1 Safety Instructions

Safe and secure operation of the unit can only be guaranteed if the operating instructions and all safety notes are read, understood and followed.

1.1 Approved usage

The Liquiphant M FTL50H and FTL51H is designed for level limit detection in liquids. If used incorrectly, it is possible that application-related dangers may arise. The level limit switch Liquiphant M FTL50H and FTL51H may be installed, connected, commissioned, operated and maintained **by qualified and authorized personnel only**, under strict observance of these operating instructions, any relevant standards, legal requirements, and, where appropriate, the certificate.

1.2 Safety pictograms and symbols

Safe and reliable operation of this unit can only be guaranteed if the safety hints and warnings in these operating instructions are followed. The safety hints in these instructions are highlighted using the following symbols:

Caution!

This symbol indicates activities and actions that, if followed incorrectly, could lead to faulty operation or even damage to the unit.

Note!

This symbol indicates activities and actions that, if followed incorrectly, could have an indirect influence on the unit operation or could lead to an unforeseen unit reaction.

Warning!

This symbol indicates activities and actions that, if followed incorrectly, could lead to personal injury, a safety hazard, or destruction of the instrument.

Hazardous area, certified equipment!

If this character is shown on the unit, then it may be operated in hazardous areas.

Non-hazardous area!

This symbol identifies the non-hazardous areas in these instructions. Units that operate in the non-hazardous areas but that are connected to the hazardous areas must also be certified.

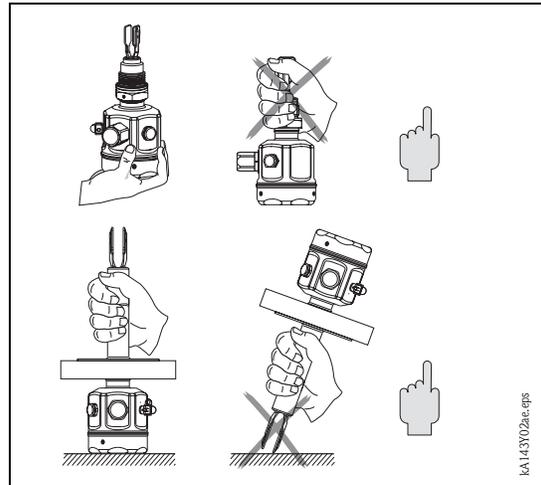

Warning!(For Intrinsically Safe Units)

Installation shall be in accordance with the National Electrical Code (ANSI/NFPA 70) and ANSI/ISA RP 12.6, "Wiring Practices for Hazardous (Classified) Locations, Instrumentation Part I: Intrinsic Safety".

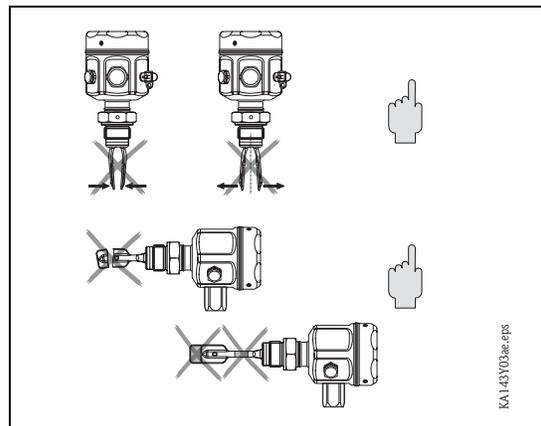

Liquiphant M has been tested for pharmaceutical, food and dairy processing, earning EHEDG certificates, and meeting 3-A Sanitary Standards.

1.3 Handling

Hold by housing, flange or extension tube

Do not bend.
Do not shorten.
Do not lengthen

7 Troubleshooting

Fault	Reason	Remedy
Does not switch	No power	Check power
	Faulty signal line	Check signal line
	Faulty electronic insert – FEL51 connected directly to L1 and N	Exchange – always connect FEL51 via external load
	Density of liquid too low	Set density to >0.5 at electronic insert
	Fork encrusted	Clean fork
	Fork corroded (Indication on FEL: red/yellow flashes, FEL58: green flashes (0.3 Hz))	Exchange fork and process connection
	FEL51: Internal resistance of connected relay too large	Connect suitable relay
	FEL51: Holding current of connected relay too low	Connected resistor in parallel with relay
	FEL54: Contacts welded together (after short-circuit)	Exchange FEL54; put fuse in contact circuit
Switches incorrectly	Min-/Max- fail-safe mode set wrong	Set correct mode at electronic insert

Fault	Reason	Remedy
Sporadic faulty switching	Thick heavy foam, very turbulent conditions, foaming liquid	Mount Liquiphant in bypass
	Extreme RFI	Use shielded cable
	Extreme vibration	Decouple, damp, turn fork 90°
	Water in housing	Screw cover and cable gland tight
	FEL52: Output overloaded	Reduce load, (cable) capacitance
Switches incorrectly after power failure	FEL57: behavior during switch-on test (functional test)	Observe switching behavior of FEL57; after power failure block plant control for up to 45 s

Troubleshooting Supplement

If the switching behavior of the fork is abnormal, the fork frequency can be measured at PIN 4 of the diagnosis socket. With electronic inserts FEL 51/52/54/55/56/57/58, this is a sinusoidal vibration whose amplitude makes it possible to determine the condition of the fork.
