Technical Information **HAW566**

Surge Protective Device

DIN rail surge protective device for installation in the control cabinet for power supply and communication signals with SIL and optional Ex approval

Application

Surge protective devices are used to weaken residual currents from upstream lightning protection steps and to limit system-induced or system-generated overvoltage surges.

HAW566 devices are primarily used in process automation for measurement and communication technology within the chemical, pharmaceutical, water and wastewater industries as well as in the food industry.

Your benefits

- Increased plant availability as surge protective device is perfectly matched to the electronic components involved in process automation and process measuring technology.
- Protection of investment-intensive measuring devices.
- Optional available with intrinsically safe approvals for the application in Ex areas.
- Optional available with SIL3

Operating principle	The HAW566 surge protective device is used to protect electronic components from being destroy by overvoltage. It ensures that overvoltage surges which occur in signal cables (e.g. 4 to 20 mA), i communication lines (Field buses) and in power lines are safely passed into the ground.				
	The functionality of the transmitter or the electronics component to be protected is not affected.				
	Operation of power supply protective devices:				
	Using the impedance-free connection of the protective device, interference voltage drops cannot be introduced on the power lines.				
	Operation of signal cable protective devices:				
	Low and matched disconnection impedance between the individual protective steps within the unit guarantee high compatibility with the system to be protected.				
Available versions	 For power lines: HAW566-AADP1x to protect power lines in non-Ex areas, voltage range 10-55 V HAW566-AADP2~P5x to protect power lines in non-Ex areas, voltage range 90-230 V For signal cables and communication lines: HAW566-AACx to protect signal cables in non-Ex areas Ex ia approval to protect signal cables 				
System construction	Field device HAW566-AADx Power supply HAW568-NCBB1x HAW566-AACx/ I/O NACx I/O HAW568 -AABx/-NCBx Cabinet				

Function and system design

☑ 1 Overview of system construction, HAW566 and HAW568

e.g. temp. sensor

Application

Overvoltage protection of various measurement instrumentation seen in the example of a water treatment plant.

Conditions for the installation of surge protective devices in a water treatment plant are:

- Lightning protection of plant and buildings
- Lightning protection of the main power supply distribution circuits in accordance with local regulations
- Low impedance foundation grounding
- Linked grounding of all buildings and plant

€ 2 Linked grounding (schematic diagram)

- Storm overflow tank Pump house
- 1 2 3
- Plant control
- 4 5 7 8 9
- Plant control Rough/fine rake Sand/fat trap Primary clarifier tank Outfall shaft Final clarifier tank Activation tank

- 10 Denitrification

🛃 3 Water treatment example (schematic diagram: Measurement points and measured variables)

- 1 Storm overflow tank (A: Level + quantity)
- Pump house (B: Level + quantity) 2
- 3 *Rough/fine rake (C: Pressure)*
- Fecal matter reception (D: Level) 4
- 5 Plant control
- Sand/fat trap 6
- Primary clarifier tank (E: ph value + temperature) Outfall shaft (F: ph value + temperature) 7
- 8
- 9 Final clarifier tank
- Activation tank (G: O_2 value) 10
- Denitrification (H: Quantity) 11

Fitting out measuring points in a water treatment plant	Application	Sample measuring point	Measuring point requirements	Connection diagram
	Storm overflow tanks Level and overflow quantity	 Level measurement: 0/4 to 20 mA Overflow quantity measurement: 0/4 to 20 mA 	 2 x HAW566-AACB1x for 0/4 to 20 mA remote signal 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 1
	Pumping system Quantity	Quantity measurement: 0/4 to 20 mA FlexView FMA90 with Micropilot FMR20B level measurement sensors	 1 x HAW566-AACB1x for 0/4 to 20 mA signals 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 2
	Pump station	Level measurement: FlexView FMA90 with Micropilot FMR20B level measurement sensor	1 x HAW566-AADPx for power supply to the transducer	See connection diagram 3
	Pipe Intrinsically safe pump pressure monitoring	Pressure measurement: 4 to 20 mA Cerabar S pressure transmitter	1 x HAW566-NACB1x for 4 to 20 mA remote signal in Ex area.	See connection diagram 4

Application	Sample measuring point	Measuring point requirements	Connection diagram
Primary clarification tank pH value + temperature	pH/temperature value measurement: Profibus PA or Profibus DP Liquisys M CPM253 transmitter with CYA112 and CPS11 measuring sensors	 1 x HAW566-AACB2x for Profibus PA or Profibus DP 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 5
Denitrification Recirculation quantity	Flow measurement: 0/4 to 20 mA Modbus RS485 Promag W 10 flowmeter	 1 x HAW566-AACB1x for 0/4 to 20 mA remote signal 1 x HAW566-AACA1x for Modbus RS485 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 6
Activation tank Dissolved oxygen	Oxygen content measurement: 0/4 to 20 mA Liquisys M CPM253 transmitter with COS41 measuring sensor	 1 x HAW566-AACB1x for 0/4 to 20 mA remote signal 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 5
Outfall pH value and temperature	pH/temperature value measurement: Profibus PA or Profibus DP Liquisys M CPM253 transmitter with CYA112 and CPS11 measuring sensors	 1 x HAW566-AACB2x for Profibus PA or Profibus DP 1 x HAW566-AADPx for power supply to the transducer 	See connection diagram 5
Other application example: Flow measurement	E.g. Coriolis Promass F 200, 300, 500; T-mass, F 300, 500 & I 300, 500; Prosonic 92F or W 400	1 HAW568-NCBBx4x for power supply and signal cable	See connection diagram 7

Back-up fuses are recommended to be installed in case the unit gets short-circuited and the recommended back-up fuse is 40 A gG.

For connecting to L/N, cables with a cross-sectional area \geq 2.5 mm² are recommended.

For connecting to PE, cables with a cross-sectional area $\ge 4 \text{ mm}^2$ are recommended.

Operability

Display elements

HAW566-AADP2~P5

Green display (= functional) in sight window. The energy transfer of the units is controlled by the integrated thermal monitoring system. In the event of a defect (= red display window - means thermal overload) this monitoring system will automatically separate the surge protective device from the power source.

All other HAW566 units do not have any display elements.

NOTICE

Defective surge protective device

- Electric units connected are then no longer protected from overvoltages.
- Replace the surge protective device immediately.

HAW566-*C, HAW566-AADP1

These units do not have any display elements.

NOTICE

Defective surge protective device

Signal cable short circuit.

The short circuit is rectified when the defective protection module is taken out of the carrier. Electric units connected are no longer protected from overvoltages. Replace the surge protective device immediately.

Certificates and approvals

Current certificates and approvals for the product are available at www.endress.com on the relevant product page:

- 1. Select the product using the filters and search field.
- 2. Open the product page.
- 3. Select **Downloads**.

Ordering information

Detailed ordering information is available from your nearest sales organization www.addresses.endress.com or in the Product Configurator at www.endress.com:

- 1. Select the product using the filters and search field.
- 2. Open the product page.
- 3. Select Configuration.

Product Configurator - the tool for individual product configuration

- Up-to-the-minute configuration data
- Depending on the device: Direct input of measuring point-specific information such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly in the Endress+Hauser Online Shop

Documentation

The following document types are available in the Downloads area of the Endress+Hauser website (www.endress.com/downloads), depending on the device version:

Document type	Purpose and content of the document	
Technical Information (TI)	Planning aid for your device The document contains all the technical data on the device and provides an overview of the accessories and other products that can be ordered for the device.	
Brief Operating Instructions (KA)	Guide that takes you quickly to the 1st measured value The Brief Operating Instructions contain all the essential information from incoming acceptance to initial commissioning.	

Document type	Purpose and content of the document	
Operating Instructions (BA)	Your reference document The Operating Instructions contain all the information that is required in various phases of the life cycle of the device: from product identification, incoming acceptance and storage, to mounting, connection, operation and commissioning through to troubleshooting, maintenance and disposal.	
Description of Device Parameters (GP)	Reference for your parameters The document provides a detailed explanation of each individual parameter. The description is aimed at those who work with the device over the entire life cycle and perform specific configurations.	
Safety instructions (XA)	Depending on the approval, safety instructions for electrical equipment in hazardous areas are also supplied with the device. These are an integral part of the Operating Instructions.	
	the device.	
Supplementary device-dependent documentation (SD/FY)	Always comply strictly with the instructions in the relevant supplementary documentation. The supplementary documentation is a constituent part of the device documentation.
