Make sure the document is stored in a safe place such that it is always available when working on or with the device.

Avoid danger to individuals or the facility: read the “Basic safety instructions” section carefully, as well as all other safety instructions in the document that are specific to working procedures.

The manufacturer reserves the right to modify technical data without prior notice. The Endress+Hauser sales organization will supply you with current information and updates to these instructions.

1 About this document

1.1 Purpose of this document
These Operating Instructions contain all the information that is required in the various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2 Symbols

1.2.1 Safety symbols

⚠️ **DANGER**
This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

⚠️ **WARNING**
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

⚠️ **CAUTION**
This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

⚠️ **NOTICE**
This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Symbols for certain types of information and graphics

✔️ **Permitted**
Procedures, processes or actions that are permitted

✔️ ✔️ **Preferred**
Procedures, processes or actions that are preferred

❌ **Forbidden**
Procedures, processes or actions that are forbidden

ℹ️ **Tip**
Indicates additional information

📖 **Reference to documentation**

🔍 **Reference to graphic**

⚠️ **Notice or individual step to be observed**

1, 2, 3 **Series of steps**

➡️ **Result of a step**

🔍 Operation via local display

🔍 Operation via operating tool
1.3 Documentation

The following types of documentation are available in the Download Area of the Endress + Hauser website (www.endress.com/downloads):

For an overview of the scope of the associated Technical Documentation, refer to the following:

- Device Viewer (www.endress.com/deviceviewer): Enter the serial number from the nameplate
- Endress+Hauser Operations app: Enter serial number from nameplate or scan matrix code on nameplate.

1.3.1 Technical Information (TI)

Planning aid
The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.

1.3.2 Brief Operating Instructions (KA)

Guide that takes you quickly to the 1st measured value
The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.

1.3.3 Safety Instructions (XA)

Depending on the approval, the following Safety Instructions (XA) are supplied with the device. They are an integral part of the Operating Instructions.

The nameplate indicates the Safety Instructions (XA) that are relevant to the device.

1.3.4 Functional Safety Manual (FY)

Depending on the SIL approval, the Functional Safety Manual (FY) is an integral part of the Operating Instructions and applies in addition to the Operating Instructions, Technical Information and ATEX Safety Instructions.

The different requirements that apply for the protective function are described in the Functional Safety Manual (FY).

1.4 List of abbreviations

BA
Document type "Operating Instructions"

KA
Document type "Brief Operating Instructions"
TI
Document type "Technical Information"

SD
Document type "Special Documentation"

XA
Document type "Safety Instructions"

PN
Nominal pressure

MWP
Maximum working pressure
The MWP is indicated on the nameplate.

ToF
Time of Flight

FieldCare
Scalable software tool for device configuration and integrated plant asset management solutions

DeviceCare
Universal configuration software for Endress+Hauser HART, PROFIBUS, FOUNDATION Fieldbus and Ethernet field devices

DTM
Device Type Manager

$\varepsilon_r$ (Dk value)
Relative dielectric constant

Operating tool
The term "operating tool" is used in place of the following operating software:
- FieldCare / DeviceCare, for operation via HART communication and PC
- SmartBlue app, for operation using an Android or iOS smartphone or tablet

PLC
Programmable logic controller (PLC)

1.5 Registered trademarks

HART®
Registered trademark of the FieldComm Group, Austin, Texas, USA

Bluetooth®
The Bluetooth® word mark and logos are registered trademarks owned by the Bluetooth SIG, Inc. and any use of such marks by Endress+Hauser is under license. Other trademarks and trade names are those of their respective owners.

Apple®
Apple, the Apple logo, iPhone, and iPod touch are trademarks of Apple Inc., registered in the U.S. and other countries. App Store is a service mark of Apple Inc.

Android®
Android, Google Play and the Google Play logo are trademarks of Google Inc.

KALREZ®, VITON®
Registered trademarks of DuPont Performance Elastomers L.L.C., Wilmington, DE USA
2 Basic safety instructions

2.1 Requirements for personnel
The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

‣ Trained, qualified specialists must have a relevant qualification for this specific function and task.
‣ Personnel must be authorized by the plant owner/operator.
‣ Be familiar with federal/national regulations.
‣ Before starting work: personnel must read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
‣ Personnel must follow instructions and comply with general policies.

The operating personnel must fulfill the following requirements:

‣ Personnel are instructed and authorized according to the requirements of the task by the facility's owner-operator.
‣ Personnel follow the instructions in this manual.

2.2 Intended use

Application and media
The measuring device described in these Operating Instructions is intended for continuous, non-contact level measurement primarily in bulk solids. Because of its operating frequency of approx. 80 GHz, a maximum radiated peak power of 6.3 mW and an average output power of 63 µW, unrestricted use outside of closed, metallic vessels is also permitted (for example over heaps). Operation does not pose any danger whatsoever to humans and animals.

If the limit values specified in the 'Technical data' and the conditions listed in the instructions and additional documentation are observed, the measuring device may be used for the following measurements only:

‣ Measured process variables: level, distance, signal strength
‣ Calculable process variables: volume or mass in any shape of vessel

To ensure that the measuring device remains in proper condition for the operation time:

‣ Use the measuring device only for media against which the process-wetted materials are adequately resistant.
‣ Observe the limit values in the 'Technical data'.

Incorrect use
The manufacturer is not liable for damage caused by improper or non-intended use.

Avoid mechanical damage:

‣ Do not touch or clean device surfaces with pointed or hard objects.

Clarification of borderline cases:

‣ For special fluids and fluids for cleaning, Endress+Hauser is glad to provide assistance in verifying the corrosion resistance of fluid-wetted materials, but does not accept any warranty or liability.

Residual risks
Due to heat transfer from the process as well as power loss in the electronics, the temperature of the electronics housing and the assemblies it contains (e.g. display module, main electronics module and I/O electronics module) may rise to 80 °C (176 °F). When in operation, the sensor may reach a temperature close to the medium temperature.

Danger of burns from contact with surfaces!

‣ For elevated fluid temperatures, ensure protection against contact to prevent burns.
2.3 Workplace safety

When working on and with the device:
▶ Wear the required personal protective equipment according to federal/national regulations.
▶ Switch off the supply voltage before connecting the device.

2.4 Operational safety

Risk of injury!
▶ Operate the device only if it is in proper technical condition, free from errors and faults.
▶ The operator is responsible for the interference-free operation of the device.

Modifications to the device

Unauthorized modifications to the device are not permitted and can lead to unforeseeable dangers:
▶ If modifications are nevertheless required, consult with the manufacturer.

Repair

To ensure continued operational safety and reliability:
▶ Carry out repairs on the device only if they are expressly permitted.
▶ Observe federal/national regulations pertaining to the repair of an electrical device.
▶ Use only original spare parts and accessories from the manufacturer.

Hazardous area

To eliminate danger to persons or the installation when the device is used in the hazardous area (e.g. explosion protection, pressure vessel safety):
▶ Check the nameplate to verify whether the ordered device can be put to its intended use in the hazardous area.
▶ Observe the specifications in the separate supplementary documentation, which is an integral part of this manual.

2.5 Product safety

This device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets the general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

2.6 Functional Safety SIL (optional)

The Functional Safety Manual must be strictly observed for devices that are used in functional safety applications.

2.7 IT security

We only provide a warranty if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the device settings. IT security measures in line with operators' security standards and designed to provide additional protection for the device and device data transfer must be implemented by the operators themselves.
2.8 Device-specific IT security

The device offers specific functions to support protective measures by the operator. These functions can be configured by the user and guarantee greater in-operation safety if used correctly. An overview of the most important functions is provided in the following section:

- Write protection via hardware write protection switch
- Access code (applies for operation via display, Bluetooth or FieldCare, DeviceCare, ASM, PDM)
3  Product description

3.1  Product design

![Diagram of Micropilot FMR67B design](image)

1. Electronics housing
2. DN65 horn antenna, with flange
3. DN65 horn antenna, with UNI flange and alignment unit
4. Drip-off antenna 50 mm (2 in), with flange; optional purge air connection
5. Antenna flush mount, 80 mm (3 in), with flange; optional purge air connection
6. Antenna flush mount, 80 mm (3 in), with UNI flange; optional purge air connection
7. Antenna flush mount, 80 mm (3 in), with UNI flange and alignment unit; optional purge air connection
4  Incoming acceptance and product identification

4.1  Incoming acceptance

Check the following during incoming acceptance:
- Is the order code on the delivery note (1) identical to the order code on the product sticker (2)?
- Are the goods undamaged?
- Do the data on the nameplate correspond to the order specifications and the delivery note?
- Is the documentation provided?
- If required (see nameplate): are the Safety Instructions (XA) provided?

If one of these conditions is not met, please contact the manufacturer’s sales office.

4.2  Product identification

The following options are available for identification of the device:
- Nameplate specifications
- Extended order code with breakdown of the device features on the delivery note
  - Device Viewer(www.endress.com/deviceviewer); manually enter the serial number from the nameplate.
    - All the information about the measuring device is displayed.
  - Endress+Hauser Operations app; manually enter the serial number indicated on the nameplate or scan the 2D matrix code on the nameplate.
    - All the information about the measuring device is displayed.

4.2.1  Nameplate

The information that is required by law and is relevant to the device is shown on the nameplate, e.g.:
- Manufacturer identification
- Order number, extended order code, serial number
- Technical data, degree of protection
- Firmware version, hardware version
- Approval-related information, reference to Safety Instructions (XA)
- DataMatrix code (information about the device)
4.2.2 Manufacturer address

Endress+Hauser SE+Co. KG
Hauptstraße 1
79689 Maulburg, Germany
Place of manufacture: See nameplate.

4.3 Storage and transport

4.3.1 Storage conditions

- Use the original packaging
- Store the device in clean and dry conditions and protect from damage caused by shocks

Storage temperature range
See Technical Information.

4.3.2 Transporting the product to the measuring point

⚠️ WARNING
Incorrect transport!
The housing or sensor can be damaged or pull off. Risk of injury!

- Transport the device to the measuring point in its original packaging or by the process connection.
- Always secure lifting equipment (slings, eyes, etc.) at the process connection and never lift the device by the electronic housing or sensor. Pay attention to the center of gravity of the device so that it does not tilt or slip unintentionally.
5 Mounting

5.1 General instructions

**WARNING**
Loss of protection rating if the device is opened in a wet environment.
▶ Only open the device in a dry environment!

1. Install the device or turn the housing so that the cable entries do not point upwards.
2. Always firmly tighten the housing cover and the cable entries.
3. Counter-tighten the cable entries.
4. A drip loop must be provided when laying the cables.

5.2 Mounting requirements

5.2.1 Internal vessel fittings

Avoid internal fittings (point level switches, temperature sensors, struts, vacuum rings, heating coils, baffles etc.) inside the signal beam. Pay attention to the beam angle $\alpha$. 
5.2.2 Avoiding interference echoes

Metal deflector plates, installed at an angle to scatter the radar signals, help prevent interference echoes.

5.2.3 Vertical alignment of antenna axis
Align the antenna so that it is perpendicular to the product surface.

![Diagram of antenna alignment](image)

![Diagram of antenna alignment](image)

The maximum reach of the antenna can be reduced, or additional interference signals can occur, if the antenna is not installed perpendicular to the product.

5.2.4 Radial alignment of the antenna
Based on the directional characteristic, radial alignment of the antenna is not necessary.

5.2.5 Optimization options

**Mapping**
Measurement can be optimized by electronically suppressing interference echoes.

See the **Confirm distance** parameter.

5.3 Mounting the device

5.3.1 Horn antenna 65 mm (2.56 in)

Information about the mounting nozzle
The maximum nozzle length $H_{\text{max}}$ depends on the nozzle diameter $D$. 
Maximum nozzle length $H_{\text{max}}$ as a function of the nozzle diameter $D$

<table>
<thead>
<tr>
<th>$\phi D$</th>
<th>$H_{\text{max}}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 to 100 mm (3.2 to 4 in)</td>
<td>1 700 mm (67 in)</td>
</tr>
<tr>
<td>100 to 150 mm (4 to 6 in)</td>
<td>2 100 mm (83 in)</td>
</tr>
<tr>
<td>$\geq$ 150 mm (6 in)</td>
<td>3 200 mm (126 in)</td>
</tr>
</tbody>
</table>

In the case of longer nozzles, reduced measuring performance must be expected.

Please note the following:
- The end of the nozzle must be smooth and free from burrs.
- The edge of the nozzle should be rounded.
- Mapping must be performed.
- Please contact the manufacturer’s support department for applications with nozzles that are higher than indicated in the table.

5.3.2 Horn antenna 65 mm (2.56 in) with alignment unit

UNI flanges with an integrated alignment unit are available for the horn antenna 65 mm (2.56 in). An angle of inclination of up to 15° in all directions can be set for the antenna axis using the alignment unit. The alignment unit is used to optimally align the measuring signal to the bulk solids.

Information about the mounting nozzle

The maximum nozzle length $H_{\text{max}}$ depends on the nozzle diameter $D$. 
The maximum nozzle length $H_{\text{max}}$ depends on the nozzle diameter $D$:

<table>
<thead>
<tr>
<th>$\phi D$</th>
<th>$H_{\text{max}}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 to 100 mm (3.2 to 4 in)</td>
<td>1700 mm (67 in)</td>

<tr>
<td>100 to 150 mm (4 to 6 in)</td>
<td>2100 mm (83 in)</td>
</tr>
<tr>
<td>$\geq$ 150 mm (6 in)</td>
<td>3200 mm (126 in)</td>
</tr>
</tbody>
</table>

In the case of longer nozzles, reduced measuring performance must be expected.

Please note the following:
- The end of the nozzle must be smooth and free from burrs.
- The edge of the nozzle should be rounded.
- Mapping must be performed.
- Please contact the manufacturer’s support department for applications with nozzles that are higher than indicated in the table.

5.3.3 Drip-off antenna PTFE 50 mm (2 in)

Information concerning threaded connections
- When screwing in, turn by the hex bolt only.
- Tool: open-ended wrench 55 mm
- Maximum permissible torque: 50 Nm (36 lbf ft)

Information about the mounting nozzle
The maximum nozzle length $H_{\text{max}}$ depends on the nozzle diameter $D$.

Maximum nozzle length $H_{\text{max}}$ as a function of the nozzle diameter $D$:

<table>
<thead>
<tr>
<th>$\phi D$</th>
<th>$H_{\text{max}}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>50 to 80 mm (2 to 3.2 in)</td>
<td>750 mm (30 in)</td>
</tr>
<tr>
<td>80 to 100 mm (3.2 to 4 in)</td>
<td>1150 mm (46 in)</td>
</tr>
<tr>
<td>100 to 150 mm (4 to 6 in)</td>
<td>1450 mm (58 in)</td>
</tr>
<tr>
<td>$\geq$ 150 mm (6 in)</td>
<td>2200 mm (88 in)</td>
</tr>
</tbody>
</table>

In the case of longer nozzles, reduced measuring performance must be expected.

Please note the following:
- The end of the nozzle must be smooth and free from burrs.
- The edge of the nozzle should be rounded.
- Mapping must be performed.
- Please contact the manufacturer’s support department for applications with nozzles that are higher than indicated in the table.
5.3.4  Antenna, flush mount 80 mm (3 in)

Information about the mounting nozzle

The maximum nozzle length $H_{\text{max}}$ depends on the nozzle diameter $D$.

Antenna nozzle mounting, flush mount 80 mm (3 in)

<table>
<thead>
<tr>
<th>ØD</th>
<th>$H_{\text{max}}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>80 to 100 mm (3.2 to 4 in)</td>
<td>1750 mm (70 in)</td>
</tr>
<tr>
<td>100 to 150 mm (4 to 6 in)</td>
<td>2200 mm (88 in)</td>
</tr>
<tr>
<td>≥ 150 mm (6 in)</td>
<td>3300 mm (132 in)</td>
</tr>
</tbody>
</table>

In the case of longer nozzles, reduced measuring performance must be expected.

Please note the following:

- The end of the nozzle must be smooth and free from burrs.
- The edge of the nozzle should be rounded.
- Mapping must be performed.
- Please contact the manufacturer's support department for applications with nozzles that are higher than indicated in the table.

5.3.5  Antenna flush mount 80 mm (3 in) with alignment unit

UNI flanges with an integrated alignment unit are available for the antenna flush mount 80 mm (3 in). An inclination of the antenna axis of up to 15° in all directions can be set with the help of the alignment unit. The alignment unit is used to optimally align the measuring signal to the bulk solids.
The maximum length of the nozzle $H_{\text{max}}$ depends on the nozzle diameter $D$

<table>
<thead>
<tr>
<th>$\phi D$</th>
<th>$H_{\text{max}}$</th>
</tr>
</thead>
<tbody>
<tr>
<td>min. 80 to 100 mm (3 to 4 in)</td>
<td>1450 mm (57 in)</td>

<tr>
<td>100 to 150 mm (4 to 6 in)</td>
<td>1800 mm (71 in)</td>
</tr>
<tr>
<td>≥ 150 mm (6 in)</td>
<td>2700 mm (106 in)</td>
</tr>
</tbody>
</table>

In the case of longer nozzles, reduced measuring performance must be expected.

Please note the following:

- The end of the nozzle must be smooth and free from burrs.
- The edge of the nozzle should be rounded.
- Mapping must be performed.
- Please contact the manufacturer's support department for applications with nozzles that are higher than indicated in the table.

5.3.6 Purge air connection

In applications with strong dust emissions, the integrated purge air connection can prevent the antenna from becoming clogged. Pulse operation is recommended.

Purge air pressure range
- Pulse operation:
  - Max. 6 bar (87 psi)
- Continuous operation:
  - 200 to 500 mbar (3 to 7.25 psi)

Purge air connection
- Tool:
  - Open-ended wrench 13 mm (G 1/4")
  - Open-ended wrench 14 mm (NPT)
  - Open-ended wrench 17 mm (NPT "adapter")
  - Min. torque: 6 Nm (4.4 lbf ft)
  - Max. torque: 7 Nm

- Always use dry purge air
- In general, purging should only be performed to the extent necessary as excess purging can cause mechanical damage (abrasion)

5.3.7 Turning the housing

The housing can be rotated up to 380° by loosening the locking screw.
Your benefits
- Easy installation due to optimum alignment of housing
- Easily accessible device operation
- Optimum readability of the local display (optional)

![Diagram of housing types]

A  Plastic single compartment housing (no locking screw)
B  Aluminum single compartment housing
C  Single compartment housing, 316L, hygiene (no locking screw)
D  Dual compartment housing
E  Dual compartment housing, L-form
1  Locking screw

**NOTICE**
The housing cannot be unscrewed fully.
- Loosen the external locking screw by a maximum of 1.5 turns. If the screw is unscrewed too much or completely (beyond the screw anchor point), small parts (counter disk) can become loose and fall out.
- Tighten the securing screw (hexagon socket 4 mm (0.16 in)) with maximum 3.5 Nm (2.58 lbf ft) ± 0.3 Nm (0.22 lbf ft).

### 5.3.8 Turning the display module

**WARNING**
Supply voltage switched on!
Risk of electric shock and/or explosion!
- Switch off the supply voltage before opening the measuring device.

1. If fitted: release the screw of the cover lock for the electronics compartment cover using the Allen key.
2. Unscrew the electronics compartment cover from the transmitter housing and check the cover seal.
3. Press the release mechanism and remove the display module.
4. Turn the display module to the desired position: maximum 4 × 90° in each direction. Fit the display module on the electronics compartment in the desired position until it clicks into place. Screw the electronics compartment cover back onto the transmitter housing. If fitted: tighten the screw of the cover lock using the Allen key 0.7 Nm (0.52 lbf ft) ± 0.2 Nm (0.15 lbf ft).
5.3.9 Changing the installation position of the display module

The installation position of the display can be changed in the case of the dual compartment housing, L-form.

**WARNING**

Supply voltage switched on!
Risk of electric shock and/or explosion!

- Switch off the supply voltage before opening the measuring device.

1. If fitted: release the screw of the cover lock for the display cover using the Allen key.
2. Unscrew the display cover and check the cover seal.
3. Press the release mechanism, remove the display module.
4. Release the connection.
5. If fitted: release the screw of the cover lock for the connection compartment cover using the Allen key.
6. Unscrew the connection compartment cover, check the cover seal. Screw this cover onto the electronics compartment instead of the display cover. If fitted: tighten the screw of the cover lock using the Allen key.
Plug in the connection for the display module in the connection compartment.
Fit the display module in the desired position until it clicks into place.

Screw the display cover firmly back onto the housing. If fitted: tighten the screw of the cover lock using the Allen key 0.7 Nm (0.52 lbf ft).

5.3.10 Closing the housing covers

NOTICE
Thread and housing damaged from dirt!
- Remove dirt (e.g. sand) on the cover and housing thread.
- If you encounter resistance when closing the cover, check the thread for dirt and clean it.

Housing thread
The threads of the electronics and connection compartment can be coated with an anti-friction coating.
The following applies for all housing materials:
- Do not lubricate the housing threads.

5.4 Post-mounting check

- Is the device free from damage (visual inspection)?
- Are the measuring point identification and labeling correct (visual inspection)?
- Is the measuring device protected against precipitation and sunlight?
- Are the securing screws and cover lock tightened securely?
- Does the measuring device comply with the measuring point specifications?

For example:
- Process temperature
- Process pressure
- Ambient temperature
- Measuring range
6  Electrical connection

6.1  Connecting requirements

6.1.1  Cover with securing screw

In the case of devices for use in the hazardous area with a certain type of protection, the cover is sealed by a securing screw.

**NOTICE**

If the securing screw is not positioned correctly, the cover cannot provide secure sealing.

- Open the cover: slacken the screw of the cover lock with a maximum of 2 turns so that the screw does not fall out. Fit the cover and check the cover seal.
- Close the cover: screw the cover securely onto the housing, making sure that the securing screw is positioned correctly. There should not be any gap between the cover and housing.

![Cover with securing screw](image)

6.1.2  Potential equalization

The protective ground on the device must not be connected. If necessary, the potential matching line can be connected to the outer ground terminal of the transmitter before the device is connected.
Electrical connection

Micropilot FMR67B HART

A  Single compartment housing, plastic
B  Single compartment housing, aluminum
C  Single compartment housing, 316L hygiene (Ex device)
D  Dual compartment housing
E  Dual compartment housing, L-form
1  Ground terminal for connecting the potential matching line

**WARNING**

Explosion Hazard!
- Please refer to the separate documentation on applications in hazardous areas for the safety instructions.

For optimum electromagnetic compatibility:
- Keep the potential matching line as short as possible
- Observe a cross-section of at least 2.5 mm² (14 AWG)

### 6.2  Connecting the device

A  Plastic single compartment housing
B  Aluminum single compartment housing
C  Single compartment housing, 316L hygiene
D  Dual compartment housing
E  Dual compartment housing, L-form
1  Connection compartment cover

- Devices with a single compartment housing, 316L hygiene, and conduit gland must be connected as end-of-line devices. Only one conduit entry must be used.

**Housing thread**
The threads of the electronics and connection compartment can be coated with an anti-friction coating.
The following applies for all housing materials:
- **Do not lubricate the housing threads.**

### 6.2.1  Supply voltage
The supply voltage depends on the selected type of device approval
The power unit must be tested to ensure it meets safety requirements (e.g., PELV, SELV, Class 2) and must comply with the relevant protocol specifications.

A suitable circuit breaker must be provided for the device in accordance with IEC/EN61010-1

**Device display and Bluetooth**

Depending on the supply voltage and current consumption (see the chart)
- the background lighting is switched on or off
- the Bluetooth function (order option) can be switched on or off optionally

![Diagram](image)

**A** Display lighting switched on, Bluetooth can be switched on optionally

**B** Display lighting switched off, Bluetooth can be switched on optionally

**C** Display lighting switched off and Bluetooth not active

### 6.2.2 Cable specification

**Rated cross-section**
- Supply voltage
  - 0.5 to 2.5 mm² (20 to 13 AWG)
- Protective earth or grounding of the cable shield
  - >1 mm² (17 AWG)
- External ground terminal
  - 0.5 to 4 mm² (20 to 12 AWG)

**Cable outer diameter**

The cable outer diameter depends on the cable gland used
- Coupling, plastic:
  - Ø5 to 10 mm (0.2 to 0.38 in)
- Coupling, nickel-plated brass:
  - Ø7 to 10.5 mm (0.28 to 0.41 in)
- Coupling, stainless steel:
  - Ø7 to 12 mm (0.28 to 0.47 in)
### 6.2.3 4 to 20 mA HART

![Block diagram of HART connection](image)

1. Device with HART communication
2. HART communication resistor
3. Power supply
4. Multimeter or ammeter

The HART communication resistor of 250 Ω in the signal line is always necessary in the case of a low-impedance power supply. 

**Take the voltage drop into consideration:**
Maximum 6 V for a 250 Ω communication resistor

### 6.2.4 Overvoltage protection

The overvoltage protection can optionally be ordered as a 'Mounted accessory' via the product structure.

**Devices without optional overvoltage protection**

The equipment fulfills the requirements of the product standard IEC / DIN EN 61326-1 (Table 2 Industrial Environment).

Depending on the type of port (DC power supply, input/output port) different testing levels according to IEC / DIN EN 61326-1 against transient overvoltages (Surge) are applied (IEC / DIN EN 61000-4-5 Surge):
- Test level on DC power ports and input/output ports is 1 000 V line to earth

**Devices with optional overvoltage protection**

- Spark-over voltage: min. 400 V<sub>DC</sub>
- Tested according to IEC / DIN EN 60079-14 sub chapter 12.3 (IEC / DIN EN 60060-1 chapter 7)
- Nominal discharge current: 10 kA

**NOTICE**

**Device could be destroyed**
- Always ground device with integrated overvoltage protection.

**Overvoltage category**

Overvoltage category II
6.2.5  Wiring

⚠️ WARNING

Supply voltage might be connected!
Risk of electric shock and/or explosion!
- If the device is used in hazardous areas, make sure to comply with national standards and the specifications in the Safety Instructions (XAs). The specified cable gland must be used.
- The supply voltage must match the specifications on the nameplate.
- Switch off the supply voltage before connecting the device.
- If necessary, the potential matching line can be connected to the outer ground terminal of the device before the power supply lines are connected.
- A suitable circuit breaker should be provided for the device in accordance with IEC/EN 61010.
- The cables must be adequately insulated, with due consideration given to the supply voltage and the overvoltage category.
- The connecting cables must offer adequate temperature stability, with due consideration given to the ambient temperature.
- Only operate the measuring device with the covers closed.

Connect the device in the following order:
1. Release the cover lock (if provided).
2. Unscrew the cover.
3. Guide the cables into the cable glands or cable entries.
4. Connect the cables.
5. Tighten the cable glands or cable entries so that they are leak-tight. Counter-tighten the housing entry.
6. Screw the cover securely back onto the connection compartment.
7. If provided: tighten the screw of the cover lock using the Allen key 0.7 Nm (0.52 lbf ft) ±0.2 Nm (0.15 lbf ft).

6.2.6  Terminal assignment

Single compartment housing

Connection terminals and ground terminal in the connection compartment

1  Positive terminal
2  Negative terminal
3  Internal ground terminal
9 Connection terminals and ground terminal in the connection compartment

1 Positive terminal
2 Negative terminal
3 Internal ground terminal

10 Connection terminals and ground terminal in the connection compartment

1 Positive terminal
2 Negative terminal
3 Internal ground terminal
6.2.7  Cable entries

<table>
<thead>

<td>1 Cable entry</td>
<td>2 Dummy plug</td>
<td>1 Cable entry</td>
<td>2 Dummy plug</td>
<td>1 Cable entry</td>
</tr>
</tbody>
</table>

The type of cable entry depends on the device version ordered.

Always route connecting cables downwards so that moisture cannot penetrate the connection compartment.

If necessary, create a drip loop or use a weather protection cover.

6.2.8  Available device plugs

In the case of devices with a plug, it is not necessary to open the housing for connection purposes.

Use the enclosed seals to prevent the penetration of moisture into the device.

CuZn, gold-plated plug-in jack and plug contacts

6.3  Ensuring the degree of protection

6.3.1  Cable entries
- Gland M20, plastic, IP66/68 NEMA TYPE 4X/6P
- Gland M20, nickel-plated brass, IP66/68 NEMA TYPE 4X/6P
- Gland M20, 316L, IP66/68 NEMA TYPE 4X/6P
- Thread M20, IP66/68 NEMA TYPE 4X/6P
- Thread G1/2, IP66/68 NEMA TYPE 4X/6P

If the G1/2 thread is selected, the device is delivered with an M20 thread as standard and a G1/2 adapter is included with the delivery, along with the corresponding documentation
- Thread NPT1/2, IP66/68 TYPE 4X/6P
- Dummy plug transport protection: IP22, TYPE 2
- HAN7D plug, 90 degrees, IP65 NEMA Type 4X
- M12 plug
  - When housing is closed and connecting cable is plugged in: IP66/67, NEMA Type 4X
  - When housing is open or connecting cable is not plugged in: IP20, NEMA Type 1

NOTICE
Plug M12 and plug HAN7D: incorrect mounting can invalidate the IP protection class!
- The degree of protection only applies if the connecting cable used is plugged in and screwed tight.
- The degree of protection only applies if the connecting cable used is specified according to IP67, NEMA Type 4X.
- The IP protection classes are only maintained if the dummy cap is used or the cable is connected.

6.4  Post-connection check
- Are the device or cables undamaged (visual inspection)?
- Do the cables used comply with the requirements?
☐ Do the mounted cables have strain relief?
☐ Cable glands mounted, securely tightened and leak-tight?
☐ Does the supply voltage correspond to the specifications on the nameplate?
☐ No reverse polarity, terminal assignment correct?
☐ Cover screwed down correctly?
☐ Cover lock tightened correctly?
7 Operation options

7.1 Overview of operating options

- Operation via operating keys and DIP switches on the electronic insert
- Operation via optical operating keys on the device display (optional)
- Operation via Bluetooth® wireless technology (with optional device display with Bluetooth) with Smartblue app or FieldXpert, DeviceCare
- Operation via operating tool (Endress+Hauser FieldCare/DeviceCare, handheld terminal, AMS, PDM, ...)

7.2 Operating keys and DIP switches on the HART electronic insert

![Diagram of operating keys and DIP switches on the HART electronic insert]

1 Operating key for reset password (for Bluetooth login and Maintenance user role)
2 Operating keys for device reset (as-delivered state)
3 Operating key II (only for factory reset)
4 DIP switch for alarm current
5 DIP switch for locking and unlocking the device

The setting of the DIP switches on the electronic insert has priority over the settings made via other operation methods (e.g. FieldCare/DeviceCare).

7.3 Structure and function of the operating menu

The differences between the structure of the operating menus of the local display and the Endress+Hauser FieldCare or DeviceCare operating tools can be summarized as follows:

The local display is suitable for configuring simple applications.
The operating tools (FieldCare, DeviceCare, SmartBlue, AMS, PDM, ...) can be used to configure the parameters of wide-ranging applications.

Wizards help the user to commission the various applications. The user is guided through the individual configuration steps.

7.3.1 User roles and related access authorization

The two user roles Operator and Maintenance (as-delivered state) have different write access to the parameters if a device-specific access code has been defined. This access code protects the device configuration from unauthorized access.
If an incorrect access code is entered, the user obtains the access rights of the Operator role.

### 7.4 Access to the operating menu via the local display

#### 7.4.1 Device display (optional)

Possible to operate the optical operating keys through the cover. No need to open the device.

Functions:
- Display of measured values and fault and notice messages
- Background lighting, which switches from green to red in the event of an error
- The device display can be removed for easier operation

Backlighting is switched on or off depending on the supply voltage and the current consumption.

The device display is also optionally available with Bluetooth® wireless technology.

![Graphic display with optical operating keys (1)](image)

- Key ▼
  - Navigate downwards in the picklist
  - Edit the numerical values or characters within a function
- Key ▲
  - Navigate upwards in the picklist
  - Edit the numerical values or characters within a function
- Key ▶
  - Change from main display to main menu
  - Confirm entry
  - Jump to the next item
  - Select a menu item and activate the edit mode
  - Unlock/lock the display operation
  - Press and hold the ▶ key to display a short description of the selected parameter (if available)
- ▼ key and ▲ key (ESC function)
  - Exit edit mode for a parameter without saving the changed value
  - Menu at a selection level: pressing the keys simultaneously takes the user back up a level in the menu
  - Press and hold the keys simultaneously to return to the upper level
7.4.2  Operation via Bluetooth® wireless technology (optional)

Prerequisite
- Device with device display including Bluetooth
- Smartphone or tablet with Endress+Hauser SmartBlue app or PC with DeviceCare from version 1.07.05 or FieldXpert SMT70

The connection has a range of up to 25 m (82 ft). The range can vary depending on environmental conditions such as attachments, walls or ceilings.

The operating keys on the display are locked as soon as the device is connected via Bluetooth.

A flashing Bluetooth symbol indicates that a Bluetooth connection is available.

SmartBlue app

1. Scan the QR code or enter 'SmartBlue' in the search field of the App Store or Google Play.

2. Start the SmartBlue app.

3. Select device from livelist displayed.

4. Login:
   - Enter the user name: admin
   - Password: serial number of the device.

5. Change the password after logging in for the first time!

Prerequisites

System requirements
The SmartBlue app is available to download for smartphones or tablets. Please see the 'App Store (Apple)' or 'Google Play Store' for information regarding the compatibility of the SmartBlue app with mobile terminals.

Initial password
The serial number of the device serves as the initial password when the connection is established for the first time.

Please note the following
If the Bluetooth display is removed from one device and installed in another device:
- All the log-in data are only saved in the Bluetooth display and not in the device
- The password changed by the user is also saved in the Bluetooth display

7.5  Access to the operating menu via the operating tool

Access via the operating tool is possible:
- Via HART communication, e.g. Commubox FXA195
- Via Endress+Hauser Commubox FXA291
  With the Commubox FXA291, a CDI connection can be established with the device interface and a Windows PC/notebook with a USB port
7.6 DeviceCare

7.6.1 Function scope
Tool for connecting and configuring Endress+Hauser field devices.
The fastest way to configure Endress+Hauser field devices is with the dedicated "DeviceCare" tool. Together with the device type managers (DTMs), DeviceCare presents a convenient, comprehensive solution.

For details, see Innovation Brochure IN01047S

7.7 FieldCare

7.7.1 Function scope
FDT-based plant asset management tool from Endress+Hauser. FieldCare can configure all smart field devices in a system and helps you manage them. By using the status information, FieldCare is also a simple but effective way of checking their status and condition.

Access is via:
- CDI service interface
- HART communication

Typical functions:
- Parameterization of transmitters
- Loading and saving of device data (upload/download)
- Documentation of the measuring point
- Visualization of the measured value memory (line recorder) and event logbook

For additional information about FieldCare, see Operating Instructions BA00027S and BA00059S
8  System integration

8.1  Overview of device description files
- Manufacturer ID: 17 (0x0011)
- Device type ID: 0x11C1
- HART specification: 7.6
- DD files, information and files can be found at:
  - www.endress.com
  - www.fieldcommgroup.org

8.2  Measured variables via HART protocol
The following measured values are assigned to the device variables at the factory:

<table>
<thead>
<tr>
<th>Device variable</th>
<th>Measured value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary variable (PV)</td>
<td>Level linearized</td>
</tr>
<tr>
<td>Secondary variable (SV)</td>
<td>Distance</td>
</tr>
<tr>
<td>Tertiary variable (TV)</td>
<td>Absolute echo amplitude</td>
</tr>
<tr>
<td>Quaternary variable (QV)</td>
<td>Relative echo amplitude</td>
</tr>
</tbody>
</table>

The assignment of the measured values to the device variables can be changed in the following submenu:
Application → HART output → HART output

In a HART Multidrop loop, only one device may use the analog current value for signal transmission. For all other devices in the "Loop current mode" parameter, select the Disable option.
9 Commissioning

All configuration tools provide a commissioning assistant that supports the user when setting the most important configuration parameters (Guidance menu Commissioning wizard).

9.1 Preliminaries

The measuring range and the unit in which the measured value is transmitted correspond to the data on the nameplate.

WARNING

The settings of the current output are relevant for safety!
This can result in product overflow.

- The setting for the current output depends on the setting in the Assign PV parameter.
- After changing the setting of the current output, check the setting of the span (Lower range value output and Upper range value output) and change it if necessary!

9.2 Function check

Before commissioning the measuring point, check whether the post-mounting and post-connection checks (checklist) have been performed:

- 'Post-mounting check' section
- 'Post-connection check' section

9.3 Establishing a connection via FieldCare and DeviceCare

9.3.1 Via HART protocol

![Diagram of connection via HART protocol]

13 Options for remote operation via HART protocol
1 PLC (programmable logic controller)
2 Transmitter power supply unit, e.g., RN42
3 Connection for Commubox FXA195 and AMS Trex™ device communicator
4 AMS Trex™ device communicator
5 Computer with operating tool (e.g., DeviceCare/FieldCare, AMS Device View, SIMATIC PDM)
6 Commubox FXA195 (USB)
7 Field Xpert SMT70
8 Bluetooth modem with connecting cable (e.g., VIATOR)
9 Transmitter
9.3.2 Via service interface (CDI)

1. Computer with FieldCare/DeviceCare operating tool
2. Commubox FXA291
3. Service interface (CDI) of the measuring device (= Endress+Hauser Common Data Interface)

9.4 Configuring the device address via software

See “HART address” parameter
Enter the address to exchange data via the HART protocol.
- Guidance → Commissioning → HART address
- Application → HART output → Configuration → HART address

9.5 Setting the operating language

9.5.1 Local display

Setting the operating language

1. Press the key for at least 2 s. → A dialog box appears.
2. Unlock the display operation.
3. Select the Language parameter in the main menu.
4. Press the key.
5. Select the desired language with the or key.
6. Press the key.

Display operation locks automatically (except in the Safety mode wizard):
- after 1 min on the main page if no key has been pressed
- after 10 min within the operating menu if no key has been pressed

9.5.2 Operating tool

Set display language

System → Display → Language

Selection in the Language parameter; Visibility depends on order options or device settings
9.6 Device configuration

9.6.1 Level measurement in bulk solids

| R | Reference point of measurement          |
| A | Length of antenna + 10 mm (0.4 in)      |
| D | Distance                                |
| L | Level                                   |
| E | "Empty calibration" parameter (= 0%)    |
| F | "Full calibration" parameter (= 100%)   |

9.6.2 Commissioning with the Commissioning wizard

In FieldCare, DeviceCare, SmartBlue and on the display, the **Commissioning** wizard is available to guide the user through the initial commissioning steps.

Complete this wizard to commission the device.

For each parameter, enter the appropriate value or select the appropriate option.

**NOTE**

If you exit the wizard before completing all required parameters, the changes you have made will be saved. For this reason, the device may then be in an undefined state! In this case, a reset to the default settings is recommended.

9.7 Recording the Echo curve

Record the current Echo curve as a reference echo curve for subsequent diagnostic purposes

After the measurement has been configured, it is recommended to record the current Echo curve as a reference echo curve.

The **Save reference curve** parameter in the **Echo curve** submenu is used to record the Echo curve.
Diagnostics → Echo curve → Save reference curve

- Under the Save reference curve parameter, activate the Customer reference curve option

9.8 "Simulation" submenu

Simulation of a process variable, a pulse output or a diagnostic event.
10  Operation

10.1  Reading off the device locking status
Displaying active write protection in the Locking status parameter
- Local display 📦:
  The 🗝 symbol appears on the main page
- Operating tool (FieldCare/DeviceCare) 📡:
  Navigation: System → Device management → Locking status

10.2  Reading off measured values
All the measured values can be read off using the Measured values submenu.
Navigation: Application menu → Measured values submenu

10.3  Adapting the device to process conditions
The following menus are available for this purpose:
- Basic settings in the Guidance menu
- Advanced settings in:
  - Diagnostics menu
  - Application menu
  - System menu

10.4  Heartbeat Technology (optional)

10.4.1  Heartbeat Verification
"Heartbeat Verification" wizard
This wizard is used to start an automatic verification of the device functionality. The results can be documented as a verification report.
- The wizard can be used via the operating tools and the display
  The wizard can be started on the display but only shows the Passed option or Failed option result.
- The wizard guides the user through the entire process for creating the verification report

10.4.2  Heartbeat Verification/Monitoring
The Heartbeat submenu is only available when operating via FieldCare, DeviceCare or the SmartBlue app. It contains the wizards that are provided with the Heartbeat Verification and Heartbeat Monitoring application packages.

Documentation on the Heartbeat Technology: Endress+Hauser website:
www.endress.com → Downloads.
11 Diagnostics and troubleshooting

11.1 General troubleshooting

11.1.1 General errors

Device is not responding
- Possible cause: Supply voltage does not match the specification on the nameplate
  Remedial action: Apply the correct voltage
- Possible cause: The polarity of the supply voltage is wrong
  Remedial action: Correct the polarity
- Possible cause: The connecting cables are not in contact with the terminals
  Remedial action: Check the electrical contact between cables and correct if necessary
- Possible cause: Load resistance too high
  Remedial action: Increase the supply voltage to reach the minimum terminal voltage

Values not visible on the display
- Possible cause: Display setting is too bright or too dark
  Remedial action:
  Use the Contrast display parameter to increase or reduce contrast
  Navigation path: System → Display → Contrast display
- Possible cause: The plug of the display cable is not connected correctly
  Remedial action: Connect the plug correctly
- Possible cause: Display is defective
  Remedial action: Replace the display

"Communication error" is indicated on the display when the device is started or the display is connected
- Possible cause: Electromagnetic interference influence
  Remedial action: Check grounding of the device
- Possible cause: Defective cable connection or display plug
  Remedial action: Replace the display

Communication via CDI interface not working
Possible cause: Wrong setting of the COM port on the computer
Remedial action: Check the setting of the COM port on the computer and correct it if necessary

Device measuring incorrectly
Possible cause: Parameter configuration error
Remedial action: Check and correct the parameter configuration

11.2 Error - SmartBlue operation

Operation via SmartBlue is only possible on devices that have a display with Bluetooth (optionally available).
Device is not visible in the live list
- Possible cause: No Bluetooth connection available
  Remedial action: Enable Bluetooth in the field device via display or software tool and/or
  in the smartphone/tablet
- Possible cause: Bluetooth signal outside range
  Remedial action: Reduce distance between field device and smartphone/tablet
  The connection has a range of up to 25 m (82 ft).
  Operating radius with intervisibility 10 m (33 ft)
- Possible cause: Geopositioning is not enabled on Android devices or is not permitted for
  the SmartBlue app
  Remedial action: Enable/permit the geopositioning service on Android device for the
  SmartBlue app
- Display does not have Bluetooth

Device appears in the live list but a connection cannot be established
- Possible cause: The device is already connected with another smartphone/tablet via
  Bluetooth
  Only one point-to-point connection is permitted
  Remedial action: Disconnect the smartphone/tablet from the device
- Possible cause: Incorrect user name and password
  Remedial action: The standard user name is "admin" and the password is the device serial
  number indicated on the device nameplate (only if the password was not changed by the
  user beforehand)
  If the password has been forgotten, contact Endress+Hauser Service
  (www.addresses.endress.com)

Connection via SmartBlue not possible
- Possible cause: Incorrect password entered
  Remedial action: Enter the correct password, paying attention to lower/upper case
- Possible cause: Forgotten password
  Remedial action: Contact Endress+Hauser Service (www.addresses.endress.com)

Login via SmartBlue not possible
- Possible cause: Device is being put into operation for the first time
  Remedial action: Enter the user name "admin" and the password (device serial number),
  paying attention to lower/upper case
- Possible cause: The electric current and voltage are not correct.
  Remedial action: Increase the supply voltage.

Device cannot be operated via SmartBlue
- Possible cause: Incorrect password entered
  Remedial action: Enter the correct password, paying attention to lower/upper case
- Possible cause: Forgotten password
  Remedial action: Contact Endress+Hauser Service (www.addresses.endress.com)
- Possible cause: Operator option has no authorization
  Remedial action: Change to Maintenance option

11.3 Diagnostic message
Faults detected by the self-monitoring system of the device are displayed as a diagnostic
message in alternation with the measured value.

Diagram of diagnostic message displayed in alternating sequence with the measured value.
If two or more diagnostic events occur simultaneously, only the diagnostic message with the highest priority is shown.

### 11.3.1 Diagnostic information on local display

![Segment display without keys](image1)

- 16 Segment display without keys
  - 1 Status symbol for event level
  - 2 Status signal with diagnostic event

![Graphic display with keys](image2)

- 17 Graphic display with keys
  - 1 Status signal
  - 2 Status symbol with diagnostic event and preceding symbol for event level
  - 3 Event text

### 11.3.2 Diagnostic information in the operating tool

If a diagnostic event has occurred in the device, the status signal appears in the top left status area of the operating tool together with the corresponding symbol for the event level according to NAMUR NE 107.

Click the status signal to see the detailed status signal.

Pending diagnostic messages can also be displayed in the Active diagnostics parameter.

The diagnostic events and remedial measures can be printed out in the Diagnostic list submenu.

### 11.3.3 Status signal

- **F**
  - Failure (F)
  - A device error has occurred. The measured value is no longer valid.

- **C**
  - Function check (C)
  - The device is in the service mode (e.g. during a simulation).

- **S**
  - Out of specification (S)
  - Device operation:
    - Outside of the technical specifications (e.g. during startup or a cleaning)
    - Outside of the configuration performed by the user (e.g. sensor frequency outside the configured span)
11.3.4 Diagnostic event and event text

The fault can be identified by means of the diagnostic event. The event text helps you by providing information about the fault. In addition, the associated status symbol is displayed in front of the diagnostic event.

Symbol for event level

⚠️ "Alarm" status
Measurement is interrupted. The signal outputs adopt the defined alarm state. A diagnostic message is generated.

⚠️ "Warning" status
The device continues to measure. A diagnostic message is generated.

11.4 Remedy information

Calling up

11.4.1 Graphic display with keys

Open the Diagnostic list submenu
### 11.4.2 Operating menu

In the **Diagnostic list** submenu, up to 5 currently pending diagnostic messages can be displayed. If more than 5 messages are pending, the messages with the highest priority are shown on the display.

**Navigation path**
Diagnostics → Diagnostic list

Queued diagnostic messages are also displayed in the **Active diagnostics** parameter.

**Navigation**: Diagnostics → Active diagnostics

### 11.5 Adapting the diagnostic information

The event level can be configured:

**Navigation**: Diagnostics → Diagnostic settings → Configuration

### 11.6 List of diagnostic events

If Remedy information **Contact the Service Department** is displayed (www.addresses.endress.com), be ready with the **service ID** shown.

### 11.7 Event logbook

#### 11.7.1 Event history

A chronological overview of the event messages that have occurred is provided in the Event logbook submenu. This submenu only exists if operating via the local display with keys. In the case of operation via FieldCare, the event list can be displayed with the "Event List / HistoROM" functionality of FieldCare.

**Navigation:**
Diagnostics → Event logbook → Event list

A maximum of 100 event messages can be displayed in chronological order.

1) Diagnostic behavior can be changed.
The event history includes entries for:
- Diagnostic events
- Information events

In addition to the operating time when the event occurred, each event is also assigned a symbol that indicates whether the event has occurred or is finished:
- Diagnostic event
  - EventData: Occurrence of the event
  - : End of the event
- Information event
  - EventData: Occurrence of the event

**Calling up and closing the remedial measures**

1. Press \[\text{}\].
   - The message for the remedial measures for the selected diagnostic event opens.
2. Press \[\text{} \text{+} \text{}\] simultaneously.
   - The message about the remedial measures closes.

**11.7.2 Filtering the event logbook**

Filters can be used to determine which category of event messages is displayed in the Event list submenu.

Navigation: Diagnostics → Event logbook

**Filter categories**
- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information

### 11.8 Resetting the device

#### 11.8.1 Resetting the device via the operating tool

Reset the device configuration - either entirely or in part - to a defined state.

**Navigation:** System → Device management → Reset device

**Reset device** parameter

[Note: For details see the “Description of device parameters” documentation.]

#### 11.8.2 Resetting the device via keys on the electronic insert

**Resetting the password**

1. Press operating key I three times.

   - The Reset Password function is started, the LED flashes.

**Deleting/resetting the password**

1. Press operating key I three times.

   - The Reset Password function is started, the LED flashes.

Resetting the device to the factory setting

- Press operating key I and operating key II simultaneously for at least 12 s.
  ☑️ Device data are reset to the factory setting, the LED flashes briefly.

11.9 Device information

All the device information is contained in the Information submenu.
Navigation: System → Information

For details see the ‘Description of device parameters’ documentation.

11.10 Firmware history

The firmware version can explicitly be ordered via the product structure. This makes it possible to ensure the compatibility of the firmware version with an existing or planned system integration.

Version
01.00.00
- Initial software
- Valid from: 1 August 2022
12 Maintenance

No special maintenance work is required.

12.1 Exterior cleaning

Notes on cleaning
- The cleaning agents used should not corrode the surfaces and the seals
- Observe the degree of protection of the device

12.2 Seals

The process seals, located on the process connection of the device, should be replaced periodically. The interval between changes depends on the frequency of the cleaning cycles, the cleaning temperature and the medium temperature.
13  Repair

13.1  General information

13.1.1  Repair concept

Endress+Hauser repair concept
- The devices have a modular design
- Repairs can be carried out by Endress+Hauser Service or by appropriately trained customers
- Spare parts are grouped into logical kits with the associated replacement instructions

For more information on service and spare parts, please contact your Endress+Hauser sales representative.

13.1.2  Repair of Ex-certified devices

⚠️ WARNING
Incorrect repair can compromise electrical safety!
Risk of explosion!
- Only specialist personnel or the Endress+Hauser service team may carry out repairs on Ex-certified devices in accordance with national regulations.
- Relevant standards and national regulations on hazardous areas, safety instructions and certificates must be observed.
- Use only original Endress+Hauser spare parts.
- Please note the device designation on the nameplate. Only identical parts may be used as replacements.
- Carry out repairs according to the instructions.
- Only the Endress+Hauser service team is permitted to modify a certified device and convert it to another certified version.

13.2  Spare parts

- Some replaceable device components are identified by a spare part nameplate. This contains information about the spare part.
- All the spare parts for the measuring device, along with the order code, are listed in the Device Viewer (www.endress.com/deviceviewer) and can be ordered. If available, users can also download the associated Installation Instructions.

_device serial number or QR code: Located on the device and spare part nameplate_.

13.3  Replacement

⚠️ CAUTION
Data upload/download is not permitted if the device is used for safety-related applications.
- After an entire device or an electronics module has been replaced, the parameters can be downloaded to the device again via the communication interface. For this, the data must have been uploaded to the PC beforehand using the "FieldCare/DeviceCare" software.
13.3.1 HistoROM
It is not necessary to perform a new device calibration after replacing the display or transmitter electronics.

The spare part is supplied without HistoROM.

After removing the transmitter electronics, remove HistoRom and insert it into the new spare part.

13.4 Return
The requirements for safe device return can vary depending on the device type and national legislation.

1. Refer to the web page for information:
   http://www.endress.com/support/return-material
   Select the region.

2. Return the device if repairs or a factory calibration are required, or if the wrong device was ordered or delivered.

13.5 Disposal

If required by the Directive 2012/19/EU on waste electrical and electronic equipment (WEEE), the product is marked with the depicted symbol in order to minimize the disposal of WEEE as unsorted municipal waste. Do not dispose of products bearing this marking as unsorted municipal waste. Instead, return them to the manufacturer for disposal under the applicable conditions.
14 Accessories

14.1 Weather protection cover 316L

The weather protection cover can be ordered together with the device via the "Accessory enclosed" product structure.

It is used to protect against direct sunlight, precipitation and ice.

Weather protection cover 316L is suitable for the dual compartment housing made of aluminum or 316L. The delivery includes the holder for direct mounting on the housing.

Material
- Weather protection cover: 316L
- Clamping screw: A4
- Holder: 316L

Order number for accessories:
71438303

14.2 Plastic weather protection cover

The weather protection cover can be ordered together with the device via the "Accessory enclosed" product structure.

It is used to protect against direct sunlight, precipitation and ice.

The plastic weather protection cover is suitable for the single compartment housing made of aluminum. The delivery includes the holder for direct mounting on the housing.
Material
Plastic

Order number for accessories:
71438291

14.3 Adjustable flange seal

The adjustable flange seal is used to align the sensor to the surface of the product. It can be ordered directly with the device via the product structure 'Accessory enclosed' or individually via the specific order number.

14.3.1 Seal, adjustable, DN80

The seal, adjustable, DN80 is compatible with flanges EN DN80 PN10/PN40

Technical data

- Material: EPDM
- Recommended screw size: M14
- Recommended screw length: 100 mm (3.9 in)
- Process pressure: –0.1 to 0.1 bar (–1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (–40 to +176 °F)

Ordering information

- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71074263

14.3.2 Seal, adjustable, DN100

The seal, adjustable, DN100 is compatible with flanges EN DN100 PN10/PN16
**Technical data**

- Material: EPDM
- Recommended screw size: M14
- Recommended screw length: 100 mm (3.9 in)
- Process pressure: –0.1 to 0.1 bar (–1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (–40 to +176 °F)

**Ordering information**

- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71074264

**14.3.3 Seal, adjustable, DN150**

The seal, adjustable, DN150 is compatible with flanges EN DN150 PN10/PN19 and JIS 10K 150A

![Diagram of seal](A0046697)

**Technical data**

- Material: EPDM
- Recommended screw size: M18
- Recommended screw length: 110 mm (4.3 in)
- Process pressure: –0.1 to 0.1 bar (–1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (–40 to +176 °F)

**Ordering information**

- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71074265

**14.3.4 Seal, adjustable, ASME 3"/ JIS 80A**

The seal, adjustable, ASME 3"/ JIS 80A is compatible with flanges ASME 3" 150 lbs and JIS 80A 10K

![Diagram of seal](A0046698)
Technical data
- Material: EPDM
- Recommended screw size: M14
- Recommended screw length: 100 mm (3.9 in)
- Process pressure: –0.1 to 0.1 bar (~1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (~40 to +176 °F)

Ordering information
- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71249070

14.3.5 Seal, adjustable, ASME 4"
The seal, adjustable, ASME 4" is compatible with flanges ASME 4" 150 lbs

Technical data
- Material: EPDM
- Recommended screw size: M14
- Recommended screw length: 100 mm (3.9 in)
- Process pressure: –0.1 to 0.1 bar (~1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (~40 to +176 °F)

Ordering information
- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71249072

14.3.6 Seal, adjustable, ASME 6"/ JIS 150A
The seal, adjustable, ASME 6"/ JIS 150A is compatible with flanges ASME 6" 150 lbs and JIS 150A 10K
Technical data
- Material: EPDM
- Recommended screw size: M18
- Recommended screw length: 100 mm (3.9 in)
- Process pressure: –0.1 to 0.1 bar (–1.45 to 1.45 psi)
- Process temperature: –40 to +80 °C (–40 to +176 °F)

Ordering information
- The flange seal can be ordered together with the device via the "Accessory enclosed" product structure.
- Order number: 71249073

14.4 M12 socket

M12 socket, straight
- Material:
  Body: PBT; union nut: nickel-plated die-cast zinc; seal: NBR
- Degree of protection (fully locked): IP67
- Pg coupling: Pg7
- Order number: 52006263

M12 socket, angled
- Material:
  Body: PBT; union nut: nickel-plated die-cast zinc; seal: NBR
- Degree of protection (fully locked): IP67
- Pg coupling: Pg7
- Order number: 71114212
M12 socket, angled, 5 m (16 ft) cable
- M12 socket material:
  - Body: TPU
  - Union nut: nickel-plated die-cast zinc
- Cable material:
  - PVC
- Cable Li Y YM 4×0.34 mm² (20 AWG)
- Cable colors
  - 1 = BN = brown
  - 2 = WH = white
  - 3 = BU = blue
  - 4 = BK = black
- Order number: 52010285

14.5 Remote display FHX50B

The remote display is ordered via the Product Configurator.

If the remote display is to be used, the device version Prepared for display FHX50B must be ordered.
**Material of single compartment housing, remote display**
- Aluminum
- Plastic

**Degree of protection:**
- IP68 / NEMA 6P
- IP66 / NEMA 4x

**Connecting cable:**
- Connecting cable (option) up to 30 m (98 ft)
- Customer-supplied standard cable up to 60 m (197 ft)
  Recommendation: EtherLine®-P CAT.5e from LAPP.

**Specification of customer-supplied connecting cable**
Push-in CAGE CLAMP®, connection technology, push actuation
- Conductor cross-section:
  - Solid conductor 0.2 to 0.75 mm² (24 to 18 AWG)
  - Fine-stranded conductor 0.2 to 0.75 mm² (24 to 18 AWG)
  - Fine-stranded conductor; with insulated ferrule 0.25 to 0.34 mm²
  - Fine-stranded conductor; without insulated ferrule 0.25 to 0.34 mm²
  - Stripping length 7 to 9 mm (0.28 to 0.35 in)
  - Outer diameter: 6 to 10 mm (0.24 to 0.4 in)
  - Maximum cable length: 60 m (197 ft)

**Ambient temperature:**
- –40 to +80 °C (–40 to +176 °F)
- Option: –50 to +80 °C (–58 to +176 °F)
14.6  Commubox FXA195 HART
For intrinsically safe HART communication with FieldCare via the USB interface
For details, see "Technical Information" TI00404F

14.7  HART Loop Converter HMX50
Is used to evaluate and convert dynamic HART process variables to analog current signals or limit values.
Order number:
71063562
For details, see "Technical Information" TI00429F and Operating Instructions BA00371F

14.8  FieldPort SWA50
Intelligent Bluetooth® and/or WirelessHART adapter for all HART field devices
For details, see "Technical Information" TI01468S

14.9  Wireless HART adapter SWA70
The WirelessHART adapter is used for the wireless connection of field devices. It can be easily integrated into field devices and existing infrastructures, offers data protection and transmission safety and can be operated in parallel with other wireless networks.
For details, see Operating Instructions BA00061S

14.10  Fieldgate FXA42
Fieldgates enable communication between connected 4 to 20 mA, Modbus RS485 and Modbus TCP devices and SupplyCare Hosting or SupplyCare Enterprise. The signals are transmitted either via Ethernet TCP/IP, WLAN or mobile communications (UMTS). Advanced automation capabilities are available, such as an integrated Web-PLC, OpenVPN and other functions.
For details, see "Technical Information" TI01297S and Operating Instructions BA01778S.

14.11  Field Xpert SMT70
Universal, high-performance tablet PC for device configuration in Ex Zone 2 and non-Ex areas
For details, see "Technical Information" TI01342S

14.12  DeviceCare SFE100
Configuration tool for HART, PROFIBUS and FOUNDATION Fieldbus field devices
Technical Information TI01134S
14.13  **FieldCare SFE500**  
FDT-based plant asset management tool  
It can configure all smart field units in your system and helps you manage them. By using the status information, it is also a simple but effective way of checking their status and condition.  
Technical Information TI00028S

14.14  **Memograph M**  
The Memograph M graphic data manager provides information on all the relevant process variables. Measured values are recorded correctly, limit values are monitored and measuring points analyzed. The data are stored in the 256 MB internal memory and also on an SD card or USB stick.  
Technical Information TI00133R and Operating Instructions BA00247R

14.15  **RN42**  
Single-channel active barrier with wide-range power supply for safe electrical isolation of 4 to 20 mA standard signal circuits, HART transparent.  
Technical Information TI01584K and Operating Instructions BA02090K
15 Technical data

15.1 Input

<table>
<thead>
<tr>
<th>Measured variable</th>
<th>The measured variable is the distance between the reference point and the product surface. The level is calculated based on &quot;E&quot;, the empty distance entered.</th>
</tr>
</thead>
</table>

| Measuring range   | The start of the measuring range is the point where the beam hits the floor. Levels below this point cannot be measured, particularly in the case of conical outlets. An alignment unit can be used to increase the maximum measuring range in such applications. |

**Maximum measuring range**

The maximum measuring range depends on the antenna size and design.

<table>
<thead>
<tr>
<th>Antenna</th>
<th>Maximum measuring range</th>
</tr>
</thead>
<tbody>
<tr>
<td>Horn, 316L, 65 mm (2.6 in)</td>
<td>125 m (410 ft)</td>
</tr>
<tr>
<td>Drip-off, PTFE, 50 mm (2 in)</td>
<td>50 m (164 ft)</td>
</tr>
<tr>
<td>Flush mount, PTFE, 80 mm (3 in)</td>
<td>125 m (410 ft)</td>
</tr>
</tbody>
</table>

**Usable measuring range**

The usable measuring range depends on the antenna size, the medium's reflective properties, the installation position and any possible interference reflections. In principle, measurement is possible up to the tip of the antenna. Depending on the position of the product (angle of repose) and to avoid any material damage from abrasive media and deposit buildup on the antenna, the end of the measuring range should be selected 10 mm (0.4 in) before the tip of the antenna.
For the dielectric constants (DC values) of many media commonly used in industry, please refer to:
- Dielectric constant (DC value) Compendium CP01076F
- The Endress+Hauser "DC Values app" (available for Android and iOS)

Operating frequency
Approx. 80 GHz
Up to 8 devices can be installed in a tank without the devices mutually influencing one another.

Transmission power
- Peak power: 6.3 mW
- Average output power: 63 μW

15.2 Output

Output signal
HART
Signal coding:
FSK ±0.5 mA over current signal
Data transmission rate:
1200 Bit/s
Galvanic isolation:
Yes

Current output
4 to 20 mA with superimposed digital communication protocol HART, 2-wire
The current output offers a choice of three different operating modes:
- 4.0 to 20.5 mA
- NAMUR NE 43: 3.8 to 20.5 mA (factory setting)
- US mode: 3.9 to 20.8 mA

Signal on alarm

**Current output**
Failure mode (according to NAMUR Recommendation NE 43):
- Minimum alarm (= factory setting): 3.6 mA
- Maximum alarm: 22 mA

**Local display**
Status signal (according to NAMUR Recommendation NE 107):
Plain text display

**Operating tool via service interface (CDI)**
Status signal (according to NAMUR Recommendation NE 107):
Plain text display

**Operating tool via HART communication**
Status signal (according to NAMUR Recommendation NE 107):
Plain text display

Linearization

The linearization function of the device allows the conversion of the measured value into any unit of length, weight, flow or volume.

**Pre-programmed linearization curves**
Linearization tables for calculating the volume in the following vessels are preprogrammed into the device:
- Pyramid bottom
- Conical bottom
- Angled bottom
- Horizontal cylinder
- Sphere

Other linearization tables of up to 32 value pairs can be entered manually.
Load

4 to 20 mA HART

![Graph showing load resistance](image)

1. Power supply 10.5 to 30 VDC Ex i
2. Power supply 10.5 to 35 VDC, for other types of protection and non-certified device versions
3. \( R_{L_{\text{max}}} \), maximum load resistance
4. \( U \), Supply voltage

Operation via handheld terminal or PC with operating program: take minimum communication resistor of 250 Ω into consideration.

Protocol-specific data

HART

**Manufacturer ID:**
17 (0x11(hex))

**Device type ID:**
0x11C1

**Device revision:**
1

**HART specification:**
7

**DD version:**

**HART load:**
Min. 250 Ω

**HART device variables**
The following measured values are assigned to the device variables at the factory:

<table>
<thead>
<tr>
<th>Device variable</th>
<th>Measured value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assign PV (^1)</td>
<td>Level linearized</td>
</tr>
<tr>
<td>Assign SV</td>
<td>Distance</td>
</tr>
</tbody>
</table>
1) The PV is always applied to the current output.

Choice of HART device variables
- Level linearized
- Distance
- Terminal voltage
- Electronics temperature
- Sensor temperature
- Absolute echo amplitude
- Relative echo amplitude
- Area of incoupling
- Build-up index
- Build-up detected
- Foam index
- Foam detected
- Percent of range
- Loop current
- Terminal current
- Not used

Supported functions
- Burst mode
- Additional transmitter status
- Device locking

Wireless HART data

**Minimum start-up voltage:**
10.5 V

**Start-up current:**
< 3.6 mA

**Starting time:**
< 15 s

**Minimum operating voltage:**
10.5 V

**Multidrop current:**
4 mA

**Time to establish connection:**
< 30 s
15.3 Environment

**Ambient temperature range**

The following values apply up to a process temperature of +85 °C (+185 °F). At higher process temperatures, the permitted ambient temperature is reduced.

- **Without LCD display:**
  - Standard: –40 to +85 °C (–40 to +185 °F)
  - Optionally available: –50 to +85 °C (–58 to +185 °F) with restricted operating life and performance
  - Optionally available: –60 to +85 °C (–76 to +185 °F) with restricted operating life and performance; below –50 °C (–58 °F): devices can be damaged permanently
- **With LCD display:** –40 to +85 °C (–4 to +185 °F) with limitations in optical properties such as display speed and contrast. Can be used without limitations up to –20 to +60 °C (–4 to +140 °F)

ℹ️ If operating outdoors in strong sunlight:
- Mount the device in the shade.
- Avoid direct sunlight, particularly in warm climatic regions.
- Use a weather protection cover (see accessories).

**Ambient temperature limits**

The permitted ambient temperature ($T_a$) depends on the selected housing material (Product Configurator → Housing; Material →) and the selected process temperature range (Product Configurator → Application →).

In the event of temperature ($T_p$) at the process connection, the permitted ambient temperature ($T_a$) is reduced.

ℹ️ The following information only takes functional aspects into consideration. Additional restrictions may apply for certified device versions.

**Plastic housing**

*Plastic housing; process temperature –40 to +80 °C (–40 to +176 °F)*

<table>
<thead>
<tr>

Storage temperature

- Without LCD display: –40 to +90 °C (–40 to +194 °F)
- With LCD display: –40 to +85 °C (–40 to +185 °F)
Climate class  
DIN EN 60068-2-38 (test Z/AD)

Installation height as per IEC61010-1 Ed.3
- Generally up to 2,000 m (6,600 ft) above sea level
- Over 2,000 m (6,600 ft) under the following conditions:
  - Supply voltage < 35 V<sub>DC</sub>
  - Power supply, overvoltage category 1

Degree of protection
Test as per IEC 60529 and NEMA 250-2014

Housing
IP66/68, NEMA TYPE 4X/6P
IP68 test condition: 1.83 m under water for 24 hours.

Cable entries
- Gland M20, plastic, IP66/68 NEMA TYPE 4X/6P
- Gland M20, nickel-plated brass, IP66/68 NEMA TYPE 4X/6P
- Gland M20, 316L, IP66/68 NEMA TYPE 4X/6P
- Gland M20, hygiene, IP66/68/69 NEMA Type 4X/6P
- Thread M20, IP66/68 NEMA TYPE 4X/6P
- Thread G1/2, IP66/68 NEMA TYPE 4X/6P
  If the G1/2 thread is selected, the device is delivered with an M20 thread as standard and a G1/2 adapter is included with the delivery, along with the corresponding documentation
- Thread NPT1/2, IP66/68 NEMA TYPE 4X/6P
- HAN7D plug, 90 degrees, IP65 NEMA TYPE 4X
- M12 plug
  - When housing is closed and connecting cable is plugged in: IP66/67 NEMA TYPE 4X
  - When housing is open or connecting cable is not plugged in: IP20, NEMA TYPE 1

 NOTICE
Plug M12 and plug HAN7D: incorrect mounting can invalidate the IP protection class!
- The degree of protection only applies if the connecting cable used is plugged in and screwed tight.
- The degree of protection only applies if the connecting cable used is specified according to IP67 NEMA TYPE 4X.
- The protection classes are only maintained if the dummy cap is used or the cable is connected.

Vibration resistance  
DIN EN 60068-2-64 / IEC 60068-2-64 for 5 to 2,000 Hz: 1.5 (m/s<sup>2</sup>)<sup>2</sup>/Hz

Electromagnetic compatibility (EMC)
- Electromagnetic compatibility as per EN 61326 series and NAMUR recommendation EMC (NE21)
- With regard to the safety function (SIL), the requirements of EN 61326-3-x are satisfied
- Maximum measured error during EMC testing: < 0.5 % of the span.

For more details refer to the EU Declaration of Conformity.
