<b>Extended order code</b>	<p>The extended order code is indicated on the nameplate, which is affixed to the device in such a way that it is clearly visible. Additional information about the nameplate is provided in the associated Operating Instructions.</p>

### Structure of the extended order code

FTM5x	-	*****	+	A*B*C*D*E*F*G*..
(Device type)		(Basic specifications)		(Optional specifications)

\* = Placeholder

At this position, an option (number or letter) selected from the specification is displayed instead of the placeholders.

### Basic specifications

The features that are absolutely essential for the device (mandatory features) are specified in the basic specifications. The number of positions depends on the number of features available.

The selected option of a feature can consist of several positions.

### Optional specifications

The optional specifications describe additional features for the device (optional features). The number of positions depends on the number of features available. The features have a 2-digit structure to aid identification (e.g. JA). The first digit (ID) stands for the feature group and consists of a number or a letter (e.g. J = Test, Certificate). The second digit constitutes the value that stands for the feature within the group (e.g. A = 3.1 material (wetted parts), inspection certificate).

More detailed information about the device is provided in the following tables. These tables describe the individual positions and IDs in the extended order code which are relevant to hazardous locations.

## Extended order code: Soliphant M

## Device type

FTM50, FTM51, FTM52

### Basic specifications

Position 1 (Approval)		
Selected option		Description
FTM50	2	ATEX II 1/2 D Ex ta/tb IIIC T160°C...T310°C Da/Db <sup>1)</sup>
FTM51		ATEX II 2(1) D Ex tb [ia Da] IIIC T83°C Db <sup>2)</sup>
FTM52	2	ATEX II 1/2 D Ex ta/tb [ia Da] IIIC T83°C Da/Db
		ATEX II 2(1) D Ex tb [ia Da] IIIC T83°C Db <sup>2)</sup>

1) Depending on Position 11

2) Only in connection with Position 7 = D, E, G, H

Position 6 (Electronics, Output)		
Selected option		Description
FTM5x	1	FEM51; 2-wire 19-253VAC
	2	FEM52; 3-wire PNP 10-55VDC
	4	FEM54; relay DPDT, 19-253VAC/55VDC
	5	FEM55; 8/16mA, 11-35VDC

Position 7 (Type of Probe)		
Selected option		Description
FTM5x	A	Compact
	D, E	Cable > separate enclosure
	G, H	Cable, armoured > separate enclosure

Position 8 (Housing)		
Selected option		Description
FTM5x	H	T13 Alu IP66/68 NEMA Type 4X/6P Encl., separate conn. compartment
	3	F17 Alu IP66/67 NEMA Type 4X Encl.
	5	F13 Alu IP66/68 NEMA Type 4X/6P Encl.
	6	F27 316L IP67/68 NEMA Type 4X/6P Encl.
	7	F15 316L hygiene IP66/67 NEMA Type 4X Encl.

Position 10 (Additional Option 1)		
Selected option		Description
FTM50 FTM51	1	UK marking
	2	Glass cover + UK marking
	3	Glass cover, SIL declaration of conformity + UK marking
	4	SIL declaration of conformity + UK marking
	5	Glass cover + UK marking, detection of solids under water
	6	Detection of solids under water + UK marking
FTM52	1	UK marking
	2	Glass cover + UK marking
	3	Glass cover, SIL declaration of conformity + UK marking
	4	SIL declaration of conformity + UK marking

Position 11 (Additional Option 2)		
Selected option		Description
FTM50 FTM51	A	Not selected
	C	EN10204-3.1 material (wetted parts), inspection certificate
	D, E	Temp. separator $\leq 150^{\circ}\text{C}$
	F, H	High temperature $\leq 280^{\circ}\text{C}$
	J, K	High temperature $\leq 230^{\circ}\text{C}$
	Y	Special version: High temperature $\leq 300^{\circ}\text{C}$
FTM52	A	Not selected

### *Optional specifications*

No options specific to hazardous locations are available.

### **Safety instructions: General**

- The device is intended to be used in explosive atmospheres as defined in the scope of EN IEC 60079-0 or equivalent national standards. If no potentially explosive atmospheres are present or if additional protective measures have been taken: The device may be operated according to the manufacturer's specifications.
- Staff must meet the following conditions for mounting, electrical installation, commissioning and maintenance of the device:
  - Be suitably qualified for their role and the tasks they perform
  - Be trained in explosion protection
  - Be familiar with national regulations
- Install the device according to the manufacturer's instructions and national regulations.
- Do not operate the device outside the specified electrical, thermal and mechanical parameters.
- Only use the device in media to which the wetted materials have sufficient durability.
- Avoid electrostatic charging:
  - Of plastic surfaces (e.g. enclosure, sensor element, special varnishing, attached additional plates, ..)
  - Of isolated capacities (e.g. isolated metallic plates)
- Refer to the temperature tables for the relationship between the permitted ambient temperature for the sensor and/or transmitter, depending on the range of application and the temperature class.
- Modifications to the device can affect the explosion protection and must be carried out by staff authorized to perform such work by Endress+Hauser.

**Safety  
instructions:  
Special conditions**

- To avoid electrostatic charging: Do not rub surfaces with a dry cloth.
- In the event of additional or alternative special varnishing on the enclosure or other metal parts or for adhesive plates:
  - Observe the danger of electrostatic charging and discharge.
  - Do not install in the vicinity of processes ( $\leq 0.5$  m) generating strong electrostatic charges.

*Basic specification, Position 6 = 4*

In an explosive atmosphere: Waiting time before opening the electronics compartment after switching off the power supply: 17 minutes.

**Safety  
instructions:  
Installation**

A0027391

- 1 Zone 21  
 1 Tank; Hazardous area Zone 20  
 2 Version  
 3 Temperature separator (optional at 150 °C)  
 4 Electronic insert; Electronic compartment Ex tb  
 5 Enclosure  
 6 Power supply  
 7 Potential equalization line  
 8 Potential equalization

A0027392

- A Zone 20, Zone 21  
 B Zone 21  
 1 Tank; Hazardous area Zone 20  
 2 Version  
 3 Sensor enclosure  
 4 Temperature separator (optional at 150 °C)  
 5 Electronic insert; Electronic compartment Ex tb  
 6 Electronics enclosure  
 7 Power supply  
 8 Potential equalization line  
 9 Potential equalization

- After mounting and connecting the sensor, ingress protection of the enclosure must be at least IP65.
- Perform the following to achieve the degree of protection IP66/67 or IP66/68:
  - Screw the cover tight.
  - Mount the cable entry correctly.
- Use a process connection seal that meets the materials compatibility and temperature requirements.
- When connecting the cables, ensure there is adequate strain relief at place of installation.

- Protect the connecting cable between the separate enclosure and the level sensor from tension and friction (e.g. due to electrostatic charge from medium flow).
- Observe the maximum process conditions according to the manufacturer's Operating Instructions.
- At high medium temperatures, note flange pressure load capacity as a factor of temperature.
- Max. heat-up of device surface in Zone 20 under fault conditions:  $\leq 10$  K (measured with deposited material with a layer  $> 200$  mm in thickness).
- Max. heat-up of device surface in Zone 21 or Zone 22 under fault conditions:  $\leq 23$  K.
- Install the device to exclude any mechanical damage or friction during the application. Pay particular attention to flow conditions and tank fittings.
- Support extension tube of the device if a dynamic load is expected.
- Only use certified cable entries suitable for the application. Observe national regulations and standards.
- When operating the transmitter enclosure at an ambient temperature under  $-20$  °C, use appropriate cables and cable entries permitted for this application.
- Seal unused entry glands with approved sealing plugs that correspond to the type of protection. The plastic transport sealing plug does not meet this requirement and must therefore be replaced during installation.
- Continuous service temperature of the connecting cable:  $-50$  °C to  $\geq +93$  °C; in accordance with the range of service temperature taking into account additional influences of the process conditions ( $T_{a,min}$ ), ( $T_{a,max} + 23$  K).
- Before operation:
  - Screw in the cover all the way.
  - Tighten the securing clamp on the cover.
- In potentially explosive atmospheres:
  - Do not disconnect the electrical connection of the power supply circuit when energized.
  - Do not open the connection compartment cover and the electronics compartment cover when energized.

### **Accessory high pressure sliding sleeve**

The high pressure sliding sleeve can be used for a continuous setting of the switch point and is suited for zone separation if mounted properly (see Operating Instructions).

### **Potential equalization**

Integrate the device into the local potential equalization.

Temperature tables

Basic specification, Position 8 = 3, 7: T<sub>a</sub> restriction to -40 °C

Compact version

Basic specification, Position 7 = A

Device type	Basic specification, Position 11	Permissible process temperature T <sub>p</sub>  FTM50 FTM51	Maximum surface temperature		Permissible ambient temperature T <sub>a</sub>  Enclosure
