Operating Instructions **Picomag IO-Link**

Electromagnetic flowmeter

- Make sure the document is stored in a safe place such that it is always available when working on or with the device.
- To avoid danger to individuals or the facility, read the "Basic safety instructions" section carefully, as well as all other safety instructions in the document that are specific to working procedures.
- The manufacturer reserves the right to modify technical data without prior notice. Your Endress+Hauser Sales Center will supply you with current information and updates to these instructions.

Picomag IO-Link About this document

1 About this document

1.1 Document function

These Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.

1.2 Symbols used

1.2.1 Safety symbols

⚠ DANGER

This symbol alerts you to a dangerous situation. Failure to avoid this situation will result in serious or fatal injury.

WARNING

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury.

A CAUTION

This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in minor or medium injury.

NOTICE

This symbol contains information on procedures and other facts which do not result in personal injury.

1.2.2 Electrical symbols

Symbol	Meaning
===	Direct current
=	Ground connection A grounded terminal which, as far as the operator is concerned, is grounded via a grounding system.

1.2.3 Communication-specific symbols

Symbol	Meaning
*	Bluetooth® Wireless data transmission between devices over a short distance.
ℚ IO- Link [®]	IO-Link Communications system for connecting intelligent sensors and actuators to an automation system. In the IEC 61131-9 standard, IO-Link is standardized under the name "Single-drop digital communication interface for small sensors and actuators (SDCI)".

About this document Picomag IO-Link

1.2.4 Symbols for certain types of information

Symbol	Meaning
	Permitted Procedures, processes or actions that are permitted.
	Preferred Procedures, processes or actions that are preferred.
X	Forbidden Procedures, processes or actions that are forbidden.
i	Tip Indicates additional information.
(i)	Reference to documentation
	Reference to page
	Reference to graphic
•	Notice or individual step to be observed
1., 2., 3	Series of steps
L-	Result of a step

1.2.5 Symbols in graphics

Symbol	Meaning
1, 2, 3,	Item numbers
A, B, C,	Views

1.3 Documentation

- For an overview of the scope of the associated Technical Documentation, refer to the following:
 - The *W@M Device Viewer*: Enter the serial number of the measuring device (www.endress.com/deviceviewer)
 - The *Endress+Hauser Operations App*: Enter the serial number of the measuring device or scan the 2-D matrix code on the measuring device.

Basic safety instructions Picomag IO-Link

2 Basic safety instructions

2.1 Requirements for the personnel

The personnel for installation, commissioning, diagnostics and maintenance must fulfill the following requirements:

- ► Trained, qualified specialists must have a relevant qualification for this specific function and task.
- ► Are authorized by the plant owner/operator.
- ► Are familiar with federal/national regulations.
- ▶ Before starting work, read and understand the instructions in the manual and supplementary documentation as well as the certificates (depending on the application).
- ▶ Follow instructions and comply with basic conditions.

The operating personnel must fulfill the following requirements:

- ► Are instructed and authorized according to the requirements of the task by the facility's owner-operator.
- ▶ Follow the instructions in this manual.

2.2 Intended use

Application and media

The measuring device described in this manual is intended only for the flow measurement of liquids with a minimum conductivity of $10 \mu S/cm$.

To ensure that the measuring device remains in proper condition for the operation time:

- ▶ Use the measuring device only for media to which the process-wetted materials have an adequate level of resistance.
- ► Not suitable for use in ambient atmospheres with contamination by harmful gases, e.g. hydrogen sulfide, sulfur dioxide, nitrogen oxides or chlorine gas.

Incorrect use

Non-designated use can compromise safety. The manufacturer is not liable for damage caused by improper or non-designated use.

MARNING

Danger of breakage due to corrosive or abrasive fluids and ambient conditions!

- ▶ Verify the compatibility of the process fluid with the sensor material.
- ► Ensure the resistance of all fluid-wetted materials in the process.
- ► Keep within the specified pressure and temperature range.

Residual risks

A WARNING

If the temperature of the media or electronics unit is high or low, this may cause the surfaces of the device to become hot or cold. This poses a risk of burns or frostbite!

► In the case of hot or cold medium temperatures, install appropriate protection against contact.

2.3 Workplace safety

For work on and with the device:

▶ Wear the required personal protective equipment according to national regulations.

For welding work on the piping:

► Do not ground the welding unit via the measuring device.

Picomag IO-Link Basic safety instructions

2.4 Operational safety

Risk of injury!

- ▶ Operate the device in proper technical condition and fail-safe condition only.
- ▶ The operator is responsible for interference-free operation of the device.

2.5 Product safety

This measuring device is designed in accordance with good engineering practice to meet state-of-the-art safety requirements, has been tested, and left the factory in a condition in which it is safe to operate.

It meets general safety standards and legal requirements. It also complies with the EU directives listed in the device-specific EU Declaration of Conformity. Endress+Hauser confirms this by affixing the CE mark to the device.

Furthermore, the device meets the legal requirements of the applicable UK regulations (Statutory Instruments). These are listed in the UKCA Declaration of Conformity along with the designated standards.

By selecting the order option for UKCA marking, Endress+Hauser confirms a successful evaluation and testing of the device by affixing the UKCA mark.

Contact address Endress+Hauser UK: Endress+Hauser Ltd. Floats Road Manchester M23 9NF United Kingdom www.uk.endress.com

2.6 IT security

Our warranty is valid only if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the device and associated data transfer, must be implemented by the operators themselves in line with their security standards.

2.7 Device-specific IT security

2.7.1 Access via the SmartBlue app

Two access levels (user roles) are defined for the device: the **Operator** user role and the **Maintenance** user role. The **Maintenance** user role is the default setting.

If a user-specific access code is not defined (in the **Set access code** parameter), the default setting **0000** continues to apply and the **Maintenance** user role is automatically enabled. The device's configuration data are not write-protected and can be edited at all times.

If a user-specific access code has been defined (in the **Set access code** parameter), all the parameters are write-protected and the device is accessed with the **Operator** user role. The previously defined access code must first be entered again before the **Maintenance** user role is enabled and all the parameters can be write-accessed.

2.7.2 Protecting access via a password

Different passwords are available to protect write access to the device parameters or access to the device via the Bluetooth® interface.

Basic safety instructions Picomag IO-Link

- User-specific access code
 Protect write access to the device parameters via the SmartBlue app
- Bluetooth key The password protects a connection between an operating device (e.g. smartphone, tablet) and the device via the Bluetooth® interface.

General notes on the use of passwords

- The access code and Bluetooth key supplied with the device should be changed during commissioning.
- Follow the general rules for generating a secure password when defining and managing the access code or Bluetooth key.
- The user is responsible for the management and careful handling of the access code and Bluetooth key.

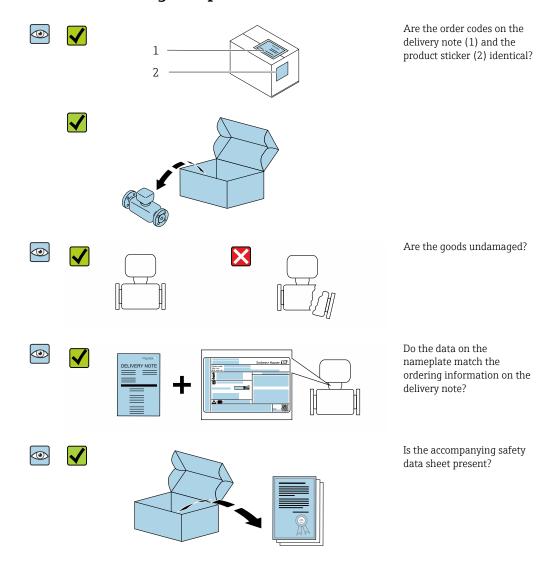

2.7.3 Access via Bluetooth® wireless technology

Secure signal transmission via Bluetooth $^{\rm @}$ wireless technology uses an encryption method tested by the Fraunhofer Institute.

- The device is not visible via *Bluetooth*® wireless technology without the SmartBlue App.
- Only one point-to-point connection is established between the device and a smartphone or tablet.
- \bullet The ${\it Bluetooth} ^{\circledR}$ wireless technology interface can be disabled via SmartBlue.

3 Incoming acceptance and product identification

3.1 Incoming acceptance

- If one of the conditions is not satisfied, contact your Endress+Hauser Sales Center.
 - The Technical Documentation is available via the Internet or via the *Endress+Hauser Operations App*, see the "Product identification" section .

3.2 Product identification

The following options are available for identification of the measuring device:

- The device label
- Order code with breakdown of the device features on the delivery note
- Enter the serial number on the device label in *W@M Device Viewer* (www.endress.com/deviceviewer): all the information about the measuring device is displayed.
- Enter the serial number on the device label into the *Endress+Hauser Operations App* or scan the 2-D matrix code (QR code) on the measuring device with the *Endress+Hauser Operations App*: all the information about the measuring device is displayed.

3.2.1 Symbols on measuring device

Symbol	Meaning
\triangle	WARNING! This symbol alerts you to a dangerous situation. Failure to avoid this situation can result in serious or fatal injury. To determine the nature of the potential hazard and the measures required to avoid it, consult the documentation accompanying the measuring device.
<u>i</u>	Reference to documentation Refers to the corresponding device documentation.

Picomag IO-Link Storage and transport

4 Storage and transport

4.1 Storage conditions

Observe the following notes for storage:

- ► Store in the original packaging to ensure protection from shock.
- ► Store in a dry place.
- ▶ Do not store outdoors.

Storage temperature $\rightarrow \triangleq 42$

4.2 Transporting the product

Transport the device to the measuring point in the original packaging.

Do not remove protective covers or caps installed on process connections. They prevent mechanical damage to the sealing surfaces and contamination in the measuring tube.

4.3 Packaging disposal

All packaging materials are environmentally friendly and 100% recyclable: Carton in accordance with European Packaging Directive 94/62EC; recyclability is confirmed by the affixed RESY symbol.

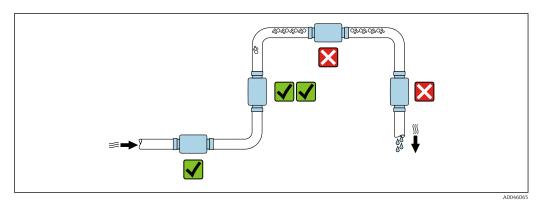

Mounting Picomag IO-Link

5 Mounting

5.1 Mounting requirements

5.1.1 Mounting position

Mounting location

Preferably install the sensor in an ascending pipe.

Inlet and outlet runs

No inlet and outlet runs need to be considered.

- The installation dimensions provide information on the dimensions and installed lengths of the device $\rightarrow \triangleq 43$
- The arrow points in the preferred direction of flow. Measurement in the other direction is also possible. → 🗎 23

5.2 Mounting the measuring device

Install the measuring device without any mechanical tension so that pipe forces are not transferred to the measuring device.

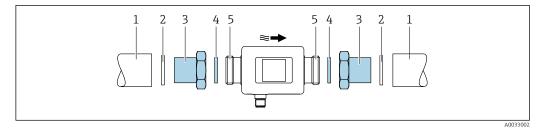

Burn hazard!

If medium temperatures or ambient temperatures exceed 50 °C, areas of the housing can heat to over 65 °C.

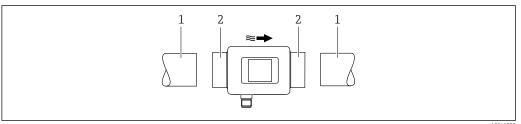

► Safequard the housing so that it cannot be touched accidentally.

Picomag IO-Link Mounting

 $\blacksquare 1$ Measuring device with male thread

- 1 Pipe with female thread
- 2 Seal (not supplied)
- 3 Adapter: available adapters → 🖺 39
- 4 Seal (included in delivery)
- 5 Measuring device connection, male thread

- 2 Measuring device with female thread
- 1 Pipe with conical male thread
- 2 Measuring device connection, female thread
- No seals are included in the delivery for devices with a female thread. Suitable commercially available seal material can be used.

Electrical connection Picomag IO-Link

6 Electrical connection

6.1 Electrical safety

In accordance with applicable national regulations.

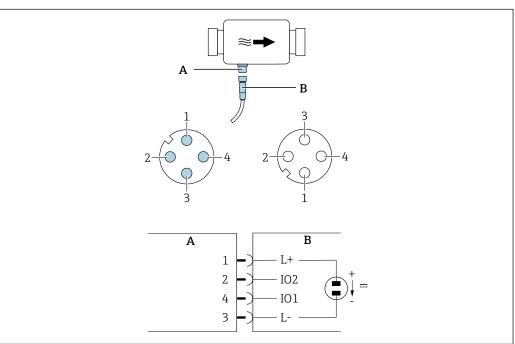

6.2 Connecting requirements

6.2.1 Requirements for connecting cable

National regulations and standards apply.

Connecting cable	M12 × 1 A-coded
Conductor cross-section At least 0.12 mm ² (AWG26)	
Degree of protection	IP65/67, pollution degree 3

6.2.2 Pin assignment, device plug

A0033

- A Plug (measuring device)
- B Socket (customer side)
- 1...4 Pin assignment

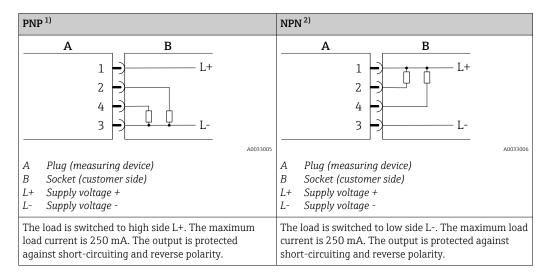

Pin assignment

Pin	Assignment	Description	
1	L+	Supply voltage + (18 to $30 V_{DC}/max. 3 W$)	
2	IO2	Input/output 2, can be configured independently of IO1	
3	L-	Supply voltage -	
4	IO1	Input/output 1, can be configured independently of IO2	

Picomag IO-Link Electrical connection

Switch output configuration version

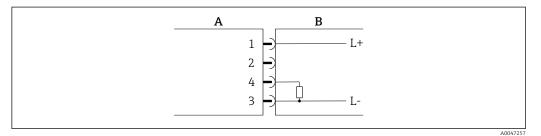

The switching behavior of IO1 and IO2 can be configured independently of one another.

- 1) Positive Negative Positive (high side switch)
- 2) Negative Positive Negative (low side switch)

Pulse output configuration version

 \square Option only available for output $1 \rightarrow \square$ 25

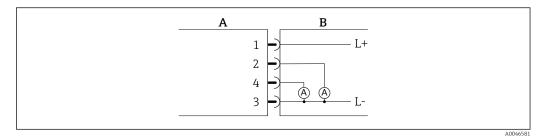

- **■** 3 Pulse output with PNP switching behavior
- A Plug (measuring device)
- B Socket (customer side)
- L+ Supply voltage +
- L- Supply voltage -

The load is switched to high side L+. The maximum load current is 250 mA. The output is protected against short-circuiting and reverse polarity.

Electrical connection Picomag IO-Link

Current output configuration version

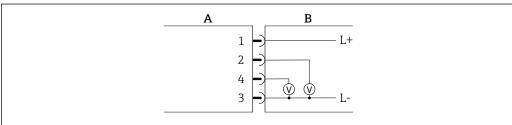

€ 4 Current output, active, 4 to 20 mA

- Plug (measuring device) Α
- В Socket (customer side)
- I.+Supply voltage +
- Supply voltage -

The current flows from the output to L-. The maximum load may not exceed 500 Ω . A bigger load distorts the output signal.

Voltage output configuration version

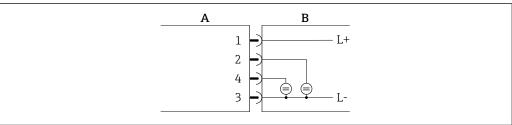

- € 5 Voltage output, active, 2 to 10 V
- Α Plug (measuring device)
- В Socket (customer side)
- Supply voltage + L+
- Supply voltage -

The voltage from the output applies to L-. The load must be at least 600 Ω . The output is protected against short-circuiting and reverse polarity.

Digital input configuration version

- 15 V (switch-on threshold)
- 5 V (switch-off threshold)

- € 6 Digital input
- Α Plug (measuring device)
- Socket (customer side)
- Supply voltage + L+
- Supply voltage -

Picomag IO-Link Electrical connection

Internal resistance: $7.5 \text{ k}\Omega$

IO-Link configuration version

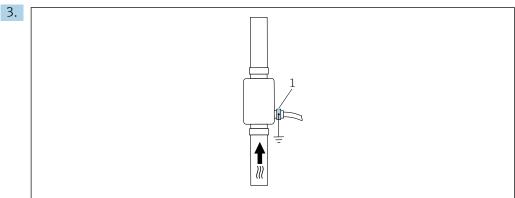

The measuring device features an IO-Link communication interface with a baud rate of 38,400 and with a second IO function on pin 2. This requires an IO-Link compatible module (IO-Link master) for operation. The IO-Link communication interface allows direct access to the process and diagnostics data.

6.3 Connecting the measuring device

NOTICE

The measuring device may only be installed by properly trained technicians.

- ► Comply with national and international regulations regarding the installation of electrotechnical systems.
- ▶ Power supply according to EN 50178, SELV, PELV or Class 2.
- 1. De-energize the system.
- 2. Connect the measuring device via the connector.

A004619

1 Ground terminal

In the case of non-grounded pipes:

The device must be grounded using the ground terminal accessory.

6.4 Post-connection check

Are cables or the device undamaged (visual inspection)?	
Do the cables have adequate strain relief?	
Is the connected correctly?	
Does the supply voltage match the specifications on the measuring device?	
Is the pin assignment of the connector correct?	
Is the potential equalization established correctly?	

Operation options Picomag IO-Link

7 Operation options

7.1 Access to the operating menu via the SmartBlue app

The device can be operated and configured via the SmartBlue app. In this case, the connection is established via the Bluetooth® wireless technology interface.

Supported functions

- Device selection in Live List and access to the device (login)
- Configuration of the device
- Access to measured values, device status and diagnostic information

The SmartBlue app is available to download free of charge for Android devices (Google Playstore) and iOS devices (iTunes Apple Store): *Endress+Hauser SmartBlue*

Directly to the app with the QR code:

A0033202

System requirements

- Devices with iOS:
 - From iOS 11
- Devices with Android: Android 6.0 KitKat or higher

Downloading the SmartBlue app:

- 1. Install and start the SmartBlue app.
 - A Live List shows all the devices available.
 The list displays the devices with the configured tag name. The default setting for the tag name is EH_DMA_XYZZ (XYZZ = the last 7 digits of the device serial number).
- 2. For Android devices, activate GPS positioning (not necessary for devices with IOS)
- 3. Select the device from the Live List.
 - ► The Login dialog box opens.

Logging in:

- 4. Enter the user name: admin
- 5. Enter the initial password: serial number of the device.
 - When you log in for the first time, a message is displayed advising you to change the password.
- 6. Confirm your entry.
 - ► The main menu opens.
- 7. Optional: Change Bluetooth® password: Menu: Guidance → Security → Change Bluetooth password
- 🙌 Forgotten your password: contact Endress+Hauser Service.
- Navigate through the various items of information about the device: swipe the screen to the side.

Picomag IO-Link System integration

8 System integration

The measuring device has an IO-Link communication interface. The IO-Link interface allows direct access to process and diagnostics data and enables the user to configure the measuring device on the fly.

Properties:

- IO-Link Specification: Version 1.1
- IO-Link Smart Sensor Profile 2nd Edition
- SIO mode: yes
- Speed: COM2 (38.4 kBaud)
 Minimum cycle time: 10 ms
 Process data width: 120 bit
 IO-Link data storage: yes
- Block configuration: no
- Device operational: The measuring device is operational 4 seconds after the supply voltage is applied
- More information on IO-Link is available at www.io-link.com
- ho Overview of the entire IO-Link ISDU parameter list ho ho 52

8.1 Overview of device description files

Current version data for the device

Firmware version	01.01.zz	Information on the firmware version can be found: On the title page of the Operating instructions On the device label In the Firmware version parameter in the System menu
Release date of firmware version	05.2019	
Profile version	1.1Smart Sensor Profile	

8.2 Device master file

In order to integrate field devices into a digital communication system, the IO-Link system needs a description of the device parameters, such as output data, input data, data format, data volume and supported transfer rate.

These data are available in the device master file ($IODD^{1}$), provided to the IO-Link master when the communication system is commissioned.

The IODD can be downloaded as follows:

■ Endress+Hauser: www.endress.com

■ IODDfinder: http://ioddfinder.io-link.com

¹⁾ IO Device Description

Commissioning Picomag IO-Link

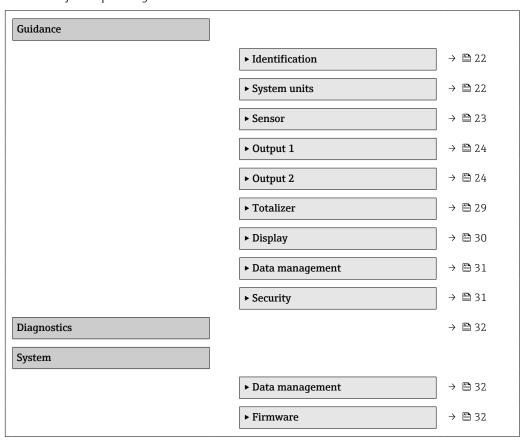

9 Commissioning

9.1 Switching ON the measuring device

Once the supply voltage has been switched on, the measuring device adopts the normal mode after a maximum of 4 s. During the start-up phase, the outputs are in the same state as the measuring device in the switched-off state.

9.2 Overview of the operating menu

Overview of the operating menu

9.3 Configuring the measuring device

9.3.1 Identification

The device tag and the user level can be changed in the **Identification** submenu.

Navigation

Menu: "Guidance" \rightarrow Identification

9.3.2 Configuring system units

In the ${\bf System\ units}$ submenu, you can configure the units of all measured values.

Navigation

Picomag IO-Link Commissioning

Menu: "Guidance" \rightarrow System units

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Volume flow unit	Select the unit for the volume flow.	 l/s, m³/h, l/min, l/h gal/min (us), fl. oz/min 	l/min
Volume unit	Select the unit for the volume.	 ml, l, m³ fl. oz (us), gal (us) 	ml
Temperature unit	Select the unit for the temperature.	• °C • °F	°C
Totalizer unit	Select the unit for the totalizer.	 ml, l, m³ kl, Ml fl. oz (us), gal (us) kgal (us) 	m³
Conductivity unit	Select the unit for conductivity.	■ µS/cm ■ S/m ■ mS/cm	μS/cm

9.3.3 Setting the installation direction and measurement

The **Sensor** submenu contains parameters for specific settings of the measuring device.

Navigation

Menu: "Guidance" \rightarrow Sensor

Parameter overview with brief description

Parameter	Description	Selection/input	Factory setting
Installation direction	Select the installation direction.	 Flow in arrow direction (forwards) Positive flow measurement in the direction of the arrow. Flow against arrow direction (backwards) Positive flow measurement in the opposite direction of the arrow. 	Flow in arrow direction (forwards)
On value	Enter the on value for low flow cut off.	Positive floating point number A flow measured value that is less than the value of the on value forces the display to zero. In the event of plant downtime, this prevents the totalizer from continuing to totalize even though there is no flow. The measured value flashes on the display when low flow cut off is active. Low flow cut off is deactivated again as soon as the flow measured value exceeds 1.5 times the on value.	Depends on the nominal diameter: DN 15 (½"): 0.05 l/min (0.013 gal/min) DN 20 (¾"): 0.1 l/min (0.026 gal/min) DN 25 (1"): 0.2 l/min (0.052 gal/min) DN 50 (2"): 1.5 l/min (0.4 gal/min)
Damping	Enter the time constant for damping the flow measured value.	0 to 10 s	0 s

Commissioning Picomag IO-Link

9.3.4 Configuring the IO modules

The measuring device has two signal inputs or signal outputs that can be configured independently of one another:

■ Current output → 🗎 24

■ Pulse output \rightarrow 🗎 25

• Switch output $\rightarrow \triangle 26$

■ Voltage output → 🖺 27

■ Digital input \rightarrow 🗎 28

Navigation

Menu: "Guidance" \rightarrow Output 1 Menu: "Guidance" \rightarrow Output 2

Parameter overview with brief description

Parameter	Description	Selection	Factory setting
Output 1	Select the operating mode of output 1.	 Pulse output Current output Switch output Voltage output Digital input IO-Link Off 	IO-Link
Output 2	Select the operating mode of output 2.	Current outputSwitch outputVoltage outputDigital inputOff	Off

Configuring the current output

The Current output submenu contains all the parameters that must be configured for the configuration of the current output.

The output is used to output process variables by analog means in the form of a 4--20~mA current.

Navigation

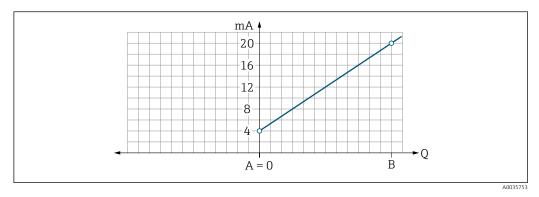

Menu: "Guidance" \rightarrow Output $1 \rightarrow$ Current output Menu: "Guidance" \rightarrow Output $2 \rightarrow$ Current output

Parameter overview with brief description

Parameter	Description	Selection/input	Factory setting
Assign current output	Select process variable for current output.	OffVolume flowTemperatureConductivity	Volume flow
4 mA value	Enter 4 mA value.	Floating point number with sign	0 l/min
20 mA value	Enter 20 mA value.	Floating point number with sign	Depends on the nominal diameter: DN 15 (½"): 25 l/min (6.6 gal/min) DN 20 (¾"): 50 l/min (13.2 gal/min) DN 25 (1"): 100 l/min (26.4 gal/min) DN 50 (2"): 750 l/min (198.1 gal/min)

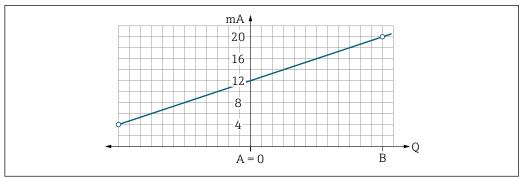

Picomag IO-Link Commissioning

Unidirectional flow measurement (Q), conductivity measurement (S)

- A Lower range value = 0
- B Upper range value
- Q Flow
- Current I is linearly interpolated between lower range value (A) and upper range value (B).
- The output range ends at 20.5 mA.

Bidirectional flow measurement (Q), temperature measurement (T)

A0035754

- A Lower range value
- B Upper range value
- Q Flow
- Current I is linearly interpolated between lower range value (A) and upper range value (B).
- Rather than having a hard upper and lower limit, the output range ends at 20.5 mA at the top end and at 3.8 mA at the bottom end

Configuring the pulse output

The Pulse output submenu contains all the parameters that must be configured for the configuration of the pulse output.

Navigation

Menu: "Guidance" → Output 1

Parameter overview with brief description

Parameter	Description	User entry	Factory setting
Value per pulse	Enter the value for the pulse output.	Floating point number with sign	Depends on the nominal diameter: DN 15 (½"): 0.5 ml DN 20 (¾"): 1.0 ml DN 25 (1"): 2.0 ml DN 50 (2"): 10.0 ml

Commissioning Picomag IO-Link

The current pulse repetition frequency is calculated from the current flow and the configured pulse value:

Pulse repetition frequency = flow/pulse value

Example

Flow: 24 l/minPulse value: 0.001 l

■ Pulse repetition frequency = 400 Pulse/s

The pulse output only outputs positive flow components in the set installation direction. Negative flow components are ignored and not balanced.

+

Low flow cut off \rightarrow $\stackrel{\triangle}{=}$ 23 resets the pulse output.

Configuring the switch output

The Switch output submenu contains all the parameters that must be configured for the configuration of the switch output.

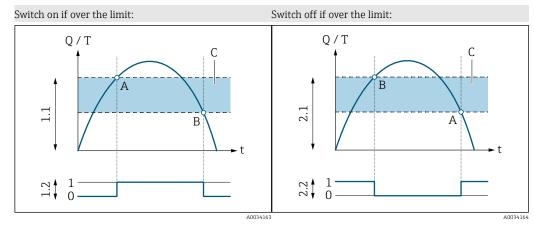

Navigation

Menu: "Guidance" \rightarrow Output 1 Menu: "Guidance" \rightarrow Output 2

Parameter overview with brief description

Parameter	Description	Selection/input	Factory setting
Polarity	Select the switching behavior.	 NPN (low-side-switch) Switches load to low side to L- PNP (high-side-switch) Switches load to high side to L+ 	PNP (high-side-switch)
Switch output function		 Off The switch output is permanently switched off (open, non-conductive). On The switch output is permanently switched on (closed, conductive). Diagnostic behavior The output switches off when an event with the status signal F occurs Limit volume flow Indicates if a specified limit value has been reached for the process variable. Limit temperature Indicates if a specified limit value has been reached for the process variable. Limit conductivity Indicates if a specified limit value has been reached for the process variable. Limit volume totalizer Range volume flow Range temperature Range conductivity Range volume totalizer Empty pipe detection Output switches off if empty pipe detection is activated. 	Off
Switch-on value	Enter the measured value for the switch-on value.	Floating point number with sign	1000 m³/h
Switch-off value	Enter the measured value for the switch-off value.	Floating point number with sign	1000 m³/h

Configuring the voltage output

The Voltage output submenu contains all the parameters that must be configured for the configuration of the voltage output.

Navigation

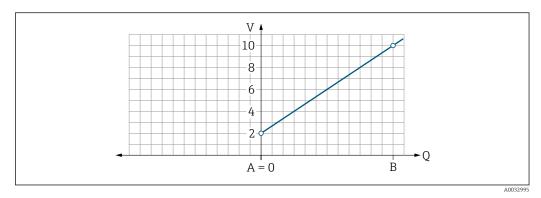

Menu: "Guidance" \rightarrow Output 1 Menu: "Guidance" \rightarrow Output 2

Parameter overview with brief description

Parameter	Description	Selection/input	Factory setting
Assign voltage output	Select process variable for voltage output.	OffVolume flowTemperatureConductivity	Volume flow
2 V value	Enter the lower range value.	Floating point number with sign	0 1/min
10 V value	Enter the upper range value.	Floating point number with sign	Depends on the nominal diameter: DN 15 (½"): 25 l/min DN 20 (¾"): 50 l/min DN 25 (1"): 100 l/min DN 50 (2"): 750 l/min

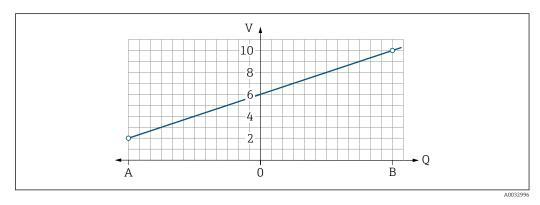

Commissioning Picomag IO-Link

Unidirectional flow measurement (Q), conductivity measurement

- A Lower range value = 0
- B Upper range value
- Q. Flow
- Voltage U is linearly interpolated between lower range value (A) and upper range value (B).
- The output range ends at 10.25 V.

 ${\it Bidirectional flow\ measurement\ (Q), temperature\ measurement\ (T)}$

- A Lower range value
- B Upper range value
- Q Flow
- Voltage U is linearly interpolated between lower range value (A) and upper range value (B).
- Rather than having a hard upper and lower limit, the output range ends at 10.25 V at the top end and at 1.9 V at the bottom end

Configuring the digital input

The **Digital input** submenu contains all the parameters that must be configured for the configuration of the digital input.

The input is used to control an action with an external voltage signal. The minimum pulse duration is $100\ ms$.

Parameter	Description	Selection/input	Factory setting
		 270° Can be read in the vertical installation position with flow from top to bottom 	
		A0033016	
Backlight	Set the intensity of the backlighting.	0 to 100 %	50 %

9.3.7 Data management

Export configuration as report

The device configuration can be exported as a PDF report and saved in the mobile terminal or forwarded with this function.

Save configuration to file

The device configuration is saved in the app. The saved device configuration can be transferred to another measuring device using the System \rightarrow "Load configuration from app" function.

Navigation

Menu: "Guidance" → Data management

9.3.8 Security

The **Security** submenu contains all the parameters needed to define the access code and configure the Bluetooth connection.

Navigation

Menu: "Guidance" → Security

Parameter overview with brief description

Parameter	Description	Entry/selection/display	Factory setting
Define access code	Define a user-specific access code to restrict write access to parameters.	4-digit string of numbers	0000
Bluetooth	Enable or disable the <i>Bluetooth</i> ® wireless technology interface. If the interface is disabled, it can only be re-enabled by tapping the device.	 Disable Disable the interface. The connection to the measuring device is torn down. Enable 	Enable
Change Bluetooth password	Change Bluetooth password Keep the password safe. If it is lost, Endress+Hauser cannot restore access to the device.	Character string comprising numbers, letters and special characters	Device serial number

Enable Bluetooth by tapping the device

- 1. Activate Bluetooth by tapping on the housing three times.
- 2. Establish a connection to the device via the SmartBlue app.

Commissioning Picomag IO-Link

9.4 Diagnostics

The **Diagnostics** menu enables you to simulate, without a real flow situation, various process variables in the process and the device alarm mode and to verify downstream signal chains (switching of valves or closed-control loops).

Navigation

"Diagnostics" menu

Parameter overview with brief description

Parameter	Description	Selection/input	Factory setting
Actual diagnostic	A diagnostic event has occurred.	Displays the current diagnostic event along with the diagnostic information. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.	Symbol for diagnostic behavior, diagnostic code and short message.
Simulation process variable	Activate the simulation of process variables.	 Off Simulation is deactivated. On Simulation is activated. Deactivate the simulation again once the test has been performed. 	Off
Volume flow value	Enter the value for volume flow simulation.	Positive floating point number	-
Temperature value	Enter the value for temperature simulation.	Positive floating point number	-
Conductivity value	Enter the value for conductivity simulation	Positive floating point number	-

9.5 System

The **System** submenu contains all the parameters that can be used for the administration of the device.

Navigation

Menu: "System"

Parameter overview with brief description

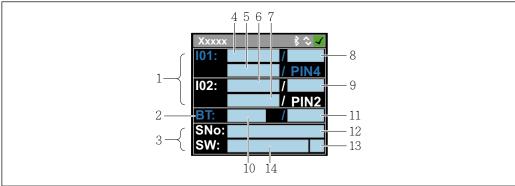

Parameter	Description	Entry/selection/display	Factory setting
Access status tooling	Displays the access status. No user entry/selection possible.	OperatorMaintenance	Maintenance
Enter access code	Enter the defined access code. $\rightarrow \blacksquare 31$ Restrict write access to parameters in order to protect the device configuration from unauthorized modification.	4-digit string of numbers	0000
Device reset	Reset the entire device configuration or some of the configuration to a defined state.	CancelTo factory defaultsRestart device	Cancel
Export configuration as report	The device configuration can be exported as a PDF report and saved in the mobile device or forwarded with this function.	-	-
Save configuration to file	The device configuration is saved in the app. The saved device configuration can be transferred to another measuring device using the System \rightarrow "Load configuration from file" function.	-	-
Load Configuration from file	The saved device configuration can be uploaded to a new measuring device with this function.	-	-

Picomag IO-Link Operation

10 Operation

10.1 Offline quick view of configuration

If you tap the top of the housing (e.g. on the arrow indicating the flow direction) with your fist or an object), the device displays an overview of the preset parameters.

11 Diagnostics and troubleshooting

11.1 General troubleshooting

For local display

Error	Possible causes	Remedial action
Local display dark and no output signals	Supply voltage does not match the voltage specified on the nameplate.	Apply the correct supply voltage $\rightarrow \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ $
	Supply voltage has incorrect polarity.	Correct the polarity.
	The connecting cables are not connected correctly.	Check the cable connection and correct if necessary.

For output signals

Error	Possible causes	Remedial action	
Device shows correct value on local display, but signal output is incorrect, though in the valid range.	Parametrization errors	Check parameterization and correct it.	
Device measures incorrectly.	Configuration error or device is operated outside the application.	Check and correct parameter configuration. Observe limit values specified in the "Technical Data".	

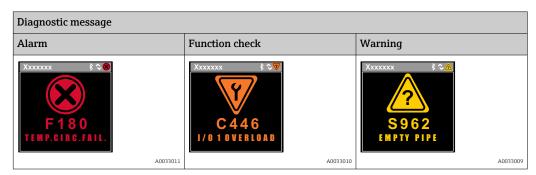

For access

Error	Possible causes	Remedial action
Measuring device not in smartphone or tablet live list	Bluetooth communication is disabled	Check whether the Bluetooth logo is visible on the local display or not. Re-enable Bluetooth communication by tapping the device three times.
Device not responding via SmartBlue app	No Bluetooth connection	Enable Bluetooth function on smartphone or tablet.
	The device is already connected to another smartphone/tablet.	Check whether the device is already connected.
Login via SmartBlue app not possible	Device is being put into operation for the first time	Enter initial password (device serial number) and change.
Device cannot be operated via	Incorrect password entered	Enter correct password.
SmartBlue app	Password forgotten	Contact Endress+Hauser Service.
No write access to parameters	Current user role has limited access authorization	 Check user role Enter the correct customer- specific access code →

11.2 Diagnostic information on local display

11.2.1 Diagnostic message

Faults detected by the self-monitoring system of the measuring device are displayed as a diagnostic message in alternation with the operational display.

If two or more diagnostic events are pending simultaneously, only the message of the diagnostic event with the highest priority is shown.

Diagnostic behavior

Diagnostic message	Meaning
8	 Alarm The measurement is interrupted. Signal outputs and totalizers assume the defined alarm condition. A diagnostic message is generated.
W	Function check Process measured values are simulated to test the outputs/wiring. IO1/IO2 overload Flow override is active
<u>^</u>	 Warning Measurement is resumed. Measuring operation with limited accuracy The signal outputs and totalizers are not affected. A diagnostic message is generated.

Diagnostic behavior of outputs

Output	Diagnostic behavior
Switch output	 The output is switched off (fail-safe) if events with the status signal F occur No further response to events with other status signals
Pulse output	 Pulse output stops if events with the status signal F occur No further response to events with other status signals
Totalizer	 Totalizer stops if events with the status signal F occur No further response to events with other status signals
Current output	 3.5 mA is output to signal events with the status signal F No further response to events with other status signals
Voltage output	 1.75 V is output to signal events with the status signal F No further response to events with other status signals
IO-Link	 All events reported to the Master Events read and processed further by the Master

11.3 Overview of diagnostic events

Diagnostic event Event text		Cause	Remedial measures	Status signal [ex- factory]		
181	Coil. circ. fail.	Coil/frequency failure Coil current PWM outside tolerance range	Replace the measuring device.	F		
180	Temp. circ. fail.	Temperature sensor open circuit/short-circuit	Replace the measuring device.	F		
201	Device fail.	Internal hardware error	Replace the measuring device.	F		
283	Memory fail.	CRC failure	Reset to factory settings.	F		
446	I/O 1 overload	Overload at output 1	Increase load impedance.	С		
447	I/O 2 overload	Overload at output 2	Increase load impedance.	С		
485	Simulation act.	Measured value simulation active (via remote configuration)	-	С		
453	Flow override	Flow override active (via auxiliary input)	_	С		
441	I-Out 1 range	I-output 1 at range limit	Adjust parameter or process.	S		
444	U-Out 1 range	U-output 1 at range limit	Adjust parameter or process.	S		
443	P-Out 1 range	P-output 1 at range limit	Adjust parameter or process.	S		
442	I-Out 2 range	I-output 2 at range limit	Adjust parameter or process.	S		
445	U-Out 2 range	U-output 2 at range limit	Adjust parameter or process.	S		
962	Empty pipe	Pipe is completely or partially empty	Adjust the process.	S		
834	Temperat. range	Medium temperature outside the permitted range	Adjust the process.	S		

11.4 Device information

The **Device info** submenu contains all parameters that display different information for device identification.

Navigation

Menu: "System" \rightarrow Device info

Parameter overview with brief description

Parameter	Description	User interface
Device name	Displays the name of the measuring device.	Picomag
Device tag	Shows name of measuring point.	Max. 32 characters, such as letters, numbers or special characters (e.g. @, %, /).
Serial number	Displays the serial number of the measuring device.	Max. 11-digit character string comprising letters and numbers.

Parameter	Description	User interface
Firmware version	Displays the device firmware version installed.	Character string in the format xx.yy.zz
Extended order code	Displays the extended order code.	Character string composed of letters, numbers and certain punctuation marks (e.g. /).

The following information is shown on the display by tapping once on the housing:

- Status and values for output 1
- Status and values for output 2
- Bluetooth status (On/Off)
- Serial number
- Software version

Measuring range DN 15 (½"): 0.05 to 35 l/min (0.013 to 9.2 gal/min)

Volume flow measurement DN 20 (34"): 0.1 to 75 l/min (0.026 to 19.8 gal/min) DN 25 (1"): 0.2 to 150 l/min (0.052 to 39.6 gal/min)

DN 50 (2"): 1.5 to 750 l/min (0.4 to 198.1 gal/min)

Measuring range

Medium temperature measurement

Measuring range

DN 15 ($\frac{1}{2}$ "): 20 to 30 000 μ S/cm Conductivity measurement DN 20 ($\frac{3}{4}$ "): 20 to 30 000 μ S/cm DN 25 (1"): 20 to 30 000 µS/cm

DN 50 (2"): 20 to 10 000 µS/cm

-10 to +70 °C (+14 to +158 °F)

Digital input High or low active

■ Switch-on level 15 V Switch-off level 5 V

■ Internal resistance 7.5 kOhm

13.2 Output

Output Max. load 500 Ω Current output Load must not be greater Voltage output Load must not be smaller Pulse output Max. pulse rate: 10000 Pulse/s Signal on alarm • Status signal (as per NAMUR Recommendation NE 107) Plain text display with remedial action Switch output Switching behavior: PNP or NPN

Max. load 250 mA

13.3 Power supply

Supply voltage range 18 to 30 V_{DC} (SELV, PELV, Class 2)

Power consumption Maximum 3 W

Without outputs IO1 and IO2: 120 mA

• With outputs IO1 and IO2: 120 mA plus the effective load currents

13.4 Performance characteristics

Volume flow measurement Water, +15 to +45 °C, 2 to 6 bar Reference operating conditions Maximum measured error ±0.8 % o.r. ±0.1 % o.f.s.

±0.2 % o.r. Repeatability

Medium temperature measurement

±2.5 ℃ Maximum measured error ±0.5 ℃ Repeatability

Conductivity measurement

Repeatability ±5 %o.r. ±5 µS/cm

Technical data Picomag IO-Link

Maximum measured error, current output

±20 µA 1) Additional error Repeatability $\pm 10~\mu A$ Response time T90 Typically 200 ms

1) At a device temperature of 25 °C.

Maximum measured error, voltage output

 ± 60 mV $^{1)}$ Additional error Repeatability $\pm 10 \text{ mV}$ Response time T90 Typically 200 ms

At a device temperature of 25 °C.

The response time T90 is the time a measuring system needs to display 90% of the change of the measured value.

13.5 Installation

→ 🖺 14

13.6 **Environment**

Ambient temperature range $-10 \text{ to } +60 \,^{\circ}\text{C} \text{ (+14 to +140 }^{\circ}\text{F)}$ $-25 \text{ to } +85 \,^{\circ}\text{C} \, (-13 \text{ to } +185 \,^{\circ}\text{F})$ Storage temperature Degree of protection IP65/67, pollution degree 3

Humidity and moisture Suitable for indoor environments with up to 100% rh (wet and damp

locations)

Operating altitude up to 2000 m

Shock resistance 20 g (11 ms) in accordance with IEC/EN60068-2-27

Vibration resistance Acceleration up to 5 g (10 to 2000 Hz) in accordance with IEC/

EN60068-2-6

Electromagnetic compatibility (EMC) According to IEC/EN61326 and/or IEC/EN55011 (Class A)

13.7 **Process**

■ -10 to +70 °C (+14 to +158 °F) Medium temperature range

• Permissible short-term temperature: maximum one hour 85 °C (185 °F) every 4 hours.

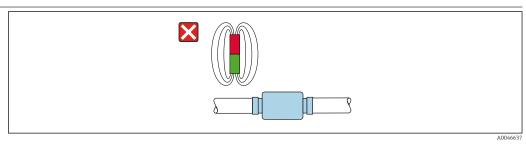

• Permissible short-term temperature with electronics switched off: maximum one hour 100 °C (212 °F) every 4 hours.

Medium properties Liquid, conductivity $\geq 10 \ \mu \text{S/cm}$

Pressure Max. 16 bar_{rel}

Avoid cavitation in the process.

Magnetism and static electricity

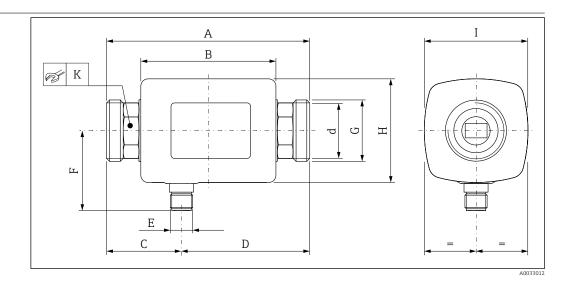

₽8 Avoid magnetic fields

13.9 Operability

Local display

The device has an onsite display:

......

- 1 Tag name (configurable)
- *Measured variable 1 (configurable) with sign* $\rightarrow \square$ *30*
- 3 Measured variable 2 (configurable) with sign $\rightarrow = 30$
- 4 Active Bluetooth connection
- 5 Active I/O-Link connection
- 6 Device status

Display element

3 measured variables can be displayed (volume flow, temperature, conductivity).

Floating point numbers are saved in IEEE754 format and displayed with single precision format. The values are entered in the decimal system, however. As a result, extremely small, insignificant differences can arise between the value entered and the floating point number displayed, depending on the numerical values.

Operation

- Via Bluetooth® wireless technology
- Via IO-Link

Digital communication

Via IO-Link

SmartBlue app

The device has a $Bluetooth^{\circledR}$ wireless technology interface and can be operated and configured using the SmartBlue app.

- The range under reference conditions is 10 m (33 ft)
- Incorrect operation by unauthorized persons is prevented by means of encrypted communication and password encryption
- The *Bluetooth*® wireless technology interface can be disabled

Technical data Picomag IO-Link

13.10 Certificates and approvals

Current certificates and approvals for the product are available via the Product Configurator at www.endress.com.

1. Select the product using the filters and search field.

2. Open the product page.

The **Configuration** button opens the Product Configurator.

CE mark

The device meets the legal requirements of the applicable EU Directives. These are listed in the corresponding EU Declaration of Conformity along with the standards applied.

Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

UKCA marking

The device meets the legal requirements of the applicable UK regulations (Statutory Instruments). These are listed in the UKCA Declaration of Conformity along with the designated standards. By selecting the order option for UKCA marking, Endress+Hauser confirms a successful evaluation and testing of the device by affixing the UKCA mark.

Contact address Endress+Hauser UK:

Endress+Hauser Ltd.

Floats Road

Manchester M23 9NF

United Kingdom

www.uk.endress.com

Radio approval

The measuring device has radio approval.

For detailed information regarding radio approval, see the appendix $\rightarrow~\cong~47$

Pressure Equipment Directive

Devices not bearing this marking (without PED or UKCA) are designed and manufactured according to sound engineering practice. They meet the requirements of

- a) Art. 4 Para. 3 of the Pressure Equipment Directive 2014/68/EU or
- b) Part 1, Para. 8 of Statutory Instruments 2016 No. 1105.

The scope of application is indicated

- a) in diagrams 6 to 9 in Annex II of the Pressure Equipment Directive 2014/68/EU or
- b) Schedule 3, Para. 2 of Statutory Instruments 2016 No. 1105.

$_{\text{C}}\text{UL}_{\text{US}}$ listing

The measuring device is UL-listed.

Drinking water approval

Availability, see Applicator: https://portal.endress.com/webapp/applicator

ADENDO AO MANUAL

Modelo: Picomag

A0037714

Para maiores informações, consulte o site da ANATEL: www.gov.br/anatel/pt-br

Este equipamento não tem direito à proteção contra interferência prejudicial e não pode causar interferência em sistemas devidamente autorizados.

14.1.3 Europe

This device meets the requirements of the Telecommunications Directive RED 2014/53/EU.

14.1.4 India

ETA Certificate No: ETA - 1707/18-RLO(NE)

14.1.5 Indonesia

14.1.6 Canada and United States

English

This device complies with Part 15 of the FCC Rules and with Industry Canada licence-exempt RSS standard(s).

Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

Français

Le présent appareil est conforme aux CNR d'industrie Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes :

- L'appareil ne doit pas produire de brouillage, et
- L'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

14.1.7 Mexico

La operación de este equipo está sujeta dos condiciones: (1) es posible que este equipo o dispositivo no cause interferencia perjudicial y (2) este equipo o dispositivo debe aceptar cualquier interferencia, incluyendo la que pueda causar su operación no deseada.

14.1.8 Republic of Korea
