

Technical Information t-trend – ATT12

Thermal flow Flow monitor for liquids and gases

Applications

- Dry run pump protection
- Trending of water distribution
- Monitoring of pump function
- Monitoring of air distribution

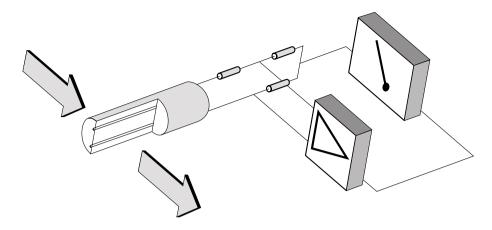

Your benefits

- Nominal diameters from DN40
- Suitable for liquids and gases
- No moving parts reduced maintenance
- Wide selection of process connections
- Wide dynamic range
- EHEDG approved. Meets 3A requirements
- cCSAus general approval

Measuring principle

Thermal technology is a well established operating principle in the process industry used on a wide variety of applications. It operates by monitoring the cooling effect of a fluid stream as it passes over a heated transducer (RTD). The fluid flows over two RTD elements, one of which senses the actual fluid temperature and provides a reference whilst the other is heated to ensure a constant differential temperature above the fluid temperature. The applied power needed to maintain this differential is proportional to the mass flow of the fluid.

Applications

Process plant	 Dry run protection for pumps Control of cooling systems for pumps, turbines, compressors and heat exchangers 				
Chemical industry	Chemical dosingMonitoring pump function				
Water treatment	 Status indication of valves in water distribution systems Chemical dosing Air injection 				
Beverage industry	Filter controlMonitoring cleaning processes				
Dairy industry	 Cooling systems in refrigeration plants 				

Performance and selection

Sensor type

Note:

Liquid	[flat-face]
--------	-------------

Figures referenced to water Ranged 2m/sec or 3m/sec Response time: 5 sec rising < 5 sec falling (0-66% step change)

Operates from 0.1m/sec

Gas (probe)

Figures referenced to air Ranged 0-50Nm/sec Response time: 15 sec rising 10 sec falling (0-66% step change)

Conversion to Nm/sec (velocity at normalised conditions)

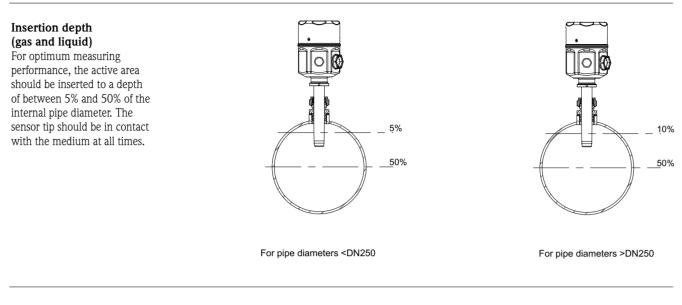

Flow (Kg/hr)	Х	353.68 (Constant)
normal density of gas (K	g/m ³⁾	d² pipe dia (mm)
$=\frac{500}{1.293}$	Х	$\frac{353.68}{54^2}$
(density of air at 0°C+1.0 = 46.9Nm/sec	013bar A) (Ex	ample 2" pipe)

Example: to convert 350 Nm³/hr in 50mm NB pipe to Nm/sec Flow (Nm³/hr) 353.68 (Constant)

	d² pipe dia (mm)
= 350	$\frac{353.68}{54^2}$
= 44.145Nm/sec	5-

 $Normal = 0^{\circ}C + 1.013bar A$

Mounting and installation

IP protection guideline

- Housing gasket must be clean and undamaged prior to tightening the lid
- The cables used for connecting must have the correct outer diameter to suit the cable gland seal
- The cable gland must be firmly tightened
- The cable must loop down before entering the cable gland to ensure that no moisture can enter it (fig 1)
- Any cable glands not used are to be replaced with a blind plug
- The protective bush should not be removed from the cable gland

Planning and installation guidelines

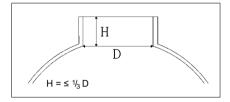

Planning and installation guidelines

Sensor

- Each process connection has an orientation mark. This should be positioned in line facing the oncoming flow
- Sensor should be installed so that the sensing surface is in contact with the flowing medium at all times
- There is an allowed orientation tolerance of +/- 5° from centre
- For liquids, ensure full pipe
- Avoid mounting device where exposure to extreme ambient temperature change occurs, i.e. direct sunlight
- Avoid applications with large process temperature changes
- For gases, avoid areas where condensate collects

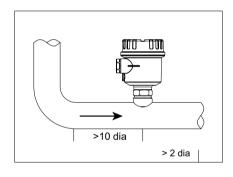

Sanitary sensor

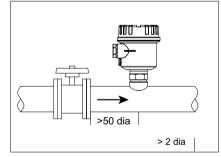

• It is the responsibility of the user to ensure that the volume enclosed by the mounting boss has sufficient dimensions to ensure adequate cleaning takes place Flow 5°-

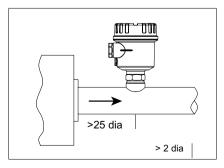

Mounting and installation (Good Engineering Practice guidelines) Avoid installing in areas of extreme flow turbulence. For example:

- Directly after bends or expansions/reductions
- Directly downstream of isolation and control valves
- Directly after pumps, fans and compressors
- 1. All downstream dimensions are provided only as a guideline and wherever possible greater dimensions should be considered
- 2. The devices will work if installed closer to or even on the bend but overall performance will be impaired

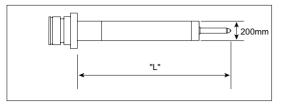

Note:

Insertion sensor

Process connection Extended sensor

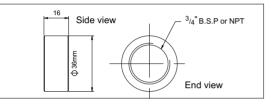

Dimensions of extended versions (L in mm)

Sensor option	Insertion 125mm	Insertion 235mm
Flat-face	125	235
Probe	125	235

Mounting boss

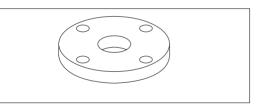

For BSP and NPT threads

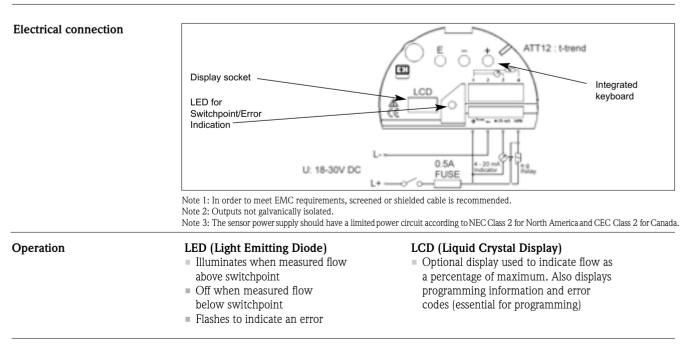

Accessories

Threaded flanges ³/₄" NPT thread for mounting

Process connection

Process connection	Dimensions with liquid sensor	Dimensions with gas sensor	Process limits
BSP ³ /4" (G)			max 25 bar A max 80ºC
³ /4" NPT			max 25 bar A max 80ºC
Sanitary coupling DN40 DN50 to DIN 11851	29.5		max 25 bar A max 80ºC
Varivent DN50			max 10 bar A max 80ºC
Triclamp 1 ¹ / ₂ " 2" ISO 2852			max 16 bar A max 80 ⁰ C
Aseptic coupling DN50 to DIN 11864			max 25 bar A max 80ºC

All dimensions in mm For extended insertion sensor supplied with compression fitting: 20 bar A at 20°C

Technical data

Process conditions	 Nominal process diameters from DN40 Process pressure range: 25 Bar A (process fitting dependent) Process temperature range: -10 to +80°C (For temperatures in excess of 80°C please contact your local E+H representative)
Materials	 Meter body: 1.4404/1.4435/316L Transducers: 1.4404/1.4435/316L Polyester housing: PBT-FR (polyester) with cover in PBT-FR or with transparent cover in PA 12, seal of cover; EPDM Steel housing: 1.4301 (AISI 304), seal of cover; silicone Cable gland: polyamide Hastelloy C (available on request) Aluminium housing (available on request)
Process connections	 Parallel thread BSP ³/₄" (includes brass ³/₄" compression fitting for insertion sensors only) Tapered thread ³/₄" NPT (includes brass ³/₄" compression fitting for insertion sensors only) Sanitary coupling DN40, 50 to DIN 11851 Varivent DN50 to factory standard Tuchenhagen Triclamp 1¹/₂", 2" to ISO 2852 Aseptic coupling DN50 to DIN 11864 Optional: Stainless Steel compression fitting for insertion sensors
Performance limits	 Accuracy: ± 5% of factory full scale Repeatability: ± 1% of factory full scale Response time, flat-face: 5 sec rising, < 5 sec falling Response time, probe: 15 sec rising, 10 sec falling Flow ranges liquid: 2m/sec or 3m/sec ref. to water (see page 2) Flow ranges gas: 50Nm/sec ref. to air
Human interface	 Integrated keyboard. Red LED to indicate switching status, flashes under fault condition Optional display: 4 numeric characters with bar graph
Electrical	 Power supply: 18-30V AC/DC (~) 50/60 Hz Power consumption: <3W The sensor power supply should have a limited power circuit, according to NEC Class 2 for North America and CEC Class 2 for Canada Current output: 4-20mA active output and NPN open collector max rating 30VDC/50mA (output shares common +ve of power supply rail)
Environment	 Storage temperature range: -20 to +80°C (without LCD) Ambient temperature range: -10 to +60°C (without LCD) Degree of protection: polyester and steel housings: IP66 to EN 60529 Vibration resistance: up to 1g, 10150Hz to IEC 60068-2-6 Shock resistance: to IEC 60068-2-31 Electromagnetic compatibility (EMC): IEC 801 part3: E = 10V/m (30MHz1GHz)
Approvals	 EHEDG, all wetted materials FDA listed. Meets the requirements of 3A cCSAus general approval Installation (overvoltage) category 2 Pollution degree 2
