaling of the tank variable to the output current*

1   Tank variable
2   Output current

ℹ After startup of the device, as long as the assigned tank variable is not yet available, the output current assumes the defined error value.

ℹ The **Analog I/O** submenu contains more parameters which can be used for a more detailed configuration of the analog output. For a description see → 🖿 140

---

4) "HART slave +4..20mA output " means that the Analog I/O module serves as a HART slave which cyclically sends up to four HART variables to a HART master. For the configuration of the HART output: → 🖿 77

9.4.13   Configuration of the HART slave + 4-20mA output

If **Operating mode** = **HART slave +4..20mA output** has been selected for an Analog I/O module, it serves as a HART slave which sends up to four HART variables to a HART master.

ℹ️   The 4-20 mA signal can be used in this case, too. For its configuration: → 🖺 76

Standard case: PV = 4-20mA signal
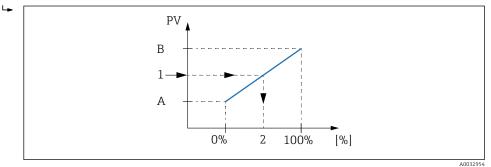

By default, the Primary Variable (PV) is identical to the tank variable transmitted by the 4-20mA output. To define the other HART variables and to configure the HART output in more detail, proceed as follows:

1. Navigate to: Setup → Advanced setup → Communication → HART output → Configuration

2. Go to the **System polling address** parameter and set the HART slave address of the device.

3. Use the following parameters to assign tank variables to the second to fourth HART variable: **Assign SV**, **Assign TV**, **Assign QV**.
   ↳ The four HART variables are transmitted to a connected HART Master.

Special case: PV ≠ 4-20mA signal
In exceptional cases it might be required that the Primary Variable (PV) transmits a different tank variable than the 4-20mA output. This is configured as follows.

1. Navigate to: Setup → Advanced setup → Communication → HART output → Configuration

2. Go to the **PV source** parameter and select **Custom**.
   ↳ The following additional parameters appear in the submenu: **Assign PV**, **0 % value**, **100 % value** and **PV mA selector**.

3. Go to the **Assign PV** parameter and select the tank variable to be transmitted as the Primary Variable (PV).

4. Use the **0 % value** and **100 % value** parameters to define a range for the PV. The **Percent of range** parameter indicates the percentage for the actual value of the PV. It is included in the cyclical output to the HART master.
   ↳
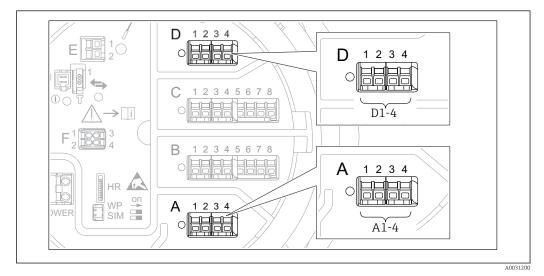

🖾 38   *Scaling of the tank variable to the percentage*

A   0 % value
B   100 % value
1   Primary variable (PV)
2   Percent of range

5. Use the **PV mA selector** parameter to define whether the output current of an Analog I/O module is to be included in the cyclical HART output.

After startup of the device, as long as the assigned tank variable is not yet available, the output current assumes the defined error value.

The **PV mA selector** parameter does not influence the output current at the terminals of the Analog I/O module. It only defines whether the value of this current is part of the HART output or not.

9.4.14   Configuration of the Modbus output
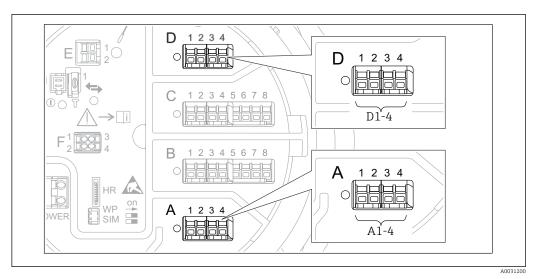

🖻 *39   Possible locations of the Modbus modules (examples); depending on the device version these modules may also be in slot B or C → 🖺 18.*

The Micropilot NMR8x acts as a Modbus slave. Measured or calculated tank values are stored in registers which can be requested by a Modbus master.

The following submenu is used to configure the communication between the device and the Modbus master:
Setup → Advanced setup → Communication → Modbus X1-4 →Configuration (→ 🖺 156)
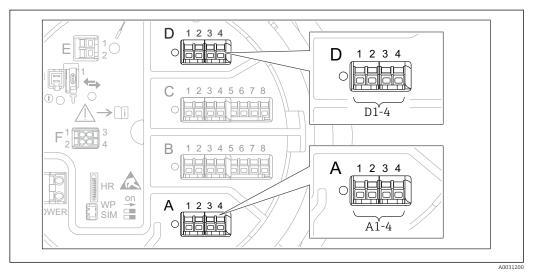

9.4.15   Configuration of the V1 output

⊠ *40   Possible locations of the V1 modules (examples); depending on the device version these modules may also be in slot B or C → ⧉ 18.*

The following submenus are used to configure the V1 communication between the device and the control system:
- Setup → Advanced setup → Communication → V1 X1-4 → Configuration→ ⧉ 159
- Setup → Advanced setup → Communication → V1 X1-4 → V1 input selector→ ⧉ 162
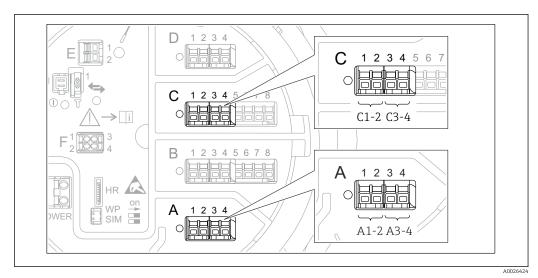

9.4.16   Configuration of the WM550 output
⊠ *41   Possible locations of the WM550 modules (examples); depending on the device version these modules may also be in slot B or C → ⧉ 18.*
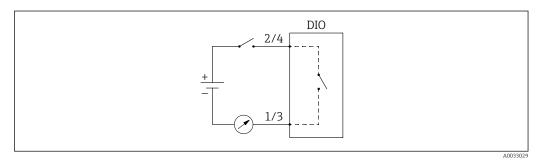

The following submenus are used to configure the WM550 communication between the device and the control system:
- **Setup** menu → **Advanced setup** submenu → **Communication** submenu → WM550 X1-4 → **Configuration** submenu → ⧉ 155
- **Setup** menu → **Advanced setup** submenu → **Communication** submenu → WM550 X1-4 → **WM550 input selector** submenu → ⧉ 164

9.4.17 Configuration of the digital outputs

🖾 *42   Possible locations of the Digital I/O modules (examples); the order code defines the number and location of Digital I/O modules → 🖺 18.*

🖾 *43   Usage of the Digital I/O module as a digital output*

There is a **Digital Xx-x** submenu for each digital I/O module of the device. "X" designates the slot in the terminal compartment, "x-x" the terminals within this slot. The most important parameters of this submenu are **Operating mode, Digital input source** and **Contact type**.

A digital output can be used to
- output the state of an alarm (if an alarm has been configured → 🖺 75)
- transmit the status of a digital input (if a digital input has been configured → 🖺 69)

To configure a digital output, proceed as follows:

1. Navigate to Setup → Advanced setup → Input/output → Digital Xx-x, where Xx-x designates the digital I/O module to be configured.

2. Go to the **Operating mode** parameter and select the **Output passive** option.

3. Go to the **Digital input source** parameter and select the alarm or digital input to be transmitted.

4. Go to the **Contact type** parameter and select how the internal state of the alarm or digital input is to be mapped to the digital output (see table below).

• State of the alarm • Internal state of the digital input	Switching state of the digital output	
	Contact type = Normally open	Contact type = Normally closed
Inactive	Open	Closed
Active	Closed	Open

ℹ
- For SIL applications, **Contact type** is automatically set to **Normally closed** by the device when starting the SIL confirmation procedure.
- In case of a power supply failure, the switching state is always "open", irrespective of the selected option.
- The **Digital Xx-x** submenu contains additional parameters for a more detailed configuration of the Digital Input. For a description refer to → 📖 150.

9.5 Advanced settings

For a more detailed configuration of the signal inputs, the tank calculations and the signal outputs refer to the **Advanced setup** submenu (→ 📖 126).

9.6 Simulation

To check the correct configuration of the device and of the control system, it is possible to simulate different situations (measured values, diagnostic messages etc.). See the **Simulation** submenu (→ 📖 248) for details.

9.7 Protecting settings from unauthorized access

There are two possibilities to protect the settings from unauthorized access:
- By an access code (→ 📖 49)
  This locks the access via the display and operating module.
- By the protection switch (→ 📖 50)
  This locks the access to W&M-related parameters by any user interface (display and operating module, FieldCare, other configuration tools).
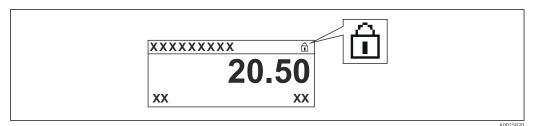

10   Operation

10.1   Reading off the device locking status

Depending on the locking state of the device some operations may be locked. The current locking status is indicated at: Setup → Advanced setup → Locking status. The following table summarizes the different locking statuses:

Locking status	Meaning	Unlocking procedure
Hardware locked	The device is locked by the write-protection switch in the terminal compartment.	→ 🖺 50
SIL locked	The device is in SIL-locked mode.	📖 Detailed information on this topic see SIL Safety manual
CT active - all parameters	The custody transfer mode is active.	→ 🖺 50
WHG locked	The device is in WHG-locked mode.	📖 Detailed information on this topic see SIL Safety manual
Temporarily locked	Write access to the parameters is temporarily lock due to device-internal processing (e.g. data upload/download, reset). Once the internal processing has been completed, the parameters can be changed again.	Wait for completion of the device-internal processing.

A locking is indicated by the write protection symbol in the header of the display:

A0015870

10.2   Reading off measured values

Tank values can be read off in the following submenus:
- Operation → Level
- Operation → Temperature
- Operation → Density
- Operation → Pressure

11   Diagnostics and troubleshooting

11.1   General trouble shooting
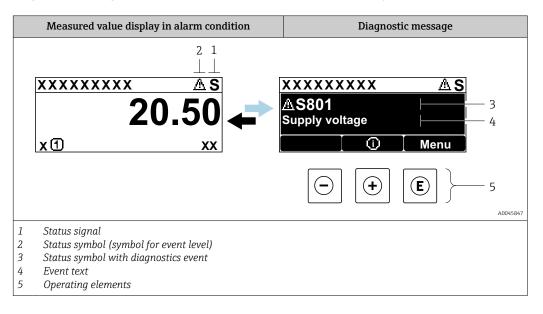

11.1.1   General errors

Error	Possible cause	Remedial action
Device does not respond.	Supply voltage not connected.	Connect the correct voltage.
	The cables do not contact the terminals properly.	Ensure electrical contact between the cable and the terminal.
Values on the display invisible	The plug of the display cable is not connected correctly.	Connect the plug correctly.
	Display is defective.	Replace display.
	Display contrast too low.	Set Setup → Advanced setup → Display → Contrast display to a value ≥ 60 %.
"Communication error" is indicated on the display when starting the device or connecting the display	Electromagnetic interference	Check grounding of the device.
	Broken display cable or display plug.	Exchange display.
CDI communication does not work.	Wrong setting of the COM port on the computer.	Check the setting of the COM port on the computer (e.g. FieldCare) and change it if necessary.
Device measures incorrectly.	Parametrization error	Check and adjust parameterization.

11.2   Diagnostic information on local display

11.2.1   Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the measured value display.
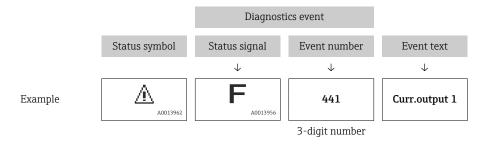

Measured value display in alarm condition	Diagnostic message

1   Status signal
2   Status symbol (symbol for event level)
3   Status symbol with diagnostics event
4   Event text
5   Operating elements

Status signals

F A0013956	**"Failure"** A device error is present. The measured value is no longer valid.
C A0013959	**"Function check"** The device is in service mode (e.g. during a simulation or a warning).
S A0013958	**"Out of specification"** The device is operated: • Outside of its technical specifications (e.g. during startup or a cleaning) • Outside of the configuration carried out by the user (e.g. level outside configured span)
M A0013957	**"Maintenance required"** Maintenance is required. The measured value is still valid.

Status symbol (symbol for event level)

A0013961	**"Alarm" status** The measurement is interrupted. The signal outputs take on the defined alarm condition. A diagnostic message is generated.
A0013962	**"Warning" status** The device continues to measure. A diagnostic message is generated.

Diagnostics event and event text
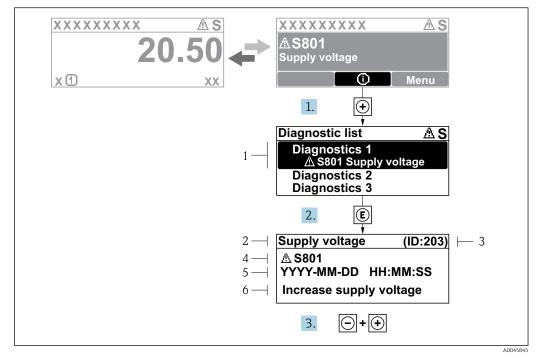

The fault can be identified using the diagnostics event. The event text helps you by providing information about the fault. In addition, the corresponding symbol is displayed before the diagnostics event.

	Diagnostics event		
Status symbol	Status signal	Event number	Event text
	↓	↓	↓

| Example | ⚠️ A0013962 | F A0013956 | 441 | **Curr.output 1** |

3-digit number
If two or more diagnostic messages are pending simultaneously, only the message with the highest priority is shown. Additional pending diagnostic messages can be shown in **Diagnostic list** submenu (→ 🖹 244).

Operating elements

Operating functions in menu, submenu	
⊕ A0013970	**Plus key** Opens the message about the remedial measures.
Ⓔ A0013952	**Enter key** Opens the operating menu.

11.2.2   Calling up remedial measures

🖾 44   Message for remedial measures

1   Diagnostic information
2   Short text
3   Service ID
4   Diagnostic behavior with diagnostic code
5   Operation time of occurrence
6   Remedial measures

A diagnostic message appears in the standard view (measured value display).

1. Press ⊞ (ⓘ symbol).
   ↳ The **Diagnostic list** submenu opens.

2. Select the desired diagnostic event with ⊞ or ⊟ and press ⓔ .
   ↳ The message for the remedial measures for the selected diagnostic event opens.

3. Press ⊟ + ⊞ simultaneously.
   ↳ The message for the remedial measures closes.

The user is in the **Diagnostics** menu at an entry for a diagnostics event, e.g. in the **Diagnostic list** submenu or in the **Previous diagnostics**.
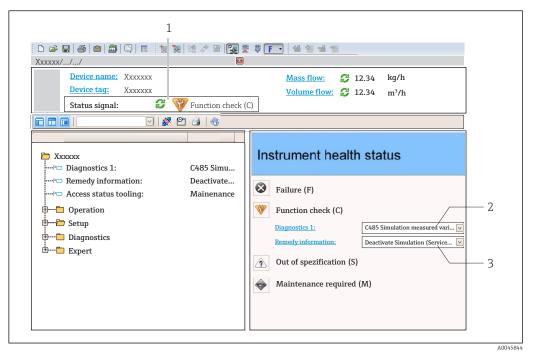

1. Press ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message for the remedial measures closes.

11.3 Diagnostic information in FieldCare

Any faults detected by the measuring device are displayed on the home page of the operating tool once the connection has been established.

A0045844

1   Status area with status signal
2   Diagnostic information
3   Remedial measures with Service ID

Furthermore, diagnostic events that have occurred can be viewed in the **Diagnostic list** submenu.

11.3.1 Status signals

The status signals provide information on the state and reliability of the device by categorizing the cause of the diagnostic information (diagnostic event).

Symbol	Meaning
A0017271	**Failure** A device error has occurred. The measured value is no longer valid.
A0017278	**Function check** The device is in service mode (e.g. during a simulation or a warning).
A0017277	**Out of specification** The device is operated outside its technical specification limits (e.g. outside the process temperature range)
A0017276	**Maintenance required** Maintenance is required. The measured value is still valid.

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107.

11.3.2   Calling up remedy information

Remedy information is provided for every diagnostic event to ensure that problems can be rectified quickly:
- On the home page
  Remedy information is displayed in a separate field below the diagnostics information.
- In the **Diagnostics** menu
  Remedy information can be called up in the working area of the user interface.

The user is in the **Diagnostics** menu.

1. Call up the desired parameter.

2. On the right in the working area, mouse over the parameter.
   ↳ A tool tip with remedy information for the diagnostic event appears.

11.4   Overview of the diagnostic messages

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
Diagnostic of sensor				
102	Sensor incompatible error	1. Restart device 2. Contact service	F	Alarm
150	Detector error	1. Restart device 2. Check electrical connections of detector 3. Replace detector unit	F	Alarm
151	Sensor electronic failure	Replace sensor electronic module	F	Alarm
Diagnostic of electronic				
242	Software incompatible	1. Check software 2. Flash or change main electronic module	F	Alarm
252	Modules incompatible	1. Check if correct electronic module is plugged 2. Replace electronic module	F	Alarm
261	Electronic modules	1. Restart device 2. Check electronic modules 3. Change I/O module or main electronics	F	Alarm
262	Module connection	1. Check module connections 2. Replace electronic modules	F	Alarm
270	Main electronics failure	Replace main electronics	F	Alarm
271	Main electronics failure	1. Restart device 2. Change main electronic module	F	Alarm
272	Main electronics failure	Restart device	F	Alarm
272	Main electronics failure	1. Restart device 2. Contact service	F	Alarm
273	Main electronics failure	1. Emergency operation via display 2. Change main electronics	F	Alarm
275	I/O module failure	1. Restart device 2. Change I/O module	F	Alarm
276	I/O module faulty	1. Restart device 2. Change I/O module	F	Alarm
282	Data storage	1. Restart device 2. Contact service	F	Alarm
283	Memory content	1. Transfer data or reset device 2. Contact service	F	Alarm
284	Detector SW update in progress	Firmware update active, please wait!	F	Alarm
311	Electronics failure	Maintenance required! 1. Do not perform reset 2. Contact service	M	Warning
333	System recovery required	HW change detected System configuration recovery required Go to menu on device and perform recovery	F	Alarm

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
334	System recovery failure	HW changed, system recovery failure. Return to factory	F	Alarm
381	Displacer distance invalid	1. Calibrate sensor 2. Restart device 3. Replace sensor electronics	F	Alarm
382	Sensor communication	1. Check connection of sensor electronics 2. Restart device 3. Replace sensor electronics	F	Alarm
Diagnostic of configuration				
400	AIO simulation output	Deactivate simulation AIO output	C	Warning

Diagnostic number	Short text	Remedy instructions	Status signal [from the factory]	Diagnostic behavior [from the factory]
943	In blocking distance	Reduced accuracy Check level	S	Warning
950	Advanced diagnostics	Maintain your diagnostic event	M	Warning
961	Alarm 1 to 4 HighHigh	1. Check alarm source 2. Check configuration settings	C	Warning
962	Alarm 1 to 4 High	1. Check alarm source 2. Check configuration settings	C	Warning
963	Alarm 1 to 4 Low	1. Check alarm source 2. Check configuration settings	C	Warning
964	Alarm 1 to 4 LowLow	1. Check alarm source 2. Check configuration settings	C	Warning
965	Alarm 1 to 4 HighHigh	1. Check alarm source 2. Check configuration settings	F	Alarm
966	Alarm 1 to 4 High	1. Check alarm source 2. Check configuration settings	F	Alarm
967	Alarm 1 to 4 Low	1. Check alarm source 2. Check configuration settings	F	Alarm
968	Alarm 1 to 4 LowLow	1. Check alarm source 2. Check configuration settings	F	Alarm
970	Overtension	1. Check displacer and process conditions 2. Release overtension	C	Alarm
971	Undertension	Check displacer and process.	C	Alarm

1)   Diagnostic behavior can be changed.

The parameters No.941, 942, and 943 are only used for NMR8x and NRF81.

11.5   Diagnostic list

In the Diagnostic list submenu, up to 5 currently pending diagnostic messages can be displayed. If more than 5 messages are pending, the messages with the highest priority are shown on the display.

Navigation path
Diagnostics → Diagnostic list

Calling up and closing the remedial measures

1. Press Ⓔ.
   ↳ The message for the remedial measures for the selected diagnostic event opens.

2. Press ⊟ + ⊞ simultaneously.
   ↳ The message about the remedial measures closes.

11.6   Reset measuring device

To reset the device to a defined state use the **Device reset** parameter (→ 🖺 239).

11.7   Device information

Information on the device (order code, hardware and software version of the individual modules etc.) can be found in the **Device information** submenu (→ 🖺 245).

11.8   Firmware history

Date	Software version	Modifications	Documentation (NMR84)		
			Operating Instructions	Description of Parameters	Technical Information
04.2016	01.00.zz	Original software	BA01453G/00/EN/01.16	GP01071G/00/EN/01.16	TI01253G/00/EN/01.16

12 Maintenance

12.1 Maintenance tasks

No special maintenance work is required.

12.1.1 Exterior cleaning

When cleaning the exterior of measuring devices, always use cleaning agents that do not attack the surface of the housing or the seals.

12.2 Endress+Hauser services

Endress+Hauser offers a wide variety of services for maintenance such as recalibration, maintenance service or device tests.

Your Endress+Hauser Sales Center can provide detailed information on the services.

13   Repair

13.1   General information on repairs

13.1.1   Repair concept

The Endress+Hauser repair concept assumes that the devices have a modular design and that repairs can be done by the Endress+Hauser service or specially trained customers.

Spare parts are contained in suitable kits. They contain the related replacement instructions.

For more information on service and spare parts, contact the Service Department at Endress+Hauser.

13.1.2   Repairs to Ex-approved devices

When carrying out repairs to Ex-approved devices, please note the following:

- Repairs to Ex-approved devices may only be carried out by trained personnel or by the Endress+Hauser Service.
- Comply with the prevailing standards, national Ex-area regulations, safety instructions (XA) and certificates.
- Only use original spare parts from Endress+Hauser.
- When ordering a spare part, please note the device designation on the nameplate. Only replace parts with identical parts.
- Carry out repairs according to the instructions. On completion of repairs, carry out the specified routine test on the device.
- Only Endress+Hauser Service may convert a certified device into a different certified variant.
- Document all repair work and conversions.

13.1.3   Replacement of a device or electronic module

After a complete device or the electronic mainboard has been replaced, the parameters can be downloaded into the instrument again via FieldCare.

Condition: The configuration of the old device has been saved to the computer via FieldCare.

You can continue to measure without carrying out a new setup. Only a linearization and a tank map (interference echo suppression) have to be recorded again.

The "Save/Restore" function
After a device configuration has been saved to a computer and restored to the device using the **Save/Restore** function of FieldCare, the device must be restarted by the following setting:
Setup → **Advanced setup** → **Administration** → **Device reset** = **Restart device**.
This ensures correct operation of the device after the restore.

13.2   Spare parts

Some interchangeable measuring device components are listed on an overview sign in the connection compartment cover.

The spare part overview sign contains the following information:
- A list of the most important spare parts for the measuring device, including their ordering information.
- The URL for the *W@M Device Viewer* (www.endress.com/deviceviewer):
  All the spare parts for the measuring device, along with the order code, are listed here and can be ordered. If available, users can also download the associated Installation Instructions.

13.3   Endress+Hauser services

Endress+Hauser offers a wide range of services.

Your Endress+Hauser Sales Center can provide detailed information on the services.

13.4   Return

The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the web page for information:
   http://www.endress.com/support/return-material
   ↳ Select the region.

2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

13.5   Disposal
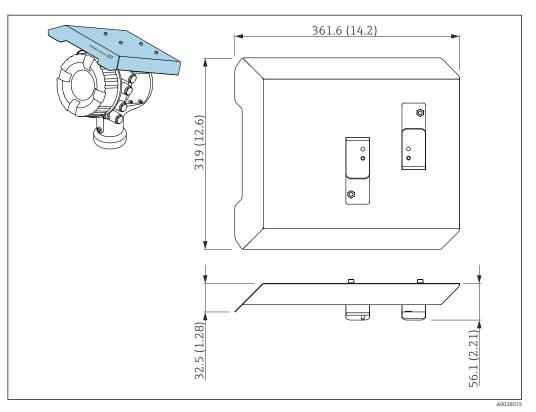

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.

14   Accessories

14.1   Device-specific accessories

14.1.1   Weather protection cover

🖼 45   *Weather protection cover; dimensions: mm (in)*

Materials
- Protection cover and mounting brackets
  Material
  316L (1.4404)
- Screws and washers
  Material
  A4

🛈 • The weather protection cover can be ordered together with the device:
    Ordering feature 620 "Accessory Enclosed", option PA "Weather Protection Cover")
  • It can also be ordered as an accessory:
    Order code: 71292751 (for NMR8x and NRF8x)

14.2   Communication-specific accessories

WirelessHART adapter SWA70
- Is used for the wireless connection of field devices
- The WirelessHART adapter can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks

📖 For details, see Operating Instructions BA00061S

Gauge Emulator, Modbus to BPM
- Using the protocol converter, it is possible to integrate a field device into a host system even if the field device does not know the communication protocol of the host system. Eliminates vendor lock-in for field devices.
- Field communication protocol (field device): Modbus RS485
- Host communication protocol (host system): Enraf BPM
- 1 measuring device per Gauge Emulator
- Separate power supply: 100 to 240 V_{AC}, 50 to 60 Hz, 0.375 A, 15 W
- Several approvals for the hazardous area

Gauge Emulator, Modbus to TRL/2
- Using the protocol converter, it is possible to integrate a field device into a host system even if the field device does not know the communication protocol of the host system. Eliminates vendor lock-in for field devices.
- Field communication protocol (field device): Modbus RS485
- Host communication protocol (host system): Saab TRL/2
- 1 measuring device per Gauge Emulator
- Separate power supply: 100 to 240 V_{AC}, 50 to 60 Hz, 0.375 A, 15 W
- Several approvals for the hazardous area

14.3   Service-specific accessories

Commubox FXA195 HART
For intrinsically safe HART communication with FieldCare via the USB interface

📖 For details, see "Technical Information" TI00404F

Commubox FXA291
Connects Endress+Hauser field devices with a CDI interface (= Endress+Hauser Common Data Interface) and the USB port of a computer or laptop
Order number: 51516983

📖 For details, see "Technical Information" TI00405C

DeviceCare SFE100
Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus field devices
DeviceCare is available for download at www.software-products.endress.com. You need to register in the Endress+Hauser software portal to download the application.

📖 Technical Information TI01134S

FieldCare SFE500
FDT-based plant asset management tool
It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.

📖 Technical Information TI00028S

14.4 System components

RIA15
Compact process display unit with very low voltage drop for universal use to display 4 to 20 mA/HART signals

  📖   Technical Information TI01043K

Tankvision Tank Scanner NXA820 / Tankvision Data Concentrator NXA821 / Tankvision Host Link NXA822
Inventory Management System with completely integrated software for operation via standard web browser

  📖   Technical Information TI00419G

15 Operating menu

ℹ️
- ⊞ : Navigation path for operating module at the device
- ▯ : Navigation path for operating tool (e.g. FieldCare)
- 🔒 : Parameter can be locked via software locking

15.1 Overview of the operating menu

ℹ️
- This section lists the parameters of the following menus:
  - Operation (→ 🖺 111)
  - Setup (→ 🖺 120)
  - Diagnostics (→ 🖺 241)
- For the **Expert** menu refer to the "Description of Device Parameters" (GP) of the respective device.
- Depending on the device version and parametrization some parameters will not be available in a given situation. For details refer to the "Prerequisite" category in the description of the respective parameter.
- The representation essentially corresponds to the menu in an operating tool (e.g. FieldCare). On the local display there may be minor differences in the menu structure. Details are mentioned in the description of the respective submenu.

15.2 "Operation" menu

The **Operation** menu (→ 🖻 111) shows the most important measured values.

Navigation   🖩🖳   Operation

15.2.1 "Level" submenu

Navigation   🖩🖳   Operation → Level

Dip Freeze   🔒

Navigation	🖩🖳 Operation → Level → Dip Freeze
Description	If activated the level values are frozen and a warning is shown.
Selection	• Off • On
Factory setting	Off
Additional information	ℹ️ This function can be used when performing a manual dipping in the same stilling well or nozzle where the radar device is mounted.

Tank level

Navigation	🖩🖳 Operation → Level → Tank level
Description	Shows the distance from the zero position (tank bottom or datum plate) to the product surface.

Additional information

Read access	Operator
Write access	–

Tank Level %

Navigation	🖩🖳 Operation → Level → Tank Level %
Description	Shows the level as a percentage of the full measuring range.

Additional information

Read access	Operator
Write access	–

Tank ullage

Navigation	⊚⊟ Operation → Level → Tank ullage

Description   Shows the remaining empty space in the tank.

Additional information

Read access	Operator
Write access	-

Tank ullage %

Navigation	⊚⊟ Operation → Level → Tank ullage %

Description   Shows the remaining empty space in percentage related to parameter tank reference height.

Additional information

Read access	Operator
Write access	-

Upper interface level

Navigation	⊚⊟ Operation → Level → Upper I/F level

Description   Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid Interface measurement.

Additional information

Read access	Maintenance
Write access	-

Lower interface level

Navigation	⊚⊟ Operation → Level → Lower I/F level

Description   Shows measured interface level from zero position (tank bottom or datum plate). Value is updated when device generates a valid interface measurement.

Additional information

Read access	Maintenance
Write access	-

Water level	

Navigation	🔲🔲 Operation → Level → Water level
Description	Shows the bottom water level.

Additional information	Read access	Operator
	Write access	-

Measured level	

Navigation	🔲🔲 Operation → Level → Measured level
Description	Shows the measured level without any correction from the tank calculations.

Additional information	Read access	Operator
	Write access	-

Distance	

Navigation	🔲🔲 Operation → Level → Distance
Description	Distance from lower edge of device flange to product surface.

Additional information	Read access	Operator
	Write access	-

15.2.2 "Temperature" submenu

Navigation   🔲🔲 Operation → Temperature

Air temperature	

Navigation	🔲🔲 Operation → Temperature → Air temp.
Description	Shows the air temperature.

Additional information	Read access	Operator
	Write access	-

Liquid temperature

Navigation   ◎◙◲   Operation → Temperature → Liquid temp.

Description   Shows the average or spot temperature of the measured liquid.

Additional information

Read access	Operator
Write access	-

Vapor temperature

Navigation   ◎◙◲   Operation → Temperature → Vapor temp.

Description   Shows the measured vapor temperature.

Read access	Operator
Write access	-

"NMT element values" submenu

ℹ️ This submenu is only visible if a Prothermo NMT is connected.

Navigation   ◲   Operation → Temperature → NMT elem. values

"Element temperature" submenu

Navigation   ◲   Operation → Temperature → NMT elem. values → Element temp.

Element temperature 1 to 24

Navigation   ◲   Operation → Temperature → NMT elem. values → Element temp. → Element temp 1 to 24

Description   Shows the temperature of an element in the NMT.

Additional information

Read access	Operator
Write access	-

"Element position" submenu

Navigation   ▣   Operation → Temperature → NMT elem. values → Element
                                position

Element position 1 to 24

Navigation   ▣   Operation → Temperature → NMT elem. values → Element position → Element pos.
                                1 to 24

Description   Shows the position of the selected element in the NMT.

Additional information

Read access	Operator
Write access	–

15.2.3   "Density" submenu

Navigation   ▣▣   Operation → Density

Observed density

Navigation   ▣▣   Operation → Density → Observed density

Description   Calculated density of the product.

Additional information

Read access	Operator
Write access	–

ℹ️ This value is calculated from different measured variables depending on the selected
calculation method.

Observed density temperature

Navigation   ▣▣   Operation → Density → Obs. dens. temp.

Description   Corresponding temperature of measured density. Can be used for reference density
                     calculation.

User interface   Signed floating-point number

Factory setting   0 ℃

Vapor density	🔒

Navigation	🔘🖵 Operation → Density → Vapor density
Description	Defines the density of the gas phase in the tank.
User entry	0.0 to 500.0 kg/m³
Factory setting	1.2 kg/m³

Additional information	Read access	Operator
	Write access	Maintenance

Air density	🔒

Navigation	🔘🖵 Operation → Density → Air density
Description	Defines the density of the air surrounding the tank.
User entry	0.0 to 500.0 kg/m³
Factory setting	1.2 kg/m³

Additional information	Read access	Operator
	Write access	Maintenance

Measured upper density

Navigation	🔘🖵 Operation → Density → Meas upper dens.
Description	Shows the density of the upper phase.

Additional information	Read access	Operator
	Write access	-

Measured middle density

Navigation	🔘🖵 Operation → Density → Meas middle dens
Description	Density of the middle phase.

Additional information	Read access	Operator
	Write access	–

Measured lower density

Navigation   ⊞⊟   Operation → Density → Meas lower dens.

Description   Density of the lower phase.

Additional information

Read access	Maintenance
Write access	–

15.2.4   "Pressure" submenu

Navigation   ⊞⊟   Operation → Pressure

P1 (bottom)

Navigation   ⊞⊟   Operation → Pressure → P1 (bottom)

Description   Shows the pressure at the tank bottom.

Additional information

Read access	Operator
Write access	–

P3 (top)

Navigation   ⊞⊟   Operation → Pressure → P3 (top)

Description   Shows the pressure (P3) at the top transmitter.

Additional information

GP Value 4

Navigation   ⊞⊟ Operation → GP values → GP Value 4

Description   Displays the value that will be used as general purpose value.

Additional information

Read access	Operator
Write access	-

15.3   "Setup" menu

Navigation   ⊞⊟ Setup

Device tag   🔒

Navigation	⊞⊟ Setup → Device tag

Description   Enter a unique name for the measuring point to identify the device quickly within the plant.

User entry   Character string comprising numbers, letters and special characters (32)

Factory setting   NMR8x

Additional information

Read access	Operator
Write access	Maintenance

Units preset   🔒

Navigation   ⊞⊟ Setup → Units preset

Description   Defines a set of units for length, pressure and temperature.

Selection   • mm, bar, ℃
                         • m, bar, ℃
                         • mm, PSI, ℃
                         • ft, PSI, ℉
                         • ft-in-16, PSI, ℉
                         • ft-in-8, PSI, ℉
                         • Customer value

Factory setting   mm, bar, ℃

Additional information

Read access	Operator
Write access	Maintenance

If the **Customer value** option is selected, the units are defined in the following parameters. In any other case these are read-only parameters used to indicate the respective unit:
• Distance unit (→ 🔲 232)
• Pressure unit (→ 🔲 233)
• Temperature unit (→ 🔲 233)

Tube diameter	🔒

Navigation	🖉🖳 Setup → Tube diameter

Description	Enter diameter of stilling well.

User entry	Positive floating-point number

Factory setting	150 mm

Additional information	

Read access	Operator
Write access	Maintenance

Empty	🔒

Navigation	🖉🖳 Setup → Empty

Description	Distance from reference point to zero position (tank bottom or datum plate).

User entry	0 to 10 000 000 mm

Factory setting	Dependent on the device version

Additional information	

Read access	Operator
Write access	Maintenance

ℹ️ The reference point is the lower edge of the device flange.

ℹ️
- After changing the **Empty** parameter (→ 🗎 121), the **Table mode** parameter (→ 🗎 210) is automatically set to **Disable**.
- If **Empty (→ 🗎 121)** has been changed by more than 20 mm (0.8 in), it is recommended to delete the dip table.
- The dip table values are not affected by a change of the **Empty** parameter (→ 🗎 121).

Tank reference height	🔒

Navigation	🖉🖳 Setup → Tank ref height

Description	Defines the distance from the dipping reference point to the zero position (tank bottom or datum plate).

User entry	0 to 10 000 000 mm

Factory setting	Dependent on the device version

Additional information	Read access	Operator
	Write access	Maintenance

Tank level

Navigation	🔲🔲 Setup → Tank level

Description   Shows the distance from the zero position (tank bottom or datum plate) to the product surface.

Additional information	Read access	Operator
	Write access	-

Set level   🔒

Navigation	🔲 Setup → Set level

Description   If the level measured by the device does not match the actual level obtained by a manual dip, enter the correct level into this parameter.

User entry   0 to 10 000 000 mm

Factory setting   0 mm

Additional information	Read access	Operator
	Write access	Maintenance

The device adjusts the **Empty** parameter (→ 🖺 121) according to the entered value, such that the measured level will match the actual level.

ℹ️ • After the change of the **Empty** parameter (→ 🖺 121), the **Table mode** parameter (→ 🖺 210) is automatically set to **Disable**.
   • If **Empty** has been changed by more than 20 mm (0.8 in), it is recommended to delete the dip table.
   • The dip table values are not affected by a change of the **Empty** parameter.

Confirm distance   🔒

Navigation	🔲 Setup → Confirm distance

Description   Specify, whether the measured distance matches the real distance. Depending on the selection the device automatically sets the range of mapping.

Selection	• Distance ok
	• Distance unknown
	• Distance too small *
	• Distance too big *
	• Tank empty
	• Manual map
	• Factory map

Factory setting	Distance unknown

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options
- **Distance ok**
  To be selected if the measured distance matches the actual distance. The device performs a mapping.
- **Distance unknown**
  To be selected if the actual distance is unknown. No mapping will be recorded in this case.
- **Distance too small** [5]
  To be selected if the measured distance is smaller than the actual distance. The device searches for the next echo and returns to the **Confirm distance** parameter (→ 🖺 122). The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **"Distance ok" option**.
- **Distance too big** [5]
  To be selected if the measured distance exceeds the actual distance. The device adjusts the signal evaluation and returns to the **Confirm distance** parameter (→ 🖺 122). The distance is recalculated and displayed. The comparison must be repeated until the displayed distance matches the actual distance. After this, the recording of the map can be started by selecting **"Distance ok" option**.
- **Tank empty**
  To be selected if the tank is completely empty. The device records a mapping covering the complete measuring range as defined by the **Empty** parameter (→ 🖺 121).
- **Manual map**
  To be selected if the range of mapping is to be defined manually in the **Mapping end point** parameter (→ 🖺 124). In this case it is not necessary to confirm the distance.
- **Factory map**
  To be selected if the present mapping curve (if one exists) is to be deleted. The factory map is used, instead.

🛈 When operating via the display module, the measured distance is displayed together with this parameter for reference purposes.

🛈 If the teaching procedure with the **Distance too small** or **Distance too big** option is quit before the distance has been confirmed, a map is **not** recorded and the teaching procedure is reset after 60 s.

5)   Only available for " Evaluation mode (→ 🖺 224)" = "Short time history"

Present mapping

Navigation	⊟	Setup → Present mapping

Description   Present end of mapping.

Additional information

Read access	Operator
Write access	-

Mapping end point

Navigation	⊟	Setup → Map. end point

Prerequisite   Confirm distance (→ 🖺 122) = Manual map

Description   Defines up to which distance the new mapping has to be recorded.

Remark: Make sure the level signal is not covered by the mapping.

User entry   100 to 999 999.9 mm

Factory setting   100 mm

Additional information

Read access	Operator
Write access	Maintenance

Record map

Navigation	⊟	Setup → Record map

Prerequisite   Confirm distance (→ 🖺 122) = Manual map

Description   Controls the recording of the map.

Selection   • No
                     • Record map
                     • Overlay map
                     • Factory map
                     • Delete partial map

Factory setting   No

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options
- **No**
  The map is not recorded.
- **Record map**
  The map is recorded. After the recording is completed, the new measured distance and the new mapping range appear on the display. When operating via the local display, these values must be confirmed by pressing ☑.
- **Recalculate map**
  Used internally by the software. Initiates a new calculation of the map from the new data points.
- **Overlay map**
  The new mapping curve is generated by overlaying the old and the current envelope curves.
- **Factory map**
  The factory map stored in the ROM of the device is used.
- **Delete partial map**
  The mapping curve is deleted up to **Mapping end point (→ 🖺 124)**.
- **Stop overlay**
  Stops the overlaying of the map.

Distance	

Navigation	◨◧ Setup → Distance

Description	Distance from lower edge of device flange to product surface.

Navigation   ▣▤   Setup → Advanced setup

Locking status

| Navigation | ▣▤ | Setup → Advanced setup → Locking status |

Description   Indicates the type of locking.

'Hardware locked' (HW)
The device is locked by the 'WP' switch on the main electronics module. To unlock, set the switch into the OFF position.

'WHG locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'SIL locked' (SW)
Unlock the device by entering the appropriate access code in 'Enter access code'.

'Temporarily locked' (SW)
The device is temporarily locked by processes in the device (e.g. data upload/download, reset). The device will automatically be unlocked after completion of these processes.

	Write access	-

Minimum probe temperature   🔒

Navigation	🔂🔲 Setup → Advanced setup → Input/output → Analog IP → Min. probe temp

Prerequisite	Operating mode (→ 🕮 134) = RTD temperature input

Description	Minimum approved temperature of the connected probe. If the temperature falls below this value, the W&M status will be 'invalid'.

User entry	−213 to 927 °C

Factory setting	−100 °C

Additional information	Read access	Operator
	Write access	Maintenance

Maximum probe temperature   🔒

Navigation	👁⊟ Setup → Advanced setup → Input/output → Analog IP → Max. probe temp

Prerequisite	Operating mode (→ 🕮 134) = RTD temperature input

Description	Maximum approved temperature of the connected probe. If the temperature rises above this value, the W&M status will be 'invalid'.

User entry	−213 to 927 °C

Factory setting	250 °C

Additional information	Read access	Operator
	Write access	Maintenance

Probe position   🔒

Navigation	👁⊟ Setup → Advanced setup → Input/output → Analog IP → Probe position

Prerequisite	Operating mode (→ 🕮 134) = RTD temperature input

Description	Position of the temperature probe, measured from zero position (tank bottom or datum plate). This parameter, in conjunction with the measured level, determines whether the temperature probe is still covered by the product. If this is no longer the case, the status of the temperature value will be 'invalid'.

User entry	−5 000 to 30 000 mm

Factory setting	5 000 mm

Additional information	Read access	Operator
	Write access	Maintenance

Damping factor	🔒

Navigation	🎛🖥 Setup → Advanced setup → Input/output → Analog IP → Damping factor
Prerequisite	Operating mode (→ 🖫 134) ≠ Disabled
Description	Defines the damping constant (in seconds).
User entry	0 to 999.9 s
Factory setting	0 s

Additional information	Read access	Operator
	Write access	Maintenance

Gauge current

Navigation	🎛🖥 Setup → Advanced setup → Input/output → Analog IP → Gauge current
Prerequisite	Operating mode (→ 🖫 134) = Gauge power supply
Description	Shows the current on the power supply line for the connected device.
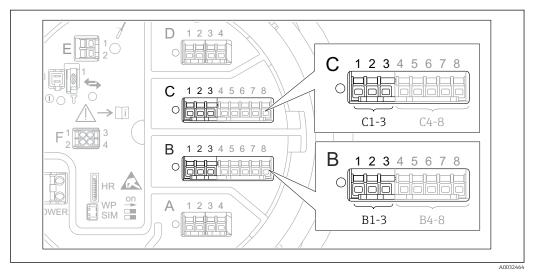

Additional information	Read access	Operator
	Write access	–

"Analog I/O" submenu

ℹ️ There is a **Analog I/O** submenu for each Analog I/O module of the device. This submenu refers to terminals 1 to 3 of this module (an analog input or output). For terminals 4 to 8 (always an analog input) refer to → 🗎 134.

🖼 *47 Terminals for the "Analog I/O" submenu ("B1-3" or "C1-3", respectively)*

Navigation   🕮🔲   Setup → Advanced setup → Input/output → Analog I/O

Operating mode		🔒

Navigation   🕮🔲   Setup → Advanced setup → Input/output → Analog I/O → Operating mode

Description   Defines the operating mode of the analog I/O module.

Selection
- Disabled
- 4..20mA input
- HART master+4..20mA input
- HART master
- 4..20mA output
- HART slave +4..20mA output

Factory setting   Disabled

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options

Operating mode (→ 🗎 140)	Direction of signal	Type of signal
Disabled	-	-
4..20mA input	Input from 1 external device	Analog (4...20mA)
HART master+4..20mA input	Input from 1 external device	• Analog (4...20mA) • HART
HART master	Input from up to 6 external devices	HART

Operating mode (→ 🖹 140)	Direction of signal	Type of signal
4..20mA output	Output to higher-level unit	Analog (4...20mA)
HART slave +4..20mA output	Output to higher-level unit	• Analog (4...20mA) • HART

Depending on the terminals used, the Analog I/O module is used in the passive or active mode.

Mode	Terminals of the I/O module		
	1	2	3
Passive (power supply from external source)	-	+	not used
Active (power supplied by the device itself)	not used	-	+

In the active mode the following conditions must be met:
- Maximum current consumption of the connected HART devices: 24 mA (i.e. 4 mA per device if 6 devices are connected).
- Output voltage of the Ex-d module: 17.0 V@4 mA to 10.5 V@22 mA
- Output voltage of the Ex-ia module: 18.5 V@4 mA to 12.5 V@22 mA

Current span   🔒

Navigation   😵😑 Setup → Advanced setup → Input/output → Analog I/O → Current span

Prerequisite   **Operating mode** parameter (→ 🖹 140) ≠ **Disabled** option or **HART master** option

Description   Defines the current range for the measured value transmission.

Selection   • 4...20 mA NE (3.8...20.5 mA)
                    • 4...20 mA US (3.9...20.8 mA)
                    • 4...20 mA (4... 20.5 mA)
                    • Fixed value *

Factory setting   4...20 mA NE (3.8...20.5 mA)

Additional information

Read access	Operator
Write access	Maintenance

Meaning of the options

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA (4... 20.5 mA)	4 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA
4...20 mA NE (3.8...20.5 mA)	3.8 to 20.5 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.6 mA

---

* Visibility depends on order options or device settings

Option	Current range for process variable	Minimum value	Lower alarm signal level	Upper alarm signal level	Maximum value
4...20 mA US (3.9...20.8 mA)	3.9 to 20.8 mA	3.5 mA	< 3.6 mA	> 21.95 mA	22.0 mA
Fixed current	Constant current, defined in the **Fixed current** parameter (→ 🖺 142).				

In the case of an error, the output current assumes the value defined in the **Failure mode** parameter (→ 🖺 143).

Fixed current

Navigation   🔘🖥 Setup → Advanced setup → Input/output → Analog I/O → Fixed current

Prerequisite   Current span (→ 🖺 141) = Fixed current

Description   Defines the fixed output current.

User entry   4 to 22.5 mA

Factory setting   4 mA

Additional information

Read access	Operator
Write access	Maintenance

Analog input source

Navigation   🔘🖥 Setup → Advanced setup → Input/output → Analog I/O → Analog source

Prerequisite   • Operating mode (→ 🖺 140) = **4..20mA output** or **HART slave +4..20mA output**
                        • Current span (→ 🖺 141) ≠ **Fixed current**

Description   Defines the process variable transmitted via the AIO.

Selection   • None
                        • Tank level
                        • Tank level %

Output value	

Navigation	🎛🖥 Setup → Advanced setup → Input/output → Analog I/O → Output value
Prerequisite	Operating mode (→ 🗎 140) = 4..20mA output or HART slave +4..20mA output
Description	Shows the output value in mA.
Additional information	

Read access	Operator
Write access	-

Process variable	🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Analog I/O → Process variable

Prerequisite	Operating mode (→ 🖺 140) = 4..20mA input or HART master+4..20mA input

Description	Defines the type of measuring variable.

Selection	• Level linearized • Temperature • Pressure • Density

Factory setting	Level linearized

Additional information		Read access	Operator
	Write access	Maintenance

Analog input 0% value	🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Analog I/O → AI 0% value

Prerequisite	Operating mode (→ 🖺 140) = 4..20mA input or HART master+4..20mA input

Description	Value corresponding to an input current of 0% (4mA).

User entry	Signed floating-point number

Factory setting	0 mm

Additional information		Read access	Operator
	Write access	Maintenance

Analog input 100% value	🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Analog I/O → AI 100% value

Prerequisite	Operating mode (→ 🖺 140) = 4..20mA input or HART master+4..20mA input

Description	Value corresponding to an input current of 100% (20mA).

User entry	Signed floating-point number

Factory setting	0 mm

Additional information	Read access	Operator
	Write access	Maintenance

Error event type   🔒

Navigation	🔘🖥 Setup → Advanced setup → Input/output → Analog I/O → Error event type
Prerequisite	Operating mode (→ 🖺 140) ≠ Disabled or HART master
Description	Defines the type of event message (alarm/warning) in case of an error or output out of range in the analog I/O module.
Selection	• None • Warning • Alarm
Factory setting	Warning

Additional information	Read access	Operator
	Write access	Maintenance

Process value

Navigation	🔘🖥 Setup → Advanced setup → Input/output → Analog I/O → Process value
Prerequisite	Operating mode (→ 🖺 140) = 4..20mA input or HART master+4..20mA input
Description	Shows the input value scaled to customer units.

Additional information	Read access	Operator
	Write access	-

Input value in mA

Navigation	🔘🖥 Setup → Advanced setup → Input/output → Analog I/O → Input val. in mA
Prerequisite	Operating mode (→ 🖺 140) = 4..20mA input or HART master+4..20mA input
Description	Shows the input value in mA.

Additional information	Read access	Operator
	Write access	-

Input value percent

Navigation	�角🔲 Setup → Advanced setup → Input/output → Analog I/O → Input value [%]
Prerequisite	Operating mode (→ 🗎 140) = **4..20mA input** or **HART master+4..20mA input**
Description	Shows the input value as a percentage of the complete 4...20mA current range.
Additional information

Write access	-

"Digital Xx-x" submenu

ℹ️
- In the operating menu, each digital input or output is designated by the respective slot of the terminal compartment and two terminals within this slot. **A1-2**, for example, denotes terminals 1 and 2 of slot **A**. The same is valid for slots **B**, **C** and **D** if they contain a Digital IO module.
- In this document, **Xx-x** designates any of these submenus. The structure of all these submenus is the same.
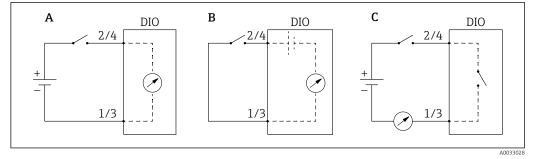

🔲 *48   Designation of the digital inputs or outputs (examples)*

Navigation   🔲🔲 Setup → Advanced setup → Input/output → Digital Xx-x

Operating mode	🔒

Navigation   🔲🔲 Setup → Advanced setup → Input/output → Digital Xx-x → Operating mode

Description   Defines the operating mode of the discrete I/O module.

Selection
- Disabled
- Output passive
- Input passive
- Input active

Factory setting   Disabled

Additional information

🖾 49 Operating modes of the Digital I/O module

A   Input passive
B   Input active
C   Output passive

Digital input source

Navigation	🔀🔲 Setup → Advanced setup → Input/output → Digital Xx-x → Digital source
Prerequisite	Operating mode (→ 🖺 150) = **Output passive**
Description	Defines which device state is indicated by the digital output.
Selection	• None • Alarm x any • Alarm x High • Alarm x HighHigh • Alarm x High or HighHigh • Alarm x Low • Alarm x LowLow • Alarm x Low or LowLow • Digital Xx-x • Primary Modbus x • Secondary Modbus x
Factory setting	None

Additional information   Meaning of the options
• **Alarm x any**, **Alarm x High**, **Alarm x HighHigh**, **Alarm x High or HighHigh**, **Alarm x
  Low**, **Alarm x LowLow**, **Alarm x Low or LowLow**
  The digital output indicates if the selected alarm is currently active. The alarms
  themselves are defined in the **Alarm 1 to 4** submenus.
• **Digital Xx-x** [8]
  The digital signal present at the digital input **Xx-x** is passed through to the digital
  output.
• **Modbus A1-4 Discrete x**
  Modbus B1-4 Discrete x
  Modbus C1-4 Discrete x
  Modbus D1-4 Discrete x
  The digital value written by the Modbus Master device to the **Modbus discrete x**
  parameter [9] is passed to the digital output. For details refer to Special Documentation
  SD02066G.

---

8)   Only present if "Operating mode (→ 🖺 150)" = "Input passive" or "Input active" for the respective Digital I/O module.
9)   Expert → Communication → Modbus Xx-x → Modbus discrete x

Input value

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Digital Xx-x → Input value
Prerequisite	Operating mode (→ 🔲 150) = **"Input passive" option** or **"Input active" option**
Description	Shows the digital input value.

Additional information	Read access	Operator
	Write access	–

Contact type   🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Digital Xx-x → Contact type
Prerequisite	Operating mode (→ 🔲 150) ≠ **Disabled**
Description	Determines the switching behavior of the input or output.
Selection	• Normally open • Normally closed
Factory setting	Normally open
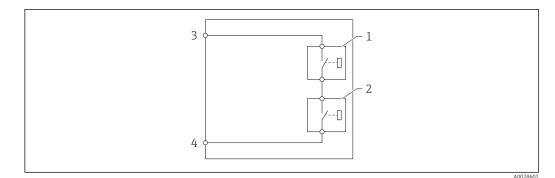

Output simulation   🔒

Navigation	🔘🔲 Setup → Advanced setup → Input/output → Digital Xx-x → Output sim
Prerequisite	Operating mode (→ 🔲 150) = **Output passive**
Description	Sets the output to a specific simulated value.
Selection	• Disable • Simulating active • Simulating inactive • Fault 1 • Fault 2
Factory setting	Disable

Additional information	Read access	Operator
	Write access	Maintenance

The digital output consists of two relays connected in series:

⊠ 50   The two relays of a digital output

1/2   The relays
3/4   The terminals of the digital output

The switching state of these relays is defined by the **Output simulation** parameter as follows:

Output simulation	State of relay 1	State of relay 2	Expected result on the terminals of the I/O module
Simulating active	Closed	Closed	Closed
Simulating inactive	Open	Open	Open
Fault 1	Closed	Open	Open
Fault 2	Open	Closed	Open

The **Fault 1** and **Fault 2** options can be used to check the correct switching behavior of the two relays.

Output value

Navigation   ⊞⊟   Setup → Advanced setup → Input/output → Digital Xx-x → Output values

Prerequisite   **Operating mode (→ ⊜ 150) = Output passive**

V1 address	🔒

Navigation	🔧🔲 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → V1 address

Prerequisite	Communication interface protocol variant (→ 🗎 159)

Description	Identifier of the previous device for V1 communication.

User entry	0 to 255

Factory setting	1

Additional information		

Read access	Operator
Write access	Maintenance

Level mapping	🔒

Navigation	🔧🔲 Setup → Advanced setup → Communication → V1 X1-4 → Configuration → Level mapping

Prerequisite	Communication interface protocol (→ 🗎 155) = V1

Description	Determines the transmittable range of levels.

Selection	• +ve • +ve & -ve

Factory setting	+ve

Additional information		

Read access	Operator
Write access	Maintenance

In V1, the level is always represented by a number in the range from 0 to 999 999. This number corresponds to a level as follows:

"Level mapping" = "+ve"

Number	Corresponding level
0	0.0 mm
999 999	99 999.9 mm

"Level mapping" = "+ve & -ve"

Number	Corresponding level
0	0.0 mm
500 000	50 000.0 mm

Number	Corresponding level
500 001	−0.1 mm
999 999	−49 999.9 mm

Line impedance   🔒

Navigation   Setup → Advanced setup → Communication → V1 X1-4 → Configuration → Line
                            impedance

Prerequisite   Communication interface protocol (→ 🖺 155) = V1

Description   Adjusts the impedance of the communication line.

User entry   0 to 15

Factory setting   15

Additional information

Read access	Operator
Write access	Maintenance

The line impedance affects the voltage difference between a logical 0 and a logical 1
on the message of the device to the bus. The default setting is suitable for most
applications.

"V1 input selector" submenu

This submenu is only present for devices with a **V1** communication interface.

"Tank calculation" submenu
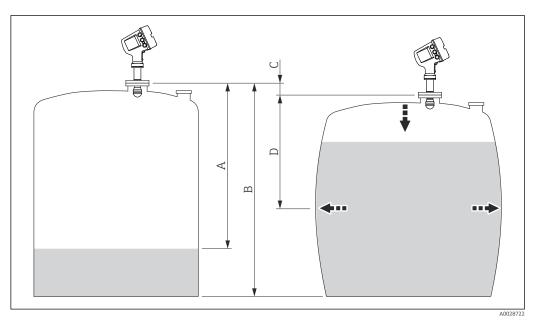

Navigation   ⊞⊟   Setup → Advanced setup → Application → Tank calculation

"HyTD" submenu

Overview

Hydrostatic Tank Deformation can be used to compensate the vertical movement of the Gauge Reference Height (GRH) due to bulging of the tank shell caused by the hydrostatic pressure exerted by the liquid stored in the tank. The compensation is based on a linear approximation obtained from manual hand dips at several levels distributed over the full range of the tank.
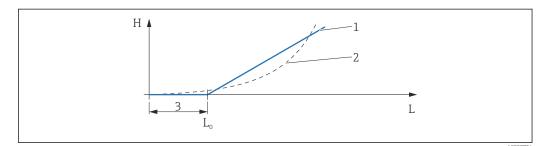

⊠ 52   Correction of the hydrostatic tank deformation (HyTD)

A   "Distance" (level below L_0 → "HyTD correction value" = 0)
B   Gauge Reference Height (GRH)
C   HyTD correction value
D   "Distance" (level above L_0 → "HyTD correction value" > 0)

Linear approximation of the HyTD correction

The real amount of deformation varies non-linearly with the level due to the construction of the tank. However, as the correction values are typically small compared to the measured level, a simple straight line method can be used with good results.

🖾 53   Calculation of the HyTD correction

1   Linear correction according to "Deformation factor (→ 🕮 194)"
2   Real correction
3   Starting level (→ 🕮 193)
L   Measured level (→ 🕮 113)
H   HyTD correction value (→ 🕮 193)

Calculation of the HyTD correction

$$L \leqslant L_0 \quad \Rightarrow \quad C_{HyTD} = 0$$
$$L > L_0 \quad \Rightarrow \quad C_{HyTD} = -(L - L_0) \times D$$

A0028715

L	Measured level
L_0	Starting level
c_{HyTD}	HyTD correction value
D	Deformation factor

"CTSh" submenu

Overview

CTSh (correction for the thermal expansion of the tank shell) compensates for effects on the Gauge Reference Height (GRH) and on the expansion or contraction of the measuring wire due to temperature effects on the tank shell or stilling well. The temperature effects are separated into two parts, respectively affecting the 'dry' and 'wetted' part of the tank shell or stilling well. The correction function is based on thermal expansion coefficients of steel and insulation factors for both the 'dry' and 'wet' parts of the wire and the tank shell. The temperatures used for the correction can be selected from on manual or measured values.

This correction is recommended for the following situations:
- if the operating temperature deviates considerably from the temperature during calibration ($\Delta T > 10\ ℃\ (18\ ℉)$)
- for extremely high tanks
- for refrigerated, cryogenic or heated applications

As the use of this correction will influence the innage level reading, it is recommended to ensure the manual hand dip and level verification procedures are being conducted correctly before enabling this correction method.

This mode cannot be used in conjunction with HTG because the level is not measured relative to the gauge reference height with HTG.

CTSh: Calculation of the wall temperature

🖼 *54   Parameters for the CTSh calculation*

A   Gauge Reference Height (GRH)
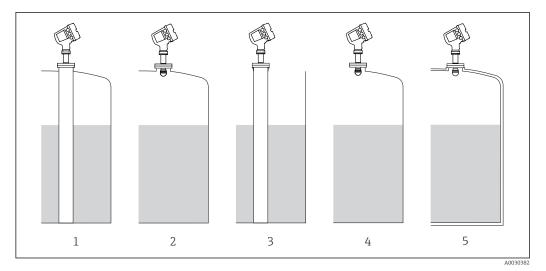

T_W	Temperature of the wetted part of the tank shell
T_D	Temperature of the dry part of the tank shell
T_P	Product temperature
T_V	Vapor temperature (in the tank)
T_A	Ambient temperature (atmosphere surrounding the tank)

CTSh: Calculation of the wall temperature

Depending on the parameters **Covered tank (→ 🖺 198)** and **Stilling well (→ 🖺 199)**, the temperatures T_W of the wetted and T_D of the dry part of the tank wall are calculated as follows:

Covered tank (→ 🖺 198)	Stilling well (→ 🖺 199)	T_W	T_D
Covered	Yes [1]	T_P	T_V
	No	$(7/8)\,T_P + (1/8)\,T_A$	$(1/2)\,T_V + (1/2)\,T_A$
Open top	Yes	T_P	T_A
	No	$(7/8)\,T_P + (1/8)\,T_A$	T_A

1)   This option is also valid for insulated tanks without a stilling welll. This is due to the temperature inside and outside of the tank shell being the same due to the insulation of the tank.

A0030382

1   Covered tank (→ 📄 198) = Covered; Stilling well (→ 📄 199) = Yes
2   Covered tank (→ 📄 198) = Covered; Stilling well (→ 📄 199) = No
3   Covered tank (→ 📄 198) = Open top; Stilling well (→ 📄 199) = Yes
4   Covered tank (→ 📄 198) = Open top; Stilling well (→ 📄 199) = No
5   Insulated tank: Covered tank (→ 📄 198) = Open top; Stilling well (→ 📄 199) = Yes

CTSh: Calculation of the correction

$$C_{CTSh} = \alpha\,(H - L)\,(T_D - T_{cal}) + \alpha\,L\,(T_W - T_{cal})$$

A0028716

H	Gauge Reference Height
L	Measured level
T_D	Temperature of the dry part of the tank shell (calculated from T_P, T_V and T_A)
T_W	Temperature of the wetted part of the tank shell (calculated from T_P, T_V and T_A)
T_{cal}	Temperature at which the measurement has been calibrated
α	Linear expansion coefficient
c_{CTSh}	CTSh correction value

                               in factory.

User entry   0 to 100 ppm

Factory setting   15 ppm

"HTMS" submenu

Overview

The Hybrid Tank Measurement System (HTMS) is a method to calculate the density of a product in a tank based on both a (top mounted) level and at least one (bottom mounted) pressure measurement. An additional pressure sensor can be installed at the top of the tank to provide information about the vapor pressure and to make the density calculation more accurate. The calculation method also takes into account a possible level of water at the bottom of the tank to make density calculations as accurate as possible.

HTMS parameters

A0028847

🔲 *55   HTMS parameters*

A   Product
B   Water

Parameter	Navigation path
P1 (Bottom pressure)	Setup → Advanced setup → Tank configuration → Pressure → P1 (bottom)
H_{P1} (Position of P1 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P1 position
P3 (Top pressure)	Setup → Advanced setup → Tank configuration → Pressure → P3 (top)
H_{P3} (Position of P3 transmitter)	Setup → Advanced setup → Tank configuration → Pressure → P3 position
ρ_P (Density of the product [1])	• Measured value: Setup → Advanced setup → Calculation → HTMS → Density value • User-defined value: Setup → Advanced setup → Calculation → HTMS → Manual upper density
ρ_V (Vapor density)	Expert → Application → Tank configuration → Density → Vapor density
ρ_A (Ambient air temperature)	Setup → Advanced setup → Tank configuration → Density → Air density
g (Local gravity)	Expert → Application → Tank Calculation → Local gravity
L_p (Level of the product)	Operation → Tank level
L_W (Bottom water level)	Operation → Water level
$V = L_W - H_{P1}$	
$\Delta_P = L_P - L_W = L_P - V - H_{P1}$	

1)   Depending on the situation this parameter is measured or a user-defined value is used.

HTMS modes

Two HTMS modes can be selected in the **HTMS mode** parameter ($\rightarrow$ 🖺 203). The mode determines whether one or two pressure values are used. Depending on the selected mode a number of additional parameters are required for the calculation of the product density.

ℹ️ The **HTMS P1+P3** option must be used in pressurized tanks in order to compensate for the pressure of the vapor phase.

HTMS mode ($\rightarrow$ 🖺 203)	Measured variables	Required additional parameters	Calculated variables
HTMS P1	• P_1 • L_P	• g • H_{P1} • L_W (optional)	ρ_P
HTMS P1+P3	• P_1 • P_3 • L_P	• ρ_V • ρ_A • g • H_{P1} • H_{P3} • L_W (optional)	ρ_P (more precise calculation for pressurized tanks)

Minimum level

The density of the product can only be calculated if the product has a minimum thickness :

$$\Delta_P \geq \Delta_{P,\,min}$$

<div align="right">_{A0028864}</div>

This is equivalent to the following condition for the product level:

$$L_P - V \geq \Delta_{P,min} + H_{P1} = L_{min}$$

<div align="right">_{A0028863}</div>
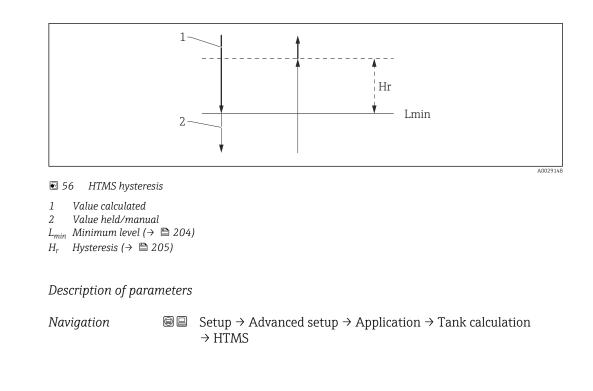

L_{min} is defined in the **Minimum level** parameter ($\rightarrow$ 🖺 204). As can be seen from the formula it always must be bigger than H_{P1}.

If L_P - V falls below this limit, the density is calculated as follows:
• If a previous calculated value is available, this value will be kept as long as no new calculation is possible.
• If no value was previously calculated, the manual value (defined in the **Manual upper density** parameter) will be used.

Hysteresis

The level of the product in a tank is not constant but slightly varies, due for example to filling disturbances. If the level oscillates around the changeover level (**Minimum level** ($\rightarrow$ 🖺 204)), the algorithm will constantly switch between calculating the value and holding the previous result. To avoid this effect a positional hysteresis is defined around the changeover point.

🖼 56 HTMS hysteresis

1 Value calculated
2 Value held/manual
L_{min} Minimum level (→ 🕮 204)
H_r Hysteresis (→ 🕮 205)

Description of parameters

"Dip-table" submenu

Dip table

The dip table is used to correct the level readings using independently taken hand dips. The dip table is used in particular to adapt the level gauge to the specific application conditions such as a mechanical offset and the tank or stilling well design. Depending on national regulations, national inspectors will dip the tank at one to three levels during a calibration run and check the level readings.

Only one value pair must be entered into the dip table to correct the measurement offset. If a second value pair is entered into the dip table, the device accepts the corrected measured values identically for both value pairs. All other measured values are determined by linear extrapolation.

If more than two value pairs are entered, the system carries out a linear interpolation between adjacent value pairs. Outside these value pairs, extrapolation is also linear.

> Before a table is entered, delete any existing table values by selecting **Table settings (→ 🗎 210)** = **"Clear table" option**.

> - The offset should **not** be determined and entered within the close range of the antenna or immediately in the range of the tank bottom, because within these ranges interferences of the radar signal may occur.
> - The entries of the dip table must be arranged in an ascending order of levels. If table values have not been entered in the correct order, they can automatically be rearranged by selecting **Table settings (→ 🗎 210)** = **Sort table**.

> - After changing the **Empty** parameter (→ 🗎 121), the **Table mode** parameter (→ 🗎 210) is automatically set to **Disable**.
> - If **Empty (→ 🗎 121)** has been changed by more than 20 mm (0.8 in), it is recommended to delete the dip table.
> - The dip table values are not affected by a change of the **Empty** parameter (→ 🗎 121).

Semiautomatic creation of a dip table

In order not to mix up measurement values corrected by the dip table with uncorrected measurement values, it is recommended to enter new data pairs semiautomatically into the table. This means: the uncorrected level is measured by the device and the user only enters the corresponding dip value.

The first dip value should be entered immediately after the basic calibration. Further dip points should be entered only after a level change of at least 2 m (6.6 ft) and a deviation between the uncorrected measurement value and the hand dip value of at least 4 mm (0.16 in).

If this procedure can not be followed, then **no** value pair should be entered into the dip table after basic calibration. Measurement data and hand dip values should be collected over the full measurement range and be evaluated with regard to a good linear fit. Only then characteristic value pairs should be entered into the dip table using the "manual mode" (see below).

Manual creation of a dip table

Before creating a dip table manually, measured levels and dip values should be collected over the full measurement range and be evaluated with regard to a linear fit. Only then characteristic value pairs from this fit should be entered into the dip table using the manual mode. In the manual mode both, the measured level (without correction) and the corresponding dip value are entered by the user.

> If further linearisation is needed, further hand dip values should be entered using only the "semi-automatic" mode (see above).

The table editor on the local display

1. Navigate to Setup → Advanced setup → Application → Tank calculation → Dip-table → Table mode and select the **Disable** option.

2. Navigate to Setup → Advanced setup → Application → Calculation → Dip-table → Edit table

   ↳

Write access	Maintenance

"Information" submenu

Navigation   🔘🖥 Setup → Advanced setup → Sensor config → Information

| Signal quality |

Navigation   🔘🖥 Setup → Advanced setup → Sensor config → Information → Signal quality

Description   Shows the quality of the evaluated level signal.

Additional information

Read access	Operator
Write access	-

| Absolute echo amplitude |

Navigation   🔘🖥 Setup → Advanced setup → Sensor config → Information → Abs. echo ampl.

Description   Shows the absolute amplitude of the evaluated level signal.

Additional information

Read access	Operator
Write access	-

Relative echo amplitude

Navigation	◎⊟ Setup → Advanced setup → Sensor config → Information → Relat.echo ampl.

Description Shows the relative amplitude (i.e. the distance to the evaluation curve) of the evaluated level signal.

Additional information

Read access	Operator
Write access	-

Distance

Navigation	◎⊟ Setup → Advanced setup → Sensor config → Information → Distance

Description Distance from lower edge of device flange to product surface.

Additional information

Read access	Operator
Write access	-

"Echo tracking" submenu

Navigation   ⊞⊟   Setup → Advanced setup → Sensor config → Echo tracking

Evaluation mode	🔒

Navigation	⊞⊟ Setup → Advanced setup → Sensor config → Echo tracking → Evaluation mode
Description	Defines the evaluation mode for the echo tracking.
Selection	• Short time history • History off
Factory setting	Short time history
Additional information	

Read access	Operator
Write access	Maintenance

Meaning of the options
• **Short time history**
   In addition to the static algorithms a dynamic echo trace is continuously generated and evaluated.
• **History off**
   The envelope curve is evaluated only statically.

History reset	🔒

Navigation	⊞⊟ Setup → Advanced setup → Sensor config → Echo tracking → History reset
Description	Resets the history of the echo tracking.
Selection	• Reset done • Restart echo tracking • Delete history
Factory setting	Reset done
Additional information	

Read access	Operator
Write access	Maintenance

Meaning of options:
• Reset done
   Does not initiate an action but is only a display option. It is displayed as soon as the reset operation has been accomplished.
• Delete history
   The echo tracking and tank trace are reset.

"Display" submenu
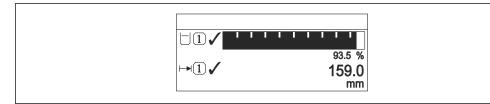

This menu is only visible if the device has a local display.

Navigation   ⧉⧉   Setup → Advanced setup → Display
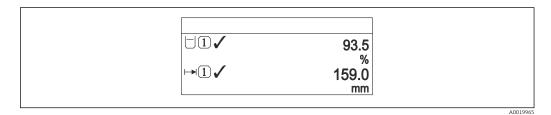

Language

Navigation   ⧉⧉   Setup → Advanced setup → Display → Language

Prerequisite   The device has a local display.

Description   Set display language.

Selection   • English
                        • Deutsch
                        • русский язык (Russian)
                        • 日本語 (Japanese)

Factory setting   English

"SIL confirmation" wizard

- • The **SIL confirmation** wizard is only available for devices with SIL or WHG approval (Feature 590: "Additional Approval", option LA: "SIL" or LC: "WHG overfill prevention") which are currently **not** in the SIL- or WHG-locked state.
- • The **SIL confirmation** wizard is required to lock the device according to SIL or WHG. For details refer to the "Functional Safety Manual" of the respective device, which describes the locking procedure and the parameters of this wizard.

Navigation   Setup → Advanced setup → SIL confirmation

"Deactivate SIL/WHG" wizard

- • The **Deactivate SIL/WHG** wizard is only available for devices with SIL or WHG approval (Feature 590: "Additional Approval", option LA: "SIL" or LC: "WHG overfill prevention") which are currently in the SIL- or WHG-locked state.
- • The **Deactivate SIL/WHG** wizard is required to undo the locking of the device according to SIL or WHG. For details refer to the "Functional Safety Manual" of the respective device, which describes the locking procedure and the parameters of this wizard.

Navigation   Setup → Advanced setup → Deactiv. SIL/WHG

"Administration" submenu

Navigation   ⊟   Setup → Advanced setup → Administration

Define access code 🔒

Navigation	⊟	Setup → Advanced setup → Administration → Def. access code

Description   Define release code for write access to parameters.

User entry   0 to 9 999

Factory setting   0

Additional information

Read access	Operator
Write access	Maintenance

ℹ️ If the factory setting is not changed or 0 is defined as the access code, the parameters are not write-protected and the configuration data of the device can then always be modified. The user is logged on in the *Maintenance* role.

ℹ️ The write protection affects all parameters marked with the 🔒 symbol in this document.

ℹ️ Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 🖺 126).

Device reset 🔒

Navigation	◉⊟	Setup → Advanced setup → Administration → Device reset

Description   Reset the device configuration - either entirely or in part - to a defined state

Selection
- Cancel
- To factory defaults
- Restart device

Factory setting   Cancel

Additional information   **Meaning of the options**
- **Cancel**
  No action
- **To factory defaults**
  All parameters are reset to the order-code specific factory setting.
- **Restart device**
  The restart resets every parameter which is stored in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.
