#### 12. Description of Equipment:

General - The Prothermo series NMT 539 and NMT532 are average temperature measuring and/or water level measurement devices and/or level measurement devices of water at a tank bottom. The devices are available in four different configurations. A converter only configuration, an average temperature probe + converter configuration, a water bottom and converter configuration, and an average temperature probe + water bottom + and converter configuration.

Construction - The overall construction consists of a metal housing containing a potted electronics insert with a flexible metal tube that leads to the probe. The temperature sensor cable has an insulation material of PVC, PEX, ETFE, FEP, or PTFE.

#### Ratings:
