Technical Information

Liquiphant S  FTL70, FTL71
Vibronic

High-temperature point level switch for all types of liquids

Application
The Liquiphant S is a point level switch for use in all types of liquids
- for process temperatures between –60 °C and 280 °C (–76 °F to 540 °F)
  (300 °C (572 °F) for max. 50 cumulative hours; without thermal shock restriction)
- for pressures up to 100 bar (1450 psi)
- for viscosities up to 10,000 mPa*s (cSt)
- for density \( \geq 0.5 \) g/cm\(^3\) (SGU) or \( \geq 0.7 \) g/cm\(^3\) (SGU), other configurations on request
- Foam detection on request

The function is not affected by flow, turbulence, bubbles, foam, vibration, solids content or buildup, making the Liquiphant an ideal substitute for float switches.

FTL70: Compact design, for pipes also
FTL71: Extension pipe up to 3 m (9.8 ft) and up to 6 m (20 ft) on request

For use in very aggressive liquids, the fork and process connection are available in the highly corrosion-resistant material AlloyC22 (2.4602).

EEx ia, EEx de and EEx d protection enable it to be used in hazardous areas.

Your benefits
- Use in safety systems requiring functional safety to SIL2 in accordance with IEC 61508/IEC 61511-1
- Welded, gas-tight feed-through ensures maximum safety, even in the event of damage to sensor
- With process connections from ¼" and small fork dimensions, it is also suitable where space is tight.
- A wide range of process connections allows for universal application.
- The right connection for every process control system: e.g. NAMUR, relay, DC-PMP, PROFIBUS PA interface
- No adjustment: quick, low-cost startup
- No mechanical moving parts: maintenance-free

Application

Point level detection
Maximum or minimum detection in tanks or pipes with all types of cold to very hot liquids. The devices are also suitable for use in hazardous areas and for applications involving high pressure.

Function and system design

Measuring principle
The sensor's fork vibrates at its intrinsic frequency. This frequency is reduced when covered with liquid. This change in frequency causes the point level switch to switch.

Modularity

Point level switch
Liquiphant S FTL7x with electronic inserts
FEL51, FEL52, FEL54

Point level switch
Liquiphant S FTL7x with electronic inserts
FEL55, FEL56, FEL57, FEL58, FEL50A
for connecting to a separate switching unit, an isolating amplifier or for connecting to a PROFIBUS PA segment coupler
Electronic versions

FEL51:
Two-wire AC version;
Switches the load directly into the power supply circuit via an electronic switch.

FEL52:
Three-wire DC version;
Switches the load via the transistor (PNP) and separate connection e.g. in conjunction with
programmable logic controllers (PLCs), DI modules as per EN 61131-2.

FEL54:
Universal current version with relay output;
Switches the loads via 2 floating change-over contacts.

FEL55:
Signal transmission 16/8 mA on two-wire cabling e.g. in conjunction with programmable logic
controllers (PLCs), AI modules 4 to 20 mA as per EN 61131-2.

FEL56:
For separate switching unit; signal transmission L-H edge 0.6 to 1.0 / 2.2 to 2.8 mA
to EN 50227 (NAMUR) on two-wire cabling.

FEL58:
For separate switching unit; signal transmission H-L edge 2.2 to 3.5 / 0.6 to 1.0 mA
to EN 50227 (NAMUR) on two-wire cabling.
Checking of connecting cabling and other devices by pressing a key on the electronic insert.

FEL57:
For separate switching unit; PFM signal transmission;
Current pulses superposed on the power supply along the two-wire cabling.
Proof test from the switching unit without changing levels.

FEL50A:
For connecting to PROFIBUS PA;
Cyclic and acyclic data exchange acc. to PROFIBUS-PA Profile 3.0
Discrete Input

Galvanic isolation

FEL51, FEL52, FEL50A: between sensor and power supply
FEL54: between sensor and power supply and load
FEL55, FEL56, FEL57, FEL58, FEL50D: see connected switching unit

Design

FTL70: Compact
FTL71: With extension pipe

Input

Measured variable

Level (limit value)

Measuring range (detection range)

FTL70: dependent on mounting point
FTL71: dependent on mounting point and the extension pipe ordered.
Standard extension pipe up to 3 m (9.8 ft) and up to 6 m (20 ft) on request.

Process density

Setting on the electronic insert > 0.5 g/cm$^3$ (SGU) or > 0.7 g/cm$^3$ (SGU) (others on request)
Electronic insert FEL51 (AC 2-wire)

Power supply
Supply voltage: AC 19 to 253 V
Power consumption: < 0.83 W
Residual current consumption: < 3.8 mA
Short-circuit protection
Overvoltage protection FEL51: overvoltage category III

Electrical connection
Two-wire AC connection
Switches the load directly into the power supply circuit via an electronic switch.
Always connect in series with a load!

Check the following:
- The residual current in blocked state (up to 3.8 mA)
- That for low voltage
  - the voltage drop across the load is such that the minimum terminal voltage at the electronic insert (19 V) when blocked is not undershot.
  - the voltage drop across the electronics when switched through is observed (up to 12 V)
- That a relay cannot de-energize with holding power below 3.8 mA.
  If this is the case, a resistor should be connected parallel to the relay. An RC module is available under the part number: 71107226
- When selecting the relay, pay attention to the holding power / rated power (see "Connectable load")

</table>

Signal on alarm
Output signal on power failure or in the event of damaged sensor: < 3.8 mA

Connectable load
- Voltage drop via FEL51 ≤ 12 V
- Residual current if electrical switch is blocked: ≤ 3.8 mA
- Load switched directly into the power supply circuit via the thyristor.
  Transient (40 ms) ≤ 1.5 A, ≤ 375 VA at 253 V or ≤ 36 VA at 24 V (not short-circuit-proof)

The load is switched via an electronic switch directly in the power circuit.
Always connect in series with a load!
Not suitable for connection to low-voltage PLC inputs!

Relays with less nominal power can be operated via an RC module connected in parallel (optional).
**Electronic insert FEL52 (DC PNP)**

### Power supply
- Supply voltage: DC 10 to 55 V
- Ripple: ≤ 1.7 V, 0 to 400 Hz
- Current consumption: ≤ 15 mA
- Power consumption: ≤ 0.83 W
- Reverse polarity protection
- Overvoltage protection FEL52: overvoltage category III

### Electrical connection
- **Three-wire DC connection**
  - Switches the load via the transistor (PNP) and separate connection.
  - Preferably used with programmable logic controllers (PLC), DI modules as per EN 61131-2.
  - Positive signal at switching output of the electronics (PNP); Output blocked on reaching point level.

### Output signal

<table>

</tbody>
</table>

- \( I_\text{L} \) = load current (switched through)
- \(< 100 \mu A\) = residual current (blocked)
- \( \odot \) = lit
- \( \bullet \) = unlit

### Signal on alarm
- Output signal on power failure or in the event of damaged sensor: \(< 100 \mu A\)

### Connectable load
- Load switched via transistor and separate PNP connection, ≤ DC 55 V
- Load current ≤ 350 mA (pulsed overload and short-circuit protection)
- Residual current < 100 \( \mu A \) (with transistor blocked)
- Capacitance load ≤ 0.5 \( \mu F \) at 55 V, 1.0 \( \mu F \) at 24 V
- Residual voltage < 3 V (with transistor switched through);
Electronic insert FEL54 (AC/DC with relay output)

Power supply
- Supply voltage: AC 19 to 253 V, 50/60 Hz or DC 19 to 55 V
- Power consumption: ≤ 1.3 W
- Reverse polarity protection
- Overvoltage protection FEL54: overvoltage category III

Electrical connection
- Universal current connection with relay output
  - Power supply:
    - Please note the different voltage ranges for AC and DC.
  - Output:
    - When connecting an instrument with high inductance, provide a spark arrester to protect the relay contact.
    - A fine-wire fuse (depending on the load connected) protects the relay contact on short-circuiting.
    - Both relay contacts switch simultaneously.
  - * When jumpered, the relay output works with NPN logic.
  - ** See “Connectable load”

</tbody>
</table>

- = relay energized
- = relay de-energized
- = lit
- = unlit

Signal on alarm
- Output signal on power failure or in the event of damaged sensor: relay de-energized

Connectable load
- Loads switched via 2 floating change-over contacts (DPDT).
- I~ ≤ 6 A (Ex de 4 A), U~ ≤ AC 253 V; P~ ≤ 1500 VA, cos φ = 1, P~ ≤ 750 VA, cos φ > 0.7
- I% ≤ 6 A (Ex de 4 A) to DC 30 V, I% ≤ 0.2 A to 125 V
- When connecting a low-voltage circuit with double insulation according to IEC 1010, the following applies: the sum of the voltages of the relay output and power supply is ≤ 300 V
- The electronic insert FEL52 DC-PNP is preferred for low DC load currents (e.g. when connecting to a PLC)
- Relay contact material: silver/nickel AgNi 90/10
Electronic insert FEL55 (8/16 mA)

Power supply
Supply voltage: DC 11 to 36 V
Power consumption: < 600 mW
Reverse polarity protection
Overvoltage protection FEL55: overvoltage category III

Electrical connection
Two-wire connection for separate switching unit
For separate switching unit.
Signal transmission 16/8 mA on two-wire cabling.
For connection to programmable logic controllers (PLC) for example, AI modules 4 to 20 mA to EN 61131-2.
Output signal jump from high to low current on point level.

Fuse required for non-Ex applications!
Only use power units with safe galvanic isolation (e.g. SELV).

Output signal

<table>
<thead>
<tr>
<th>Safety mode</th>

</tbody>
</table>

~16 mA = 16 mA ± 5 %
~8 mA = 8 mA ± 6 %

Output signal on alarm
Output signal on power failure or in the event of damaged sensor: < 3.6 mA

Connectable load
- R = (U - 11 V) : 16.8 mA
- U = connection voltage: DC 11 to 36 V (in wet environments DC 11 to 35 V)
Example: PLC with 250 Ω with 2-wire version

250 Ω = (U - 11V) / 16.8 mA
4.2 [Ω / A] = U - 11 V
U = 15.2 V
Electronic insert FEL56 (NAMUR L-H edge)

Power supply
Supply voltage: DC 8.2 V ±20 %
Power consumption: < 6 mW at I < 1 mA; < 38 mW at I = 2.8 mA
Connection data interface: IEC 60947-5-6

Electrical connection
Two-wire connection for separate switching unit
For connecting to isolating amplifiers according to NAMUR (IEC 60947-5-6), e.g. FTL325N from Endress+Hauser.
Output signal jump from low to high current on point level.
(L–H edge)
Connecting to multiplexer:
Set clock time to min. 2 s.

Output signal

<table>
<thead>

= lit
= flashes
= unlit

Signal on alarm
Output signal in the event of damaged sensor: > 2.2 mA

Connectable load
- See Technical Data of the isolating amplifier connected according to IEC 60947–5–6 (NAMUR)
Electronic insert FEL58 (NAMUR H-L edge)

Power supply
Supply voltage: DC 8.2 V ±20 %
Power consumption: < 6 mW at I < 1 mA; < 38 mW at I = 3.5 mA
Connection data interface: IEC 60947-5-6

Electrical connection
Two-wire connection for separate switching unit
For connecting to isolating amplifiers as per NAMUR (IEC 60947-5-6), e.g. FTL325N, FTL375N from Endress+Hauser.
Output signal jump from high to low current on point level.
(H–L edge)

Additional function:
Test key on the electronic insert. Pressing the key breaks the connection to the isolating amplifier.

Note!
In Ex–d applications, the additional function can only be used if the housing is not exposed to an explosive atmosphere.

Connecting to multiplexer:
Set clock time to min. 2 s.

Signal on alarm
Output signal in the event of damaged sensor: < 1.0 mA

Connectable load
- See Technical Data of the isolating amplifier connected according to IEC 60947–5–6 (NAMUR)
- Connection also to isolating amplifiers which have special safety circuits (I > 3.0 mA)
Electronic insert FEL57 (PFM)

**Power supply**
- Supply voltage: DC 9.5 to 12.5 V
- Current consumption: 10 to 13 mA
- Power consumption: < 150 mW
- Reverse polarity protection

**Electrical connection**

### Two-wire connection for separate switching unit

For connecting to Endress+Hauser switching units Nivotester FTL320, FTL325P, FTL370, FTL372, FTL375P (also with proof test).

Output signal jump of the PFM signal from high to low frequency when sensor is covered. Switching between minimum/maximum safety in the Nivotester.

Additional function “proof test”: After interruption of the power supply, a test cycle is activated which checks the sensor and electronics without any change in level.

Approved for overfill protection acc. to WHG (German Water Resources Act). The following can be switched at the electronic insert:

- **Standard (STD):**
  - Corrosion of the fork unlikely;
  - Simulation approx. 8 s: tuning fork exposed – covered – exposed.
  - For proof testing, the Nivotester tests the sensor's level notification function.

- **Extended (EXT):**
  - Corrosion of the fork possible;
  - Simulation approx. 41 s: tuning fork exposed – covered – corroded – exposed.
  - For proof testing, the Nivotester tests the sensor's level notification function and fault notification (alarm) function.

The check is activated and monitored at the switching unit.

The twin-core connecting cable (instrument cable) with a cable resistance of ≤ 25Ω per core is connected to the screw terminals (conductor cross-sections 0.5 to 2.5 mm / 0.02 to 0.1 in) in the connection compartment. Protective circuits against reverse polarity, HF influences and overvoltage peaks are installed.

Maximum cable length up to 1000 m (3281 ft).

A shielded connecting cable is recommended in the event of strong electromagnetic interference. Here the shielding must be connected to the sensor and the power supply.

**Output signal on power failure or in the event of damaged sensor: 0 Hz**

Signal on alarm

Connectable load

- Floating relay contacts in the connected switching unit Nivotester FTL325P, FTL375P
- For contact load, see the Technical Data of the switching unit.
Electronic insert FEL50A (PROFIBUS PA)

Power supply

- Bus voltage: DC 9 to 32 V
- Bus current:
  - 12.5 mA +/- 1.0 mA (software version: 01.03.00, hardware version: 02.00)
  - 10.5 mA +/- 1.0 mA (software version: 01.03.00, hardware version: 01.00)

Electrical connection

- Two-wire connection for power supply and data transfer

For connecting to PROFIBUS PA

Additional functions:

- Digital communication enables the representation, reading and editing of the following parameters:
  - Fork frequency, switch-on frequency, switch-off frequency, switch-on time and switch-off time, status, measured value, density change
- Matrix locking possible
- Switch to WHG mode possible (WHG approval)
- For a detailed description, see BA00198F

**Signal on alarm**
- Failure information can be opened using the following interfaces:
  - Yellow LED flashing, status code, diagnostic code; see BA00198F

**Connection and function**

**Connecting cables**
- Electronic inserts: cross-section ≤ 2.5 mm² (14 AWG); strand in ferrule as per DIN 46228
- Protective ground in housing: cross-section ≤ 2.5 mm² (14 AWG)
- External equipotential bonding connection on housing: cross-section ≤ 4 mm² (12 AWG)

**Safety mode**
Minimum/maximum residual current safety selectable on electronic insert (with FEL57 on Nivotester only)

- **MAX** = maximum safety:
  - The output switches to the power fail response when the fork is covered
  - For use with overfill protection for example

- **MIN** = minimum safety:
  - The output switches to the power fail response when the fork is exposed
  - For use with dry running protection for example

**Switching time**
- When fork is covered: approx. 0.5 s
- When fork is exposed: approx. 1.0 s
- Additionally configurable for PROFIBUS PA:
  - 0.5 to 60 s
- Other switching times available on request.

**Switch-on behavior**
- When switching on the power supply, the output assumes the alarm signal.
  - After ≤ 3 s it assumes the correct switching mode (exception: FEL57)

**Accuracy**

**Reference operating conditions**
- Ambient temperature: 23 °C (73 °F)
- Medium temperature: 23 °C (73 °F)
- Medium density (water): 1 g/cm³ (SGU)
- Medium viscosity: 1 mm²/s (cSt)
- Medium pressure pₚ: 0 bar (0 psi)
- Sensor mounting: vertical from above
- Density switch: to > 0.7 g/cm³ (SGU)

* Switch point under reference operating conditions

### Operating conditions

#### Installation

**Installation instructions**

Switch points \( h \) on the sensor depend on the mounting position, with reference to water, Density 1 g/cm³ (SGU), 23 °C (73 °F), \( p_e \) 0 bar (0 psi).

![Diagram showing mounting from above, below, and the side.](image-url)

**Examples of mounting**

Depending on the viscosity \( v \) of the liquid and the tendency to form buildup

**Optimum mounting, without problem even with high viscosity:**

Position the fork so that the narrow edge of the tines is vertical to ensure that the liquid can run off easily.

![Diagram showing vertical and flush-mounted from the side.](image-url)
With buildup on the tank walls:

* Ensure that there is sufficient distance between the buildup expected on the tank wall and the fork.

Mounting positions in the case of low viscosity (up to 2000 mm$^2$/s (cSt)):

* Deburr the nozzle surfaces

Installation in pipes from 2”:

Flow velocities up to 5 m/s (16.4 ft/s) for viscosity of 1 mm$^2$/s (cSt) and density 1 g/cm$^3$ (SGU).

(Check the function for other medium conditions.)
Dynamic load
Support the Liquiphant S FTL71 in the event of a severe dynamic load.

Space outside the tank
Ensure that there is adequate space outside the tank for mounting, connection and configuration.

Orientation
FTL70, and FTL71 with short pipe up to approx. 500 mm (19.7 in): in any position,
FTL71 with long pipe: vertical
Environment

Ambient temperature range
Permitted ambient temperature $T_a$ at the housing depending on the process temperature $T_p$ in the vessel:

- **Maximum of 50 cumulative hours**
- **–60 °C for ATEX and CSA certificates only**
- *****FEL50A maximum +60 °C ambient temperature ($T_a$) in hazardous areas**

**Ambient temperature limits**
- $-50$ to $+70 °C$ ($-58$ to $158 °F$)

**Storage temperature**
- $-50$ to $+80 °C$ ($-58$ to $176 °F$)

**Installation height as per IEC61010-1 Ed.3**
- Up to 2000 m (6600 ft) above sea level.
- Can be extended up to 3000 m (9800 ft) above sea level if overvoltage protection is used, for example HAW562 or HAW569.

**Climate class**
- Climate protection to IEC 68, Part 2-38, Fig. 2a

**Degree of protection**

* As per EN60529
** As per NEMA 250
*** Only with M20 cable entry or G1/2 thread
**** F13 housing only in conjunction with XP or Ex d approval

**Vibration resistance**
- As per IEC 68, parts 2-6 (10 to 55 Hz, 0.15 mm (0.01 in), 100 cycles)
Emitters with a noise level of 4000 Hz or more should be employed.

**Electromagnetic compatibility**

- Interference emission to EN 61326, Electrical Equipment Class B
- Interference immunity to EN 61326; Annex A (Industrial) and NAMUR Recommendation NE 21 (EMC)

**Process conditions**

**Process temperature**

-60 to +280 °C (-76 to 536 °F) and 300 °C (572 °F) for max. 50 cumulative hours

**Thermal shock**

Without restriction within the process temperature range.

**Process pressure pₑ**

For the pressure values permitted for the flanges in the case of higher temperatures, please refer to the following standards:

- pR EN 1092-1: 2005
  - With regard to their stability-temperature property, the materials 1.4435 and 1.4404 are identical and are grouped together in EN1092-1 Tab. 18 under 13E0. The chemical composition of the two materials can be identical.
- ASME B 16.5a - 1998 Tab. 2-2.2 F316
- ASME B 16.5a - 1998 Tab. 2.3.8 N10276
- JIS B 2220

The lowest value from the derating curves of the device and selected flange applies in each case.

**Test pressure**

max. 150 bar (2175 psi) at 20 °C (68 °F). The function is not available during test pressure. Burst pressure of diaphragm 400 bar (5800 psi)

**State of aggregation**

Liquid

**Density**

≥ 0.7 g/cm³ (SGU) = delivery status

≥ 0.5 g/cm³ (SGU) can be adjusted via switches

**Viscosity**

≤ 10,000 mm²/s (cSt)

**Solids content**

≤ ø5 mm (0.2 in)

**Lateral loading**

≤ 75 Nm

**Medium conditions**

The service life of the device can be affected in applications involving an increased level of hydrogen diffusion through the metal process isolating diaphragm of the sensor.

Typical conditions: temperature >180 °C (>356 °F) and pressure >64 bar (>928 psi)
Mechanical construction

Note!
2D and 3D drawings containing individual dimensions can be generated and downloaded in the Configurator on the product pages of the Liquiphant FTL7x at www.endress.com.

Weights
See ordering information: → 31

Materials
Material specifications as per AISI and DIN-EN.

Parts in contact with process
- Process connection and extension pipe: 316L (1.4435) optional 2.4602 (AlloyC22)
- Tuning fork: S31803 (1.4462) optional 2.4602 (AlloyC22)
- Flanges: 316L (1.4404)
- Flange plating: AlloyC22

Parts with no process contact
- Tuning fork/housing seal: EPDM
- Temperature spacer: 316 L (1.4435)
- Pressure-tight feedthrough: 316L (1.4435)
- Ground terminals at housing (external): 304 (1.4301)
- Nameplate on housing (external): 304 (1.4301)
- Cable glands
  - Housing F13, F15, F16, F17: polyamide (PA)
    - With B or C approval (→ 31 ordering information): nickel-plated brass
  - Housing F27: 316L (1.4404)
  - Housing T13: nickel-plated brass
- Polyester housing F16: PBT-FR with PBT-FR cover or with PA12 transparent cover,
  - Cover seal: EPDM
  - Nameplate glued: polyester film (PET)
  - Pressure compensation filter: PBT-GF20
- Stainless steel housing F15: 316L (1.4404)
  - Cover seal: silicone
  - Safety claw: 304 (1.4301)
  - Pressure compensation filter: PBT-GF20, PA
- Aluminum housing F17/F13: EN-AC-AlSi10Mg, plastic-coated,
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass
  - Pressure compensation filter: silicone
- Stainless steel housing F27: 316L (1.4435)
  - Cover seal: FVMQ (optional: EPDM seal available as spare part)
  - Safety claw: 316L (1.4435)
- Aluminum housing T13: EN-AC-AlSi10Mg, plastic-coated,
  - Cover seal: EPDM
  - Safety claw: nickel-plated brass

**Process connections**
- Parallel thread G ¾, G 1 as per DIN ISO 228/1, flat seal as per DIN 7603, installed on site
- Tapered thread R ¾, R 1 as per DIN 2999 Part 1
- Tapered thread ¾ -14 NPT, 1 - 11½ NPT as per ANSI B 1.20.1
- Flanges (for standards, see also Ordering information → 31+):
  - as per EN/DIN from DN 25
  - as per ANSI B16.5 from 1”
  - as per JIS B2220 (RF)

**Operability**

**Electronic inserts**
With FEL51, FEL52, FEL54, FEL55:
- 2 switches for fail-safe circuit and density change,
- green LED to indicate operational status,
- red LED to indicate switching status, flashes in the event of corrosion damage on sensor or if the electronics are defective
With FEL56:
- 2 switches for fail-safe circuit and density change,
- green LED flashes to indicate operational status,
- red LED to indicate switching status, flashes in the event of corrosion damage on sensor or if the electronics are defective
With FEL57:
- 2 switches for density change and proof testing,
- green LED to indicate operational status,
- yellow LED to indicate covered status, flashes in the event of corrosion damage on sensor or if the electronics are defective
With FEL58:
- 2 switches for fail-safe circuit and density change,
- green LED
  - flashes quickly to indicate operational status
  - flashes slowly in the event of corrosion damage on sensor or if the electronics are defective,
- yellow LED to indicate switching status, test key
  - breaks cable connection
Operating concept

Onsite configuration

Certificates and approvals

**CE mark**
The measuring system meets the legal requirements of the applicable EC Directives. These are listed in the corresponding EC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the CE mark.

**RoHS**
The measuring system complies with the substance restrictions of the EU Directive on the restriction of the use of certain hazardous substances 2011/65/EU (RoHS 2).

**RCM-tick mark**
The product or measuring system supplied complies with the regulations of the Australian Communications and Media Authority (ACMA) for network integrity, performance characteristics and health and safety requirements. The specifications for electromagnetic compatibility, in particular, are observed. The products bear the RCM-tick mark on their nameplate.

**Other certificates**
- See Ordering information

**EAC conformity**
The measuring system meets the legal requirements of the applicable EAC Directives. These are listed in the corresponding EAC Declaration of Conformity along with the standards applied. Endress+Hauser confirms successful testing of the device by affixing to it the EAC mark.

**CRN approval**
Device versions available with CRN approval: 0F10904.5C (Canadian Registration Number) are marked with a "*" in feature 20 'Process connection' under Ordering information (→ 31+).

Further details on maximum pressure values are available in the Download area of the product pages under www.endress.com.

With FEL50A:
- 8 switches for configuring device address
- green LED to indicate operational status, pulsing to indicate communication;
- yellow LED to indicate switching status, flashes in the event of corrosion damage on sensor or if the electronics are defective

**Note!** Wetted device components are listed in the 'Mechanical construction' (→ 22+) and “Ordering information” (→ 31) sections.
Process seal according to ANSI/ISA 12.27.01

Endress+Hauser devices are designed as either single seal or dual seal devices with an alarm in accordance with ANSI/ISA 12.27.01. This means that the user does not need to install an external secondary process seal in the thermowell which is required in ANSI/NFPA 70 (NEC) and CSA 22.1 (CEC). These devices comply with installation practice in North America and enable very safe, low-cost installation in pressurized applications with hazardous media.

Further information is provided in the Safety Instructions (XA) for the specific device → 39 ff.

Pressure Equipment Directive 2014/68/EU (PED)

Pressure instruments with permitted pressure ≤ 200 bar (2,900 psi)

Pressure instruments with a flange and threaded boss that do not have a pressure-bearing housing do not fall within the scope of the Pressure Equipment Directive, irrespective of the maximum permitted pressure.

Reason:

According to Article 2, point 5 of EU Directive 2014/68/EU, pressure accessories are defined as "devices with an operational function and having pressure-bearing housings". If a pressure instrument does not have a pressure-bearing housing (no identifiable pressure chamber of its own), there is no pressure accessory present within the meaning of the Directive.

Use in hazardous zones

Pay particular attention to the information provided in the documentation: Safety Instructions, Control Drawings etc. → 39

ASME B 31.3

Design and materials in accordance with ASME B31.3 The welding seals are through-penetration welded and comply with ASME Boiler and Pressure Vessel Code Section IX and EN ISO 15614-1.
Combinations of housing and electronic inserts

For permitted combinations of housing versions and electronic inserts, see the safety instructions for ATEX, NEPSI etc. A list of available documents can be found on → § 39+. The actual documents are available on the product pages at www.endress.com.

Note! **Polyester housing F16 (PBT)**

Electrical connecting cables run in pipes:
- Do not screw cable entries firmly to the piping. Use flexible connections (e.g. with armored hose).
- If piping is used for grounding, ensure that there is a continuous electrical connection.
Ordering information

Detailed ordering information is available from the following sources:
- In the Product Configurator on the Endress+Hauser website: www.endress.com → Click "Corporate" → Select your country → Click "Products" → Select the product using the filters and search mask → Open the product page → The 'Configuration' button to the right of the product image opens the Product Configurator.
- From your Endress+Hauser Sales Center: www.addresses.endress.com

Product Configurator - the tool for individual product configuration
- Up-to-the-minute configuration data
- Depending on the device: direct input of information specific to measuring point, such as measuring range or operating language
- Automatic verification of exclusion criteria
- Automatic creation of the order code and its breakdown in PDF or Excel output format
- Ability to order directly from the Endress+Hauser online shop

Versions that are mutually exclusive are not indicated in this table.

* F27 housing under development.
Note!
The basic weight comprises:
- Sensor (compact)
- Thread G ¾
- Electronic insert
- Polyester housing

Accessories

**Lap joint flange**

Order number: 918158-0000
with G 1 thread for mounting a Liquiphant 51 with GR2 process connection.

Pressure up to 40 bar (580 psi)
Material: corrosion-resistant steel
1.4301 (AISI 304)
Weight: 0.54 kg (1.19 lbs)

**Lap joint flanges**

With G 1 thread for mounting a Liquiphant S FTL70/71 with GR2 process connection.
Material: corrosion-resistant steel 1.4571 (AISI 113Ti)
- Order number: 918143-0000
  Flange DN50 PN40, EN 1092-1
  Weight: 3.11 kg (6.86 lbs)
- Order number: 918144-0000
  Flange ASME 2", 150 psi, RF
  Weight: 2.38 kg (5.25 lbs)

**High pressure sliding sleeves**

For continuous adjustment of the switch point of a Liquiphant M FTL71. 
Also for use in hazardous areas. For further information → 39ff. (ATEX, NEPSI).

Material: corrosion-resistant steel 1.4435 (AISI 316L) or AlloyC22

Weight for G 1, NPT 1: 1.13 kg (2.49 lbs)  
Weight for G 1½, NPT 1½: 1.32 kg (2.91 lbs)  

Seal package made of graphite.

For G1, G 1½: Seal is included in the delivery.

Note!  
For process pressures up to 100 bar (1450 psi).
Thread | Standard | Material | Order number | Approval
--- | --- | --- | --- | ---
G 1½ | DIN ISO 228/1 | 1.4435 (AISI 316 L) | 52011882 | With inspection certificate EN 10204 - 3.1 material

NPT1¼ | ASME B 1.20.1 | 1.4435 (AISI 316 L) | 52003669 |
NPT1¼ | ASME B 1.20.1 | 1.4435 (AISI 316 L) | 52011883 | With inspection certificate EN 10204 - 3.1 material
NPT1¼ | ASME B 1.20.1 | AlloyC22 | 71118695 | With inspection certificate EN 10204 - 3.1 material

Pressure and temperature derating of high pressure sliding sleeves

Cover with sight glass
Order number: 943461-0001
for polyester housing F16
Material: PA 12
Weight: 0.04 kg (0.09 lbs)

Cover with sight glass
For stainless steel housing F15
Material: AISI 316L
Weight: 0.16 kg (0.35 lbs)
- Order number: 52027002
  With glass sight glass
- Order number: 52028207
  With PC sight glass
(Not for CSA, General Purpose)
