* |t| = absolute value °C. For measurement errors in °F, calculate using equation above in °C, then multiply the outcome by 1.8.

Dielectrical strength
The units are factory tested with 850 VDC for one second between live parts (leads/terminals) and exposed non-current-carrying metal parts (e.g. insert sheath).

Supplementary documentation
All important Temperature Operating Instructions, particularly with regard to head and field transmitters are available on CD–ROM, find enclosed or order by order number: SONDTT-AG.

Compact Instructions

Explosion proof RTD assembly in flanged Thermowell T14

Measuring System
Explosion proof RTD assembly in flanged Thermowell with spring loaded insert and enclosure for process industry.

The Pt100 RTD is specifically designed for use in two different process temperature ranges:
- Low range RTD: -58 °F to 392 °F
- High range RTD: -328 °F to 1112 °F

Performance Instructions

Performance instructions must be followed.

1. Install the unit according to the relevant NEC Code and local regulations.
2. Avoid any spark due to impact, friction and installation. Anti-sparking wrenches should be utilized.
3. Approved apparatus must be installed in accordance with manufacturer’s instructions, see corresponding Control Drawing.
4. Always refer to the relevant NEC Code and local regulations.

Installation Guidelines and Safety instructions

The accessories for pipe connections and the appropriate gaskets and sealing rings are not supplied with the sensors. These are the customer’s responsibility.

Depending on the position and pressure operating conditions of the head, the gaskets, the gasket grooves and the applicable torques must be selected by the user. The unit is constructed using the most up to date production equipment and complies with the safety requirements of the local guidelines. However, if it is installed incorrectly or misused, certain application dangers can occur. Installation, wiring and maintenance of the unit must only be completed by trained, skilled personnel who are authorized to do so by the plant operator. The plant operator must make sure that the measurement system has been correctly wired to the connection schematics. Procedures indicated in these instructions must be followed.

Returns

Please follow the Return Authorization Policy which is attached with this manual.

Safety pictograms and symbols

Notes draw attention to activities or procedures that can have a direct influence on operation. If activities or procedures are not carried out.

Cautions draw attention to activities or procedures that can lead to persons being seriously injured, to safety risks or to the destruction of the device if they are not carried out.

Important Notice

Electrical shock could cause death or serious injury. If the sensor is installed in a high voltage environment and a fault or installation error occurs, high voltage may be present on the connection terminals or the probe itself.

Safe and secure operation of the temperature sensor can only be guaranteed if the operating instructions of the used transmitters and all included safety notes are read, understood and followed. For Endress+Hauser temperature transmitters see enclosed CD–ROM.

Correct use

The manufacturer cannot be held responsible for damage caused by misuse of the unit. The installation conditions and connection values indicated in the operating instructions must be followed.

Instructions might be changed.

Dimensions

with spring loaded insert and self contained nipple (dimensions in inches).

Example of installation. In pipes of a small section the axis line of the duct must be reached and if possible slightly exceed by the tip of the probe (=U).

A: Pipe installation
B: Container installation

For installation proceed as follows:
1. Attach thermowell to pipe or process container wall.
2. Install and tighten the Thermowell before applying process pressure.
3. Make sure that the process fitting matches the maximum specified process pressure.
4. Seal the extension nipples with TFE tape before screwing the sensor into the thermowell.
5. Thermowells are used in measuring the temperature of a moving fluid in a conduit, where the stream exerts an appreciable force. The limiting value for the thermowells is governed by the temperature, the pressure and the speed of the medium, the immersion length, the materials of the thermowell and the medium, etc.

For operating conditions, a stress calculation should be carried out.

Electrical connection-wiring diagrams

Head or field transmitter mounted (3”or 5½” flying leads - crimped sleeves)

1. Attach thermowell to pipe or process container wall.
2. Install and tighten the Thermowell before applying process pressure.
3. Make sure that the process fitting matches the maximum specified process pressure.
4. Seal the extension nipples with TFE tape before screwing the sensor into the thermowell.
5. Thermowells are used in measuring the temperature of a moving fluid in a conduit, where the stream exerts an appreciable force. The limiting value for the thermowells is governed by the temperature, the pressure and the speed of the medium, the immersion length, the materials of the thermowell and the medium, etc.

For operating conditions, a stress calculation should be carried out.

Terminal block mounted (3” flying leads - fork lugs)

The blocks and transmitters are shown as they will sit inside the heads in reference to the conduit opening. ALWAYS terminate leads to the outside screw.

Flange rating: ASME B16.5

Material: Steel or 316SS

Recommended minimum immersion for thermowell:

Tapered TW = 4½”

Straight TW = 4”

Technical data

Weight
From 1 to 10 lbs

Material
316SS (Wetted parts)

Shock and vibration resistance
4g/2 to 150 Hz as per IEC 60 068-2-6

Ambient temperature limits*

Housing without head-mounted transmitter

Aluminium pressure die-cast housing
-58 to 212 °F (-50 to 100 °C)

Stainless steel housing
-58 to 212 °F (-50 to 100 °C)

Housing with head-mounted transmitter

All types of housing
-40 to 185 °F (-40 to 85 °C)

Field transmitter

with display
-40 to 158 °F (-40 to 70 °C)

without display
-40 to 185 °F (-40 to 85 °C)

*For hazardous areas refer to the transmitter control drawing

Spare part insert, TU111. For replacement with additional option code (XP spare part) need to be used to assure approved classification, please contact Endress+Hauser!
