1.3 U.S. export compliance

The policy of Endress+Hauser is strict compliance with U.S. export control laws as detailed on the website of the Bureau of Industry and Security at the U.S. Department of Commerce.
2 Basic safety instructions

Read this section carefully to avoid danger to individuals or the facility. Additional laser safety information and hazardous area certification and safety instructions are contained in the Raman Rxn2 Safety Instructions (XA02700C).

2.1 Requirements for the personnel

- Installation, commissioning, operation, and maintenance of the measuring system may be carried out only by specially trained technical personnel.
- Technical personnel must be authorized by the plant operator to carry out the specified activities.
- Electrical connections may be performed only by an electrical technician.
- Technical personnel must have read and understood these Brief Operating Instructions and must follow the instructions contained herein.
- Faults at the measuring point may only be rectified by authorized trained personnel. Repairs not described in this document must be carried out only directly at the manufacturer's site or by the service organization.

2.2 Intended use

The Raman Rxn2 analyzer is designed for use in chemical composition measurements of solids, liquids, or turbid media in a laboratory or process development environment. The Raman Rxn2 is particularly suited for use in the following applications:

- Endpoint monitoring of chemical reactions
- Crystallinity monitoring of solid materials
- Critical process parameter monitoring and control in upstream cell culture or fermentation bioprocesses
- Molecular structure and composition of plant-based proteins, dairy solids, and cell-based foods
- Small molecule pharmaceutical polymorph identification and monitoring

Use of the device for any purpose other than that described poses a threat to the safety of people and of the entire measuring system and is not permitted.
2.3  Workplace safety

- Do not use the Raman Rxn2 for anything other than its intended use.
- Do not drape the power cord over counters or on hot surfaces, or in areas where damage to the integrity of the power cord may occur.
- Do not open the enclosure of the Raman Rxn2.
- Do not look directly into the laser beam.
- Do not allow emitted laser light to reflect off mirrored or shiny surfaces in an uncontrolled way.
- Minimize the presence of shiny surfaces in the working area and always use a laser beam block to prevent uncontrolled transmission of the laser light.
- Do not leave unused probes uncapped or unblocked while they are still attached to the analyzer.

2.4  Operational safety

Before commissioning the entire measuring point:

1. Verify that all connections are correct.
2. Ensure that electrical cables and optical fiber connections are undamaged.
3. Do not operate damaged products. Protect them against unintentional operation.
4. Label damaged products as defective.

During operation:

1. If faults cannot be rectified, products must be taken out of service and protected against unintentional operation.
2. Keep the door closed when not carrying out service and maintenance work.

⚠️ CAUTION

Activities while the analyzer is in operation introduce risk of exposure to hazardous materials.

- Follow standard procedures for limiting exposure to chemical or biological materials.
- Follow workplace policies on personal protective equipment including wearing protective clothing, goggles and gloves and limiting physical access to analyzer location.
- Clean any spills following the appropriate site policies and cleaning procedures.

⚠️ CAUTION

There is risk of injury from the analyzer door stop mechanism.

- If the enclosure needs to be open, always open the analyzer door fully to ensure the analyzer door stop engages properly.
2.5 **Product safety**

The product is designed to meet local safety requirements for the intended application, and has been tested accordingly, leaving the factory in a condition in which it is safe to operate. All applicable regulations and international standards have been observed. Devices connected to the analyzer must also comply with the applicable safety standards, and users should follow the probe-specific product safety instructions.

2.6 **IT security**

Our warranty is valid only if the device is installed and used as described in the Operating Instructions. The device is equipped with security mechanisms to protect it against any inadvertent changes to the settings.

IT security measures, which provide additional protection for the device and associated data transfer, must be implemented by the operators themselves in line with their security standards.
3 Product description

3.1 The Raman Rxn2 analyzer

The Raman Rxn2 analyzer, powered by Kaiser Raman technology, is a for-purpose embedded system with built-in Raman RunTime control software. Raman spectroscopy provides the chemical specificity of mid-infrared (IR) spectroscopy and the sampling simplicity of near-IR spectroscopy. By operating in the visible or near-infrared spectral region, Raman spectroscopy allows vibrational spectra to be collected in situ, using fiber-coupled probes, without sample purging, and without the use of specialty sampling devices.

There are four possible configurations of the Raman Rxn2 analyzer: single-channel, four-channel, hybrid, and starter. All Raman Rxn2 analyzers employ a unique self-monitoring system to ensure the validity of each analysis. The analyzer is capable of two-point self-calibration in extreme environments and utilizes self-diagnostics and spectral correction methods when system calibration is unnecessary. The analyzer's precision is essential for robust chemometric analyses and calibration transfer between instruments. The Raman Rxn2 suite of analyzers allow for remote fiber-optic connections to probe sampling points for installation flexibility. And all configurations of the Raman Rxn2 analyzer are designed for use with the Endress+Hauser line of Raman fiber-optic probes and optics. An ergonomic mobile cart, including built-in probe and optic storage, is available as an option for all Raman Rxn2 configurations.

3.1.1 The Raman Rxn2 single-channel and four-channel configurations

The Raman Rxn2 single-channel configuration offers one fiber optic sampling probe connector for the accurate measurement, collection, monitoring, and analysis of a single sample. The Raman Rxn2 four-channel configuration provides four fiber-optic sampling probe connectors. Raman Rxn2 single-channel or four-channel configurations are available with a 532 nm, 785 nm, or 993 nm excitation wavelength laser.

Both the Raman Rxn2 single-channel and four-channel configurations are designed for use in an analytical or process development laboratory for routine sample measurements, quality assurance, or process development applications in life sciences, chemical, and food and beverage industries. The four-channel Raman Rxn2 was designed for customers who need to support process development activities so that they can monitor multiple vessels. The ability to follow several different reactions at the same time can quickly build process knowledge and simplify technology transfer from a laboratory into a process environment.

With the Raman RunTime software embedded into the analyzer, the Raman Rxn2 single-channel and four-channel analyzers meet the needs of both good laboratory practice (GLP) and good manufacturing practice (GMP) governed areas within the pharmaceutical industry for process analytical technology (PAT) and quality by design (QbD) applications.
3.1.2 The Raman Rxn2 hybrid configuration

The Raman Rxn2 hybrid configuration is unique because it contains connectors for an Rxn-20 large volumetric probe and a second, alternate (ALT) backscattered probe. The Raman Rxn2 hybrid configuration is only available with a 785 nm excitation wavelength laser.

The two different probe types enable a variety of applications for solids, liquids, and turbid media. A backscattered immersion probe is the preferred approach for measuring liquids because of its short focus, optical window, and bubble-shedding design. The Rxn-20 probe is optimized for large volumetric measurements, enabling focus-free, non-contact representative measurements of solids or turbid media. The hybrid configuration provides maximal sampling flexibility for laboratory, quality control, and process development purposes.

With the Raman RunTime software embedded into the analyzer, the Raman Rxn2 hybrid configuration meets the needs of both good laboratory practice (GLP) and good manufacturing practice (GMP) governed areas within the pharmaceutical industry for process analytical technology (PAT) and quality by design (QbD) applications.

3.1.3 The Raman Rxn2 starter configuration

The standard Raman Rxn2 starter configuration is the analyzer with a single Rxn-10 Raman spectroscopic probe. There is an optional upgrade to configure the analyzer with up to four channels, and the analyzer is compatible with the full range of Endress+Hauser liquid or bioprocessing probes. The Raman Rxn2 starter configuration is only available with a 785 nm excitation wavelength.

The Raman Rxn2 starter configuration is designed for cart-portable or benchtop uses such as material quality, reaction monitoring, basic science research, quality assurance, and unknowns identification. The variety of non-contact or immersion optics compatible with the Rxn-10 probe provides sampling flexibility to support a variety of applications.
3.2 Product design

3.2.1 Front panel

On the front panel of the instrument are the standard user interfaces. These include the main ON/OFF power switch, the laser ON/OFF key switch, light emitting diode (LED) indicators, and a universal serial bus (USB) 3.0 port.

![Front panel of a Raman Rxn2 four-channel analyzer](image)

4  **Incoming product acceptance and identification**

4.1  **Incoming acceptance**

1. Verify that the packaging is undamaged. Notify the supplier of any damage to the packaging. Keep the damaged packaging until the issue has been resolved.

2. Verify that the contents are undamaged. Notify the supplier of any damage to the delivery contents. Keep the damaged goods until the issue has been resolved.

3. Check that the delivery is complete and nothing is missing. Compare the shipping documents with your order.

4. Pack the product for storage and transportation in such a way that it is protected against impact and moisture. The original packaging offers the best protection. Make sure to comply with the permitted ambient conditions.

If you have any questions, refer to our website (https://endress.com/contact) for the list of local sales channels in your area.

### NOTICE

**Incorrect transportation can damage the analyzer.**

- Always use a lifting truck or a forklift to transport the analyzer.

4.1.1  **Nameplate**

The nameplate located on the rear of the Analyzer provides the following information about your device:

- Manufacturer contact information
- Laser radiation notice
- Electric shock notice
- Model number
- Serial number
- Wavelength
- Maximum power
- Build month
- Build year
- Patent information
- Certification information

Compare the information on the nameplate with the order.
4.1.2 Identifying the product
The order code and serial number of your product can be found in the following locations:
- On the nameplate
- In the delivery papers

4.1.3 Manufacturer address
Endress+Hauser
371 Parkland Plaza
Ann Arbor, MI 48103 USA

4.2 Scope of delivery
The scope of delivery comprises:
- Raman Rxn2 analyzer in the configuration ordered
- *Raman Rxn2 Operating Instructions*
- *Raman RunTime Operating Instructions*
- Raman Rxn2 Certificate of Product Performance
- Local declarations of conformity, if applicable
- Certificates for hazardous zone use, if applicable
- Raman Rxn2 optional accessories, if applicable

If you have any questions regarding the items delivered, or if anything appears to be missing, refer to our website ([https://endress.com/contact](https://endress.com/contact)) for the list of local sales channels in your area.

5.2  **Power and grounding**

The Raman Rxn2 has a standard IEC-320 C-14 inlet for power at the rear of the instrument. Any power cord with an IEC-320 C-13 plug will connect to the base unit. The Raman Rxn2 accepts AC power from 100 to 240 V and 50/60 Hz. For U.S. applications, a power cord is supplied. For non-U.S. applications, the user must supply a power cable that meets local/national standards.

Also included on the rear of the instrument is a functional earth terminal for additional grounding if required. Primary grounding occurs through the IEC power inlet plug ground terminal which should be connected to the building grounding system.

Do not position the Raman Rxn2 in a way that makes it difficult to remove the mains cord. Only use adequately rated power cables with the Raman Rxn2 system.

6.4 Air filter

The Raman Rxn2 incorporates a tacked polyester spun air filter element to reduce dust intake into the base unit. The air filter is accessed by a magnetically secured access panel on the front of the instrument. The air filter should be cleaned with compressed air once every month or if the embedded software is reporting an internal over-temperature error (if ambient temperature is within specification). In extremely dusty conditions, the air filter should be cleaned more often. The air filter has a blue tacky side which should be oriented toward the outside of the base unit.

If a replacement air filter (p/n 70207492) is needed, refer to our website (https://endress.com/contact) for the list of local sales channels in your area.

Figure 9. Pull (1) for access to air filter
7 Operation

**WARNING**

- Whenever the Raman Rxn2 analyzer main power switch and laser key are turned **ON**, any attached probes should be shuttered or covered, or remain immersed in the sample to be measured.

### 7.1 Raman RunTime embedded software

Raman RunTime is the embedded control software installed on all the Raman Rxn2 analyzers. It is intended for easy integration with standard multivariate analysis and automation platforms to enable a real-time, *in situ* process monitoring and control solution. Raman RunTime presents an OPC and Modbus interface which provides clients with analyzer data as well as analyzer control functions. Refer to the *Raman RunTime Operating Instructions (BA02180C)* for complete instructions on configuring and using the Raman Rxn2 with Raman RunTime.

### 7.2 Initial Raman RunTime setup

To perform initial Raman RunTime software setup, follow the instructions below.

1. Customize the analyzer name. The default name is “Raman Analyzer”:
   - From the Raman RunTime dashboard, navigate to **Options > System > General**.
   - Click the **Instrument Name** field.
   - Enter a custom name, for example, Raman Rxn2-785 SBAAAF12000, then click **Apply**. The analyzer name is how the system is identified in diagnostic exports and within calibration reports.

2. (Optional) Calibrate the touch screen:
   - From the dashboard, navigate to **Options > System > General > Calibrate Touch Screen**.
   - Follow the on-screen prompts. To achieve better calibration, use the edge of your fingernail when following on screen prompts and touching the requested touch points.
3. Customize the identity for communication protocols, and customize network settings:
   - Navigate to Options > System > Network.
   - Click the Hostname field.
   - Enter a custom name and click Apply. This is a critical step because the hostname is how the Raman Rxn system is identified through communication protocols.
     If using DHCP, the IP address is obtained automatically.
   - (Optional) Enter the static IP information, as applicable, then click Apply.

4. Set the date and time:
   - From the dashboard, navigate to Options > System > Date & Time.
   - Specify the time, date, and time zone, or
   - Enable Time Synchronization. Provide a time server address on the local network.
   - Click Apply.
     ▶ If setting the date and time manually, ensure the time zone is set up correctly before proceeding to other adjustments.
     ▶ This is another critical step because spectral acquisition and resulting files and communication protocols are managed by the system’s date/time.

5. Specify names for each probe/quadrant such as Probe 1, Probe 2:
   - From the dashboard, click the title bar of the probe you wish to name. The stream or probe detail view displays.
   - Select the Settings Tab and click Name.
   - Enter the name of the probe and click Apply.
   - Let the system stabilize for at least two hours before proceeding to calibration.

6. Refer to the Raman RunTime Operating Instructions (BA02180C) for initial calibration and verification instructions.
7.3 Calibration and verification

Reliable, transferable calibration is important for comparing data acquired at various times or with different analyzers. Different instruments analyzing the same sample can generate nearly identical spectra if they are properly calibrated. The Raman RunTime software package includes an automatic calibration wizard that guides you through a procedure to automatically calibrate the wavelength and intensity axes and the wavelength of the laser.

After the initial calibration during installation, the Calibrate Periodically function is usually sufficient to maintain the wavelength and laser calibration of the Raman Rxn2.

A summary of the recommended calibration and verification sequence is as follows:

1. Internal calibration
2. Probe calibration
3. Probe verification

7.3.1 Internal calibration

Raman Rxn2 analyzers have internal calibration standards for spectrograph and laser wavelength. The internal calibration options are:

- **Automatic.** If the instrument is already calibrated, this setting compares the current analyzer response to calibration specifications and applies an algorithmic correction if it is minorly out of specification. This setting also recalibrates if the spectrograph wavelength, laser wavelength, or both are out of specification. If the analyzer is uncalibrated, this performs an alignment calibration, followed by a full wavelength calibration and full laser wavelength calibration.

- **Recalibrate X Axis.** Forces full wavelength and laser calibrations without first checking whether the analyzer is within spec.

- **Recalibrate All.** This setting causes the alignment calibration to be repeated prior to performing full spectrograph wavelength and laser wavelength calibrations. Note that when **Recalibrate All** completes, the intensity calibrations and verifications of all probes are invalidated.

Refer to the Calibration and verification section of the *Raman RunTime Operating Instructions (BA02180C)* for steps to perform or set periodic internal calibrations.

7.3.2 Probe calibration

The sensitivity of the Raman Rxn2 varies with wavelength due to variations in the throughput of the optics and the quantum efficiency of the CCD. The probe calibration function in Raman RunTime can be used to remove the effects of this variation from measured spectra.

Probe calibration for Raman Rxn2 analyzers can be performed using a probe-specific calibration kit or the HCA Raman calibration accessory. Refer to the applicable probe or optics manual to determine the appropriate calibration accessory. Refer to the calibration accessory manual for details on how to calibrate the specific analyzer/probe combination. Each channel must be probe-calibrated separately.
Probe calibration can be performed during active experiments, for example when a probe needs to be set up while another probe is active. When a probe calibration is triggered, any acquisitions currently in progress are aborted automatically, and the calibration proceeds. Upon completion of the calibration, active probes automatically resume normal operation.

7.3.3 Probe verification

The probe verification wizard may be used to verify that the Raman Rxn2 is performing within specifications. Probe verification acquires a Raman spectrum of a standard Raman sample, usually 70% IPA or cyclohexane, and analyzes the resultant spectrum for peak positions, peak area ratios and Raman signal strength. The peak position verification confirms that the spectrograph and laser wavelength calibrations are within specification. The peak area ratio verification confirms that the probe intensity calibrations are within specification. The signal strength verification confirms that the instrument’s signal-to-noise ratio is within specification. A report is generated showing the results of the verification steps along with a Pass/Fail indication.

This step is not required to collect a Raman spectrum, but it is highly recommended. Refer to the applicable probe or optics manual to determine the appropriate verification accessory, acceptable reference samples, and for information about how to verify the specific analyzer/probe combination.
8 Diagnostics and troubleshooting
Raman RunTime provides diagnostic information to help determine troubleshooting required on the analyzer. Refer to the System warnings and errors section of the Raman RunTime Operating Instructions (BA02180C) for additional information.

8.1 Warnings and errors
The Status button in the middle of the main view Status bar displays the current state of the system.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="OK" /></td>
<td>When the system is fully calibrated and operating as expected, the Status button in the middle of the main view status bar reads OK and appears Green.</td>
</tr>
<tr>
<td><img src="image" alt="Warning" /></td>
<td>If a system warning is encountered, the Status button changes to Yellow. Warnings should be acknowledged but immediate action may not be necessary. Click the Status button to view details of the warning. The most common warning occurs when all the channels are not occupied. The button pulses continuously until the problem is resolved. Click the Status button to view details about the warning.</td>
</tr>
<tr>
<td><img src="image" alt="Error" /></td>
<td>If a system error is encountered, the Status button changes to Red. An error requires immediate action to restore system performance. Click the Status button to view details about the error.</td>
</tr>
</tbody>
</table>

8.2 Contact information
For Technical Service, refer to our website (https://endress.com/contact) for the list of local sales channels in your area.
