# 1 Document information

## 1.1 Document function

The document is part of the Operating Instructions and serves as a reference for parameters, providing a detailed explanation of each individual parameter of the Expert operating menu.

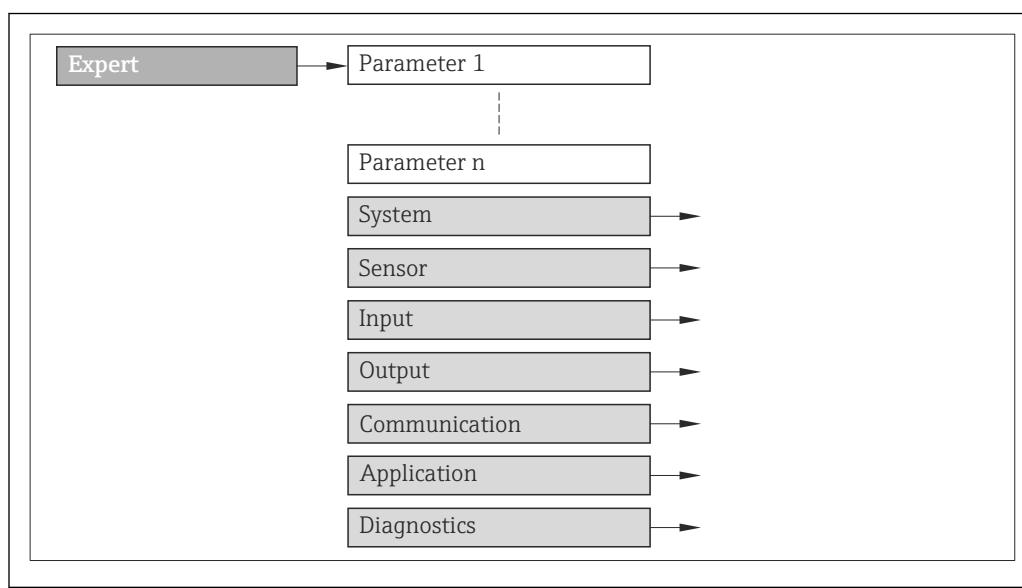

## 1.2 Target group

The document is aimed at specialists who work with the device over the entire life cycle and perform specific configurations.

## 1.3 Using this document

### 1.3.1 Information on the document structure

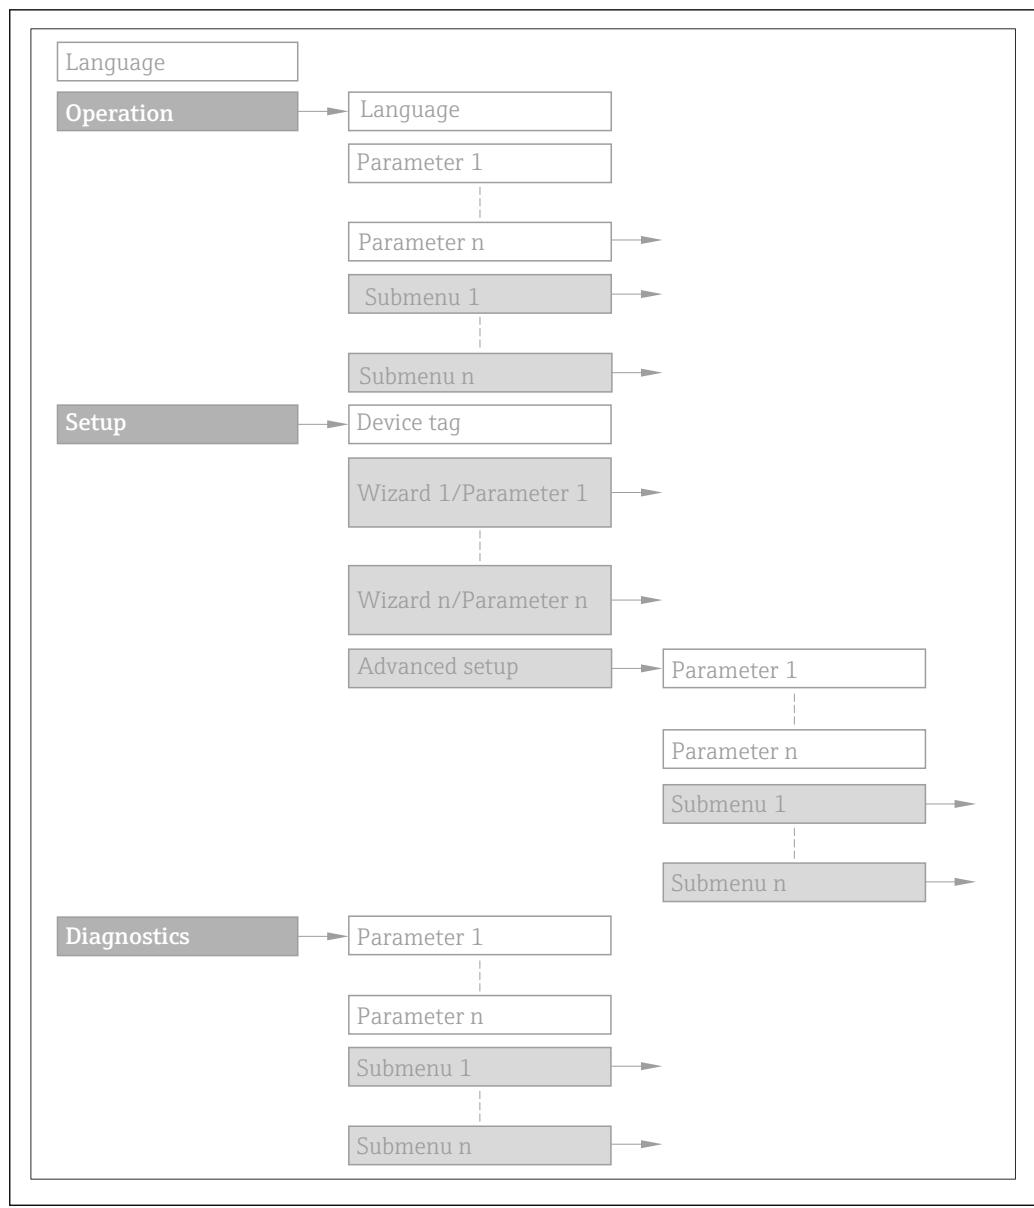

This document lists the submenus and their parameters according to the structure of the **Expert** menu (→ 8) that are available once the "**Operator**" user role or the "**Maintenance**" user role is enabled.

A0022576-EN

1 Sample graphic

For information on the arrangement of the parameters according to the structure of the **Operation** menu, **Setup** menu, **Diagnostics** menu (→ 86), along with a brief description, see the Operating Instructions for the device.

2 Sample graphic

 For information about the operating philosophy, see the "Operating philosophy" chapter in the device's Operating Instructions

### 1.3.2 Structure of a parameter description

The individual parts of a parameter description are described in the following section:

Complete parameter name	Write-protected parameter = 
<b>Navigation</b>	 Navigation path to the parameter via the local display (direct access code) or Web browser  Navigation path to the parameter via the operating tool The names of the menus, submenus and parameters are abbreviated to the form in which they appear on the display and in the operating tool.
<b>Prerequisite</b>	The parameter is only available under these specific conditions
<b>Description</b>	Description of the parameter function
<b>Selection</b>	List of the individual options for the parameter <ul style="list-style-type: none"> <li>▪ Option 1</li> <li>▪ Option 2</li> </ul>
<b>User entry</b>	Input range for the parameter
<b>User interface</b>	Display value/data for the parameter
<b>Factory setting</b>	Default setting ex works
<b>Additional information</b>	Additional explanations (e.g. in examples): <ul style="list-style-type: none"> <li>▪ On individual options</li> <li>▪ On display values/data</li> <li>▪ On the input range</li> <li>▪ On the factory setting</li> <li>▪ On the parameter function</li> </ul>

## 1.4 Symbols used

### 1.4.1 Symbols for certain types of information

Symbol	Meaning
	<b>Tip</b> Indicates additional information.
	Reference to documentation
	Reference to page
	Reference to graphic
	Operation via local display
	Operation via operating tool
	Write-protected parameter

### 1.4.2 Symbols in graphics

Symbol	Meaning	Symbol	Meaning
1, 2, 3 ...	Item numbers	A, B, C, ...	Views
A-A, B-B, C-C, ...	Sections		

## 2 Overview of the Expert operating menu

The following table provides an overview of the menu structure of the expert operating menu and its parameters. The page reference indicates where the associated description of the submenu or parameter can be found.

<b>Expert</b>	
Direct access	→ <a href="#">10</a>
Locking status	→ <a href="#">11</a>
Access status display	→ <a href="#">11</a>
Access status tooling	→ <a href="#">12</a>

▶ Min/max values	→ 98
▶ Heartbeat	→ 100
▶ Simulation	→ 101

### 3 Description of device parameters

In the following section, the parameters are listed according to the menu structure of the local display. Specific parameters for the operating tools are included at the appropriate points in the menu structure.

<b>Expert</b>	
Direct access	→  10
Locking status	→  11
Access status display	→  11
Access status tooling	→  12
Enter access code	→  13
<b>► System</b>	→  13
<b>► Sensor</b>	→  34
<b>► Communication</b>	→  71
<b>► Application</b>	→  81
<b>► Diagnostics</b>	→  86

---

#### Direct access

**Navigation**

Expert → Direct access

**Prerequisite**

There is a local display with operating elements.

**Description**

Input of the access code to enable direct access to the desired parameter via the local display. For this reason, each parameter is assigned a parameter number that appears in the navigation view on the right in the header of the selected parameter.

**User entry**

0 to 65 535

**Additional information***User entry*

The direct access code consists of a 4-digit number and the channel number, which identifies the channel of a process variable: e.g. 0914-1

- The leading zeros in the direct access code do not have to be entered.  
Example: Input of "914" instead of "0914"
- If no channel number is entered, channel 1 is jumped to automatically.  
Example: Enter 0914 → **Assign process variable** parameter
- If a different channel is jumped to: Enter the direct access code with the corresponding channel number.  
Example: Enter 0914-3 → **Assign process variable** parameter

**Locking status****Navigation**

Expert → Locking status

**Description**

Displays the active write protection.

**User interface**

- Hardware locked
- Temporarily locked

**Additional information***Display*

If two or more types of write protection are active, the write protection with the highest priority is shown on the local display. In the operating tool all active types of write protection are displayed.

If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→ 11).

*"Hardware locked" option (priority 1)*

The DIP switch for hardware locking is activated on the main electronics module. This locks write access to the parameters (e.g. via local display or operating tool).

Information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

*"Temporarily locked" option (priority 2)*

Write access to the parameters is temporarily locked on account of internal processes running in the device (e.g. data upload/download, reset etc.). Once the internal processing has been completed, the parameters can be changed once again.

**Access status display****Navigation**

Expert → Access stat.disp

**Prerequisite**

A local display is provided.

**Description**

Displays the access authorization to the parameters via the local display.

User interface	<ul style="list-style-type: none"><li>▪ Operator</li><li>▪ Maintenance</li></ul>
Factory setting	Operator
Additional information	<p><i>Description</i></p> <p>If the -symbol appears in front of a parameter, it cannot be modified via the local display with the current access authorization.</p> <p> Access authorization can be modified via the <b>Enter access code</b> parameter (→  13).</p> <p> For information on the <b>Enter access code</b> parameter, see the "Disabling write protection via access code" section of the Operating Instructions for the device</p> <p> If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the <b>Locking status</b> parameter (→  11).</p>
	<p><i>Display</i></p> <p> Information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.</p>

---

## Access status tooling

---

Navigation	  Expert → Access stat.tool
Description	Displays the access authorization to the parameters via the operating tool or Web browser.
User interface	<ul style="list-style-type: none"><li>▪ Operator</li><li>▪ Maintenance</li></ul>
Factory setting	Maintenance
Additional information	<p><i>Description</i></p> <p> Access authorization can be modified via the <b>Enter access code</b> parameter (→  13).</p> <p> If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the <b>Locking status</b> parameter (→  11).</p>
	<p><i>Display</i></p> <p> Information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.</p>

**Enter access code****Navigation** Expert → Ent. access code**Description**

Use this function to enter the user-specific release code to remove parameter write protection.

**User entry**

0 to 9 999

## 3.1 "System" submenu

*Navigation* Expert → System

 <b>System</b>	
 <b>Display</b>	→  13
 <b>Diagnostic handling</b>	→  26
 <b>Administration</b>	→  30

### 3.1.1 "Display" submenu

*Navigation* Expert → System → Display

 <b>Display</b>	
Display language	→  14
Format display	→  15
Value 1 display	→  17
0% bargraph value 1	→  17
100% bargraph value 1	→  18
Decimal places 1	→  18
Value 2 display	→  19
Decimal places 2	→  19
Value 3 display	→  20

0% bargraph value 3	→  20
100% bargraph value 3	→  21
Decimal places 3	→  21
Value 4 display	→  21
Decimal places 4	→  22
Display interval	→  22
Display damping	→  23
Header	→  23
Header text	→  24
Separator	→  24
Contrast display	→  25
Backlight	→  25
Access status display	→  25

## Display language

### Navigation

Expert → System → Display → Display language

### Prerequisite

A local display is provided.

### Description

Use this function to select the configured language on the local display.

### Selection

- English
- Deutsch \*
- Français \*
- Español \*
- Italiano \*
- Nederlands \*
- Portuguesa \*
- Polski \*
- русский язык (Russian) \*
- Svenska \*
- Türkçe \*
- 中文 (Chinese) \*
- 日本語 (Japanese) \*

\* Visibility depends on order options or device settings

- 한국어 (Korean) \*
- العربية (Arabic) \*
- Bahasa Indonesia \*
- ภาษาไทย (Thai) \*
- tiếng Việt (Vietnamese) \*
- čeština (Czech)

**Factory setting** English (alternatively, the ordered language is preset in the device)

## Format display

<b>Navigation</b>	 Expert → System → Display → Format display
<b>Prerequisite</b>	A local display is provided.
<b>Description</b>	Use this function to select how the measured value is shown on the local display.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ 1 value, max. size</li> <li>■ 1 bargraph + 1 value</li> <li>■ 2 values</li> <li>■ 1 value large + 2 values</li> <li>■ 4 values</li> </ul>
<b>Factory setting</b>	1 value, max. size
<b>Additional information</b>	<p><i>Description</i></p> <p>The display format (size, bar graph etc.) and number of measured values displayed simultaneously (1 to 4) can be configured. This setting only applies to normal operation.</p> <p> ■ The <b>Value 1 display</b> parameter (→ 17) to <b>Value 4 display</b> parameter (→ 21) are used to specify which measured values are shown on the local display and in what order.</p> <p>■ If more measured values are specified than the display mode selected permits, then the values alternate on the device display. The display time until the next change is configured via the <b>Display interval</b> parameter (→ 22).</p>

\* Visibility depends on order options or device settings

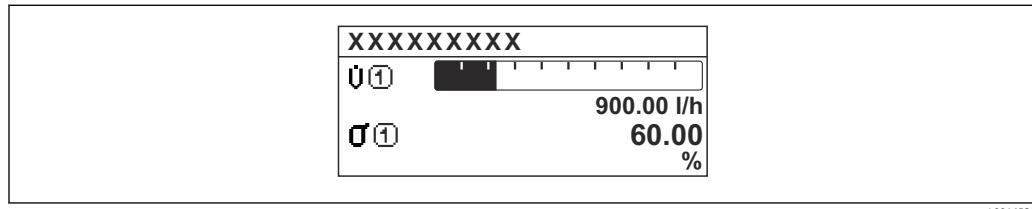

Possible measured values shown on the local display:

"1 value, max. size" option

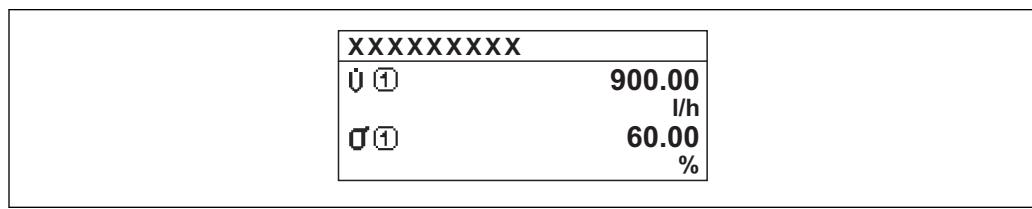

A0016529

"1 bargraph + 1 value" option

A0016530

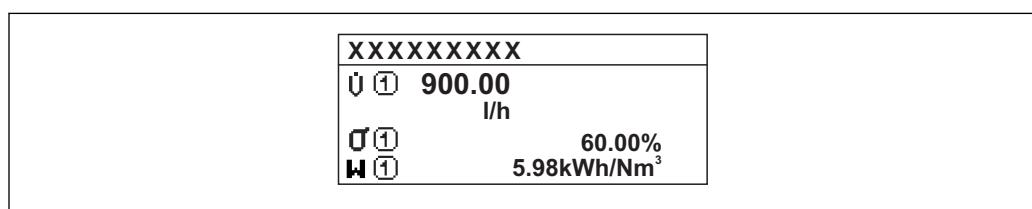

"2 values" option

A0016531

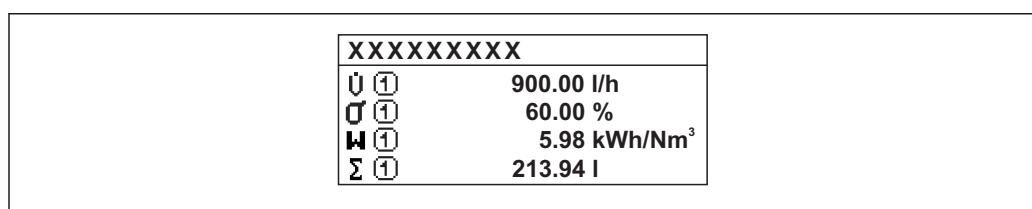

3

"1 value large + 2 values" option

A0016532

"4 values" option

A0016533

**Value 1 display**

<b>Navigation</b>	Expert → System → Display → Value 1 display
<b>Prerequisite</b>	A local display is provided.
<b>Description</b>	Use this function to select one of the measured values to be shown on the local display.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> <li>■ Flow velocity*</li> <li>■ Conductivity*</li> <li>■ Corrected conductivity*</li> <li>■ Temperature*</li> <li>■ Electronic temperature</li> <li>■ Totalizer 1</li> <li>■ Totalizer 2</li> <li>■ Totalizer 3</li> <li>■ None</li> </ul>
<b>Factory setting</b>	Volume flow
<b>Additional information</b>	<p><i>Description</i></p> <p>If several measured values are displayed at once, the measured value selected here will be the first value to be displayed. The value is only displayed during normal operation.</p> <p> The <b>Format display</b> parameter (→  15) is used to specify how many measured values are displayed simultaneously and how.</p> <p><i>Selection</i></p> <p> The unit of the displayed measured value is taken from the <b>System units</b> submenu (→  39).</p>

**0% bargraph value 1**

<b>Navigation</b>	Expert → System → Display → 0% bargraph 1
<b>Prerequisite</b>	A local display is provided.
<b>Description</b>	Use this function to enter the 0% bar graph value to be shown on the display for the measured value 1.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	Country-specific: <ul style="list-style-type: none"> <li>■ 0 l/h</li> <li>■ 0 gal/min (us)</li> </ul>

\* Visibility depends on order options or device settings

**Additional information***Description*

The **Format display** parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 39).

---

**100% bargraph value 1****Navigation**

Expert → System → Display → 100% bargraph 1

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter the 100% bar graph value to be shown on the display for the measured value 1.

**User entry**

Signed floating-point number

**Factory setting**

Depends on country and nominal diameter → 104

**Additional information***Description*

The **Format display** parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.

*User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 39).

---

**Decimal places 1****Navigation**

Expert → System → Display → Decimal places 1

**Prerequisite**

A measured value is specified in the **Value 1 display** parameter (→ 17).

**Description**

Use this function to select the number of decimal places for measured value 1.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

**Factory setting**

X.XX

**Additional information***Description*

This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

**Value 2 display****Navigation**

Expert → System → Display → Value 2 display

**Prerequisite**

A local display is provided.

**Description**

Use this function to select one of the measured values to be shown on the local display.

**Selection**

For the picklist, see the **Value 1 display** parameter (→ [17](#))

**Factory setting**

None

**Additional information***Description*

If several measured values are displayed at once, the measured value selected here will be the second value to be displayed. The value is only displayed during normal operation.

The **Format display** parameter (→ [15](#)) is used to specify how many measured values are displayed simultaneously and how.

*Selection*

The unit of the displayed measured value is taken from the **System units** submenu (→ [39](#)).

**Decimal places 2****Navigation**

Expert → System → Display → Decimal places 2

**Prerequisite**

A measured value is specified in the **Value 2 display** parameter (→ [19](#)).

**Description**

Use this function to select the number of decimal places for measured value 2.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

**Factory setting**

X.XX

**Additional information***Description*

This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

**Value 3 display**

<b>Navigation</b>	Expert → System → Display → Value 3 display
<b>Prerequisite</b>	A local display is provided.
<b>Description</b>	Use this function to select one of the measured values to be shown on the local display.
<b>Selection</b>	Picklist, see <b>Value 1 display</b> parameter (→  17)
<b>Factory setting</b>	None
<b>Additional information</b>	<i>Description</i> If several measured values are displayed at once, the measured value selected here will be the third value to be displayed. The value is only displayed during normal operation. The <b>Format display</b> parameter (→  15) is used to specify how many measured values are displayed simultaneously and how. <i>Selection</i> The unit of the displayed measured value is taken from the <b>System units</b> submenu (→  39).

**0% bargraph value 3**

<b>Navigation</b>	Expert → System → Display → 0% bargraph 3
<b>Prerequisite</b>	A selection has been made in the <b>Value 3 display</b> parameter (→  20).
<b>Description</b>	Use this function to enter the 0% bar graph value to be shown on the display for the measured value 3.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	Country-specific: <ul style="list-style-type: none"><li>▪ 0 l/h</li><li>▪ 0 gal/min (us)</li></ul>
<b>Additional information</b>	<i>Description</i> The <b>Format display</b> parameter (→  15) is used to specify that the measured value is to be displayed as a bar graph. <i>User entry</i> The unit of the displayed measured value is taken from the <b>System units</b> submenu (→  39).

---

**100% bargraph value 3**

---

<b>Navigation</b>	Expert → System → Display → 100% bargraph 3
<b>Prerequisite</b>	A selection was made in the <b>Value 3 display</b> parameter (→ 20).
<b>Description</b>	Use this function to enter the 100% bar graph value to be shown on the display for the measured value 3.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0
<b>Additional information</b>	<i>Description</i> The <b>Format display</b> parameter (→ 15) is used to specify that the measured value is to be displayed as a bar graph.  <i>User entry</i> The unit of the displayed measured value is taken from the <b>System units</b> submenu (→ 39).

---

**Decimal places 3**

---

<b>Navigation</b>	Expert → System → Display → Decimal places 3
<b>Prerequisite</b>	A measured value is specified in the <b>Value 3 display</b> parameter (→ 20).
<b>Description</b>	Use this function to select the number of decimal places for measured value 3.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ X</li><li>■ X.X</li><li>■ X.XX</li><li>■ X.XXX</li><li>■ X.XXXX</li></ul>
<b>Factory setting</b>	X.XX
<b>Additional information</b>	<i>Description</i> This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

---

**Value 4 display**

---

<b>Navigation</b>	Expert → System → Display → Value 4 display
<b>Prerequisite</b>	A local display is provided.

**Description** Use this function to select one of the measured values to be shown on the local display.

**Selection** Picklist, see **Value 1 display** parameter (→ 17)

**Factory setting** None

**Additional information** *Description*

If several measured values are displayed at once, the measured value selected here will be the fourth value to be displayed. The value is only displayed during normal operation.

**i** The **Format display** parameter (→ 15) is used to specify how many measured values are displayed simultaneously and how.

*Selection*

**i** The unit of the displayed measured value is taken from the **System units** submenu (→ 39).

## Decimal places 4

**Navigation** Expert → System → Display → Decimal places 4

**Prerequisite** A measured value is specified in the **Value 4 display** parameter (→ 21).

**Description** Use this function to select the number of decimal places for measured value 4.

**Selection**

- X
- X.X
- X.XX
- X.XXX
- X.XXXX

**Factory setting** X.XX

**Additional information** *Description*

**i** This setting does not affect the measuring or computational accuracy of the device. The arrow displayed between the measured value and the unit indicates that the device computes with more digits than are shown on the local display.

## Display interval

**Navigation** Expert → System → Display → Display interval

**Prerequisite** A local display is provided.

**Description** Use this function to enter the length of time the measured values are displayed if the values alternate on the display.

**User entry** 1 to 10 s

**Factory setting** 5 s

**Additional information** *Description*

This type of alternating display only occurs automatically if the number of measured values defined exceeds the number of values the selected display format can display simultaneously.

-  ■ The **Value 1 display** parameter (→ 17) to **Value 4 display** parameter (→ 21) are used to specify which measured values are shown on the local display.
- The display format of the displayed measured values is specified using the **Format display** parameter (→ 15).

## Display damping

**Navigation**  Expert → System → Display → Display damping

**Prerequisite** A local display is provided.

**Description** Use this function to enter the reaction time of the local display to fluctuations in the measured value caused by process conditions.

**User entry** 0.0 to 999.9 s

**Factory setting** 0.0 s

**Additional information** *User entry*

A time constant is entered:

- If a low time constant is entered, the display reacts particularly quickly to fluctuating measured variables.
- On the other hand, the display reacts more slowly if a high time constant is entered.

## Header

**Navigation**  Expert → System → Display → Header

**Prerequisite** A local display is provided.

**Description** Use this function to select the contents of the header of the local display.

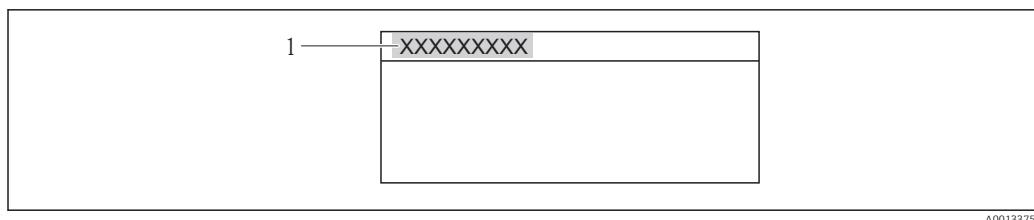

**Selection**

- Device tag
- Free text

**Factory setting** Device tag

**Additional information** *Description*

The header text only appears during normal operation.

A0013375

1 Position of the header text on the display

#### *Selection*

Free text

Is defined in the **Header text** parameter (→ 24).

---

## Header text

### Navigation

Expert → System → Display → Header text

### Prerequisite

The **Free text** option is selected in the **Header** parameter (→ 23).

### Description

Use this function to enter a customer-specific text for the header of the local display.

### User entry

Max. 12 characters such as letters, numbers or special characters (e.g. @, %, /)

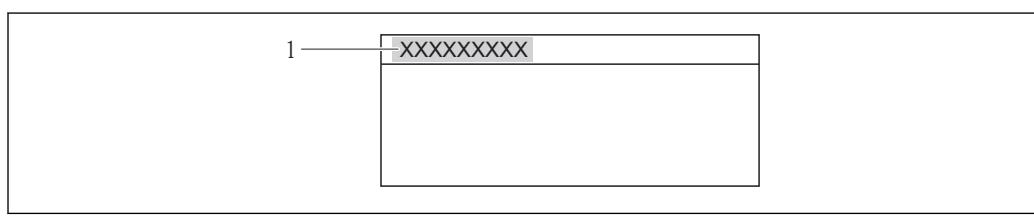

### Factory setting

-----

### Additional information

#### *Description*

The header text only appears during normal operation.

A0013375

1 Position of the header text on the display

#### *User entry*

The number of characters displayed depends on the characters used.

---

## Separator

### Navigation

Expert → System → Display → Separator

### Prerequisite

A local display is provided.

### Description

Use this function to select the decimal separator.

**Selection**

- . (point)
- , (comma)

**Factory setting**

. (point)

## Contrast display

**Navigation**

 Expert → System → Display → Contrast display

**Prerequisite**

A local display is provided.

**Description**

Use this function to enter a value to adapt the display contrast to the ambient conditions (e.g. the lighting or viewing angle).

**User entry**

20 to 80 %

**Factory setting**

Depends on the display

## Backlight

**Navigation**

 Expert → System → Display → Backlight

**Prerequisite**

Order code for "Display; operation", option E "SD03 4-line, illum.; touch control + data backup function"

**Description**

Use this function to switch the backlight of the local display on and off.

**Selection**

- Disable
- Enable

**Factory setting**

Enable

## Access status display

**Navigation**

 Expert → System → Display → Access stat.disp

**Prerequisite**

A local display is provided.

**Description**

Displays the access authorization to the parameters via the local display.

**User interface**

- Operator
- Maintenance

**Factory setting**

Operator

**Additional information***Description*

If the -symbol appears in front of a parameter, it cannot be modified via the local display with the current access authorization.

 Access authorization can be modified via the **Enter access code** parameter (→ [13](#)).

 For information on the **Enter access code** parameter, see the "Disabling write protection via access code" section of the Operating Instructions for the device

 If additional write protection is active, this restricts the current access authorization even further. The write protection status can be viewed via the **Locking status** parameter (→ [11](#)).

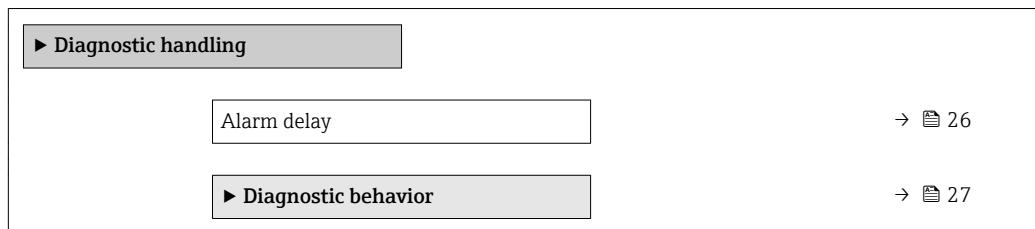

*Display*

 Information on access authorization is provided in the "User roles and associated access authorization" and "Operating concept" sections of the Operations Instructions for the device.

### 3.1.2 "Diagnostic handling" submenu

*Navigation*

  Expert → System → Diagn. handling

#### Alarm delay

*Navigation*

  Expert → System → Diagn. handling → Alarm delay

*Description*

Use this function to enter the time interval until the device generates a diagnostic message.

 The diagnostic message is reset without a time delay.

*User entry*

0 to 60 s

*Factory setting*

0 s

*Additional information**Effect*

This setting affects the following diagnostic messages:

- 190 Special event 1
- 832 Electronic temperature too high
- 833 Electronic temperature too low
- 834 Process temperature too high

- 835 Process temperature too low
- 862 Partly filled pipe
- 990 Special event 4

### "Diagnostic behavior" submenu

Each item of diagnostic information is assigned a specific diagnostic behavior at the factory. The user can change this assignment for specific diagnostic information in the **Diagnostic behavior** submenu (→ [27](#)).

The following options are available in the **Assign behavior of diagnostic no. xxx** parameters:

Options	Description
Alarm	The device stops measurement. The totalizers assume the defined alarm condition. A diagnostic message is generated.
Warning	The device continues to measure. The totalizers are not affected. A diagnostic message is generated.
Logbook entry only	The device continues to measure. The diagnostic message is entered only in the <b>Event logbook</b> submenu (→ <a href="#">93</a> ) ( <b>Event list</b> submenu (→ <a href="#">94</a> )) and is not displayed in alternation with the measured value display.
Off	The diagnostic event is ignored, and no diagnostic message is generated or entered.

 For a list of all the diagnostic events, see the Operating Instructions for the device.

**Assign behavior of diagnostic no. 302 (Device verification active)****Navigation**

Expert → System → Diagn. handling → Diagn. behavior → Diagnostic no. 302

**Description**

Use this function to change the diagnostic behavior of the diagnostic message **302 Device verification active**.

**Selection**

- Alarm
- Warning

**Factory setting**

Warning

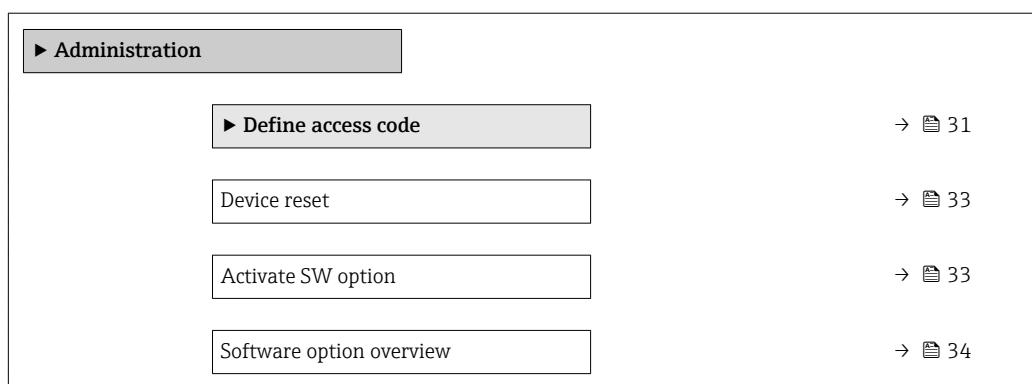

**Additional information**

For a detailed description of the options available, see → [27](#)

### 3.1.3 "Administration" submenu

**Navigation**

Expert → System → Administration

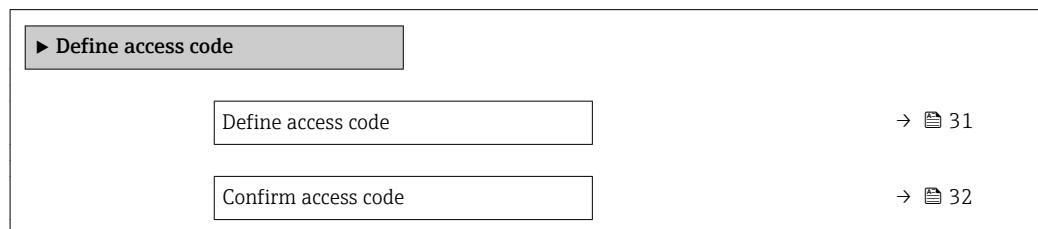

**"Define access code" wizard**

**i** The **Define access code** wizard (→ 31) is only available when operating via the local display or Web browser.

If operating via the operating tool, the **Define access code** parameter (→ 32) can be found directly in the **Administration** submenu. There is no **Confirm access code** parameter if the device is operated via the operating tool.

*Navigation*

Expert → System → Administration → Def. access code

**Define access code****Navigation**

Expert → System → Administration → Def. access code → Def. access code

**Description**

Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the configuration of the device against any inadvertent changes via the local display or Web browser.

**User entry**

0 to 9 999

**Factory setting**

0

**Additional information***Description*

The write protection affects all parameters in the document marked with the symbol.

On the local display, the symbol in front of a parameter indicates that the parameter is write-protected.

The parameters that cannot be write-accessed are grayed out in the Web browser.

**i** Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the **Enter access code** parameter (→ 13).

**i** If you lose the access code, please contact your Endress+Hauser Sales Center.

*User entry*

A message is displayed if the access code is not in the input range.

*Factory setting*

If the factory setting is not changed or **0** is defined as the access code, the parameters are not write-protected and the device configuration data can be modified. The user is logged on in the "**Maintenance**" role.

**Confirm access code**

<b>Navigation</b>	Expert → System → Administration → Def. access code → Confirm code
<b>Description</b>	Enter the defined release code a second time to confirm the release code.
<b>User entry</b>	0 to 9 999
<b>Factory setting</b>	0

**Additional parameters in the "Administration" submenu****Define access code**

<b>Navigation</b>	Expert → System → Administration → Def. access code
<b>Description</b>	Use this function to enter a user-specific release code to restrict write-access to the parameters. This protects the configuration of the device against any inadvertent changes via the operating tool.
<b>User entry</b>	0 to 9 999
<b>Factory setting</b>	0
<b>Additional information</b>	<i>Description</i> The write protection affects all parameters in the document marked with the  symbol. Once the access code has been defined, write-protected parameters can only be modified if the access code is entered in the <b>Enter access code</b> parameter (→  13). If you lose the access code, please contact your Endress+Hauser Sales Center.  <i>User entry</i> A message is displayed if the access code is not in the input range.  <i>Factory setting</i> If the factory setting is not changed or <b>0</b> is defined as the access code, the parameters are not write-protected and the device configuration data can be modified. The user is logged on in the " <b>Maintenance</b> " role.

**Device reset****Navigation**

Expert → System → Administration → Device reset

**Description**

Use this function to choose whether to reset the device configuration - either entirely or in part - to a defined state.

**Selection**

- Cancel
- To delivery settings
- Restart device

**Factory setting**

Cancel

**Additional information***"Cancel" option*

No action is executed and the user exits the parameter.

*"To delivery settings" option*

Every parameter for which a customer-specific default setting was ordered is reset to this customer-specific value. All other parameters are reset to the factory setting.

This option is not visible if no customer-specific settings have been ordered.

*"Restart device" option*

The restart resets every parameter whose data are in the volatile memory (RAM) to the factory setting (e.g. measured value data). The device configuration remains unchanged.

**Activate SW option****Navigation**

Expert → System → Administration → Activate SW opt.

**Description**

Use this function to enter an activation code to enable an additional, ordered software option.

**User entry**

Max. 10-digit string consisting of numbers.

**Factory setting**

0

**Additional information***User entry*

Endress+Hauser provides the corresponding activation code for the software option with the order.

**NOTICE!** This activation code varies depending on the measuring device and the software option. If an incorrect or invalid code is entered, this can result in the loss of software options that are already been activated. After commissioning the measuring device: in this parameter only enter activation codes which Endress+Hauser has provided (e.g. when a new software option was ordered). If an incorrect or invalid activation code is entered,

enter the activation code from the parameter protocol again and contact your Endress+Hauser sales organization, quoting the serial number of your device.

*Example for a software option*

Order code for "Application package", option EB "Heartbeat Verification + Monitoring"

*Web browser*

 Once a software option has been activated, the page must be loaded again in the Web browser.

---

## Software option overview

---

**Navigation**

  Expert → System → Administration → SW option overv.

**Description**

Displays all the software options that are enabled in the device.

**User interface**

- Electrode cleaning circuit
- Heartbeat Verification
- Heartbeat Monitoring

**Additional information**

*Description*

Displays all the options that are available if ordered by the customer.

*"Electrode cleaning circuit" option*

Order code for "Application package", option EC "ECC electrode cleaning"

*"Heartbeat Verification" option and "Heartbeat Monitoring" option*

Order code for "Application package", option EB "Heartbeat Verification + Monitoring"

## 3.2 "Sensor" submenu

*Navigation*

  Expert → Sensor

 <b>Sensor</b>	
 <b>Measured values</b>	→  35

#### "Process variables" submenu

*Navigation*

Expert → Sensor → Measured val. → Process variab.

► Process variables

Volume flow

→ 35

Mass flow

→ 36

Conductivity

→ 36

Corrected volume flow

→ 36

Temperature

→ 36

Corrected conductivity

→ 37

---

## Volume flow

---

**Navigation**

Expert → Sensor → Measured val. → Process variab. → Volume flow

**Description**

Displays the volume flow currently measured.

**User interface**

Signed floating-point number

**Additional information**

*Dependency*

The unit is taken from the **Volume flow unit** parameter (→ 40)

---

## Mass flow

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Mass flow
<b>Description</b>	Displays the mass flow currently calculated.
<b>User interface</b>	Signed floating-point number
<b>Additional information</b>	<i>Dependency</i>
	 The unit is taken from the <b>Mass flow unit</b> parameter (→  43)

---

## Conductivity

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Conductivity
<b>Prerequisite</b>	In the <b>Conductivity measurement</b> parameter (→  54), the <b>On</b> option is selected.
<b>Description</b>	Displays the conductivity currently measured.
<b>User interface</b>	Signed floating-point number
<b>Additional information</b>	<i>Dependency</i>
	 The unit is taken from the <b>Conductivity unit</b> parameter (→  41)

---

## Corrected volume flow

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Correct.vol.flow
<b>Description</b>	Displays the corrected volume flow currently measured.
<b>User interface</b>	Signed floating-point number
<b>Additional information</b>	<i>Dependency</i>
	 The unit is taken from the <b>Corrected volume flow unit</b> parameter (→  45)

---

## Temperature

---

<b>Navigation</b>	 Expert → Sensor → Measured val. → Process variab. → Temperature
<b>Prerequisite</b>	For the following order code: "Sensor Option", option CI "Fluid temperature probe"

**Description** Displays the temperature currently calculated.

**User interface** Positive floating-point number

**Additional information** *Dependency*

 The unit is taken from the **Temperature unit** parameter (→ [42](#))

## Corrected conductivity

**Navigation**  Expert → Sensor → Measured val. → Process variab. → CorrConductivity

**Prerequisite** One of the following conditions is satisfied:

- Order code for "Sensor Option", option CI "Fluid temperature probe"  
or
- The temperature is read into the flowmeter from an external device.

**Description** Displays the conductivity currently corrected.

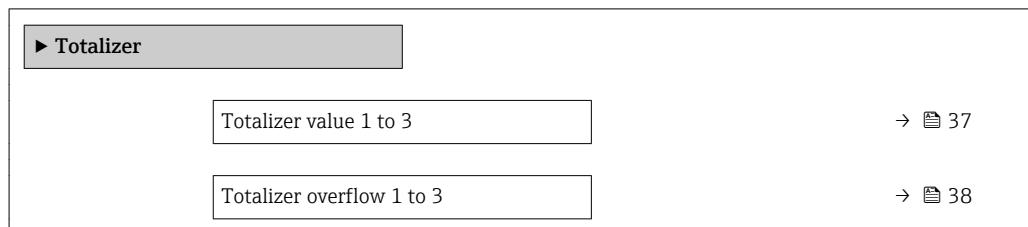

**User interface** Positive floating-point number

**Additional information** *Dependency*

 The unit is taken from the **Conductivity unit** parameter (→ [41](#))

## "Totalizer" submenu

*Navigation*  Expert → Sensor → Measured val. → Totalizer

## Totalizer value 1 to 3

**Navigation**  Expert → Sensor → Measured val. → Totalizer → Totalizer val. 1 to 3

**Prerequisite** One of the following options is selected in the **Assign process variable** parameter (→ [82](#)) of the **Totalizer 1 to 3** submenu:

- Volume flow
- Mass flow
- Corrected volume flow

<b>Description</b>	Displays the current totalizer reading.
<b>User interface</b>	Signed floating-point number
<b>Additional information</b>	<p><i>Description</i></p> <p>As it is only possible to display a maximum of 7 digits in the operating tool, the current counter value is the sum of the totalizer value and the overflow value from the <b>Totalizer overflow 1 to 3</b> parameter if the display range is exceeded.</p> <p> In the event of an error, the totalizer adopts the mode defined in the <b>Failure mode</b> parameter (→ 86).</p> <p><i>User interface</i></p> <p>The value of the process variable totalized since measuring began can be positive or negative. This depends on the settings in the <b>Totalizer operation mode</b> parameter (→ 84).</p> <p> The unit of the selected process variable is specified for the totalizer in the <b>Unit totalizer</b> parameter (→ 83).</p>
<i>Example</i>	Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool: <ul style="list-style-type: none"><li>▪ Value in the <b>Totalizer value 1</b> parameter: 1968457 m<sup>3</sup></li><li>▪ Value in the <b>Totalizer overflow 1</b> parameter: <math>1 \cdot 10^7</math> (1 overflow) = 10 000 000 [m<sup>3</sup>]</li><li>▪ Current totalizer reading: 11 968 457 m<sup>3</sup></li></ul>

## Totalizer overflow 1 to 3

<b>Navigation</b>	  Expert → Sensor → Measured val. → Totalizer → Tot. overflow 1 to 3
<b>Prerequisite</b>	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 82) of the <b>Totalizer 1 to 3</b> submenu: <ul style="list-style-type: none"><li>▪ Volume flow</li><li>▪ Mass flow</li><li>▪ Corrected volume flow</li></ul>
<b>Description</b>	Displays the current totalizer overflow.
<b>User interface</b>	Integer with sign
<b>Additional information</b>	<p><i>Description</i></p> <p>If the current totalizer reading has more than 7 digits, which is the maximum value range of the operating tool that can be displayed, the value above this range is output as an</p>

overflow. The current totalizer value is therefore the sum of the overflow value and the totalizer value from the **Totalizer value 1 to 3** parameter

#### *Display*

 The unit of the selected process variable is specified for the totalizer in the **Unit totalizer** parameter (→ [83](#)).

#### *Example*

Calculation of the current totalizer reading when the value exceeds the 7-digit display range of the operating tool:

- Value in the **Totalizer value 1** parameter: 1968457 m<sup>3</sup>
- Value in the **Totalizer overflow 1** parameter:  $2 \cdot 10^7$  (2 overflows) = 20 000 000 [m<sup>3</sup>]
- Current totalizer reading: 21 968 457 m<sup>3</sup>

- lb/min

**Additional information***Result*

The selected unit applies for:

**Mass flow parameter** (→ 36)

*Selection*

For an explanation of the abbreviated units: → 108

*Customer-specific units*

The unit for the customer-specific mass is specified in the **User mass text** parameter (→ 48).

**Mass unit****Navigation**

Expert → Sensor → System units → Mass unit

**Description**

Use this function to select the unit for the mass.

<b>Selection</b>	<i>SI units</i> ■ g ■ kg ■ t	<i>US units</i> ■ oz ■ lb ■ STon
<i>Custom-specific units</i> User mass		
<b>Factory setting</b>	Country-specific: ■ kg ■ lb	
<b>Additional information</b>	<i>Selection</i>  For an explanation of the abbreviated units: → <a href="#">108</a>  <i>Customer-specific units</i>  The unit for the customer-specific mass is specified in the <b>User mass text</b> parameter (→ <a href="#">48</a> ).	

<b>Density unit</b>			
<b>Navigation</b>		  Expert → Sensor → System units → Density unit	
<b>Description</b>		Use this function to select the unit for the density.	
<b>Selection</b>	<i>SI units</i> ■ g/cm <sup>3</sup> ■ g/m <sup>3</sup> ■ kg/dm <sup>3</sup> ■ kg/l ■ kg/m <sup>3</sup> ■ SD4°C ■ SD15°C ■ SD20°C ■ SG4°C ■ SG15°C ■ SG20°C	<i>US units</i> ■ lb/ft <sup>3</sup> ■ lb/gal (us) ■ lb/bbl (us;liq.) ■ lb/bbl (us;beer) ■ lb/bbl (us;oil) ■ lb/bbl (us;tank)	<i>Imperial units</i> ■ lb/gal (imp) ■ lb/bbl (imp;beer) ■ lb/bbl (imp;oil)
<b>Factory setting</b>	Country-specific: ■ kg/l ■ lb/ft <sup>3</sup>		

**Additional information***Result*

The selected unit applies for:

- **External density** parameter (→ 64)
- **Fixed density** parameter (→ 64)

*Selection*

- SD = specific density

The specific density is the ratio of the density of the fluid to the density of water at a water temperature of +4 °C (+39 °F), +15 °C (+59 °F), +20 °C (+68 °F).

- SG = specific gravity

The specific gravity is the ratio of the density of the fluid to the density of water at a water temperature of +4 °C (+39 °F), +15 °C (+59 °F), +20 °C (+68 °F).

For an explanation of the abbreviated units: → 108

User corrected volume offset	→ <a href="#">50</a>
User corrected volume factor	→ <a href="#">50</a>

**User volume text****Navigation**

Expert → Sensor → System units → User-spec. units → Volume text

**Description**

Use this function to enter a text for the user-specific unit of volume and volume flow. The corresponding time units (s, min, h, d) for volume flow are generated automatically.

**User entry**

Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**

User vol.

**Additional information***Result*

The defined unit is shown as an option in the choose list of the following parameters:

- **Volume flow unit** parameter (→ 40)
- **Volume unit** parameter (→ 41)

*Example*

If the text GLAS is entered, the choose list of the **Volume flow unit** parameter (→ 40) shows the following options:

- GLAS/s
- GLAS/min
- GLAS/h
- GLAS/d

**User volume offset****Navigation**

Expert → Sensor → System units → User-spec. units → Volume offset

**Description**

Use this function to enter the offset for adapting the user-specific volume unit and volume flow unit (without time).

**User entry**

Signed floating-point number

**Factory setting**

0

**Additional information***Description*

Value in user-specific unit = (factor × value in base unit) + offset

**User volume factor****Navigation**

Expert → Sensor → System units → User-spec. units → Volume factor

**Description**

Use this function to enter a quantity factor (without time) for the user-specific volume and volume flow unit.

**User entry**

Signed floating-point number

**Factory setting**

1.0

**User mass text****Navigation**

Expert → Sensor → System units → User-spec. units → Mass text

**Description**

Use this function to enter a text for the user-specific unit of mass and mass flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

<b>User entry</b>	Max. 10 characters such as letters, numbers or special characters (@, %, /)
<b>Factory setting</b>	User mass
<b>Additional information</b>	<p><i>Result</i></p> <p> The defined unit is shown as an option in the choose list of the following parameters:</p> <ul style="list-style-type: none"> <li>▪ <b>Mass flow unit</b> parameter (→  43)</li> <li>▪ <b>Mass unit</b> parameter (→  43)</li> </ul> <p><i>Example</i></p> <p>If the text GLAS is entered, the following options are displayed in the picklist for the <b>Mass flow unit</b> parameter (→  43):</p> <ul style="list-style-type: none"> <li>▪ GLAS/s</li> <li>▪ GLAS/min</li> <li>▪ GLAS/h</li> <li>▪ GLAS/d</li> </ul>

---

## User mass offset

<b>Navigation</b>	 Expert → Sensor → System units → User-spec. units → Mass offset
<b>Description</b>	Use this function to enter the offset for adapting the user-specific mass unit and mass flow unit (without time).
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0
<b>Additional information</b>	<p><i>Description</i></p> <p> Value in user-specific unit = (factor × value in base unit) + offset</p>

---

## User mass factor

<b>Navigation</b>	 Expert → Sensor → System units → User-spec. units → Mass factor
<b>Description</b>	Use this function to enter a quantity factor (without time) for the user-specific mass and mass flow unit.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	1.0

**User corrected volume text****Navigation**

Expert → Sensor → System units → User-spec. units → Corr. vol. text

**Description**

Use this function to enter a text for the user-specific unit of the corrected volume and corrected volume flow. The corresponding time units (s, min, h, d) for mass flow are generated automatically.

**User entry**

Max. 10 characters such as letters, numbers or special characters (@, %, /)

**Factory setting**

UserCrVol.

**Additional information**

*Result*

The defined unit is shown as an option in the choose list of the following parameters:

- **Corrected volume flow unit** parameter (→ 45)
- **Corrected volume unit** parameter (→ 46)

*Example*

If the text GLAS is entered, the choose list of the **Corrected volume flow unit** parameter (→ 45) shows the following options:

- GLAS/s
- GLAS/min
- GLAS/h
- GLAS/d

**User corrected volume offset****Navigation**

Expert → Sensor → System units → User-spec. units → Corr vol. offset

**Description**

Use this function to enter the offset for adapting the user-specific corrected volume unit and corrected volume flow unit (without time).

Value in user-specific unit = (factor × value in base unit) + offset

**User entry**

Signed floating-point number

**Factory setting**

0

**User corrected volume factor****Navigation**

Expert → Sensor → System units → User-spec. units → Cor.vol. factor

**Description**

Use this function to enter a quantity factor (without time) for the user-specific corrected volume unit and corrected volume flow unit.

**User entry**

Signed floating-point number

<b>Factory setting</b>	1.0
------------------------	-----

### 3.2.3 "Process parameters" submenu

*Navigation*

Expert → Sensor → Process param.

<b>► Process parameters</b>	
Filter options	→  51
Flow damping	→  53
Flow override	→  53
Conductivity damping	→  54
Temperature damping	→  54
Conductivity measurement	→  54
<b>► Low flow cut off</b>	→  55
<b>► Empty pipe detection</b>	→  58
<b>► Electrode cleaning circuit</b>	→  60

#### Filter options

**Navigation**

Expert → Sensor → Process param. → Filter options

**Description**

Use this function to select a filter option.

**Selection**

- Standard CIP off
- Standard CIP on
- Dynamic CIP off
- Dynamic CIP on
- Binomial filter

**Factory setting**

Standard CIP off

**Additional information**

*Description*

The user can choose from a range of filter combinations which can optimize the measurement result depending on the application. Each change in the filter setting affects

the output signal of the measuring device. The response time of the output signal increases as the filter depth increases.

#### *Selection*

##### ■ **Standard**

- Strong flow damping with a short output signal response time.
- Some time is needed before a stable output signal can be generated.
- Not suitable for pulsating flow as the average flow can be different here.

##### ■ **Dynamic**

- Average flow damping with a delayed output signal response time.
- The average flow is displayed correctly over a measuring interval determined over a long period.

##### ■ **Binomial**

- Weak flow damping with a short output signal response time.
- The average flow is displayed correctly over a measuring interval determined over a long period.

##### ■ **CIP**

- This filter is also available for the **Standard** and **Dynamic** filter options.
- If the CIP filter has detected a change in the medium (abrupt increase in the noise level, e.g. quickly changing medium conductivity values during CIP cleaning), flow damping is greatly increased and the raw value (before flow damping) is limited by the mean value (delimiter). This eliminates extremely high measured errors (up to several 100 m/s).
- If the CIP filter is enabled, the response time of the entire measuring system increases and the output signal is delayed accordingly.

#### *Examples*

#### *Possible applications for the filters*

Application	Standard	Standard CIP	Dynamic	Dynamic CIP	Binomial
Pulsating flow (flow is negative intermittently)	---	---	++	--	++
Flow changes frequently (flow is dynamic)	-	--	++	-	++
Clear signal, quick control loop (< 1 s)	--	--	+ <sup>1)</sup>		++
Poor signal, slow control loop (response time of a few seconds)	++	-	--	----	---
Permanently bad signal	++	--	-	----	-
Short and severe signal distortion after a while		++		++	
Promag 50/53 replacement: Promag 100 system damping = 0.5 * Promag 50/53					+++
Promag 10 replacement: Promag 100 system damping = Promag 10 + 2			+++		
For a stable flow signal (no other requirements)	+++				

1) Flow damping value < 6

**Flow damping****Navigation**

Expert → Sensor → Process param. → Flow damping

**Description**

Use this function to enter flow damping. Reduction of the variability of the flow measured value (in relation to interference). For this purpose, the depth of the flow filter is adjusted: when the filter setting increases, the reaction time of the device also increases.

**User entry** 0 to 15

**Factory setting** 7

**Additional information** *User entry*

- Value = 0: no damping
- Value > 0: damping is increased

- 0 is a weak damping and 15 a strong one.
- A damping of 0 is not recommended, as the measuring signal is then so noisy that it is almost impossible to carry out a measurement.
- The damping depends on the measuring period and the filter type selected.
- An increase or decrease in the damping depends on the application.

*Effect*

The damping affects the following variables of the device:

- Outputs
- Low flow cut off → 55
- Totalizers → 82

**Flow override****Navigation**

Expert → Sensor → Process param. → Flow override

**Description**

Use this function to select whether to interrupt the evaluation of measured values. This is useful for the cleaning processes of a pipeline, for example.

**Selection**

- Off
- On

**Factory setting** Off

**Additional information** *Result*

This setting affects all the functions and outputs of the measuring device.

*Description***Flow override is active**

- The diagnostic message diagnostic message **△C453 Flow override** is displayed.
- Output values
  - Output: Value at zero flow
  - Temperature: proceeding output
  - Totalizers 1-3: Stop being totalized

## Conductivity damping

**Navigation** Expert → Sensor → Process param. → Conduct. damping

**Prerequisite** In the **Conductivity measurement** parameter (→ 54), the **On** option is selected.

**Description** Use this function to enter the time constant for conductivity damping.

**User entry** 0 to 999.9 s

**Factory setting** 0 s

## Temperature damping

**Navigation** Expert → Sensor → Process param. → Temp. damping

**Prerequisite** For the following order code:  
"Sensor Option", option CI "Fluid temperature probe"

**Description** Use this function to enter the time constant for temperature damping.

**User entry** 0 to 999.9 s

**Factory setting** 0 s

## Conductivity measurement

**Navigation** Expert → Sensor → Process param. → Conduct. measur.

**Description** Use this function to enable and disable conductivity measurement.

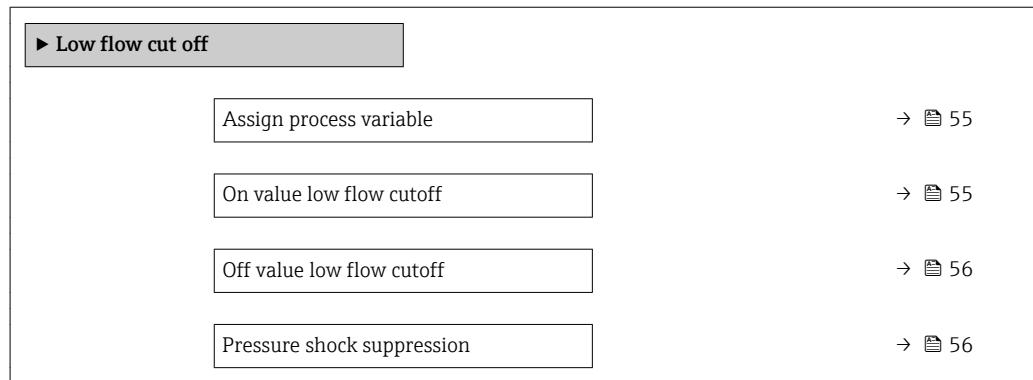

**Selection**

- Off
- On

**Factory setting** Off

**Additional information** *Description*

For conductivity measurement to work, the medium must have a minimum conductivity of 5 µS/cm.

**"Low flow cut off" submenu***Navigation*
 Expert → Sensor → Process param. → Low flow cut off
**Assign process variable****Navigation**
 Expert → Sensor → Process param. → Low flow cut off → Assign variable
**Description**

Use this function to select the process variable for low flow cutoff detection.

**Selection**

- Off
- Volume flow
- Mass flow
- Corrected volume flow

**Factory setting**

Volume flow

**On value low flow cutoff****Navigation**
 Expert → Sensor → Process param. → Low flow cut off → On value
**Prerequisite**

One of the following options is selected in the **Assign process variable** parameter (→ 55):

- Volume flow
- Mass flow
- Corrected volume flow

**Description**

Use this function to enter a switch-on value for low flow cut off. Low flow cut off is activated if the value entered is not equal to 0 → 56.

**User entry**

Signed floating-point number

**Factory setting**

Depends on country and nominal diameter → 105

**Additional information**

*Dependency*

 The unit depends on the process variable selected in the **Assign process variable** parameter (→ 55).

**Off value low flow cutoff****Navigation**

Expert → Sensor → Process param. → Low flow cut off → Off value

**Prerequisite**

One of the following options is selected in the **Assign process variable** parameter  
(→ 55):

- Volume flow
- Mass flow
- Corrected volume flow

**Description**

Use this function to enter a switch-off value for low flow cut off. The off value is entered as a positive hysteresis from the on value → 55.

**User entry**

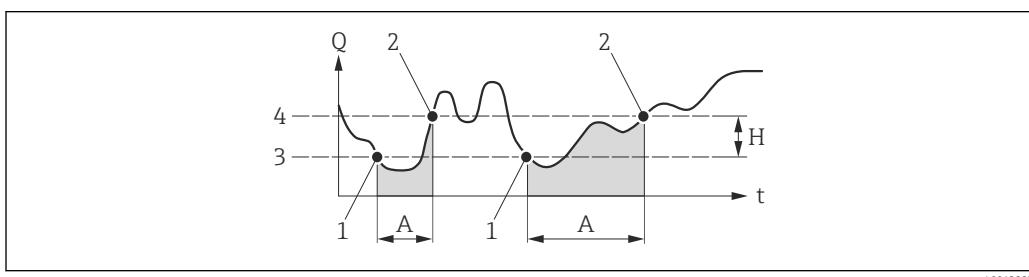

0 to 100.0 %

**Factory setting**

50 %

**Additional information**

*Example*

- |   |                                 |
|---|---------------------------------|
| Q | Flow                            |
| t | Time                            |
| H | Hysteresis                      |
| A | Low flow cut off active         |
| 1 | Low flow cut off is activated   |
| 2 | Low flow cut off is deactivated |
| 3 | On value entered                |
| 4 | Off value entered               |

**Pressure shock suppression****Navigation**

Expert → Sensor → Process param. → Low flow cut off → Pres. shock sup.

**Prerequisite**

One of the following options is selected in the **Assign process variable** parameter  
(→ 55):

- Volume flow
- Mass flow
- Corrected volume flow

**Description**

Use this function to enter the time interval for signal suppression (= active pressure shock suppression).

**User entry**

0 to 100 s

**Factory setting**

0 s

**Additional information***Description***Pressure shock suppression is enabled**

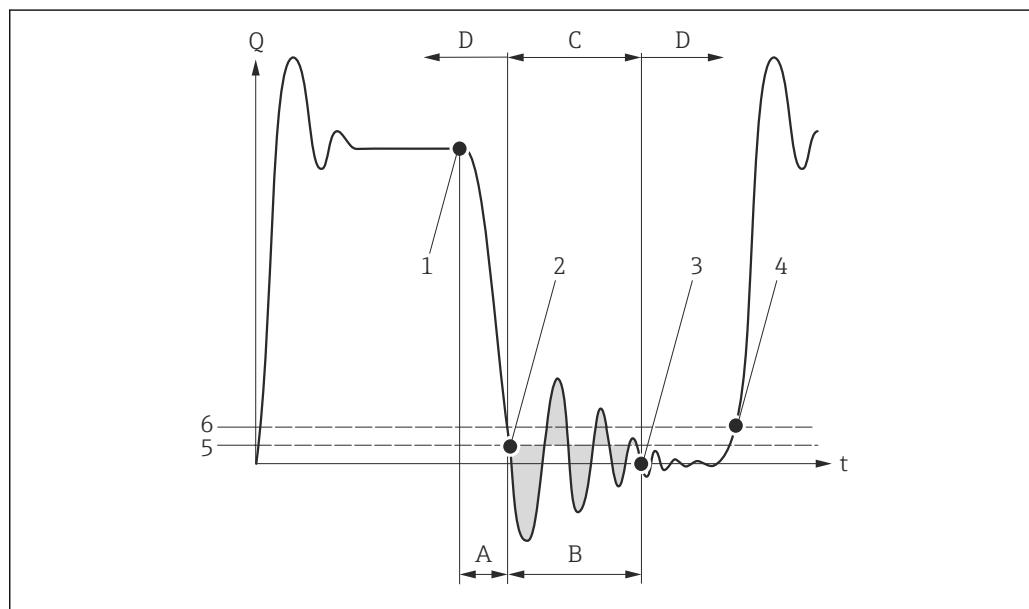

- Prerequisite:  
Flow rate < on-value of low flow cut off
- Output values
  - Flow displayed: 0
  - Totalizer: the totalizers are pegged at the last correct value

**Pressure shock suppression is disabled**

- Prerequisite: the time interval set in this function has elapsed.
- If the flow also exceeds the switch-off value for low flow cut off, the device starts processing the current flow value again and displays it.

*Example*

When closing a valve, momentarily strong fluid movements may occur in the pipeline, which are registered by the measuring system. These totalized flow values lead to a false totalizer status, particularly during batching processes.

*Navigation*

Expert → Sensor → Sensor adjustm.

---

#### Installation direction

**Navigation**

Expert → Sensor → Sensor adjustm. → Install. direct.

**Description**

Use this function to change the sign of the medium flow direction.

**Selection**

- Flow in arrow direction
- Flow against arrow direction

**Factory setting**

Flow in arrow direction

**Additional information**

*Description*

Before changing the sign: ascertain the actual direction of fluid flow with reference to the direction indicated by the arrow on the sensor nameplate.

---

#### Integration time

**Navigation**

Expert → Sensor → Sensor adjustm. → Integration time

**Description**

Display the duration of an integration cycle.

**User interface**

1 to 65 ms

---

#### Measuring period

**Navigation**

Expert → Sensor → Sensor adjustm. → Measuring period

**Description**

Display the time of a full measuring period.

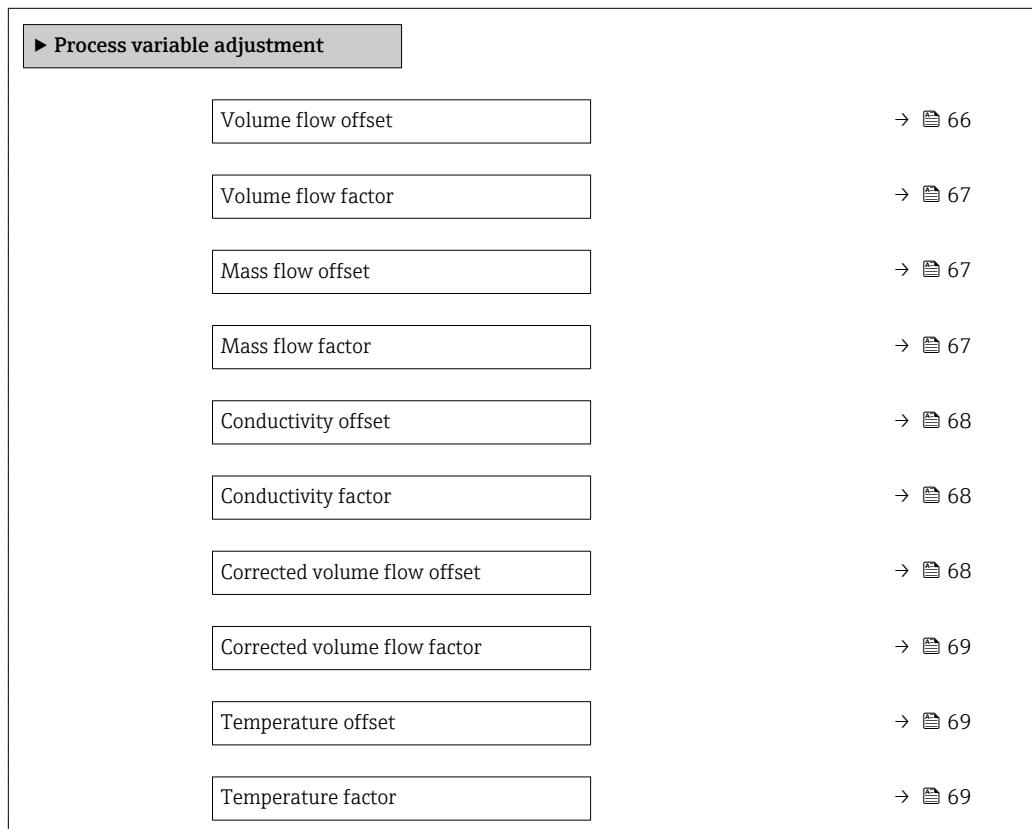

---

User interface	50 to 1 000 ms
----------------	----------------

### "Process variable adjustment" submenu

Navigation

Expert → Sensor → Sensor adjustm. → Variable adjust

---

## Volume flow offset

### Navigation

Expert → Sensor → Sensor adjustm. → Variable adjust → Vol. flow offset

### Description

Use this function to enter the zero point shift for the volume flow trim. The volume flow unit on which the shift is based is m<sup>3</sup>/s.

### User entry

Signed floating-point number

### Factory setting

0 m<sup>3</sup>/s

### Additional information

Description

Corrected value = (factor × value) + offset

---

**Volume flow factor**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Vol. flow factor

**Description** Use this function to enter a quantity factor (without time) for the volume flow. This multiplication factor is applied over the volume flow range.

**User entry** Positive floating-point number

**Factory setting** 1

**Additional information** *Description*

Corrected value = (factor × value) + offset

---

**Mass flow offset**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Mass flow offset

**Description** Use this function to enter the zero point shift for the mass flow trim. The mass flow unit on which the shift is based is kg/s.

**User entry** Signed floating-point number

**Factory setting** 0 kg/s

**Additional information** *Description*

Corrected value = (factor × value) + offset

---

**Mass flow factor**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Mass flow factor

**Description** Use this function to enter a quantity factor (without time) for the mass flow. This multiplication factor is applied over the mass flow range.

**User entry** Positive floating-point number

**Factory setting** 1

**Additional information** *Description*

Corrected value = (factor × value) + offset

## Conductivity offset

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Conduct. offset
<b>Prerequisite</b>	In the <b>Conductivity measurement</b> parameter (→ 54), the <b>On</b> option is selected.
<b>Description</b>	Use this function to enter the zero point shift for the conductivity trim. The conductivity unit on which the shift is based is S/m
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0 S/m
<b>Additional information</b>	<i>Description</i> Corrected value = (factor × value) + offset

## Conductivity factor

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Conduct. factor
<b>Prerequisite</b>	In the <b>Conductivity measurement</b> parameter (→ 54), the <b>On</b> option is selected.
<b>Description</b>	Use this function to enter a quantity factor for the conductivity. This multiplication factor is applied over the conductivity range.
<b>User entry</b>	Positive floating-point number
<b>Factory setting</b>	1
<b>Additional information</b>	<i>Description</i> Corrected value = (factor × value) + offset

## Corrected volume flow offset

<b>Navigation</b>	Expert → Sensor → Sensor adjustm. → Variable adjust → Corr. vol offset
<b>Description</b>	Use this function to enter the zero point shift for the corrected volume flow trim. The corrected volume flow unit on which the shift is based is 1 Nm <sup>3</sup> /s.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0 Nm <sup>3</sup> /s
<b>Additional information</b>	<i>Description</i> Corrected value = (factor × value) + offset

**Corrected volume flow factor**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Corr. vol factor

**Description** Use this function to enter a quantity factor (without time) for the corrected volume flow. This multiplication factor is applied over the corrected volume flow range.

**User entry** Positive floating-point number

**Factory setting** 1

**Additional information** *Description*

Corrected value = (factor × value) + offset

**Temperature offset**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. offset

**Prerequisite** For the following order code:  
"Sensor Option", option CI "Fluid temperature probe"

**Description** Use this function to enter the zero point shift for the temperature trim. The temperature unit on which the shift is based is 1 K.

**User entry** Signed floating-point number

**Factory setting** 0 K

**Additional information** *Description*

Corrected value = (factor × value) + offset

**Temperature factor**

**Navigation** Expert → Sensor → Sensor adjustm. → Variable adjust → Temp. factor

**Prerequisite** For the following order code:  
"Sensor Option", option CI "Fluid temperature probe"

**Description** Use this function to enter a quantity factor (without time) for the temperature. This multiplication factor is applied over the temperature range.

**User entry** Positive floating-point number

**Factory setting** 1

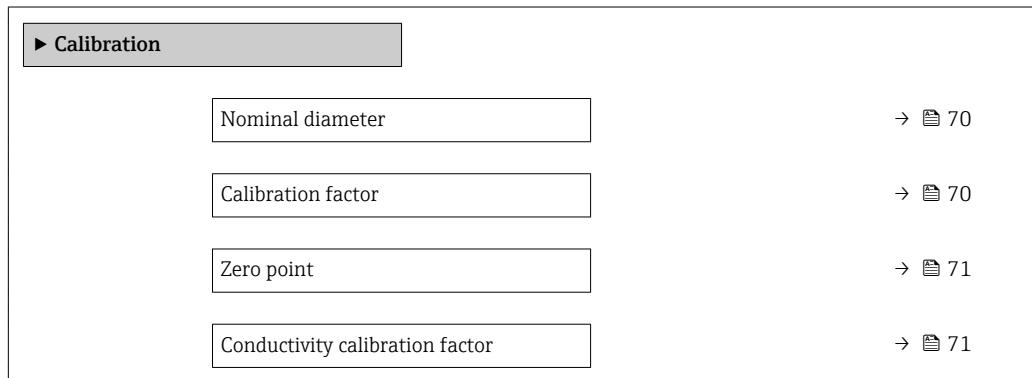

**Additional information**      *Description*

 Corrected value = (factor × value) + offset

### 3.2.6 "Calibration" submenu

**Navigation**

 Expert → Sensor → Calibration

---

#### Nominal diameter

---

**Navigation**

 Expert → Sensor → Calibration → Nominal diameter

**Description**

Displays the nominal diameter of the sensor.

**User interface**

DNxx / x"

**Factory setting**

Depends on the size of the sensor

**Additional information**      *Description*

 The value is also specified on the sensor nameplate.

---

#### Calibration factor

---

**Navigation**

 Expert → Sensor → Calibration → Cal. factor

**Description**

Displays the current calibration factor for the sensor.

**User interface**

Positive floating-point number

**Factory setting**

Depends on nominal diameter and calibration.

**Zero point**

**Navigation** Expert → Sensor → Calibration → Zero point

**Description** This function shows the zero point correction value for the sensor.

**User interface** Signed floating-point number

**Factory setting** Depends on nominal diameter and calibration

**Conductivity calibration factor**

**Navigation** Expert → Sensor → Calibration → Cond. cal. fact.

**Prerequisite** In the **Conductivity measurement** parameter (→ 54), the **On** option is selected.

**Description** Displays the calibration factor for the conductivity measurement.

**User interface** 0 to 10 000

### 3.3 "Communication" submenu

*Navigation* Expert → Communication

► **Communication**

► **Configuration**

→ 71

#### 3.3.1 "Configuration" submenu

*Navigation* Expert → Communication → Configuration

- 한국어 (Korean) \*
- العربية (Arabic) \*
- Bahasa Indonesia \*
- ภาษาไทย (Thai) \*
- tiếng Việt (Vietnamese) \*
- čeština (Czech) \*

**Factory setting**

English

## MAC address

**Navigation** Expert → Communication → Configuration → MAC Address

**Description** Displays the MAC <sup>1)</sup> address of the measuring device.

**User interface** Unique 12-digit character string comprising letters and numbers

**Factory setting** Each measuring device is given an individual address.

\* Visibility depends on order options or device settings

1) Media Access Control

**Additional information***Example*

For the display format  
00:07:05:10:01:5F

**Default network settings**

**Navigation**  Expert → Communication → Configuration → Default netw.set

**Description** Displays the use of default network settings.

**User interface**

- Off
- On

**Factory setting** Off

**Additional information** *User interface*

The **On** option is displayed as soon as the last octet of the IP address is set via DIP switches.

**DHCP client**

**Navigation**  Expert → Communication → Configuration → DHCP client

**Description** Use this function to activate and deactivate the DHCP client functionality.

**Selection**

- Off
- On

**Factory setting** On

**Additional information** *Result*

If the DHCP client functionality of the Web server is activated, the IP address (→ [73](#)), Subnet mask (→ [74](#)) and Default gateway (→ [74](#)) are set automatically.

Identification is via the MAC address of the measuring device.

**IP address**

**Navigation**  Expert → Communication → Configuration → IP address

**Description** Use this function to enter the IP address of the device's web server.

**User entry** 4 octet: 0 to 255 (in the particular octet)

**Factory setting** 192.168.1.212

**Subnet mask****Navigation**

Expert → Communication → Configuration → Subnet mask

**Description**

Use this function to enter the subnet mask.

**User entry**

4 octet: 0 to 255 (in the particular octet)

**Factory setting**

255.255.255.0

**Default gateway****Navigation**

Expert → Communication → Configuration → Default gateway

**Description**

Use this function to enter the default gateway.

**User entry**

4 octet: 0 to 255 (in the particular octet)

**Factory setting**

0.0.0.0

**Web server functionality****Navigation**

Expert → Communication → Configuration → Webserver funct.

**Description**

Use this function to switch the Web server on and off.

**Selection**

- Off
- On

**Factory setting**

On

**Additional information****Description**

Once disabled, the Web server functionality can be re-enabled only via the local display or the FieldCare operating tool.

**Selection**

- Off
  - The web server is completely disabled.
  - Port 80 is locked.
- On
  - The complete functionality of the web server is available.
  - JavaScript is used.
  - The password is transferred in an encrypted state.
  - Any change to the password is also transferred in an encrypted state.

<b>Factory setting</b>	Unit totalizer 3

**Input assembly position 19**

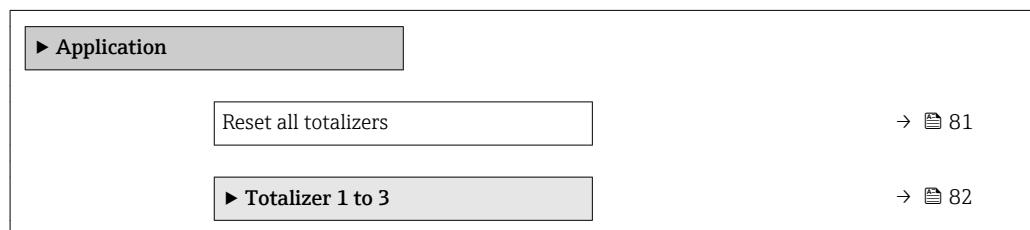

<b>Navigation</b>	Expert → Communication → Configuration → Input assembly → Position 19
<b>Description</b>	Use this function to select a process variable for input value 19.
<b>Selection</b>	Picklist, see <b>Input assembly position 11</b> parameter (→  78)
<b>Factory setting</b>	Velocity unit

**Input assembly position 20**

<b>Navigation</b>	Expert → Communication → Configuration → Input assembly → Position 20
<b>Description</b>	Use this function to select a process variable for input value 20.
<b>Selection</b>	Picklist, see <b>Input assembly position 11</b> parameter (→  78)
<b>Factory setting</b>	Off

### 3.4 "Application" submenu

*Navigation* Expert → Application

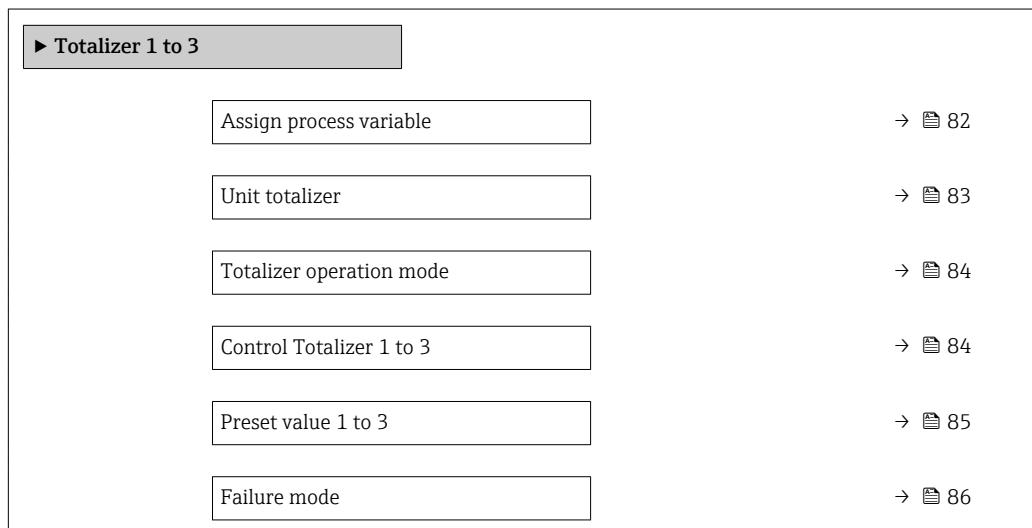

**Reset all totalizers**

<b>Navigation</b>	Expert → Application → Reset all tot.
<b>Description</b>	Use this function to reset all totalizers to the value <b>0</b> and restart the totaling process. This deletes all the flow values previously totalized.
<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Cancel</li> <li>■ Reset + totalize</li> </ul>
<b>Factory setting</b>	Cancel

**Additional information***Selection*

- Cancel  
No action is executed and the user exits the parameter.
- Reset + totalize  
All totalizers are reset to 0 and the totaling process is restarted.

### 3.4.1 "Totalizer 1 to 3" submenu

*Navigation* Expert → Application → Totalizer 1 to 3**Assign process variable***Navigation* Expert → Application → Totalizer 1 to 3 → Assign variable*Description*

Use this function to select a process variable for the Totalizer 1 to 3.

*Selection*

- Off
- Volume flow
- Mass flow
- Corrected volume flow

*Factory setting*

Volume flow

*Additional information**Description*

 If the option selected is changed, the device resets the totalizer to 0.

*Selection*

If the **Off** option is selected, only **Assign process variable** parameter (→ 82) is still displayed in the **Totalizer 1 to 3** submenu. All other parameters in the submenu are hidden.

**Unit totalizer****Navigation**

Expert → Application → Totalizer 1 to 3 → Unit totalizer

**Prerequisite**

One of the following options is selected in the **Assign process variable** parameter (→ 82) of the **Totalizer 1 to 3** submenu:

- Volume flow
- Mass flow
- Corrected volume flow

**Description**

Use this function to select the unit for the process variable of totalizer 1-3.

Additional information	Description
	<p> The unit is selected separately for each totalizer. The unit is independent of the option selected in the <b>System units</b> submenu (→ 39).</p>
	<p><i>Selection</i></p> <p>The selection depends on the process variable selected in the <b>Assign process variable</b> parameter (→ 82).</p>

---

## Totalizer operation mode

Navigation	  Expert → Application → Totalizer 1 to 3 → Operation mode
Prerequisite	<p>One of the following options is selected in the <b>Assign process variable</b> parameter (→ 82) of the <b>Totalizer 1 to 3</b> submenu:</p> <ul style="list-style-type: none"><li>▪ Volume flow</li><li>▪ Mass flow</li><li>▪ Corrected volume flow</li></ul>
Description	Use this function to select how the totalizer summates the flow.
Selection	<ul style="list-style-type: none"><li>▪ Net flow total</li><li>▪ Forward flow total</li><li>▪ Reverse flow total</li></ul>
Factory setting	Net flow total
Additional information	<p><i>Selection</i></p> <ul style="list-style-type: none"><li>▪ Net flow total Positive and negative flow values are totalized and balanced against one another. Net flow is registered in the flow direction.</li><li>▪ Forward flow total Only the flow in the forward flow direction is totalized.</li><li>▪ Reverse flow total Only the flow against the forward flow direction is totalized (= reverse flow total).</li></ul>

---

## Control Totalizer 1 to 3

Navigation	  Expert → Application → Totalizer 1 to 3 → Control Tot. 1 to 3
Prerequisite	<p>One of the following options is selected in the <b>Assign process variable</b> parameter (→ 82) of the <b>Totalizer 1 to 3</b> submenu:</p> <ul style="list-style-type: none"><li>▪ Volume flow</li><li>▪ Mass flow</li><li>▪ Corrected volume flow</li></ul>
Description	Use this function to select the control of totalizer value 1-3.

<b>Selection</b>	<ul style="list-style-type: none"> <li>■ Totalize</li> <li>■ Reset + hold</li> <li>■ Preset + hold</li> <li>■ Reset + totalize</li> <li>■ Preset + totalize</li> </ul>
<b>Factory setting</b>	Totalize
<b>Additional information</b>	<p><i>Selection</i></p> <ul style="list-style-type: none"> <li>■ Totalize The totalizer is started or continues totalizing with the current counter reading.</li> <li>■ Reset + hold The totaling process is stopped and the totalizer is reset to 0.</li> <li>■ Preset + hold The totaling process is stopped and the totalizer is set to its defined start value from the <b>Preset value</b> parameter (→ 85).</li> <li>■ Reset + totalize The totalizer is reset to 0 and the totaling process is restarted.</li> <li>■ Preset + totalize The totalizer is set to the defined start value in the <b>Preset value</b> parameter (→ 85) and the totaling process is restarted.</li> </ul>

---

## Preset value 1 to 3

---

<b>Navigation</b>	Expert → Application → Totalizer 1 to 3 → Preset value 1 to 3
<b>Prerequisite</b>	One of the following options is selected in the <b>Assign process variable</b> parameter (→ 82) of the <b>Totalizer 1 to 3</b> submenu: <ul style="list-style-type: none"> <li>■ Volume flow</li> <li>■ Mass flow</li> <li>■ Corrected volume flow</li> </ul>
<b>Description</b>	Use this function to enter a start value for totalizer 1-3.
<b>User entry</b>	Signed floating-point number
<b>Factory setting</b>	0 1
<b>Additional information</b>	<p><i>User entry</i></p> <p> The unit of the selected process variable is specified for the totalizer in the <b>Unit totalizer</b> parameter (→ 83).</p> <p><i>Example</i></p> <p>This configuration is suitable for applications such as iterative filling processes with a fixed batch quantity.</p>

**Failure mode****Navigation**

Expert → Application → Totalizer 1 to 3 → Failure mode

**Prerequisite**

One of the following options is selected in the **Assign process variable** parameter (→ 82) of the **Totalizer 1 to 3** submenu:

- Volume flow
- Mass flow
- Corrected volume flow

**Description**

Use this function to select how a totalizer behaves in the event of a device alarm.

**Selection**

- Stop
- Actual value
- Last valid value

**Factory setting**

Stop

**Additional information***Description*

This setting does not affect the failsafe mode of other totalizers and the outputs. This is specified in separate parameters.

*Selection*

- Stop  
Totalizing is stopped when a device alarm occurs.
- Actual value  
The totalizer continues to count based on the current measured value; the device alarm is ignored.
- Last valid value  
The totalizer continues to count based on the last valid measured value before the device alarm occurred.

## 3.5 "Diagnostics" submenu

**Navigation**

Expert → Diagnostics

▶ Device information	→  95
▶ Min/max values	→  98
▶ Heartbeat	→  100
▶ Simulation	→  101

## Actual diagnostics

**Navigation**

Expert → Diagnostics → Actual diagnos.

**Prerequisite**

A diagnostic event has occurred.

**Description**

Displays the current diagnostic message. If two or more messages occur simultaneously, the message with the highest priority is shown on the display.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information**

*Display*

Additional pending diagnostic messages can be viewed in the **Diagnostic list** submenu (→ 89).

*Example*

For the display format:

F271 Main electronic failure

## Timestamp

**Navigation**

Expert → Diagnostics → Timestamp

**Description**

Displays the operating time when the current diagnostic message occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information**

*Display*

The diagnostic message can be viewed via the **Actual diagnostics** parameter (→ 87).

*Example*

For the display format:

24d12h13m00s

---

## Previous diagnostics

---

<b>Navigation</b>	  Expert → Diagnostics → Prev.diagnostics
<b>Prerequisite</b>	Two diagnostic events have already occurred.
<b>Description</b>	Displays the diagnostic message that occurred before the current message.
<b>User interface</b>	Symbol for diagnostic behavior, diagnostic code and short message.
<b>Additional information</b>	<i>Example</i> For the display format:  F271 Main electronic failure

---

## Timestamp

---

<b>Navigation</b>	 Expert → Diagnostics → Timestamp
<b>Description</b>	Displays the operating time when the last diagnostic message before the current message occurred.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)
<b>Additional information</b>	<i>Display</i>  The diagnostic message can be viewed via the <b>Previous diagnostics</b> parameter (→  88).
	<i>Example</i> For the display format: 24d12h13m00s

---

## Operating time from restart

---

<b>Navigation</b>	  Expert → Diagnostics → Time fr. restart
<b>Description</b>	Use this function to display the time the device has been in operation since the last device restart.
<b>User interface</b>	Days (d), hours (h), minutes (m) and seconds (s)

---

## Operating time

---

**Navigation**  Expert → Diagnostics → Operating time

**Description** Use this function to display the length of time the device has been in operation.

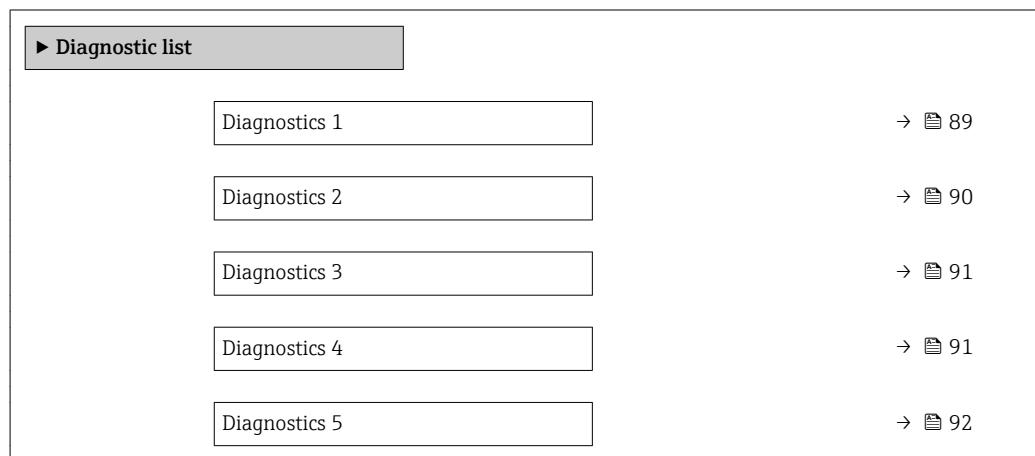

**User interface** Days (d), hours (h), minutes (m) and seconds (s)

**Additional information** *User interface*

The maximum number of days is 9999, which is equivalent to 27 years.

### 3.5.1 "Diagnostic list" submenu

*Navigation*  Expert → Diagnostics → Diagnostic list

---

## Diagnostics 1

---

**Navigation**  Expert → Diagnostics → Diagnostic list → Diagnostics 1

**Description** Displays the current diagnostics message with the highest priority.

**User interface** Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information** *Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Timestamp**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information***Display*

 The diagnostic message can be viewed via the **Diagnostics 1** parameter (→ 89).

*Example*

For the display format:  
24d12h13m00s

---

**Diagnostics 2**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 2

**Description**

Displays the current diagnostics message with the second-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Timestamp**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the second-highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information***Display*

 The diagnostic message can be viewed via the **Diagnostics 2** parameter (→ 90).

*Example*

For the display format:  
24d12h13m00s

---

### Diagnostics 3

---

**Navigation**   Expert → Diagnostics → Diagnostic list → Diagnostics 3

**Description** Displays the current diagnostics message with the third-highest priority.

**User interface** Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information** *Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

### Timestamp

---

**Navigation**   Expert → Diagnostics → Diagnostic list → Timestamp

**Description** Displays the operating time when the diagnostic message with the third-highest priority occurred.

**User interface** Days (d), hours (h), minutes (m) and seconds (s)

**Additional information** *Display*

 The diagnostic message can be viewed via the **Diagnostics 3** parameter (→  91).

*Example*

For the display format:

24d12h13m00s

---

### Diagnostics 4

---

**Navigation**   Expert → Diagnostics → Diagnostic list → Diagnostics 4

**Description** Displays the current diagnostics message with the fourth-highest priority.

**User interface** Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information** *Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Timestamp**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the fourth-highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information***Display*

 The diagnostic message can be viewed via the **Diagnostics 4** parameter (→ [91](#)).

*Example*

For the display format:  
24d12h13m00s

---

**Diagnostics 5**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Diagnostics 5

**Description**

Displays the current diagnostics message with the fifth-highest priority.

**User interface**

Symbol for diagnostic behavior, diagnostic code and short message.

**Additional information***Examples*

For the display format:

-  F271 Main electronic failure
-  F276 I/O module failure

---

**Timestamp**

---

**Navigation**

Expert → Diagnostics → Diagnostic list → Timestamp

**Description**

Displays the operating time when the diagnostic message with the fifth-highest priority occurred.

**User interface**

Days (d), hours (h), minutes (m) and seconds (s)

**Additional information***Display*

 The diagnostic message can be viewed via the **Diagnostics 5** parameter (→ [92](#)).

*Example*

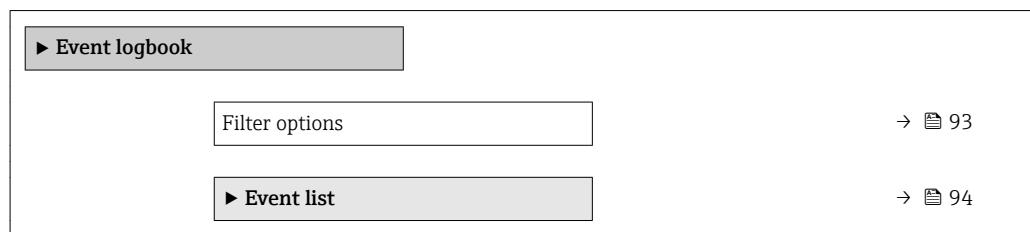

For the display format:  
24d12h13m00s

### 3.5.2 "Event logbook" submenu

*Navigation*

Expert → Diagnostics → Event logbook

#### Filter options

**Navigation**

Expert → Diagnostics → Event logbook → Filter options

**Description**

Use this function to select the category whose event messages are displayed in the event list of the local display.

**Selection**

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

**Factory setting**

All

**Additional information**

*Description*

The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:

- F = Failure
- C = Function Check
- S = Out of Specification
- M = Maintenance Required

#### Filter options

**Navigation**

Expert → Diagnostics → Event logbook → Filter options

**Description**

Use this function to select the category whose event messages are displayed in the event list of the operating tool.

**Selection**

- All
- Failure (F)
- Function check (C)
- Out of specification (S)
- Maintenance required (M)
- Information (I)

**Factory setting** All

**Additional information** *Description*

- i** The status signals are categorized in accordance with VDI/VDE 2650 and NAMUR Recommendation NE 107:
- F = Failure
  - C = Function Check
  - S = Out of Specification
  - M = Maintenance Required

#### "Event list" submenu

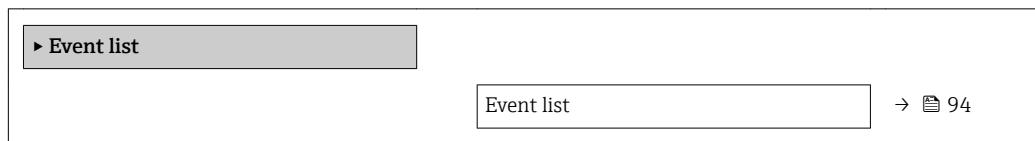

**i** The **Event list** submenu is only displayed if operating via the local display.

If operating via the FieldCare operating tool, the event list can be read out with a separate FieldCare module.

If operating via the Web browser, the event messages can be found directly in the **Event logbook** submenu.

*Navigation*

Expert → Diagnostics → Event logbook → Event list

## Event list

**Navigation**

Expert → Diagnostics → Event logbook → Event list

**Description**

Displays the history of event messages of the category selected in the **Filter options** parameter (→ 93).

**User interface**

- For a "Category I" event message  
Information event, short message, symbol for event recording and operating time when error occurred
- For a "Category F, C, S, M" event message (status signal)  
Diagnostics code, short message, symbol for event recording and operating time when error occurred

**Additional information**

*Description*

A maximum of 20 event messages are displayed in chronological order.

If the advanced HistoROM function is enabled in the device, the event list can contain up to 100 entries.

The following symbols indicate whether an event has occurred or has ended:

- ⊖: Occurrence of the event
- ⊕: End of the event

#### *Examples*

For the display format:

- I1091 Configuration modified  
⊖ 24d12h13m00s
- ✗ F271 Main electronic failure  
⊖ 01d04h12min30s

#### *HistoROM*

A HistoROM is a "non-volatile" device memory in the form of an EEPROM.

### 3.5.3 "Device information" submenu

#### *Navigation*

Expert → Diagnostics → Device info

► Device information	
Device tag	→ <a href="#">95</a>
Serial number	→ <a href="#">96</a>
Firmware version	→ <a href="#">96</a>
Device name	→ <a href="#">96</a>
Order code	→ <a href="#">97</a>
Extended order code 1	→ <a href="#">97</a>
Extended order code 2	→ <a href="#">97</a>
Extended order code 3	→ <a href="#">98</a>
ENP version	→ <a href="#">98</a>

---

#### Device tag

---

#### *Navigation*

Expert → Diagnostics → Device info → Device tag

#### *Description*

Displays a unique name for the measuring point so it can be identified quickly within the plant.

#### *User interface*

Max. 32 characters such as letters, numbers or special characters (e.g. @, %, /)

---

Factory setting	Promag 100
-----------------	------------

---

## Serial number

---

Navigation	  Expert → Diagnostics → Device info → Serial number
------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Description	Displays the serial number of the measuring device.
-------------	-----------------------------------------------------

 The number can be found on the nameplate of the sensor and transmitter.

User interface	A maximum of 11-digit character string comprising letters and numbers.
----------------	------------------------------------------------------------------------

Additional information	<i>Description</i>
------------------------	--------------------

 **Uses of the serial number**

- To identify the measuring device quickly, e.g. when contacting Endress+Hauser.
- To obtain specific information on the measuring device using the Device Viewer:  
[www.endress.com/deviceviewer](http://www.endress.com/deviceviewer)

---

## Firmware version

---

Navigation	  Expert → Diagnostics → Device info → Firmware version
------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Description	Displays the device firmware version installed.
-------------	-------------------------------------------------

User interface	Character string in the format xx.yy.zz
----------------	-----------------------------------------

Additional information	<i>Display</i>
------------------------	----------------

 The Firmware version is also located:

- On the title page of the Operating instructions
- On the transmitter nameplate

---

## Device name

---

Navigation	  Expert → Diagnostics → Device info → Device name
------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Description	Displays the name of the transmitter. It can also be found on the nameplate of the transmitter.
-------------	-------------------------------------------------------------------------------------------------

User interface	Promag 100
----------------	------------

---

Order code**Navigation**

Expert → Diagnostics → Device info → Order code

**Description**

Displays the device order code.

**User interface**

Character string composed of letters, numbers and certain punctuation marks (e.g. /).

**Additional information***Description*

The order code can be found on the nameplate of the sensor and transmitter in the "Order code" field.

The order code is generated from the extended order code through a process of reversible transformation. The extended order code indicates the attributes for all the device features in the product structure. The device features are not directly readable from the order code.

**Uses of the order code**

- To order an identical spare device.
- To identify the device quickly and easily, e.g. when contacting Endress+Hauser.

---

Extended order code 1**Navigation**

Expert → Diagnostics → Device info → Ext. order cd. 1

**Description**

Displays the first part of the extended order code.

On account of length restrictions, the extended order code is split into a maximum of 3 parameters.

**User interface**

Character string

**Additional information***Description*

The extended order code indicates the version of all the features of the product structure for the measuring device and thus uniquely identifies the measuring device.

The extended order code can also be found on the nameplate of the sensor and transmitter in the "Ext. ord. cd." field.

---

Extended order code 2**Navigation**

Expert → Diagnostics → Device info → Ext. order cd. 2

**Description**

For displaying the second part of the extended order code.

**User interface**

Character string

**Additional information**

For additional information, see **Extended order code 1** parameter (→ 97)

**Extended order code 3**

<b>Navigation</b>	Expert → Diagnostics → Device info → Ext. order cd. 3
<b>Description</b>	For displaying the third part of the extended order code.
<b>User interface</b>	Character string
<b>Additional information</b>	For additional information, see <b>Extended order code 1</b> parameter (→  97)

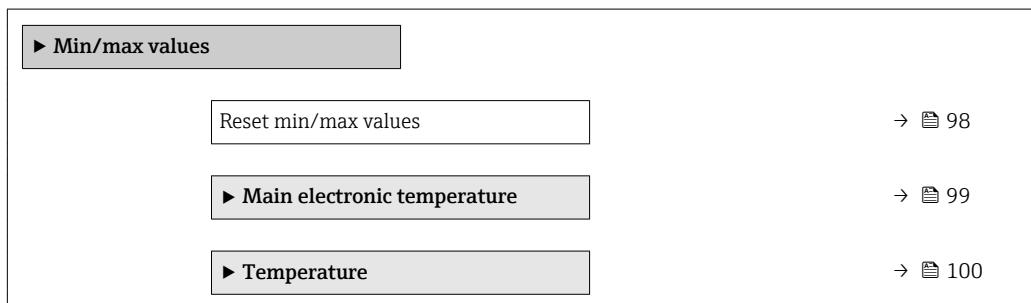

---

**ENP version**

<b>Navigation</b>	Expert → Diagnostics → Device info → ENP version
<b>Description</b>	Displays the version of the electronic nameplate.
<b>User interface</b>	Character string
<b>Factory setting</b>	2.02.00
<b>Additional information</b>	<i>Description</i> This electronic nameplate stores a data record for device identification that includes more data than the nameplates attached to the outside of the device.

### 3.5.4 "Min/max values" submenu

*Navigation* Expert → Diagnostics → Min/max val.

---

**Reset min/max values**

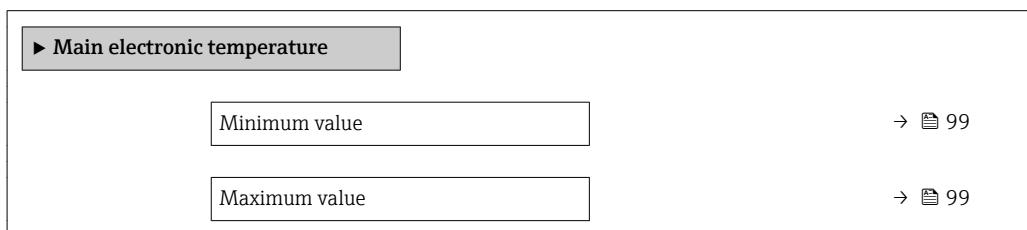

<b>Navigation</b>	Expert → Diagnostics → Min/max val. → Reset min/max
<b>Description</b>	Use this function to select measured variables whose minimum, maximum and average measured values are to be reset.

**Selection** Cancel

**Factory setting** Cancel

### "Main electronic temperature" submenu

*Navigation*  Expert → Diagnostics → Min/max val. → Main elect.temp.

---

#### Minimum value

---

**Navigation**  Expert → Diagnostics → Min/max val. → Main elect.temp. → Minimum value

**Description** Displays the lowest previously measured temperature value of the main electronics module.

**User interface** Signed floating-point number

**Additional information** *Dependency*

 The unit is taken from the **Temperature unit** parameter (→  42)

---

#### Maximum value

---

**Navigation**  Expert → Diagnostics → Min/max val. → Main elect.temp. → Maximum value

**Description** Displays the highest previously measured temperature value of the main electronics module.

**User interface** Signed floating-point number

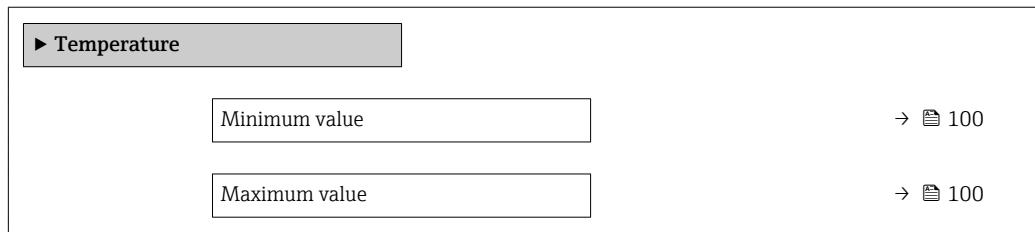

**Additional information** *Dependency*

 The unit is taken from the **Temperature unit** parameter (→  42)

### "Temperature" submenu

#### Navigation

Expert → Diagnostics → Min/max val. → Temperature

---

## Minimum value

---

#### Navigation

Expert → Diagnostics → Min/max val. → Temperature → Minimum value

#### Prerequisite

For the following order code:  
"Sensor Option", option CI "Fluid temperature probe"

#### Description

Displays the lowest previously measured medium temperature value.

#### User interface

Signed floating-point number

#### Additional information

*Dependency*

The unit is taken from the **Temperature unit** parameter (→ 42)

---

## Maximum value

---

#### Navigation

Expert → Diagnostics → Min/max val. → Temperature → Maximum value

#### Prerequisite

For the following order code:  
"Sensor Option", option CI "Fluid temperature probe"

#### Description

Displays the highest previously measured medium temperature value.

#### User interface

Signed floating-point number

#### Additional information

*Dependency*

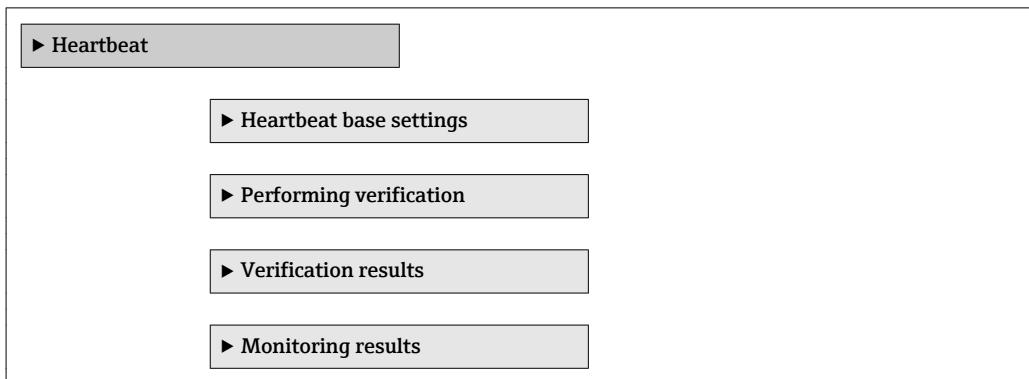

The unit is taken from the **Temperature unit** parameter (→ 42)

### 3.5.5 "Heartbeat" submenu

For detailed information on the parameter descriptions of the **Heartbeat Verification** application package, see the Special Documentation for the device

Navigation

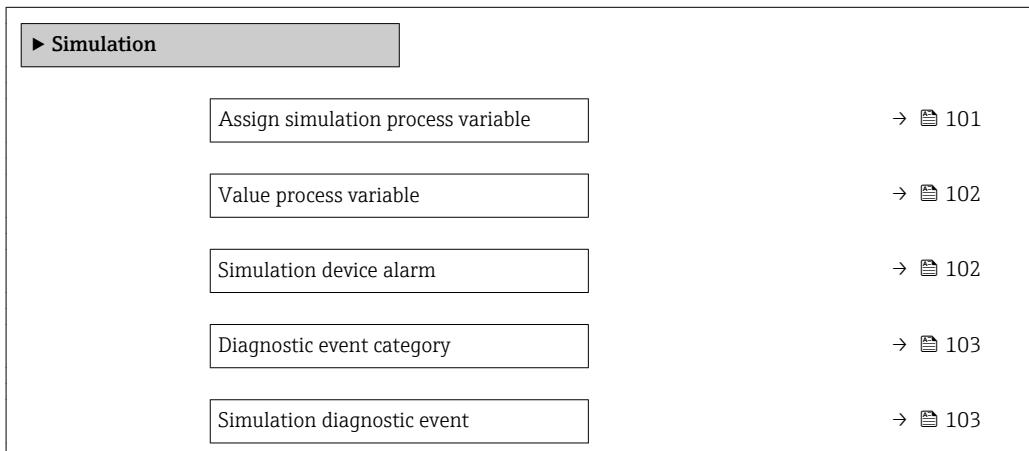

Expert → Diagnostics → Heartbeat

### 3.5.6 "Simulation" submenu

Navigation

Expert → Diagnostics → Simulation

#### Assign simulation process variable

Navigation

Expert → Diagnostics → Simulation → Assign proc.var.

Description

Use this function to select a process variable for the simulation process that is activated. The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

Selection

- Off
- Volume flow
- Mass flow
- Corrected volume flow
- Conductivity\*
- Corrected conductivity\*
- Temperature

Factory setting

Off

\* Visibility depends on order options or device settings

**Additional information***Description*

The simulation value of the process variable selected is defined in the **Value process variable** parameter (→ 102).

**Value process variable****Navigation**

Expert → Diagnostics → Simulation → Value proc. var.

**Prerequisite**

One of the following options is selected in the **Assign simulation process variable** parameter (→ 101):

- Volume flow
- Mass flow
- Corrected volume flow
- Conductivity \*
- Corrected conductivity \*
- Temperature \*

**Description**

Use this function to enter a simulation value for the selected process variable. Subsequent measured value processing and the signal output use this simulation value. In this way, users can verify whether the measuring device has been configured correctly.

**User entry**

Depends on the process variable selected

**Factory setting**

0

**Additional information***User entry*

The unit of the displayed measured value is taken from the **System units** submenu (→ 39).

**Simulation device alarm****Navigation**

Expert → Diagnostics → Simulation → Sim. alarm

**Description**

Use this function to switch the device alarm on and off.

**Selection**

- Off
- On

**Factory setting**

Off

**Additional information***Description*

The display alternates between the measured value and a diagnostic message of the "Function check" category (C) while simulation is in progress.

\* Visibility depends on order options or device settings

---

## Diagnostic event category

---

<b>Navigation</b>	 Expert → Diagnostics → Simulation → Event category
<b>Description</b>	Use this function to select the category of the diagnostic events that are displayed for the simulation in the <b>Simulation diagnostic event</b> parameter (→  103).
<b>Selection</b>	<ul style="list-style-type: none"><li>■ Sensor</li><li>■ Electronics</li><li>■ Configuration</li><li>■ Process</li></ul>
<b>Factory setting</b>	Process

---

## Simulation diagnostic event

---

<b>Navigation</b>	  Expert → Diagnostics → Simulation → Sim. diag. event
<b>Description</b>	Use this function to select a diagnostic event for the simulation process that is activated.
<b>Selection</b>	<ul style="list-style-type: none"><li>■ Off</li><li>■ Diagnostic event picklist (depends on the category selected)</li></ul>
<b>Factory setting</b>	Off
<b>Additional information</b>	<i>Description</i>  For the simulation, you can choose from the diagnostic events of the category selected in the <b>Diagnostic event category</b> parameter (→  103).

## 4 Country-specific factory settings

### 4.1 SI units

 Not valid for USA and Canada.

#### 4.1.1 System units

Volume flow	l/h
Volume	m <sup>3</sup>
Conductivity	µS/cm
Temperature	°C
Mass flow	kg/h
Mass	kg
Density	kg/l
Corrected volume flow	Nl/h
Corrected volume	Nm <sup>3</sup>

#### 4.1.2 Full scale values

 The factory settings apply to the following parameters:  
100% bar graph value 1

Nominal diameter [mm]	(v ~ 2.5 m/s) [dm <sup>3</sup> /min]
2	0.5
4	2
8	8
15	25
25	75
32	125
40	200
50	300
65	500
80	750
100	1200
125	1850
150	150 m <sup>3</sup> /h
200	300 m <sup>3</sup> /h
250	500 m <sup>3</sup> /h
300	750 m <sup>3</sup> /h
350	1000 m <sup>3</sup> /h
400	1200 m <sup>3</sup> /h
450	1500 m <sup>3</sup> /h

Nominal diameter [mm]	(v ~ 2.5 m/s) [dm <sup>3</sup> /min]
500	2000 m <sup>3</sup> /h
600	2500 m <sup>3</sup> /h

#### 4.1.3 On value low flow cut off

 The switch-on point depends on the type of medium and the nominal diameter.

Nominal diameter [mm]	(v ~ 0.04 m/s) [m <sup>3</sup> /h]
2	0.01
4	0.05
8	0.1
15	0.5
25	1
32	2
40	3
50	5
65	8
80	12
100	20
125	30
150	2.5
200	5
250	7.5
300	10
350	15
400	20
450	25
500	30
600	40

## 4.2 US units

 Only valid for USA and Canada.

### 4.2.1 System units

Volume flow	gal/min (us)
Volume	gal (us)
Temperature	°F
Mass flow	lb/min
Mass	lb
Density	lb/ft <sup>3</sup>

Corrected volume flow	Sft <sup>3</sup> /h
Corrected volume	Sft <sup>3</sup>

#### 4.2.2 Full scale values

**i** The factory settings apply to the following parameters:  
100% bar graph value 1

Nominal diameter [in]	(v ~ 2.5 m/s) [gal/min]
1/12	0.1
1/8	0.5
3/8	2
1/2	6
1	18
1½	50
2	75
3	200
4	300
5	450
6	600
8	1200
10	1500
12	2400
14	3600
16	4800
18	6000
20	7500
24	10500

#### 4.2.3 On value low flow cut off

**i** The switch-on point depends on the type of medium and the nominal diameter.

Nominal diameter [in]	(v ~ 0.04 m/s) [gal/min]
1/12	0.002
1/8	0.008
3/8	0.025
1/2	0.15
1	0.25
1½	0.75
2	1.25
3	2.5
4	4
5	7

Nominal diameter [in]	{v ~ 0.04 m/s) [gal/min]}
6	12
8	15
10	30
12	45
14	60
16	60
18	90
20	120
24	180

## 5 Explanation of abbreviated units

### 5.1 SI units

Process variable	Units	Explanation
Density	g/cm <sup>3</sup> , g/m <sup>3</sup>	Gram/volume unit
	kg/dm <sup>3</sup> , kg/l, kg/m <sup>3</sup>	Kilogram/volume unit
	SD4°C, SD15°C, SD20°C	Specific density: The specific density is the ratio of the density of the fluid to the density of water at a water temperature of 4 °C (39 °F), 15 °C (59 °F), 20 °C (68 °F).
	SG4°C, SG15°C, SG20°C	Specific gravity: The specific gravity is the ratio of the density of the fluid to the density of water at a water temperature of 4 °C (39 °F), 15 °C (59 °F), 20 °C (68 °F).
Conductivity	µS/mm	Microsiemens/length unit
	nS/cm, µS/cm, mS/cm, S/cm	Nano- Micro- , Milli- , Siemens/length unit
	µS/m, mS/m, S/m, kS/m, MS/m	Micro- , Milli- , Siemens, Kilo-, Megasiemens/length unit
Mass	g, kg, t	Gram, kilogram, metric ton
Mass flow	g/s, g/min, g/h, g/d	Gram/time unit
	kg/s, kg/min, kg/h, kg/d	Kilogram/time unit
	t/s, t/min, t/h, t/d	Metric ton/time unit
Corrected volume	NI, Nm <sup>3</sup> , Sm <sup>3</sup>	Normal liter, normal cubic meter, standard cubic meter
Corrected volume flow	NI/s, NI/min, NI/h, NI/d	Normal liter/time unit
	Nm <sup>3</sup> /s, Nm <sup>3</sup> /min, Nm <sup>3</sup> /h, Nm <sup>3</sup> /d	Normal cubic meter/time unit
	Sm <sup>3</sup> /s, Sm <sup>3</sup> /min, Sm <sup>3</sup> /h, Sm <sup>3</sup> /d	Standard cubic meter/time unit
Temperature	°C, K	Celsius, Kelvin
Volume	cm <sup>3</sup> , dm <sup>3</sup> , m <sup>3</sup>	Cubic centimeter, cubic decimeter, cubic meter
	ml, l, hl, Ml Mega	Milliliter, liter, hectoliter, megaliter
Volume flow	cm <sup>3</sup> /s, cm <sup>3</sup> /min, cm <sup>3</sup> /h, cm <sup>3</sup> /d	Cubic centimeter/time unit
	dm <sup>3</sup> /s, dm <sup>3</sup> /min, dm <sup>3</sup> /h, dm <sup>3</sup> /d	Cubic decimeter/time unit
	m <sup>3</sup> /s, m <sup>3</sup> /min, m <sup>3</sup> /h, m <sup>3</sup> /d	Cubic meter/time unit
	ml/s, ml/min, ml/h, ml/d	Milliliter/time unit
	l/s, l/min, l/h, l/d	Liter/time unit
	hl/s, hl/min, hl/h, hl/d	Hectoliter/time unit
	Ml/s, Ml/min, Ml/h, Ml/d	Megaliter/time unit
Time	s, m, h, d, y	Second, minute, hour, day, year

### 5.2 US units

Process variable	Units	Explanation
Density	lb/ft <sup>3</sup> , lb/gal (us)	Pound/cubic foot, pound/gallon
	lb/bbl (us;liq.), lb/bbl (us;beer), lb/bbl (us;oil), lb/bbl (us;tank)	Pound/volume unit
Mass	oz, lb, STon	Ounce, pound, standard ton
Mass flow	oz/s, oz/min, oz/h, oz/d	Ounce/time unit

Process variable	Units	Explanation
	lb/s, lb/min, lb/h, lb/d	Pound/time unit
	STon/s, STon/min, STon/h, STon/d	Standard ton/time unit
Corrected volume	Sft <sup>3</sup> , Sgal (us), Sbbl (us;liq.)	Standard cubic foot, standard gallon, standard barrel
Corrected volume flow	Sft <sup>3</sup> /s, Sft <sup>3</sup> /min, Sft <sup>3</sup> /h, Sft <sup>3</sup> /d	Standard cubic foot/time unit
	Sgal/s (us), Sgal/min (us), Sgal/h (us), Sgal/d (us)	Standard gallon/time unit
	Sbbl/s (us;liq.), Sbbl/min (us;liq.), Sbbl/h (us;liq.), Sbbl/d (us;liq.)	Barrel/time unit (normal liquids)
Temperature	°F, °R	Fahrenheit, Rankine
Volume	af	Acre foot
	ft <sup>3</sup>	Cubic foot
	fl oz (us), gal (us), kgal (us), Mgal (us)	Fluid ounce, gallon, kilogallon, million gallon
	bbl (us;liq.), bbl (us;beer), bbl (us;oil), bbl (us;tank)	Barrel (normal liquids), barrel (beer), barrel (petrochemicals), barrel (filling tanks)
Volume flow	af/s, af/min, af/h, af/d	Acre foot/time unit
	ft <sup>3</sup> /s, ft <sup>3</sup> /min, ft <sup>3</sup> /h, ft <sup>3</sup> /d	Cubic foot/time unit
	fl oz/s (us), fl oz/min (us), fl oz/h (us), fl oz/d (us)	Fluid ounce/time unit
	gal/s (us), gal/min (us), gal/h (us), gal/d (us)	Gallon/time unit
	kgal/s (us), kgal/min (us), kgal/h (us), kgal/d (us)	Kilogallon/time unit
	Mgal/s (us), Mgal/min (us), Mgal/h (us), Mgal/d (us)	Million gallon/time unit
	bbl/s (us;liq.), bbl/min (us;liq.), bbl/h (us;liq.), bbl/d (us;liq.)	Barrel/time unit (normal liquids) Normal liquids: 31.5 gal/bbl
	bbl/s (us;beer), bbl/min (us;beer), bbl/h (us;beer), bbl/d (us;beer)	Barrel/time unit (beer) Beer: 31.0 gal/bbl
	bbl/s (us;oil), bbl/min (us;oil), bbl/h (us;oil), bbl/d (us;oil)	Barrel/time unit (petrochemicals) Petrochemicals: 42.0 gal/bbl
Time	bbl/s (us;tank), bbl/min (us;tank), bbl/h (us;tank), bbl/d (us;tank)	Barrel/time unit (filling tank) Filling tanks: 55.0 gal/bbl
	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem (before midday), post meridiem (after midday)

### 5.3 Imperial units

Process variable	Units	Explanation
Density	lb/gal (imp), lb/bbl (imp;beer), lb/bbl (imp;oil)	Pound/volume unit
Corrected volume	Sgal (imp)	Standard gallon
Corrected volume flow	Sgal/s (imp), Sgal/min (imp), Sgal/h (imp), Sgal/d (imp)	Standard gallon/time unit
Volume	gal (imp), Mgal (imp)	Gallon, mega gallon
	bbl (imp;beer), bbl (imp;oil)	Barrel (beer), barrel (petrochemicals)

Process variable	Units	Explanation
Volume flow	gal/s (imp), gal/min (imp), gal/h (imp), gal/d (imp)	Gallon/time unit
	Mgal/s (imp), Mgal/min (imp), Mgal/h (imp), Mgal/d (imp)	Mega gallon/time unit
	bbl/s (imp;beer), bbl/min (imp;beer), bbl/h (imp;beer), bbl/d (imp;beer)	Barrel /time unit (beer) Beer: 36.0 gal/bbl
	bbl/s (imp;oil), bbl/min (imp;oil), bbl/h (imp;oil), bbl/d (imp;oil)	Barrel/time unit (petrochemicals) Petrochemicals: 34.97 gal/bbl
Time	s, m, h, d, y	Second, minute, hour, day, year
	am, pm	Ante meridiem ( before midday), post meridiem (after midday)
