	DN 1"…12" (polyurethan)	122	140	140	140	140

	Max. medium temperature [°F] (at $T_a = 122$ °F)	T5	T4A	T4	T3C	T3B
Promag H	DN 1/2"…4"	122	230	230	230	230
Promag P	DN 1"…8" (PFA lining)	122	230	230	230	230
	DN 1/2"…12" (PTFE lining)	122	230	230	230	230
Promag W	DN 1"…12" (hard-rubber lining)	122	176	176	176	176
	DN 1"…12" (hard-rubber lining)	122	140	140	140	140

Note!

- At the specified medium temperatures, the equipment is not subjected to temperatures impermissible for the temperature class in question.
- Determine the temperature class dependent on the ambient temperature and the medium temperature.
- The minimum ambient temperature is -4 °F. A version for ambient temperatures up to -40 °F is optionally available.

Approvals

Nr. / Approval type	Description
J. I. 3002554 (Special conditions, see Page 6)	for the electric flow measuring system Proline Promag 50 Identification: see below

Compact version

P r o m a g 5 0 * * * - * * * * * * * * * *	
W = Current HART A = Current HART, Frequency D = Current HART, Frequency, Status, Status input S = Current HART (IS) active, Frequency (IS) T = Current HART (IS) passive, Frequency (IS)	
Promag 50 H	DN 1/12"…4"
Promag 50 P	DN 1/2"…12"
Promag 50 W	DN 1"…12"
	XP-IS-DIP / I, II, III/ 1 / ABCDEFG / T5-T3C and XP-IS / I / 1 / IIC / T5-T3C

Notified body

The measuring system was tested for approval by the following named entity: FM Global Technologies LLC

Special conditions

1. The flowmeter must be integrated into the potential equalisation system. Potential must be equalized along the intrinsically safe sensor circuits.
2. Control room equipment shall not use or generate more than 250 V rms.
3. Ratings for devices connected to terminals Nos. 26 to 27 of the transmitter must not exceed $U_m = 250$ V and $I_m = 500$ mA. It is impermissible to connect devices with higher ratings to these terminals (Does not apply to Promag 5*****_*****S/T with intrinsically safe output circuits).

 **Caution!**

4. Use supply wires suitable for 41 °F above ambient temperature, but at least for 176 °F.
5. Class II Group G: The surface temperature of the apparatus cannot exceed 329 °F.
6. Transmitter enclosure G02 explosionproof for use in Cl. I Div. 1 Groups A, B, C, D (Seal not required) and dust-ignition proof for Class II, III Div. 1 Groups E, F, G.
7. It is not permissible to connect the service adapter while area is known to be hazardous.
8. Install per National Electrical Code. Install intrinsically safe circuits per NEC ANSI/NFPA 70 and ISA RP 12.6 respecting the explosionproof integrity of the transmitter enclosure.

 **Warning!**

9. Substitution of components may impair intrinsic safety.

General warnings

 **Warning!**

- Installation, connection to the electricity supply, commissioning and maintenance of the devices must be carried out by qualified specialists trained to work on Ex-rated devices.
- Compliance with national regulations relating to the installation of devices in potentially explosive atmospheres is mandatory, if such regulations exist.
- Open the device only when it is de-energized (and after a delay of at least 10 minutes following shutdown of the power supply).
- The housing of the Ex-rated transmitter can be turned in 90° steps. Whereas the non-Ex version has a bayonet adapter, however, the Ex version has a thread. Recesses for centering the worm screw are provided to prevent inadvertent movement of the transmitter housing. It is permissible to turn the transmitter housing through a maximum of 180° during operation (in either direction), without compromising explosion protection. After turning the housing the worm screw must be tightened again.
- The screw cap has to be removed before the local display can be turned, and this must be done with the device de-energized (and after a delay of at least 10 minutes following shutdown of the power supply). Be sure that the device is closed properly, before connecting it to power again.

Electrical connections**Power supply**

F06-5xxxxxZZ-04-00-xx-xx-004

Fig. 1: Electrical connections power supply and potential equalisation

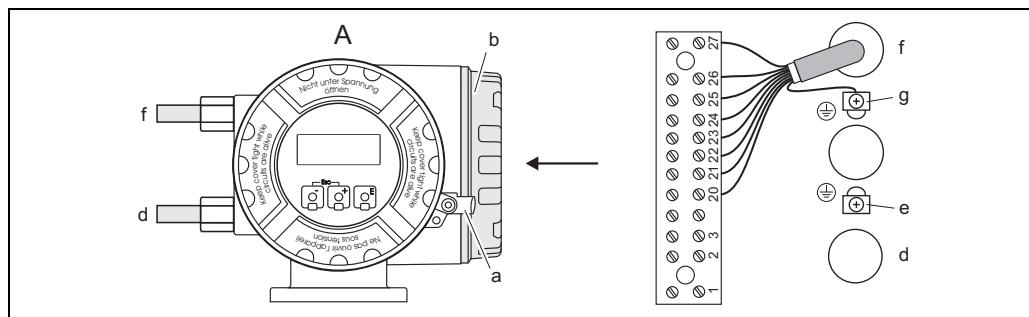

- A Transmitter housing, front view
 a Securing clamp
 b Connection compartment cover
 c Screw terminal for connecting to potential equalisation
 d Power supply cable
 e Ground terminal
 f Input/Output circuit cable (see Fig. 2)
 g Ground terminal

 Caution!

The transmitter is to be securely connected to the potential equalization system using either the screw terminal on the outside of the transmitter housing.

The table below contains the values that are identical for all versions, irrespective of the type code:

Terminals	1 L (+)	2 N (-)	3
Designation		Power supply	Protective earth
Functional values	AC: U = 85...260 V or AC: U = 20...55 V or DC: U = 16...62 V Power consumption: 15 VA / 15 W		Caution: Follow ground network requirements for the facility!
Intrinsically safe circuit	no		
U _m	260 V AC		

Input/output circuit

F06-5xxxxxZZ-04-00-xx-xx-005

Fig. 2: Electrical connections input/output circuit cable

- A Transmitter housing, front view
 a Securing clamp
 b Connection compartment cover
 c – (see Fig. 1)
 d Power supply cable (see Fig. 1)
 e Ground terminal
 f Input/Output circuit cable
 g Ground terminal

⚠ Note!

The table below contains the values which depend on the type code (type of device). Always remember to compare the type code in the table with the code on the nameplate of your device.

Terminal assignment of input/output circuits with am intrinsically safe circuit**⚠ Note!**

If multiple intrinsically safe outputs are fed through one cable gland, the twisted pairs must be individually shielded.

Promag 50***-*****S

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***-*****S	–	–	Pulse / Frequency output (IS)	Current output HART, active (IS)				
Safety-related relevant values								
Intrinsically safe circuit			yes	yes				
U_{oc}			–	21.8 V DC				
I_{sc}			–	90 mA				
P_{max}			–	490 mW				
L_a			–	4.1 mH				
C_a			–	150 nF				
V_{max}			30 V DC	30 V DC				
I_{max}			300 mA	10 mA				
P_{max}			600 mW	0.3 W				
L_i			0	0				
C_i			6 nF	6 nF				
Functional values → see table “Functional values of input/output circuits” on Page 9								

Promag 50***-*****T

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***-*****T	–	–	Pulse / Frequency output (IS)	Current output HART, passive (IS)				
Safety-related relevant values								
Intrinsically safe circuit			yes	yes				
V_{max}			30 V DC	30 VDC				
I_{max}			300 mA	100 mA				
P_{max}			600 mW	1.25 W				
L_i			0	negligible				
C_i			6 nF	6 nF				
Functional values → see table “Functional values of input/output circuits” on Page 9								

Terminal assignment of input/output circuits

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***_*****W	—	—	—	—	—	—	Current output HART	
50***_*****A	—	—	—	—	Pulse / Frequency output	—	Current output HART	
50***_*****D	—	Status input	—	Status output	—	Pulse / Frequency output	—	Current output HART
Safety-related relevant values								
Intrinsically safe circuit	No							
U_m	260 V AC							
I_m	500 mA							
Functional values → see following Table								

Functional values of input/output circuits

Input/output circuit	Functional values
Current output HART	galvanically isolated ■ aktive: 0/4...20 mA; $R_L < 700 \Omega$, (HART $R_I \geq 250 \Omega$) ■ passive: 4...20 mA; supply voltage $V_S = 18...30$ V DC; $R_i \geq 150 \Omega$
Current output HART (IS)	galvanically isolated ■ aktive: 0/4...20 mA; $R_L < 400 \Omega$ (R_L HART $\geq 400 \Omega$) ■ passive: 0/4...20 mA; voltage drop $V \leq 9$ V DC; $R_L < (V_S - 9 \text{ V}) / 25 \text{ mA}$
Pulse/Frequency output	galvanically isolated ■ passive: Open Collector, 30 V DC, 250 mA ■ Frequency output Full scale frequency: 2...1000 Hz ($f_{max} = 1.25$ kHz) on/off ratio 1:1; pulse width max. 10 s ■ Pulse output pulse value and pulse polarity selectable pulse width configurable (0,5...2000 ms)
Pulse/Freq. output (IS)	galvanically isolated ■ passive: 30 V DC; 250 mA; $f = 0...5000$ Hz
Status output	■ galvanically isolated ■ Open Collector, max. 30 V / 250 mA
Status input	galvanically isolated $U = 3...30$ V DC; $R_i = 5 \text{ k}\Omega$

Service adapter

The service adapter is exclusively for connection to Endress+Hauser approved service interfaces.

⚠ Warning!

It is not permissible to connect the service adapter in explosive atmospheres.

Device fuse
⚠ Warning!

Use only fuses of the following types; the fuses are installed on the power supply board:

- Voltage 20...55 V AC / 16...62 V DC:
fuse 2.0 A slow-blow, disconnect capacity 1500 A
(Schurter, 0001.2503 or Wickmann, Standard Type 181 2.0 A)
- Voltage 85...260 V AC:
fuse 0.8 A slow-blow, disconnect capacity 1500 A
(Schurter, 0001.2507 or Wickmann, Standard Type 181 0.8 A)

Cable entries

Cable entries for the transmitter terminal compartment (XP version)
power supply / input /output circuit cable: (Promass 50***_*****N*****)
Choice of thread for cable entries, $\frac{1}{2}$ " NPT.

Make sure that the XP cable glands/entries are secured to prevent working loose.

Technical data

Dimensions

Differences in dimensions and weight due to the use of an XP housing:

- Height + 0.6 inch more than the standard version (see Technical Information)
- Weight + approx. 4.4 lbs more than the standard version (see Technical Information)

Note!

Applicable "Technical Information":

- Promag 50/53 H → TI048D
- Promag 50/53 P → TI047D
- Promag 50/53 W → TI046D

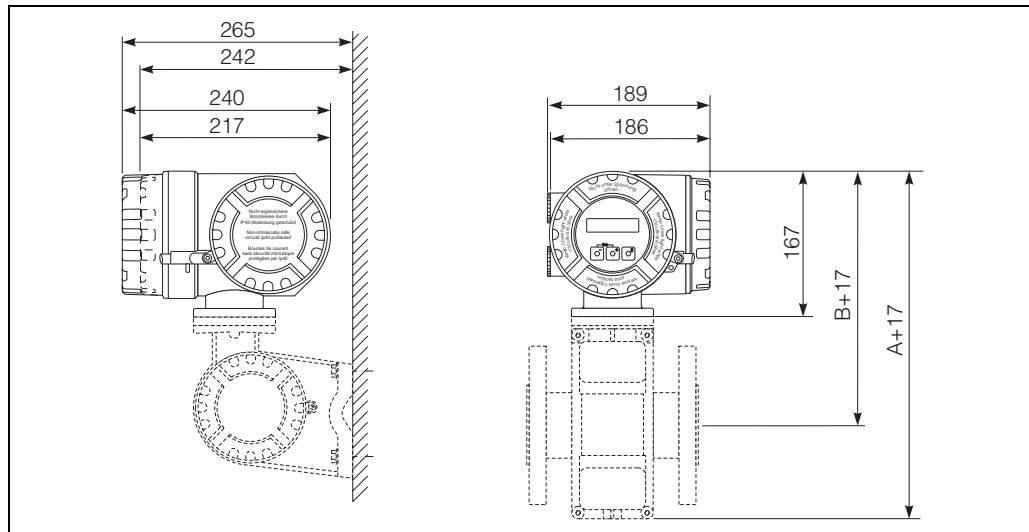

Fig. 3: Dimensions of the Ex-transmitter housing

Device identification

Transmitter Promag 50 and W/H/P sensor.

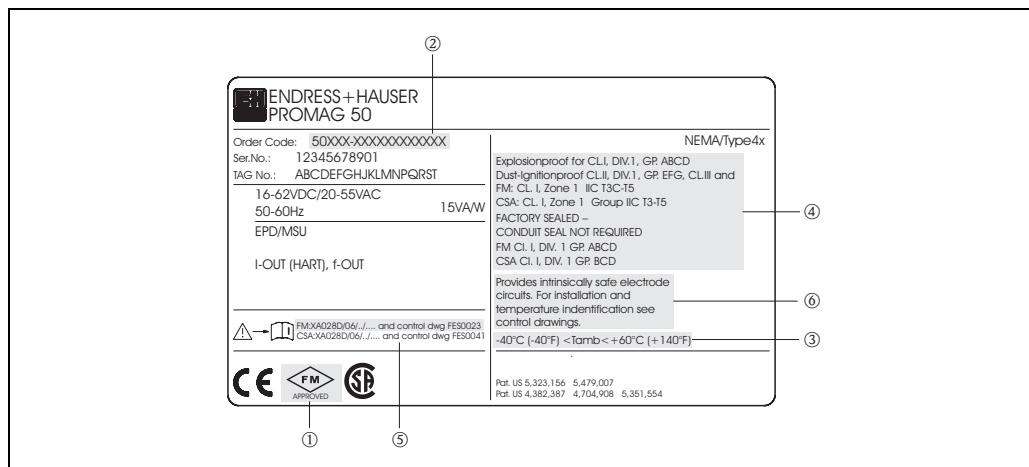

Fig. 4: Nameplate of transmitter and nameplate of sensor (example)

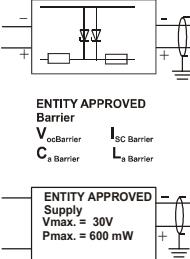

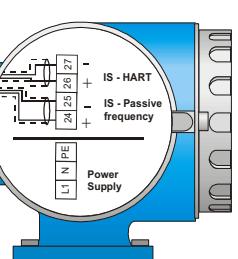

- 1 Label of the notified body: Factory Mutual Research
- 2 Type code
- 3 Ambient temperature range
- 4 Type of protection and explosion group for the measuring system
- 5 Applicable Ex documentation
- 6 Warning

Control drawings

Endress+Hauser Reinach hereby declares that the product is in conformity with the requirements of the FACTORY MUTUAL standards.

	DN 25...300 (polyurethan)	50	60	60	60	60

Note!

- At the specified medium temperatures, the equipment is not subjected to temperatures impermissible for the temperature class in question.
- Determine the temperature class dependent on the ambient temperature and the medium temperature.
- The minimum ambient temperature is -20 °C. A version for ambient temperatures up to -40 °C is optionally available.

Aprovals

Nr. / Approval type	Description
160686-1006421 (Special notes, see Page 16)	for the electric flow measuring system Proline Promag 50 Identification: Explosionproof and Dust-Ignitionproof for – Class I, Groups ABCD oder Class I, Zone 1, Group IIC – Class II, Groups EFG – Class III

Promag 50 P	DN 15...300
Promag 50 W	DN 25...300
see description above	

Notified body

The measuring system was tested for approval by the following named entity:
CSA (Canadian Standards Association)

Special conditions

1. The flowmeter must be integrated into the potential equalisation system. Potential must be equalized along the intrinsically safe sensor circuits.
2. Control room equipment shall not use or generate more than 250 V rms.
3. Ratings for devices connected to terminals Nos. 26 to 27 of the transmitter must not exceed $U_m = 250$ V and $I_m = 500$ mA. It is impermissible to connect devices with higher ratings to these terminals (Does not apply to Promag 5****_*****S/T with intrinsically safe output circuits).

Caution!

4. Use supply wires suitable for 5 °C above ambient temperature, but at least for 80 °C.
5. Class II Group G: The surface temperature of the apparatus cannot exceed 165 °C.
6. Transmitter enclosure G02 explosionproof for use in Cl. I Div. 1 Groups A, B, C, D (Seal not required for Groups B, C and D) and dust-ignition proof for Class II, III Div. 1 Groups E, F, G.
7. It is not permissible to connect the service adapter while area is known to be hazardous.
8. Install per Canadian Electrical Code. Intrinsically safe circuits per CEC Part 1, Section 18 and Appendix F, respecting the explosionproof integrity of the enclosure.

Warning!

9. Substitution of components may impair intrinsic safety.

General warnings

Warning!

- Installation, connection to the electricity supply, commissioning and maintenance of the devices must be carried out by qualified specialists trained to work on Ex-rated devices.
- Compliance with national regulations relating to the installation of devices in potentially explosive atmospheres is mandatory, if such regulations exist.
- Open the device only when it is de-energized (and after a delay of at least 10 minutes following shutdown of the power supply).
- The housing of the Ex-rated transmitter can be turned in 90° steps. Whereas the non-Ex version has a bayonet adapter, however, the Ex version has a thread. Recesses for centering the worm screw are provided to prevent inadvertent movement of the transmitter housing. It is permissible to turn the transmitter housing through a maximum of 180° during operation (in either direction), without compromising explosion protection. After turning the housing the worm screw must be tightened again.
- The screw cap has to be removed before the local display can be turned, and this must be done with the device de-energized (and after a delay of at least 10 minutes following shutdown of the power supply). Be sure that the device is closed properly, before connecting it to power again.

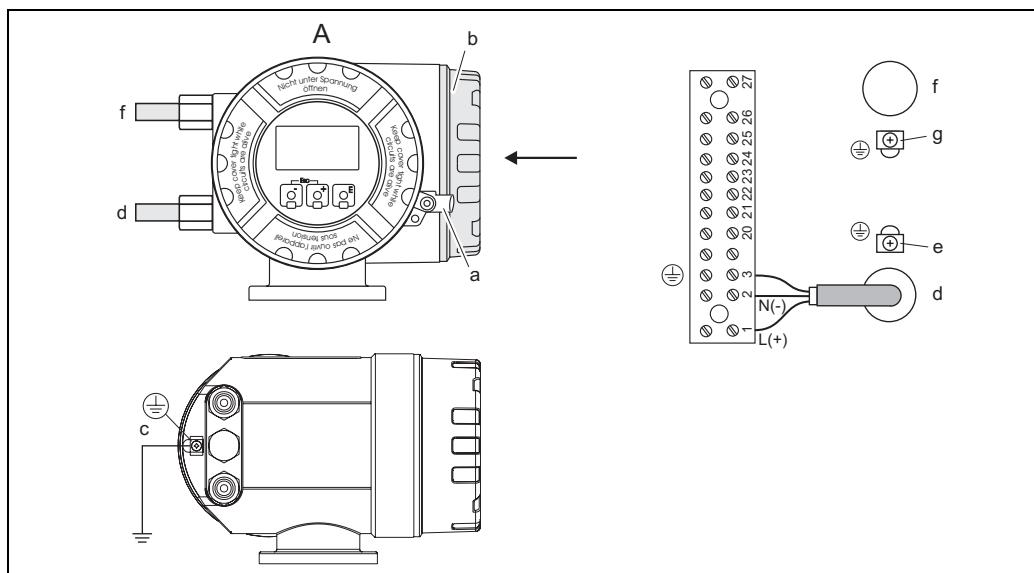

Electrical connections**Power supply**

Fig. 5: Electrical connections power supply and potential equalisation

F06-5xxxxxZZ-04-00-xx-xx-004

- A Transmitter housing, front view
 a Securing clamp
 b Connection compartment cover
 c Screw terminal for connecting to potential equalisation
 d Power supply cable
 e Ground terminal
 f Input/Output circuit cable (see Fig. 6)
 g Ground terminal

Caution!

The transmitter is to be securely connected to the potential equalization system using either the screw terminal on the outside of the transmitter housing.

The table below contains the values that are identical for all versions, irrespective of the type code:

Terminals	1 L (+)	2 N (-)	3
Designation		Power supply	Protective earth
Functional values	AC: U = 85...260 V or AC: U = 20...55 V or DC: U = 16...62 V Power consumption: 15 VA / 15 W		Caution: Follow ground network requirements for the facility!
Intrinsically safe circuit	no		
U _m	260 V AC		

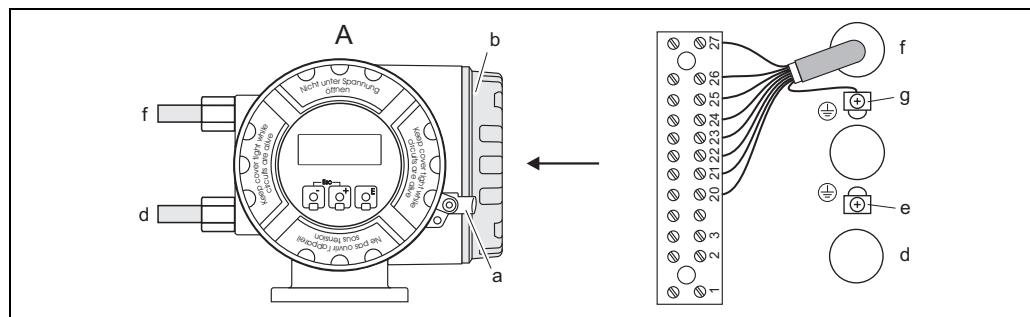

Input/output circuit

Fig. 6: Electrical connections input/output circuit cable

- A Transmitter housing, front view
a Securing clamp
b Connection compartment cover
c – (see Fig. 5)
d Power supply cable (see Fig. 5)
e Ground terminal
f Input/Output circuit cable
g Ground terminal

F06-5xxxxxZZ-04-00-xx-xx-005

⚠ Note!

The table below contains the values which depend on the type code (type of device). Always remember to compare the type code in the table with the code on the nameplate of your device.

Terminal assignment of input/output circuits with am intrinsically safe circuit**⚠ Note!**

If multiple intrinsically safe outputs are fed through one cable gland, the twisted pairs must be individually shielded.

Promag 50***-*****S

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***-*****S	–	–	Pulse / Frequency output (IS)	Current output HART, active (IS)				
Safety-related relevant values								
Intrinsically safe circuit				yes			yes	
U_{oc}				–			21.8 V DC	
I_{sc}				–			90 mA	
P_{max}				–			490 mW	
L_a				–			4.1 mH	
C_a				–			150 nF	
V_{max}				30 V DC			30 V DC	
I_{max}				300 mA			10 mA	
P_{max}				600 mW			0.3 W	
L_i				0			0	
C_i				6 nF			6 nF	
Functional values → see table “Functional values of input/output circuits” on Page 19								

Promag 50***-*****T

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***-*****T	–	–	Pulse / Frequency output (IS)	Current output HART, passive (IS)				
Safety-related relevant values								
Intrinsically safe circuit				yes			yes	
V_{max}				30 V DC			30 VDC	
I_{max}				300 mA			100 mA	
P_{max}				600 mW			1.25 W	
L_i				0			negligible	
C_i				6 nF			6 nF	
Functional values → see table “Functional values of input/output circuits” on Page 19								

Terminal assignment of input/output circuits

Type code	20 (+)	21 (-)	22 (+)	23 (-)	24 (+)	25 (-)	26 (+)	27 (-)
50***_*****W	—	—	—	—	—	—	Current output HART	
50***_*****A	—	—	—	—	Pulse / Frequency output	—	Current output HART	
50***_*****D	—	Status input	—	Status output	—	Pulse / Frequency output	—	Current output HART
Safety-related relevant values								
Intrinsically safe circuit	No							
U_m	260 V AC							
I_m	500 mA							
Functional values → see following Table								

Functional values of input/output circuits

Input/output circuit	Functional values
Current output HART	galvanically isolated ■ aktive: 0/4...20 mA; $R_L < 700 \Omega$; (HART $R_t \geq 250 \Omega$) ■ passive: 4...20 mA; supply voltage $V_S = 18...30$ V DC; $R_i \geq 150 \Omega$
Current output HART (IS)	galvanically isolated ■ aktive: 0/4...20 mA; $R_L < 400 \Omega$ (R_L HART $\geq 400 \Omega$) ■ passive: 0/4...20 mA; voltage drop $V \leq 9$ V DC; $R_L < (V_S - 9 \text{ V}) / 25 \text{ mA}$
Pulse/Frequency output	galvanically isolated ■ passive: Open Collector, 30 V DC, 250 mA ■ Frequency output Full scale frequency: 2...1000 Hz ($f_{max} = 1.25$ kHz) on/off ratio 1:1; pulse width max. 10 s ■ Pulse output pulse value and pulse polarity selectable pulse width configurable (0,5...2000 ms)
Pulse/Freq. output (IS)	galvanically isolated ■ passive: 30 V DC; 250 mA; $f = 0...5000$ Hz
Status output	■ galvanically isolated ■ Open Collector, max. 30 V / 250 mA
Status input	galvanically isolated $U = 3...30$ V DC; $R_i = 5 \text{ k}\Omega$

Service adapter

The service adapter is exclusively for connection to Endress+Hauser approved service interfaces.

⚠ Warning!

It is not permissible to connect the service adapter in explosive atmospheres.

Device fuse**⚠ Warning!**

Use only fuses of the following types; the fuses are installed on the power supply board:

- Voltage 20...55 V AC / 16...62 V DC:
fuse 2.0 A slow-blow, disconnect capacity 1500 A
(Schurter, 0001.2503 or Wickmann, Standard Type 181 2.0 A)
- Voltage 85...260 V AC:
fuse 0.8 A slow-blow, disconnect capacity 1500 A
(Schurter, 0001.2507 or Wickmann, Standard Type 181 0.8 A)

Cable entries

Cable entries for the transmitter terminal compartment (XP version)
power supply / input/output circuit cable: (Promass 50***_*****N*****)
Choice of thread for cable entries, $\frac{1}{2}$ " NPT.

Make sure that the XP cable glands/entries are secured to prevent working loose and that the seals are installed immediately adjacent to the housing, if required.

Technical data

Dimensions

Differences in dimensions and weight due to the use of an explosionproof housing:

- Height + 15 mm more than the standard version (see Technical Information)
- Weight + approx. 2 kg more than the standard version (see Technical Information)

⚠ Note!

Applicable "Technical Information":

- Promag 50/53 H → TI048D
- Promag 50/53 P → TI047D
- Promag 50/53 W → TI046D

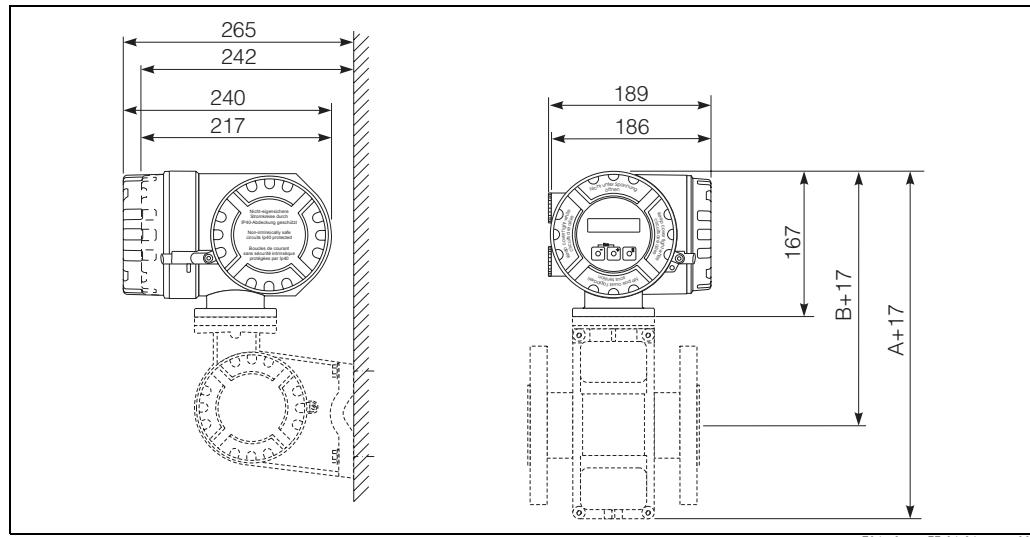

Fig. 7: Dimensions of the Ex-transmitter housing

Device identification

Transmitter Promag 50 and W/H/P sensor.
