## Technical Information

### Temperature Converter RCV-NMT NCT530

#### NCT530-7 External type

#### Application

Convert resistance temperature detection (RTD) signal to HART®.

Typical multi-core RTD sensors

- RCV11 (RCV1100)
- RCV12 (RCV1200)

#### Features and benefit

- Enables migration to HART® transmitter while continuing use of existing RTD average temperature sensor
- Digital HART® output to transmitters
- E.g. Proservo NMS5/NMS7
- E.g. Tank Side Monitor NRF590

## Function and system design

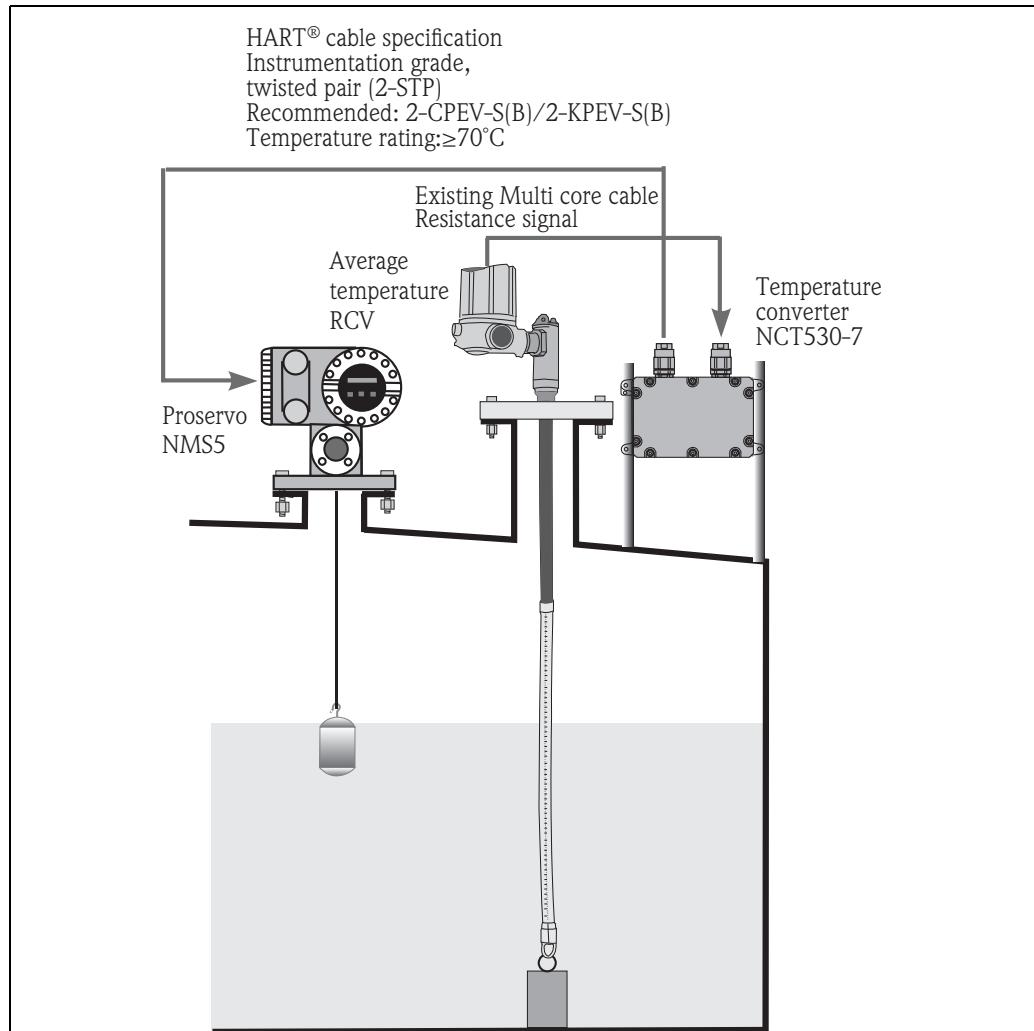

### Existing system layout

Existing device configurations may include legacy average temperature sensors such as RCV11 (RCV1100), RCV12 (RCV1200), which are connected to TGM3000 or TGM4000 servo gauge transmitters. The RTD signal from RCV11/RCV12 is input directly into TGM3000/TGM4000, where the signal is converted to digital or analog 4-20mA signal. In this case up to 12 cores may extend between the average temperature sensor and the transmitter.

### NCT530 system layout

NCT530 is useful when the existing transmitter is upgraded to a HART® input device, but the RTD average temperature sensor continues in place. For example, TGM4000 is upgrade to NMS5 Proservo, but the existing RCV12 cannot be replaced because the tank is in operation. In this case, NCT530 provides signal conversion, from RTD out put of RCV to HART® input for NMS5 Proservo.

## Input

---

<b>Temperature signal</b>	Maximum 10x JPt or Pt100
---------------------------	--------------------------

## Output

---

<b>Converted Temperature signal</b>	2-wire digital HART®
-------------------------------------	----------------------

## Auxiliary Energy

---

<b>Supply voltage</b>	DC16V~DC30V
-----------------------	-------------

---

<b>Power consumption</b>	6mA
--------------------------	-----

---

<b>Grounding</b>	The NCT530 must be grounded to the tank potential before communication and power connections are made. The connections ( $A \geq 4\text{mm}^2$ ) from each outer ground plug of the NCT530 to the tank ground must be made before any other wiring connections are made. All grounding must be compliant with local and company regulations and checked before the equipment is commissioned.
------------------	---

## Performance Characteristics

---

<b>Reference operating conditions</b>	Measuring range -50 to +200C°
---------------------------------------	-------------------------------

---

<b>Conversion accuracy</b>	$\pm 0.15\text{C}^\circ$ ( $\pm 0.27\text{F}^\circ$ )
----------------------------	---

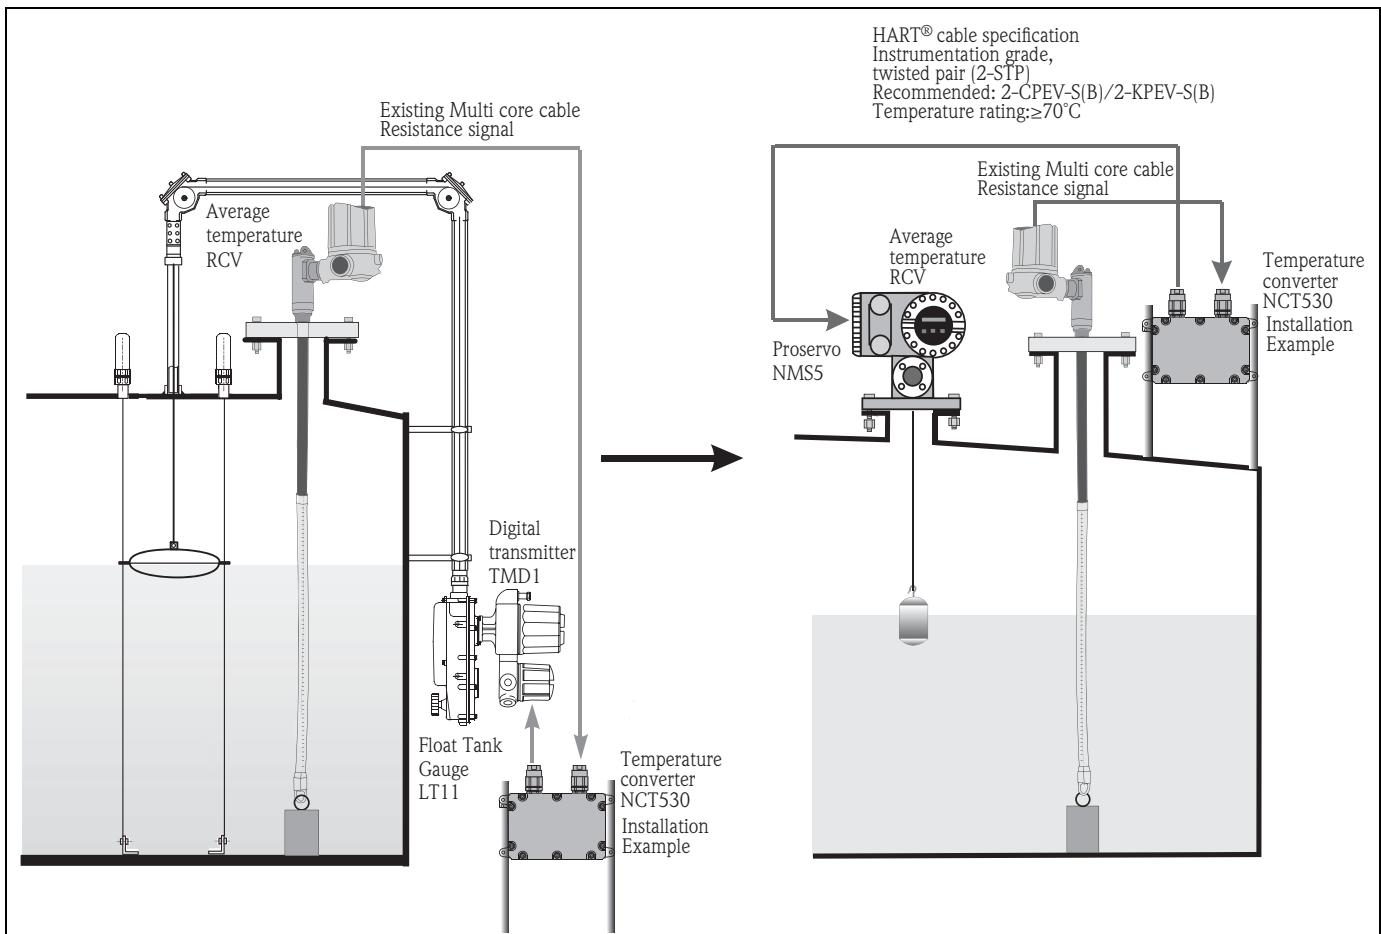

## Ambient conditions

---

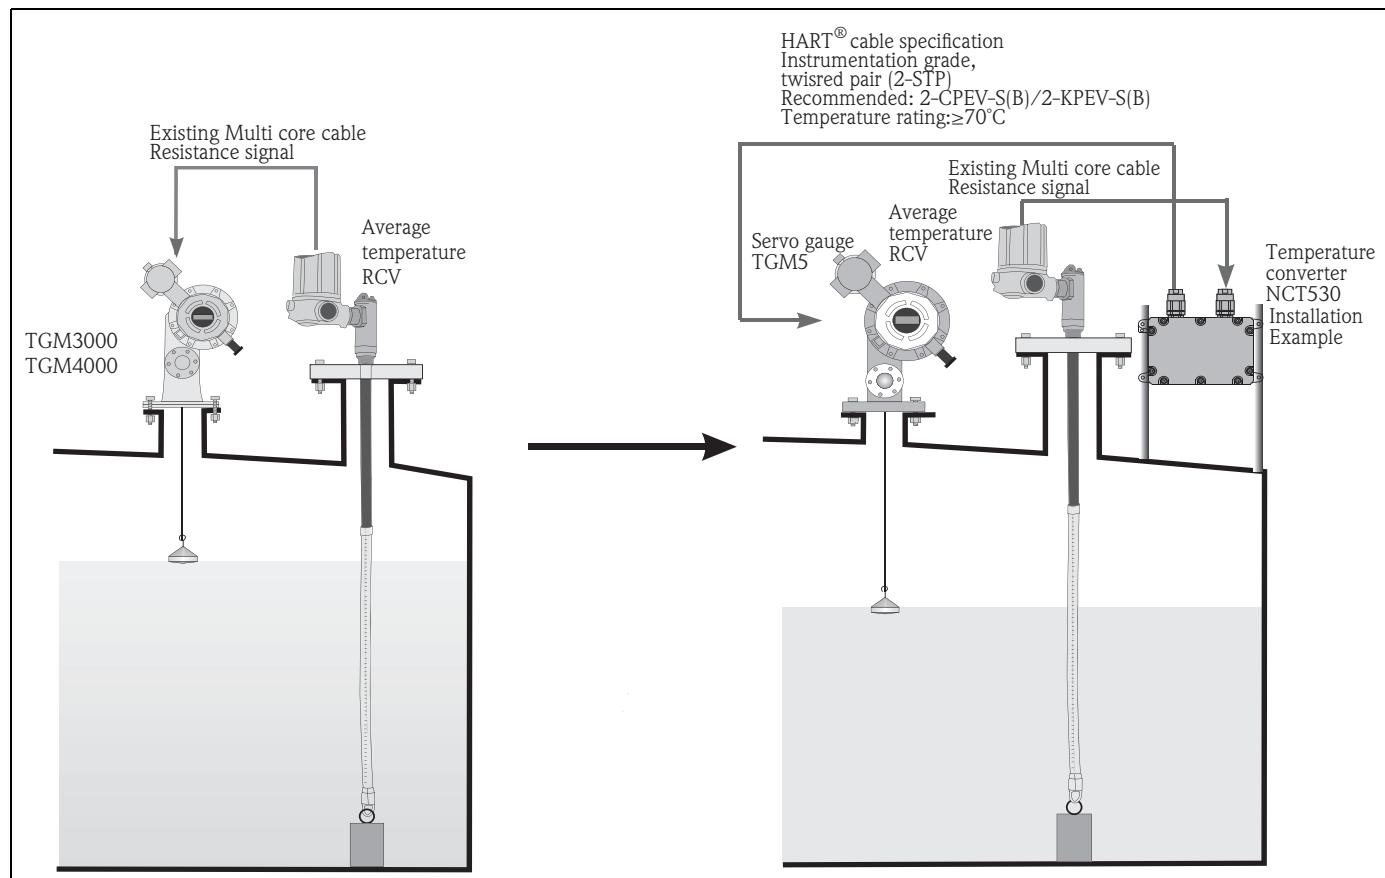

<b>Ambient temperature range</b>	-20 to +60 C°
----------------------------------	---------------

## Operating conditions

### System Overview with Proservo (Flameproof enclosures "d")
